It is probable, however, that Peshawar has since recovered a portion of its previous prosperity. It is well situated for trade; and should we take possession of the Punjab, or the Indus be extensively navigated by British vessels, Peshawar would most likely become a considerable entrepôt for the trade between India, and Afghanistan, Khorassan, and the countries N. of the Hindoo Koosh. The inhabitants are very mixed, but principally of Indian origin, and occupied in commerce. The shops are well supplied with fruits and other provisions, saddlery, boots and shoes, woollens, hardware, books, and other manufactured goods.

It is said by some authorities to have been founded by Acher; but the district of Peshawar is mentioned in the histories of the 10th century; and it is more probable that it should have taken its name from a city already existing, than the reverse. Peshawar was, however, greatly improved and enlarged by Acher, in the 16th century. (*Elphinstone's Caubul*, i., 72-81; *Moorcroft's Travels*, ii., 337, 338; *Burnes's Bokhara*, &c.)

PESTH, a city of Hungary, on the E. side of the Danube, immediately opposite to Buda, with which it is connected by a bridge of boats, being the seat of the chief judicial tribunals of the country, as Buda is the residence of the viceroy and other chief state authorities, 135 m. E.S.E. Vienna. Pop. (excluding garrison and strangers) about 63,000, principally Roman Catholics; or, together with Buda (which see) and its suburbs, probably 110,000. (*Berghaus*.) Pesth, with its suburbs, occupies a space about  $\frac{1}{2}$  m. in circ. It stands on level ground; and being almost wholly of modern date, is much more regularly laid out and handsomely built than Buda. The streets, which are mostly wide and straight, are paved, and partially furnished with trottoirs, some of them being, in the splendour of their shops and their elaborately painted signs, little inferior to those of Vienna. "After a fashion, once common with us, and of which one or two specimens still exist in London, every shop has a name and sign; so that you may buy your cigars at the *Young Prince*, your cravats at the *Three Graces*, and bonbons at the *English Lord*; and for the instruction of those who do not read, or to attract the attention of those who do, these subjects are all illustrated by large paintings, in a style by no means contemptible." (*Paget's Hungary*, i., 243-4.) The squares are generally very well built; but, from the want of some object in the centre, they look bare and deserted: besides affording room for the accumulation of those heaps of sand with which the city is infested, but which might probably be prevented by planting round the outskirts. The growth of Pesth within the last few years has been most rapid. Along the river-side, which, a few years ago, was nothing but a marsh, is now a wide quay, partially paved and walled in, and lined for upwards of 1 m. by a succession of handsome buildings. Near the centre of these are the new theatre, and *Redouten-saal*, or public ball-room; and at one end, ornamented with a portico like the last named edifice, is the National Casino, an institution similar to the clubs of London, recently established by Count Szechenyi. It is open to strangers, who may use it during their stay in Pesth, and its reading-room is furnished with the leading newspapers and magazines of Europe. A part of the establishment is appropriated as a casino for tradesmen; and in the centre of the building is a very fine ball-room. Among the most conspicuous of the public edifices is the *Neugebaude*, in the suburb of Leopold-

## PESTH.

stadt, begun by Joseph II. in 1786; a structure of immense size, four stories in height, ranged round four spacious areas, and now used as a barrack and artillery *dépot*. Pesth has only a small number of churches in proportion to its size and population, and none is particularly distinguished for architectural beauty. Service is performed in them according to the United Greek, Roman Catholic, Dissenting Greek, Lutheran, and Calvinistic rituals; and in the German, Hungarian, Slavonic, and Greek languages.

There are also several synagogues. Besides the large theatre on the quay, an elegant new national theatre, destined solely for Hungarian performances, has recently been completed by the aid of a grant from the diet. The grenadiers' barracks, county hall, Jesuit college, and two or three of the hospitals, are worth notice. But, in respect of public buildings, Pesth must yield to Buda; it has, however, many handsome noble palaces and other private residences, and excellent hotels and coffee-houses.

This city is also distinguished by its establishments devoted to the higher branches of scientific instruction. Its university, established at Tyrnau in 1633, and transferred thither from Buda, by Joseph II., in 1784, is the only one in Hungary, and one of the most richly endowed in Europe. The instruction is entirely gratuitous; and it has about 50 professors, an observatory on the Blocksberg in Buda, a large botanic garden, a veterinary hospital, and a library of 60,000 volumes. In 1834-35, it had 1610 students; 72 in divinity, 184 in law, 885 in medicine and surgery, and 403 in philosophy, &c. The National museum, founded in 1802, has a fine library, rich in Hungarian MSS.; a complete collection of Hungarian coins from the 10th century; collections of minerals, fossils, antiquities (principally Roman, and others, found in Hungary and Transylvania); historical relics, specimens of manufactures, &c. The Hungarian academy of sciences, originally founded for the cultivation of the Magyar language, has received many munificent donations, and has an income of about £2000 a year. It publishes transactions, and gives annual prizes for the best works in Hungarian. Pesth has also a gymnasium, Roman Catholic and Lutheran seminaries, an English conventual school for noble ladies (*Englisch Frauentstift*), a teacher's seminary, many primary, and Greek, Protestant, and Jewish schools, a blind school, &c. The chief judicial tribunals are the *Curia Regia*, or Royal Table, and the *Septemvirale Tifel*, so termed because it originally consisted of seven members, but is now extended so as to include the palatine, four prelates, nine magnates, and seven other nobles. There are various charitable institutions. Several newspapers are published in the Hungarian language; the principal of which has a circulation of about 4000. Though near the extreme verge of European civilization toward the E., Pesth has all the appearance and conveniences of a city of W. Europe. It is well furnished with provisions of every kind, and, in some respects, its inhabitants are better off than those even of the capitals of England and France! "The *fiacre* is none of the heavy, shabby, slow coaches found on the stands of London; but a very clean, smart, open calèche, with two high-bred little horses, which whisk along at a famous rate; and a driver as far superior in sharpness and wit to his wooden-shod confrère of Paris, as the equipage is to that of London. In winter, instead of the open calèche, a neat, close chariot takes its place; for he is a very poor *fiacre*, in Pesth, who has not a winter and a summer carriage." (*Paget*, i., 230.)

The greatest variety of costume may be seen in Pesth, especially at the four great annual fairs, which are attended by at least 20,000 strangers, many of them from very distant parts. The business transacted at these fairs is very extensive. (See *Bright's Travels in Lower Hungary*, p. 217-223.)

Pesth manufactures silk and woollen fabrics, leather, straw hats, oil, tobacco, &c.; but its principal manufacture is that of *meerschau* pipe-bowls. These, which consist of the species of earth called *kaf-kil*, dug in the Crimea, are first rudely fashioned in Constantinople, but are finished for the German markets in Pesth. They are thence conveyed to Vienna, and ultimately to the fairs of Leipzig, Frankfurt, Mannheim, &c.; where the best fetch from £3 to £5, and even £7 sterling. A considerable intercourse is kept up between Pesth and Buda; and though a large proportion of the population be exempted from payment, by their privilege of nobility or otherwise, the tolls on the bridge of boats across the Danube are estimated to amount to 16,000 florins a year. But the nobles have agreed to relinquish this offensive privilege in favour of the project for building a suspension bridge across the river. (See BUDA.)

The amusements of both cities differ little from those of the German capitals. The theatres, coffee-houses, and public gardens in the neighbourhood are the favourite places of resort. Immediately beyond the barriers of Pesth is the *Rákös Mész*, a wide plain on which the diets of Hungary were held for many centuries; and on a part of which

## PETERBOROUGH.

horse races, somewhat after the English fashion, are now held yearly in May or June.

Pesth is supposed to occupy the site of the *Transacincum* of the Romans, on the ruins of which a town was afterward built by Arpad, Bela IV., in the 13th century, surrounded the town with walls; and it subsequently rose to considerable commercial importance. It was held by the Turks 160 years. The present town, one of the best built and handsomest in the Austrian dominions, may be said to have wholly grown up since the reign of Maria Theresa. It suffered severely in 1838 from an inundation of the Danube, which is said to have destroyed 1200 houses in the older part of the city. (*Est. Nat. Encycl.*; *Berghaus, Allg. Länder, &c.*; *Paget's Hungary*, i., 229-245; *Brigat's Travels in Lower Hungary, &c.*)

PETERBOROUGH, an episcopal city and parl. bor. of England, in liberty of its own name, co. Northampton, on the navigable river Nen, crossed here by a wooden bridge, 37 m. N.E. Northampton, and 75 m. N. by E. London. Area of parl. bor. (which includes the entire parish of St. John the Baptist, with the Minster precincts), 1430 acres. Pop. in 1841, 13,066. This small city consists of several streets close to the N. bank of the river, regularly laid out, well paved, and lighted with gas, the houses generally being well built, and some of recent erection. The principal public building is the cathedral, formerly attached to a Benedictine monastery, founded here in 870, and regarded at the dissolution as one of the most magnificent abbeys in the kingdom. It is a regular cruciform structure of Norman and early English architecture, erected during the 12th century. The dimensions of the interior are, length, 476 ft.; breadth of nave and aisles, 78 ft.; breadth, including the great transept, 203 ft.; breadth of transepts, 69 ft.; height of ceiling, 78 ft.; ditto of lantern, 135 ft.; length of the W. front, 156 ft.; height of the central tower, 150 ft. A tower and spire once stood over the N.W. transept; but the latter has been taken down. The approach to the cathedral has a very monastic appearance. "Passing under a Norman gate, with later additions, a court is entered, the right side of which is formed by the domestic buildings of the abbey; and at the end is the noble front of the church, consisting of three fine early English arches; but their beauty is much impaired by the small chapel or porch, which, in another place, would have been very beautiful. The E. end is circular, and the aisles are made out square by perpendicular additions. The choir has a wooden groined roof of very inferior workmanship; a handsome stone screen has recently been substituted for one of wood, and the fittings of the choir have been entirely renewed, under the direction of Mr. Blore. The nave is a very good specimen of that description of Norman work which has its piers composed of shafts; the proportions are good, and the general appearance is fine, without that overwhelming heaviness seen in those edifices where the great circular piers are used." There are few monuments, shrines, or chantry chapels, the parliamentary troops having plundered the church of most of its ornaments of this description. Catherine of Arragon and Mary, queen of Scotland, were interred here; but their graves are not marked by any sepulchral monument. "The remains of the monastic buildings in the court fronting the cathedral are of somewhat varied style, but present, on the whole, a valuable specimen of bold and varied outline both of plan and elevation. In the same court, also, leading to the cemetery on the N. side of the church, is a late perpendicular gate, remarkably rich in ornament, and near the S. transept are some remains that may have been the refectory, or infirmary chapel of the ancient monastery." (*Rickmann's Gothic Architecture*, p. 209.) The cathedral corporation consists of the dean and six prebendaries, who divide among them a nett revenue of £5118: there are also four minor canons and a precentor. Peterborough was erected into a bishop's see by Henry VIII., and the diocese now comprises the counties of Northampton, Rutland, and Leicester. The nett revenue of the see amounted, at an average of the three years ending with 1831, to £3103 a year; but it has been since augmented by an order of council to £4500, the deficiency being supplied from the surplus fund contributed by the larger sees.

The parish church is a spacious building, lately remodelled and put in very complete repair: the living is a vicarage in the gift of the bishop. The Independents, Baptists, and Wesleyan Methodists, have also their respective places of worship, and there are Sunday schools attended by upwards of 200 children of both sexes. The cathedral grammar school, founded by Henry VIII., is attended by about 30 boys, and endowed with three scholarships and a fellowship at St. John's college, Cambridge. There are two charity schools for boys, and a national school is attended by about 300 boys and 120 girls. There are numerous other charities, including a pretty large infirmary and a dispensary. The town-hall is a small but neat structure, the area beneath being used as a market-place. The jail

## PETERHEAD.

and house of correction for the city and liberties are both "small and miserably deficient in accommodation." (*Prisoners' Report*.) There is also a small theatre, open during the summer months.

The trade of Peterborough arises chiefly from the transit of corn and malt, large quantities of which are brought down the Nen from the interior; it also imports coal, timber, bricks, stone, and other goods. The city is not incorporated, but is under the jurisdiction of the dean and chapter, whose steward holds a court for the trial of civil actions within the city. Quarter sessions are likewise held here for the liberty of Peterborough, and it is one of the polling places at elections for the N. division of the county. Peterborough has returned two members to the House of Commons since the 1 Edward VI., the right of election down to the Reform Act being in the inhabitants paying scot and lot. The electoral limits were enlarged by the Boundary Act, so as to include with the old borough the remainder of the parish, and the extra-parochial precincts of the cathedral. Reg. electors in 1839-40, 569. Markets on Saturday: fairs, July 1 and Oct. 1, chiefly for cattle.

PETERBOROUGH, P. L., Hillsborough co., N.H., 41 m. S.W. Concord, 447 W. Chartered in 1738. Drained by Contoocook river and its branches, which afford water-power. It contains five churches, a Presbyterian, Methodist, Baptist, and two Universalist; six stores, two fulling-mills, two woollen factories, five cotton factories with 6064 spindles, one furnace, six grist-mills, seven saw-mills, one paper-mill, two tanneries; one academy, 90 students; 13 schools, 671 scholars. Pop. 2163.

PETERHEAD, a pari. and mun. bor. and seaport of Scotland, co. Aberdeen, on the point of a flat, rocky promontory, projecting into the German ocean, 27 m. N.N.E. Aberdeen; lat. 57° 32' N., long. 10° 47' W., being the most easterly point of land in Scotland. Pop. in 1831, 5112. Peterhead was erected into a borough of barony by the family of Keith, earls marischal, on whose estate it was built, in 1593. On the attainer of that family, it was purchased by the York Buildings company, who sold it to the governors of the Merchant Maidens hospital of Edinburgh, who are now the superiors of the town, and have always been its liberal and munificent patrons. It did not, however, attain to any distinction till about 1770, soon after which the famous engineer, Smeaton, was employed to construct a harbour on the S. side of the promontory on which the town is built. This harbour, though on a small scale, was sufficient to demonstrate the importance of the place, and the advantage that would result, not merely to the town itself, but to the shipping employed on the E. coast of Scotland, from the improvement of the harbour. In consequence, measures have been undertaken and carried into effect during the present century for excavating the rocks that obstructed the S. harbour, and for constructing a new and extensive harbour and graving dock on the N. side of the peninsula. These great works have since been completed, at an expense of above £30,000, and Peterhead has, in consequence, been rendered one of the best harbours on the E. coast of Scotland. The area of the S. harbour is 6-6, and that of the N. nearly 11 acres. They are formed by strong moles projecting into the sea. The harbour-dues, which, in 1808, amounted to only £367, had increased, in 1837, to £2879, and are now about £3000.

"The general appearance of the town is airy and healthy; the streets are wide and well paved; and the houses are built of the fine red granite which abounds in the neighbourhood, and is an object of traffic." (*Parl. Bound. Report*.) The streets are well lighted with gas, and the town is supplied with excellent water, brought from a distance of above 2½ m. Among the public buildings may be specified the townhouse, with a handsome spire 125 ft. in height, and the parish church, a respectable building, 118 ft. in height. A handsome cross, consisting of a Tuscan pillar of granite surmounted by the arms of the earl-marischal, was erected in 1832. The town has also a *quoad sacra* parish and church; an Episcopal chapel, with chapels for the Associated Dissenters, Independents, and Methodists. The educational establishments are not such as one might expect to find in so large and thriving a town; but measures, we believe, are now in progress for having a grammar school or academy organized on an adequate scale. The town has a scientific association, a news' room, a valuable museum belonging to Mr. Arbuthnot, two public libraries, and various friendly societies. There are mineral springs within the borough that used to be a good deal resorted to; but they are now comparatively neglected. Except ropemaking and ship-building, Peterhead has no manufactures. In 1837 there belonged to Peterhead 82 vessels of the aggregate burden of 11,022 tons. The inhabitants early engaged in the N. sea whale fishery, and carried it on for a lengthened period with great vigour and success. In 1823, 15 ships belonging to this port brought home 2217 tons of oil! This, however, was the maximum of prosperity, and

## PETERSBURG.

the business has since progressively declined, and is now nearly extinct. But the loss of the whale-fishery has been compensated by the extension of the herring-fishery and the success which has attended it. During the year ending the 5th of April, 1840, 53,677 barrels of herrings were cured here; the cod or white fishery is also prosecuted to a considerable extent.

The products of the fishery form, of course, a considerable portion of the exports from the port; but, exclusive of these, very considerable quantities of corn, butter, and other agricultural products, are exported. In 1836, for example, there were shipped 27,164 quarters of corn, 14,424 bolls meal, 3343 cwt. butter, 1,730,000 eggs, 3268 cwt. pork, &c. Great quantities of granite are also occasionally exported.

The Reform Act conferred on Peterhead the privilege of sending a member to the House of Commons in conjunction with the boroughs of Elgin, Banff, Cullen, Inverury, and Kintore. Registered electors in the united boroughs, in 1839-40, 648; in Peterhead, only 241. The borough has 12 councillors. (*New Statistical Account of Scotland, par. Peterhead; Boundary Report, &c.*)

PETER-LE PORT (ST.), See GUERNSEY.

PETERS, T. Franklin co., Pa., 12 m. S.W. Chambersburg. Watered by the W. branch of Conococheague creek. It contains three stores, one fulling mill, one woollea factory, one furnace, three forges, three flouring-mills, one grist-mill, six saw-mills, one oil-mill, four tanneries; 13 schools, 325 scholars. Pop. 1939.

PETERSBURG, a government of Russia in Europe, being that in which the capital is situated, between 58° and 60° 30' N. lat., and 28° and 34° E. long.; having N. the gulf of Finland, the gov. of Wyborg, lake Ladoga, and the gov. of Olonetz; E. and S.E. Novgorod; S. Pskof; and W. the lake Peipus, and the gov. Revel. Area, estimated at about 15,000 sq. m. Pop., in 1838, 585,000. The country is generally flat; but in the N. and S.E. are a few undulating hills. The general slope is towards the N.W.; all the rivers, the principal of which is the Neva, flow to the gulf of Finland, or lake Ladoga. The soil is mostly sandy and thin; and the climate damp, severe, and unhealthy. At an average, frost prevails, more or less, for 160 days in the year. Rye, barley, oats, and some wheat are grown, but the climate is unfavourable to the culture of corn; and nearly 2-3ds of the province is covered with wood, marshes, and lakes. Timber, indeed, forms the chief source of what may be called wealth, deals and masts being the great articles of export, and the villagers subsisting chiefly by making woodwork of different kinds. The trade is limited, in a great measure, to the capital. The best agriculturists are German colonists, who raise flax, hemp, and, above all, kitchen vegetables, for the supply of the capital. Russians form the majority of the inhabitants; the remainder is composed of Finns, Carélians, Ijors, Germans, &c., most of whom are Lutherans. This government is divided into nine districts; Petersburg, the capital, is the only place of importance.

PETERSBURG, the modern metropolis of the Russian empire, and one of the largest cities of Europe, at the E. extremity of the gulf of Finland, where it receives the river Neva, by which the city is intersected, lat. 59° 56' 31" N., long. 30° 18½' E. Pop., in 1838, 469,720. The city, which is of a circular form, stands partly on the main land, on the S. side of the Neva, and partly on islands formed by its branches. It owes its existence to the genius and power of Peter the Great, by whom its foundations were laid in 1703. At first all the public buildings and houses were of wood, and were huddled together without regard either to regularity or convenience. But brick and stone buildings were soon after introduced; and the streets were laid out on a regular plan, crossing each other at right angles. This was greatly facilitated by the ravages of destructive fires in 1736 and 1737, which having destroyed some thousands of the old houses, enabled government to lay down judicious regulations for their reconstruction. The empress Elizabeth did much to improve the city; but it is chiefly indebted for its regularity, beauty, and magnificence to the empress Catharine II. Under this princess the principal channel of the Neva was faced by noble granite quays; several new streets and canals were opened; and seven of the finest public buildings and monuments were either rebuilt on an improved plan, or constructed of wood. The late and present emperors have also distinguished themselves by their efforts to improve and embellish the city. It is now certainly one of the finest in Europe, and is unmatched for the width and regularity of its streets, the length and magnificence of its quays; and the elegance of its squares and public buildings.

Among the latter, which are principally situated on the quays bordering the main channel of the Neva, and in the street entitled the Nefski Perspective, may be specified the Winter palace, or ordinary residence of the emperor, a vast but heavy building. It communicates by a gallery with the Hermitage, another palace, long the residence of Cath-

## PETERSBURG.

erine II.; the latter has attached to it the court theatre, and contains a noble picture gallery, a valuable library, and an extraordinary rich collection of engraved stones, jewels, &c. There are also the Marble palace, the palace of Anitchkoff, formerly occupied by the reigning monarch, the Taurida palace, built by Catherine II. for her favourite Potemkin, &c. The admiralty, an immense brick building, occupies the centre of the city; it contains store-houses, docks for the construction of men-of-war, and a very extensive collection of objects connected with navigation and natural history. The high gilt tower of the admiralty, erected by the empress Anne in 1734, is one of the most striking objects in approaching Petersburg. Among the other public buildings are the hotel of the academy of the fine arts, accounted one of the finest in the city; the exchange; the palace of the senate; the hotel de l'état Major, a magnificent building; the barracks for the guards; the new theatre; the exchange bank; imperial library; founding hospital; hotel of the land cadets, and a host of others.

The citadel, founded by Peter the Great, but since reconstructed, stands on an island in the centre of the city. It is a regular hexagon, and has a tower 360 feet in height.

Among the churches may be specified the cathedral of our lady of Kasan, consecrated in 1811. It is built on the model of St. Peter's at Rome, and is one of the finest ornaments of the capital. The cathedral of St. Peter and St. Paul was founded by Peter the Great in 1712: it is of large dimensions; but it derives its principal interest from its containing the tombs of all the Russian sovereigns, from its illustrious founder down to the late emperor, with the exception of that of Peter II., interred at Moscow. The church of the convent of St. Alexander Nefski, at the end of the magnificent street to which it has given its name, occupies the third rank among the churches of Russia. The mausoleum of the saint is of solid silver; several distinguished persons are interred in the church; and there is attached to it a grammar school on a very large scale; having generally about 800 pupils. The cathedral of St. Isaac, now in course of being built, will be one of the finest churches in the city. The total number of churches in 1836 amounted to 58, of which 43 belonged to the established Greek faith, 11 to Catholics and Protestants, and four to dissenters. There were also, at the same epoch, 91 Greek chapels in private houses, and one monastery.

Petersburg contains some noble monuments: at the head of these may be placed the magnificent equestrian statue of Peter the Great, by Falconet. "The monarch is represented in the attitude of mounting a precipice, the summit of which he has nearly attained. His head is uncovered, and crowned with laurel; he wears on a loose vest, in the Asiatic style, with half boots, and sits on a housing of bear skin; the right hand is stretched out, as in the act of giving benediction to his people, and the left holds the reins. The design is masterly, and the attitude bold and spirited. The horse is springing upon the hind legs, and the tail, which is full and flowing, appears slightly to touch a serpent, artfully contrived to assist in supporting the vast weight. The contrast between the composure of Peter and the fire of the horse, eager to press forward, is very striking. The simplicity of the inscription corresponds to the sublimity of the design—PETRO PRIMO, CATHARINA SECUNDA, 1722." (*Coxe's Trav.*, ii., p. 112.) The pedestal on which this noble statue is erected is a gigantic rough block of granite. It was found at a distance of several miles from the capital, and its conveyance thither was a work of extraordinary difficulty.

The column erected in honour of the late emperor Alexander is one of the finest of its kind. It is 150 feet in height; the pedestal is of granite and bronze; the shaft of the column consists of a single piece of red granite, 84 feet in length, and 14 feet in diameter. This, which is the largest monolith in the world, was cut from the quarries of Pytlar, in Finland, several miles from Petersburg. The column is surmounted by a capital and a small dome in bronze, on which is placed a statue emblematical of religion.

The cottage occupied by Peter the Great during the foundation of Petersburg is still preserved, and will be regarded by most persons as the most interesting monument in the city. It is built of wood, painted in the Dutch style, and is not 20 feet high.

Petersburg has a great variety of institutions for the promotion of education and literature. The university, founded in 1819, has already attained to considerable distinction, and had, in 1839, 413 pupils and 42 professors. The *medico-chirurgical academy*, founded by Peter the Great, and reorganized by the emperor Alexander, for the instruction of medical men, enjoys a high reputation; two hospitals, on a large scale, are attached to it; the instruction is gratuitous, and the number of pupils may amount to 520. A sum of 386,290 roubles a year is appropriated to the support of this establishment. The education is good, and the examinations strict. Among the educational institutions may be

specified the military schools (*see art. RUSSIA*); the theological academy; the school for training and instructing schoolmasters; the Oriental institution, founded in 1823; the school of commerce and navigation; the technological institution; the Protestant school of St. Peter, at which above 500 children of both sexes are educated; two gymnasia or colleges; the schools of Sendioui and St. Catherine, for the instruction of nearly 700 young ladies; the military orphan school; the grammar school of St. Alexander Nefski, already alluded to, and a number of others.

According to the official returns, the pupils at the various schools and educational institutions in the city, in 1836, amounted, in all, to 11,293. Now, if we take the stationary population of the city at 370,000 (*see post*), this would give the proportion of scholars to the population at about one in 33. But when everybody is educated, the proportion at school cannot well be less than one in 10. The number of children in Petersburg is, no doubt, less in proportion to the population than in most other great towns; but it is, notwithstanding, sufficiently obvious that the means of elementary instruction are very insufficient.

Petersburg has some noble libraries, and scientific and literary collections. The Imperial library, one of the largest and finest in the world, contains about 425,000 printed vols., and 7000 MSS. The academy of sciences, founded by Peter the Great in 1724, has long occupied a distinguished place among such bodies. It contains a valuable library, an Asiatic museum, with cabinets of medals, natural history, &c. It is also furnished with an observatory, whence the Russian geographers reckon their first meridian. The Imperial Russian academy, the academy of fine arts, &c., are celebrated all over Europe; and there are besides a great number of similar institutions. The botanic garden is extensive, and has a valuable collection of exotics. There were in the city, in 1836, 32 printing and lithographical establishments belonging to the crown, and 31 to individuals.

The hospitals are numerous, and well endowed. The most celebrated is the founding hospital, founded by Catherine II., and much improved and enlarged by the late benevolent empress, Maria Fædorovna. But, however well intended, it is pretty certain that this foundation has always been productive of infinitely more evil than good. The mortality used to be enormous; and, notwithstanding the improvements that have been introduced, it continues, necessarily perhaps, to be very great. From 1822 to 1831, the admissions were 39,114, and the deaths 31,779! The establishment costs about 1,000,000 roubles a year. The city hospital, and the Imperial hospital, for sick poor, are both on a large scale: there is also an institution for deaf and dumb persons, a blind asylum, &c.

The Neva is deep, rapid, and its waters as clear as crystal. The main stream, which is broader than the Thames at London, is crossed by two bridges, and its branches by three. These are all of boats, and are removed in the beginning of winter, before the river is frozen over. The granite quay, along the S. side of the Neva, is a stupendous work, above 3 m. in length. The S. side of the town is intersected by canals, of which the Fontanka is the finest.

The streets are, for the most part, paved with stone; a few, however, are still floored with logs of timber; and recently some have been macadamised. The foot pavements are generally good; but the carriage ways, in wet weather, become very dirty.

Many of the brick houses are stuccoed and painted, so as to have the appearance of stone; but the number of genuine stone houses is very limited, indeed, and wooden houses still predominate. According to the official account, there were in the city, in 1836, 8641 houses, of which 3024 were brick and stone, and 5617 wood. The better class of houses are covered with iron or copper, and the inferior with tiles. The principal houses have arched door-ways, under which carriages enter, and spacious courtyards, in which wood for fuel, &c., is stored up.

Owing to the barren nature of the soil round the city, most part of the provisions required for its consumption have to be brought from a great distance by canal or by sledges. An extraordinary market for butchers' meat, game, fish, &c., is held at the conclusion of the fast, ending the 22th Dec. (O.S.), at which a large proportion of the inhabitants supply themselves with provisions for the remainder of the winter. The carcases of the vast quantities of oxen, sheep, hogs, fowls, &c., brought to this market, are all frozen: the smaller animals are piled up in pyramids, but the larger ones, which are skinned, and set on their legs, in rows, along side each other, have a ghastly and frightful appearance to persons not familiar with such exhibitions. They are cut in pieces with hatchets; and when carried home are preserved in snow cellars, of which each house has one. Previously to its being dressed, the frozen meat is thawed in cold water, but it loses much of its flavour, and all families of condition use fresh killed meat. The

## PETERSBURG.

length and severity of the winter necessarily occasions a great demand for fuel. This consists partly of coal from England, but chiefly of wood; and as the neighbourhood does not afford a sufficient supply, vast quantities are brought from the interior. The barges, too, which arrive from the latter are almost all broken up, and used either as timber in the construction of houses, or as fire-wood. Flour and billet magazines have been erected by government, for the accommodation of the poor in scarce and severe seasons.

There were in 1836, within the city, six manufacturing establishments and workshops carried on upon account of the crown, and 218 by private individuals. Among those belonging to the crown are manufactures of gunpowder, tapestry, and porcelain, and a cannon foundry. Among the private manufactures are those of silks, cottons, sail-cloth, woollens, paper, leather, stuffs, tobacco, wax-cloth, soap, types, &c.; there are extensive glass-works at Oserski, near the city; and there are great numbers of watchmakers and jewellers, coachmakers, mathematical and musical instrument makers, carpenters, &c.

Petersburg has the most extensive foreign trade of any city in the N. of Europe. This arises not so much from its great population as from its being the only great maritime inlet on the gulf of Finland, and from its vast and various communications with the interior. By means partly of canals, but principally of rivers, Petersburg is connected with the Caspian sea, goods being conveyed from the latter to the capital, a distance of 1434 m., without once landing them. The iron and furs of Siberia and the teas of China are received at Petersburg in the same way; but, owing to the great distance of these countries, and the short period during which the rivers and canals are navigable, they take three years in their transit by water. Immense quantities of the less bulky and more valuable species of goods are also brought to the city during the winter upon the ice in sledges.

The principal article of export is tallow; and, next to it, are hemp and flax, iron, copper, grain, particularly wheat; timber, potashes, canvass and coarse linen; linseed and hempseed; linseed and hempseed oils; furs, hides, leather, bristles, fox, hare, and squirrel skins; cordage, caviare, wax, isinglass, tar, &c. The principal imports are sugar and other colonial products; cotton yarn, raw cotton, and cotton stuffs; dye stuffs, wines, silks, woollens, hardware, fine linen from Holland, Silesia, &c.; salt, lead, tin, coal, &c.

During the year 1836, the total value of the exports was 129,601,662 roubles; the principal articles being, tallow, 40,732,359; hemp, 19,221,328; flax, 6,291,808; copper, 9,364,065; iron, 6,869,329; canvass and coarse linen, 7,521,786; bristles, 5,316,052; hides, 2,618,100; Russia leather, 1,246,207; and potashes, 2,134,660. During the same year the imports amounted to 180,913,930 roubles; the principal articles being, cotton yarn (almost entirely from England), 48,418,476; raw cotton, 5,262,880; raw sugar (principally from Havanah), 37,343,544; coffee, 4,316,996; silks, 5,420,632; woollens, 6,174,868; cotton stuffs, 3,344,434; wine, 8,879,765; and gold and silver, 2,948,450 roubles. The customs' duties during the same year amounted to 48,968,790 roubles.

This great trade is principally conducted by foreigners, especially the English. Cronstadt, 20 m. lower down the gulf, is properly the port of Petersburg. All ships drawing more than 8 or 9 feet water stop at the former, their cargoes being conveyed to and from the city by means of lighters. Hence Cronstadt is included in the Petersburg custom-house, and vessels clear indifferently for the one or the other. The number of vessels entering the port varies from 1000 to 1600 a year, of which the English are by far the most numerous. The arrivals in 1836 were 1105 ships, of the burden of 108,613½ lasts. The Russians have few native ships. A commercial bank was established here in 1818. (For farther details as to commerce, &c., see Russia.)

In most large towns females predominate over males; but it is quite otherwise in this capital: of 451,974 individuals, composing the population in 1836, 330,564 were males, and only 121,410 females! This extraordinary discrepancy is accounted for, partly by the great number of soldiers in the city, very few of whom are married, partly by the great number of unmarried male domestics in great houses, and partly by the fact that the wives and families of many of the peasants are established in the districts of the country to which they belong. Deducting military and strangers, the permanent population of the city does not exceed 370,000 or 380,000.

In 1832 there were 2185 marriages, 10,167 births, and 16,262 deaths. The city is not unhealthy. In 1830, of 8348 deaths, of individuals belonging to the Greek church, 3314 were occasioned by colic, 2037 by fever, 1152 by phthisis, 359 by diarrhoea, 376 by dropsy, and 293 died suddenly.

Suicides are rare, but accidental drowning is not uncommon.

Though well situated for commerce, the position of the city is, in most other respects, far from good. The ground on which it stands is low and swampy, and the surrounding country partakes of the same character, and is covered with forests. No one less bold and enterprising than Peter the Great would have dreamed of building a large city in such a situation, and no one with less gigantic means at his disposal would have been able to carry such a project into effect. But no art can ever overcome the defects inherent in its situation. The climate is severe, foggy, wet, and variable in an unusual degree. The sub-soil is so very porous and saturated with water, that it is hardly possible to excavate a cellar any where in the city, and there is the greatest difficulty in constructing sewers to carry off filth and other impurities. But the great drawback on Petersburg consists in its little elevation above the level of the sea and the river, and its consequent exposure to the most dreadful inundations. These are generally occasioned by a W. or S.W. wind, accumulating the water of the gulf at the mouth of the river, and preventing the free exit of the latter. The years 1726, 1752, 1777, and 1824 have been particularly distinguished by these inundations. The last of these visitations was the most appalling and destructive. The whole city was laid under water; above 8000 individuals perished, and property to a vast amount was destroyed.

The amusements of Petersburg are modified by the religion and the climate. There are four theatres, and plays are acted in Russian, German, French, and sometimes English. The actors are all paid by government, and do not, in any degree, depend on their audiences. The personnel of the theatres, in 1836, amounted to 1126 individuals. During winter the national amusements are sledge-driving and sliding down artificial elevations, similar to those called in Paris the *Montagnes Russes*. All classes use the vapour bath: in 1836 the public and private baths in the city were estimated at 350. During the same year there were open 18 public markets, 2517 shops attached to houses, 118 *magazins de modes*, 5 great magazines for merchandise, 40 live-bonts for the sale of live fish, 53 eating-houses, 29 furnished hotels, 37 coffee-houses, 36 confectioners, 46 *restaurants*, 59 do. for the lower classes, 308 wine-merchants, 98 taverns, 5 spirit magazines, 70 dépôts for the sale of spirits, 197 bake-houses, 247 forges, &c. (For further particulars as to the climate, manners, and classes of the people, police, &c., see Russia.)

The country in the vicinity of Petersburg being flat and marshy, presents few rural beauties. The imperial family have country residences at Oranienbaum, on the gulf of Finland, Rammanoi, Ostefo, Peterhof, Czarkoselo, &c. Czarkoselo, situated on the Neva, about 16 m. from Petersburg, is an exception to the general rule, inasmuch as it stands on an eminence rising 220 ft. above the river; Paulosk, in the vicinity of Czarkoselo, is also considerably elevated.

The palace of Czarkoselo is reckoned the finest summer residence belonging to the Russian monarchs. The town, though small, is handsome and improving. It has a lyceum, with 14 professors, a forest school, and is the capital of a circle. Paulosk has also a pretty little town dependent on it. These have been, for some time past, favourite resorts of the citizens of Petersburg; and the presumption is that they will be more resorted to now than ever, a railroad, the first work of the kind constructed in the empire, having been opened between them and the capital.

We have consulted in drawing up this article the *Travels of Coxe*, the *Voyage de Deux Français dans le Nord de l'Europe* (an accurate and valuable work), *Storch's Picture of Petersburg*, &c.; but we are principally indebted to the excellent account of the city in Schnitzler's work *La Russie, La Pologne*, &c., p. 187-301, and the official accounts published by the Russian government.

PETERSBURG, p. t., Rensselaer co., N. Y., 26 E. Albany, 392 W. Watered by Little Hoosie creek. It contains five stores, one grist-mill, five saw-mills, one oil-mill, two tanneries; 13 schools, 627 scholars. Pop. 1901.

PETERSBURG, p. t., port of entry, Dinwiddie co., Va., 23 S. by E. Richmond, 140 W. Situated in 37° 13' 54" N. lat., and 77° 20' W. long. Population in 1830, 8322; in 1840, 11,136. It is on the S. bank of Appomattox river, 12 m. above its entrance into James river, at City Point. The falls of the river here afford extensive water-power, and there is a canal around them for the purpose of navigation. Vessels of 100 tons come to this place. The borough contains besides Petersburg, the villages of Blandford, in Prince George county, and Pocahontas in Chesterfield county. It has a courthouse, jail, a masonic hall, two banks, an insurance office, seven churches, a Presbyterian, Methodist, Baptist, Episcopal, and two African, six commercial and eight commission houses in foreign trade, with a capital of \$575,000; 121 retail stores, capital \$1,026,250; two lumber yards, capi-

## PETERSFIELD.

tal \$6,000; one furnace, six forges, one woollen factory, six cotton factories with 10,000 spindles, two flouring mills, one grist mill, two saw-mills, two rope-walks, one pottery, two printing-offices, one semi-weekly newspaper; total capital in manufactures, \$726,555; eight academies, 386 students, seven schools, 125 scholars. In July 1815, a disastrous fire destroyed 400 buildings, and property to the amount of about \$2,000,000. The place has been rebuilt with brick, in an improved form. It exports extensively flour, tobacco, and cotton. Vessels requiring more than seven feet of water, discharge and receive their cargoes at City Point, at the mouth of Appomattox river, at its entrance into James river.

PETERSBURG, p. v., capital of Pike co., Ia., 138 S.W. Indianapolis, 677 W. Situated one mile S. of White river, and three miles below the junction of its E. and W. branches. It is on elevated ground, and contains a courthouse, jail, six stores, and about 400 inhabitants.

PETERSBURG, p. v., capital of Menard co., Ill., 21 N.W. Springfield, 801 W. Situated on the W. side of Sangamon river, and contains a courthouse, jail, six stores, one steam saw-mill and grist mill, and about 30 dwellings.

PETERSFIELD, a parl. bor., market town and parish of England, co. Southampton, and hund. Finch-dean, near the Loddon, 15 m. N.N.E. Portsmouth. Pop. of parl. borough (which includes with the old bor. the tithing of Sheet, the several pars. of Buriton, Lyp, and Froxfield, three tithings belonging to the parish of East Meon and the parish of Steep, with the exception of two tithings), in 1831, 4391; ditto, of town, 1495. It is a small, clean, country-town, its principal street crossing the Portsmouth and London road, nearly at right angles. The church is a large brick structure, with a low, square tower: the living is a curacy subordinate to the rectory of Buriton. Near the church is an equestrian statue in bronze of William III., erected at the expense of the late W. Jolliffe, Esq., the father of the present lord of the manor; but it has a shabby appearance, and is any thing but an ornament. The Wesleyan Methodists and Baptists have their respective places of worship, with attached Sunday schools. The endowed charity school, called Churcher's college, was founded in 1722, and furnishes clothing and food, with general and mathematical instruction, to 10 or 12 boys. "Petersfield has but little trade, and any consequence which it possesses arises entirely from its position on the high road between London and Portsmouth," an advantage, however, which it will not enjoy after the completion of the Portsmouth branch of the south-western railway. (*Parl. Bound. Rep.*) The borough was incorporated in the reign of Elizabeth, and is governed by a titular mayor and common council, chosen annually at the court-leet of the lord of the manor. It returned two members to the house of congress, from the reign of Edward I. down to the Reform Act, the right of election being in the freeholders in general within the borough, though, in point of fact, it had been for many years a close borough, belonging to the lord of the manor. The Reform act deprived it of one of its members, and the Boundary act enlarged the electoral limits, so as to include with the old bor. the additional pars. and tithings mentioned above. Registered electors in 1839-40, 343. It is also one of the polling-places at elections for the N. division of Hampshire. Markets on Saturday, and fortnightly cattle fairs on alternate Wednesdays; other fairs March 5, July 10, and Dec. 11, for sheep and horses.

PETERSHAM, p. l., Worcester co., Mass., 64 W. by N. Boston, 462 W. Swift river affords water-power. Incorporated in 1754. It contains three churches, two Congregational and a Baptist, three stores, two grist-mills, seven saw-mills, two tanneries; 13 schools, 328 scholars. Pop. 1775.

PETTIS', co., Mo. Situated toward the W. part of the state, and contains 600 sq. m. Watered by La Mine river and its branches. It contained in 1840, 4821 neat cattle, 2551 sheep, 12,068 swine; and produced 6579 bushels of wheat, 162,145 of Indian corn, 38,640 of oats, 6390 of potatoes, 11,475 pounds of tobacco. It had five stores, five grist-mills, three saw-mills, five distilleries. Pop.: whites, 2377; slaves, 552; free coloured, 1; total, 2930. Capital, Georgetown.

PETERWARDEIN, or PETER-VÁRA, the cap. town of the Slavonian military frontier, and one of the strongest fortresses in the Austrian empire, on a scarped rock, on the S. bank of the Danube, opposite Neusatz, 46 m. N.W. Belgrade. Pop., with its suburbs, about 4500, exclusive of its garrison, which is usually about 3000 strong, though there are barracks adapted for 10,000. Peterwardein has several churches, schools, &c., and communicates with Neusatz by a bridge of boats defended by a strong *tête de pont*. It is the residence of the general commandant of the Slavonian military frontier and several subordinate military authorities. It is supposed to occupy the site of the ancient *Scutminum*, and derives its present name from Peter the Her-

## PHILADELPHIA.

mit, who marshalled here the soldiers of the first crusade. (*Anst. Nat. Encyc.: Berghaus; Slade; Paget, &c.*)

PETHERTON, NORTH, a market-town and parish of England, co. Somerset, hund. its own name,  $\frac{7}{8}$  m. N.E. Taunton. Area of parish, 11,080 acres. Pop. in 1841, 3759. The town consists of one long street, in which are many well-built houses and a spacious market-place. The principal buildings are, the parish church, a handsome edifice, a chapel-of-ease, and an endowed school for 20 boys. The inhabitants are chiefly employed in retail trade and agriculture. A large corn-market was formerly held here; but it has long since declined in favour of that held at Bridgewater. Fairs, May 1, and the Monday before November 13.

PETWORTH, a market-town and parish of England, rape of Arundel, co. Sussex, hund. Rotherbridge, on the Arun, 13 m. N.N.E. Chichester, and 42 m. S.W. London. Area of parish, 6140 acres: pop., in 1841, 3364. The streets are very irregular, but there are many well-built and some handsome houses, besides a fine market and sessions-house near the centre of the town. The church, a neat stone edifice recently enlarged, has a square tower: the living is a rectory in the gift of the Earl of Egremont, the lord of the manor. The Wesleyan Methodists and Independents have also their respective places of worship, and there are various Sunday schools and a national school. Here are almshouses, a hospital, and a house of correction on the plan of Howard. A considerable retail trade is carried on for the supply of the neighbouring gentry; but most of the inhabitants are engaged in agriculture. The Epiphany and Easter quarter-sessions for the W. division of Sussex are held here, and petty sessions on alternate Saturdays. Petworth is one of the polling-places at elections for the W. division of the county. Markets on Saturday; fairs, Holy Thursday, July 29, and Oct. 2.

Close to the town is Petworth house, the seat of the Earl of Egremont, which, both for the elegance of its exterior and the sumptuousness of its internal fittings, may vie with the finest mansions of the English nobility: the park, which is enclosed by a wall, 12 m. in circumference, is beautifully laid out, and commands many picturesque as well as extensive views.

PEZENAS, (an. *Piscena*), a town of France, dép. Hérault, cap. cant., near the junction of the Hérault and Peine, 24 m. W.S.W. Montpellier. Pop., in 1836, 7,490. It is finely situated, and its old-castle commands a magnificent prospect. Several of its streets are wide and lined with good houses. It has a handsome parish church, and had formerly many conventual churches; but one of these has been converted into a distillery, another into an hotel, and a third into a theatre! Pezenas is the seat of a tribunal and chamber of commerce, and a comm. col. It has manufactures of woollens, cotton stuffs and yarn, linens, &c. But it is principally celebrated for the great fair, held here in September, which is attended by dealers from all parts of the S. of France. A great deal of business is then transacted in wool, woollens, cottons, and other fabrics. (*Hugo, art. Hérault, &c.*)

PHELPS, p. l., Ontario co., N. Y. 15 E. Canandaigua, 185 W. Albany, 350 W. Watered by Canandaigua outlet and Flint creek. Gypsum abounds in the vicinity. It contains 18 stores, 3 fulling mills, 8 flouring mills, 4 grist-mills, 11 saw-mills, 5 distilleries, 1 printing-office, 1 weekly newspaper; 2 academies, 90 students, 30 schools, 1416 scholars. Pop. 5563.

PHILADELPHIA, co., Pa. Situated in the S.E. part of the state, and contains 120 sq. m. Bounded E. by Delaware river. Watered by Schuylkill river, and Pennypack, Poquessing, Frankford, and Darby creeks. These streams, especially the Schuylkill, afford good water-power. It has five colleges, 737 students; 130 academies, 8897 students; 248 schools, 16,212 scholars. Pop. 258,037. For the other statistics, see Philadelphia city, its capital.

PHILADELPHIA, the largest city of Pennsylvania, and, next to New York, the largest city in the United States, is situated in lat.  $39^{\circ} 57' 9''$  N., long.  $75^{\circ} 10' 37''$  W., and  $10^{\circ} 50' 47''$  W. long. from Washington, as taken at the High School observatory. It is 300 m. S.W. Boston, 86 m. S.W. New-York, 97 m. N.E. Baltimore, 98 m. E. by S. Harrisburg, 138 N.E. Washington. The population in 1800 was 70,287; in 1810, 96,287; in 1820, 119,325; in 1830, 167,325; in 1840, 228,691. Of these, in 1840, 693 were engaged in agriculture, 7912 in commerce, 24,900 in manufactures and trades, 1403 in navigating the ocean; ditto rivers and canals, 395; in the learned professions, 1553.

The city is situated between the Delaware and Schuylkill rivers, extending from the one to the other, 5 m. above their junction. The distance between the two rivers, on Market-street, is about 2 m.; but, as the rivers curve toward each other, the distance between them is something more, above and below this point. It is 120 m. distant from the ocean by the course of the river, and about 55 m. in a

## PHILADELPHIA.

direct line S.E. Its name is derived from that of a city in Asia Minor; and the Greek words of which it is compounded signify "brotherly love," a name which accorded well with the pacific principles of William Penn, its founder. According to the original design of the proprietary, it would have covered an area of more than 12 sq. m.; but, by its charter of 1701, it was contracted to the limits of Delaware river on the E., Schuylkill river on the W., Vine-street on the N., and Cedar-street on the S., the present limits of the city proper. But there are five adjoining districts which properly belong to Philadelphia, though they have incorporations and municipal authorities entirely distinct from the city proper, and from each other. They are the Northern Liberties, Kensington, and Spring Garden on the N., and Southwark and Moyamensing on the S. All these are included in the above account of the population. In 1840 the city proper had 93,665 inhabitants. The district of the *Northern Liberties* was incorporated in 1803, and the act was amended in 1819. It is governed by 21 commissioners, elected for three years, one third of them being chosen annually. The municipal officers are chosen by the commissioners, but no commissioner can be appointed to any office to which a compensation is attached. *Spring Garden* lies W. of the Northern Liberties, was incorporated in 1813, and is governed by 15 commissioners, who serve for three years, five members being elected annually. The district of *Southwark* was incorporated in 1794, and is governed by 15 commissioners, who serve for three years, five being elected annually. *Moyamensing* was incorporated in 1812, and is governed by nine commissioners, elected for three years, three of them being elected annually.

The city is built on a plain, slightly ascending from each river, the highest point of which is elevated 64 feet above high water mark in the river. The streets of the city vary from 50 to 120 feet in width: originally the city proper consisted of nine streets running E. and W., from the Delaware to the Schuylkill, and 25 running N. and S., from Vine to Cedar streets. Numerous small streets, alleys, and courts, or streets which run partially across a block, divide the different squares. The whole number of streets in the city and adjoining districts is about 1280. High or Market street, which runs from river to river, a little N. of the middle of the city proper, is 100 feet wide; and Broad-street, which crosses it at right angles, a little W. of the middle, is 130 feet wide: Front-street, on both rivers, is 60 feet wide; Arch-street is 66 feet wide; and most of the other streets are 50 feet wide. The city was originally laid out with uncommon regularity, all the streets crossing each other at right angles, which is still the case, with the exception of Dock-street, which is crooked, occupying the site of a former navigable creek, that is now obliterated, having been arched over. The adjoining districts, though tolerably regular, have not the same regularity in their arrangement as the city proper; nor does the whole connect in one consistent and uniform plan. While the city proper had very little variety of surface, above this on the Delaware, and above and below on the Schuylkill, there are many situations with commanding prospects, and much varied scenery. The carriage-ways in the streets are paved with rounded pebbles, bedded in gravel, forming a dry and durable, but somewhat rough, surface. Paving with wooden blocks has been tried as an experiment; but, though pleasing to the eye and agreeable to the traveller when first laid, these pavements have been found here, as in New-York, to decay so rapidly as to lead to the abandonment of the plan. Chestnut-street, from Fourth to Sixth streets, has been recently paved with square blocks of stone, which, though expensive at first, possess smoothness and durability, and promise to be superior to any other mode yet tried. The side-walks are almost universally paved with bricks, but in a few instances with smooth, well-dressed flagging stones. The city is drained by common sewers, which are arched culverts of brick-work, constructed under most of the main streets. The densely-built parts of the city and districts have an outline of about  $\frac{3}{4}$  m., and its length on the Delaware is  $\frac{4}{5}$  m.

The dwellings are chiefly of brick, and the style of architecture is plain and neat, rather than showy and ornamental. White marble, which abounds in this vicinity, is generally used for door-steps, window-sills, &c., and the basement story in front is faced with this material. A number of the public edifices present an entire exterior of marble, which is obtained, of a fine quality, from the quarries in the adjacent counties of Montgomery and Chester, which have contributed much to the embellishment of the city.

Philadelphia was provided with many public squares, through the wise forecast of its founder. In the original plan a public square in the centre was designed to contain 10 acres, and one in each quarter of the city to contain eight acres; and the space between Front street and Delaware river was designed to be left open. Although these designs were not fully carried out, yet there are many pub-

lic squares, which are finely ornamented, though none of them are very large. Penn-square, at the intersection of Market and Broad streets, near the centre of the city, was designed by the proprietor to be surrounded by the public buildings; but in early times it was too far removed from the centre of population, and hence Independence-square was procured. Penn-square, however, before the removal of the water-works to Fairmount, was the most ornamental spot in the city. It was laid out in the form of a circle, had a neat marble temple in the centre, containing the steam engine for raising the water of the Schuylkill, had an elegant fountain with a beautiful piece of statuary, and was handsomely laid out with walks and shaded by trees. But its ornaments have all been removed, and it is now divided into four parts by running Market and Broad streets through it, which have added to the convenience of the city, but destroyed the beauty of this public ground. Independence-square is between Chestnut and Walnut streets, and Fifth and Sixth streets. It is surrounded by a solid brick wall, 3 or 4 feet high above the adjacent streets, surmounted by an iron railing. It is laid out with walks and grass-plots, and shaded by majestic trees. It is in the rear of the old state-house or Independence hall, a venerable building, which deserves to be denominated the cradle of American Independence, as Faneuil hall in Boston is called the cradle of American Liberty. In this building the "declaration of independence" was adopted, and from its steps it was read to the multitude assembled in this square to hear it; and it is still a place where public meetings are held when the audience is too large to be accommodated in the hall. It is an inviting spot on its own account, as well as from its associations. The northern part of this ground was purchased, and the state-house erected, in 1735; the southern part, fronting on Walnut-street, was purchased in 1760. Washington-square, between Walnut, Locust, Sixth, and Washington streets, is a little S.W. of Independence-square, and is one of the most handsome and frequented public grounds in the city. It is finely ornamented with walks, trees, and shrubbery, and surrounded by a handsome iron railing. For many years it constituted the Potter's fields, a place of burial for the poor and for strangers. When the yellow fever prevailed in the city, many interments took place here. About the year 1795 it was closed by the city authorities against future interments, and about 1815 it was regulated as a public square, laid out with walks, planted with trees, and made to put on its present attractive appearance. It is in contemplation to erect a monument to Washington in the centre of this square, of which the corner stone was laid in 1833. Franklin-square, between Race, Vine, Sixth, and Franklin streets, in 632 feet long by 550 feet broad, handsomely embellished, and has a splendid fountain in its centre, surrounded by a marble basin. A part of it was formerly used as a cemetery by the German society. It is now an attractive public promenade. Logan-square, between Race and Vine streets, and Rittenhouse-square, between Walnut and Locust streets, both on Schuylkill Fifth-street, are enclosed and planted with trees, and promise to become attractive public grounds, and a resort of the inhabitants of the western part of the city.

Among the public buildings, the old state-house, now called Independence hall, deserves, from its historical associations and venerable appearance, the first place in the enumeration. It fronts on Chestnut-street, having, as already mentioned, Independence-square in its rear. It was begun in 1729, and finished in 1735. The wings, extending from the main building to Fifth and Sixth streets, are of modern construction. The wood work of the steeple of the main building was so much decayed in 1774, that it was taken down, leaving only a small belfry to cover the bell for the use of the town clock. The bell for the first steeple was imported from England in 1752, but was broken by accident when first hung up. A new one was cast in Philadelphia, under the direction of Isaac Norris, then speaker of the colonial assembly, who caused to be inscribed on it: a passage from Leviticus xxv. 10, as if prophetic of its future use, "Proclaim LIBERTY throughout this land, unto all the inhabitants thereof." Accordingly, its joyous tones rang loud and clear to proclaim to anxious thousands the declaration of American Independence. The chamber in which the declaration was signed is on the first floor, at the eastern end of the centre or original building. Some years since the wood-work of the interior was removed, to give place to more modern decorations. But, with great good taste, the people demanded its restoration; and it now presents the same appearance that it did when it contained that venerable body whom William Pitt, the friend of America, pronounced, in the British parliament, to be the most distinguished for wisdom of any body of men of whom he had read, in ancient or modern times. In 1828 the present steeple was erected, to correspond, as nearly as possible, to the original structure. A statue of Washington in Independence hall, carved in wood, by Rush, is said to be an excel-

## PHILADELPHIA.

lent likeness, and several fine paintings adorn this venerable room. The west room is occupied by the mayor's court, and the second story by the district and circuit courts of the United States. Until time shall destroy them, it is hoped that it will be regarded as sacrilege to alter materially this building or Faneuil hall at Boston. They are noble monuments of revolutionary times and characters. In the steeple is an excellent clock, with a ground glass dial-plate, capable of being illuminated by night, and a heavy bell to give alarm in cases of fire. A watchman, stationed in the steeple, indicates, by the number of strokes, the district in which the fire takes place. The old bell, an interesting relic, is carefully preserved in the cupola. On each side of the state-house are two wings, occupied as offices for the law courts, and depositories for the records and documents in relation to the county of Philadelphia. The United States bank is a chaste specimen of the Grecian Doric architecture, in imitation of the Parthenon at Athens, with the omission of the colonnades on the sides. It is 87 feet in front by 161 feet deep, with marble steps ascending to the portico, which consists of eight columns, 4 feet 6 inches in diameter, supporting a plain entablature and pediment. The large banking room in the centre of the building is 81 feet long and 48 feet wide, richly ornamented with fluted Ionic columns and sculptured embellishments. The whole interior arrangements are admirably adapted to its purpose: it was commenced in 1819, and completed in 1824, at a cost of about \$500,000. The bank of Pennsylvania is a beautiful edifice, of white marble, and is a fine specimen of Grecian architecture. It has a portico on each front, of six Ionic columns, supporting entablatures and pediments. It is 121 feet long and 21 feet wide; and has an enclosure neatly ornamented with plants and shrubbery, surrounded by an iron railing. The Girard bank was purchased of the old bank of the United States, by Stephen Girard, Esq., and used by him as a banking house. It has a marble front, with the sides and rear of the building of brick, and is enriched by a portico of six Corinthian columns. Several other banking houses are spacious and handsome buildings, but of a plainer style of architecture. The Merchants' exchange is a splendid building, erected on the triangular space between Third, Walnut, and Dock streets, in the centre of commercial and financial transactions. The eastern front, on Dock-street, presents a semicircular piazza, supported by six Corinthian columns, on a basement about 12 feet high, presenting a beautiful appearance, and producing an imposing effect. In the basement are insurance and brokers' offices. The first floor is divided into several apartments; that on the eastern side is devoted to the use of the subscribers, who assemble during the business hours of the day. The rotunda has four appropriate columns, and adjoining it is a spacious reading room, well furnished with the current literature of the day. Some of the churches deserve attention on account of their architecture. St. Stephen's Episcopal church is a fine specimen of Gothic architecture, on Tenth-street, between Market and Chestnut streets. It is 102 feet long and 50 feet wide, and on its front corners has two octagonal towers, 66 feet high. The upper parts of the windows are embellished with cherubins, in white glass on a blue ground; and the sashes are filled with diamond-shaped glass of various colours, ornamented in the same manner. St. John's Roman Catholic church is an elegant Gothic structure, situated on Thirteenth-street, between Chestnut and Market streets, with square towers on each of its front corners. The windows are composed of stained glass, and the interior is decorated with several appropriate pictures. The first Presbyterian church, fronting on the S. side of Washington-square, is the most elegant Presbyterian church in the city. It is after the model of a temple on the Ilissus, near Athens, and is of the Ionic order of Grecian architecture, having a portico of six Ionic columns in front. The walls are of brick, covered with mortar, and painted to resemble marble. It is surmounted by a neat cupola. The fifth Presbyterian church, on Arch-street, above Tenth-street, deserves to be mentioned, on account of the beauty of its architecture. Among the buildings of Philadelphia distinguished for their architecture, the Girard college deserves a particular description. It was founded by the bequest of the late Stephen Girard, of \$2,000,000, and a farther sum, if necessary, for the erection of the buildings and the education of orphan children, for whose exclusive use it was designed. This immense sum would have been sufficient to found and endow a most splendid college. Over \$1,000,000 have already been expended upon the buildings alone, and a farther sum will be required to complete them; and it is questionable whether these splendid preparations are necessary to promote the object in view. Less expensive buildings would be better calculated to teach the orphans economy, to say nothing more. The Girard college, being on high ground, occupies a commanding position, about a mile N.W. of the limits of the city proper. The lot on which it stands contains about 45 acres of ground,

bequeathed for the purpose by the founder of the institution. The college buildings consist of a centre building, to be exclusively devoted to the purposes of education, and four other buildings, two on each side, for the residence and accommodation of the professors, teachers, and students. The centre building is one of the most splendid edifices in the United States. It is 218 feet long from N. to S., and 160 feet wide from E. to W. It is surrounded by 34 columns of the Corinthian order, with beautiful capitals, supporting an entablature. Each column, including its capital and base, is 55 feet high and 6 feet in diameter, having a base 3 feet high and 9 feet in diameter, and leaving a space of 15 feet between the columns and the body of the building. At each end is a door or entrance, 16 feet wide and 32 feet high, decorated with massive architraves, surmounted by a sculptured cornice. Each of these doors opens into a vestibule 26 feet wide and 48 feet long, the ceiling of which is supported by eight marble columns. In the second story, over these vestibules, are lobbies of similar dimensions, having their ceilings supported by Corinthian columns. In each corner of the building are marble stair-ways, lighted from the roof. On each floor are four rooms, each 50 feet square, and the third is lighted by a sky-light, which does not rise above the roof. No wood is used in the construction of the building, excepting for the doors, so that it is entirely incombustible. The building is warmed by furnaces built in the cellar, with flues in the interior walls. The remaining four buildings, two on each side of the main building, are each 52 feet wide by 125 feet long, and two stories high above the basement. The most eastern of these is divided so as to constitute four distinct houses for the professors. The other buildings are devoted to the residence and accommodation of the pupils.

The benevolent and charitable institutions are very numerous. One of the oldest and most respectable of these is the Pennsylvania hospital. It was founded chiefly by the exertions of Dr. Franklin and Dr. Bond, in 1750. It has received, besides, individual grants, and donations from the legislature, until its endowment is ample. The building, grounds, and garden occupy the entire square between Eighth, Ninth, Spruce, and Pine streets. The principal front is on Pine-street, and consists of a centre building and two wings. The E. wing was erected in 1755, the W. wing in 1796, and the centre building in 1804. Between the street and the building is a handsome area planted with lofty trees, and laid out in grass-plots, in the centre of which is a colossal statue of William Penn, bronzed. In the rear of the lot, fronting on Spruce-street, is a small neat edifice, erected for the purpose of containing the picture, by West, of Christ healing the sick, presented to the institution by its author, the exhibition of which adds something to the funds of the institution. This spacious building affords accommodation to indigent patients as well as to those who pay. It contains a fine anatomical museum, and a valuable library of books, and is eminently useful to the numerous medical students in the city. From its roof a fine view of the city and its environs is obtained. The Insane asylum is a branch of the Pennsylvania hospital, about 2 m. W. of the Schuylkill, and is surrounded by 111 acres of ground, 41 of which are enclosed by a substantial wall, and laid out in pleasure-grounds for the patients. The building has a front of 236 feet, is two stories high above the basement, and contains 204 rooms for the patients and their attendants. The United States Marine hospital or Naval asylum has an extensive and elegant building on the E. bank of the Schuylkill, below Cedar-street. It is intended for invalid seamen, and officers disabled in the service. It has a front of 386 feet, is built of white marble, having a centre building 146 feet in front and 175 feet deep, and two extensive wings. The centre building has a fine Ionic portico of eight columns, projecting in front and rear beyond the wings, which have balconies extending their whole length, and resting on iron pillars. The basement contains a large refectory with cooking apparatus. The whole building can lodge about 400 persons, and is partly occupied by a naval school. The almshouse is on the W. side of Schuylkill river, opposite to Cedar-street, and extends its benefits to the poor of the city and the adjoining districts of Southwark, Northern Liberties, Kensington, Spring Garden, and Penn township; the other districts of the county provide for their own poor. The edifice is an immense structure, consisting of four main buildings in the form of a parallelogram, covering and enclosing an area of 10 acres of ground. The front, on Schuylkill river, presents a handsome appearance: the main building has a portico of eight massive pillars 30 feet in height, and, the site being elevated above the sloping bank of the river, presents a fine view of the city and the adjacent country. It contains workshops for such of the inmates as are capable of employment, furnished with a steam engine for propelling machinery. The average number of paupers maintained in this establishment for the year ending May 16th, 1842, was 1546, of whom

## PHILADELPHIA.

750 were men, 630 women, and 157 children. The number is augmented on the approach of winter, and diminished on the return of spring. The tax assessed for its support in 1842, amounted to \$184,004. The Pennsylvania institution for the deaf and dumb is at the corner of Broad and Pine streets, having extensive buildings adapted to the purposes of the establishment. The system of instruction is similar to that of Abbe de L'Epée and Abbe Sicard of Paris. In addition to literary and moral instruction, the pupils are taught some mechanical trade, by which they may be able to provide for themselves in after-life. Most of them are supported by funds derived from the state; some of them by the states of Maryland and New-Jersey; and some by their friends or the institution. The Pennsylvania institution for the instruction of the blind is situated in Race-street, near Schuylkill Third-street. The main edifice is built of brick, stuccoed to imitate marble, and occupies a lot 247 feet on Race-street and 220 feet on Third-street. In front the ground is decorated with flower gardens, and in the rear are play grounds. A commodious building is erected for workshops, and the pursuit of such trades as are carried on by the pupils. They are taught not only reading, writing, arithmetic, geography, and music, but also to manufacture a great variety of useful and ornamental articles. Among the other charitable institutions may be mentioned the orphans' asylum, the asylum for indigent widows and single women, Wills' hospital for the lame and blind, Preston retreat, the Magdalen asylum, Foster home, shelter for coloured orphans, institute for coloured youth, St. John's and St. Joseph's orphan asylum, Christ church hospital, Friends' almshouse, Friends' lunatic asylum near Frankford, Philadelphia northern and southern dispensaries, for the supply of medicine to the poor; house of industry, union benevolent association, fuel savings' society, seaman's friend society, humane society, society for alleviating the miseries of public prisons, and many others. There are societies for the relief of distressed emigrants from foreign countries, and a great number of mutual relief societies, and other associations for benevolent purposes. Indeed Philadelphia is distinguished among its sister cities for a provision for the relief of the varied forms of human suffering. Temperance societies are numerous, exercising a happy influence on the community, and contributing to dry up this great source of misery and crime.

Among the literary institutions, the university of Pennsylvania is one of the oldest and most considerable. It was founded as a charity school in 1751, chartered and endowed in 1753, erected into a college in 1755, and into a university in 1779. It comprises three departments, the academical, the collegiate, and the medical. The usual course in the collegiate department occupies a term of four years, in which instruction is given in the usual branches taught in the colleges and universities in the United States, and the usual degrees are conferred. The medical school connected with the university is the oldest and most flourishing in the country, having usually from 400 to 500 students, and from 1791 to 1830 it had 3320 graduates. It has an extensive anatomical museum and cabinet of natural history, and an excellent chemical and philosophical apparatus. Three charity schools, two male and one female, are supported by the funds of the university. The university buildings are in Ninth street, between Market and Chestnut streets. They consist of two handsome edifices 85 feet front by 112 feet deep, surrounded by an open area, separated from the street by an iron railing. Jefferson medical college was founded in 1825, and is a flourishing institution, having usually about 200 students. It was formerly connected with the college of Cannonsburg, but is now an independent institution. Its hall is in Tenth-street, between Walnut and Chestnut streets, and has ample accommodations for lectures, and anatomical demonstrations, with a museum of preparations in the branches of science connected with medical studies. Pennsylvania medical college is connected with Pennsylvania college at Gettysburg, was founded in 1839, and empowered to confer degrees. It is located in Filbert-street above Twelfth-street, and is a young and flourishing institution. But the most interesting portion of the literary institutions of Philadelphia is its public schools. By a law passed in 1818, the city and county of Philadelphia were erected into a separate district, denominated the First School district of Pennsylvania. The schools have been divided into eleven sections, most of which are in the city proper, and the incorporated districts. At the head of them stands the High school, and a model school, and the arrangement of the whole is thought to constitute one of the most perfect systems of school education to be found in any country. More than 33,000 children, or three fifths of the whole population between the ages of 5 and 15, attend the public schools, and the applications for admittance are more than can be received. The number of schools in the district is 214, of which one is the High school, 40 are grammar schools, 18 secondary, 76 primary schools, and 80 in the outer sections

not classified. The number of teachers, including the professors of the High school, is 499, of whom 87 are males, and 412 females; and the number of pupils in all the schools was, in 1843, 33,130, which is 5222 more than in 1842. The whole expenses of the board of the district, for all purposes excepting the erection and fitting up of school-houses, including tuition, fuel, books, stationery, &c., was \$192,511 per annum, making an average to each scholar, including the pupils of the High school, the sum of \$5 81 cents. As some of these schools are without the city and incorporated districts, the following, from the report of 1842, will show the proportion. In the city and incorporated districts there were 62 primary schools, with 9342 pupils; 11 secondary schools, with 2397 pupils; 19 grammar schools, with 8445 pupils; and one high school, with 307 pupils. In the outer sections of the district there were 92 schools, with 6347 pupils. The whole were accommodated in 24 substantial school-houses, generally three stories high, and capable of accommodating from 600 to 1000 scholars each, worth, with the lots on which they stand, \$540,000, and the value of school furniture, libraries, &c., was \$40,000. The High school, from the number and ability of its professors, and the extent and duration of its course of studies, deserves to be denominated the people's college. It has a principal and 10 professors, a professor of belles-lettres, of ancient languages, of modern languages, of theoretical mathematics, of practical mathematics, of natural history, of natural philosophy, of chemistry, of mental, moral, and political science, and of graphics. Attached to the High school, is an astronomical observatory, furnished with fine instruments; and for practical astronomy, it ranks high among the literary institutions of the country. The first or English course in this institution occupies two years; the second or principal course four years; and the classical course four years.

Among the literary and scientific institutions is the American philosophical society. It was founded in 1743, principally through the exertions of Dr. Franklin, by the union of two previous societies. It has had among its members many distinguished men in the United States and in Europe. Its hall is in South Fifth-street, below Chestnut-street. It has a library of 15,000 volumes of rare books, and a collection of minerals, fossils, and ancient relics. It has published several volumes of its transactions. The Franklin institute was incorporated in 1824 for the promotion of manufactures and the mechanic and useful arts, by popular lectures, and the formation of a cabinet of models, minerals, and a library. It has over 2000 members, a library of about 3000 volumes, and an extensive reading room. The Academy of Natural Sciences occupies a spacious building in Broad-street, between Chestnut and Walnut streets, has a library of 9000 volumes of valuable books, and a cabinet of natural science. The Pennsylvania Academy of Fine Arts was founded in 1805, and in Chestnut-street above Tenth-street, has an extensive collection of paintings, statues, and other works of art, always open to students, and exhibited to visitors. The Artists' Fund society has its hall in Chestnut-street, in front of the Academy of Fine Arts, and exhibits its productions for the benefit of decayed artists. The Philadelphia library was founded in 1731 by the influence of Dr. Franklin, containing upwards of 30,000 volumes of books on almost every branch of knowledge. To this has been added the Legonian library of 11,000 volumes, of rare and valuable books, mostly classical. The Athenaeum was incorporated in 1815, and contains the periodical journals of the day, and a library of several thousand volumes. The Mercantile library was established in 1822, and has a collection of about 8000 volumes, chiefly relating to commerce, and its kindred subjects. It sustains popular lectures on commerce, commercial law, the arts and sciences, and general literature. The Apprentices' library was instituted in 1819 by voluntary contribution from the citizens, and contains about 14,000 volumes, read by about 1300 young persons of both sexes. The literary, scientific, and benevolent institutions of Philadelphia are worthy of the city of William Penn and Benjamin Franklin.

The United States mint was founded in 1790, and the business of coining commenced in 1793, in the building occupied at present by the Apprentices' library. It was removed in 1830 to the fine building it now occupies in Chestnut-street above Olive-street. The edifice is of white marble, and the north front opposite to Penn-square is 123 feet long, with a portico 60 feet long, of six Ionic columns, and the south front on Chestnut-street has a similar portico. The whole amount of coinage since its establishment in 1793, to December, 1842, has been 255,987,171 pieces, the value of \$35,873,052½. In 1842 there were coined 7,453,180 pieces, to the amount of \$2,426,351½. The amount of gold deposited for coinage at the mint at Philadelphia, since its institution, with the exception of \$27,117, was from the mines in the states of Virginia, North Carolina, South Carolina, Georgia, Tennessee, and Alabama, and amounted to

## PHILADELPHIA.

\$6,135,531. The first deposit from these states was made in 1824.

The eastern penitentiary in the N.W. part of the city is at the corner of Coates-street and College-avenue, S. of Girard college, and its towers, battlements, and massy walls, resembles a baronial castle of the middle ages. It occupies a square area of 10 acres, which is surrounded by a wall, 30 feet high, and surrounded at the angles, and on each side of the front entrance, by watch towers, which command a view of the inside and outside of the external walls. It is constructed on the principle of strictly solitary confinement in separate cells, and is admirably calculated for the security and the health, and, so far as consistent, with the comfort of its occupants. In the centre of the whole enclosure is an observatory or watch house, from which long passages radiate in different directions, on the sides of which the cells are ranged so that the watchman at the observatory commands a view of all the passages and the entrance to all the cells. These cells are 12 feet long, 8 feet wide, and 10 feet high, made perfectly secure, and lighted by a convex glass at top. Food is conveyed to the prisoner by means of a cast iron drawer, which forms a table on the inside when the prisoner takes his meals. The cells are well cleaned and ventilated, and to each of them is attached a yard, 18 feet by 8, surrounded by walls 12 feet high, which are overlooked from the observatory at the centre of the prison. As a reward for good behaviour, the Bible, and some other religious and moral books are given to the prisoners, and some suitable employment is granted; but they are withheld as a punishment. A suitable person administers moral and religious instruction to the convicts, standing near the centre of the passage on which the cells are ranged, where he can be heard, but not seen from the cells. This institution is well calculated to make a trial of the principle of solitary confinement.

The county prison on Passyunk road, below Federal-street, is appropriated to the confinement of persons awaiting trial, or those which are sentenced for short periods. The building is spacious, and presents an imposing front of Gothic architecture, and is admirably adapted to solitary confinement, for which it is intended. The debtors prison, adjoining the county prison on the N., is constructed of red sand stone, in a style of massive Egyptian architecture.

The house of refuge is at the corner of Coates-street and the Ridge road, not far from the penitentiary, and is appropriated to the confinement of vicious and abandoned juvenile offenders, of both sexes; where, in addition to their moral culture, they are taught the various elementary branches of an English education, and various mechanical employments. At the expiration of their terms of confinement they are apprenticed, the boys to respectable mechanics or farmers, and the girls to families to perform the work of domestics.

There are in the city 144 churches of different denominations, of which the Presbyterians have 23, the Protestant Episcopal 22, Methodist Episcopal 19, Methodist Protestant 5, Reformed Presbyterian 3, Associate Reformed 2, Baptist 14, Lutheran 6, German Reformed 3, Dutch Reformed 2, Friends, Orthodox, 4, Hicksite 3, Universalist 3, Independent, Moravian, Unitarian, Swedenborgian, Menonist, Disciples of Christ, Bible Christians, Protestant (Mariners' chapel), and Mormons, 1 each, Roman Catholic 11, Jews 3; African, Presbyterian 3, Methodist Episcopal 4, Protestant Episcopal 1, Baptist 4. Attached to these churches are 163 Sunday schools, with 38,320 scholars.

The city is supplied with water derived from the Schuylkill river. Before the present water-works were constructed at Fairmount, the water was raised by two steam engines, one of which was situated on Penn-square, where the water was raised into a reservoir 36 feet high, and distributed in wooden pipes over the city. The supply was expensive and inadequate, and after having expended \$657,396, these works were abandoned in 1815, and the Fairmount water-works were put in operation. But in 1818, after having expended upon them \$320,699, the plan of operation was changed. A dam is constructed across the Schuylkill, and by means of wheels moved by the water, which work forcing pumps, by which the water of the river is raised into a reservoir, 102 feet above its level, and 50 feet above the highest ground in the city. There are four reservoirs to let the water settle, the whole containing 22,000,000 gallons. The dam is 1090 feet long, and the race upwards of 400 feet long and 90 feet wide, cut in solid rock. The mill house is of stone, 233 feet long and 56 feet wide, and capable of containing eight wheels, and each pump will raise about a million and a quarter of gallons in 24 hours. The reservoirs contain an area of over 6 acres, and they are 12 feet deep, lined with stone and paved with bricks, laid on a bed of clay, in strong lime cement, and made water-tight. The water is conveyed from them into the city by iron mains, one 20 and the other 22 inches in diameter, and distributed through the streets in pipes from 6 to 10 inches in diameter,

and from these smaller ones lead into the yards and dwellings. The daily consumption of the water in the city and districts in the year 1843 was 4,422,400 gallons, supplied to 26,549 tenants. There are laid in the city and districts 117½ m. of iron pipes; and there are 1070 fire-plugs. The whole cost of these works, including those which have been abandoned, is \$1,584,594; and they are inferior only to the Croton water-works of New-York, while their expense has been greatly less. Three thousand families in Philadelphia are supplied by the public pumps, which receive their water from cisterns, filled by the water-works of the Schuylkill. These constitute a part of the above named works.

The principal streets, most of the stores, hotels, churches, public institutions, and many of the private dwellings, are lighted with gas, supplied by the city gas-works, situated on Schuylkill river, between Market and Filbert streets, which have a retort house capable of containing 120 retorts with their connected apparatus. On the eastern part of the lot are eight gasholders of 50 feet diameter each, the whole capable of containing 280,000 cubic feet of gas. The total length of the street mains, Jan. 18th, 1844, was 45½ m., and the length of the service pipe connected, was 10 m. The number of customers was 4429, the number of private lights 30,658. There were 837 public lamps in the streets, and 62 in the public squares, making the whole number of lights supplied, 31,557. There were consumed 154,002 bushels of coal, 2509 barrels of rosin for distillation, and 54,602 bushels of lime for purifying the gas. The coal used produces, as a residuum of coke, more than sufficient for heating the retorts. The average consumption of gas in the city is 135,000 cubic feet per day. There is a gas company in the Northern Liberties for supplying that district and Kensington, with a capital of \$150,000, with a line of mains 32,725 feet in length, supplying 633 consumers, and 146 public lamps. There were consumed in 1843, 42,776 cubic feet of gas, and the works could supply much more.

There are in the city 14 banks, with an aggregate capital of nearly \$12,000,000, besides a number of saving banks and institutions, and over 20 insurance companies with a total capital of about \$6,000,000.

Philadelphia is well protected against fire, by about 60 engine and hose companies, greatly aided by the Schuylkill water, and superior engines. The expense of the fire apparatus is borne by the members of the companies, aided by appropriations from the treasuries of the city and districts.

There are several theatres in the city, the principal of which are the Chestnut-street theatre, the Arch-street theatre, and the Walnut-street theatre. The Philadelphia Museum, founded by Charles Wilson Peale in 1784, and long one of the most distinguished institutions of the kind in the United States, is alike a place of entertainment and instruction. It was removed in 1839 to convenient rooms at the corner of Ninth and George streets. It occupies the upper story of an edifice 238 feet long, 70 feet wide, and two stories high. The lower story, formerly occupied by the Chinese Museum, is now used for temporary exhibitions and public meetings. Philadelphia is celebrated for its excellent markets, supplied not only from the parts of state adjacent, but extensively from the state of New-Jersey opposite. The principal market is in High or Market-street, extending from Delaware river to Eighth-street, and the end of which near the river is a fish market. There are five other markets in different parts of the place, as in Market-street from Schuylkill Seventh to Schuylkill Eighth streets; Callowhill-street, from Fourth to Seventh-street; in Spring Garden, from Marshall to Ninth-street; in North Second-street, from Coates-street to Poplar-lane; in South Second-street, from Pine to South-street; in Moyamensing, Passyunk, &c. The regular market days in High-street market are Wednesday and Saturday, and those in Second-street market on Tuesday and Friday; but the markets are well supplied with provisions on other days of the week, and they are strictly regulated. The United States navy yard is situated at the southern end of Swanson-street, and contains an area of about 12 acres, which was purchased in 1801, for \$37,500, but is now considered worth over \$70,000. The area is enclosed on three sides by a high and substantial brick wall, and on the fourth side by Delaware river. It contains every preparation for building vessels of war, and has marine barracks sufficient for accommodating 150 men, with handsome quarters for the officers. The shears for fixing the masts are 120 feet high, said to be the most complete in the United States. The Pennsylvania, one of the largest and finest vessels in the world, pierced for 140 guns, was built at this yard. Her masts are about 150 feet high, her main yard is 120 feet long, and her largest anchor weighs 10,000 lbs. Other large vessels have been built at this yard. Philadelphia has made provision for an ornamental cemetery, located on Laurel Hill, on the E. bank of the Schuylkill, about three and a half miles from the city, on the Ridge road, containing over 20 acres, with every variety of surface and prospect. The entrance contains a fine example of the

## PHILADELPHIA.

Doric architecture, 216 feet long, on the Ridge road. It is handsomely laid out, and nature and art have combined to render it a highly inviting spot. Such ornamental cemeteries have become common in our principal cities, and they alike bear witness to the respect for the dead, and the kind feelings of the living. It thus becomes peculiarly pleasant to the living to visit the tombs of those whom they have loved in life.

Philadelphia has an extensive foreign, but a still greater domestic trade. The registered tonnage entered from foreign ports in 1843, was 63,369; and the registered tonnage cleared for foreign ports for the same period, was 58,894. The value of the imports was \$4,916,535; and of the exports was \$3,043,320. The United States custom-house is situated in Second, below Dock-street. The front of the basement is of marble, and the remainder of brick. It stands back from the street, and has an iron gate in the brick wall before it. A niche in front contains a statue, emblematical of commerce.

Delaware bay, though a fine body of water, having a depth in its principal channel sufficient for the largest vessels, is still much obstructed with sand bars and shoals, and requires a skilful pilot to navigate it with safety. Hence, in case of war, it furnishes much to deter an invading force, and therefore Philadelphia, in the last war, felt much more apprehensive of an attack by the way of the Chesapeake than the Delaware bay. The principal harbour of Philadelphia is on Delaware river, where large vessels come up, and foreign commerce centres; but the Schuylkill affords a convenient harbour for small vessels, and has become specially important since the extensive opening of the coal trade. There are many wharves on the Schuylkill below the bridge at Market-street, at which a large number of sloops are generally found. A permanent bridge was completed across the Schuylkill, at the end of Market-street, in 1805, which cost \$300,000. It was originally a toll, but is now a free bridge. A light and beautiful wire bridge has been erected at Fairmount, which is also a free bridge. There is a railroad bridge at Gray's ferry, below the city, which also accommodates vehicles and foot passengers; and another one of the Columbia railroad, with similar conveniences, above the city. By means of railroads and canals, Philadelphia possesses facilities for communication with a great extent of country, and shares with New-York and Baltimore in the trade of the great West. Many excellent roads, turnpikes, and others, greatly facilitate and extend its trade. The most important road is the Philadelphia and Columbia railroad, 82 m. long, to Columbia, on the Susquehanna, which connects with the eastern division of the Pennsylvania canal, and forms the principal route to Pittsburg, which cost \$3,993,302.

Philadelphia is distinguished for its foreign and domestic commerce, but more for its manufactures. According to the census of the United States of 1840, there were 186 commercial, and 63 commission houses engaged in foreign trade, with a capital of \$2,119,501; 2078 retail dry goods and other stores, with a capital of \$17,385,993; 60 lumber-yards, with a capital of \$1,232,000; three furnaces and one forge employed 25 persons, and a capital of \$314,050; 10 persons manufactured granite and marble to the amount of \$4600, with a capital of \$1300; 1084 persons manufactured machinery to the amount of \$1,088,864; 245 persons produced hardware and cutlery to the amount of \$217,445; 13 persons manufactured 500 small-arms; 215 persons manufactured the precious metals to the amount of \$2,651,510; 156 persons manufactured various metals to the amount of \$876,060; 405 persons produced granite and marble to the amount of \$386,733; 588 persons produced bricks and lime to the amount of \$278,894; 16 fulling-mills and 29 woollen factories employed 1156 persons, producing to the amount of \$964,450, with a capital of \$378,600; 45 cotton factories, with 40,862 spindles, and 32 dyeing and printing works, employed 2903 persons, producing to the amount of \$3,157,119, with a capital of \$1,993,600; 32 men and 15 women or children produced 1912 lbs. of reeled silk, valued at \$12,560, with a capital of \$76,600; 100 persons manufactured flax to the amount of \$59,100, with a capital of \$51,000; mixed manufactures employed 2880 persons, producing to the amount of \$857,830, with a capital of \$1,550,488; 390 persons manufactured tobacco to the amount of \$312,600, with a capital of \$158,900; 584 persons produced hats and caps to the amount of \$313,620, and straw bonnets to the amount of \$72,700, with a capital of \$153,700; 10 tanneries, employing 279 persons, produced 48,300 sides of sole leather, and 43,050 of upper leather, with a capital of \$128,000; 271 other manufactories of leather, as saddleries, &c., manufactured to the amount of \$1,504,034, with a capital of \$475,210; 152 persons produced 4,181,845 pounds of soap, 1,367,200 pounds of tallow candles, and 5000 pounds of wax or spermaceti candles, with a capital of \$254,300; 11 distilleries produced 505,032 gallons of distilled spirits, and 19 breweries 11,345,920 gallons of beer, the whole employing 181 persons, and a

capital of \$413,600; 368 persons manufactured paints and drugs to the amount of \$1,823,600, and turpentine and varnish to the amount of \$3200, with a capital of \$1,865,630; one glass house, and one glass-cutting works, employed 106 persons, and produced to the amount of \$70,000, with a capital of \$23,500; seven potteries employed 39 persons, produced to the amount of \$46,300, with a capital of \$24,600; 12 sugar refineries produced \$890,000, chocolate factories \$6003, and confectionaries \$152,300, the whole employing 134 persons, and a capital of \$322,700; 10 paper-mills produced \$97,250, and other manufactories of paper as a material, \$59,500, employing 180 persons, and a capital of \$50,750; 20 rope-walks employed 151 persons, producing cordage to the amount of \$129,800, with a capital of \$37,050; 97 persons manufactured musical instruments to the amount of \$27,000, with a capital of \$32,500; 491 persons manufactured carriages and wagons to the amount of \$291,290, with a capital of \$127,670; 17 flouring-mills produced 113,810 barrels of flour, and 13 grist-mills, 13 saw-mills, and one oil-mill, employed 103 persons, and produced to the amount of \$654,063, with a capital of \$242,575; vessels were built to the amount of \$467,480; 736 persons manufactured furniture to the amount of \$547,900, with a capital of \$396,700; 47 printing-offices, 13 binderies, eight daily, 17 weekly, and seven semi-weekly or tri-weekly newspapers, and 26 periodicals, employed 925 persons, and a capital of \$263,600; 927 brick or stone, and 138 wooden houses, were built by 2317 persons, and cost \$3,009,633. The total amount of capital employed in manufactures was \$11,587,668. The above are the statistics of Philadelphia city and county, and they belong mostly to the city and immediate vicinity. As Philadelphia exists under several distinct incorporations, it would involve some trouble to separate the statistics into their parts; and as the whole have increased since the census was taken, the above give, probably, little more than a fair view of what substantially belong to Philadelphia and its immediate vicinity. A small portion belongs to the towns in the vicinity, Blockley, Bristol, Germantown, Kingessing, Lower Dublin, Moreland, Oxford, Northern Liberties (unincorporated), Roxborough, and Penn township. They contain a population of 37,614 out of 258,037, and a much smaller proportion of stores and manufactories.

The government of the city proper is in the hands of a mayor, a select council of 12, and a common council of 20 members. One third of the select, and the whole of the common council, are chosen annually by the people, and the councils elect a mayor. The aldermen, who are 15 in number, are appointed by the governor to act with the mayor and recorder, as judges, during good behaviour; and the aldermen act as justices of the peace. The whole legislative power is in the councils, of which the select council is a kind of senate. The incorporated districts are governed by commissioners, as already noticed.

Philadelphia was first laid out at the close of 1682, by Thomas Holme, the first surveyor-general of the province. The ground selected was claimed by three Swedes by the name of Swenson, to the amount of about 800 acres, granted by the Dutch governor of New-York, in 1664. This claim was extinguished by Penn on his arrival, by giving them in exchange a tract on the Schuylkill above Fairmount. Shortly after his arrival, Penn held a treaty with the Indians under a large elm tree in Shackamaxon (now Kensington), on the bank of the Delaware, at which certain grants of land were confirmed, and the most amicable relations were settled between the colonists and the Indians. This venerable tree was regarded and preserved with great reverence, as a memorial of this interesting transaction, until it was blown down in 1810. A marble monument, with an appropriate inscription has been erected on the spot. By the close of 1682, 23 ships had arrived with passengers, and numbers followed in the succeeding year, so that when Penn departed for England in 1684, the city contained 300 dwellings, and 2500 inhabitants. It seems that from the first the idea was entertained of building up a large place. Dean Prideaux, in his celebrated work entitled "The Connection of the Old and New Testament," after presenting the plan of the ancient city Babylon, observes, "Much according to this model hath William Penn, the Quaker, laid out the ground for his city of Philadelphia, in Pennsylvania: and were it all built according to that design, it would be the fairest city in America, and not much behind any other in the whole world." In 1689, the first public school was founded by the Friends, and placed under the care of George Keith, a native of Aberdeen in Scotland. The Revolution of 1688 having driven James II. from the throne, and placed William the Third and Mary, the daughter of James, on the throne, Penn, from a supposed adherence to the former, was, in 1693, deprived of his authority over Pennsylvania, and Colonel Fletcher, governor of New-York, succeeded to the government. But in 1694, the warrant by which he was deprived of his proprietary right was revoked, and he was reinstated in his rights and authority over the province.

## PHILADELPHIA.

In Oct. 25th, 1701, the city of Philadelphia received a charter from the proprietary, and Penn sailed for England. The same year the customs on goods chiefly imported through Philadelphia amounted to £8000 sterling. In 1702 eight vessels were loaded with tobacco for England, with 80 or 90 hogsheads each. Tobacco seems to have been early much cultivated here. In 1704, the first Presbyterian church was erected. In 1706, 800 hogsheads of tobacco and 25 or 30 tons of furs were exported. In 1707, British goods were consumed to the amount of £14,000 or £15,000 sterling. In 1718, William Penn died in England, and left his interest in Pennsylvania as an inheritance to his children, which they and their heirs possessed until the Revolution. In 1719 the first weekly Gazette, entitled "The American Weekly Mercury," was published by Andrew Bradford. The mayor and alderman Hill, in conjunction with the regulators, were requested to employ Jacob Taylor to run out the seven streets of the city, and cause the same to be staked out, to prevent any encroachment in building, for the want thereof. Some foot pavements of brick, and crossing places of stone, were laid in the streets. In 1727, Benjamin Franklin published "The Pennsylvania Gazette." In 1729, the first Roman Catholic church was founded. In 1730, a fire consumed a number of stores and dwellings, to the loss of £5000 pounds sterling. Soon after, the corporation paid nine shillings a piece for 100 fire buckets; and in addition, 350 fire buckets and two fire engines were imported from England: the fire buckets were hung up in the courthouse, and houses were provided for the engines. In 1738, Benjamin Franklin instituted the first fire-company in Philadelphia. In 1739, Rev. George Whitefield preached to 15,000 people, assembled on Society Hill, near the flag-staff. Aug. 17th, 1741, to prevent riotous assemblages of negroes and others, the constables were charged to disperse all such meetings at half an hour after sunset, and all persons who refused to depart were to be brought before the magistrates. In 1742, the first Moravian church was built. May 4th, 1743, stalls erected for the sale of goods in the market were ordered to be removed, that the market might be kept open and clear. During this year the first Lutheran church was built; and the first Dutch Reformed in 1747. In 1749, the grand jury presented the city watch as defective; only five or six persons were employed, who went the rounds in company. Second-street from High-street to Chestnut-street first paved; a horse having been mired there, and the rider, a respectable man by the name of Wharton, having been thrown and broken his leg. The city this year contained between two and three thousand houses, and 15,000 inhabitants. In 1751, an act passed for a nightly watch, and enlightening the city; the last of which was completed in October of this year. Previously to this the constables acted as a city watch. In 1754, a theatre was erected in Southwark, much against the remonstrance of the citizens. In 1755, Fifth-street might be regarded as the western extremity of the city. In 1756, the first stage to New York, through Trenton and Perth Amboy, was established, going through in three days. St. Paul's, the first Episcopal church, was founded in 1760. This year the Pennsylvania hospital was founded, and Dr. Franklin wrote an inscription, which was engraved on its corner stone. The first public library was founded in Philadelphia by the influence of Dr. Franklin; 38 persons agreed to pay 40 shillings each, and ten shillings annually afterwards. In 1761-2, the streets were first paved in the middle, and it was at first accomplished by a lottery. In 1765, a scavenger was appointed to see the streets cleaned once a week. The use of curb-stones was not then introduced, and the gutters were often in the middle of the streets. A second line of stages was established to New-York, twice a week, going through in three days, at two pence a mile. It was a covered wagon without springs. In the same year a line of vessels and wagons, once a week, was established to Baltimore. In 1766, a third line of stages to New-York was established, called the "Flying Machine," going through in two days. The first Methodist church was founded in 1769. In 1773, the first stage coaches were established from Philadelphia to New-York, going through in two days, with a fare of four dollars for each passenger. In 1777, Gen. Howe, the British commander, was in possession of the city; many of the inhabitants were gone, and there were 3508 houses, of which 587 were untenanted; there were 287 stores, and 21,767 inhabitants, exclusive of the army and strangers. In 1780, the bank of Pennsylvania was established for the purpose of supplying the army of the United States for two months, by a subscription of £300,000, by 90 persons, the principal of whom were Robert Morris and Blair McClennachan, who subscribed £10,000 each. The bank of North America was founded by the United States Congress in 1781. April 19th, 1790, Dr. Benjamin Franklin died, leaving, among other benefactions, £1000 sterling, or \$1444-44 to be loaned to young unmarried artificers under 25 years of age, who had served an apprenticeship in the city, and fulfilled their indentures,

## PHILIPPINE ISLANDS.

in sums of not more than £60, nor less than £15, at 5 per cent. interest, with sufficient sureties. This constitutes what is called the Franklin fund; and on the first of January, 1830, it amounted, with the interest due, to \$32,062. Southwark district was incorporated in 1794. In 1800, the seat of the United States' government was removed from Philadelphia to Washington, District of Columbia. March 28th, 1803, the district of the Northern Liberties was incorporated, and the act was amended March 16th, 1819. In March 22d, 1813, the district of Spring Garden was incorporated. In March 24th, 1812, the district of Moyamensing was incorporated; and on March 6th, 1820, the district of Kensington was incorporated. These districts, with the city proper, make up what is virtually the city of Philadelphia. The police of Philadelphia would probably be more efficient if it were under a single incorporation.

PHILADELPHIA, P. L. Jefferson co., N. Y., 16 N.E. Water town, 172 N.W. Albany, 432 W. Drained by Indian river and its tributaries. Taken from Le Roy in 1821, first settled from Pennsylvania in 1813. It contains one Friends' church, four stores, one grist-mill, six saw-mills - 18 schools, 709 scholars. Pop. 1,888.

PHILADELPHIA. See ALA-SHEHR.

PHILIPPINE ISLANDS, a group of islands of the eastern archipelago, principally included in its 5th division, forming, Cuba excepted, the most valuable colonial possession still belonging to Spain, between the 6th and 20th deg. N. lat., and the 117th and 124th deg. E. long., having N. the Balintang channel, which divides it from the Batanes and Basher islands; E. the Pacific ocean; S. the strait of Basilan, separating it from the Sooloo archipelago to the E. of Borneo; and W. the Chinese sea. Aggregate area (according to Berghaus), including Palawan, 134,115 sq. m. Of these islands, ten are large, and the rest of very inferior size, their extent and population, in 1837 (from an official return), being respectively as follows:

Islands and Provinces.	Area in sq. m.	Pop. in 1837.
Luzon (18 provs.)	56,604	2,364,507
(Minjoro)	4,153	29,632
Fanay (3 provs.)	4,516	406,093
Isla de Negros	3,774	35,622
Zebré	2,162	250,317
Lav Isles		
Layte	4,158	92,165
Samar	5,470	99,635
Masbate	1,215	2,310
Palawan	7,538	11,057
Magindanao (2 provs.)	35,637	74,560*
Smaller islands, including the Isles of Calamianes	8,826	15,000*
Total of 30 provs.	134,115	3,560,000*

The islands of Palawan and Magindanao, however, are but very imperfectly known, portions of them being only subject to the colonial government of Manila, the rest being governed by chiefs of native and often hostile tribes.

Luzon, the largest of these islands, and that also which is best known to Europeans, is of extremely irregular shape, but may be described as a long and narrow island, running N. and S., with a peninsula (called Camarines) stretching out at its S.E. side, its length from point Cabicunga northward, to point Calaan southward, being about 450 m., and its breadth ranging from 10 to nearly 140 m. The coast generally is rocky, and indented with numerous bays and gulfs; on the E. side is the Seno de Lamon, a deep narrow inlet, nearly separating the peninsula of Camarines from the rest of the island, and on the W. side are the gulf of Lingayen, the bay of Manila, the Ensenada de Balayan, and the Seno de Ragay. A large portion of the surface is covered with mountains; and N. of Manila the chains are divided by the Cagayan, the largest river of the island, into two nearly parallel ranges, called Sierra Madra and Sierra de los Caravallas, that terminate respectively in the points Cabicunga and St. Vincent, the extreme N. points of the island. The latter range is the most elevated; but even its highest peaks do not rise more than 6000 ft. above the sea. S. of Manila the chain may be traced into the peninsula of Camarines, a large portion of which it covers, and finally terminates in the Punta Calaan. The plain of Pampanza N. of the city of Manila, extends northward nearly as far as the gulf Lingayen, from which it is separated by a ridge of rather lofty hills: it is about 90 m. in length by about 30 m. in breadth, and being watered by a river falling into the bay of Manila, is extremely fertile, and is covered with plantations, and densely peopled. (Berghaus, *Memoir zur Erklärung der Karte von den Philippinen Inseln*, p. 16.) S. of Manila is the Laguna de Bahía, about 20 m. in length and 10 m. in breadth, the waters of which are conveyed into the bay of Manila by a wide and pretty deep stream, the Pasig, flowing through the cap. A few miles further S. is the Laguna de Taal which communicates with the Senada de Balayan, by the

\* This estimate includes only the Spanish portion of these islands.

## PHILIPPINE ISLANDS.

short, but deep river Bonbon: it is nearly circular, being about 11 m. in diameter, and contains the island of Taal, in which is a volcano, with two active craters. About 20 m. E. is another volcano; and more to the S., in the peninsula of Camarines, are ten volcanoes, one of which has frequent eruptions: in fact, throughout Luzon and most of the Philippines, the igneous formations have been found in constant connexion with the primitive rocks, and there can be no doubt that they form a part of the great volcanic band extending from Kamtschatka, through Japan and Formosa into Borneo, Java, and Sumatra. Gold, iron, and copper, have been found in the mountains of Luzon, and rock-salt is so abundant in some parts as to be an article of export. Luzon is separated from Mindoro by the strait of that name, about 5 m. broad, and from Samar by the Embocadero de San Bernardino, the common passage for vessels navigating the Pacific on their way to China.

The Bisayan group, which lies S.W. and S. of the great island last mentioned, comprises about eight or nine considerable islands, the most westerly of which is Mindoro, and that most eastward Samar. With the exception of Pamar, which is triangular, these islands are generally long and narrow; Mindoro, Negros, Samar and Masbate, are very mountainous, and only moderately productive; but Panay and Zebre contain much good level land, and are, on the whole, the most important islands of the Philippine group. The Palawan, the extreme W. island of the Philippines, extends from N.E. to S.W. about 250 m., with a breadth of not more than one tenth its length: it is reported to be extremely mountainous; but the greater part is inhabited by savages, and it has been little visited by Europeans. (*Berghaus*, p. 65.) A small portion only at its N. extremity belongs to Spain.

Mugindmano, or Mindanao, the largest of the Philippine islands after Luzon, is of very irregular shape, having a peninsula stretching 150 m. from the main part of the island: length from N. to S. about 320 m.; average breadth, exclusive of the peninsula, 95 m. Dampier and Forrest are the principal authorities from whom we derive any knowledge of this still imperfectly known island. In the interior, near the bay of Illano, is a considerable lake, which, according to Forrest, is between 15 and 20 m. in width. The E. coast is mountainous, and numberless hills occur in the W. and S. districts, which are generally well-covered with timber: large tracts, however, are found in some parts quite destitute of trees and covered, like the savannahs of America, with long, rank grass. So large an island must necessarily have large rivers; but only two of them are known, one on the N. side, flowing into the Bay of Butnan, and another, called the Pelaguay, flowing westward into the bay of Illano, opposite the island of Bunwrit. The Spanish settlements, which are chiefly on the N. side, form two provinces in the capitanata of the Philippines. The interior is inhabited by *Horaforas*, who are treated as slaves by the Malays occupying all the S. coast; they acknowledge the supremacy of a native sultan.

The climate of the Philippines, owing to their extent, is more variable than in the other groups of islands lying so near the equator. In and about Manila, the district usually visited by Europeans, the mean temperature of the hot season (from August to October) may average about 82°, and that of the cold season, usually preceding the rains, about 70° Fah. The year, as in other tropical countries, is divided into a wet and dry season, here depending on the monsoons: the former lasts from May till the commencement of November, and the latter during the rest of the year. In the S.W. monsoon immense quantities of water falls, and the rain frequently lasts for 12 or 14 days without intermission. A large part of Luzon is within the region of the *typhoons*, which are as formidable as the tornados of the W. Indies: they last from May to December, but seldom continue more than six or eight hours at a time. In Luzon (with which we are better acquainted than the rest of the group), the inhabitants suffer from agues and dysentery, in consequence of the great extent of marshy and low grounds inundated during the rainy months, and exhaling pestilential vapours during the rest of the year. (*Meyen, Reise um die Erde*, ii., 281.)

The agricultural products of the Philippine islands include rice, millet, and maize; sugar, indigo, hemp, tobacco, coffee, and cotton, with a great variety of other articles of inferior importance; but with the modes of culture we are little acquainted, though, according to Moor (*Malayan Archipel*, p. 81), the Chinese implements are pretty generally used in husbandry. Rice is the chief support of the population, and hence is raised in large quantities throughout the group, the marshy nature of the country in many parts being favourable to its cultivation. In other districts, however, upland rice is cultivated. The sugar-cane is raised on the great plain of Pampanga and in the island of Panay: the mode of extracting the sugar is defective, but the sugar is excellent; its culture is also rapidly extending, and it

now forms by far the most important article of export from the Philippines. Tobacco grows well, and might be produced on a very extensive scale; but its growth is limited from the manufacture of cigars, in which form alone tobacco is exported, being a government monopoly. Indigo, also, is pretty extensively cultivated, but is inferior in quality to that of Bengal. Sapan wood constitutes the chief timber of the hilly districts, and is exported in large quantities to China. The coffee-plant was introduced by the Spaniards at the close of the last century, and grows wild on the W. side of Luzon, though not in the other islands. The coffee exported from Manila is almost wholly procured from these wild plants, and is alleged to be almost equal to that of Bourbon or the Mauritius. The banana is found on nearly all the island, and hemp is produced very abundantly in the neighbourhood of Manila, as well as in Panay and Zebre, furnishing materials both for cordage and a strong coarse cloth woven by the Malays. (*Meyen*, ii., 279.) Excellent sago grows in most parts of Luzon, and the cocoa-nut, which was introduced from Guatemala, is very abundant, and superior in quality even to that of Peru. The shrub-cotton (*gossypium herbaceum*) thrives well; but, owing to some imperfection in the mode of breaking the pod, the cotton is of inferior quality, and little is exported. Cinnamon, the betel-pepper, and the clove-tree are found wild in many of the islands, and the bread-fruit, mango, and shaddock are raised very abundantly and with little labour. The other fruit-trees are few in number and of very indifferent quality. The mountains produce excellent timber for building both houses and ships; and the bamboos, used in the construction of the houses of the Malays, are very long, some being as thick as a man's thigh. The fauna of the Philippines comprises buffaloes of uncommon size and strength, a small, but hardy, breed of horses, introduced by the Spaniards, goats, pigs, and a few sheep, with immense numbers of ducks and fowls both wild and domestic. Land-tortoises are plentiful in most of the islands, and their shells constitute an important article among the exports. There are no beasts of prey; but caymans are found in most of the rivers and lakes, and are particularly numerous in the Laguna de Bahia. Among the birds may be noticed the swallows which supply the edible nests. Fish abound on the coasts, and the native fishermen are equally expert with the other islanders of the E. archipelago. Pearl-oysters also are found in large quantities, and the shells are exported to China. The sea slug, or *holothuria*, is also an important article of commerce.

*Manufactures* are of very little importance. The plaiting of straw and chips of wood into hats, cigar cases and matting is carried on pretty extensively, and the hats are highly prized by the Spaniards. Domestic weaving occupies most of the females; and cotton cloth was till recently an article of export to Mexico. Considerable quantities of earthenware are made in Luzon, but of very inferior quality to that of China. The manufacture of cigars is a government monopoly; and, according to *Meyen*, ii., 211, the royal manufactory at Manila employs about 2000 persons, two thirds of whom are females.

*Commerce*.—Considering the great fertility and varied productions of the Philippines, and their peculiarly favourable situation for carrying on commerce, the limited extent of their trade, even with its late increase, may excite surprise. This, however, is entirely a consequence of the wretched policy of the Spanish government, which persevered until very recently in excluding all foreign ships from the ports of the Philippines, confining the trade between them and Mexico and South America to a single ship! Even ships and settlers from China were excluded. "Provisions," says La Pérouse, "of all kinds are in the greatest abundance here, and extremely cheap; but clothing, European hardware, and furniture, bear an excessively high price. The want of competition, together with prohibitions and restraints of every kind laid on commerce, render the productions and merchandise of India and China at least as dear as Europe!" Happily, however, this miserable policy, the effects of which have been admirably depicted by M. de la Pérouse, has been materially modified within the last few years. The events of the late war destroyed for ever the old colonial system of Spain; and the ships of all nations are now freely admitted into Manila and the other ports in the Philippines. An unprecedented stimulus has, in consequence, been given to all sorts of industry; and its progress will, no doubt, become more rapid, according as a wider experience and acquaintance with foreigners makes the natives better aware of the advantages of commerce and industry, and disabuses them of the prejudices of which they have been so long the slaves.

In 1837, among other articles exported from Manila, were 232,183 piculs (about 13,250 tons) sugar; 39,457 piculs hemp; 126,003 coyanags rice; 4598 boxes cigars, with considerable quantities of indigo, hempen cloth, sapan wood,

## PHILIPPINE ISLANDS.

and a great number of other articles; the total value of the exports amounting in the course of that year to above two million dollars. Cotton manufactured goods constitute the great article of import. The foreign trade of the islands centres almost entirely in Manila, whicsee. It is, in fact, the only port in the Philippines to which either Spanish ships to or from Europe and foreign vessels generally are allowed to trade; but Spanish vessels trading with China and Singapore, may proceed to the outports of Pangasinan, Ylvers, and other places, to take on board their outward-bound cargoes. (See MANILLA.)

The population of the Philippines is extremely various; and, independently of foreign settlers, the natives consist of a great number of distinct tribes, partly of Malay, partly of Papuan origin, and speaking several distinct languages or dialects. Some of the natives still adhere to the polytheism they professed before the arrival of the Spaniards; but a large proportion have been converted to the Catholic faith, which, indeed, is the common bond between them and their new masters, and the principal means by which the latter have so long been able to maintain their ascendancy. The natives are said to be the most active, b-cld, and energetic of any belonging to the E. archipelago. "These people," says M. de la Perouse, "appear in no respect inferior to those of Europe. They cultivate the earth like men of understanding; are carpenters, joiners, smiths, gold-smiths, weavers, masons, &c. 'I have walked through their villages,' and found them kind, hospitable, and communicative; and though the Spaniards speak of them and treat them with contempt, I perceived that the vices with which they are charged, ought rather to be imputed to the colonial government." (*Voyage*, chap. 15.) The people here described, however, are the Malays, who have pretty generally acknowledged the supremacy of the Spaniards, by whom they are treated as free subjects, and allowed to be proprietors of land; the Papuans, who chiefly occupy the higher parts of the country and less frequent islands, are miserable savages, incapable of civilization, and avoiding all communication with foreigners. The rest of the population comprises European and Creole Spaniards, Spanish and Indian mestizos, Mohammedans from the E. Indies, and Chinese. The Spaniards, however, do not, perhaps, exceed 4000 or 5000.

The seat of government is at Manila, the residence of the captain-general of the Philippines; but there are lieutenant-governors in the most important of the other islands, and alcaldes in each of the provinces, which also are subdivided into *pueblos*, having their separate intendants. The revenues of the Philippines are principally derived from *ad valorem* duties on imports and exports, and from a capitation tax, and the tobacco monopoly. Foreign commodities, imported in foreign vessels, pay 14 per cent., and in national vessels from 7 to 9 per cent.; but there are some exceptions, and wines of all sorts, except Champagne, pay from 40 to 50 per cent., according as they are brought in native or foreign bottoms. Spanish products, imported by Spanish vessels, pay 3, and, by foreign vessels 8 per cent. Exports (in which are comprised commodities produced in the island, and imports from foreign countries for consumption) pay from 1 to 1½ per cent. *ad valorem*, by Spanish, but from 2 to 3 by foreign ships. Tobacco, however, and hempen rope, made at Manila, may be exported free of duty. Spaniards may export rice free of duty; but foreigners are charged 4½ per cent. The capitation tax, or annual tribute, is charged at certain rates on all the inhabitants except European mestizos. The Chinese, who constitute the chief portion of the shopkeepers, traders, mechanics, coolies, and household servants are divided into four classes, paying rates, varying from 12 doll. 6 rs. to 120 doll. 6 rs., to which they are subject from the age of 16 to 60; but no Chinese is allowed to settle on the islands after the age of 40 years. Chinese and Indian mestizos pay 1 doll. 3 rs. annually, from the time of puberty till death, and Indians of both sexes pay 5 rs. 6 gr. each, during the same period. The number of tribute payers amounted, in 1837, to 1,305,142, of whom 901,924 belonged to the 17 provinces comprised in the island of Luzon. The army consists of about 7000 men, of whom only 700 are Spaniards, and the rest Malays. The cavalry are chiefly European; but the Malays are said to be good soldiers, and occupy most of the fortresses in Luzon.

The Philippines were discovered by Magellan in 1521, but were not claimed by the Spanish till 1565, soon after which Manila was constituted the capital of their possessions in this part of the world. The islands received their present appellation in honour of Philip II. when king of Spain. The Dutch and Chinese tried to make settlements here in the 17th century, though without success, owing to the determined and jealous opposition of the Spaniards. In 1762, Manila was taken by the English, who gave it back to Spain in 1764; since which they have held it without interruption. The government, however, is inefficient

## PIAZZA.

and unable to protect the islanders from the ravages of the Sooloo and other pirates, who capture vessels, plunder villages, massacre or enslave the inhabitants, and commit other enormities with impunity. (*Berghaus's Asia*; *Meyen*, ii. 210-264; *Moor's Malayan Archipelago*, p. 76-85; *Maver's Hist. View of the Philipp. Islands*; *Hamilton's Gaz.*)

PHILLIPS, co., Ark. Situated in the E. part of the state, and contains 730 sq. m. Watered by St. Francis river. Bounded E. by Mississippi river. It contained in 1840, 7634 neat cattle, 557 sheep, 11,415 swine; and produced 151 bushels of wheat, 160,675 of Indian corn, 3850 of oats, 15,256 of potatoes, 1455 lbs. of tobacco, 146,409 of cotton. It had 10 stores, 22 grist-mills, five saw-mills, two tanneries, two distilleries, two printing-offices, two weekly newspapers; five schools, 109 scholars. Pop.: whites, 2625; slaves, 905; free coloured, 17; total, 3547. Capital, Helena.

PHILLIPSTOWN, t. Putnam co., N. Y., 14 W. Carmel 96 S. Albany. Bounded W. by Hudson's river. It contains some of the most elevated summits of the highlands. Iron ore abounds in the vicinity. It has four churches, a Presbyterian, Methodist, Episcopal and Baptist, 18 stores, one fulling-mill, one furnace, one flouring-mill, four grist-mills, four saw-mills, one paper mill; nine schools, 547 scholars. Pop. 3314.

PHIPPSBURG, p. t., Lincoln co., Me., 44 S. Augusta, 584 W. Situated on a peninsula on the W. side of Kennebec river, at its mouth. It has cape Small Point at its S. extremity, on the Atlantic. It contains seven stores, one grist-mill, 33 saw-mills; nine schools, 654 scholars. Pop. 1657.

PIACENZA (anc. *Placentia*), a city of N. Italy, duchy Parma, cap. prov. and duchy of its own name, on the Emilian way, near the Po, where it is joined by the Trebbia, 37 m. W.N.W. Parma, and 37 m. S.E. Milan; lat. 45° 2' 44", long. 9° 42' 32". Pop. 30,000. It is of an oblong form, surrounded with ramparts, now partly converted into public promenades, and defended by a citadel garrisoned by Austrian troops. Its streets are wide and regular, especially the principal, called the *Stradone*, which is one of the handsomest in Italy; but they are dull and deserted. The houses are built of brick. The principal square is mostly surrounded with old and mean buildings, but includes the town house, with the prison, an antique structure, with fine Gothic tracery-work; the governor's palace, an old building, with new front, raised by the French; and a large church: in the centre of the square are the bronze equestrian statues of Alexander Farnese and his son. The Farnese palace, an unfinished edifice of singular architecture, designed by Vignola, is now converted into a barrack; its walls were formerly adorned with the works of Raphael, Correggio, Parmegiano, &c.; but these were mostly removed when the last duke of Parma changed his brick palace of Piacenza for the throne of Naples. Piacenza abounds with churches. The cathedral is a heavy-looking building of the 12th century; but its cupola is ornamented with fine frescoes by Guercino and Franceschini; and it has an altar-piece of high merit, by Procaccino, and other paintings by that artist, the Caracci, Parmegiano, &c. Many of the other churches, also, boast of fine paintings; but that formerly belonging to the Augustine convent, an elegant structure by Vignola, has been converted into a granary. The city has a pretty theatre, good hotels, a public library, said to comprise 30,000 vols.; two orphan asylums, &c.; and about ½ m. distant, a bridge crosses the Po. Piacenza is a bishop's see, the seat of the high court of appeal for the duchy, two inferior tribunals, an Episcopal seminary, with about 200 students, schools of the fine arts, architecture, a high school for young ladies, &c. It has a few manufactures of silk twist, woollen stuffs, stockings, hats, earthenware, &c.; but its chief trade is in agricultural produce. It has a large fair in April.

When colonized by the Romans, anno B.C. 219, Placentia was the most important and strongest city in Cispadine Gaul; and it afforded a secure retreat to the Romans, after the unfortunate battles of the Ticinus and Trebbia. Its fine amphitheatre, beyond the walls, was destroyed in the war between Otho and Vitellius. Piacenza, with its territory, was taken possession of by Pope Julius II., and given by Paul III. to L. Farnese. It has since mostly followed the fortunes of Parma. Pope Gregory X., Cardinal Albornoz, Pallavicini, Landi, &c.; were among the remarkable natives of this city. (*Rampoldi*; *Cramer's Anc. Italy*, i. 79-82; *Conder's Italy*, ii. 18-23, &c.)

PIATT, co., Ill. Situated a little N.E. of the centre of the state, and contains 440 sq. m. Watered by Sangamon river. Capital, Monticello. Organized since the census of 1840.

PIAZZA, a town of Sicily, near its centre, intend. of Caltanissetta, 18 m. S.E.E. city of that name. Pop. in 1831, 13,229. It is built upon an isolated eminence. There is nothing remarkable in its buildings; but it is admired for the richness of its territory, and the great beauty of the contiguous country. The *chiesa madre*, a good church,

## PICARDY.

several convents, and a college, are the principal edifices. It is a bishop's see; but, from the little attention paid to it by classical writers, and the absence of any vestige of antiquity, it was evidently a place of no great consequence in early times. (*Hoare, Sir R. C., Classical Tour*, ii. 253, 254.)

**PICARDY**, one of the former provs. of France, now subdivided among the depts. Aisne, Somme, Pas-de-Calais, Ardennes, and Oise.

**PICKAWAY**, co., O. Situated a little S. of the centre of the state, and contains 470 sq. m. Watered by Scioto river and its tributaries. It contained in 1840, 19,273 neat cattle, 25,858 sheep, 37,895 swine; and produced 246,661 bushels of wheat, 10,414 of rye, 1,323,884 of Indian corn, 1342 of buckwheat, 160,553 of oats, 18,067 of potatoes, 1138 lbs. of tobacco, 11,050 of sugar. It had three commission houses in foreign trade, 33 retail stores, one furnace, four fulling mills, two woollen factories, eight flouring mills, 15 grist-mills, 38 saw-mills, one oil-mill, 13 tanneries, eight distilleries, one brewery, two potteries, three printing-offices, two weekly and one semi-weekly newspapers and four periodicals; one academy, 15 students; 54 schools, 1522 scholars. Pop. 19,725. Capital, Circleville.

**PICKAWAY**, t., Pickaway co., O. It has one flouring-mill, two saw-mills; six schools, 176 scholars. Pop. 1572.

**PICKENS**, distr., S. C. Situated in the N.W. part of the state, and contains 1050 sq. m. Drained by Seneca river and its branches. It contained in 1840, 14,873 neat cattle, 7961 sheep, 32,566 swine; and produced 48,815 bushels of wheat, 3440 of rye, 515,215 of Indian corn, 91,539 of oats, 39,238 of potatoes, 13,613 lbs. of tobacco, 355,523 of cotton. It had 16 stores, one fulling-mill, one woollen factory, nine flouring-mills, 72 grist-mills, 25 saw-mills, seven tanneries, 49 distilleries; one academy, 51 students, 25 schools, 579 scholars. Pop.: whites, 11,548; slaves, 2715; free coloured, 93; total, 14,356. Capital Pickens, C. H.

**PICKENS**, co., Ala. Situated in the W. part of the state, and contains 720 sq. m. Drained by Tombigbee river and its branches. It has three academies, 130 students, 28 schools, 609 scholars. Pop.: whites, 9347; slaves, 7764; free coloured, 7; total, 17,113. Capital, Carrollton.

**PICKERING**, a market-town and parish of England, N. riding co. York, W. divis. of wap. Pickering-Lythe, on the S. side of the Egon Moors, 18 m. S.W. Whitby, and 23 m. N.E. York. Area of parish, including five townships, 32,760 acres; pop. of township in 1831, 2555. The town, situated on a gentle eminence near a small tributary of the Derwent, is old and struggling. Near its W. extremity are the ruins of a castle, in which Richard II. was confined after his deposition, and prior to his final removal to Pontefract. The church is a fine old building, with a lofty spire; the living is a vicarage in the gift of the dean of York. The Wesleyan Methodists, Independents, and other dissenters, have their respective places of worship; and there are various Sunday schools and a well-endowed charity school for 150 children of both sexes. The town sent two members to the House of Commons in 23 Edw. I.; but the privilege was discontinued in the same reign, and has not been restored. It belongs to the duchy of Lancaster, and comprises in its jurisdiction several neighbouring villages, the whole forming what is called "the Honour of Pickering." A railway, 24 m. in length, connects this town with Whitby. A manor-court is held here at Easter and Michaelmas, for the recovery of debts under 40s., and petty sessions are held on alternate Mondays. Markets on Monday, fairs the Mondays before Feb. 14, July 6, and Oct. 11, chiefly for cattle.

**PIEDMONT**, a country of N. Italy, composing the principal portion of the continental dome, of the kingdom of Sardinia. (*See* SARDINIA, KINGDOM OF.)

**PIERMONT**, p. v., Orange L., Rockland co., N. Y. 24 N. New-York, 135 S. by W. Albany, 258 W. A thriving village on the W. side of Hudson river. Here, by a pier in the river, nearly a mile long, the Erie railroad commences; and here the highlands terminate by an abrupt hill.

**PIERRE (ST.)**. *See* MARTINIQUE.

**PIKE**, co., Pa. Situated toward the N.E. part of the state, and contains 729 sq. m. Bounded N.E. and S.E. by Delaware river. Watered by Lackawaxen river, along the banks of which the canal of the Hudson and Delaware company passes. It contained in 1840, 2935 neat cattle, 3037 sheep, 3421 swine; and produced 4469 bushels of wheat, 32,994 of rye, 21,759 of Indian corn, 19,317 of buckwheat, 16,019 of oats, 51,614 of potatoes. It had 11 stores, one woollen factory, seven grist-mills, 46 saw-mills, four tanneries; one academy, 46 students, 18 schools, 426 scholars. Pop. 3832. Capital, Milford.

**PIKE**, co., Ga. Situated a little W. of the centre of the state, and contains 470 sq. m. Bounded W. by Flint river, and drained by its branches. It contained in 1840, 11,746 neat cattle, 4475 sheep, 24,207 swine; and produced 47,171 bushels of wheat, 396,282 of Indian corn, 27,516 of oats,

## PIKE.

14,715 of potatoes, 3947 lbs. of tobacco, 6,074,959 of cotton. It had 11 stores, three grist-mills, five saw-mills, two oil-mills; one academy, 25 students, eight schools, 256 scholars. Pop.: whites, 6595; slaves, 2549; free coloured, 32; total, 9176. Capital, Zebulon.

**PIKE**, co., Ala. Situated toward the S.E. part of the state, and contains 1100 sq. m. Bounded E. by Pea river. Drained by Conecuh river and its branches. It contained in 1840, 28,375 neat cattle, 3720 sheep, 36,240 swine; and produced 3020 bushels of wheat, 385,993 of Indian corn, 8173 of oats, 32,320 of potatoes, 733,206 lbs. of cotton. It had eight stores, 12 grist-mills, seven saw-mills; 19 schools, 412 scholars. Pop.: whites, 7987; slaves, 2111; free coloured, 10; total, 10,108. Capital, Troy.

**PIKE**, co., Miss. Situated toward the S.W. part of the state, and contains 864 sq. m. Drained by Bouge Chitto river and its branches. It contained in 1840, 9421 neat cattle, 2482 sheep, 19591 swine; and produced 257 bushels of wheat, 180,345 of Indian corn, 9198 of oats, 20,818 of potatoes, 149,600 lbs. of rice, 1,416,751 of cotton. It had three stores; 12 schools, 242 scholars. Pop.: whites, 3,756; slaves, 2374; free coloured, 21; total, 6151. Capital, Holmesville.

**PIKE**, co., Ky. Situated in the S.E. part of the state, and contains 400 sq. m. Bounded S.E. by Cumberland mountains. Watered by the W. fork of Big Sandy river. It contained in 1840, 5017 neat cattle, 2984 sheep, 11,806 swine; and produced 4966 bushels of wheat, 174,398 of Indian corn, 21,292 of oats, 8767 of potatoes, 11,369 lbs. of tobacco, 16,850 of sugar. It had 12 stores, 48 grist-mills, one saw-mill; one school, 25 scholars. Pop.: whites, 3469; slaves, 85; free coloured, 13; total, 3567. Capital, Piketon.

**PIKE**, co., O. Situated in the S. part of the state, and contains 421 sq. m. Watered by Scioto river. It contained in 1840, 9559 neat cattle, 8706 sheep, 12,362 swine; and produced 82,470 bushels of wheat, 336,434 of Indian corn, 106,324 of oats, 4593 of potatoes. It had 23 stores, three flouring mills, five grist-mills, 19 saw-mills; 37 schools, 823 scholars. Pop. 7626. Capital, Chillicothe.

**PIKE**, co., Ia. Situated in the S.W. part of the state, and contains 325 sq. m. Organized in 1816. Bounded N. by White river. Drained by Patoka river. It contained in 1840, 4733 neat cattle, 5152 sheep, 18,578 swine; and produced 28,947 bushels of wheat, 239,037 of Indian corn, 31,934 of oats, 9366 of potatoes, 11,440 lbs. of tobacco, 6732 of sugar. It had 15 stores, eight grist-mills, three saw-mills, three tanneries, three distilleries; one academy, 15 students, 12 schools, 342 scholars. Pop. 4769. Capital, Petersburg.

**PIKE**, co., Ill. Situated in the W. part of the state, and contains 800 sq. m. Bounded E. by Illinois river, S.W. by Mississippi river, and drained by their small tributaries, which afford water-power. A salt spring, 20 ft. in diameter, is found on McKee's creek. It contained in 1840, 12,597 neat cattle, 6987 sheep, 22,413 swine; and produced 81,879 bushels of wheat, 1221 of rye, 359,945 of Indian corn, 1740 of buckwheat, 30,860 of oats, 31,615 of potatoes, 12,065 lbs. of tobacco, 8240 of sugar. It had 20 stores, one flouring mill, 11 grist-mills, 18 saw-mills, 14 tanneries, one distillery; two academies, 105 students; six schools, 656 scholars. Pop. 11,728. Capital, Pittsfield.

**PIKE**, co., Mo. Situated toward the N.E. part of the state, and contains 720 sq. m. Bounded N.E. by Mississippi river, Watered by Salt and Cuivre rivers. It contained in 1840, 13,515 neat cattle, 14312 sheep, 33,940 swine; and produced 42,971 bushels of wheat, 2306 of rye, 513,160 of Indian corn, 73,980 of oats, 21,641 of potatoes, 822,922 lbs. of tobacco, 20,045 of sugar. It had one commercial house in foreign trade, 36 retail stores, three woollen factories, two flouring-mills, 15 grist-mills, eight saw-mills, 11 tanneries, nine distilleries, two potteries, one printing-office, one weekly newspaper; 27 schools, 1048 scholars. Pop.: whites, 8157; slaves, 2472; free coloured, 17; total, 10,646. Capital, Bowling Green.

**PIKE**, co., Ark. Situated toward the S.W. part of the state, and contains 500 sq. m. It contained in 1840, 1772 neat cattle, 448 sheep, 5744 swine; and produced 653 bushels of wheat, 70,115 of Indian corn, 2670 of potatoes, 1018 lbs. of tobacco, 11,998 of cotton. It had one grist-mill, one saw-mill. Pop.: whites, 560; slaves 109; total, 969. Capital, Murfreesboro'.

**PIKE**, p. t., Alleghany co., N. Y., 20 N. Angelica, 257 W. by S. Albany, 350 W. Drained by Westkoy and Eastkoy creeks, tributaries of Alleghany river. It contains three churches, a Methodist, Baptist and Presbyterian, nine stores, one furnace, three fulling-mills, two grist-mills, six saw-mills, three tanneries, one distillery; nine schools, 289 scholars. Pop. 2176.

**PIKE**, p. t., Bradford co., Pa., 158 N. Harrisburg, 268 W. Drained by Wyalusing creek and its tributaries. It has three stores, two fulling-mills, one woollen factory, one grist-mill, nine saw-mills, two tanneries; 11 schools, 185 scholars. Pop. 1518.

## PIKE RUN.

PIKE, L. Perry co., O. It has six stores, two flouring-mills, one grist-mill, four saw-mills, two tanneries, one pottery; seven schools, 325 scholars. Pop. 1668.

PIKE RUN, p. t., Washington co., Pa., 18 S. E. Washington b., 194 W. Harrisburg, 210 W. Bounded E. by Monongahela river. It contains six stores, one saw-mill, one distillery; two schools, 58 scholars. Pop. 2157.

PIKETON, p. v. capital of Pike co., O., 19 S. Chillicothe, 64 S. Columbus, 398 W. Situated on the E. side of Scioto river. It contains a courthouse, jail, six stores, 80 dwellings, and about 500 inhabitants.

PILLAU, a seaport town of the Prussian states, prov. E. Prussia, at the point of a tongue of land, on the N. side of the opening from the Baltic into the large maritime inlet, called the Frische Haff, lat.  $54^{\circ} 33' 39''$  N., long.  $19^{\circ} 52' 30''$  E. Pop. 3600. Pillau has a pretty good port, but the water is rather shallow, not exceeding 11 or 12 ft. in depth, so that vessels of large burden must anchor outside the bar. A light-house, having the lantern elevated 90 ft. above the level of the sea, has been erected on the S. side of the town, contiguous to the port. Pillau is properly the seaport of Conigsberg and Elbing, and is, in consequence, largely frequented by shipping.

PILES GROVE, t., Salem co., N. J., 10 N. E. Salem. Salem creek affords water-power. It contains three churches, a Methodist, Friends, and an African Methodist, 10 stores, four grist-mills, two saw-mills, two tanneries; eight schools, 312 scholars. Pop. 2477.

PILSEN, a town of Bohemia, cap. circ. Pilsen, on the Beraun, a tributary of the Elbe, 53 m. S.W. by W. Prague. Pop. in 1834, 8906. It is one of the best built towns in the kingdom, and has a fine Gothic parish church, and town-hall, a gymnasium, military and other schools, a theatre, &c. Its manufactures of woollen goods are flourishing, and it has others of Morocco leather, iron and horn wares, and alum. Being on the high route from Prague to S. and central Germany, it has a considerable transit trade; and a large annual fair is also held at Pilsen, attended by traders from every part of Bohemia. (*Austr. Nat. Encyc.; Berg-haus.*)

PINE, t., Alleghany co., Pa., 11 N. Pittsburg. Drained by tributaries of Alleghany river. It has one store, two fulling-mills, five grist-mills, five saw-mills, three tanneries; nine schools, 342 scholars. Pop. 1770.

PINE GROVE, p. t., Schuylkill co., Pa., 43 N. E. Harrisburg, 153 W. Watered by Swatara creek, along which runs a navigable feeder of the Union canal. It contains six stores, two furnaces, one forge, three grist-mills, 12 saw-mills; one school, 25 scholars. Pop. 1605.

PINE PLAINS, p. t., Dutchess co., N. Y., 25 N. E. Poughkeepsie, 62 S. Albany, 327 W. Drained by head branches of Wappinger's creek, issuing from several ponds. It contains a Presbyterian church, six stores, two fulling-mills, one flouring-mill, four grist-mills, three saw-mills; one school, 18 scholars. Pop. 1334.

PINEROLO (Fr. *Pignerol*), a town of the Sardinian dom., in Piedmont, divis. Turin, cap. prov., on the Clusone, near the foot of the Alps, 21 m. S.W. Turin. Pop. in 1838, 13,501. It was formerly a place of strength; but on its cession to Savoy in 1713, its fortifications were blown up by the French; and at present it is surrounded only by a slight wall. It is neither regularly nor well built, but contains a spacious place of arms, with a handsome hospital and cavalry barracks. It has a fine cathedral, and numerous convents. The manufactures comprise coarse woollens, silk, twist, paper, and leather; and the inhabitants have a considerable trade in these articles, and in corn, wine, spirits, and fire-wood.

PIQUA, p. v. Miami co., O., 25 N. Dayton, 73 W. Columbus, 467 W. Situated on the S.W. side of Miami river, on the line of the Miami canal. It is regularly laid out with spacious streets, crossing each other at right angles. It contains five churches, a market-house, 16 stores, two grist-mills, four saw-mills, a printing-office, issuing a weekly newspaper, 250 dwellings, mostly of brick, and many of them handsome, five schools, 169 scholars. Pop. 1481.

PISA (an. *Pise*), a famous city of central Italy, the cap. of one of its most celebrated republics, and now the cap. of the prov. of its own name in the grand duchy of Tuscany, in a fertile, though rather marshy plain on the Arno, about eight m. from its mouth, 13 m. N.N.E. Leghorn, 50 m. W. Florence, and 12 m. S.W. Lucca; lat.  $43^{\circ} 43' 11''$  N., long.  $10^{\circ} 24' E.$  The pop., which, in the 13th century was estimated, though probably far beyond the mark, at 150,000, was, in 1836, only 20,943: The walls of the city are nearly five m. in circuit. In the days of its prosperity it was celebrated for the strength of its fortifications, its patrician towers, its profusion of marble, and its grave magnificence; but it is now only "the shell of a great city." (*Addison.*) Its ancient gravity has degenerated into dulness; its towers, however, though no longer a mark of nobility, may be traced in its modernised houses; and it can still boast of

## PISA.

many marble edifices, and of one of the finest marble bridges in Europe. Its streets, though crooked, are wide, and paved, as those in Florence, with large flag stones; the river is embanked with stone quays; and a street, the *Lung-Arno*, which extends along both its banks, has a most majestic appearance. Some of the houses have curious old fronts, and one street is wholly bordered with arcades. In a large grass-grown square, at the N. angle of the city, are four remarkable buildings—the cathedral, baptistry, leaning tower, and *Campo Santo*; "all," says Forsyth, "built of the same marble, all varieties of the same architecture, all venerable with years, and fortunate both in their society and their solitude." The cathedral is an edifice of the 11th century, and principally interesting as a specimen of the style then prevalent in Italy. Its length is 297 ft., breadth 108 ft.; and it has a front of 127 ft. in height. Internally it is divided into five aisles by 68 insulated columns of Corinthian or Composite architecture; and four piers support an elliptical cupola. There are some beautiful altars, three magnificent bronze doors with sculptures in relief by John of Bologna, and many fine paintings and bas-reliefs by some of the first Italian masters. But incongruities are numerous: "The marble pulpit is supported by a naked figure of the most gross design; Bacchanals and Meleager's hunt are encrusted on the walls; an ancient statue of Mars is worshipped under the name of St. Potitus; and the heads of satyrs are carved on a cardinal's tomb!" (*Forsyth.*) Among the 80 other churches are many which can boast of rare works of art. The baptistry, opposite the cathedral, was built between 1152 and 1154, when Pisa was so populous and rich, that a voluntary contribution of one florin from each family is said to have sufficed to pay for its erection. This building is an immense polygon, above 160 ft. in diameter and 176 in height, surmounted by a cupola and a cone terminated by a figure of St. John the Baptist. Nearly the whole of the exterior is of marble, and the interior is handsome; but, according to Mr. Woods, the building wants finish, and is not altogether well proportioned. The famous *Campanile*, or Leaning Tower, is an edifice of little actual beauty, but rendered extraordinary by its inclination from the perpendicular. It was begun about 1174, but not finished till the middle of the 14th century: it consists of two concentric walls, each two ft. thick, the diameter of the circular well in the centre being 22 ft.: it is eight stories, or 190 ft. in height, with outside galleries projecting seven ft. The topmost story overhangs the base on one side about 15 ft.; and to a spectator looking down from the top, the effect is terrific; though as the centre of gravity is still 10 ft. within the base, it is perfectly safe. The view from the summit is alike extensive and beautiful. It has been supposed by some that the inclination is not accidental, but intentional, and that it was so constructed originally; but the more probable opinion seems to be, that it is a consequence of the sinking of the foundation. The observatory and baptistry have also a slight inclination, which is, no doubt, owing to the same cause.

The *campo santo*, or cemetery, is the most beautiful edifice at Pisa, and unique in its kind. It is an oblong or rhomboidal court, 383 ft. in length, by 127 ft. in breadth, surrounded by arcades of white marble, adorned with ancient Etruscan, Greek, and Roman bas-reliefs, busts, and other sculptures; and the walls covered with fresco-paintings, &c., by the earliest Italian masters. In its centre is an enormous mound of earth, said to have been brought thither from Palestine during the crusades, and formerly used as a burial ground. Pisa has a grand ducal residence, and several other palaces, which, with the nobility's clubhouse and bank, are fine buildings: the three bridges are handsome; and the hospitals, theatre, modern aqueduct four m. in length, &c., are well adapted to their purposes. Various remains of antiquity exist, as those of the aqueduct of Caldocoli, of the *hypocaustum*, &c., supposed to have been constructed by Nero, but especially a *sudatorium*, or vapour-bath, near the Lucca gate. About  $\frac{3}{4}$  m. distant, on the Lucca road, are the *Bagni di Pisa*, supposed to be the baths mentioned by Strabo and Pliny, and still frequented by numerous visitors.

Pisa has a university, formerly among the most celebrated in Italy, and remarkable for its tolerance; its degrees, except in divinity and canon law, being attainable by persons of all creeds. It is still the head university of Tuscany; and, in 1836, had 545 students, 255 in jurisprudence, 173 in medicine and surgery, 39 in physical and mathematical sciences, and 26 in theology. Its library comprises 55,000 vols.; and attached to it are the Ferdinand college, a fine botanical garden, cabinet of natural history, chemical laboratory, and observatory. This university was one of the first to revive the study of the civil law; though there be no good foundation for the common story that this revival was a consequence of the Pisans having found a copy of the Pandects among the spoils of Amalfi, sacked by them in 1140. The university has had many illustrious names in

## PISCATAQUA.

the roll of her professors, including, among others, Galileo, Torricelli, Redi, Malpighi, Thomas Dempster, Borelli, Castelli, Gronovius, &c. Besides the university, Pisa has an Episcopal seminary, with about 80 students, several conventual female schools, normal and Lancasterian schools, &c.; and is an archbishop's see. Its manufactures, which are unimportant, consist chiefly of soap, white lead, vitriol, glass, and a few other articles; and its trade has sunk in proportion to the rise of that of Leghorn. The city is connected by navigable canals both with Leghorn and the Serchio; but it is a curious fact that no vestige can now be found of its ancient port or roadstead at the mouth of the river, though, in the 13th century, it accommodated large fleets. This singular result is supposed to have been brought about by a change in the course and embouchure of the Arno.

Pisa derives some advantage from its being the winter resort of the grand duke and of the Tuscan court, as well as of numerous invalids, attracted thither by the mildness of the climate. On the shore near the city, amidst an extensive forest of islex, is a farm belonging to the grand duke, where a number of camels have been reared, it is said, from the time of the crusades; and whence most of the zoological collections in Europe are supplied with these animals.

Morals seem to be at a lower ebb in this, than even in most other Italian cities.

"All evils here contaminate the mind,  
That opulence departed leaves behind."

According to Simond, idleness, ignorance, and profligacy, form the general character of the inhabitants. "Every day I hear disgusting stories of meanness and dirty artifice in every transaction of life." Foreigners cannot hire a house, or make a bargain of any sort without being cheated. Most of the ladies have their *cavallieri serpenti*.

Most writers attribute the foundation of this city to colonists from Pisa in the Peloponnesus soon after the Trojan war.

"Alpheus ab origine Pisas  
Urbs Etrusca solo." *Æneid*, lib. x. v. 179.

It became a Roman colony, and its port was, in the time of Strabo, an important naval station. It did not however, attain to any great distinction till the 10th century, when it took the lead among the commercial republics of Italy. In the 11th century, its fleet of galleys maintained a superiority in the Mediterranean, commanding the coasts of Sicily, Sardinia, Corsica, and Barbary, and assisting the French in the crusades. But in the 13th century, a struggle commenced with Genoa, which, after many vicissitudes, ended in the total ruin of the Pisans. The latter were defeated near the island of Meloria, in 1284, in a great naval engagement by the Genoese, with the loss of the greater part of their fleet, and above 16,000 men killed and taken prisoners. Pisa subsequently became the prey of various petty tyrants, and was finally united to Florence in 1406. (*Eustace*, iii. 440-461; *Wood's Letters of an Architect*, ii. 393-398; *Matthews*; *Williams*; *Forsyth*; *Conder's Italy*, iii. 1-20, &c.)

PISCATAQUA, r., N. H., rises in Wakefield t., and running S.E. about 40 m., falls into the Atlantic below Portsmouth, where it forms one of the best harbours in the United States. In the upper part of its course it is called Salmon Falls river, and including this, it constitutes, through most of its course, the boundary between New Hampshire and Maine. Through Great bay which enters it on the S. side, it receives Lamprey, Exeter, and several other streams from the S. and W. It is navigable, with its tributaries, for sloops to South Berwick, Dover, New-Market, Durham, and Exeter. Great Bay unites with it at Hilton's Point, five miles above Portsmouth, and is, in some places, four miles wide. The tide flows up the river at Portsmouth, with a powerful current, which prevents this fine harbour from being much obstructed by ice.

PISCATAQUA, t., Middlesex county, N. J., 5 N. New-Brunswick. Bounded S. and S.W. by Raritan river, N.W. by Green Brook. It contains an Episcopal church, seven stores, five grist-mills, three saw-mills, two tanneries, eight schools, 222 scholars. Pop. 2928.

PISCATAQUIS, r., Me., is a large western branch of Penobscot river, is about 100 m. long, and enters the Penobscot 25 m. below the junction of Mattawamkeag river, the great eastern branch.

PISCATQUIS, co., Me. Situated in the N. part of the state, and contains a great amount of territory, extending to the Canada line. The N. part is a wilderness, only a small portion of the S. part being settled. Moose-head lake forms a part of its W. boundary, and it has many other lakes. Watered by the W. branch of Penobscot river, and by Piscataquis river and its branches. It contains Katadin mountain, an isolated summit, 5300 ft. above the level of the sea, it contained in 1840, 8642 neat cattle, 17,330 sheep, 4730

## PITTSBURG.

swine; and produced 59,298 bushels of wheat, 2769 of rye, 12,583 of Indian corn, 4229 of barley, 57,675 of oats, 445,576 of potatoes, 8454 lbs. of sugar. It had 10 stores, three fulling-mills, one woollen factory, three flouring-mills, 19 grist-mills, 31 saw-mills, one oil mill, nine tanneries, two printing-offices, two weekly newspapers; one academy, 100 students; 143 schools, 5578 scholars. Pop. 13,138. Capital, Dover.

PISTOJA, (anc. *Pistoria*), a city of central Italy, grand duchy of Tuscany, prov. Florence, on the Ombrone, a tributary of the Arno, at the foot of the Apennines, 20 m. N.W. Florence. Pop. in 1836, 11,266. It is between 2 and 3 m. in circuit; is surrounded by old walls said to have been originally constructed by Desiderius, the last of the Lombard kings, and is further defended by a citadel built in 1252. It is clean, handsome, and well built, with unusually broad streets, and many curious and splendid edifices; but, like many other Italian towns, is dull, monotonous, and silent. Its cathedral is in the same style of architecture as that of Pisa and that of Lucca, but inferior to either; it has, however, some interesting monuments. The baptistry, constructed by Andrea Pisano, in 1337, is a small and handsome octagonal Gothic edifice. Several of the inferior churches are remarkable for their style of architecture or works of art: and the courthouse is a fine old building. Instead of the suppressed Jesuits' college, there is a seminary for priests; and a large hospital is kept in good order.

Pistoja has a well supplied market, a museum, two small public libraries, a large theatre, assembly-rooms, and a race ground. Provisions are cheap and good; the climate is cool and healthy; and the city is the residence of many noble and respectable families. The manufactures, which are on a small scale, include silk twist, straw hats, paper, musket barrels, cutlery, nails, iron ware, &c.; and near the city are some tolerably extensive iron-works.

Pistoja is with Prato a bishop's see, and has an Episcopal college, a superior private lyceum, with normal, girls', Lancasterian, and various inferior schools. In the middle ages it was the cap. of a republic which became subject to Florence about the same time with Pisa. (*Rampoldi*; *Bowring's Report*; *Conder's Italy*.)

PITCAIRN'S ISLAND. See POLYNESIA.

PITCHER, p. t., Chenango co., N. Y., 126 W. Albany, 332 W. Watered by Ostelic river. It contains two churches, a Presbyterian and Baptist, three stores, two fulling-mills, one woollen factory, four grist-mills, three saw-mills, two tanneries; one academy, 26 students, 16 schools, 571 scholars. Pop. 1562.

PITT, co., N. C. Situated toward the E. part of the state, and contains 800 sq. m. Bounded S. by Neuse river. Watered by Tar river. It contained in 1840, 5984 neat cattle, 4369 sheep, 31,037 swine; and produced 9751 bushels of wheat, 2570 of rye, 376,455 of Indian corn, 6424 of oats, 73,316 of potatoes, 510,529 lbs. of cotton. It had 15 commission houses in foreign trade, nine retail stores, one flouring-mill, six grist-mills, five saw-mills, 14 distilleries; one academy, 30 students; 4 schools, 63 scholars. Pop.: whites, 6128; slaves, 5648; free coloured, 30; total, 11,806.

PITT, t., Alleghany co., Pa. Bounded N. by Alleghany river, S. and W. by Monongahela river. The city of Pittsburgh and the villages of East Liberty and Lawrenceville are within its limits. It contains an abundance of coal. Exclusive of Pittsburgh, it contains 17 stores, one furnace, one forge, four glass-houses, two saw-mills, five tanneries; one academy, 20 students; 10 schools, 961 scholars. Pop. 6062.

PITTENWEEM, a royal and parl. bor. and seaport of Scotland, co. Fife, on the N. shores of the frith of Forth, 26½ m. N.E. by N. Edinburgh. Pop. 1317. It was created a bor. in 1537, and bears the marks of antiquity and decay. In addition to the parish church, the Episcopalians and the Relief synod have each a chapel. Pittenweem has a small harbour; but the only business connected with it is that of fishing to a limited extent. Here are the remains of a monastery of Augustine friars. Dr. Douglas, bishop of Salisbury,

"The scourge of impostors, the terror of quacks."

was born here in 1721.

Pittenweem unites, with St. Andrew's, the two Anstruthers, Crail, Cupar, and Killyrenny, in sending one member to the House of Commons. Registered electors in this bor. in 1839-40, 49. Corporation revenue, £448. Number of councillors, 24.

PITTSBORO', p. v., capital of Chatham co., N. C., 34 m. W. by S. Raleigh, 329 W. Situated on Robinson's creek, a tributary of Haw river, and contains a courthouse, jail, two churches, an Episcopal and Methodist, an academy, and about 300 inhabitants.

PITTSBURG, city, port of entry, and capital of Alleghany co., Pa., is situated in 49° 30' N. lat. and 80° 2' W. long., 230 m. W.N.W. Baltimore, 297 m. W. by N. Philadelphia, 200 m. W.N.W. Harrisburg, 226 W. The population in

## PITTSBURG.

1810, was 4768; in 1820, 7248; in 1830, 12,542; in 1840, 21,115, being the second city in population in the state, and the thirteenth in the United States. With the adjoining cities and boroughs of Alleghany, Manchester, Birmingham, and Lawrenceville, and other suburbs of Pittsburg, there is a population of not less than 40,000.

The city is situated at the confluence of the rivers Alleghany, 400 yards wide, and Monongahela, 450 yards wide, which by their union here form the Ohio river, which is at this place, a quarter of a mile wide, and navigable by steamboats to the gulf of Mexico, through the Mississippi river. It is built on a beautiful plain between the two rivers of a triangular form. About a mile back of the point it is surrounded by Grant's, Ayers's, and Quarry hills. It is compactly built, with many handsome edifices, chiefly of brick, to which however a dingy appearance is given by the dust of the bituminous coal, so extensively used in its manufactures and otherwise. It was laid out in 1765 on the N.E. bank of the Monongahela river, with streets running parallel with the river, and crossed by others at right angles with them. The streets on the Alleghany river also run parallel with the river, and are crossed at right angles with other streets. The cross streets meet each other obliquely a few streets back from Alleghany river. Three covered bridges cross the Alleghany river, one of which has a walk on the top of the roof. A bridge also crosses the Monongahela river, which cost \$102,000. The Pennsylvania canal crosses the Alleghany river in an aqueduct, and several ferries cross the Monongahela. The harbour of Pittsburg is chiefly on the Monongahela, where the water is deeper than on the Alleghany. Eighty-nine steamboats employed on the Ohio and connected rivers, with an aggregate of 12,436 tons are owned either wholly or in part in Pittsburg. The hills with which the city is surrounded are filled with bituminous coal, which can easily be brought to the city, and affords unequalled facilities for manufacturing.

Among the public buildings of Pittsburg, the new courthouse is a splendid edifice, at an elevation which commands an extensive view of the three rivers, with the city and the surrounding country, adorned with hills and valleys, villages and steamboats. It is 165 feet long and 100 feet wide, of the Grecian Doric architecture, having in the rear a spacious and well conducted prison. It is surmounted by a dome, 37 feet in diameter at the base, and 148 feet high above the level of the street, and cost about \$200,000. A splendid Roman Catholic cathedral is located on Grant's hill. The Western university of Pennsylvania is also situated near Grant's hill. The third Presbyterian church, several of the banks, and two splendid hotels, the Exchange hotel and the Monongahela house, which are the largest in the western country, have much that is imposing in their appearance. There is a museum which contains many aboriginal curiosities, three market-houses, and several literary societies, with small libraries, which would probably be more efficient if united in one large institution. The city is supplied with water raised from the Alleghany river, a stream which yields fine water, by a steam engine, which raises 3,000,000 gallons daily, and which is sent over the city in pipes, which have a total length of over  $\frac{1}{2}$  miles. These water-works cost over \$250,000. The city is lighted with gas, extended through its principal streets, by gas works which were completed in 1836. The bituminous coal, which abounds in the vicinity, furnishes great facilities for the production of gas, at a little expense, and which affords a brilliant light.

There are 35 churches in Pittsburg, five Presbyterian, one Reformed Presbyterian, four Methodist, one Protestant Methodist, one Cumberland Presbyterian, three Baptist, two Episcopal, five Scots Presbyterian, two Lutheran, two Congregational, three Welsh Methodists, one Unitarian, one Disciples, three Roman Catholic and one African. There are four banks, with an aggregate capital of \$3,000,000; and three insurance companies, with a capital of \$540,000; and a bank for savings. The tonnage of the port in 1840 was 12,000. It had according to the census of 1840, seven commercial, and 32 commission houses in foreign trade, with a capital of \$1,241,110; 408 retail stores, with a capital of \$4,165,190; 17 lumber-yards with a capital of \$167,000; 25 furnaces and five forges, with a capital of \$1,219,000; machinery was manufactured to the amount of \$443,500; hardware and cutlery to the amount of \$276,500; five cannon and 1350 small arms were manufactured; the precious metals were manufactured, producing \$14,860; various metals, \$196,700; one fulling-mill, and one woollen manufactory employed a capital of \$10,000; two cotton factories with 3000 spindles, four tanneries, five breweries; paints and drugs were manufactured with a capital of \$203,300; four glass houses, two glass-cutting works, two flouring-mills, five saw-mills, one oil-mill; 18 printing-offices, seven binderies, four daily and 11 weekly newspapers; 53 brick or stone houses, and 15 wooden houses were built, which cost \$161,300. The total capital employed in manufactures

was \$2,037,952. There were one college with 50 students; nine academies with 755 students, and 18 schools with 2581 scholars.

Several places in the vicinity of Pittsburg deserve to be described with it, although they are under separate incorporations. The most important of these is Alleghany city, on the opposite side of Alleghany river. It contains 15 churches, two Presbyterian, two Reformed Presbyterian, two Cumberland Presbyterian, two Methodist, two Protestant Methodist, two Scots Presbyterian, a Baptist, an Episcopal, a German Reformed, and a Disciples. It contains the Western Theological seminary, founded in 1823, which has two professors, 20 students, 182 have been educated, and has 6000 volumes in its libraries. It is under the direction of the Presbyterians. The edifice occupies a commanding eminence, is 140 feet long and 50 feet wide; the central part being four stories, and the wings, three stories high. It is also the seat of the theological seminary of the Associate Reformed church. Alleghany city presents many fine residences, in commanding situations, occupied by many persons doing business in Pittsburg, who are pleased to retire from the bustle, smoke and coal dust of the principal city. Its commercial and manufacturing business, properly its own, is considerable. It contained in 1840, 53 stores, with a capital of \$3,400; nine lumber-yards with a capital of \$50,000; one furnace, and one forge, with a capital of \$218,000; value of hardware and cutlery manufactured, \$50,600, three cotton factories, with 14,270 spindles, two tanneries, one brewery, one rope-walk; total capital in manufactures \$726,640; one theological college, 31 students; three academies, with 169 students; 12 schools, 709 scholars.

Birmingham, borough, the postoffice of which is called Buchanan, is another considerable suburb of Pittsburg. It occupies the S. side of Monongahela river, at the distance of about a mile from the centre of the city. It is connected with Pittsburg by a bridge 1500 feet long, and by a ferry, and has important manufactures of glass and iron. It contains two churches, a Presbyterian and Methodist, and a market-house. It had in 1840, 10 stores, capital \$14,500; two lumber-yards, capital \$9300; one forge, six glass houses, four glass-cutting works, capital \$140,000, one pottery; total capital in manufactures \$155,750; four schools, 115 scholars. Pop. 1554. There are a number of other flourishing villages in the vicinity of Pittsburg.

Pittsburg occupies the site of the former French fort Du Quesne, which remained in their possession from 1754 to 1758, and whence they instigated the Indians to hostilities against the frontier settlements of Pennsylvania. In 1755 General Braddock lost his life, and the army suffered a defeat in attempting to drive the French from this post. The youthful Washington displayed his military skill, and gave promise of his future greatness, by conducting in a masterly manner the retreat of the shattered forces. A more formidable force was collected at Carlisle, under General Forbes, for the capture of fort Du Quesne. Major Grant, who was sent forward with a force of 800 men, was surrounded by the French and Indians, on what is now called Grant hill in Pittsburg, and captured, after losing about 300 men in killed and prisoners, himself being among the captured. General Forbes, however, pressed forward, and before he reached the place, the French burned their fort and retired. Near this a temporary stockaded fort was built on the bank of the Monongahela, which was called fort Pitt, in honour of the distinguished British statesman. In 1759 General Stanwix commenced the construction of a more formidable work, nearer the site of fort Du Quesne, which cost the British government £60,000 sterling. This fort was unsuccessfully attacked by the Indians in 1763. In 1764 peace having been restored between the British and French, a brick redoubt was built, remains of which are still visible. Until the close of the revolutionary war, Pittsburg advanced slowly. In 1775 the number of dwelling houses, within the present limits of the city, amounted to from 25 to 30. The ground on which it stands belonged to Penn's minor, and was the property of the family. In 1784 it was laid out into town lots, which sold rapidly. In 1786 the first number of the Pennsylvania Gazette was published, and in it, it was stated that the number of houses in the village was about 100. In 1788 Alleghany county was constituted, and in 1791 Pittsburg was made its capital, and a lot was purchased for the site of a courthouse and jail. Among those who came in 1794 to quell the whiskey insurrection, there were many enterprising young men who were pleased with the situation of Pittsburg, and resolved to make it their future abode. The large sums expended by the army in this expedition and in the Indian wars, had a favourable influence on the business of the place.

In the Pittsburg Gazette it is stated Jan. 9th, 1796, that by a census just taken by the assessors, the population amounted to 1395. This is the earliest authentic account of the population of the place. During this year Louis

## PITTSFIELD.

Phillippe, the present king of the French, visited Pittsburg, and spent a considerable time in the place. In 1811 the first steamboat constructed on the western waters, named the Orleans, was built at Pittsburg. This invention has entirely changed the character of the trade of the west. Before its introduction it was the work of a whole season to make a trip to New-Orleans and to return; now many are made in a season. In 1814, the manufactures of Pittsburg employed 1637 hands, and amounted to \$2,266,366. The Pennsylvania canal constructed between 1823 and 1836, is also of great importance to Pittsburg and the west. It has reduced the transportation from Philadelphia to Pittsburg from 3 or 4 dollars to less than one dollar for a hundred pounds, besides greatly facilitating the travel on this route, shortening the time and reducing the expense to less than half its former amount. The Pennsylvania canal crosses the Alleghany river by a splendid aqueduct 1200 feet long, built by the state at an expense of \$104,000. After entering Pittsburg it passes through a tunnel under Grant's hill, and enters the Monongahela river. Another branch of the canal passes through Alleghany city and enters Alleghany river a few hundred yards above the head of Ohio river. In 1837 the manufactures, mechanical products, and sales of all kinds, foreign and domestic, in Pittsburg, were estimated at from 20,000,000 to 25,000,000 of dollars. Pittsburg has acquired deservedly the name of the Birmingham of America. It is a great work shop, and industrious hive; where many who once toiled in its manufactories, now live in elegance, and ride in coaches, still practising the economy by which their wealth has been acquired.

PITTSFIELD, p. t., Merrimac co., N.H., 15 m. N.E. Concord, 406 W. Drained by Suncook r., which affords water-power. It contains three churches, a Congregational, Methodist, and Free-will Baptist; five stores, one cotton factory with 4096 spindles, one grist-mill, two saw-mills, three tanneries; two academies, 168 students; 11 schools, 461 scholars. Pop. 1719.

PITTSFIELD, p. t., Berkshire co., Mass., 131 m. W. Boston, 6 m. N. Lenox, 33 m. E.S.E. Albany, 376 W. Drained by branches of Housatonic river, which affords water-power. The railroad from Boston to Albany passes through it. Agriculture has been greatly improved here. The village near the centre, is the largest in the county, and the most beautiful in this part of the state. The houses are mostly of wood, built in fine taste, and neatly painted white, with yards in front, ornamented with shrubbery. It contains four churches, a Congregational, Episcopal, Methodist, and Baptist; a bank, and the Berkshire medical institution. This institution is connected with Williams college, was founded in 1823, has five professors, 103 students, and 473 graduates. The lectures commence on the first Thursday in September. The village contains a male and a female academy, a printing-office, 350 dwellings, and 2500 inhabitants. It has a central square of 4 acres, ornamented by a lofty elm, the remains of the original forest. The township contains a number of stores, one furnace, one cotton factory with 1500 spindles, two grist-mills, eight saw-mills, three tanneries, one brewery, one printing-office, one weekly newspaper; one academy, 68 students; 15 schools, 696 scholars. Pop. 3747.

PITTSFIELD, p. t., Otsego co., N. Y., 18 m. W. by S. Cooperstown, 95 m. W. Albany, 352 W. Bounded W. by Unadilla river, and drained by its tributaries. It contains two stores, one fulling-mill, one cotton factory with 3500 spindles, one grist-mill, nine saw-mills; five schools, 160 scholars. Pop. 1395.

PITTSFIELD, p. v., capital of Pike co. Ill., 70 m. W.S.W. Springfield, 850 W. Situated on elevated ground on a rolling prairie, midway between Illinois and Mississippi rivers, and contains a courthouse, jail, five stores, various mechanic shops, and about 250 inhabitants.

PITTSFORD, p. t., Rutland co., Vt., 70 m. S.W. Montpelier, 464 W. Chartered in 1761; first settled in 1769. Watered by Otter creek, and its tributary Furnace brook, which affords water-power. It abounds with iron ore, and a marble which is coarse grained, and slightly flexible. The oxide of manganese is also found. It contains three churches, a Baptist, Congregational, and Methodist; four stores, two furnaces, two tanneries; 18 schools, 650 scholars. Pop. 1927.

PITTSFORD, p. t., Monroe co., N. Y., 6 m. E. Rochester, 213 m. W. by N. Albany, 362 W. Drained by Irondequoit creek and its branches. The Erie canal, and the Auburn and Rochester railroad, pass through it. It contains three churches, a Presbyterian, Baptist, and Methodist; three stores, one flouring-mill, one tannery, one brewery; 13 schools, 593 scholars. Pop. 1983.

PITTSBURGH, p. t., Salem co., N. J., 16 m. E. Salem. Drained by branches of Maurice river, and head waters of Oldman's and Salem creeks. It contains four churches, two Methodist, a Presbyterian, and Baptist; six stores, one woollen factory, five grist-mills, three saw-mills; seven schools, 270 scholars. Pop. 2390.

## PLASENCIA.

PITTSSTON, p. t., Kennebec co., Me., 7 m. S. by E. Augusta, 395 W. Bounded W. by Kennebec river, small tributaries of which afford water-power. Incorporated in 1779. Lumber is exported. It contains nine stores, three grist-mills, 11 saw-mills; 16 schools, 696 scholars. Pop. 2460.

PITTSSTOWN, p. t., Rensselaer co., N. Y., 12 m. N.E. Troy, 25 m. N.E. Albany, 393 W. Bounded N. by Hoosick river. Drained by Tonhannock creek. It contains three churches, a Presbyterian, Methodist, and Baptist; 10 stores, three fulling-mills, one woollen factory, three cotton factories with 2290 spindles, one flouring-mill, five grist-mills, 13 saw-mills, one oil-mill, two tanneries; 20 schools, 857 scholars. Pop. 3784.

PITTSYLVANIA, county, Va. Situated in the S. part of the state, and contains 891 sq. m. Bounded N. by Staunton river. Watered by Dan and Bannister rivers. It contained in 1840, 19,451 neat cattle, 19,277 sheep, 42,513 swine; and produced 142,178 bushels of wheat, 5747 of rye, 679,319 of Indian corn, 333,763 of oats, 24,499 of potatoes, 6,438,777 pounds of tobacco, 16,490 of cotton. It had 25 stores, four flouring-mills, 50 grist-mills, 37 saw-mills, 13 tanneries, four distilleries, one printing-office, one weekly newspaper; four academies, 195 students; 38 schools, 817 scholars. Pop., whites, 14,283; slaves, 11,553; free coloured, 557; total, 26,398. Capital, Competition.

PITTSYLVANIA, C. H. (called also *Competition*), p. v., capital of Pittsylvania co., Va. Situated on Cherrystone branch of Bannister river, and contains a courthouse, jail, a Methodist church, about 125 dwellings, many of them of brick, and neat, and about 300 inhabitants.

PLAIN, p. t., Wayne co., O., 92 m. N.E. Columbus, 349 W. Pop. 2134.

PLAINFIELD, p. t., Sullivan co., N. H., 62 m. N.W. Concord, 478 W. Bounded W. by Connecticut r. Queechy falls, in this river, are opposite to the town, and a bridge crosses the river. Hart's island in Connecticut river, containing 19 acres, belongs to the town. Union Academy, founded in 1813, to aid young men for the gospel ministry, received a bequest from Hon. Daniel Kimball, of \$40,000, and is flourishing. It contains three churches, two Congregational, and a Baptist; three stores, two grist-mills, five saw-mills, two tanneries; one academy, 175 students; 11 schools, 613 scholars. Pop. 1552.

PLAINFIELD, p. t., Windham co., Ct., 45 m. E. Hartford, 372 W. Bounded W. by Quinebaug river, and watered by its tributary, Moosup river, which affords water-power. The Norwich and Worcester railroad passes through it, a little W. of the village. The village is built chiefly on one extended street, on elevated ground, and contains a Congregational church, an academy, founded in 1783, and a number of neat dwellings. The town contains four churches, a Congregational, two Baptist, and a Friends; six stores, two woollen factories, seven cotton factories with 15,900 spindles, four grist-mills, five saw-mills, nine oil-mills; 12 schools, 692 scholars. Pop. 2383.

PLAINFIELD, p. t., Otsego co., N. Y., 15 m. N.W. Cooperstown, 84 m. W. Albany, 373 W. Watered by tributaries of Unadilla river, which bounds it on the W. It contains a Presbyterian church, two stores, two fulling-mills, two grist-mills, four saw-mills; 12 schools, 491 scholars. Pop. 1450.

PLAINFIELD, p. v., Westfield t., Essex co., N. J., 39 m. N.E. Trenton, 206 W. Situated on Green brook, and contains five churches, a Presbyterian, Methodist, Baptist, and two Friends; a bank, four stores, several mills and manufactories, an insurance company, a ladies' library, an apprentices library, 150 dwellings, and about 1000 inhabitants.

PLAINFIELD, t., Northampton co., Pa. Drained by the E. branch of Bushkill creek. It has four stores, three grist-mills, four saw-mills, one oil-mill, two tanneries. Pop. 1501.

PLAQUEMINE, parish, La. Situated in the S.E. part of the state, and includes the mouths of the Mississippi proper. It contains about 2500 sq. m. It is level and low, the most elevated parts being not more than 10 feet above the level of the gulf of Mexico. Much of it is liable to submersion. The arable soil is extremely fertile, and is confined to the margin of the Mississippi. It contained in 1840, 4124 neat cattle, 1832 sheep, 834 swine; and produced 100,185 bushels of Indian corn, 985,600 pounds of rice, 10,329,000 of sugar. It had 15 stores, one distillery, one brewery; one college, 38 students. Pop.: whites, 1551; slaves, 3385; free coloured, 324; total, 5060. Capital, Fort Jackson.

PLAQUEMINE, p. v., capital of Iberville par., La., 112 m. W.N.W. New-Orleans, 1192 W. Situated on the S. side of Plaquemine bay, at its efflux from Mississippi river. It contains a courthouse, 15 stores, and about 250 inhabitants.

PLASENCIA, a fortified city of Spain, in Estremadura, on a peninsula almost surrounded by the Jertes, a tributary of the Tagus (crossed here by three bridges), 102 m. N. by E. Badajoz, and 120 m. W. by S. Madrid. Pop., according to Miñano, 6787. It stands in a plain, surrounded N. and

## PLASSEY.

E. by high mountains, is surrounded by strong walls, entered by six gates, and has several pretty wide, level, and well-paved streets, with seven parish churches, a cathedral, an episcopal palace, five hospitals, a fine old aqueduct of 80 arches, which conveys water to the town, and a private collection of antiquities. The cathedral, a modern Gothic structure, is not completed: the chapter comprises a bishop, eight dignitaries, and 24 canons. The manufactures comprise leather, hats, woollen, linen, and hempen cloths, and the surrounding plain, or *puerta*, is extremely fertile, producing large quantities of grain, fruits, oil, &c.

Plasencia, though not the *Ambracia* of the Romans, is proved, by the numerous antiquities found in it, to be of remote origin. The present city, however, was built near the end of the 12th century, by Alphonso IX. of Castile. It was formerly possessed by its own lords, and gave title to a duchy; but, in 1448, it was united to the crown of Castile. (*Dillon's Travels*, p. 282; *Mod. Trav.*; *Miñano*.)

PLASSEY, a village of Bengal, on the Hooghly river, 80 m. N. Calcutta, and 30 m. S. Moorshedabad. This village will be ever memorable in Indian history, for its having been the scene of the great victory gained by Lord (then Colonel) Clive, on the 23d of June, 1757, over Suraja Dowla, soubahdar of Bengal. Clive's army consisted of only 900 Europeans, 2100 Sepoys, and 100 Topasses; yet, with this small force, he did not hesitate to attack the soubahdar's army, of 50,000 foot, and 18,000 horse, supported by a formidable train of artillery! This, however, was not so Quixotic a proceeding as it may at first sight appear; for Clive knew that the native troops had no confidence in their general, and, in fact, they instantly gave way, so that the victory was at once complete, and easily won. The result of this contest threw Bengal into the hands of the English, and laid the foundation of our empire in India. (*Mil's India*, iii., 158.)

PLATA, LA (REPUBLIC OF), or ARGENTINE REPUBLIC, an independent state, or rather confederation of states, in S. America, extending between the 22d and 41st degrees of S. lat., and the 54th and 72d of W. long., having N. Bolivia; E. Paraguay, Brazil, and the Banda Oriental, from all which it is separated by the Paraguay, Parana, and Uruguay rivers; S. the Atlantic ocean and Patagonia; and W. Chili and Bolivia. Sir Woodbine Parish gives the following estimate of the area, population, and subdivisions of this territory:

Provinces.	Area in sq. m.	Estim. Pop 1836-37.	Chief Towns.
Buenos Ayres	726,000	150,000 to 200,000	Buenos Ayres
Sanla Fe		15,000 — 20,000	Sanla Fe
Entre Rios		25,000 — 30,000	Parana
Corrientes		35,000 — 40,000	Corrientes
Cordova		80,000 — 85,000	Cordova
Santiago		45,000 — 50,000	Santiago
Tucuman		40,000 — 45,000	Tucuman
Salta		50,000 — 60,000	Salta
Catamarca		30,000 — 35,000	Catamarca
La Rioja		15,000 — 20,000	Rioja
San Luis		20,000 — 25,000	San Luis
Mendoza		35,000 — 40,000	Mendoza
San Juan		22,000 — 25,000	San Juan
Total	726,000	600,000 to 675,000	

Inasmuch, however, as the population of the city of Buenos Ayres may itself be estimated at about 100,000, we are inclined to think that this estimate is under the mark, and that the population may be set down at about a million. It has sometimes, indeed, been estimated at two millions and upwards; but there can be no doubt that this is very far beyond the mark. The Indians, who are not included in any of the above estimates, are, probably, under 50,000.

On the W. this territory is bounded by the great Cordillera of the Andes; and the N.W. prov. of Salta is almost wholly mountainous, as are extensive portions of the adjacent provinces of Catamarca and Tucuman. Some points of the Despeñado chain in Salta rise probably to the height of 13,000 feet; and in Cordova are isolated chains, which any where but in the neighbourhood of the Andes would be called mountains. Still, however, after allowing for these and other deductions, five-sixths of the country consist of plains, several of which are of vast extent. But notwithstanding its freedom from mountains, and the number and magnitude of its rivers, it is far from being the fertile region that is so generally supposed; and a large proportion of its surface is, in fact, condemned to perpetual sterility. In the N. is the S. portion of the immense tract known by the name of the *Gran Chaco*, a vast plain, occupying the whole triangular space between Bolivia on the N., and the great rivers Paraguay on the E., and Salado on the W. This immense plain, which probably covers from 110,000 to 120,000 sq. m., is but little known; in the N. it is covered with extensive forests, but its more S. portion, between the Vermejo and Salado, is, in fact, a sandy, arid, and uninhabitable desert. This, also, is the character of the extensive tract between the Salado and the Rio Dulce, and W. from the latter, as far as the Sierra Velasco, in about the 68 degree

## PLATA, LA.

of W. long., extends the great Salt Desert of Salinas, in great part covered with saline efflorescence, and extremely hot. The great southern plain, or that which extends over the whole country S. of the 33d degree of lat., is, fortunately, of a very different character from those previously noticed. This vast tract, which includes an area of above 300,000 sq. m., is called the *Pampas*. It may, taking its vast size into account, be regarded almost as a dead level, its slope towards the E. being gradual and imperceptible. It is interspersed with innumerable lakes; but these, as well as most of the rivers by which they are fed are brackish, the soil through which they flow being strongly impregnated with salt. Perfectly fresh and portable water is, however, found at the depth of from 20 to 50 feet. Substantially, however, the Pampas are divided into several regions, differing in climate and produce, though under the same latitude. "On leaving Buenos Ayres, the first of these regions is covered for 180 m. with clover and thistles alternately; the 2d region, which extends for 450 m., produces long grass; and the 3d, which reaches the base of the Cordillera, is a grove of low trees and shrubs. The 2d and 3d of these regions have nearly the same appearance throughout the year, for the trees and shrubs are evergreens, and the immense plain of grass only changes its colour from green to brown; but the 1st region varies with the four seasons of the year in a most extraordinary manner. In winter the leaves of the thistles are large and luxuriant, and the whole surface of the country has the rough appearance of a turnip field. The clover in this season is extremely rich and strong; and the sight of the wild cattle grazing in full liberty on such pasture is very beautiful. In spring the clover has vanished, the leaves of the thistles have extended along the ground, and the country still looks like a rough crop of turnips. In less than a month the whole region becomes a luxuriant wood of enormous thistles, which have suddenly shot up to a height of 10 or 11 feet, and are all in full bloom. The path is hemmed in on both sides; the view is comparatively obstructed; not an animal is to be seen; and the stems of the thistles are so close to each other, and so strong, that, independent of the prickles with which they are armed, they form an impenetrable barrier. The sudden growth of these plants is quite astonishing; and though it would be an unusual misfortune in military history, yet it is really possible that an invading army, unacquainted with the country, might be imprisoned by these thistles before it has had time to escape from them. The summer is not over before the scene undergoes another rapid change: the thistles suddenly lose their sap and verdure, their heads droop, the leaves shrink and fade, the stems become black and dead, and they remain rattling with the breeze one against another until the violence of the pampero, or hurricane, levels them with the ground, where they rapidly decompose and disappear; the clover rushes up, and the scene is again verdant. The vast region of grass in the Pampas for 450 m. is without a weed, and the region of wood is equally extraordinary. The trees are not crowded, but in their growth such beautiful order is observed, that one may gallop between them in every direction. The whole country is in such beautiful order, that if cities and millions of inhabitants, could suddenly be planted at proper intervals and situations, the people would have nothing to do but to drive out their cattle to graze, and without any previous preparation, to plough whatever quantity of ground their wants may require.

"The climate of the Pampas is subject to a great difference of temperature in winter and summer, though the changes are very regular. The winter is about as cold as our month of November, and the ground at sunrise is always covered with white frost, but the ice is seldom more than 1-10th of an inch thick. In summer the sun is oppressively hot. The difference, however, between the atmosphere of Mendoza, San Luis, and Buenos Ayres, which are all nearly under the same latitude, is very great; in the two former, or in the regions of wood and grass, the air is extremely dry; there is no dew at night; in the hottest weather there is apparently very little perspiration, and the dead animals lie on the plain dried up in their skins. But in the province of Buenos Ayres, or in the region of thistles and clover, vegetation clearly announces the humidity of the climate, and the dead animals on the plain are in a rapid state of putrefaction. On arriving at Buenos Ayres, the walls of the houses are so damp that it is cheerless to enter them; and sugar, as also all deliquescent salts, are there found nearly dissolved. This dampness, however, does not appear to be unhealthy. The S. part of the Pampas is inhabited by Indians, who have no fixed abode, but wander from place to place as the herbage around them becomes consumed by their cattle. The N. part and the rest of the provinces of La Plata are inhabited by a few straggling individuals, and a few small groups of people, who live together only because they were born together. The travelling across the Pampas is really a very astonishing

effort. The country has no road but a tract which is constantly changed. The huts, termed posts, are at different distances, but, upon an average, about 20 m. from each other; and in travelling with carriages, it is necessary to send a man before to request the *guachos* to collect their horses. The country is intersected with streams, rivulets, and rivers, with *pantanos* (marshes), &c., through which it is absolutely necessary to drive. In one instance, the carriage, strange as it may seem, goes through a lake, which of course is not deep. The banks of the rivulets are often very precipitous, and I constantly remarked that we drove over and through places which, in Europe, any military officer would, I believe, without hesitation, report as impassable. The most independent way of travelling is, however, on horseback, without baggage, and without an attendant. In this case the traveller has to saddle his own horse, and to sleep at night upon the ground on his saddle; and as he is unable to carry any provisions, he must throw himself completely on the feeble resources of the country, and live on little else than beef and water." (*Head's Journeys across the Pampas*, p. 2-10, 46-50.)

Many of the minor plains are of a very different character from either this or the Gran Chaco; and some, as those of Tucuman, yield corn and maize, rice, tobacco, the sugar-cane, &c., in the greatest abundance. The provinces of Cordova, Salta, &c., are also in parts very fertile. In general, the N.W. provinces are the most productive of grain, while the E. provinces, or those between the Parana and the Uruguay, and the S.E. provinces, abound most in cattle, and furnish the greater portion of the exports from Buenos Ayres.

The Argentine Republic, excepting a small portion towards its S. extremity, watered by the Rio Colorado, and a few smaller rivers, is wholly comprised in the basin of the Plata. (See next art.) Its vast branches supply the most extensive means of internal communication; though the utility of some of them is at present a good deal impaired by the prohibitory measures of Dr. Francia, dictator of Paraguay. Many large rivers water the great plains; but several of these lose themselves in the considerable lakes previously noticed, without finding their way to the sea. The principal of these is the Rio Dolce, which intersects the provinces of Tucuman and Santiago, and falls into the lake *de los Porongos*, or great salt lake, 35 m. in length, by 20 m. in breadth. Several lakes and swamps, of a size little inferior to this, are laid down in maps as existing in the Pampas; but the largest lake, or lagoon, is that of Ybera, in Corrientes, which extends over 1000 sq. m., and supplies four considerable rivers. It is probable that the Parana formerly took its course through this lake: at present no stream runs into it, and it is supposed to derive its waters through some underground drainage.

*Geology and Minerals.*—The N. E. and S.W. shores of the Rio de la Plata present the greatest contrast in their geological features. The N. shore is elevated, and, like the islands in the river's bed above Buenos Ayres, composed of granite, gneiss, and clay-slate; while, on the S. side, every trace of rock is entirely lost, and for hundreds of miles inland, not even the smallest pebble is to be met with. As far as we are yet acquainted with it, the whole of the vast level forming the Pampas appears to be one immense bed of alluvial sand, quietly deposited, during the lapse of ages, in what was anciently a gulf of the Atlantic, of which the estuary of the Plata is now the only remaining portion. The same process appears to be, at present, going on here also: this estuary, which, in the 16th century, is reported to have been deep enough for ships of any burden, is gradually silting up, and we may expect that, at some future period, instead of discharging itself by a wide mouth as at present, or as the Nile, probably, in the most ancient times, the Plata will enter the ocean by a delta, like the Amazon, the Ganges, or the Nile of our day. In the alluvium of the Pampas, vast quantities of marine shells, and the remains of the *Megatherium olipoidon*, &c., have been found, and, according to Mr. Darwin, its whole area is one wide sepulchre for extinct quadrupeds. (*Voyage of the Adventure and Beagle*, iii., 155, &c.; *Parish's Buenos Ayres*, 164, 165.)

The precious metals, with copper, lead, iron, &c., are found in different parts of the country; but, speaking generally, its mineral riches have been very imperfectly explored. Gold and silver have, however, been obtained in considerable quantities, in various districts in the N.W. and W. provinces connected with the Andes, especially at Famatina, in Rioja, where the ores of silver are said to be very rich. Humboldt estimated the total value of the gold and silver obtained from mines and washings in the captain-generalship of Buenos Ayres, at the commencement of the present century, at nearly 5 millions of dollars a year. But the greatest portion of what is now called Bolivia was then included within the limits of the government; and we have seen no late accounts of the produce of the mines on which it would be safe to place the smallest reliance:

perhaps it does not, at present (1841), amount to £400,000 a year. Iron is also believed to exist in the Chaco, in extensive veins, intermixed with small proportions of nickel and cobalt; and Sir W. Parish considers it extremely probable, that the immense mass of metal presented by him to the British Museum, and considered meteoric, is rather a production of the soil. (*Buenos Ayres*, 258-263.)

Salt is the most abundant mineral, and exists in a state of efflorescence over the surface of immense tracts, in a multitude of brackish springs and pools, and in mines of rock salt. Epsom and Glauber salts, limestone, gypsum, alum, mineral pitch, and an abundance of sulphur, are to be met with along the Cordillera, besides bituminous shale, with appearances of coal in many places, and it is said, though the statement requires confirmation, that there are extensive beds of coal in the extreme S.W. angle of the country.

The *vegetable products* in the N. provinces include most of those which flourish between the tropics; while in the S. they are in general similar to those of S. Europe. But even as far S. as Corrientes, cotton, tobacco, rice, sugar cane, indigo, and many other articles of primary importance in the markets of Europe, may be produced to almost any extent; and a large extent of country is extremely well adapted to the culture of wheat, maize, and other grains. Wheat, which, till of late, was little cultivated, has now become an article of export. But the implements and processes of agriculture are still in the rudest possible state. "In many towns of the interior, a common wheelbarrow is as yet unheard of; while in the capital itself, the first pump ever seen in a private house was put up a very few years ago by an Englishman!" (*Parish's Buenos Ayres*, p. 351.)

The immense tract annually inundated by the Plata, now wholly in a state of nature, might, it is said, be made available for the culture of rice on a most extensive scale. The inhabitants of Arauco, a department of La Rioja, are principally employed in the culture of the vine, and make annually from 8000 to 10,000 small barrels of a strong sweet wine, which is sent to Cordova and the neighbouring provinces. A good deal of strong and full-bodied wine and brandy is also sent from Mendoza to Buenos Ayres.

The demand for sugar in the inland provs. is not sufficient to induce the country people to attend much to the cane; but tobacco is pretty largely cultivated, and finds a ready sale in Tucuman and the adjacent provs. Catamarca supplies all the surrounding states with cotton of a superior quality, for their domestic manufactures; and exports large quantities of red pepper to Buenos Ayres. The cactus, which feeds the cochineal insect, grows in Santiago, Salta, and elsewhere in the W., and to an unusual size; and from the first named province from 8000 to 10,000 lbs. a year of cochineal were formerly sent to Chili and Peru. Aloes are equally abundant, and from the macerated fibres the Indians of the Chaco make yarn, ropes, fishing-nets, and a variety of bags and pouches, for which there is always a demand among their more civilized neighbours; these articles are dyed in indelible colours, prepared by the Indians from native plants. The cocoa plant (*Erythroxylon peruvianum*), which, when mixed with lime, forms a stimulant chewed by the Peruvian, as the betel in S. Asia, grows plentifully in Salta. Bonpland found three new species of indigo in Corrientes; madder is indigenous in several places; and on one species of shrub a small insect called the *clavillo* is found, which affords a most beautiful green dye. The E. flanks of the Andes, and the banks of the W. affluents of the Paraguay, are covered with dense forests; which are, however, for the most part, useless, being at so great a distance from the Plata and seaports of the republic. The trees are mostly of the *minos* family; and from the fruit of the algaroba, mixed with maize, the Indians make cakes; and by fermentation, produce their *chicha*, a strong intoxicating spirit, in very general use. The *quinaquina*, or Peruvian bark tree, various palms, and the *yerba maté*, or Paraguay tea, are indigenous in Salta, &c. Figs, oranges, peaches, walnuts, apples, and other fruits, have been introduced by and Europeans, flourish with great luxuriance in many of the central and S. provinces; the want of population being, for the most part, the only great drawback to the development of the vast natural resources of the country.

But the chief source of wealth is the immense herds of horned cattle which wander over the widely-extended plains of the Pampas. Formerly, the greater number of these were unappropriated, like the land they roamed over, and were *lassoed* and destroyed at pleasure for their hides or fat, though sometimes, also, for their flesh, and sometimes for their tongues only, the rest of the body being left to beasts and birds of prey. But the Pampas are no longer unappropriated; a large part has been carefully measured by the government officers, and allotted to individuals, the extent and boundaries of whose *estancias*, or estates, are duly registered. Every animal a year old is branded with the mark of the owner, and that mark, being registered by the authorities, entitles him to claim his property wherever

## PLATA, LA.

er found. According to Sir W. Parish, it has been estimated in the single province of Buenos Ayres there are from three to four million head of cattle, and above another million in the other provinces. The number must certainly be immense; for hundreds of thousands have, on some occasions, perished through inundation and drought without sensibly affecting the supply for the market.\* But all estimates of the number of cattle in these provinces are purely conjectural, and entitled to little weight; though we incline to think that Sir W. Parish has much underrated the numbers of cattle in the provinces other than Buenos Ayres. In Entre Rios, before the revolution, "an estate of 3 leagues in length, by  $2\frac{1}{2}$  in breadth, that is, of 12 $\frac{1}{2}$  sq. leagues, might have had upon it generally about 8,000 head of horned cattle, and 15,000 horses. The price of it, with stock, &c., might be—the horned cattle at 2s. each = £800; the horses at 6d. each = £375, and fixtures £100; cost, therefore, of stock and fixtures, £1,275, leaving the estate of 3 $\frac{1}{2}$  sq. m. as a bonus to the purchaser!" (*Robertson's Letters on Paraguay*, li. 215, 216.)

Cattle-rearing estates are frequently of vast size; and Candiotti, probably the largest landholder of La Plata, is said, by Mr. Robertson, to have been the proprietor of 300 sq. leagues of territory, with 250,000 head of horned cattle, and 30,000 horses and mules. The annual increase upon a well-regulated *estancia* varies from 30 to 40 per cent., which yields an enormous profit to the proprietor, whose expenses are comparatively trifling. And since the revolution, which has thrown open the trade of S. America, the cattle, which were previously not worth more than 3s. or 4s. a head, are now worth 20s. and for these 20s. the farmer can buy double the quantity of the necessities and luxuries (his own commodity of cattle always excepted), which he could procure for them before. The *estancieros* of Santa Fé were formerly among the richest in the viceroyalty, and furnished by far the greater part of the 50,000 mules yearly sent to Salta for the service of Peru; but the stoppage of the trade with the latter country and Paraguay, and the attacks of the Indians, have impoverished and depopulated that province almost to the last degree. The mules were commonly sent when two or three years old, to a periodical fair, near Salta, to which the purchasers from Peru repaired, and bought them in droves, at the rate of from 14 to 16 dollars each. The struggle for independence stopped this traffic; for Peru being to the last in the possession of the royalists, all intercourse with Salta was long cut off, and not having been renewed to any great extent, the breeding of mules has declined considerably in La Plata.

The horses of the Pampas are similar to the common Spanish horse, and of all colours: like the cattle, the original stock was introduced from Europe. They wander wild in immense herds, being caught indiscriminately by the gauchos, whenever they are required. Though as serviceable to the gaucho as to the Arab, the former, owing, no doubt, to the animal being raised without any attention on his part, cares very little for his horse; he goads it in the most unmerciful manner, and when it drops with fatigue, he forthwith lassoes and mounts another, abandoning the exhausted horse to the wild animals. Mares are better treated by the Spaniards; but among the Indians mares' flesh is the ordinary animal food. It may be supposed that mutton is neither very excellent nor dear in this country, since, by an old royal edict, the inhabitants were forbidden to drive sheep alive into the brick-kilns for fuel! The wool, also, a few years ago, was hardly worth the expense of cleaning, but it has latterly much improved in quality; and the export of this article, which in 1830, reached only 19,444 lbs., amounted in 1837 to 2,207,951 lbs. Still, however, the breed of sheep, like that of goats and hogs, is very inferior. The singular animal, the *coipou*, which furnishes the skins known in commerce by the name of *nutria*, is abundant in Buenos Ayres, its skins forming a principal article of export: the chinchilla also abounds in various districts. Along the Andes are found guanacoos, llamas, vicuñas, &c. Wild boars, deer, with jaguars, pumas, armadillos, &c. are also met with. The bisacacha, a rodent quadruped, which makes travelling over the Pampas dangerous from its numerous burrowings, is very abundant; and condors, vultures, and numerous birds of rich plumage, inhabit the country. Its greatest pests are giant ants, locusts, immense bugs, musquitos, and other insect tribes.

The *gauchos*, or native peons, are the descendants of European colonists, and many of them have sprung from the best families of Spain. They are at once the most active and the most indolent of human beings; living, when not on horseback (which they generally are), in the rudest manner in mud huts. They are without agriculture, subsisting almost wholly on the flesh of oxen and game of various kinds,

which they catch by means of two singular weapons, in the use of which they are extremely dexterous, the *lasso* and the *bolas*. The former, used by most natives of La Plata and Chili, is a strong platted thong of green hide, about 40 ft. in length, with an iron ring at one end forming a running noose, the other end being fixed by the peon on horseback to his saddle-girth. The gaucho, when about to seize an animal, whirls the noose with a portion of the thong horizontally round his head, holding the rest of the lasso coiled up in his left hand; and, when near enough to the object, at a precise point of its rotation, flings off the noose, which seldom or never fails to secure the animal. If a horse, it invariably falls over the neck; if an ox, over the horns. As soon as the rider has succeeded in his aim, he suddenly turns his horse, which sets his legs in a position to resist successfully the pull of the entrapped animal. The dexterity evinced in this operation, and the certainty with which an animal running at full speed, is caught, is very striking. The *bolas*, used also by the Indians, is briefly described in the article PATAGONIA, in this volume.

The Indians are of Araucanian origin (see CHILI, vol. i. p. 620.), living, like the gauchos, chiefly on horseback, but partly in moveable tents made of hides. To their main food, the flesh of mares and colts, if they add any thing it is maize, obtained from the Spaniards in exchange for salt, cattle, and blankets, made by their women. They live together in different tribes, each governed by a cacique. Some are friendly to the whites, but the greater part are bitterly hostile; and the two races maintain against each other an exterminating warfare. A few Indians in the provinces of Salta, &c., are employed by the whites in agriculture; receiving in payment for their services some coarse woollen cloths, beads, baubles, and a few other articles of dress; but in general, the independent tribes wearing only a *poncho*, or short cloak, boots of cow-skin, and other articles of domestic manufacture, place little value on European goods. Numerous settlements were made in the 16th century by the Jesuits in the Misiones, S.E. of Corrientes, and civilization is said to have made some progress among the Indians of this quarter; but after the expulsion of the Jesuits, in 1767, they speedily lapsed into their previous barbarism.

La Plata has scarcely any manufactures. Ponchos, saddle-cloths, blankets, &c., are made by the Indian women, and sold in great numbers to the people of Tucuman and Salta. Cordova is the principal manufacturing town; but the above kind of goods and morocco leather, with wooden bowls and dishes, comprise almost all the articles made there. The foreign imports consist principally of European goods for the white colonists; mostly from Great Britain. "The gaucho is everywhere clothed in British manufactures. Take his whole equipment—examine every thing about him—and what is there (not of raw hide) that is not British? If his wife has a gown, ten to one, it is made at Manchester; the camp-kettle in which he cooks his food, the earthenware he eats from, the knife, spurs, bit, are all imported from England." (*Parish*, 338.) The foreign trade of the republic is increasing; but, as it wholly centres in Buenos Ayres, the reader is referred for an account of it to the article on that city in this Dictionary, l. 448.

Education, as may be supposed, is not very flourishing in the provinces; but in the chief towns it is not, upon the whole, so backward as in some other parts of S. America. Cordova has a university, and Buenos Ayres a good public library. Newspapers are published in several towns, and the press is quite free.

The Government is nominally a representative republic or confederation, each of the provinces being, to a certain degree, independent of the rest, as in the United States, Mexico, &c. But, in 1835, General Rosas, who was unanimously called to the presidency, refused to act, unless invested for a period with extraordinary powers. These were accordingly granted him, so that at present the government is a nearly absolute dictatorship, presenting, however, a favourable contrast to the dictatorship in the neighbouring state of Paraguay. There is a *junta* or parliament of 44 deputies, half annually renewed by popular election; and a senate of two deputies from each province. The provincial government consists of the popular assembly, which nominate the governor. But though democratic in theory, they are quite otherwise in practice; the lower classes bowing with obsequious deference to the nominees of the upper; and "if any appeal to the people be ever made by the latter, it is generally from the necessity of supporting by a demonstration of brute force the pretensions of some particular candidate."

The powers of the president are constitutionally very extensive: he appoints to all civil, military, and judicial offices; but he, as well as his ministers, is responsible for every new measure, and liable to impeachment before the senate and house of representatives. The military force is of uncertain amount; but during the late war with Brazil, about 10,000 troops were collected, besides a numerous militia.

\* In the last drought of 1831-32, it was estimated that from 1 and  $\frac{1}{2}$  to 2 millions of animals died—the borders of the lakes and streamlets in the province of Buenos Ayres were long afterwards white with their bones. (*Parish's Buenos Ayres*, p. 371.)

## PLATA (RIO DE LA.)

The province of Buenos Ayres alone supports the government expenditure; the other provinces contributing nothing to the general expenses of the confederation. The public revenue was estimated, in 1857, at 12,000,000 dollars, a sum insufficient to meet the ordinary expenditure. The public debt, at the same period, amounted to 35,917,166 dollars, bearing 6 per cent. interest.

This country was first discovered in 1517, and settled by the Spaniards in 1553. It was long dependent on Peru; but, in 1773, was erected into a viceroyalty, comprising together with La Plata, Bolivia, Paraguay, and Uruguay. The English made an unsuccessful attempt on this country in 1807. In 1810, the struggle began between the inhabitants of Buenos Ayres and Spain, which terminated in 1816, in the independence of the former. The first congress met at Tucuman, but the federal capital was soon transferred to Buenos Ayres. In 1827 a war broke out between the republic and Brazil, respecting the possession of Uruguay (Banda Oriental), established as an independent state in 1828; and more recently La Plata has been involved in disputes both with Bolivia and France. These wars have contributed to retard the march of her prosperity; but with all her accumulated difficulties, La Plata, appears only to require a few years of repose to develop her abundant natural resources, and to become a comparatively flourishing country. *Parish's Buenos Ayres; Head's Journ. across the Pampas; Andrew's Journey in S. Am.; Robertson's Letters on Paraguay; Scarlett; Miers; Darwin; Am. Alman. &c. pass.*

PLATA (RIO DE LA.) (*River of Silver*), a large river of S. America, draining with its numerous affluents the greater part of the states of La Plata, Banda Oriental, and Paraguay, with smaller portions of Bolivia and Brazil. It is formed by the union of two important branches, the Parana and Uruguay; and, gradually increasing in width, becomes a very large estuary, entering the S. Atlantic ocean between Punta Negra (lat. 34° 55' S., long. 55° 5' W.) on the N.E., and cape St. Antonio (lat. 36° 21' S., long. 56° 42' W.) on the S.W.; having on its N. bank the city and port of Monte Video and the colony of San Sacramento, while, on the opposite side, 124 m. from its mouth, is Buenos Ayres. The basin of this great river is estimated to occupy about 1,250,000 sq. m., being inferior in extent only to those of the Amazon and Mississippi: its length, from the source of the Paraguay to its mouth, is about 2450 miles.

The longest and most direct river, and that of the largest volume, belonging to this great water system, is the Paraguay, which, on receiving the waters of the Parana at Corrientes (27° 20' S. lat.), assumes the name of that branch. It has its sources between lat. 13° and 14° S., in the low ranges connecting the great mountains of Peru and Brazil, which constitute the water-shed between the affluents of the Amazon and those of the Rio de la Plata. Many navigable streams join it from the E., as it passes through Brazil; but those on the W. side, though not so numerous, are much more extensive. Between the 17th and 19th degs. of S. lat. occurs that wide region of swamps called the lake of Xarayes, which, during the periodical inundations of the river, is flooded so extensively as to form a great inland sea, stretching from E. to W. between 200 and 300 m., and from N. to S. upwards of 100 m., with a depth of 10 or 12 feet. At the close of the rainy season, these waters are carried off by the Paraguay, which is navigable from this point to its mouth for vessels of 40 or 50 tons, a direct distance of 1200 m. The other western affluents are the Pilcomayo and Vermejo, which fall into it between Assumption and Corrientes, both having their sources in Bolivia, and flowing S.E. through the great *chaco*, or desert. The Pilcomayo, after a course of 1000 m., enters the main stream by two branches, about 60 m. apart: it is shallow, and not navigable even by canoes. The Vermejo, which falls into the main river about 135 m. below that last mentioned, rises on the E. slope of the Andes, and is navigable for large boats through the whole of the level country for nearly 700 m.

The Parana (which, as we have before observed, joins the Paraguay at Corrientes, and gives its own name to its lower part) rises in the table land of Brazil, in lat. 21° S., hardly 120 m. from the shores of the Atlantic. It flows S., and then curves westward, separating Brazil from Paraguay, and, lower down, divides the latter country from the states of La Plata. It has numerous affluents, but though the main stream be upwards of 1000 m. in length, it is not navigable for more than 100 m., owing to the *salto*s, or falls, the lowest of which, close to the island of Apipé, is in lat. 27° 26' S., long. 56° 47' W. From this point the river at once becomes navigable for vessels of 300 tons. The most important fall, however, is considerably higher up the stream, in lat. 23° 30' S., being upwards of 50 ft. in height. From Corrientes, the united river, now from 1½ m. to 2 m. in width, flows through a vast channel, much broken by islands, overrun with trees, and subject to inundation. The only considerable tributary of the Parana below Corrientes is the Salado, which rises in the E. Cordillera of the Andes, and

after a devious course through the mountains, runs south-eastward through the Pampas, to its junction with the main river, near Santa Fé, in lat. 31° 40' S. Here the Parana divides into numerous branches, formed by pretty large islands, becoming more frequent lower down the stream, which at length opens into the estuary of La Plata, by a long, but narrow delta, having two principal branches. The depth at the mouth is seldom less than two fathoms, and there is an uninterrupted navigation throughout the year for vessels of 300 tons from Assumption, upwards of 800 m. from the mouth. It has been estimated, says Mr. Darwin, that "the river, at its source, has only a fall of 1 ft. per mile, and much less lower down in its course; indeed, a rise of 7 ft. at Buenos Ayres may be perceived 180 m. from the mouth of the Parana. But notwithstanding these advantages, we met during our descent very few vessels. One of the best gifts of nature seems here wilfully thrown away; so grand a channel of communication being left nearly unoccupied: a river in which ships might navigate from a temperate country, as surprisingly abundant in some productions as destitute of others, to another, possessing a tropical climate, and a soil, perhaps unequalled in fertility in any part of the world. How different would have been the aspect of this country if English, instead of Spanish colonists had, by good fortune, first sailed up this splendid river!" (*Voyage of the Admiral and Beagle, liii. 164*). The inundations of the Parana and Parana bear a close analogy to those of the Nile. "Both rivers," says Sir Woodbine Parish, "rise in the torrid zone, nearly at the same distance from the equator; and both, though holding their courses towards opposite poles, disembrace by deltas in about the same lat.: both are navigable for very long distances, and both have their periodical risings, bursting over their natural bounds, and inundating immense tracts of country." The Parana begins to rise about the end of Dec., soon after the commencement of the rainy season in the S. tropic, and increases gradually till April, when it begins to fall somewhat more rapidly till the beginning of July; a second rising, called *repente*, is caused by the winter rains S. of the tropic of Capricorn; but it seldom overflows the banks.

The ordinary average of the increase below Corrientes is 12 ft.; but at Assumption, where the river is more confined, the rise is said to be sometimes as much as 5 or 6 fathoms. Occasionally, however, these floods are much higher; penetrating into the jungles of the interior, and drowning numbers of wild animals, the carcasses of which poison the air for months afterwards. The river at these times is exceedingly turbid, from the great quantity of vegetable substances and mud brought down by it: the velocity of the stream in the higher and narrower parts at first prevents their deposition; but as it approaches the lower lands, or pampas, they are spread over the face of the country, forming a grey silty soil, which increases vegetation in a surprising degree. The extent of ground thus covered during the inundations is estimated at 30,000 sq. m.

The Uruguay, the other great branch of the estuary of La Plata, takes its name from the numerous falls and rapids which mark its course. It is upwards of 800 m. in length, rising in lat. 27° 30', on the Sierra de S. Catherina, in the province of that name, only about 75 m. W. the Atlantic ocean. Its course is at first nearly due W., but it afterwards turns southward by a mountain range, separating it from the Parana. It receives several important affluents, of which the Negro, the principal river of Banda Oriental, is the chief. It joins the estuary of La Plata about 50 m. below the junction of the latter; and its clear blue waters may be distinguished from the muddy streams of the Parana for miles after their junction. The country through which the Uruguay flows is of a very uneven and rocky character; in consequence of which the navigation is broken by many reefs and falls, only passable during the periodical floods. Of these, the lowest are the Saltos Grande and Chico in lat. 31° 30', about 190 m. above its mouth.

The estuary of the Rio de la Plata, the recipient of these great rivers, is about 185 m. in length; its breadth at the mouth being about 130 m., though it gradually becomes narrower, till, opposite Buenos Ayres it has a width of only 29 miles. The coast on the N. side is in general high and rocky; whereas on the opposite side the shores are low, extending, inwards in immense pampas. The depth of the river increases towards the mouth, where it averages 10 fathoms; but at Monte Video it scarcely exceeds 3 fathoms, and gradually lessens, so that vessels drawing more than 16 ft. water cannot ascend above Buenos Ayres. E. of Monte Video is an immense bank of sand and shells, called the English Bank; besides which there are many other sand-banks, covered when the river is low with only about 8 ft. water, one of which, called the Ortiz, is in some parts between 11 and 12 m. in width. The currents are extremely irregular, both in rate and direction, a consequence of the immense volume of water brought down at certain seasons by the Parana, as well as of the influence of the winds at the mouth of the river: indeed, this variability of the winds and cur-

## PLATÆA.

rents constitutes one of the chief difficulties in navigating the Plata, which on this account, has been termed "*El Inferno de los Marineros*."

In calm weather the currents are generally very slack, and almost as regular as tides, setting up and down the river alternately. The effect produced by the *pamperos*, or S.W. gales, so called from their blowing over the pampas S. of Buenos Ayres, is remarkable from the singular fluctuations in the depth of the water before and after their occurrence; the river being always higher than usual when they begin, whereas, after they have continued for a few hours, the water is forced out to sea, so that the sand-banks begin to appear, and, on some occasions, even the anchoring grounds have been laid bare! The tides are so much disturbed, and, as it were, hidden by the currents, that it has been affirmed they have no existence; but, according to the *Amer. Coast Pilot*, they are clearly discernible in calm weather, though their rise seldom exceeds 6 ft. (*Amer. Coast Pilot*.)

The Río de la Plata, which, with its affluents, furnishes an internal navigation of many thousand miles, must, of course, even its present neglected state, have a considerable commerce, of which BUENOS AYRES and MONTE VIDEO are the great entrepôts, and to which the reader is referred for further details. The river trade, however, is far less extensive at present than is generally supposed; the intercourse with Chili and Peru having greatly decreased since the establishment of independence at Buenos Ayres, and that with Paraguay having been all but annihilated by the exclusive and despotic policy adopted by its present dictator, Dr. Francia. The river is pre-eminently well adapted for steam navigation, and, under more happy circumstances, might become the medium of a trade inferior only to that of the Ganges and the Mississippi. (*Sir W. Parish's Buenos Ayres and La Plata*, p. 179-205; *Voyages of the Adventure and Beagle*, ii. and iii.; *Amer. C. Pilot*, &c.)

PLATÆA, a considerable city of ancient Greece, now wholly in ruins, in Bœotia, at the northern foot of mount Cithæron, about 7 m. S.W. Thebes. This town has acquired an immortality of renown from its having given its name to the great battle fought in its vicinity, on the 22d of September, anno 479 B.C., between the combined Greek forces under Pausanias and the Persian army under Mardonius, generalissimo of the forces left by Xerxes in Greece. The Grecians gained a most complete victory. Mardonius was killed in the action; and the camp to which the fugitives retreated, having been forced, a prodigious slaughter took place. In fact, with the exception of about 40,000 horse, who escaped under Artabazus, the entire Persian army, said to have been nearly 300,000 strong, was all but entirely annihilated. (*Herod.* lib. ix. cap. 69.) The victorious Greeks, besides securing the independence of their country, found immense booty in the camp of the Persians. A tenth part of the spoil was given to Pausanias, the general, whose great talents materially contributed to the success of the day; and another tenth was set apart as offerings to the gods. From the produce of the latter was presented to the shrine of Delphi a golden tripod, supported on a brazen pillar formed of three serpents twisted together. And it is a singular and curious fact, that this identical pillar, having been carried to Constantinople, still exists in the Hippodrome of that city! (*Herod.* lib. ix. cap. 80; and the *aris*. CONSTANTINOPE, and DELPHI, in this work.)

Notwithstanding the services the Platæans had rendered to the common cause in this great struggle, their city was, at a subsequent period, (anno 374 B.C.), taken and razed by the Spartans. But she was afterwards restored, and her walls rebuilt, by Alexander the Great. The existing remains of the city date from the era of that conqueror. (*Dodwell's Greece*, i. 273.)

PLATTE, r., Indian Ter., one of the largest tributaries of the Missouri, rises by two branches called the North and South forks, in the Rocky mountains, which unite about 400 miles from their source. Flowing eastwardly about 400 miles farther, it unites with Missouri river, in 41° 3' 13" N. lat., about 700 miles from the Mississippi. It is about 600 yards wide at its mouth, is broad and shallow, being from one to three miles broad, and at low water may be forded at almost any place. Its principal tributaries are the Elk-horn entering it near its mouth, and Loup fork, 90 m. above. By the N. fork or this river, following the Sweetwater branch, the best passage is obtained across the Rocky mountains, and a wagon has been actually driven across, to the Columbia river.

PLATTSBURG, p. t., capital of Clinton co., N.Y., 163 m. N. Albany, 538 W. Bound ed E. by Lake Champlain. The village is situated on both sides of Saranac r., at its entrance into Cumberland bay of lake Champlain. Incorporated in 1815. It contains a courthouse, jail, county clerk's office, a bank, an academy, a lyceum, four churches, a Presbyterian, Episcopal, Methodist, and Roman Catholic. The town contains 45 stores, four fulling-mills, three woolen factories, two cotton factories with 12,000 spindles, one furnace, four

## PLYMOUTH.

forges, one flouring-mill, three grist-mills, 25 saw-mills, five tanneries, two printing offices, two weekly newspapers; two academies, 11 students, 19 schools, 646 scholars. Pop. 6416.

This place is celebrated for a famous battle in the last war, on Sunday, September 11th, 1814, between the British under Sir George Prevost, who commanded 14,000 of their best land forces, and Commodore Downie who commanded the naval force; and the American General Macomb, who commanded the land force, and Commodore Macdonough who commanded the American naval force. The land force of the Americans consisted of 1500 regulars and 2500 militia. The British naval force rather exceeded the American, in guns and men. After a hard fought battle of over two hours, the British naval force surrendered to Commodore Macdonough. Commodore Downie was killed early in the action. The British had possession of the village on the N. side of the Saranac, but were unable to cross the river; and the object of the expedition having failed by the loss of the fleet, they retired to Canada.

PLAUEN, a town of the k. of Saxony, circ. Zurichau, cap. districts Plessen and Pausa: on the White Elster, 58 m. S. by W. Leipsic. Pop. in 1837, 9485. It is built on uneven ground, walled, and has several churches and hospitals, a gymnasium, and a royal castle. It is a thriving town, with manufactures of linens, and cotton goods and yarn: it has also considerable markets for wool. Pearls are occasionally found in this part of the river; and there is a royal pearl fishery at Oelsnitz, in the neighbourhood. (*See Berghaus; Murray's Handb. for S. Germany*)

PLEASANT VALLEY, p. t., Dutchess co., N. Y., 7 m. N.E. Poughkeepsie, 79 m. S. Albany, 306 W. Drained by Wappinger's cr. It contains three churches, a Presbyterian, Methodist and Friends, nine stores, one fulling-mill, one woolen factory, one cotton factory with 2956 spindles, four flouring-mills, four grist-mills, three saw-mills; five schools, 202 scholars. Pop. 2219.

PLUMB, t., Alleghany co., Pa., 14 m. E. Pittsburg. Bounded N.W. by Alleghany r. It has one academy, 40 students; four schools, 156 scholars. Pop. 1953.

PLUMB CREEK, t., Armstrong co., Pa. It has five stores one fulling mill, seven grist-mills, 11 saw-mills, one tannery, two distilleries; 17 schools, 1618 scholars. Pop. 2216.

PLUMB ISLAND, Southold, t., Suffolk co., N.Y. Separated from Oyster Pond point at the E. end of Long Island, by Plumb island gut, one mile wide. It is 3 miles long and 1 mile broad, and has a lighthouse on its W. end.

PLUMSTEAD, p. t., Bucks co., Pa., 30 m. N. Philadelphia, 106 m. E. Harrisburg, 168 W. Drained by Tohickon and Neshaminy creeks. It has eight stores, two grist-mills, one saw-mill, two oil-mills, one pottery. Pop. 1873.

PLYMOUTH and DEVONPORT (for, though separated in their municipal and political privileges, they constitute, in fact, parts of the same town), two parl. bor. and seaport towns of England, co. Devon, and hund. Roborough, making together the principal naval port of Great Britain after Portsmouth, at the bottom or N. end of Plymouth sound, on a kind of rocky promontory between the Tamar and Plym, 36 m. S.W. Exeter, and 193 m. W. by S. London; lat. old church, 50° 22' 14" N., long. 4° 7' 32" W. The pop. of the different towns, and districts, popularly included under the term Plymouth, was, in 1801, &c., as follows:—

	1801.	1811.	1821.	1831.	1841.
Plymouth . . .	16,010	20,203	21,591	31,080	36,527
Devonport . . .	23,747	30,083	33,778	34,883	33,322
East Stonehouse . .	3,407	5,174	6,013	9,571	9,711
	43,164	55,060	61,212	75,534	80,060

These towns had together, in 1841, 8799 inhabited houses. There is a large excess of females, the latter having amounted in the same year to 45,115, and the males to only 35,045. The towns are built on rather unequal ground; Plymouth being on the E., and Devonport on the W. side of the space (3 m. broad) between the two rivers: the medial suburb of Stonehouse connects (with the help of a bridge over Stonehouse-pool) the two towns.

Plymouth is old and irregularly laid out; several of its streets are narrow and ill-built, a few also being steep. Many improvements, however, have been made within the last few years, and it has now several handsome streets and good squares, lined with substantial stone houses. Devonport, formerly called Dock, may be said to be the new town of Plymouth, having been almost entirely built since 1760; most of its streets are straight and wide, and the older houses are being gradually replaced by handsomer and more substantial buildings. Its wide, handsome streets, which cross each other at right angles, are paved with limestone quarried in the neighbourhood. Both towns are well lighted with gas; and water is abundantly supplied to Plymouth by the corporation, and to Devonport by a joint stock company.

## PLYMOUTH.

The principal public buildings of Plymouth are, a modern, though by no means handsome, guildhall, with a small attached borough jail; an exchange, and custom-house; a very elegant edifice, called the Athenæum, belonging to the Plymouth Literary Institution; a public library; a splendid hotel and theatre, built by the corporation, at an expense of nearly £40,000; the royal Union Baths, and a plain stone structure called the Free-masons' Hall. A new and extensive market-place has been formed, at an expense of more than £10,000; and it has several barracks, hospitals, and prisons belonging to government. The naval hospital, at Stonehouse, is of great extent, and admirably arranged; and opposite to the water-entry of this hospital is the royal military hospital, with an arcade of 41 arches, supporting a terrace, and covered promenade below: there is, also, a large military prison at Mill-bay, capable of accommodating nearly 3000 persons. One of the most striking features of Plymouth is its citadel, erected on a commanding eminence in 1670: it has five bastions, and is surrounded on three sides by a deep ditch and counterscarp: the interior comprises a governor's house, residences for numerous military officers, and extensive barracks. The victualling office, erected about 10 years since at Duvall's or Devil's point, S. of Stonehouse, is of large size, and replete with every convenience. W. of the citadel is the elevated walk called the Hoe, which commands a fine view of the sound and the surrounding country, including mount Edgumbe, with the Cornish hills in the W., the high land of Dartmoor in the N., and Saltm, its neighbourhood, and distant tords in the N. E. Plymouth is divided into two parishes, St. Andrew and Charles the Martyr, of the annual value of £920 and £612 respectively: both have been till very recently in the patronage of the corporation. St. Andrew's church, erected at different periods between the 12th and 15th centuries, is a large and rather handsome structure, with a square embattled tower; its interior comprises accommodation for 2500 persons, and is, on the whole, elegantly arranged. Charles's church, built toward the close of the 17th century, and named after King Charles I., is a neat building, with a square tower surmounted by a light steeple. There are two chapels of ease, one in each parish, besides the chapel in the citadel, and the mariners' church, for which a new structure, called Trinity church, is in course of erection. There are two Baptist chapels, and two others belong to the sect denominated "Plymouth Brethren." The Wesleyan, Associated, and Bryanite Methodists, Independents, Presbyterians, and Unitarians, have each one or more chapels; and there is a meeting-house for the Society of Friends, and a synagogue. Five Sunday-schools are attached to the established church; and religious instruction is furnished by the dissenters to several hundred children of both sexes. A grammar school, in the patronage of the corporation, is attended by from 20 to 30 boys; and another school, formerly proprietary, furnishes a good general education to about 50 boys. There is, likewise, an endowed charity-school for 80 children of each sex. Dame Rogers's charity gives clothing and instruction to 52 girls; and a Lancastrian school is attended by 175 boys, and 120 girls. An orphan asylum was established some few years ago; and there are four sets of almshouses, besides the "South Devon, and East Cornwall hospital," and "Public Dispensary," for providing the poor with gratuitous medical aid; and other benevolent and religious institutions supported by voluntary contributions. The literary establishments comprise the Plymouth Institution, or Athenæum, for the promotion of science and literature; the National History society of Devon and Cornwall; a public library with 6000 vols.; a medical library, established in 1794; a law library, established in 1815; a theological library; and a mechanics' institute. There are five weekly newspapers, of which two belong to Plymouth, and three to Devonport.

Devonport, unlike Plymouth, is a regularly fortified town, surrounded by lines commenced in the reign of George II., but since much improved. It is also defended by the fortress of mount Wise, between the town and the harbour on the S., and by a fort on mount Pleasant to the N., and a battery at Obelisk Point on the peninsula of mount Edgumbe, on the opposite side of the harbour. Inasmuch, however, as several of the adjacent heights command the town, it could not oppose any effectual resistance to an army attacking it by land; but it is quite secure from any attack by sea. Close to the fort of mount Wise is the governor's house, a handsome stone building, fronted by a parade, forming a favourite promenade: on its N. side is the port admiral's house, a recent and capacious stone building. A town-hall was erected a few years ago, and other edifices for various purposes have been built since the grant of the charter in 1836. Opposite the town-hall (which is a neat Doric structure) stands a fluted column, intended to commemorate the naming of Devonport, in 1824; its summit commands a fine view of the harbour and surrounding scenery. The par. church is at Stoke-Damerell, nearly 1 m.

N.E. the town; but there are three Episcopal chapels of ease, one of which is attached to the dock-yard. The Baptists, Independents, Wesleyan Methodists, and Unitarians, have each places of worship, with attached Sunday schools: there are also several endowed and subscription schools, furnishing instruction to nearly 5000 children of both sexes. A public dispensary and savings bank have also been established. Devonport, however, is mainly dependent on its dock-yard, which, indeed, constitutes, by far the most interesting feature of the united town.

Plymouth has been, for a lengthened period, the second naval harbour of Great Britain. The dock-yard at Devonport, commenced in the reign of William III., is one of the finest establishments of its kind in Europe. It extends along the shore of Hamoaze, 3500 ft., with an extreme breadth of 1300 ft., including an area of 72 acres; the entrance on the land side is from Fore-street, one of the principal thoroughfares of Devonport. The basin of the dock is only 250 ft. in length, and 180 ft. in width; but the excellence of Hamoaze as a natural harbour renders a larger basin of less importance. The wharf wall extends along the shore; and the depth of water is such as to allow the largest ships of the line to come close up to the principal jetties to take in stores.

The dock-yard is divided into two pretty equal parts by a canal (similar to that in Portsmouth), which furnishes easy access for boats to the storehouses, roperies, smithies, &c. In the N. half, and facing the harbour, are two dry docks for ships of 120 guns, with jetties for their accommodation after having been undocked. A fine double dock, for ships of 74 guns, communicates directly with the harbour, and a smaller dock opens into the older basin, in addition to which a capacious new basin is now being formed in the S.W. part of the yard. The roofs of the docks are extraordinary specimens of architectural skill, each being formed of a single arch, unsupported either by buttress or pillars. Workshops and sheds are erected in various parts, and a quadrangular range of fire-proof stone buildings comprises magazines of stores, sails, rigging, &c. At the N. end, also, is a range of handsome houses with attached gardens, forming the residence of the principal officers. On the S. side of the yard are building-slips for large vessels, and others for those of inferior size: near these is a building in which planks are steamed when required to receive any particular curvature; and in this part, also, are extensive timber-berths, sawpits, and mast-houses, besides a large pond in which masts, yards, &c., are kept soaked to prevent their cracking by exposure to the sun. The blacksmith's shop, about 200 ft. square, comprises many forges. Anchors are made in it of the largest size. The ropery, which is the finest in the kingdom, comprises two ranges of building, each 1200 ft. in length, and three stories in height, built entirely of stone and iron, as a security against fire; contiguous to them is the hemp-magazine. In this part of the yard, also, is the model-loft, in which are the patterns of the various parts of ships ordered to be constructed by the admiralty.

The gun-wharf, or arsenal, separated from the dock-yard by North Corner-street, includes within the walls about 43 acres: it has two principal warehouses for muskets, pistols, and other small arms, with sheds for gun carriages, a powder magazine, and a coopersage.

A great number of men are employed in the different departments of the dock-yard, especially during war, or when a fleet has to be fitted out; and the scale on which the various operations are conducted, the diversity of the employments, the perfection of the machinery, and the activity prevalent throughout the establishment, are all objects of admiration. But no individual who is not in uniform, or is not well known by the authorities, is allowed to enter the dock-yard, unless by special permission.

The harbour of Plymouth is double, being formed by the estuaries of the Plym and Tamar, opening into the N.E. and N.W. angles of Plymouth sound; the estuary of the Plym forms the Catwater, a convenient and capacious harbour for merchant vessels; and that of the Tamar expands into the noble road or harbour of Hamoaze, about 4 m. in length, by about  $\frac{1}{2}$  m. in width; it is almost completely land-locked, and has moorings for 100 sail of the line, with secure anchoring-ground for a still larger number: its average depth is 9 fathoms at ebb tide, and the largest ships float close to the quays. Subordinate to the harbour of Catwater is Sutton-pool, a small tide-basin, to the E. of the citadel, surrounded by quays for the convenience of colliers, coasting vessels, and fishing smacks, by which it is almost exclusively frequented. In Mill-bay, also, to the W. of Plymouth, a pier is in course of being constructed for the accommodation of the largest steamers at all times of the tide. Spring tides rise from 15 ft. to 18 ft., and neaps from 6 ft. to 8 ft.

The bay or arm of the sea, called Plymouth sound, into which these harbours open, is used for the accommodation of the ships that have been refitted in the dock-yards, and

## PLYMOUTH.

as a safe asylum for all sorts of ships in stormy weather. Owing, however, to the heavy swell thrown in from the S., it was formerly a very unsafe place for anchoring; and, to obviate this inconvenience, a stupendous breakwater, or mole (similar to that of Cherbourg, or, rather, to that of Civita Vecchia, constructed by the emperor Trajan, see CIVITA VECCHIA), has been formed in the middle of the sound, stretching in a line, straight in the middle, but inclined inwards at either extremity, about 1 m. in length, between Cawsand bay on the one side, and Bovisand bay on the other. From the commencement of the work to the 31st of July, 1841, 3,777,062 tons of stone, procured from quarries on the banks of the Plym, consisting of rough cubical blocks, each weighing from  $1\frac{1}{2}$  to 2 tons and upwards, had been employed in this great work. The top presents a flat surface, about ten yards in width, whence it slopes on both sides to the bottom, the principal slope being on the side next the sea. A lighthouse is now being erected on its W. extremity.

This great national undertaking has cost a very large sum, but the important object in view in its construction has been completely attained. That part of the sound within the breakwater has been rendered one of the very best roadsteads in the world; it is accessible on either side, and is sufficiently capacious to admit the largest fleets, which ride under cover of this immense bulwark during the stormiest weather in perfect safety. The Eddystone lighthouse (which see) stands about 14 m. S. by W. the breakwater, and is an important appendage to the harbour, the entrance to which would, but for this beacon, be comparatively dangerous, in consequence of the hidden rocks on which it is placed. Within the breakwater, and opposite to and commanding the entrance to Hamoaze, is St. Nicholas island, which has been strongly fortified, and constitutes, with the redoubt at Staddon height, above Bovisand quay (near which is formed the reservoir for supplying H. M.'s ships with water), the principal defence of the town and harbour on the side of the sea.

The Hamoaze is bounded on the S., directly opposite Devonport, by the beautiful peninsula of mount Edgumbe, the seat of the noble family of Edgumbe. On the upper part of the Hamoaze, and on its W. side, is the town of Saltash (which see).

In Catwater harbour there are wet and dry docks, formerly suited to the construction of seventy-four-gun ships; but for many years they have been used exclusively for merchant-vessels. On the E. side of the Catwater are the villages of Oreston and Turnchapel, mostly occupied by persons engaged in the dock-yards, or otherwise connected with the trade of the port. In this direction, also, are the finely-situated villages of Upper and Lower Hooe. Mount Batten, at the S.W. extremity of the Catwater, opposite Sutton-pool, is a very picturesque object. It is surmounted by an ancient castle.

The trade of Plymouth is of considerable importance: the gross custom duties amounted in 1840 to £135,931. There belong to the port about 370 vessels, of the aggregate burden of 30,026 tons, new measurement.

A large part of the trade of the town depends on the dock-yard, and timber is, of course, a principal article of import. Steamers touch here almost daily, on their passage between London, Dublin, Belfast, &c., and boats run twice or thrice a week to and from Southampton. The manufacturing establishments of Plymouth comprise a very extensive sailcloth factory, a sugar refinery, glasshouse, starch factory, and a soap-boiling establishment, which produced, in 1839, 2,904,145 lbs. hard soap. The communication with the country E. of the Plym is effected by an iron bridge of five arches, raised on granite piers, built at the sole expense of the late Earl of Morley; and mailcoaches, carriages, horses, passengers, &c., are ferried over to Cornwall by a kind of floating steam-bridge, running every quarter of an hour between Torpoint and Devonport. A railway, 24 m. in length, connects Plymouth with Prince-town, or Dartmoor; and as a line of railway is in progress, uniting Exeter with the metropolis, there can be little doubt of its being continued thither. The bank of England has a branch here; and the Western District banking company, the Devon and Cornwall banking company, and the National and Provincial bank of England, have establishments both at Plymouth and Devonport; besides which there are the "Naval bank," and two private banks.

Plymouth was incorporated in 13 Henry VI. Its present municipal officers are a mayor, 11 other aldermen, and 36 councillors, the borough being divided into six wards. Corporation revenue, in 1839, £11,431, exclusive of £1297, accruing from the sale of property. Quarter and petty sessions are held under a recorder; and there is also a borough court for the trial of civil actions, and a local court of requests, established by a recent act for the recovery of small debts, embracing a jurisdiction extending, in some directions, nearly 12 m. Devonport has also very recently,

on petition, been made a corporate town, and divided into wards; its municipal officers being a mayor, aldermen, and councillors. It has a commission of the peace under a recorder. Corp. rev., in 1839, £1818. Plymouth has regularly sent two members to the House of Commons since the reign of Henry IV.; but it occasionally exercised the franchise at an earlier period. The electoral boundaries were enlarged by the Reform Act, so as to include within the old borough a small portion of land N.E. the town, on the Exeter road. Registered electors, in 1839-40, 1907. The Reform Act constituted Devonport a parliamentary borough, conferring on it the privilege of returning two members to the House of Commons. The electoral limits comprise the parish of Stoke-Damerell and township of Stonehouse. Registered electors, in 1839-40, 2121. Neither Plymouth nor Devonport is attached to poor-law unions; but the expenditure of the united boroughs in 1839 amounted to £16,932, of which £9320 were expended on the poor of Plymouth. Markets in Plymouth, on Monday, Thursday, and Saturday; in Devonport, on Tuesday, Thursday, and Saturday; both abundantly supplied with every kind of provisions.

Plymouth, originally called Tameorwerth, and afterward Sutton (or South-town), received its present name at the period of its incorporation, in the reign of Henry VI. The town received a considerable accession of wealth on the dissolution of the monasteries, and in the reign of Elizabeth was greatly benefited by a supply of good water, conveyed by a channel, 34 m. in length, from Dartmoor, planned by the famous Sir Francis Drake, a native of the town. During the same reign, Plymouth sound was the rendezvous of the fleet opposed to the Armada, and also of the fleet sent against Cadiz. The town suffered greatly, on three occasions, from the plague, which, in 1626, carried off 2000 persons. During the parliamentary wars it embraced the cause of the parliament, and was besieged by Prince Maurice and the royalists, though without success.

Devonport, as is already stated, is quite a modern town, which owes its rise to the rapidly increasing importance of the dock-yard during the American and French wars. Stonehouse, which connects Plymouth with Devonport, is still more modern, and has been wholly built within the present century. All these towns suffered most severely in 1832-33 from the cholera. (*Parl. Bound. and Mun. Reports; Private Inf.*)

PLYMOUTH, county, Mass., situated in the S.E. part of the state, and contains 600 sq. m. Watered by North river and branches of Taunton river. Iron ore is abundant. It contained in 1840, 14,663 neat cattle, 12,293 sheep, 9779 pigs, and produced 10,765 bushels of wheat, 25,505 of rye, 125,999 of Indian corn, 5831 of barley, 39,100 of oats, 392,802 of potatoes. It had nine commercial houses in foreign trade, 230 retail stores, seven lumber-yards; capital invested in the fisheries, \$775,950; salt produced, 14,940 bushels; 11 furnaces, 16 forges; value of hardware and cutlery manufactured, \$1,079,603; one fulling-mill, four woolen factories, 14 cotton factories with 47,994 spindles, 60 grist-mills, 103 saw-mills, one oil-mill, two paper-mills, seven rope-walks, 14 tanneries, one pottery, four printing-offices, four weekly newspapers; 12 academies, 699 students; 258 schools, 11,541 scholars. Pop. 47,373. Capital, Plymouth.

PLYMOUTH, p. t., semi-capital of Grafton co., N.H., 40 m. N. Concord, 521 W. Bounded E. by Pemigewasset river. Watered by Baker's river. It contains a courthouse, jail, three churches, a Congregational and two Methodist; six stores, one grist-mill, two saw-mills, three tanneries, three potteries; one academy, 66 students; 12 schools, 480 scholars. Pop. 1281.

PLYMOUTH, p. t., Windsor co., Vt., 73 m. S. Montpelier, 475 W. Watered by branches of Quechee river. Black river affords water-power. Limestone and steatite, or soapstone, are extensively found. It contains three churches, a Congregational, Methodist, and Christian; two stores, three grist-mills, 13 saw-mills; 16 schools, 477 scholars. Pop. 1417.

PLYMOUTH, p. t., port of entry and capital of Plymouth co., Mass., 38 m. S.E. Boston, 447 W. The township is of great extent, and contains 50 ponds, covering 3000 acres, and many small streams. The village is in the N. part of the town, on Plymouth bay, a branch of Massachusetts bay. It contains a courthouse, jail, six churches, two Congregational, a Unitarian, Methodist, Baptist, and Universalist; two banks with an aggregate capital of \$300,000, a marine insurance company, capital \$100,000, and Pilgrim-hall. The harbour is spacious, but has not sufficient depth of water for the largest vessels. There are 45 vessels employed in the cod and mackerel fisheries, several vessels employed in the whale fishery, and others in the coasting and West India trade. Pilgrim-hall is 70 feet long by 40 feet wide, and 33 feet high, forming two stories. It is built of unbewn granite. In front is a Grecian Doric portico of six columns, 20 feet high. The Pilgrim society commemorates the landing of the pilgrims, which took place on December 22d, 1620, O.S., the

## PLYMPTON EARLE.

first English settlement in New-England. In Pilgrim-hall is a large painting representing the landing of the pilgrims from the Mayflower, the chair of Governor Carver, the sword-blade of Captain Miles Standish, and various aboriginal curiosities. The Pilgrim society, at its annual celebration, meets at Pilgrim-hall. The rock on which the pilgrims first landed, was conveyed in 1774 to the centre of the village. In the whole township there are, besides the above churches, two Congregational and a Baptist; five commercial houses in foreign trade, 46 retail stores, four cotton factories with 40,000 spindles, four grist-mills, one saw-mill, two printing-offices, two weekly newspapers; two academies, 123 students; 51 schools, 1378 scholars. Pop. 5281.

PLYMOUTH, p. t., Litchfield co., Ct., 23 m. W. Hartford, 339 W. Drained by Naugatuc river, which affords good water-power. This town is celebrated for its manufacture of clocks, which have been widely diffused. It contains two churches, a Congregational and an Episcopal; seven stores, one fulling-mill, one woollen factory, one cotton factory with 2650 spindles, two furnaces, two grist-mills, eight saw-mills; 13 schools, 506 scholars. Pop. 2305.

PLYMOUTH, p. t., Chenango co., N.Y., 7 m. N.W. Norwich, 120 m. W. Albany, 344 W. Drained by Canasawacta creek, a tributary of Chenango river. It has one store, one fulling-mill, two grist-mills, eight saw-mills; 19 schools, 511 scholars. Pop. 1625.

PLYMOUTH, p. t., Luzerne co., Pa., 124 m. N.E. Harrisburg, 228 W. Drained by Harvey's and Toby's creeks. It abounds with coal, and has five stores, five grist-mills, eight saw-mills; six schools, 229 scholars. Pop. 1765.

PLYMOUTH, t. Montgomery co., Pa., 14 m. N.W. Philadelphia. Inhabited chiefly by Friends, who have a church and a female boarding school. It contains three stores, one grist-mill, one saw-mill; five schools, 315 scholars. Pop. 1417.

PLYMOUTH, p. v., capital of Washington co., N.C., 162 m. E. Raleigh, 286 W. Situated on the S. side of Roanoke river, 8 m. from its mouth in Albemarle sound. It contains a courthouse, jail, a church, and about 778 inhabitants.

PLYMOUTH, p. t., Wayne co., Mich., 25 m. S.W. Detroit, 529 W. Drained by the W. branch of Rouge river. It contains a Presbyterian church, nine stores, six flouring-mills, five saw-mills, one distillery, one pottery; 12 schools, 546 scholars. Pop. 2163.

PLYMPTON EARLE, or PLYMPTON MAURICE, a decayed bor., market town, and par. of England, co. Devon, hund. its own name,  $4\frac{1}{2}$  m. E. Plymouth. Area of borough and parish, which are co-extensive, 170 acres. Pop., in 1841, 933. The town comprises two streets disposed in the form of the letter T; and it has an old guildhall, under which is held the corn-market. The church is small, and the living is a curacy subordinate to the adjoining parish of Plympton St. Mary. The Wesleyan Methodists and Independents have places of worship. North of the town are the ruins of a once magnificent castle, occupying nearly two acres of ground: it was built by Richard de Rivers, earl of Devonshire, to whom the town was granted, "with the honour of Plympton," by Henry I. Plympton Earle claims to be a borough by prescription, but received a royal charter in the 13th Edward III. It was one of the stannary towns; but for many years it has been in a decaying condition, and the borough was not considered of sufficient importance to be included in the provisions of the Municipal Reform Act. But, decayed as it is, it sent two members to the House of Commons, with some interruptions, from the reign of Edward I. down to the Reform Act, by which it was most properly disfranchised. Markets on Saturday; fairs for cattle and woollen cloth, February 25, April 5, August 12, and October 28.

PO. See ITALY.

POCAHONTAS, co., Va., situated a little N.W. of the centre of the state, and contains 710 sq. m. Drained by Greenbrier river. It contained in 1840, 6734 neat cattle, 10,256 sheep, 4944 swine; and produced 17,846 bushels of wheat, 21,053 of rye, 41,389 of Indian corn, 4638 of buckwheat, 50,111 of oats, 21,040 of potatoes. It had three stores, one fulling-mill, 22 grist-mills, 22 saw-mills, one oil-mill, five tanneries, eight distilleries; six schools, 133 scholars. Pop.: whites, 2684; slaves, 219; free coloured, 19; total, 2922. Capital, Huntersville.

POCKLINGTON, a market town, par., and township of England, E. hiding co. York, Wilton-Beacon, div. of wap. Harthill, on a small tributary of the Derwent, 124 m. E. by S. York. Area of parish, including four townships, 4380 acres. Pop. of township, in 1841, 2552. It is a good county-town; and the market-place, though small, is conveniently arranged. The church, in the centre of the town, is a large cruciform structure, with a handsome tower at its W. end, and a chancel containing some carved stalls: the living is a vicarage in the gift of the dean of York. A free grammar school was founded here in 1526, and endow-

## POITIERS.

ed with lands that now yield upwards of £1000 a year: the master is appointed by the master and fellows of St. John's college, Cambridge. A national school also was established in 1819. It has no manufactures, but a considerable trade has grown up, chiefly in corn, flour, timber, coal, and general goods, since the completion of the canal from E. Cottingham to the Derwent, to Street Bridge, about a mile from the town. Markets on Saturday; fairs for horses, cattle, &c., March 7, May 6, Aug. 5, and Nov. 8. Great show of horses, Feb. 24 and Dec. 17.

PODOLIA, a government of Russia in Europe, chiefly between the 48th and 50th degs. of N. lat., and the 26th and 31st degs. of E. long.; having N. Volhynia, N.E. Kiev, S.E. Kherson, S.W. Bessarabia, and N.W. Galicia. Length, N.W. to S.E., 240 m. Area estimated at 12,200 sq. m. Pop., in 1838, 1,548,000, principally Poles, but including some Russians, and about 150,000 Jews. The greater part of the country is flat; but a low branch of the Carpathians extends through it in an easterly direction. The general slope is towards the S.E. Principal rivers, Bug and Dniestr, which last forms the S.W. boundary. The climate is healthy, and mild enough for the vine and mulberry to flourish in the open air. Soil stony, but in general very fertile, and Podolia formerly ranked among the most valuable provinces of Poland, as it now does of the Russian empire. Corn is produced in abundance; the produce of wheat, in 1820, was estimated at 6,000,000 chetwets, a quantity exceeding the home consumption by one third. Hemp, flax, tobacco, hops, beans, and various fruits are grown. The culture of the vine, though on the increase, is not yet of any importance; and orchard and garden husbandry is conducted in a negligent manner. Pastures luxuriant. Cattle rearing is an important business; and many head of cattle are sent into Germany, where they are much prized for their beauty and excellence. The sheep yield but indifferent wool. A good many hogs are kept, as well as poultry and bees. The forests are estimated to cover 991,443 *deciatines*, or nearly three millions acres; only a small proportion of which belongs to the crown. Game is scarce, but the fisheries are highly productive. Saltpetre, lime, and alabaster, are the principal mineral products. Manufactures are quite insignificant; except distilleries, there are only a few woollen cloth, leather, potash, and saltpetre factories. The trade, which consists mostly of the export of grain to Odessa, and cattle to Galicia and Germany, is wholly in the hands of the Jews. Podolia is divided into 12 districts; its capital is Kamnietz. It is one of the 10 governments privileged with respect to its judicial administration and the distillation of spirits: it is subordinate to the government of Kiev, both as to military affairs and public instruction. Most of its inhabitants belong to the Greek church.

Podolia was long governed by its own princes; but, in 1569, it was united to Poland, who erected it into the two voivodes of Podolia and Bracław. It has belonged to Russia since 1793. (*Schnitzler, La Russie; Possart, &c.*)

POINT COUPEE, parish, La., situated in the S.E. part of the state, and contains 600 sq. m. Bounded N.E. by Mississippi river, W. by Atchafalaya river. Much of it is liable to submersion. It contained in 1840, 6983 neat cattle, 5211 sheep, 3000 swine; and produced 93,500 bushels of Indian corn, 3985 of potatoes, 6,204,726 pounds of cotton, 411,000 of sugar. It had 26 stores, two saw-mills; one college, 51 students; five schools, 83 scholars. Pop.: whites, 2687; slaves, 5430; free coloured, 381; total, 7898. Capital, Point Coupee.

POINT COUPEE, p. v., capital of Point Coupee par., La., 140 m. W.N.W. New-Orleans, 1174 W. Situated on the S. side of Mississippi river, opposite to St. Francisville, and contains a courthouse and a jail; the land in the vicinity is very fertile, and laid out in cotton plantations. Here commences the levee, or embankment along the river, which extends to New-Orleans. The inhabitants are chiefly of French descent.

POINT PLEASANT, p. v., capital of Mason co., Va., 370 m. W.N.W. Richmond, 361 W. Situated on the E. side of Ohio river, at the mouth of Great Kanawha river. It contains a courthouse, jail, 50 dwellings, and about 300 inhabitants.

POITIERS, or POICTIERS (an. *Limonum*, and afterwards *Pictavi*), a city of France, dep. Vienne, of which it is the cap.; on the Clain, a tributary of the Vienne, 58 m. S.S.E. Tours, and 78 m. N.E. by E. La Rochelle; lat.  $46^{\circ} 35'$  N., long.  $0^{\circ} 20' 20''$  E. Pop., in 1836, 22,000. It is surrounded by old walls, flanked with towers. Few French cities occupy a greater extent of ground; but a large space within the walls consists of fields and gardens. The streets are inconveniently steep, ill-paved, and gloomy, and the city generally is ill-built, its houses being without either taste or dignity. It has but one good square, the *Place Royale*, in which was formerly a statue of Louis XIV. Previously to the revolution, few towns in France had so

## POITOU.

many churches; and though much diminished, many of them still exist; but there are few other public edifices worth notice. The cathedral is a large, though rather low Gothic edifice, said to have been founded by Henry II. of England. The church of St. Radegonde is much more ancient, being said to owe its origin to the wife of Clotaire, in 587. The crypt containing her tomb, and some other portions of the original edifice, are still extant, but the rest of the building mostly dates from the 11th century. The church of Notre Dame is very handsome, and several of the other churches have some curious tombs and monuments. The hall of justice, public library, with 12,000 volumes, bishop's palace, theatre, cavalry barracks, and baths, are the other most conspicuous buildings. Poitiers is the seat of a royal court, of tribunals of original jurisdiction and commerce, a university academy, faculty of law, and royal college; and has societies of agriculture, arts, and sciences, a departmental nursery-ground, botanic garden, &c. It is the see of a bishop, whose diocese comprises the departments Vienne and Deux Sèvres. Its manufactures, though not extensive, comprise very various articles; as coarse woollen cloths, blanketing, hosiery, cotton netting, lace, hats, prepared sheep-skins, and goose-down. It has a considerable trade in agricultural produce, and six annual fairs.

Poitiers is one of the most ancient towns in Gaul. The vestiges of a Roman palace, an aqueduct, and an amphitheatre, are still visible. The Saracens were totally defeated in 732 by Charles Martel, in a great battle between this city and Tours. But Poitiers is chiefly memorable for the signal victory obtained in its vicinity on the 19th of September, 1356, by an English army commanded by Edward the Black Prince, over a vastly superior French force commanded by King John. The French army was wholly dispersed; and, besides many thousand common soldiers, a vast number of persons of distinction were killed or taken prisoners, the king and one of his sons being among the latter. (*Hugo, art. Vienne; Dict. Géog.*)

POITOU, the name of an extensive prov. of France, previously to the revolution: it is now distributed among the departments of Vienne, Deux Sèvres, and Vendée.

POLA, in antiquity, a splendid city, but now a poor, decayed seaport town of the Austrian empire, gov. Trieste, on the W. side, and near the S. extremity of the peninsula of Istria; at the bottom of a bay of the same name; lat. 44° 52' 18" N., long. 13° 50' E. Pop., about 900. It is surrounded by walls flanked with towers constructed by the Venetians in the 15th century, is the seat of a bishopric, has a castle, a cathedral, a Greek church, and three convents. The harbour is one of the best on the Adriatic. The entrance to it is narrow, but the water is deep, and within it expands into a large basin, land-locked and safe. It might easily be rendered an excellent station for a fleet intended to command the Adriatic. The chief occupation of the inhabitants is fishing. The sand used in the Venetian glass-works is brought from its environs.

Pola owes all its celebrity to its ancient greatness, and to the magnificent remains of antiquity of which it has still to boast. The principal of these is a noble amphitheatre, standing outside the town, and near the bay. This splendid monument is in a very perfect state of preservation, and is scarcely exceeded in magnificence by that of the Colosseum at Rome, while, in point of dimensions, it is in a very small degree only inferior to the amphitheatre of Verona. It is in the form of an ellipsis, its longest diameter being 436 ft. 6 in., its shortest 346 ft. 2 in., and its height, in the most perfect parts, 97 ft.\* It is estimated to have been capable of accommodating above 20,000 spectators. The height is divided into three stories, and the whole circ. into 72 arches. It is constructed of Istrian stone of a very superior quality, and which, in appearance and durability, is equal to the purest marble.

Within the town are two temples which, when perfect, must have been exactly similar, and worthy the best period of the Augustan age. The best preserved is dedicated to Rome and Augustus Caesar. There is, also, an arch raised, as the inscription announces, by a Roman lady, in testimony of her affection for her husband. It is a beautiful and elegant structure, admired for its simplicity and admirable proportions. Part of a Roman gateway, containing three arches, was discovered by Messrs. Stanhope and Allason, in 1816. The cathedral has apparently been built on the site of an ancient temple.

These ruins sufficiently attest the former magnitude and wealth of this now miserable place. Strabo, Pliny, and Mela, say that it was founded by a colony from Colchis; and of its great antiquity there can be no doubt. It became a Roman colony, and was for a lengthened period the principal town of Istria. *Pala quondam a Colchis, ut ferunt,*

## POLAND.

*habitata (in quantum res transeunt!) nunc Romana colonia (Mela, lib. ii. cap. 3.)*

Malte-Brun says that it was destroyed by Cæsar for its devotion to Poinpey, and rebuilt by Augustus, at the intercession of his daughter Julia. But there is no evidence whatever of its having been so destroyed, or of its restoration in the way now mentioned, other than what may be derived from the fact of its having been sometimes called *Pietas Julia*!

At present it is very unhealthy in summer, owing to marshes near the town; but these, it is said, might be easily drained. (See *Allason's Picturesque Views of the Antiquities of Pola; Murray's Handbook*, p. 295; *Spon et Wheeler, Voyage d'Italie*, &c., i. 48, 12mo edit.)

POLAND (Lat. *Sarmatia*; Pol. *Polsk*, signifying a plain country), formerly the name of an independent and extensive country of E. Europe, comprising the territories between the 48th and 58th degs. N. lat., and the 15th and 33d degs. E. long.; including, with Poland Proper, Lithuania, Samogitia, Courland, the Ukraine, Podolia, and other provinces now belonging to Russia, with Galicia, belonging to Austria, the province of Posen, and some other districts in Prussia. But the existing kingdom of Poland, constituted by the congress of Vienna in 1815, and now united to the Russian empire, is of comparatively limited dimensions, extending only between the 50th and 55th degs. of N. lat., and the 18th and 24th degs. of E. long.; having N. Prussia Proper and the Russian government of Wilna; E. the governments of Wilna, Grodno, Białystok, and Volhynia; S. Austrian Poland and the territory of Cracow; and W. Prussian Poland (the grand duchy of Posen) and Silesia. Area, population, subdivisions, &c., as follows:

Governments.	Area in sq. m.	Pop. in 1835.	Chief Towns.
Cracow . . . . .	4,451	433,779	Xiv'ext.
Sandomir . . . . .	5,384	415,885	Radom.
Kalisz . . . . .	6,312	619,323	Kalisz.
Lublin . . . . .	6,723	514,930	Lublin.
Plock . . . . .	6,118	490,007	Plock.
Warsaw . . . . .	8,927	703,811	Warsaw.
Podlachia . . . . .	4,833	351,703	Siedlec.
Augustow . . . . .	6,325	567,035	Suwalki.
City of Warsaw . . . . .		136,102	
Total . . . . .	50,757	4,208,562	

Of the population about three fourths consist of Poles, one tenth of Jews, and the remainder principally of Russians, Germans, Tartars, and gipsies.

The whole country, except in the S., where are some scattered offshoots from the Carpathian mountains, is an extended plain, with a general slope toward the Baltic, in which its principal rivers have their embouchure. These are the Vistula, with its tributaries, the Wieprz, Bug, Naraw, Pilnitz, &c., the Niemen, and the Warta. The Vistula, after bounding the kingdom for a lengthened distance on the S., traverses its centre, leaving it near Thorn. The Niemen, Bobr, and Bug bound nearly all the E.; and the Prosna, a tributary of the Warta, a considerable part of the western frontier. These rivers are all more or less navigable. There are innumerable smaller streams, Poland being an extremely well-watered country; and in the N., E., and W. are a great number of lakes and many very extensive marshes. The surface, though flat, is abundantly diversified, presenting alternately fertile corn lands, savage steppes, rich pastures, sandy wastes, dense forests, and dreary swamps. The climate is rigorous; the cold of winter is often as great as in Sweden, in a lat. 10 degs. higher; and in 1799 the thermometer descended to 27° below zero (Réaumur.). In summer, however, the heat sometimes rises to 120° (Fah.). The mean temperature of the year at Warsaw is about 46° Fah. The atmosphere is humid, rainy and cloudy days occupying half the year. Between the Vistula and the Prussian frontier the soil is generally fertile, the most productive districts being in the governments of Cracow and Sandomir, and the neighbourhood of Warsaw. In the N.E. are also some very fertile tracts; but there, and in the governments of Plock, Lublin, &c., the surface is in great part waste.

"The traveller in Poland sometimes finds himself in an expanse of surface, almost without a house, a tree, or any single object large enough to attract his notice. Soon, however, are descried the skirts of some vast forest fringing the distant horizon; and, on entering it, we proceed for 8 or 10 m., more or less, winding with the road, through lofty pines, &c., precluded from the sight of all objects but trees and shrubs. Sometimes, in the midst of a forest, we meet with a small spot of ground (for example, of 10 or 20 acres) cleared and cultivated; its sides prettily fenced by the green surrounding woods. Sometimes a small lake is found thus situated, its borders ornamented in a similar manner; and these, generally speaking, are the prettiest scenes which Poland furnishes. These forests, in some places, are 15. and even 20, m. in all directions. Indeed, if we exclude

\* Mr. Murray, in his *Handbook*, says that it is 366 ft. long, and 292 broad; but the dimensions in the text are those given by Mr. Allason, the architect, from measurements taken by himself on the spot.

## POLAND.

morasses and the level pasture lands, perhaps not more than half of the country, speaking generally, is cleared. At distant intervals are found plains of some extent, affording rich pasturage. The best are those contiguous to the Vistula, some of which are periodically overflowed by that river. Such are those in the neighbourhood of Warsaw, which supply that town with good butchers' meat." (*Burnett's View of Poland*, p. 29-33.) This description was written early in the present century; and, though a considerable proportion of forest land has been cleared in the interval, it is still substantially accurate. Of 741,000 *woloka* of land comprised in the kingdom, 255,000 *woloka* are supposed to be arable; 205,000 in forest; 171,000 in natural pastures, rivers, and marshes; 46,000 in meadows; 38,000 occupied with roads and buildings, and 26,000 in gardens. Poland has, for a lengthened period, been the granary of a great part of Europe. But Volhynia, Podolia, and Galicia, formerly included in the Polish dominion, were the principal corn-growing provinces; and in the existing kingdom of Poland, with the exception of Sandomir and Cracow, the land, according to Mr. Jacob, is so poor that it can scarcely be made to yield a medium crop of wheat more than once in nine years. The soil is mostly thin, sandy, or sandy loam, resting chiefly on a bed of granite, through which the heavy rains gradually percolate. S. of the Pilnitz, however, the appearance of the land and the face of the country improve; and as we proceed southward to the Vistula, the surface becomes more undulating, and the soil stronger and more tenacious. In this quarter there are extensive tracts of clayey loam, requiring three or four horses to plough it, and yielding, when tolerably well managed, excellent crops of wheat and oats. Where, in this district, anything like a system of rotation is adopted, the crops are very heavy.

Some of the estates belonging to the nobility of the highest rank are of enormous extent; and, not long since, those of Prince Czartoryski and Count Zamoyiski, taken together, occupied a space nearly equal to half the extent of England! In the times of the republic the former contributed 20,000 and the latter 10,000 men to the army. Owing, however, to the practice of dividing the land equally among the children, unless a majorat be established in favour of the eldest son, which is sometimes the case, much of it is possessed in smaller allotments. These, however, we should still call large, for they mostly vary from 5000 or 6000 up to 30,000 or 40,000 acres each. The rent and price of land is generally low; depending much more on the number of peasants than the extent of the farm. The crown lands, comprising one third part of the whole surface, or about 10,000,000 acres, include perhaps 2,000,000 acres of wood, the remainder being chiefly arable land, leased to tenants, who, in consequence, acquire right to the services that may be legally demanded from the peasantry. The tenants of the crown are exempted as well as their peasants, from some taxes to which the other occupiers of land are subject, and, in consequence, the crown estates are better stocked with peasants. With this freedom from taxation and ample supply of labourers, the rent of 8,000,000 acres of land is said by Mr. Jacob, from whom we have borrowed these details, to have amounted, in 1827, to no more than 4,000,000 florins, about £95,000 sterling, or somewhat less than 3d. the English acre. But a large extent of land is included in this average that is literally of no value; so that, according to Mr. Jacob, the rent of the cultivable land may be fairly set down at from 8d. to 14d. per acre. It might, however, have occurred to Mr. Jacob that, in point of fact, the money rent of land, in a country like Poland, without towns and without a market for its produce, affords no test whatever of its real value. Lands belonging to private individuals are rarely, indeed, ever let, except for services to be performed on the other parts of the same estates; and the value of the land is to be determined not by the amount of the money rent it will bring, but by the amount of subsistence it affords, or the number of individuals it will maintain in an average state of comfort, according to the customs and habits of the society. Nothing, indeed, can be more perfectly inconsequential and absurd than to set about measuring the value of land in such a country as Poland by the same standard by which it is measured in England. Formerly the whole lands of the republic were the property of the nobility or gentry, and could not be held by any one else. The possession of land was, in fact, of itself, a proof of nobility; and the owner of an estate of three acres in extent voted in the elections of nuncios, and, in respect of political rights and privileges, was on a level with the richest nobleman in the country. But this state of things is now wholly changed. Landed property is no longer the appanage of a particular class; but may be indifferently held by nobles, burghers, and peasants. Jews only are prohibited from becoming proprietors of the soil, though they have numerous mortgages thereon. When they foreclose, the lands must consequently be sold; and as the Jews, who engross the greater part of the money capital of the

country, cannot become purchasers, the prices they yield are very trifling. Latterly, however, some modifications have been made in the regulations respecting the Jews, and various privileges have been conceded to them.

The most numerous class of cultivators are peasants, who are a species of *quasi* proprietors of the lands they occupy, holding them under condition of working a stipulated number of days in each week on their lord's demesne, and paying him, in addition, specified quantities of poultry, eggs, yarn, &c. The extent of their holdings varies according to the quality of the land, the quantity of work to be performed, and of payments in kind to be made. On a large property examined by Mr. Jacob, the peasants had each about 48 acres of land, for which they were bound to work two days a week with a pair of oxen. If their farther labour was required, they were paid at the rate of 3d. a day for two days more, and if beyond that number, they received 6d. a day. On another property the peasants had about 36 acres, for which they worked two days a week with two oxen; when called upon for extra labour, they were paid 6d. a day for themselves and their oxen for the next two days, or, without the oxen, 3d.

Under the republic the Polish peasants were slaves, and did not, in fact, enjoy any greater consideration than the blacks of Carolina and Georgia in the present day. They were the absolute property of their masters. Down to 1768, a lord who had killed his slave was merely amerced in a small fine; and, though in that year the offence was made capital, such an accumulation of evidence was required to prove the fact, that the enactment was rendered quite nugatory. (*Coez*, i., 113.) It was customary to make the slaves work five days a week on the estates of their lords; the latter also might seize on whatever wealth the slaves had accumulated, might inflict on them corporal punishment, and might sell them as if they had been so many head of cattle. The boasted freedom of Poland was, in truth and reality, merely the license of the gentry to trample under foot the mass of the people, to browbeat their sovereign, and sell their votes. It is due, however, to the nobility to state that some among them, as the Zamoyisks, the Czartoryskis, and others, perceived the miserable consequences of such a state of society, and were most anxious for the improvement of the peasantry on their estates, of whom they emancipated considerable numbers. Generally, however, the Polish gentry were not inclined to establish or give efficacy to any regulations in favour of the peasantry, whom they scarcely considered as belonging to the same race of beings as themselves, or as entitled to the common rights of humanity. Under these circumstances, no one will be surprised to learn that the Polish peasantry, at the dismemberment of the republic, were in the lowest state of degradation, being at once ignorant, indolent, addicted to drunkenness, poor and improvident in the extreme. (*Coez's Travels*, i., 14; *Voyage de deux Français dans le Nord de l'Europe*, v., 105; *Buschings's Geog.*; *Introduc. to Account of Poland*, §4; *Connor's State of Poland*, passim; *Coyer, Vie de Sobieski*, i., 129; *Malte Brun, Tableau*, &c.)

The servitude of the peasants was modified by the constitution of 1791, and it was wholly abolished in the grand duchy of Warsaw, nearly identical with the existing kingdom, in 1807; the labour and services due by the peasants to their lords having been since regulated and defined by law. Owing to the ignorance of the peasantry, the influence of this great and salutary change was for a lengthened period less considerable than might have been supposed. Though the peasants may now leave one part of the country to settle in another, they must first pay off any debt that may be owing their lords; and from inability to do this, and various other circumstances, they do not often quit the estates on which they were born. When a young peasant marries, his lord assigns him a certain quantity of land, sufficient for his maintenance and that of his family in the way in which they have been accustomed to live. Should the family grow numerous, some little addition is made to the grant. At the same time, the young couple obtain also a few cattle, as a cow or two, with steers to plough their land. These are fed in the stubble, or in the open places in the woods, as the season admits. The master also provides them with a cottage, with implements of husbandry; in short, with all their little moveable property. Owing to the powerful influence of old habits, but few peasants improve the little stock committed to their management; their conduct, according to Mr. Jacob, being most frequently marked by carelessness and a want of forecast. This, however, is by no means uniformly the case: there have been many instances of accumulation; indeed, several of the peasants have become proprietors, while others have hired a larger extent of land. But it will require the lapse of a lengthened series of years before any very general change be made in the habits and condition of the bulk of the people.

Speaking generally, the houses of the Polish peasantry are miserable hovels. They are all built of wood; even

"those of the better class have merely the ground floor. On the exterior they are, in every point of view, humble, very often mean in appearance; the interior is occasionally somewhat better, though an Englishman looks in vain for anything like comfort. There are usually two or three ordinary rooms, whitewashed, though only one serves, for the most part, as a sitting-room. The floors are sometimes of earth only, but more frequently planked. A bed stands almost always in every room." (*Burnett's Travels*, p. 126.) The villages, which are of the most wretched description, are thinly scattered, rather along the skirts than in the midst of the forests, and sometimes in vast bare heaths, where no other object is to be seen. They consist of from 10 to 50 miserable huts, rudely constructed of timber, and covered over with straw, turf, or shingles; and afford so imperfect a shelter, that the inhabitants are glad to stop up the chimneys in winter, and to be half smothered with smoke, rather than die of cold. Each of these huts consists generally of only one apartment, with a stove, round which the inhabitants and their cattle crowd together. Bad as these villages are, you may travel 10 m., even in the clear part of the country, without seeing one, or indeed beholding any human habitation. The common diet of the peasantry is cabbage; potatoes sometimes, but not generally; pease, black bread, and soup, or rather gruel, without the addition of butter or meat. Their chief beverage is the cheap whiskey of the country, which they drink in quantities that would astonish the best customers of the gin-palaces of England. Their houses generally have little that merits the name of furniture; and their clothing is at once coarse and disgustingly filthy. These, however, are only their general characteristics. The condition of the peasantry depends much on the character of their lords, and upon the more or less embarrassed state of the property on which they may be settled. On the estates of opulent and enlightened landlords it is wholly different from what it is on the estates of those of an opposite description, and may, indeed, be said to be decidedly comfortable.

It is, perhaps, hardly necessary to state that, from the labour applied to the lords' estates being rendered as compulsory service, it is performed in the most negligent and slovenly manner possible. Mr. Jacob says that all the operations of husbandry are very ill executed; the ploughing is shallow and irregular; the harrows, with wooden tines, do not penetrate sufficiently to root up weeds in following; so that the land is always foul, and in bad order. The same want of attention prevails in thrashing. In short, the natural effects of the system of duty-labour are strikingly visible in the whole administration of most of the large estates where it is followed; and is hardly even prevented from exhibiting itself on the estates belonging to the few proprietors who have intelligent and active managers, and are free from pecuniary embarrassments. The common course of crops is the old system of a whole year's fallow, followed by winter corn, and that by summer corn, and then a fallow again, so that one third part of the land bears nothing. The winter corn, in the N. of Poland, consists of wheat and rye, the latter being to the former nearly as nine to one, the little manure that is preserved being laid out on the wheat land. In the S. part of the kingdom the wheat bears a larger proportion to the rye, amounting, on the more tenacious soils, to one fifth, and in some cases to one fourth part, or upward. On a well-managed farm in the province of Lublin, the quantities of seed and produce are said by Mr. Jacob to have been as follows: Potatoes, about 20 bushels to the acre planted, and about 200 bushels raised; wheat, two bushels sown, and from 16 to 20 reaped; rye, two bushels sown, and from 12 to 15 reaped; buckwheat, three bushels sown, and from 10 to 15 reaped. The barley and oats scarcely yield four times the seed. Manure is applied after potatoes for the wheat, the former having the benefit of following. This farm was one of the few in which all the labour, except that of the oxen and their drivers, was paid for in money, and not in produce. The common plan of thrashing is to give the thrasher a certain proportion of the corn, varying according to circumstances, from the 14th to the 18th bushel. In the generality of farms the increase is considerably less than the above; the average produce of wheat being estimated at not more than 14 or 15 bushels; rye, 10 or 12; barley, 14 or 16; and oats and buckwheat, from 8 to 12 the acre; or at not more than half the average produce of similar crops in England. In the S. part of Sandomir and Cracow the crops are more than usually heavy; but they are celebrated more for the excellent quality of their corn than for its greater produce. Sandomir, a narrow district about 60 m. in length, extending along the Vistula, produces the heavy and fine grain known in London as Dantzic white wheat, but the average growth is rarely beyond 20 bushels an acre.

The stock of cattle is small in proportion to the extent of land and the number of the inhabitants. The Polish horses, formerly held in high estimation, have much degenerated,

and a good breed is to be met with only in a few studs. A miserable race of colts is employed to transport merchandise, and field labour is almost wholly performed by oxen or cows. The latter are small, and generally kept in bad condition, both as to food and cleanliness. They are mostly stall-fed, but, from negligence, yield very little butter, and no good cheese. The common breed of the country may be worth from 27s. to 30s. a head; but considerable numbers of a superior breed are annually imported from the Ukraine, which may be worth £3 or upward a head. Previously to the late revolution, the total number of sheep in Poland was roughly estimated at about 3,000,000; but, though the country be extremely well adapted for sheep breeding, the Polish breeds were greatly inferior to those of Saxony, and there were very few flocks of fine-woolled sheep. Latterly, however, the Polish wool has improved very much in point of quality; and is now sent in large quantities to the markets of Leipzig, Berlin, and Breslau, where it sometimes brings a very high price. Hogs, though not very numerous, are of a good breed, originally from Hungary.

The burdens laid directly on the land are not very heavy. Tithes are moderate, and principally compounded for at fixed rates. A small sum is levied in each district for the repair of roads, bridges, and other local purposes; but that and the land-tax do not exceed 25 per cent. on the presumed annual value of the land, which is usually far below its real value. The other taxes fall equally on the different classes of the community. That on beer is laid to farm by the government to the brewers. Heavy duties are laid on foreign commodities, such as sugar, coffee, wine, &c. The great mass of the population cannot, however, afford to purchase such luxuries, but content themselves with honey, dried chicory, and whiskey.

The forests are highly important, and in the governments of Augustow and Plock they cover more than a third part of the surface; though in some of the other governments they have been much neglected, and wantonly cut down; especially in the government of Cracow, where, however, the place of wood-fuel is supplied by coal. Scotch pine, black fir, alder, aspen, oak, beech, ash, maple, linden, and elm, are the principal forest trees, and the Polish oak and fir timber is decidedly preferable to that of America. Most of the larger forests belong to the crown, and are felled in portions annually, so as to cut them every 50 years. Mr. Jacob states, that the wood cut in one year, on the forest land belonging to the crown, produced £48,000 sterling, being at the rate of 5s. d. the acre on the whole of the woods, or 24s. on the part actually cut. (*Jacob's Report on the Agric. of Poland; Burnett's View of Poland; Coze's Travels*, &c.)

Among the wild animals may be specified the bison (*Pol. Zubr*), found in the vast forests of the province of Plock, traversed by the Narew. The Emperor Alexander prohibited the chase of the bison, of which, perhaps, the only remnant in Europe is now to be found in Plock and the adjoining Russian province of Bialystock. (Malte Brun, *Tableau de la Pologne*, p. 55.) The other wild animals include the elk, roebuck, wild boar, badgers, foxes, hares, &c., the skins of which last form articles of export.

Minerals are more numerous and valuable than might have been expected in so flat a country. Bog iron is found almost everywhere; but the principal mining districts are in the S., in the governments of Cracow and Sandomir. Coal is raised in considerable quantities at Bendzine, Reden, Niemcy, &c. Zinc, which is exported in considerable quantities, is found in the vicinity of Cracow; lead at Olchusz; and copper at Kielce. Iron of excellent quality is also mined in Sandomir.

The domestic manufacture of woollen and other stuffs is universal throughout Poland, almost every agricultural family having a loom for the manufacture of the coarse cloths required for their consumption. The yarn used to be partly imparted from foreign countries, but lately a large spinning factory has been established at Girardow, which occupies 500 hands, and produces, besides yarn, a quantity of linen cloth. In 1829, the woollen cloth made in the country was estimated at 7,000,000 Polish ells, worth upwards of 70 millions florins, about a tenth part of which was sent into Russia. During the disturbed period which followed, the production of Polish woollens sank to one third of what it had previously been; but it has lately revived in consequence of the importation of Polish cloths into Russia, duty free, where they are in extensive demand for the clothing of the troops, and other purposes. They are, also, sent in considerable quantities to Kuchnia, on the borders of Chinese Tartary. Leather is the manufacture next in importance; and then follow linen and cotton fabrics, sailcloth, paper, bleached wax and wax candles, alum, and other chemical products, glass, printing types, jewellery, carriages, &c. Generally, however, these articles are produced on a very small scale; and notwithstanding the

## POLAND.

cheapness of labour, they are mostly, from the want of skill on the part of the workmen, at once high-priced and inferior. Poland, in fact, is an agricultural country; and, except a few of the more bulky and coarser articles, it would, were the citizens permitted to resort to the cheapness of markets, derive almost all its manufactures and articles of luxury from other countries, in exchange for corn, wool, timber, tallow, flax, spirits, and such like articles. Spirits are distilled in every village from rye and potatoes, but their sale is still, as formerly, a manorial right, each lord of a manor having the exclusive sale of spirits within his domain. There are breweries in Warsaw, and in some other large towns; and mead, and drinks made from raspberries, cherries, &c., principally in the S. provinces, are favourite beverages of the people. Of late years several beet-root sugar factories have been established.

The trade of Poland is almost wholly in the hands of the Jews. The internal commerce is carried on chiefly by means of fairs, at which, also, a considerable portion of the foreign trade is conducted. The latter principally with Russia, Prussia, and the republic of Cracow: in 1830 the following was the value of the several exports to, and imports from each of these states, according to the *Petersburg Commercial Gazette* for 1833.

Exports.		Imports.
	<i>Polish Florins.</i>	<i>Polish Florins.</i>
Russia . . . . .	14,514,496	19,322,999
Prussia . . . . .	27,596,521	18,336,106
Austria . . . . .	238,879	9,365,395
Cracow . . . . .	2,703,241	825,181
Totals . . . . .	45,073,137	47,713,684

During the revolution the exports decreased greatly, while the imports were considerably augmented. Since that period, however, the balance has been in a great measure restored. England, Holland, France, and sometimes even America, take off, through Dantzic, most of the corn which Poland has to export. But in years when prices are high in England, and when, consequently, there is a great demand for corn in Dantzic, a good deal of the supplies brought to that port come from Galicia. The customs and octroi duties produced in 1830, 8,794,231 florins, and in 1832, 9,238,003 do. Goods are conveyed in summer by heavy wagons, and in winter by sledges; but the roads are generally bad, and during the late insurrection were much cut up; latterly, however, government has been exerting itself for their improvement. Steam navigation is but in its infancy; and merchandise is at present forwarded down the rivers by flat-bottomed boats to the Prussian ports. But Russia seems to be endeavouring to put a stop to the intercourse between Poland and the Prussian ports on the Baltic, by constructing a great commercial road from the S.W. angle of Poland to the Baltic; and a railway has been planned, for which the capital is already subscribed, and the works begun, to convey to the harbours of Windau and Libau the goods which formerly went to Tilsit or Memel, or by the Pregel to Königsberg. (*Russia under Nicholas I.*, p. 124, 125.) A similar purpose is served by the canal of Augustow, connecting the Narew and Vistula with the Niemen, and which is to be continued to the Baltic by the Windau canal, in the government of Wilna. The canal of Augustow is 96 m. in length, from 5 to 6 ft. in depth, and of sufficient breadth for two large boats to pass each other with ease. It has 17 locks, and several convenient basins in different parts of its course. It was wholly completed between 1821 and 1829, and is now the means of an active traffic. These, however, are all violent and unnatural measures, and can have no useful or permanent result. No one can take up a map without being satisfied at a glance that the Vistula is the proper highway of the country, and Dantzic her proper shipping port.

Accounts in Poland are kept in *zlots*, *groschen*, and florins: the florin = about 9d., is divided into 30 gr. The Polish lb. is about equal to 12 oz. avoird.: the ship-pound = 416 lbs.

**Government.**—Previously to 1831, Poland had its two legislative chambers, those of the deputies and the senate; but since the unhappy attempt at a revolution that then broke out, Russia has suppressed these chambers, and Poland is governed nearly in the same way as the other portions of the empire. The council of administration for the kingdom consists of three directors-general (of the interior, justice, and finance), a comptroller-general, and other persons appointed by the sovereign. The reports of this council are submitted to the emperor by a secretary of state for Poland residing in Petersburg. There is also in that capital a department for Polish affairs, established since 1832, to which the government of Poland is confided. The legislative power is vested in the sovereign, and the proposed laws for this kingdom are submitted for his sanction by the Russian council of state. The local administration of Poland is exercised by civil governors, with the same

powers as those established in the different governments of Russia.

The civil and commercial codes at present in force are, for the most part, the same as in France: the criminal code is modelled on that of Prussia and Austria. Personal and religious liberty are nominally guaranteed; and those who do not interfere with politics are as secure in Poland as any where else. But those who wish to enjoy this security must have a care not to find any fault with any action of the government. The press is under the control of censors, who are stricter here than even in Russia. Justices of the peace decide in civil causes up to the amount of 500 florins; above which the latter come before the tribunals of original jurisdiction in the capitals of the several governments. At Warsaw, besides a court of appeal, there is a supreme court of cassation, and commercial tribunals are established in all the principal towns. Criminal causes are tried in separate tribunals, of which there are four in the kingdom. Political offences come under the cognizance of a council of war, or a commission specially appointed.

**Religion.**—Until lately, upwards of three fourths of the Poles belonged to the Roman Catholic, or the United Greek church, the Greco-Russian communicants being but few in number. But of late the Russian government has, by every means, been endeavouring to shake the spiritual dependence on the court of Rome, not only of the Poles, but of the United Greeks throughout the empire; and its measures, in this respect, appear to have been attended with so much success, that, in 1839, from three to four millions of the United Greeks, including most of those of Poland, had joined the orthodox Greek church. Until 1832, the Greco-Russians had no prelate in Poland; but at that period an archimandrite was appointed, who resides at Warsaw. The bishop of the United Greek church resides at Irlene, in Lublin. The Roman Catholics have an archbishop and eight bishops, nominated by the pope on the recommendation of the emperor of Russia; and the bishop of the government of Cracow exercises authority over the free city of that name, and its territory. There are a number of convents possessing territorial revenues; but the secular clergy receive a regular stipend from the government, the landed possessions formerly belonging to them being now public property. The parish priests, however, receive tithes, the amount of which is sometimes very considerable. The Lutherans and Calvinists, amounting together to about 220,000 persons, are principally Germans. There are a few Mennonites and Moravians, and some Mohammedans.

**Public Instruction.**—Previously to 1830, education was scarcely diffused at all, except among the nobility and upper classes residing in the towns, and the total number of persons receiving instruction at that period is said not to have exceeded 16,000, or about 1 in 260 of the population. After the suppression of the insurrection, the schools were shut for several months, and when re-opened, were organized upon the same plan as those of Russia. Private schools are subject to the same inspection on the part of the government as public schools. In 1834 there were, in all, 43,794 pupils in public and private establishments; and in 1839 the number, at 1159 schools of all kinds, was estimated at 70,000 or 1 to every 62 individuals. (*Russia under Nicholas I.*, p. 188.) In 1838 an order was issued by the Russian government, directing that there shall be a teacher of the Russian language in every primary school; and that all children attending such schools shall be obliged to learn the Russian language; it was, also, at the same time, ordered that no individual should be employed as a tutor unless he possessed a testimonial signed by the proper authorities, certifying his ability to give instruction in the Russian language; and that no person unacquainted with Russian should be promoted to any civil or military employment.

This regulation, as was to be expected, gave much offence to the Poles, and has been the theme of much idle declamation in this and other countries. Russia, no doubt, wishes to secure her hold over Poland; and every thing that tends to Russianise the latter, and to give her people the same tastes, habits, and modes of thinking as the Russians, must necessarily contribute to this end; and we believe it will be generally admitted, that of all the means to bring about this consummation, the gradual substitution of the Russian for the Polish language will be one of the most effectual. If there were any rational prospect of Poland being able to emancipate herself from the yoke of Russia, one might regret the measure. But as there is no such prospect, the interests of both countries will be best promoted by their being, as far as possible, consolidated into one people.

The Polish army, which before 1831 amounted, in time of peace, to 35,000 men, is now amalgamated with that of Russia.

## POLAND.

The Poles are a remarkably fine race of people, being well formed, strong, and active. In their general appearance, they are said to resemble the western Asiatics rather than the Europeans, and are, most probably, of Tartar origin. The gentry are haughty and brave, but, at the same time, frank and generous. The peasantry, however, bowed down by continual oppression, are cringing and servile; their whole behaviour evincing the state of abject servility from which they are now being emancipated. The nobility are very numerous in Poland, amounting at present to not less than 283,420 individuals. According to the old laws of the republic, the nobles were *terrigena*; every person who possessed a freehold estate, how small soever, or who could prove his descent from ancestors formerly possessed of such an estate, and who had not debased himself (!) by engaging in any sort of manufacture or commerce, was a nobleman or gentleman, the terms being in Poland synonymous. The gentry were all held to be equal to each other, the titles of prince, count, &c., which some of them enjoyed, not being supposed to add any thing to their real dignity. Under the republic, the nobility were every thing, and the rest of the people nothing. The former were the absolute lords of their estates, and of the boors by whom they were occupied. They enjoyed the royal privilege of maintaining troops, and constructing fortresses; and they only could elect the sovereigns. No noble could be arrested without previous conviction, except in cases of high-treason, murder, or robbery on the highway; and then only provided he were taken in the fact! His house was a secure asylum to all to whom he chose to extend his protection, whatever might be their crimes. Even his vassals could not be arrested, nor their effects seized; they were exempted from all payment of tolls and other direct duties; and though the king might bestow titles, he had no power to create a nobleman or gentleman, that being the exclusive privilege of the diet. Happily, however, this state of things has been wholly changed. Under the vigorous governments of Russia, Austria, and Prussia, the oppressive privileges of the nobles have been suppressed; they can no longer trample with impunity on their inferiors, nor commit offences without subjecting themselves to the full penalty of the law; and a poor gentleman no longer considers it a degradation to engage in some department of industry. (Busching, *Introduction to Poland*, § 4; Malte Brun, *Tableau de la Pologne*, 266; Coxe, i., 102, &c.)

Though modernised in a considerable degree, the richer Polish nobles continue to live in large castles, in a state of rude hospitality, entertaining great numbers of their dependants and such strangers as may happen to visit them. At these feasts the practice of sitting below the salt is still kept up, the best dishes and the best wines being appropriated by the *élite* of the guests.

Jews are more numerous in Poland than in any other European country, having amounted, in 1838, to 411,307 individuals, of whom 338,677 lived in towns, and 72,630 in villages, or in the country. They are, as already stated, in the exclusive possession of the commerce of the country; they, also, are the great manufacturers and sellers of spirituous and fermented liquors; advance money on lands and goods; are the only jewellers and silversmiths; and carry on all pecuniary dealings. Those in the towns are mostly all bourgeois; and they may be said to engross all the most lucrative business. But notwithstanding all this, the majority of the Israelites are extremely poor. They seem, also, to be in a lower state of civilization than any other class. Even the richer individuals, though they occupy the best houses in the towns, appear to care little for cleanliness or comfort; and the lower orders live in a state of filth and discomfort that would be intolerable any where else.

There are in Poland many instances of longevity, and, on the whole, the country may be said to be healthy; but the people are, notwithstanding, especially liable to endemic diseases, such as small pox and fevers, which frequently make great havoc. Among the diseases peculiar, or nearly so, to Poland and Lithuania, the *plica polonica* is the most remarkable. This is a disease of the head, which terminates by affecting the hair, which it dilates, softens, and clots into one undistinguished mass. This disgusting malady spares neither age nor sex, gentry nor peasants, though it be more frequent among the latter than the former. Various theories have been formed to account for its origin: most probably it is occasioned by the bad water, unwholesome food, and filth of the people.

Poland suffered much from the outbreak in 1831, in consequence partly of the destruction of property, and partly of the proscriptions and oppressive measures which it occasioned. Within the last few years, however, the country has again begun to revive.

The municipal revenues of Warsaw amounted, in 1834, to 4,004,000 florins, an increase over their amount in 1829 of nearly one fourth: and the value of insured buildings,

throughout Poland, in 1835, was estimated at 505,187,000 florins, being an increase of 112,204,000 florins over that of the buildings insured in 1829. Population has increased still more rapidly; having amounted, in 1828, to 4,088,329, and to 4,298,962 in 1838. The old roads, also have been materially improved, at the same time that several new ones have been undertaken; so that, on the whole, however depressed in some respects, the country is certainly advancing in improvement.

*History.*—The history of Poland commences from the 10th century. In 1139, Boleslaus, under whom Christianity had been introduced into the country, divided the kingdom among his four sons, which was the source of a lengthened series of civil wars, and of all sorts of disasters. At length these different portions were united under one sovereign, in 1296. The reign of Cassimir the Great, which began in 1333, and terminated in 1370, is the most brilliant in the Polish annals; still, however, the foundations were laid in it of that anarchy that destroyed the kingdom. Cassimir, having no children of his own, and being anxious that the crown should devolve, at his death, on his nephew Louis, king of Hungary, in preference to the legitimate heirs, obtained, for that purpose, the sanction of a general assembly of the nobles, and Louis agreed to the conditions under which they offered him the crown (Koch, *Tableau des Révolutions*, i., 284); establishing, in this way, a precedent for the like interference on future occasions. On the death of Louis the grand duchy of Lithuania was united to the crown by the marriage of Jagellon, its grand-duke, to the daughter of Louis, who had succeeded to the throne. The house of Jagellon continued to occupy the Polish throne for about two centuries; but at each change of a sovereign an assembly of the nobles or *diet* was held, at which the new sovereign was formally elected to the throne. On the death of the last of the Jagellons, in 1572, the throne of Poland became, substantially as well as formally, elective, and it was called not a kingdom but a republic. Henceforth, on the death of a sovereign, the nobility or gentry repaired in vast numbers, sometimes to the amount of 100,000, on horseback, and armed, with crowds of attendants, to a sort of camp in the neighbourhood of Warsaw, to elect his successor, who had to subscribe, and make oath to observe, the *pacta conventa*, or conditions under which he had been elected. These were such as to reduce the royal authority within the narrowest limits, to secure and extend the privileges of the nobility and clergy, and to perpetuate the degradation of the people, who, being slaves in the fullest extent of the term, were not supposed, in fact, to have any legal existence! The famous John Sobieski, the deliverer of Vienna, elected to the throne in 1674, was the last of the great monarchs of Poland. But in the latter part even of his reign the vices of the Polish constitution, and their fatal operation, became obvious; and they thence continued to increase in number and virulence till its total subversion. (See the *Histoire de Jean Sobieski*, by the Abbé Coyer, *passim*.)

Exclusive of the diets \* for the election of the sovereigns, ordinary diets were held, at least, once every two years, at which all matters connected with the government of the country were discussed and decided upon. It is easy to see, from what has been already stated, that this form of government could not fail to produce great party contests and disorders, and that it must have afforded every facility to the surrounding powers for acquiring a preponderating influence in the diet. Probably, however, the abuses already noticed might have been repaired, but for the principle, if we may so call it, first introduced in 1652, that no decision could be come to upon any matter submitted for consideration, unless the diet were unanimous. Hence the singular and extraordinary privilege of the *liberum veto*, by which any single member of the diet was permitted to interpose his absolute veto, and, by doing so, could nullify its whole proceedings! And, which is even more extraordinary, this absurd privilege, which allowed the whim, caprice, or bad faith of an individual to prevent the adoption of any measure, however necessary and however generally approved, was, for a lengthened period, regarded by the Poles as the palladium of their liberties! (*Abregé de l'Histoire du Nord*, ii., 683.)

It is plain, from these statements, that latterly the whole powers of the state were engrossed by the nobles, or gentry, many of whom, though enjoying the same political rights and franchises as the others, were miserably poor. In consequence, corruption, intimidation, and such like vices had full scope in the Polish diets, particularly in those held for the election of sovereigns; and latterly the crown was

\* The diets consisted, 1. of the senate, composed of the bishops, palatines, or perpetual governors of provinces, castellans, or governors of towns, and the grand officers of the crown; and, 2. of the *sejmiki*, or representatives of the nobles, or gentry. These bodies did not, however, deliberate separately, but together; and, as will be immediately seen, they could come to no resolution without being unanimous.

## POLAND.

In fact, either sold to the highest bidder, or the election was decided under the influence of foreign force. And if, while the government was in this state of abasement, we bear in mind that the whole people, with the exception of the nobles or gentry, were slaves, on whom every indignity might be practised by their masters, it will be seen that there is but little to regret in the subversion of such a state of things.

Indeed, the only wonder is, that Poland was not sooner erased from the list of nations. Its partition had, in fact, been proposed by the Swedes in the reign of Casimir V., a short while previously to the election of John Sobieski, as the only method by which the disorders that agitated the country could be put an end to, and the inconvenience thence arising to the surrounding states be obviated. (Kuhlière, *Anarchie de Pologne*, l. 68.) But it was not till more than a century after that the first partition was agreed upon, in 1772, by the emperor of Austria, the empress of Russia, and the king of Prussia, by which about a third part of the kingdom was dismembered, and added to the dominions of the partitioning powers! But it was not to be supposed that having once begun to share in so rich a spoil, these powers would rest satisfied with this acquisition. The pretexts for farther interference still continued undiminished. Poland, as before, remained a prey to all sorts of disorders, and the Russian ambassador, and not the king, was the real sovereign.

In 1791 the majority of the nobility and gentry then assembled in a diet, which had been made permanent, being desirous to raise their country from the miserable state into which it had fallen, and stimulated by the events connected with the French revolution, drew up the *project* of a new constitution on a more liberal and broader basis, abolishing the *liberum veto*, and making the crown hereditary, on the demise of the king, in the Saxon family. This constitution was accepted by the king; but the great bulk of the nation did not, and could not, take any interest in the change; and the government were wholly without the means of supporting the new order of things. Russia had little difficulty in fomenting fresh disorders; and the unfortunate Poles, with an imbecile sovereign, without forces, and abandoned and betrayed by their pretended allies, were again compelled to submit to a fresh dismemberment of their country.

Provoked by these repeated indignities the Poles, under Kosciusko, rose in rebellion in 1794. But their means were totally inadequate to the struggle in which they had engaged; after displaying prodigies of valour, Kosciusko was defeated and taken prisoner (10th October, 1794), and Praga, the suburb of Warsaw, being taken by storm, that city forthwith surrendered; and there being no longer any obstacle in the way, a dismemberment of the remaining territories of the republic took place in 1795, and Poland was finally obliterated from the map of Europe.

The powers who dismembered Poland had, in reality, nothing better to allege, in justification of their measures, than the robber's plea, that the power to commit an act makes it at once right and expedient! But, how objectionable soever the motives by which they were influenced, and how dangerous soever the precedent which they established, there can be no reasonable doubt that their measures have been decidedly advantageous to the great bulk of the Polish people. The vices inherent in Polish society were such that it is idle to suppose they could have been eradicated by any remodelling of the constitution. There was no middle class (or none worth notice) in the country; nothing between nobles, jealous of their rank and privileges, on the one hand, and newly emancipated slaves, brutalised and degraded by a long course of oppression, on the other. To restrain the first within the limits prescribed by law, and to raise the second class, was a work that could only be undertaken by a powerful government, such as there were no means of forming out of native materials. It is to be regretted that Russia obtained the lion's share of the spoil; but even in Russian Poland the condition of the people has been very decidedly changed for the better; and in Austrian and Prussian Poland, the improvement in their condition has been signal and extraordinary.

The existing kingdom of Poland originated in the grand duchy of Warsaw, established by Napoleon in 1807. It was assigned to Russia by the congress of Vienna, and obtained from the emperor Alexander a representative constitution. Unfortunately, however, the disgust occasioned by the brutality of the grand duke Constantine, commander-in-chief of the Russian forces in the kingdom, conspiring with the excitement produced by the French revolution of 1830, and the abuse of Russia in intemperate and ill-judged speeches in the H. of C. and chamber of deputies, which made it be believed that England and France were ready to assail that power, precipitated the Poles into an insurrection. The result was such as all men of sense anticipated from the outset. The Poles made a gallant stand

## POLTAVA.

in defence of their liberties; but in the end every vestige of their independence was totally destroyed. The name of the kingdom remains; but its peculiar privileges have been subverted, and it is now substantially and in fact a part of the Russian empire.

POLAND, p. L., Chautauque co., Me., 51 m. S.W. Augusta, 574 W. Incorporated in 1795. Bounded N. by Little Androscoggin river. It contains a small village of Shakers, who possess 600 acres of finely cultivated land. It has five stores, one grist-mill, one saw-mill, one oil-mill; 24 schools, 1052 scholars. Pop. 2360.

POLAND, L., Chautauque co., N. Y., 22 m. S.E. Mayville, 317 m. W. by S. Albany. Drained by Conewango creek and Chautauque outlet. It contains two stores, one grist-mill, 15 saw-mills, seven tanneries; 10 schools, 400 scholars. Pop. 1087.

POLAND, p. L., Trumbull co., O., 73 m. N.E. Columbus, 284 W. Watered by Mahoning river. Pop. 1583.

POL-DE-LEON (St.), a seaport town of France, dep. Finistère, cap. cant., on the channel, 10 m. N.W. Morlaix. Pop., inc. com., in 1836, 6451. Though ill-built, it is clean, well paved, and remarkable for its antique edifices. Its cathedral, a structure of the 15th century, has some excellent carving; and a tomb, said to be that of the first Breton king. The church of Kreizker, built in the 14th century, has a spire 394 ft. in height, and one of the handsomest in France. (*Guide du Voyageur*.) St. Pol has some trade in cattle, horses, linen, hemp, &c., but to no great extent.

POLIGNY (an. *Castrum Olinum*), a town of France, dep. Jura, cap. arrond., on elevated ground, 13 m. N.E. Lons-le-Saulnier. Pop., in 1836, ex. comm., 6366. It consists principally of four long parallel streets, and is well built, clean, and ornamented with several handsome fountains. Among its public edifices is a well-constructed slaughter-house. Poligny was formerly a place of importance, and a favourite residence of the sovereigns of Burgundy. It has a few manufactures of common earthenware, saltpetre, glue, &c.; and is a sub-prefecture, though the superior courts for the arrondissement sit at Arbois. (*Hugo, art. Jura, &c.*)

POLK county, Tenn. Situated in the S.E. part of the state, and contains 330 sq. m. Bounded N. by Hiwassee river, by branches of which it is drained. It contained in 1840, 3541 neat cattle, 1799 sheep, 10,899 swine; and produced 8710 bushels of wheat, 220,224 of Indian corn, 24,489 of oats, 5362 of potatoes, 3630 pounds of tobacco, 14,883 of cotton, 1060 of sugar. It had seven stores, six grist-mills, one saw-mill, one tannery, four distilleries; two schools, 38 scholars. Pop.: whites, 3249; slaves, 304; free coloured, 17; total, 3570. Capital, Bentonville.

POLK county, Mo. Situated S.W. of the centre of the state, and contains 769 sq. m. Drained by Pomme de Terre, Sac, and Niangua rivers. It contained in 1840, 11,402 neat cattle, 6411 sheep, 30,515 swine; and produced 12,143 bushels of wheat, 392,830 of Indian corn, 19,042 of oats, 17,902 of potatoes, 25,650 pounds of tobacco, 29,223 of cotton. It had 14 stores, 10 grist-mills, three saw-mills, two tanneries, four distilleries; five schools, 93 scholars. Pop.: whites, 7978; slaves, 462; free coloured, 9; total, 8449. Capital, Bolivar.

POLTAVA, a gov. of European Russia, lying along the E. side of the Dnieper, by which it is separated from the governments of Kherson and Kieff, having the government of Tchernigoff on the N., and those of Kharkoff, and Ekaterinoslaw on the E. and S. Area estimated at 22,500 sq. m. Pop., in 1838, 1,622,000. (*Kapppen*.) Surface quite flat; soil excellent: in some parts there is a scarcity of wood. Besides the Dnieper, the principal rivers are its affluents, the Vorskla, Piriol, and Sula. This and the surrounding governments constitute what may be called the granary of Russia. It is one of the best cultivated districts of the empire: the return of the corn crops is said to be as six to one, the total produce being about 6,506,000 chetwerts, of which about 1,500,000 are exported. The grazing grounds are excellent, affording pasturage for large herds of the fine Ukraine breed of oxen, and for immense flocks of sheep, the breed of which has latterly been much improved. Some peasants have above 100 bee-hives. Manufacturing industry has not made much progress; but there are fabrics of cloth and linen, with numerous distilleries, and establishments for the preparation of tallow, candles, &c. Large quantities of corn, tallow, and other products, are annually sent from this government to Odessa, and oxen to Moscow, Petersburg, &c. (*Schait, La Russie, &c.*, p. 465.)

POLTAVA, the cap. of the above gov., on the Vorskla; lat. 49° 35' 4" N.; long. 34° 41' 15" E. Pop. 9500. It stands on an eminence, and is built principally of wood, with broad and straight streets. There is a good square, with brick houses, embellished with a granite monument in honour of its deliverer, and the regenerator of Russia, Peter the Great. It is surrounded by a rampart, and has

## POLYNESIA.

a cathedral, gymnasium, convent, &c., with three great fairs annually, and a considerable commerce.

Charles XII. of Sweden having besieged this town in 1709, Peter the Great marched to its relief; and in its vicinity, on the 27th of June of the same year, was fought the famous battle of Poltava. The Russians gained a complete victory. The Swedish army was entirely destroyed: it lost above 9000 men left dead on the field of battle, and from 2000 to 3000 made prisoners in the pursuit; while the residue, consisting of about 14,000 men, under General Lewenhaupt, after escaping from the battle, were compelled to lay down their arms and surrender on the 12th of July. Charles, with only a small escort, effected his retreat across the Bug, and took refuge in Turkey. This great victory established the power of Peter on a solid foundation, and secured not merely his empire, but the success of his vast projects and plans for the civilization and improvement of his people. To use the words of Voltaire—" *Ce qui est le plus important dans cet bataille, c'est que de toutes celles qui ont jamais ensanglanté la terre, c'est la seule, qui au lieu de ne produire que la destruction, ait servi au bonheur du genre humain, puisqu'elle a donné au Czar la liberté de polir une grande partie du monde.*" (*Histoire de la Russie sous Pierre le Grand*, part i., cap. 18.)

POLYNESIA, "the region of many islands," a collective term used by geographers to designate the numerous groups of volcanic and coralline islands scattered over a great part of the Pacific, but especially between the tropics, extending eastward from the Philippine islands and New-Guinea to the coast of S. America. Supposed aggregate population, 1,500,000; but all calculations of this kind are merely conjectural, as there are few or no data. The equator forms a convenient dividing line between these groups, which may accordingly be comprised under the heads of N. and S. Polynesia, as follows, the order being from W. to E.

Names of Insular Groups.	Situation.		
	Lat.	Long.	
I. N. Polynesia.			
Pelew Islands . . . . .	5°	N. 135°	E.
Ladron — . . . . .	17°	170°	
Caroline — . . . . .	7°—17°	150°—170°	
Radick — . . . . .	6°—10°	164°—172°	
Sandwich — . . . . .	20°	158°	W.
Galapagos — . . . . .	1°	92°	
II. S. Polynesia.			
Admiralty Islands . . . . .	2°	S. 143°	E.
New Ireland, New Britain, and New Hanover . . . . .	6°—9°	152°	
Louisiade (little known) . . . . .	10°	148°?	
Solomon's Islands . . . . .	8°	159°—164°	
New Hebrides and New Caledonia . . . . .	19°—22°	164°—170°	
Q. Charlotte's Islands . . . . .	12°	169°—179°	
Friendly — . . . . .	15°—21°	173° E.—165° W.	
Navigator's — . . . . .	13°	173°	
Society — . . . . .	13°—21°	158°—130°	
Dangerous Archipelago . . . . .	12°—15°	141°—132°	
Marquess — . . . . .	9°—11°	149°	
Pitcairn Island . . . . .	20°	133°	
Eastern — . . . . .	27°	109°	

The whole of Polynesia may be considered as a series of submarine mountain ranges; for no portion of the earth's surface has more numerous inequalities, and nowhere, except in America, have the chains so marked a course from N. to S. Indeed, all the archipelagos have, more or less, this direction, and it not infrequently happens that the small chains are individually terminated by an island of larger size than the others with which it is connected. Many of the larger islands, and particularly those which shoot up to a considerable elevation from the sea, consist of basalt, as well as other igneous formations; and in many of them are distinct traces of volcanic action, with a few active volcanoes. To this class belong the Friendly islands (the largest of which, called Ouaheite, has a mountain rising to the height of 10,000 ft. above the sea), the Marquesas, and Sandwich islands, in the last of which are several, both extinct and active, volcanoes, rising from 12,000 to 16,000 ft. above the sea. The desert group of the Galapagos is likewise in a state of igneous action, and the whole is a mere mass of lava and similar productions. The numerous small islands that stud the Pacific S. of the equator, and W. of the Friendly islands, and particularly those that rise but a short distance from the level of the sea, are based on reefs of coral rock. Of those examined by Captain Beechey, none were more than 30 m. in diameter; they were of various shapes, chiefly formed of living coral, or at any rate encompassed by a reef of that substance. Most of them have lagoons in their centres, the bottoms and sides of which are likewise formed of coral; and the generally circular form of these islands, the existence of these lagoons, and shelving conical form of the submarine mountains, has led to the supposition that they are nothing more than the crests of submarine volcanoes, having the rims and bottoms of their craters overgrown

with coral. It is also well known, that the Pacific is a great theatre of volcanic action, and every island, yet examined in Polynesia, consists either of volcanic rocks or coral limestone, and in many instances of basalt and lava, having a girdle of coral. (*Lyell's Geology*, iii., 226—229.) The formation of coral, which, according to Captain Beechey, is very gradual, ceases as soon as it reaches the surface of the water; but it serves as a basis for a vegetable soil, which in these regions is soon covered with plants, cocoa-nut and other trees. The larger islands of Polynesia are indented with deep bays, furnishing tolerably good harbours for shipping; but the circumference of the largest is less than 200 in., so that their extent does not admit of the formation of any important lakes or rivers. By far the largest portion of Polynesia is between the tropics; but the small extent of the islands procures for them the temperature of the ocean, and a succession of light sea and land breezes. Hence the heat never becomes oppressive, even to Europeans. Hurricanes and earthquakes are of rare occurrence.

The numerous islands of the Pacific afford an extremely diversified vegetation; and among the many plants covering their surface are some of high utility for human support, especially the bread-fruit tree (a favourite article of food among the islanders), cocoa-nut, yam, the root of the *Arum esculentum*, the banana, plantain, and sugar-cane, which last grows naturally in the Sandwich islands, and succeeds better than in any other part of the world. A native chestnut, called *Rata* (*Tuscarpus edulis*), furnishes the natives with a sweet nut, that forms an agreeable substitute for bread-fruit; besides which, the Ahia (*Eugenia malaccensis*) bears a pulpy fruit, shaped like an apple. The Ti-root (*Dracopa terminalis*) furnishes an inferior spirit, called *Ana*, the preparation of which is pretty well known by most of the islanders, and has produced very demoralising effects. The use of foreign spirits, however, has, in the groups best known to Europeans, almost superseded the necessity of drinking this nauseous stuff. The tropical productions of the American continent have been successfully introduced by European navigators and missionaries; so that many of the islands, besides their indigenous productions, bear an abundance of oranges, citrons, shaddocks, pine-apples, guavas, figs, and cape mulberries. The vine also was introduced, but was destroyed by the natives in their wars: fresh plants have more recently been imported, and thrive well in some of the islands. The growth of corn has been more than once attempted, without success; owing more, however, to the imperfect means of tillage than the unfitness either of the soil or climate. Pumpkins, melons, cucumbers, cabbages, and kidney-beans flourish better, and with less trouble, than any other foreign vegetables. The hills of the more elevated islands are clothed with forests of stately trees; the most valuable of which are the *apapa* and *faifa*, which yield excellent timber for canoes, and the candle-tree (*Aburites triloba*), the oil of which is used for domestic illumination. The principal trees growing on the plains are the tamanu (*Callophyllum inophyllum*), and the *Hibiscus tiliaceus* (highly valued as materials for furniture, canoes, &c.), the Chinese paper mulberry (*Morus papyrifera*), and the sandal-tree, the timber from which last is exported from the Sandwich islands to Europe and China.

The fauna of Polynesia is characterized, like that of Australia and its surrounding islands, by the absence of beasts of prey, and indeed, all the larger animals. Hogs, dogs, rats, lizards, were the only quadrupeds originally found on the islands. The native hog is different from the European breed since introduced, and has now almost disappeared: the present breed is reared in great numbers, and pork constitutes the favourite food of the natives. The flesh of the dog is also esteemed a luxury, especially by the Sandwich islanders. Rats were occasionally eaten uncooked by the Friendly islanders; but that practice has been discontinued. Cats have been domesticated in most of the houses. Horses, asses, horned cattle, goats, and sheep have since been added, and thrive exceedingly well. The oxen are a fine breed, chiefly imported from New South Wales. The horses come from S. America, and, being used only for the saddle, are never shod. Among the indigenous water birds may be noticed the albatross, tropic bird, several kinds of petrels, herons, and wild ducks. Woodpeckers, turtle-doves, and pigeons are common; besides which, the parrot (of the species *trichoclossus*) is abundantly distributed over all the islands; and in most of them the domestic, and several species of wild fowl appear to be indigenous. Fish are numerous on the coasts and in the lagoons of all parts of Polynesia: the albacore, bonito, ray, and shark are eaten by the natives; in addition to which the shores abound with a great variety of delicate coral-fish. The fresh water streams also swarm with salmon, eels, &c., and many varieties of molluscan crabs, &c., with turtles, are caught on the coral rocks. Among the whales that frequent the coasts of Polynesia,

## POLYNESIA.

the largest and most valuable is the *cachalot*, or sperm-whale (the male of which, according to Mr. Bennett, sometimes yields from 70 to 90 barrels of oil, and about 15 barrels of spermaceti), the cape-whale, hump-back, and black-fish; besides which, porpoises and other small cetaceous animals are extremely abundant. (*Ellis's Polynesian Researches*, i. 20-77; *Moerenhout*, i. 367-382; *Bennett's Whaling Voyage*, i. 36, and append.)

Polynesia has, of late years, been much visited by Europeans, partly curious to inquire into the habits of people differing essentially from those of the rest of the world, and partly anxious to communicate to them the arts of civilization and a knowledge of the Christian religion. Its isolated inhabitants were found to possess many interesting features of character, but at the same time to be plunged into the grossest barbarism, sensuality, and idolatry. Cook traced among some of the islanders, a confused notion of a supreme intelligent Deity; but they almost exclusively worship a number of inferior gods, particularly marine and aerial deities, demons, birds and fishes. Their rude idols were supposed to exercise a powerful influence; their temples were polluted with human sacrifices; and divination, witchcraft, &c., were practised by the chiefs as political engines for overawing their subjects. (*Ellis's Pol. Researches*, i. ch. 13, 14.) At the same time, morality, as understood by Europeans, had no existence among this wild people, and the grossest animal appetites had full sway, their gratification being encouraged, also, by their religious institutions. The law of the strongest prevailed: fierce and bloody wars frequently took place between the different insular tribes on the most trivial pretext, and conquest was generally followed by acts of the most horrible cruelty, including the extermination of the vanquished tribe, and occasionally even an indulgence in cannibalism. The female sex, too, was found in as licentious, degraded, and oppressed a state as in the wildest districts of Africa. A kind of civil marriage appears to have been generally observed; but as the sex was too much despised to allow the existence of affection, the wives were repudiated on the slightest pretext, or else neglected for more fascinating concubines. Polygamy was common in nearly all the islands, and in some groups it is still prevalent. Moerenhout, indeed, tells us, though the statement savours strongly of exaggeration, that some chiefs in the Fidjee islands have as many as 200 wives. (*Voyage au G. Océan*, iii. 66-69.) Female virtue was formerly wholly unknown; and notwithstanding the labours of numerous missionaries during upwards of twenty years, chastity is still, we apprehend, extremely rare. Sexual indulgences, and even infanticide, were encouraged by a singular institution called the Arooi society, the baneful influence of which appears to have been pretty generally diffused over the islands of the Pacific. The missionaries state that about two thirds of the children born were destroyed by their parents; and notwithstanding the introduction of Christianity, the practice still prevails: but we are not disposed to attach implicit credit to these statements, which, no doubt, go far beyond the mark.

Cannibalism is still practised in the Marquesas, and some of the other groups. The islanders, however, do not live in the rude independence of savage life, but acknowledge the arbitrary sway of hereditary chiefs, whose power is controlled only by those subordinate to them in particular districts. Some attempts have been made to introduce governments of a more liberal character; but they have signally failed.

The habits of the natives are still in many respects those of barbarians. Their houses, almost without exception, are confined to a single story; usually, though not always, of oblong shape, and very simply constructed with stakes of the bread-fruit tree, driven into the earth for the purpose of supporting the roof, which is commonly thatched with the leaves of the *Pandanus odoratissimus*, or cocoa-tree. The framework of the walls is composed of bamboo or hibiscus rods, and a large portion of one side is open, being covered only at night with a kind of cloth curtain. The interior comprises only a single apartment, sometimes with a boarded floor; and the furniture consists simply of a few mats and cotton-stuffed pillows spread on the floor, a few low wooden stools, a trough and stone for preparing their favourite paste called *poi* (made from the *arum esculentum*), some cocoa-nut shells, used as cups, with a fishing-spear, and perhaps a musket. Bunches of fruit hang from the walls; and occasionally may be seen a sow with a litter of pigs occupying a space in one corner, railed off for her accommodation. A separate shed is employed for cooking; and in the more advanced islands a plot of enclosed ground, planted with useful vegetables or favourite flowers, surround many of the houses. (*Bennett's Whaling Voyage*, i. 100; and *Moerenhout*, ii. 86-89.) Some of these huts are exceedingly large. Mr. Ellis mentions one belonging to a native prince that was nearly 400 ft. in length; and houses 100 ft. in length are by no means infrequent. (*Polyn. Researches*,

i. 175.) The domestic habits of most of the natives are not unsocial, but irregular, as respects refreshment and sleep, labour, and amusement. Their meals are arranged according to their avocations or the supply of their provisions. They usually eat in the forenoon; but their principal meal is in the evening, when, if well supplied, they eat to excess. They rise early, and go late to rest; but the men are often buried in sleep during many hours of the day, while every species of household drudgery is performed by the females, who are oppressed and degraded in the last degree. The habit of frequent bathing prevails throughout Polynesia, and the natives are remarkable for cleanliness, and most of them pay great attention to personal ornament: indeed, says Mr. Ellis, "their appearance on public occasions is in a high degree imposing." The hair, in particular, is regarded as an object of great attention by both sexes, and the females commonly appear in loose ringlets entwined with flowers. (*Researches*, i. 133-136.)

The dresses of the islanders originally consisted of cloths woven by the women from the bark of trees, and wrapped loosely round the body, leaving a large part of it uncovered; but since their connection with Europeans, they have introduced a very droll *mélange* of native and European costume. The practice of tattooing the body prevails more or less through all the islands, though attempts were made a few years ago to abolish this barbarous custom in Otaheite. Tattooing is performed during childhood; and in the Society islands at the early age of 8 or 10. The patterns vary in the different groups; but nowhere is the body so extensively disfigured as in the Marquesas, the inhabitants of which have a most hideous appearance. In some of the islands the face is left in its natural state, the legs, arms, and breast being the only part tattooed. (*Moerenhout*, ii. 121-4.) The natives of all the best known groups, except the Sandwich islands, are, like the half-civilized inhabitants of most tropical countries, extremely indolent, having, in fact, little occasion for industry, owing to the abundance with which the fruits of the earth are spontaneously produced. Their principal employments are agriculture, fishing, canoe-building, and the manufacture of cloth. Agriculture, as previously observed, is in the rudest state that can well be conceived, the only tillage that the earth receives being by a rude iron-shod stick, about as broad as a European chisel. Fishing is a far more favourite employment, and the methods used are numerous and sometimes highly ingenious. The fish are sometimes caught in circular fences, built up in the shallow parts of their lakes, and simply taken out with a hand net; these enclosures are also excellent preserves for fish not wanted for immediate use. Large nets, made of the twisted bark of the hibiscus, are used for fishing salmon, herrings, &c.; and on most of the islands the natives exhibit a surprising dexterity in the use of the fishing spear. In fact, nowhere are there more skilful fishermen; and considering that before their intercourse with Europeans they were entirely destitute of iron, their variety of fishing apparatus was astonishing. The situation of these islanders necessarily imparts a maritime character to their habits, and much of their attention is, accordingly, devoted to the building and management of their vessels. Their canoes are of various size, as well as shape, and are either double or single. The largest of those seen in the Society islands are nearly 70 ft. in length, with very high stems and sterns, but only 2 ft. wide. Those used in war are between 40 and 60 ft. in length, firmly built, of rather elegant shape, highly ornamented with carving, and when in use decorated with gay-coloured flags and streamers. In the double canoes (which are merely single canoes lashed together), planks are thrown across to form a kind of deck for the accommodation of passengers, and over it is sometimes spread an awning of platted cocoa-nut leaves. The paddles, made of the hibiscus, are not heavy; but as they are used alternately on each side of the boats, the labour of rowing is by no means inconsiderable. The canoes used in fishing on the reefs are single, and are commonly the excavated trunks of trees; they seldom carry more than two persons. Many of the canoes have moveable masts, which are only raised when the sails are used. The latter, of which there are sometimes two, but more frequently only one to each canoe, are made withutting of the pandanus leaf, in the shape of a half oval, and the rigging is of the simplest description. On the whole, the canoes of the Society islands are decidedly superior to those of the other groups: those of the Sandwich islands are large and strong, but less elegant: those used in most of the other islands are of smaller size, and less skilfully constructed. The dexterity of the natives in managing these frail barks when out at sea is also, perhaps, unparalleled among the inhabitants of savage countries. (*Ellis*, i. 138-170.)

The manufacture of cloth, which is more or less carried on in all the islands, is almost exclusively conducted by females, the materials commonly employed being the inner fibres of the bark from the branches of the bread-fruit tree.

## POLYNESIA.

These fibres, after having been macerated, are beaten on a long board with a grooved mallet, the blows from which cause the moist fibres to interlace with each other, and to assume the appearance of woven cloth. By this process bales are sometimes made containing upwards of 200 yards of cloth, 4 yds. wide. The colour of the unbleached cloth is a darkish brown; but it is always either bleached or coloured with vegetable dyes. Skill in the manufacture of this fabric was formerly highly prized by females of all ranks; but since the introduction of European cloth, it has been made in much smaller quantities, and its use (in the Sandwich, Society, and Friendly islands) is now confined chiefly to women, children, and the lower classes. The missionaries tried to introduce the spinning and weaving of cotton, but with little success; and this pursuit has been since abandoned. A kind of delicate matting is made in some of the islands from the bark of the hibiscus; the fabrics thus formed being either bound over the loins, or worn as mantles or the back. In the manufacture of this last article the islanders of the Palliser group far excel all others. A coarser kind of matting, also, is made of palm-leaves, for bedding, and the sails of canoes.

As respects foreign trade, it may be said to have had no existence in these islands till a late period; the intercourse is chiefly kept up by means of the whaling ships, and the number of vessels touching at the Sandwich islands may average about 80 annually. Trading intercourse has made the islanders aware of the value both of goods and money; and beads, looking-glasses, and buttons have wholly lost their former commercial value.

Most of the islanders of Polynesia are of a lively excitable disposition; hence, when not employed in the graver pursuits of fishing, canoe building, or war, they give themselves up with great ardour to a variety of amusements, among which dancing is, perhaps, the most prominent, being common on all occasions, not merely of pleasure, but also of religion and state ceremony. Some of these dances are stated by the missionaries to have been very objectionable; while others were of a graceful and more dignified character. The exchange of a Christian profession for a debasing polytheistic idolatry has diminished the frequency of these exhibitions, though they still occasionally take place. The musical instruments of the islanders consist of a long narrow drum, a trumpet formed of a species of nurex, into which is inserted a bamboo cane for a mouth-piece, and a flute of bamboo, about 16 inches long and about 1 inch in diameter. Boxing and wrestling, also, used to be favourite amusements; but these exercises, as well as many other national entertainments, have been all but abandoned since the introduction of Christianity, though there is, after all, but too much reason to suppose, that the efforts of the missionaries have produced little radical change for the better in the morals of the mass of the population.

The islanders of the Pacific, as respects physical character, may be divided into two distinct classes. The most ancient tribe is composed of Papuan negroes, who are distinguished by darkness of skin, smallness of stature, and black woolly or crisped hair: they chiefly inhabit the Admiralty islands, New Britain, New Ireland, New Hebrides, New Caledonia, and the Solomon islands. The other tribe, which is far more widely dispersed over the numerous groups of this great ocean, exhibits many of the features belonging to the Malays and aboriginal Americans, but is, in some respects, so different, as to form a separate and intermediate race. The people of each cluster, also, are distinguished by minor peculiarities. The inhabitants of the Society islands are of good stature, and well made; of olive complexion, with open, prepossessing features, with a facial angle as perpendicular as in the European head; a bright, full, and jet-black eye, placed under well-arched eyebrows, a straight or aquiline nose, well-formed mouth, and moderately high forehead, with straight though not wiry hair, either black or brown. The Sandwich islanders have more firm and muscular limbs, but in other respects bear a close resemblance to those just described; and they are generally active in their movements, graceful and stately in their gait, and perfectly unembarrassed in their address. Both sexes incline to corpulence in advanced life. It is remarkable, also, that the chiefs, and persons of hereditary rank, throughout the islands, are almost without exception, superior to the common people, in stateliness, dignified deportment, and physical strength; indeed, so great is the difference, that Bonganville, and others, have supposed them to be a distinct race, whose ancestors at some remote period had brought the aborigines into permanent subjection. (*Ellis's Pol. Research*, i. 78-84; and *Moerenhout*, ii. 247-253.)

With respect to the languages of Polynesia, Marsden first ascertained that there is one general language pervading the whole of the South Sea islands, and extending, with its different dialects, from the E. Indian archipelago to the E. extremity of the Polynesian groups: "indeed," says M. Moerenhout, "it is impossible to avoid observing the close

analogy between the dialects spoken in the many different islands. So striking a similarity is there between the languages of the Society islands and New Zealand, that the natives mutually understand each other: the inhabitants of the Sandwich, Marquesas, and Society islands converse after only a few days' practice, and the occupants even of the far distant Easter island are intelligible to the whole of the other islanders both N. and S. of the equator. It has been believed by some linguists that all these dialects are branches, more or less, of the Malay language; and many words certainly bear some analogy to those in the Malay vocabulary; but, in fact, "there is no living language either of Asia or America, which can be denominated the parent-stock of the great Polynesian language." (*Crawford's Indian Archipelago*, ii. 80-86; *Moerenhout*, i. 395-398.)

1. *The Caroline Islands* (sometimes also called the New Philippines) extend over about 20 degrees of longitude, and are divided by captain Lutke into 46 groups, comprising several hundred islands, a few of which are high and rising in peaks, but by far the greater number are low, and merely of coralline formation. They were discovered in 1686 by a Spaniard, who named them after Charles II. king of Spain. The productions of these islands are very similar to those of the Sandwich and Society islands; but the bread-fruit is found only in a few of the groups, and the hog is wholly absent; hence these islanders live chiefly on fish. The inhabitants are reputed to be the most expert sailors and fishermen of Polynesia; and, notwithstanding the tempestuous sea by which they are surrounded, they have a considerable trading intercourse in canoes with the Ladrone islands, and the E. archipelago.

2. *The Sandwich Islands* (10 in number, of which 8 are inhabited) form a group many hundred miles distant from all the rest. The area of the largest island, Owhyhee (or, more properly, Hawaii), is estimated at 4300 sq. m., being more than half that of the entire group, and, is indeed, by far the largest island of Polynesia. It rises in high and towering cones to an elevation of nearly 16,000 ft. from the sea; and not only is the gigantic volcano of Kiraucua, with its immense crater, 2 m. in length by nearly 1 m. in width, and several hundred feet deep, in a constant state of terrific ebullition, but the whole island is one complete mass of lava; and, being perforated with innumerable apertures in the shape of craters, may be considered as forming a hollow cone over a vast furnace in the heart of a stupendous submarine mountain. (*Ellis*, iv. 236, 269.) The population of the Sandwich islands is estimated by the American missionaries at 150,000, more than half of whom reside in Owhyhee. The males are of a darker complexion than those in the Society islands; the females have coarse and disagreeable features, and both sexes are gloomy and reserved. The natives generally are remarkable for their attention to the arts of industry, and have distinguished themselves above all others by their efforts to introduce European civilization.

Christianity was introduced by the American missionaries in 1820, and is now the religion of the state: schools have been established, churches have been built, and the forms of religion are, at least, pretty generally observed. European usages have also become fashionable, and the costume of the better classes, women as well as men, closely resembles that of the Anglo-Americans. Honolulu, in the island of Oahu, is the capital of the group, and has a population of about 6500. Some of the houses are built of stone; but the natives still prefer living in their huts, so that the town is grotesquely irregular. The principal public building is the "English school," in which instruction in English reading and writing is given to children of both sexes: there are, also, two churches, numerous boarding-houses, and many well-stocked shops. The harbour (formed by a barrier-reef of coral, having a single opening) has accommodation for between 60 and 70 vessels of 500 tons: in 1831, there belonged to the islands 14 ships of 2630 tons, of which 4 brigs and 7 sloops were the property of the natives. In 1836, from the 1st of July to the 13th of December, there were 154 arrivals at the port, of which 80 were brigs and schooners belonging to the country, 56 from the United States, and 17 from England. An English newspaper has been established in the town; and in some numbers, which we have seen, we have noticed advertisements of ladies' shoes from Paris, *cave de cologne*, &c. and so forth. The government has negotiated commercial treaties on a liberal footing with England, the United States, &c. (*Sandwich Islands' Gazette*; *Bennett's Whaling Voyage*, i. 190-236.)

3. *The Society Islands*, with which Europeans became earlier acquainted than the other groups, consist of six larger and several smaller islands. The principal of these, called Otaheite (or, more properly, *Tahiti*), is 108 m. in circ., and has a population of about 7000 persons. It is extremely mountainous, some parts attaining an elevation of nearly 7000 feet; but "extensive as well as fertile vales open on every side towards the sea, and the entire land is clothed from the water's edge to its topmost heights with a

## POLYNESIA.

perennial verdure, which for luxuriance and picturesque effect is certainly unparalleled." (*Bennett*, 1, 62.) Next in importance to Otaheite, and about 130 m. N.W. that island, is Ulitea, or Raiatea, nearly 60 m. in circ., encircled by a reef of coral, bordered by numerous islands: it has a bold, mountainous appearance, and is scarcely less picturesque than that last mentioned, Eimeo is another mountainous island, with an abrupt rocky coast, and is chiefly distinguished as the central station of the missionaries on this group: a school and printing-office are established here, but both on a confined scale. The Society islanders are light-hearted, merry, and fond of social enjoyment; but, at the same time, indolent, deceitful, thievish, and addicted to the excessive use of ardent spirits. The forms of Christian worship are enforced here as rigidly as in the Sandwich islands; but civilization is considerably less advanced, and European costume considerably less prevalent. (*Bennett*, 1, 70.) The seat of government and principal port of Otaheite is Papea, which exhibits the same combination of European houses and native huts as the capital of the Sandwich islands. The harbour is a capacious sheet of smooth water, of a circular shape, and so completely landlocked as rather to resemble a large dock-basin than a natural harbour. The commerce, consisting in the exportation of pearl-shells, sugar, cocoa-nut oil, and arrow-root, in exchange for European manufactures, chiefly cloth and hardware, is carried on exclusively by foreigners, as the natives have no vessels larger than their double canoes. This port is also frequently visited by whalers coming here to refit or to obtain supplies. Otaheite is not and never can be so important a commercial station as Oahu, in the Sandwich islands.

4. *The Marquesas*, which were discovered by the Spanish in 1595, consist of 13 islands, extending about 200 m. from N.W. to S.E. The largest, Nuihiva, is about 70 m. in circumference, and is the only one generally frequented by shipping. The coast-scenery is neither picturesque nor inviting, its principal features being black naked cliffs and barren hills; but in the interior are many fertile vales, and very picturesque scenery. The inhabitants, with regard to personal beauty, are superior to most others of the Polynesian tribes; and the women, though short in stature, are well-proportioned, and sometimes even handsome. In civilization, however, they are far behind the Sandwich islanders; and are generally characterised by covetousness, irascibility, love of revenge, and gross sensuality. Cannibalism was practised by them within a very recent period; and they have steadily resisted all attempts to convert them to Christianity. Polygamy, however, though not forbidden by law, has fallen into disuse.

5. *The Friendly islands* are low, encircled by dangerous coral reefs. The soil is almost throughout exceedingly rich, producing, with very little care, the banana, bread-fruit, and yam. The population may amount to about 90,000; but the natives, though favourably mentioned by Captain Cook, appear to be as treacherous, savage, and pestiferous as any in the worst parts of Polynesia. The Wesleyan missionaries established themselves in these islands in 1821, and are reported to have met with considerable success.

6. *Pitcairn island*, which stands alone, near the E. extremity of Polynesia, is chiefly interesting on account of its having been the refuge of the mutinous crew of Captain Bligh's ship, the *Bounty*. The mutineers, after having turned their captain and a few of the crew out into an open boat, tried to make a settlement in the Society islands; but afterward fixed themselves in this isolated spot, where a few of them, with their descendants, were found by Captain Beechy, in 1825. It is not more than 7 m. in circumference, with an abrupt rocky coast, and rises about 1050 feet above the sea. The present population comprises about 80 persons, who (being the descendants of Europeans and native women) form an interesting link in person, intellect, and habits between the European and Polynesian races. They are tall and robust, though not handsome, with black glossy hair, and frank, honest, good-humoured dispositions. In morals, also, they present a striking contrast to the inhabitants of the other islands; for they are a simple, inoffensive race; on the whole industrious, and strictly observant both of morality and religion.

7. *The New Hebrides* (discovered in 1506, and so named by Captain Cook, who surveyed the entire group) are considerably hilly, though well clothed with fine timber; and the valleys are extremely abundant, producing figs, nutmegs, and oranges, besides the fruits common to the rest of Polynesia. The inhabitants present about the most ugly specimen extant of the Papuan race: the men live almost in a state of nudity, and the women, who are used as mere beasts of burden, wear only a petticoat made from the plantain-leaf. Their canoes are more rudely fashioned than in most of the other islands; and, on the whole, these

## POMFRET.

people seem to be among the most degraded of the islanders of the Pacific.

8. *New Caledonia*, which is the largest island of the W. group, is far less fertile, and produces a smaller variety of fruits and vegetables than any of the islands yet mentioned. The natives closely resemble in habits, and the total absence of civilization, those of the New Hebrides; though, owing to the ravages caused by famine, they are infinitely more wretched. The Pelew islands, in about lat.  $7\frac{1}{2}$ ° N., long.  $135^{\circ}$  E., are chiefly known from the accounts of Captain Wilson, who was wrecked on them in 1783. He describes the inhabitants as hospitable, friendly, and humane. Breeds of cattle, goats, poultry, &c., were subsequently sent to the islands, and have succeeded extremely well. They have now a considerable trade with China.

Our knowledge of the many extensive groups of islands comprised in Polynesia is still very far from being satisfactory. Magellan began the work of discovery early in the 16th century, and he was followed at the close of the same century by Mendane and other Spanish navigators. The Dutch made farther discoveries in the 17th century; but to England mainly belongs the honour of having explored and laid down the exact position of the principal groups of the South sea islands, and the names of Byron, Wallis, Cook, Vancouver, and Beechey, must ever rank high in the estimation of geographers: great credit is also due to La Pérouse, D'Entrecasteaux, Freycinet, and other learned navigators, sent out on exploring voyages by the French government. In consequence of the labours of these and other navigators, aided also by the information gained from missionaries resident in the islands, we have gained a pretty intimate acquaintance with the condition of the natives in the principal groups of Polynesia; but there remains a great number of islands, especially on the W. side of the Pacific, that have very seldom been visited by Europeans, and are occupied by people as savage and uncivilized as the Sandwich islanders of the last century.

POMERANIA, a large prov. of the Prussian states, lying along the S. coast of the Baltic, from long.  $120^{\circ} 30'$  to  $160^{\circ} 20'$  E., having E. and S. West Prussia and Brandenburg, and W. Mecklenburg. Its form is oblong, its length (from E. to W.) being above 200 m.; while its breadth varies from 30 to 60 and 80 m. Area, 12,179 sq. m. Pop. in 1837, 970,117, of whom 956,334 were Protestants. It is divided into three regencies, and these again into 35 circles. Surface flat. Principal towns, Stettin, Stralsund, Greifswald, Stargard, Stolpe, &c. Principal rivers, Oder, Leba, Stolpe, Itega, Persante, Ucker, Peene, and Inna. The Haff is a large bay, or rather lagoon, of an irregular form, which communicates with the Baltic by the mouths of the Oder. Along the sea the land is in many parts so low that it would be overflowed, were it not protected by ranges of sand hills, and where these are wanting, by dykes, as in Holland. Soil mostly sandy, and unproductive, except along the rivers and lakes, where it is marshy and comparatively fertile. A large part of the country is covered with forests and heaths, and there are also many shallow lakes. Agriculture is in a very backward state; but since the abolition of vassalage in 1811, it has made considerable progress. Wheat and barley are grown; but rye, buckwheat, and oats, are the principal corn crops; potatoes are largely cultivated, and form, indeed, a principal part of the food of the people; flax and hemp are also grown, with tobacco, &c. The breeding of cattle, sheep, and hogs, is a favourite occupation. Geese are reared in immense numbers; and besides those consumed in the province, large quantities are exported smoked and dried. Very few farms are occupied by tenants holding under a lease, but are chiefly farmed by or on account of the proprietors. The peasantry live in mean dirty cottages of wood or clay; their clothes are all of home manufacture. Common agricultural laborers earn from 6 to 8 silver groschen a day, exclusive of subsistence. Minerals unimportant. The woollen manufacture in a domestic state is pretty generally diffused; and linen, leather, &c., are also produced. There are numerous breweries and distilleries, and dram-drinking is as prevalent here as in other parts of the monarchy. The fishery, particularly of sturgeon and salmon, is carried on along the coast, and in the creeks and rivers.

POMFRET, p. t., Windsor co., Vt., 49 m. S. Montpelier, 490 W. White river passes through its N.E. corner, and Quechee river through its S.E. corner, by small branches of which it is drained. It contains a Congregational church, and has some Baptists, Methodists, and Christians, two stores, three tanning-mills, two woollen factories, one saw-mill, three tanneries; 31 schools, 610 scholars. Population 1774.

POMFRET, p. t., Windham co., Ct., 41 m. E. Hartford, 377 W. Bounded E. by Quinnebaug river, by branches of which it is drained. It contains five churches, two Congregational, a Baptist, Episcopal, and Friends', seven stores, three cotton factories, with 3550 spindles, five grist-mill,

## POMFRET.

nine saw-mills, two tanneries; one academy, 35 students; 11 schools, 498 scholars. Pop. 1868.

POMFRET, t., Chautauque co., N. J., 12 m. N.E. Mayville, 315 m. W. Albany. Watered by Canadawa creek. It contains the villages of Fredonia, Vanburen, and Dunkirk. At the latter, the New-York and Erie railroad is to terminate. Bounded N. by Lake Erie. It contains five commission houses in foreign trade, 28 retail stores, four fulling mills, one woollen factory, one flouring-mill, four grist-mills, 15 saw-mills, one oil-mill, one paper-mill, five tanneries, one distillery, two printing-offices, two weekly newspapers, and one periodical; one academy, 250 students; 27 schools, 1411 scholars. Pop. 4566.

POMONA, one of the Orkney islands, which see.

POMPEII (called by the Greeks *Pompeia*), a long-buried city of ancient Italy, in Campania, not much celebrated in ancient history, but now an object of the greatest interest in consequence of its rather recent discovery and exhumation. It was originally close to the sea; but it is now nearly 1½ m. inland, and is about 5 m. S. by W. the crater of Vesuvius, and about 15 m. S.E. Naples. The era of its foundation, as well as the greater part of its early history, is involved in obscurity; but the presumption is, that it was settled by Osci and Pelagii prior to the establishment on this coast of the Greek colonies from Eubœa. About anno 440 B.C., it fell into the hands of the Samnites, from whom it was taken, with their other possessions, by the Romans about 80 years afterward. Pompeii revolted, with the other Campanian towns, during the social war; and little more is known of it till it was visited by an earthquake (A.D. 63), which occasioned great devastation. *Motu terræ, celebre Campania oppidum, Pompeii, magna ex parte prœruit.* (Tacit. *Annal.* lib. xv., cap. 22.) The repairs consequent to this disaster were incomplete, as is seen by the state of the excavated ruins. When the city, with Herculaneum, Stabian, and other towns in its vicinity, was wholly overwhelmed by an eruption of Vesuvius, A.D. 79. This tremendous calamity has been admirably described by the younger Pliny, whose uncle was one of the sufferers, in a letter to the historian Tacitus; "*Præcesserat per multos dies tremor terræ, minus formidolosus, quia Campania solitæ; illâ verò nocte ita invalidi ut non moveri omnia sed everti crederentur. Mare in se resorberi et tremore terræ quasi repelli videbamus. Certe præcesserat litus, multaque animalia maris in siccis arenis detinebat. Ab altero latere nubes atrâ et horrenda ignei spiritus tortis vibratibus discursibus rupta in longas flammarum figuras dehiscibat; fulgoribus illæ et similes et majores erant. . . . Mox audires ululatus feminarum, infantum queritatus, clamores virorum: alii parcentes, alii liberos, alii conjuges vocibus requirebant, vocibus noscitantibus: hi suum casum, illi suorum miscebantur: erant qui metu mortis mortem præcarentur. Multi ad deos manus tollere. Nec defuerunt qui fictis mentitisque terroribus vera pericula augerent. . . . Mox dies verus, sol etiam effulsit, luridus tamen: occurrabant trepidantibus adhuc oculis mutata omnia, atque cinere tanquam nive obducta.*" (Plin. *Epist.* vi., 20.) It seems probable, however, from the small number of skeletons discovered, here and at Herculaneum, that the inhabitants of both cities not only found time to escape during the confusion, but also to carry with them their most valuable effects.

From this time forward, for about 1669 years, Pompeii continued buried under the ashes, pumice-stone, and other volcanic matter by which she had been overwhelmed, and even her situation was matter of doubt and conjecture. It is surprising however, that her ruins did not sooner attract attention; for, in 1592, the celebrated architect and engineer, Dominic Fontana, having been employed to construct an aqueduct to convey water to Torre, fell in with the remains of the buried city. But this discovery appears to have attracted little or no attention; and it was not till 1748, that peasants employed in cutting a ditch fell in with the ruins of the city, that they became an object of interest and attention. The excavations were commenced in 1755; and have since been pretty constantly, though not very vigorously, prosecuted. Not having been overwhelmed by lava, but with tufa, ashes, and scoria, the excavations are much more easily effected here than at Herculaneum. (*Description de Pompeii, par Bonucci, p. 31, &c.*)

Pompeii, to borrow the words of an intelligent observer, is "the most wonderful of the antiquities of Italy; and it is perhaps the only one which never disappoints a traveller who is even moderately acquainted with the history of ancient Rome. The impression which it gives of the actual presence of a Roman town, in all the circumstantial reality of its existence 2000 years ago, is so vivid and intense, that it requires but a small effort of imagination to place yourself among the multitudes which once thronged its streets and theatres, and occupied its now voiceless chambers. The expression so often used, that you expect to see the inhabitants walk out of their houses to salute you, is scarcely

## POMPEII.

a figure of speech. Many things, in fact, concur to foster the illusion. You see a street before you carefully paved and well worn, and bordered with *trottoirs*, in good preservation, as if it had been in use on the preceding day. The houses generally extend in unbroken lines, and even the dilapidation is in some measure concealed by the small modern roofs placed over the walls to protect them from farther waste by the weather. The doors and windows, indeed, are all open; but so they generally are in the modern houses of Italy; and the sombre brown tints of the walls is not very different from what is seen in the decayed towns of the same country at the present day. You turn to the right and the left, and wander from street to street, and still you have the perfect image of a town before you, except that no inhabitants appear, and these you may suppose have only left it a few days before. We have detached public buildings of many kinds elsewhere; but here we have a Roman forum, with all its accompaniments of temples, porticoes, curiæ, &c., not indeed perfect, but only so injured that what is missing can be replaced, and what is mutilated restored. We have also many shops, with their utensils of trade in them, and about a hundred private houses of all descriptions, from the poor cottage to the patrician mansion, enabling us, for the first time, to obtain a distinct idea of the form and arrangement of a Roman house, and giving us, as it were, a glimpse of the domestic life and manners of the people. The public baths here, which were almost entire, have thrown new light on the structure of those buildings. Lastly, the *trou-ensemble* of the walls, gates, streets, forum, houses, temples, fountains, theatres, associated as they are with each other, give us a conception of a Roman town incomparably more clear and satisfactory than any number of such objects scattered over distant localities could have furnished." (*Maclaren's Notes*, p. 100, 103.)

It seems evident on an examination of the superincumbent strata, which consists of various layers, that intervals had taken place in the original eruption, which lasted for three days; and it is farther probable that some of the uppermost layers may have been the result of subsequent eruptions.

This resuscitated city, of which about 1-4th part is now laid open to public view, is of a somewhat oval form, ½ m. in breadth, and ¾ m. in length, covering an area of 160 acres, or about 2-3ds of the new town of Edinburgh, and considering the narrowness of the streets, the nature of the houses, and the mode in which the slave population generally were lodged, the entire population could scarcely have exceeded 25,000 inhabitants. The walls, which have been traced on every side, except towards the sea, are about 20 feet thick, and nearly equally high, being faced with blocks of lava inside and outside. There are six gates, and many towers, rising high above the ramparts, and pierced with arches. The best approach to Pompeii is by the Applan way to "the Gate of Herculaneum," which is nearest the sea, and at the N.W. angle of the city. Along each side of the road, approaching this gate, extends a line of tombs, many of which remain perfectly entire, their angles being as sharp, their inscriptions as legible, and their whole appearance almost as fresh as if they had been erected only a few years ago. The monuments vary greatly in size, pattern, and material: many are mere cenotaphs, while others have niches for urns; and a pretty common form is that of a small oblong temple, adorned with columns or pilasters. On the whole, these tombs are not unlike the more ambitious monuments in our own churchyards; but there is nothing resembling our single upright slabs, or flat grave-stones. The gate of Herculaneum consisted, like the others, of a large central and two smaller side-gates, not unlike those of Temple Bar in London, the central archway being about 20 feet in height and 15 feet in width. The streets appear to have been arranged pretty regularly in parallelograms; but they are very narrow, the most usual breadth being 18 or 20 feet, of which 1-3d is occupied by the trottoirs, which invariably line both sides of the horseway. An exception, however, must be made in favour of the "Street of the Silversmiths," which is 40 feet in width, and decidedly the finest in Pompeii. The middle of the road is paved, like the Via Appia, with masses of lava of irregular shapes, and from one to two feet in diameter, the most level surfaces being placed uppermost; and in many parts the ruts produced by the wheels are still obvious. The trottoirs, which are raised about 10 inches above the rest of the street, average about 4 feet in width: they are generally made of a sort of compound of lime, earth, and gravel, not unlike the asphalté used for modern pavements in London and Paris.

The largest excavated space in Pompeii, and that which exhibits most architectural magnificence, is the Forum, an extensive oblong area, once paved with large slabs of marble. The feelings of a classic traveller, on beholding, for the first time, such a monument of antiquity, are well de-

## POMPEII.

scribed by Mr. Maclaren. "I felt that it was not a trifling incident in my life, to stand in a veritable Roman forum. There it lay distinctly before me, rife of the greater part of its marble pavement, of its statues, and some of its columns, yet retaining enough of its ancient tracaments to give a perfect idea of its form, extent, and distribution of its parts. It had been terribly injured by the earthquake A.D. 63, and was rebuilding when the great catastrophe occurred. The forum was the great place of public resort: the idle came here to inquire after news, the busy to talk of business, friends to keep appointments, patrons to meet their clients, suitors to attend the courts, candidates for office to solicit votes; here the orators haranged, and the people shouted, the magistrates met in council, and the tax-gatherers collected the revenues; here the decrees of the senate were promulgated *viva voca*, and plays, festivals, and gladiatorial shows, were advertised by short notices badly spelt, painted on the walls in rudely-formed letters" (p. 131). The entrance from the N.W. corner (that nearest the gate of Herculaneum), is by a flight of steps leading downwards through a brick arch into an oblong area about 490 ft. in length by 114 ft. in width, surrounded by columns, and the ruins of temples, triumphal arches, and other public edifices, the uses of which can in general only be conjectured. The red masses of brick divested of their marble casings, the brown and yellow tints of the tufa, the fragments of white stucco attached to the shattered walls of the different edifices, and the pedestals which once supported statues in honour of illustrious patriots, are all that now remain to attest its former beauty and magnificence." (*Pompeii, Library of Entertaining Knowledge*, i., 100.) A Doric colonnade ran round three of its sides, and the fourth was occupied by a temple of Jupiter. The columns formed a species of covered gallery, raised above the central area, and a second row of smaller columns, placed on the top of the first, forming a second gallery, which would afford a view of everything passing in the area. The temple of Jupiter has a prostyle portico, supported by 12 very beautiful Corinthian columns, and its total length, from the front steps to the back wall of the *cellæ*, is 120 ft., the uniform breadth being 45 ft. On the W. side of the enclosure stood the prisons and public granaries, a peristyle temple of Venus, having a façade looking southward, of nine Corinthian columns, and a Basilica, or court of justice, which is the largest building in Pompeii. It is oblong shaped, 220 ft. in length by 80 ft. in breadth, and is entered through a vestibule having five doorways of masonry. The roof of the interior was supported by a peristyle of 28 Ionic fluted columns, and at the farther end are some remains of what was once the pretor's tribunal. At the S. end of the Forum, which was also ornamented by a triumphal arch, are the remains of three buildings of nearly equal size, and similar shape, that may have been curia, or places of assembly for the magistrates: these, however, are of very confined dimensions, and possess little interest. On the E. side, opposite to the Basilica, and flanked on one side by the Street of the Silversmiths, is a large enclosed building, in the shape of a parallelogram, within which was an oblong peristyle of white marble Corinthian columns; it is commonly called the Chalcidicum, and was built by Eumachia (whose statue is still standing), but its former use seems to be quite conjectural, though Gell and Donaldson seem to think, from some of the pictures and other remains found there, that it may have been a kind of cloth-hall. Adjoining it, and fronting the Forum, is a small temple of Mercury, in the court of which is an altar of white marble, beautifully sculptured in bass-relief, representing a sacrifice. What the next building may have been is very doubtful; but as it has an altar, without a cella, we incline to think that it may have been a senaculum or hall of meeting for the town-council. Lastly, the space close to the N.E. angle of the Forum is occupied by a very large enclosed peristyle structure, supposed to have been a pantheon dedicated to the twelve Dii Consentes of Roman mythology, and comprising, besides an *ædícula* or raised chapel, numerous cells for the accommodation of the priests. Under the colonnades of the Forum, close in front of the Pantheon, the entrance to which is by a rather narrow vestibule, are the remains of seven recesses or shops, in some of which the pedestals of the table are still visible; these may possibly have been the *tabernæ argentaria*, common in most Greek and Roman fora. (For farther particulars respecting these several buildings, and the monuments contained in them, the curious reader is referred to the accurate and very instructive little work on Pompeii, in the *Library of Entertaining Knowledge*.)

Next in importance to the excavation of the Forum, is that of the quarter occupied by the theatres. Its best approach from the Forum is by the "Street of the Silversmiths;" the space cleared comprises two theatres of unequal size, a square usually called the soldiers' quarter, and two temples, with other buildings of minor importance.

The theatres will not bear to be compared, in point either of size or splendour, with the magnificent structures at Rome; but still they have the remains of considerable beauty, and the largest, at least, would be considered of large size in any modern city. It has six entrances, leading to different parts of the building, and six inner doors, or *vomeria*, opened on an equal number of staircases running down from the external circular corridor to all parts of the house. The benches were about 1 ft. 3 in. in height, and 2 ft. 4 in. in width, and it would appear that they may have been capable of accommodating about 5000 males, chiefly of the middle classes; those of high rank sat on chairs in the orchestra, and the women occupied a gallery running round the top of the building over the corridor. All the benches as well as the orchestra seem to have been entirely covered with marble, of which, however, there are now but few vestiges. Like the Coliseum and other ancient theatres, it was open at top; but on the outside wall may still be seen the iron rings inserted to receive the masts supporting the awning. Of the scene itself, enough remains to show that the three chief doors were situated in deep recesses, and that behind them was the postscenium. The smaller theatre, which communicates with that last mentioned, is built on the same plan, and similarly arranged, having had accommodation for about 1500 spectators; but, unlike the other, it seems to have been permanently roofed. Its shape, also, is rather elliptical than semicircular. Close to the theatre is a large open space, supposed to have been soldiers' barracks; and near it is a Doric temple of Hercules, the oldest in the city, and said to have been erected at least 800 years B.C. The great amphitheatre occupies a large space at the E. angle of the town, quite separate, and at some distance from the rest of the excavations. Like other amphitheatres, it is oval-shaped, the extreme outside length being 430 ft., and do. breadth, 335 ft. The seats rise above each other in 24 successive rows, and must have accommodated upwards of 10,000 persons.

The baths, which occupy a space not far from the Forum, of about 100 ft. square, are interesting, not so much from their size as from the simplicity of their construction, which makes their arrangements more intelligible than in the complicated buildings of this kind in Rome and elsewhere. As, however, it would be impossible without a diagram to give a satisfactory account even of those at Pompeii, we pass at once to the domestic architecture of the city, which, indeed, is one of its most interesting features. Mr. Maclaren closely examined about a dozen of the private houses, which, he says, are so different from those either of Britain or modern Italy, that it is not easy to comprehend the use of their several parts. Indeed, most of them are so dilapidated that they could not be understood at all without the aid of Pliny and Vitruvius. "The present condition of the houses and shops resembles what we see in our tenements after the occurrence of a fire. The roof, upper floors, doors, and all the woodwork, have disappeared, the furniture has been carried off, and nothing remains but the half-dilapidated walls, the pavement of mosaic on the ground flats, columns entire or in fragments, stone counters, and a few bulky or heavy articles of too small value to be worth removing. The apartments, however, have been carefully cleaned out; and not only the houses but the streets were completely free of foreign matter, except a thin covering of ashes and scoræ, deposited by the recent eruption of Vesuvius, and which was easily removed by a besom or whisk of straw." The paintings, also, are still on the walls, and remarkably fresh. The house of Pansa, though not the largest, is better calculated than any other to convey to the reader an idea of a private town residence; and, taking this as a guide, we may remark that the houses consisted generally of a square or oblong enclosure surrounded by blind walls, the central court being open, and chambers formed round it, over which sheds (*compluria*) projected inwards, which discharged the rain water into a stone or marble basin (the *impluvium*), in the centre of the court. The larger houses, however, have a second court, with its corresponding impluvium, surrounded by columns; and hence, while the outer court is called simply *atrium*, the inner one (divided from it by a square apartment, called the *tablinum*), from being usually adorned with pictures and statues) is denominated the peristyle and was devoted to the use of the family. Bed-rooms and parlours run round both courts, a garden extends some way at the back of most of the houses, and the front entrance, in Pompeii at least, is by a passage 8 or 10 ft. wide. Paper, horn, mica, and even pretty thick glass, were pretty generally used; and in cold or hot weather awnings were commonly thrown over the impluvium; but no fireplaces were seen in the houses, and, like those in modern Italy, they seem to have been wholly built for summer use. The exterior of the houses is generally of brick, coated with plaster, and formed into panels; in the interior, also, the walls are covered with fine plaster, which serves as a ground for frescoes, which

## OMPEY.

are found pretty abundantly in all parts of the larger houses throughout the town: and these paintings, if not equal to other extant specimens of Roman art, are highly valuable for the light which they throw on the costumes, habits, and amusements of the ancient inhabitants. The shops, like those of Naples, seem to have been extremely small, scarcely exceeding 14 ft. square, and wholly open in front, with the exception of a low counter, being closed by shutters at night, somewhat in the same manner as the butchers' stalls and shops in England. Some of the implements of trade still remain, such as earthen jars, ovens, mills, cooking-pans, &c.; and we have reason to believe that the ancient inhabitants pretty well understood the division of trades. Most of the shops and other places of public entertainment, not excepting those belonging to the *Donne Libere*, had images or figures over the doors, serving, like the signs in modern towns, to indicate the profession or business of the occupants. The household furniture and domestic utensils found in the excavations both here and at Herculaneum have, with a few slight exceptions, been removed to the Museo Borbonico at Naples; and the number of articles of every kind and material is truly immense. "Among these," says Mr. Maclaren, "are several iron chairs, like our garden-chairs; braziers for burning charcoal or wood, keys and locks, metallic mirrors, pots and pans, glass bottles and drinking vessels, lamps of copper and earthenware, vases and urns, marble statues and bas-reliefs, ancient armour, seals, styles and inkstands, bells, moulds for bread and pastry, glazed plates for the table, scales and steel-yards, spoons, ear-rings, and similar articles." The discovery of Pompeii has, in fact, thrown a strong and steady light on many points connected with the private life and economy of the ancients that were previously involved in the greatest obscurity. An acquaintance with its remains is indispensable to the classical student; and he cannot study them to more advantage than in the volumes already referred to in this article, or in the more elaborate and better illustrated works of Gell, Donaldson, David and Maréchal. (*Pompeii*, 2 vols. passim; *Gell's Pompeii*, and *Illustr.*; *Map of Pompeii*, *Sec. of Use*, *Knowl.*; *Macl. Notes*, p. 90-132; *Lloyd's Geol.*, ii. 95-103.)

POMPEY, p. t., Onondaga, N. Y., 14 m. S.E. Syracuse, 125 W. by N. Albany, 337 W. Watered by Limestone cr., which has two falls of 70 feet perpendicular each, within 20 rods of each other, which afford extensive water-power. It contains two churches, a Presbyterian and Baptist, ten stores, two fulling-mills, one flouring-mill, three grist-mills, five saw-mills; one academy, 127 students; 28 schools, 1350 scholars. Pop. 4371.

POMPTON, t., Passaic co., N. J., 43 m. N.W. Hackensack. Bounded S. by Pompton r. Watered by Ringwood r. It contains a Dutch Reformed church, an academy, two stores, one furnace, eight forges, three grist-mills, six saw-mills; five schools, 186 scholars. Pop. 1437.

PONDICHERY (Fr. *Pondichéry*), a town of Hindostan, and the principal French settlement on the Asiatic continent; on the Coromandel coast, 83 m. S.S.W. Madras; lat. 11° 57' N., long. 95° 54' E. Pop. in 1835, 52,127, of whom 696 were Europeans. Standing on a flat sandy plain, near the shore. It has a very imposing appearance from the sea; and it is in reality a handsome regularly laid out town. The streets in the European quarter are of uniform breadth, built with remarkable regularity, and intersecting each other at right angles. The houses, which are of a good height, have flat terraced roofs, the walls being stuccoed white and yellow, and not intermixed with native huts. Nearly in the centre is a spacious square, laid out in walks, shaded by rows of trees, with the government house on the N. side, and open on the E. to the sea. The black, or native town, to the W. of the former, and separated from it by a canal, crossed by several bridges, is laid out with nearly the same regularity as the European town, though the houses are very inferior. Pondicherry was formerly strongly fortified; but the only portion of its works that now remains is an old brick tower, on which the flag is hoisted. The chief buildings are the government house, an edifice of a single story, adorned with columns, and surmounted by a balustrade; the church, built by the Jesuits, and a good market-place. It has a college for Europeans, and a school for the Indians, a botanic garden, and a government pawn bank.

The French possessions in India, comprising Pondicherry, Chandernagore, Karikal in the Carnatic, Mahé in Malabar, and Yanam in Orissa, with the territory attached to each, have a total population of about 160,000, of whom 1000 are whites. The territory attached to Pondicherry is considerably larger than the rest, and had, in 1835, 10,613 hectares under culture, producing 6,488,640 kilogr. rice, 6,734,000 kilogr. other grains, 6,900,000 cocoa nuts; with some betel, and a little indigo, tobacco, and cotton. The total value of the imports into these settlements, in the same year, amounted to 1,744,260 fr., and that of the exports to 5,399,610 fr. The trade, by far the greater part of which centres in Pondicherry, is chiefly with the rest of the Coromandel

## PONTEFRAC.

coast, Sumatra, the Isle de Bourbon, the Mauritius, and Senegal. The governor of the French settlements in India is usually a peer of France, and resides at Pondicherry, where also is the royal court for these colonies, a tribunal of primary jurisdiction, police court, &c.

This town was purchased by the French from the Beja-poor sovereign, in 1672. It was successively taken by the British, in 1761, 1778, 1793, and 1803; but was finally restored at the treaty of Paris, in 1815. (*Hugo*; *Official Reports*; *Hamilton's E. I. Gaz.*, &c.)

PONT-A-MOUSSON, a town of France, dep. Meurthe, cap. canton, on the Moselle, by which it is intersected; 16 m. N. Nancy. Pop. in 1836, ex. com., 7008. It derives its name from a bridge of eight arches which here crosses the river, and led formerly to the old castle of Monsson, now in ruins, on an eminence E. of the town. It is surrounded by planted boulevards, and has several good edifices, including a Gothic church, built towards the end of the 13th century, a town-hall, St. Mary's Abbey, now converted into a seminary, large cavalry barracks, a good hospital, and a building termed the *Maison des Sept Pêches Capitaux*, from its front being ornamented with old sculptures intended to represent the cardinal sins! This town has manufactures of coarse woollen stuffs, printing types, earthenware, tobacco-pipes, and beet-root sugar. (*Hugo*, *Guide du Voyag.*, &c.)

PONTECORVO, a town of S. Italy, the cap. of a detached territory, surrounded by the Neapolitan dom., but belonging to the Papal states, deleg. Frosinone; on the Garigliano, 20 m. S.E. Frosinone, and 37 m. N.W. Capua. Pop., about 5500—chiefly occupied in agriculture. It has several churches and convents and an old castle. Napoleon conferred on Marshal Bernadotte the title of Prince of Pontecorvo, which he enjoyed till he became king of Sweden. Near it are some considerable ruins, supposed to indicate the site of the ancient *Interamna ad Lirim*.

PONTCHARTRAIN, lake, La. is 40 m. long and 25 m. broad, communicates with lake Maurepas on the W., and lake Borgne, through the Rigolets on the E., and with New-Orleans through St. John bayou, and a canal. The water is about 16 or 18 feet deep in its deepest parts, but near the shore it is not more than 9 feet deep. It receives several rivers from the N., and is the outlet of considerable commerce from New Orleans.

PONTE-DELGADA, a seaport, and the largest and most populous city (though not the cap.) of the Azores, on the S. side of the island of St. Michael; lat. 37° 45' 10' N. long. 25° 41' 15' W. Pop. estimated at 22,000. Its appearance from the sea is far from picturesque, exhibiting a compact uniform mass of bright-looking buildings, backed by a few conical hills, some of which, however, are covered with a luxuriant vegetation. It had, when visited by Captain Bold, in 1831, six churches, eight monasteries, and four convents; but the latter, which were celebrated alike for their artificial flowers made of birds' feathers, their sweetmeats, and the easy virtue of the vestals by which they were occupied, have since luckily been suppressed. The houses are substantial; but the streets are very ill-paved, and disgustingly filthy. Its markets are abundantly supplied with fish, poultry, eggs, and vegetables of all sorts, including Spanish beans, yams, sweet and common potatoes, oranges, lemons, &c.; and every thing is remarkably cheap. When contrasted with the other towns in the Azores, it displays considerable wealth, activity, and industry. The exports consist of oranges, vines, brandy, roccella, &c. A mole has been constructed for the accommodation of the smaller class of vessels; but those of considerable burden have to anchor in an open roadstead. The town and harbour are defended on the W. by the castle and fort of St. Braz, mounting 90 pieces of cannon, and on the E. by the forts San Pedro and Rosto de Cao. The governor of the island St. Michael and St. Mary resides at Ponte-Deigada. (*Boid's Azores*, 112-116; *Dict. Glog.*)

PONTEFRAC (vulgo *Pomfret*), a parl. and mun. bor., market town and parish of England, W. riding county York, upper div. wap. Osgoldcross, on a commanding eminence about 2 m. S.W. the Aire, 10 m. E. Wakefield and 21 m. S.W. York. Pop. of parl. bor. (which includes, with the old bor., the extra par. dist. of Pontefract park, the castle precincts, and also the several townships of Tanshelf, Monkhill, Knottingley, Ferrybridge, and Carleton), in 1831, 9875. The town, which is well paved, and has been lighted with gas since 1832, is well-built, with open, spacious, and clean streets, lined by handsome houses, chiefly of brick, the principal thoroughfare running N.E. past the ruins of the old castle, at the N. end of the town. The principal public buildings are a modern-built town-hall, with an attached jail, "now used only for debtors and prisoners under remand," and a courthouse for the quarter sessions of the W. riding, a well-constructed market-house, &c. The parish church, originally built in the reign of Henry I., has subsequently been so altered, that little remains of the olden edifice; a more ancient, and once parochial church is now in ruins;

## PONTINE MARSHES.

but the tower at the intersection of the nave and transepts is nearly entire, and is worthy, according to Rickman, of attentive examination. The living is a vicarage in the gift of the chancellor of the duchy of Lancaster. There are also places of worship for Roman Catholics, Wesleyan and Primitive Methodists, Independents, and the society of Friends.

A grammar school, founded in the reign of Edward VI. was revived and rechartered in 1792: it is one of 12 schools privileged to send candidates for Lady E. Hastings' exhibitions at Queen's college, Oxford. Another charity-school for children of both sexes, endowed with £95 a year, has been incorporated with a national school; and a neat building, formerly the theatre, has been converted into school-rooms capable of accommodating 400 children. The town has four Sunday schools, and six hospitals, or almshouses, of various foundations, furnishing lodging, clothing, and a small stipend to 53 aged people of both sexes. A subscription library, mechanics' library, and news-room have recently been formed; but the races, formerly held here in September, are now extinct.

Pontefract is not a manufacturing, but a very substantial and respectable country town. A considerable trade is carried on in malt, which is said to be increasing. The corn markets generally are also improving; but there does not appear any prospect of a material change taking place in the condition of the borough. (*Mun. Corp. Rep.*) The neighbouring village of Ferrybridge within the borough is on the Aire (crossed there by a stone bridge of three arches), and till recently enjoyed considerable advantages from its position on the Great North Road: it is now in a state of decay. The vicinity of Pontefract is famed for its gardens and nurseries, which furnish vegetables in great abundance for the markets of York, Leeds, Wakefield, Doncaster, &c. The deep loamy soil around it is also well adapted for the cultivation of liquorice (*glycyrrhiza glabra*), which is grown here in large quantities, and supplied extensively to London and other large towns. Filtering stones are quarried on the castle-hill, and are in great request in all parts of the kingdom. Pontefract received its charter of incorporation in 2 Richard III. Under the Municipal Reform Act, it is governed by a mayor and three other aldermen, with 12 councillors, having also a commission of the peace under a recorder. Corporation revenue in 1839, £588. The borough has sent two members to the House of Commons, with some interruptions, since 23 Edw. I.; the right of voting down to the Reform Act having been in the inhabitant householders within the borough. Registered electors in 1839-40, 815. The spring quarter sessions for the W. riding are held here in Easter week. Markets on Saturday, and large fortnight fairs for cattle, besides eight other annual fairs.

The principal celebrity of Pontefract is owing to its castle, once of great extent, but now a mere ruin, its site having in a great measure been converted into garden-ground. It appears to have consisted of several towers, with intervening walls and other buildings, the round-tower, or donjon keep, having occupied an eminence at its W. extremity. It was finished in 1080. In the beginning of the 14th century it became, by marriage, the property of the Earls of Lancaster, and in the reign of Henry IV. was attacked with the rest of the duchy to the crown. For the space of many centuries it stood the ornament and terror of the surrounding country, till the civil wars of Charles I., when, after sustaining three successive and desperate sieges, it was finally taken by the parliamentary army in 1649, when it was unroofed and demolished by order of parliament. This castle has been the scene of various tragical events in English history. In the reign of Edward II., Thomas, Earl of Lancaster, was brought a prisoner here, and detained till the day of his execution; and in it, also, Anthony Woodville, Earl of Rivers, Richard Lord Grey, Sir Thomas Vaughan, and Sir Richard Hawse, were put to death by order of Richard III., without even the form of a trial. (*Mun. and Bound. Rep.*; *Inspector of Prisons*, 2d and 4th Reports.)

PONTINE MARSHES. See ITALY.

PONTIAC, p. t., capital of Oakland co., Mich., 25 m. N.W. Detroit, 549 W. Watered by Clinton river. It contains 18 stores, two fulling-mills, one woollen factory, one furnace; nine schools, 436 scholars. Pop. 1904. The village, on Clinton river, contains a courthouse, jail, a branch of the Michigan university, a bank, a Congregational church, 13 stores and groceries, two saw-mills, one fulling-mill, one iron foundry, two printing-offices, two weekly newspapers. A railroad connects it with Detroit.

PONTOISE (an. *Briva Isaræ*), a town of France, dep. Seine-et-Oise, cap. arrond., on the Oise, where it is joined by the Viosne, 20 m. N. Versailles. Pop. in 1836, ex. comm., 4990. It stands upon an abrupt rocky hill, and was formerly surrounded with walls, portions of which still exist. The lower part of the town is tolerably well-built and paved, but has no building of importance except a new and good

## POOLE.

hospital. The rivers here turn numerous flour-mills; and in addition to these Pontoise has iron and copper works, tanneries, and manufactures of watches, jewellery, cotton yarn, &c. It was frequently taken and retaken in the wars between England and France; and the parliament of Paris sat here several times during the 17th and 18th centuries. (*Dict. Geog.*, &c.)

PONTOLOC, county, Miss. Situated toward the N.E. part of the state, and contains 900 sq. m. Drained by Tallahatchee river and its branches, and by branches of the W. fork of Tombigbee river. It contained in 1840, 6203 neat cattle, 982 sheep, 12,365 swine; and produced 8783 bushels of wheat, 167,845 of Indian corn, 8140 of oats, 4130 of potatoes, 145,953 pounds of cotton. It had seven stores, 10 grist-mills, seven saw-mills, two tanneries, one printing-office, one weekly newspaper, one academy, 30 students; three schools, 86 scholars. Pop., whites, 2895; slaves, 1593; free coloured, 3; total, 4491. Capital, Pontotoc.

PONTOTOC, p. v., capital of Pontotoc co., Miss., 175 m. N.N.E. Jackson, 888 W. It contains a courthouse, jail, a United States land office, and about 500 inhabitants.

PONT-ST-ESPRIT, a town of France, dep. Gard, cap. cant., on the Rhine, 31 m. N.N.E. Nîmes. Pop., in 1836, 4160. It derives its name from its famous bridge over the river, constructed between 1265 and 1309, 875 yards in length; it has 23 arches, but is only about 12 feet in breadth. It is kept in perfect repair, and has of late been made practicable for carriages. The town, which is ill-built, with narrow, winding streets, has a small port on the Rhone, and a considerable traffic in corn, wine, oil, and silk. (*Hugo*, &c.)

PONTYPOOL (corrupted from *Pont ap Howell*), a market town and township of England, p. r. Trevelth, hund. Abergavenny, co. Monmouth, 153 m. S.W. Monmouth, and 125 m. W. by N. London. Area of par. and township, 10,400 acres. Pop., in 1831, 10,280. The town, occupying the side of a steep hill, near a rivulet tributary to the Usk, and nearly surrounded on all sides by mountains, is large and straggling, with two principal streets, lined with neat houses and numerous shops. The church, on an eminence near the town, has an embattled square tower; and there are two chapels of ease, besides places of worship for Wesleyan Methodists and Independents, with attached Sunday-schools.

Pontypool was formerly celebrated for its manufacture of japanned goods, introduced by Thomas Allgood, their inventor, in the reign of Charles II.; but this branch of industry has greatly declined, owing to the successful competition of Birmingham, which now nearly monopolises the trade. Its present importance is derived from the iron and tin mines in the surrounding district, chiefly belonging to Capel Hanbury Leigh, Esq., and from the iron-works, situated a little S.W. from the town, and conducted upon a very large scale. It is connected partly by railway and partly by canal with Newport, its shipping place for the produce of the mines. Petty sessions for the hund. are held here. Markets on Saturday, and cattle fairs on the last Monday of each month, besides others, April 22, July 5, and Oct. 16.

Pontypool park, the seat of the Hanbury family, is at a short distance N.E. the town; it is finely wooded with oak and other forest trees; and the house, on a perpendicular cliff above the Avon-Llwyd, commands a fine view of the surrounding country. (*Nicholson's Cambrian Guide*, &c.)

POOLE, a parl. and mun. bor., seaport, market town, and par. of England, and a co. of itself, with separate jurisdiction, on a peninsula on the N. side of the extensive and almost landlocked harbour, whence it derives its name, 20 m. E. Dorchester, and 97 m. W.S.W. London. Pop. of parl. bor., which includes, with the old bor., small portions of par. of Canford and Hamworthy, in 1831, 7959. The town consists of several streets intersecting each other at different angles, the principal running in a N.E. direction through the market-place, in which is the town-hall, a convenient building, with attached shambles. The modern houses are generally substantial, and regularly built; but the older parts of the town have a mean, shabby appearance. The church is of modern erection, and there is a chapel of ease, both livings being in the gift of the parishioners. The Wesleyan Methodists and Independents have their respective places of worship, and the town has four Sunday-schools, a free grammar school, several charity schools, and two or three well-endowed almshouses. There is a small jail, and the parish workhouse has lately been formed into a union with seven other parishes, the expense of supporting the poor of this parish having been £2031 in 1839. "The whole town, with its inhabitants and trade, may be described as in a prosperous and increasing state. Several vessels from this port are engaged in the Newfoundland fisheries; besides which it has a large and increasing coasting-trade, the exports being principally Purbeck clay (for the Staffordshire potteries) in exchange for coal." (*Parl. Bound. Rep.*) The port has also a considerable foreign trade: there belonged

## POONAH.

to it in 1840 about 160 ships, of the aggregate burden of nearly 16,000 tons. Gross customs duty, in 1840, £12,666. The entrance to Poole harbour, about  $\frac{1}{4}$  m. in width, has a shifting bar, over which there are seldom more than 15 feet, even at high water. Vessels drawing 14 feet water may, however, come up to the quays. "It is a considerable and singular advantage to Poole harbour, that the tide ebbs and flows twice in 12 hours. It first flows regularly 6 hours, and ebbs for  $1\frac{1}{2}$  hours; it then flows for  $1\frac{1}{2}$  hours, and ebbs during the remaining 3 hours. The second flood seems to arise from the peculiar situation of the entrance; for, being in a bay facing the E., the tide of ebb from between the isle of Wight and the main, falls into that bay, forcing its way so as to raise the water for  $1\frac{1}{2}$  hours, at which period the water without the bar, by its falling to a lower level than that within, produces a second ebb till low water." (*Purdy's Sailing Directions for the English Channel*, p. 29.)

Near the mouth of the harbour is a bank, from which large quantities of oysters are taken, to be fattened in the creeks of Essex and Kent.

Poole, which claims to be a borough by prescription, has received several new charters, the principal being in the 10th Eliz. Under the Mun. Reform Act, it is divided into two wards, and is governed by a mayor, five other aldermen, and 18 councillors. Corporation revenue in 1839, 3451. The borough has returned two members to the House of Commons since the reign of Edward III., the right of election down to the Reform Act being in the members of the corporation, resident and non-resident. The electoral limits were enlarged as above mentioned by the Boundary Act; and in 1839-40, it had 543 registered electors. Markets on Monday and Thursday; fairs, May 1 and Nov. 2.

POONAH, a distr. of British India, presid. Bombay, principally between the 17th and 19th degs. of N. lat., and the 74th and 76th of E. long.; having N. Ahmednuggur, W. the Concan, S. the Sattarah doon, and E. those of the Nizam. Area, 8291 sq. m. Pop. about 558,000. The face of the country is mountainous and irregular but interspersed with many fertile and well-watered valleys. The climate is good and invigorating, and more suitable to Europeans than most parts of India. A good deal of the surface consists of the black and red cotton soils common in the S. of India: rice grounds comprise about 1-16th part of the land in cultivation, and gardens about 1-10th. The land is assessed on the village system: land revenue, in 1827-8, 15,16,323 rupees. Poonah is the only city; but there are several other considerable towns, at which coarse woollen, cotton, and silk fabrics, and metallic ornaments, are made. The celebrated cave-temples of Carlee, and several places of Hindoo pilgrimage, are in this district. (*Part. Reports*; *Hamilton's E. I. Geog.*)

POONAH, a city of British India, presid. Bombay, formerly the cap. of the Mahratta dom., but now the cap. of the above distr.; on the Moolin, a tributary of the Beemah, 80 m. E.S.E. Bombay. Lat.  $18^{\circ} 30'$  N.; long.  $74^{\circ} 2'$  E. Pop. estimated at about 110,000. It stands in an extensive and bare plain, about 2000 feet above the sea, at the foot of a wall, and can neither lay claim to antiquity nor beauty; it is very irregularly built and paved, with mean bazars, deep ruinous streets, and no large or striking edifices. Heber says, "that it has as few evidences as can well be conceived of its having been, till lately, the residence of a powerful sovereign." But according to Hamilton, "its principal street is wide and handsome; and the mixture of rude paintings, in illustration of mythological legends, with the carved frame-work of dark-coloured wood, gives the fronts of the houses a fantastic and cheerful appearance." The principal palace is surrounded by high and thick walls, with four round towers, and is entered through a pointed archway. There are several other palaces, but they are small and insignificant. A little west of the city is the British cantonment, on an elevated site, with wide streets, a spacious church, a good station-library for the soldiers, and another library for the officers, and regimental schools, supported by subscription. The city has a Hindoo college, established in 1821, for 100 students, with classes for Hindoo divinity, medicine, metaphysics, mathematics, and astronomy, law, logic, rhetoric, grammar, &c., which costs 15,250 rupees a year. Poonah is the residence of the British collector and judge for the district, and has a well conducted district jail, several British schools, a Roman Catholic church, &c. East of the city is an excavated temple, apparently dedicated to Siva. Poonah is first noticed in history early in the 17th century; but it did not become the permanent residence of the Mahratta sovereign till the middle of the 18th century. It came into our possession in 1818. (*Hamilton*; *Heber*, in *Mod. Trav.*, &c.)

POPAYAN, a city of Colombia, cap. of the gov. of Cauca, New Granada, on an extensive table-land, nearly 6000 feet above the sea, having the Cauca river, about a league distant, on the N., and a mountain named M., from its resem-

## PORTER.

blance to that letter, on the E.; 230 m. S.W. Bogota, and 235 m. N.E. Quito; lat.  $2^{\circ} 28' 38''$  N., long.  $76^{\circ} 31' 30''$  W. Pop. estimated at 25,000. Like most other Spanish-American cities, it is laid out on a perfectly regular plan, its broad streets being bordered with stone footways. The houses have for the most part only one story, and are usually built of unburned brick; but, according to Mollin, some of them would not discredit a European capital; and that traveller would have preferred this to most South American cities, had it not been that the myriads of disgusting insects rendered a residence in it all but intolerable. It has several squares, one of which is spacious and handsome; a cathedral and other churches; numerous conventual buildings, some of which are now converted into barracks, or appropriated to other uses, and was formerly the seat of a royal mint and of a tribunal of finance. Two bridges are thrown across the Molina, a tributary of the Cauca, which runs rapidly through the city, and drains it of its filth. Popayan is principally inhabited by Negroes and Mulattoes, the number of whom, a few years since, was double that of the whites. It was formerly the *entrepôt* of the trade between Bogota and Quito, and had a large traffic in the precious metals; but the revolution, by turning the trade into other channels, gave a blow to its prosperity, from which it has not hitherto recovered. It has still, however, some trade in woollen stuffs, salt, flour, sugar, cocoa, &c.; and its markets are always well supplied with provisions. Popayan was the first city built by Europeans in this part of the New World, having been founded by Benalcazar in 1537. A considerable portion of the city was destroyed by an earthquake in 1837. (*Geog. Account of Colombia*; *Mollin*, in *Mod. Trav.*, xxvii.; *Dict. Geog.*)

POPE, county, Ill. Situated in the S.E. part of the state, and contains 576 sq. m. Bounded S.E. and S. by Ohio river. Drained by Big Bay, Great Pierre, and Rock creeks. It contained in 1840, 3336 neat cattle, 5350 sheep, 6041 swine; and produced 1246 bushels of wheat, 36,908 of Indian corn, 6980 of oats, 1444 of potatoes, 15,700 pounds of tobacco. It had six stores, 10 grist-mills, three saw-mills, two tanneries; 21 schools, 468 scholars. Pop. 4094. Capital, Golconda.

POPE, county, Ark. Situated in the N.W. part of the state, and contains 720 sq. m. Watered by Arkansas river and its small tributaries. It contained in 1840, 6143 neat cattle, 1178 sheep, 10,356 swine; and produced 3418 bushels of wheat, 121,874 of Indian corn, 2730 of oats, 7102 of potatoes, 13,576 pounds of tobacco, 82,344 of cotton. It had six stores, two grist-mills, four saw-mills, three tanneries, one distillery; four schools, 75 scholars. Pop. whites, 2626; slaves, 215; free coloured, 9; total, 2850. Capital, Dover.

POPERINGHE, or POPERINGHE, a town of Belgium, prov. W. Flanders, cap. cant., on the Schipwate canal, near the French frontier, 7 m. W. by N. Ypres. Pop. about 9000. It has several churches, a handsome town-hall and college, some rather extensive woollen manufactures, with oil-mills, &c. It has also a considerable trade in hops. It sends, along with Thielt, three members to the states of the prov. (*De Cloet*; *Dict. Geog.*)

PORTAGE, county, O. Situated in the N.E. part of the state, and contains 500 sq. m. Watered by Cuyahoga river, and head branches of Mahoning river. The Pennsylvania and Ohio canal passes through it. It contained in 1840, 21,922 neat cattle, 23,894 sheep, 8550 swine; and produced 112,144 bushels of wheat, 9497 of rye, 113,370 of Indian corn, 6301 of buckwheat, 119,634 of oats, 112,743 of potatoes, 258,038 pounds of sugar. It had 38 stores, one fulling-mill, one woollen factory, nine grist-mills, 41 saw-mills, 11 tanneries, two distilleries, one pottery, two printing-offices, one weekly newspaper; two academies, 101 students; 143 schools, 5077 scholars. Pop. 22,965. Capital, Ravenna.

PORTAGE, county, Wis. Situated in the N. part of the ter., and contains 800 sq. m. Bounded W. by Wisconsin river, and head branches of rock river. It contained in 1840, 372 neat cattle, 127 swine; and produced 1815 bushels of wheat, 293 of Indian corn, 1018 of oats, 5539 of potatoes. It had nine stores, 14 saw-mills; one school, 10 scholars. Pop. 1623. Capital, Fort Winnebago.

PORTAGE, L. Allegheny co., N. Y., 18 m. N. Angelica, 247 W. by S. Albany. Watered by Genesee river, which has falls of 300 feet in the distance of 2 m., producing a great water-power. The Genesee valley canal passes through it. It has an Episcopal church, 18 stores, two fulling-mills, one flouring-mill, three grist-mills, 18 saw-mills, three tanneries, one distillery; 17 schools, 1071 scholars. Pop. 4721.

PORTAGE, L. Summit co., O. Akron village, the capital of the co., lies in its S. part. Here was a former portage between Cuyahoga and Tuscarawas river, whence it derives its name. See AKRON.

PORTER, county, Ia. Situated in the N.W. part of the state, and contains 415 sq. m. Bounded N. by lake Michigan. Watered by Grand Calumet and Kankakee rivers. It contained in 1840, 3002 neat cattle, 1188 sheep, 7220 swine; and produced 30,712 bushels of wheat, 60,444 of Indian

## PORT-GIBSON.

corn, 1740 of buckwheat, 53,312 of oats, 16,673 of potatoes, 16,406 pounds of sugar. It had four stores, two grist-mills, seven saw-mills, two tanneries; eight schools, 182 scholars. Pop. 2162. Capital, Valparaiso.

Portage, 1, Niagara co., N. Y., 16 m. N.W. Lockport, 7 m. N. Lewiston, 300 m. W. Albany. Bounded N. by lake Ontario. Drained by Tascara creek. It contains old fort Niagara, opposite to fort George in Canada, at the mouth of Niagara river, which bounds it on the W. It contains 11 stores, one saw-mill; one academy, 22 students; eight schools, 481 scholars. Pop. 2177.

PORT-GIBSON, p. v., capital of Claiborne co., Miss., 45 m. N. Natchez, 72 m. S.W. Jackson, 1082 W. Situated on Pierre Bayou, 30 m. above its entrance into Mississippi river. It contains a courthouse, jail, and several stores and dwellings.

PORT-GLASGOW, a parl. bor. and seaport town of Scotland, co. Renfrew, on the S. side of the frith of Clyde, 16 m. W.N.W. Glasgow, and 2 m. E. Greenock. On the W. the town is flanked by a steep range of hills, about 400 feet in height; and is, in fact, so much overshadowed by these hills, that the rays of the sun do not reach it for about six weeks in winter. Pop. in 1790, 4036; in 1835, 6018. The town is neat and regular; the streets, which are straight, for the most part cross each other at right angles; while the houses, which are generally lofty and substantial, have a pretty uniform appearance. The only modern buildings worth notice are the town-house and parish church. The latter is ornamented in front with a portico, resting on four massy fluted pillars, and is surmounted with a handsome spire, rising from the centre. In addition to the parish church, there is a *quoad sacra* chapel belonging to the establishment, and a chapel in connexion with the Associate Synod. There are eight schools, one of which is parochial; and another an endowed seminary, called Beaton's-school, from the name of its founder. There are three public libraries, and a reading-room. A legal assessment for the support of the poor has not been introduced; but voluntary contributions to the extent of above £600 are raised for the poor, including church collections and the usual parish dues. A savings' bank, under the designation of a Provident Bank, has existed here since 1818; and there are various friendly societies.

Two sugar-refining houses employ about 50 men; and a rope-manufactory about 45. But the most important branches of business are ship building, and the manufacture of canvass for sail-cloth and coarse linen fabrics. The former gives employment to about 200 men, exclusive of apprentices; wages £1 or £1 1s. a week. The building of steam-boats, some of them of the largest class, is extensively carried on. A flax-mill employs about 40 hands.

Port-Glasgow, as every one knows, was the seaport or deep-water harbour of the city of Glasgow; and was long regarded as a mere dependency of the latter. It has two capacious harbours, furnished with ample quay and shed room, together with a graving dock, the oldest in Scotland. A large and commodious wet-dock has recently been erected. Formerly the trade of this place was almost entirely carried on in ships belonging to merchants resident in Glasgow. Of late years, however, the people of Port-Glasgow have themselves become ship-owners, and at present about 1-4th part of the shipping belonging to the port, or about 7000 tons, is owned by residents in the town. It is the principal port on the Clyde for the importation of N. American timber, the quantity imported having varied during the last 15 years, from 16,000 to 30,000 tons a year. Owing to the great improvements that have recently been effected in the navigation of the Clyde, the greater part of the trade belonging to Glasgow that formerly centered in this port, has been transferred to the former. The town, consequently, is not improving. The tonnage belonging to the port engaged in foreign trade, has ranged, for several years back, from 21,000 to 32,000 tons; but the customs' revenue has very materially decreased; a consequence of a large proportion of the goods formerly warehoused here being now carried direct to Glasgow. Thus, the customs' revenue which, in 1830, amounted to £243,349, had sunk, in 1840, to £84,936. More than half the trade of the port is with the British N. American possessions; about a fourth with the W. Indies; and the remainder with the E. Indies, the Mediterranean and the U. States. There is now little coasting trade between the town and Glasgow; but the numerous steamboats that navigate the Clyde, except those that ply to comparative distant ports, touch here in passing and re-passing.

The Glasgow, Paisley, and Greenock railway, recently opened, passes close on the W. of Port-Glasgow. We have already seen (Vol. i. 994) that the magistrates of Glasgow, in order to provide a deep water port for their city, purchased, in 1662, the ground on which Port-Glasgow stands, and laid the foundations of the town and harbour. The town supports four branch banks. The intercourse between Glasgow and its newly acquired port was at first carried on

## PORT-PATRICK.

principally by land; but the improvements effected in the Clyde navigation have been such as to make Glasgow nearly independent of this or any other port, except its own. The ruins of the castle of Newark, which originally formed the seat of the proprietor of the estate on which Port-Glasgow is built, stands on the shore, immediately contiguous to the town on the E. In 1775 it was created a borough of barony, and a municipal constitution was conferred on it. The Reform Act united it with Renfrew, Rutherglen, Dumbarton, and Kilmarnock, in sending one member to the House of Commons. Registered voters in 1840-1, 218. Municipal revenue, £2616. (Vide the article GLASGOW, in this work; *New Stat. Account of Scotland*, § *Renfrewshire*, p. 62-74; *Bound. Reports*; *Factory Returns*, &c.)

PORT JACKSON. See SYDNEY.

PORT KENT, p. v., Chesterfield t., Essex co., N. Y. 12 S. Plattsburg, 151 N. by E. Albany, 526 W. Situated on the W. side of lake Champlain, and contains about 250 inhabitants. A steam ferry boat plies to Burlington, 11 miles distant, of which place it has a delightful view.

PORT LOUIS. See MAURITIUS.

PORT MAHON, a seaport of the island of Minorca, which see.

PORTPATRICK, a seaport town of Scotland, co. Wigtown, on a gentle declivity on the E. coast of the Irish channel; bounded on the land side by hills which suddenly rise, in a romantic semicircular form, to the height of 200 or 300 ft.; 109 m. S.W. Edinburgh, and 21 m. N.E. Donaghadee, Ireland. Pop. in 1791, 512; in 1838, 1010, of whom about a third are Irish, or of Irish descent.

The principal street is in the form of a crescent, parallel to the bay; and there are three smaller streets connected with it, stretching at right angles towards the hills. The houses are in general, well built, comfortable, and covered with slate. With the exception of the parish church, erected in 1629, there are no public buildings; nor is there any other place of public worship, though the dissenters of all kinds in the town and parish exceed 400. Education is at a low ebb; lower, perhaps, than in any other place of similar size in Scotland. There is a small parish library; and a still smaller one connected with the Sunday school. There are no manufactures; but the cod fishery is carried on to some extent.

Two government steam-packets, in the service of the postoffice, ply between Portpatrick and Donaghadee; this having been long one of the principal lines of communication between Great Britain and Ireland. The fare of cabin passengers is 5s., and of deck passengers 2s. The number of the former to Ireland, annually, is about 500; from Ireland, about 450; the number of the latter to Ireland, about 5000; from Ireland, about 4500. This includes the last 14 years; but before that time, that is, before the general introduction of steam navigation, by which the most ready conveyance is obtained from all the great ports of Ireland to similar places in England and Scotland, Portpatrick, in consequence of the shortness of the passage from Donaghadee, formed the principal port of entry from and to Ireland, not only for passengers, but for cattle and horses. For example, 17,275 horses and cattle were imported here in 1701; 20,000 in 1812; but only 1080 in 1837; and the number has considerably diminished since that year.

Formerly the harbour of Portpatrick was a mere inlet between two ridges of rocks, and was one of the worst and most dangerous on the W. of Scotland. Whenever a vessel approached the harbour, the inhabitants assembled to draw her to the beach, there being no quay or creek to afford shelter from the waves. But a quay and reflecting lighthouse were built about 60 years ago; and it having been determined to make the place a steam-packet station, a new harbour has been constructed, protected by two piers, curved to resemble a horseshoe, and furnished with jetties near their extremities, by which the entrance is contracted to 180 ft.; the area of the basin thus formed being about seven acres. In accomplishing this great work, rock to an immense extent required to be excavated, which was effected by means of puddle-dikes and the diving-bell; the works are not yet quite finished. The original estimate was £120,000; it is, however, supposed that the total expense will not fall much short of £200,000. But the entrance to the harbour is, after all, very difficult in rough weather, and it is doubtful whether Portpatrick should have been selected for a packet-station; indeed, notwithstanding the outlay on the harbour, it has been already proposed to abandon it, and to select Finnart, 8 m. N. from Stranraner, on the confines of Ayrshire and Wigtownshire, as a more suitable place, on the alleged ground that the harbour of Portpatrick can never be made sufficiently accessible or secure, and that it is too remote from the central parts of Scotland.

Portpatrick was long resorted to as the Gretina Green for Ireland, and was celebrated for its runaway, or irregular marriages. The lowest sum charged was £10, payable to the parochial clergyman, who performed the marriage cere-

## PORT-AU-PRINCE.

mony, and £1 to the session clerk. The practice was abandoned in 1826, owing to the interference of the church courts; but in the records of these marriages during the preceding period of 50 years, there occur the names of 198 gentlemen, 15 officers of the army or navy, and 13 noblemen. (*New Stat. Acc. of Scotland, § Wigtonshire, p. 123-161, and Priv. Inform.*)

PORT-AU-PRINCE, now called PORT REPUBLICAIN, a city and seaport, and the modern cap. of the republic of Hayti, on the W. coast of the island, at the bottom of the bay of Gonaives, 90 m. S. cape Haytien, and 165 m. W. St. Domingo; lat. 18° 33' 42" N., long. 72° 27' 11" W. Pop. variously estimated, probably from 18,000 to 20,000. It is partially fortified on the land side, and the harbour is protected by a battery on a small island near the shore. The streets are laid out with great precision, crossing each other at nearly right angles; but the town is irregularly built; the houses are principally of wood, and as they seldom exceed two stories in height, have a paltry appearance. Except the palace, which is a large building, with a handsome flight of steps leading to good reception rooms, there are no public buildings of any importance. The arsenal, church, mint, lyceum, military hospital, and courts of law, are all insignificant. The adjacent country is low and marshy; and the heat in the summer months being excessive, the climate is then exceedingly unhealthy. The entrance to the harbour is between White island and the S. shore. The depth of water varies from about 18 ft. at ebb, to 20 ft. at full tide. It is customary, but not compulsory, to employ a pilot in entering the harbour. Ships move head and stern at from 100 to 500 yards from the shore; loading and unloading by means of boats, as there are neither docks nor quays to facilitate these operations. The harbour is perfectly safe, except during hurricanes, which may be expected from August to November. The markets are tolerably well supplied with beef, mutton, fowl, fruit, and vegetables; but the supply of fish is uncertain; and such is the indolence of the inhabitants, and their neglect of the most obvious resources, that though turtle abound in the bay, they are rarely found in the markets.

Port-au-Prince is the seat of government, the supreme court of justice, court of cassation, a tribunal of original jurisdiction, &c. It is also the residence of the principal foreign consuls in Hayti, and the grand entrepôt of the commerce of the island, which, however, is trifling, compared to what it was previously to the commencement of the disturbances and atrocities that devastated this fine colony. (*See HAYTI.*) It is of late origin, having been founded in 1749. It is very subject to earthquakes, by one of which it was nearly destroyed in 1770. (*MacKenzie's Notes on Hayti, i. 5-25; Encyc. Amer.; Comm. Diet.*)

PORT ROYAL, a town and seaport, and formerly the commercial cap. of Jamaica; at the extremity of a narrow point of land, bounding Kingston harbour on the S. and E., about 5 m. S.S.W. Kingston. It formerly had 2000 houses, and was handsomely built; but having been in great part destroyed by an earthquake in 1602, and having subsequently suffered severely by fires and hurricanes, its public offices were transferred to Kingston, and it is now insignificant as a town. It is still, however, strongly fortified, and is the seat of the royal navy yard, the naval hospital and of some regimental barracks.

PORTARLINGTON, a parl. bor. and inland town of Ireland, prov. Leinster, on the Barrow, which divides it into two portions, the larger of which is in Queen's, and the smaller in King's co., 40 m. S.W. by W. Dublin. Area of parl. bor., 933 acres, pop. of ditto, in 1831, 3000. It consists principally of a single street, nearly 2 m. in length, extending on both sides the river, which is here crossed by a stone bridge. This is, perhaps, the best built, and cleanest country town in Ireland. "Few towns of its size have so respectable an appearance, which arises, not from its trade or manufactures, for of these it has none beyond the retail trade consequent on its population, but from the unusual number of its resident gentry." (*Mun. Bound. Report.*) A considerable part, perhaps, of the distinguishing features of this town may be ascribable to the fact of a colony of French Protestant refugees having been settled in it by William III. It has two churches, in one of which, frequented by the refugees and their descendants, divine service was performed in the French language within the course of the present century. It has, also, two Roman Catholic chapels, a Methodist meeting-house, a market-house, and a dispensary. The schools belonging to this town have long enjoyed a high reputation, especially those for French; and in them two of the most illustrious individuals of whom Ireland has had to boast, the Duke of Wellington, and his brother the Marquis Wellesley, received the rudiments of their education. Under the charter granted by Charles II., in 1667, the corporation consisted of a sovereign, two portreeves, 12 burgesses, and a commonality, who returned two members to the Irish House of Commons down to the

## PORTLAND.

union. Since then it has returned one member to the Imperial House of Commons. The Boundary Act fixed the limits of the parl. bor. as stated above. Registered electors in 1839-40, 171. An obelisk on a hill adjoining the town commands an extensive prospect. Manor courts and petty sessions are held here; and it has two constabulary stations, one in the portion of the town in each county. Markets on Wednesdays and Saturdays; fairs on the 5th of Jan., 1st March, Easter Monday, 23d May, 4th July, 1st Sept., 12th Oct., and 23d Nov. The town, with an extensive surrounding district, was granted, in the reign of Charles II., to Lord Arlington (Sir H. Bennett; the Eliab of Dryden's Absalom and Archithophel), one of the famous CABAL. The town, which was previously called Cultydry, took the name of its new owner, the prefix Port being given to it in consequence of its having a small landing-place on the Barrow. Lord Arlington, however, soon afterwards sold the property; and, after passing through various hands, it was acquired by Mr. Dawson, an ancestor of the present Earl of Portland. Emu-house, the residence of this noble family, is about 4 m. S. from the town. (*Mun. and Parl. Boundary Reports; Fraser's Guide to Ireland, &c.*)

PORTLAND, city, port of entry, and capital of Cumberland co., Me., in point of wealth population and commerce, the largest town in Maine, and until 1832 the capital of the state, is in 43° 39' 26" N. lat. and 70° 29' 30" W. long. from Greenwich, and 6° 40' 54" E. long. from Washington. It is 54 N.N.E. Portsmouth, 110 N.N.E. Boston, 50 S.S.E. Augusta, 545 N.E. Washington. The population in 1700 was 2340; in 1800, 3677; in 1810, 7169; in 1820, 8521; in 1830, 12,601; in 1840, 15,218. Of these, 397 were engaged in commerce; 1032 in manufactures and trades; 726 in navigating the ocean; 101 in the learned professions.

It is pleasantly situated on a peninsula in Casco bay, having Back cove on the N., and a branch of the ocean called Fore or Casco river on the S. The ground on which it is built rises at its E. and W. ends, and the city presents a beautiful appearance as approached from the sea, rising like an amphitheatre between two hills. It is regularly laid out, and extends for 3 m. from E. to W., with an average width of three fourths of a mile. The houses are mostly of brick, many of them are neat, and some are elegant. The public buildings are a courthouse of brick, a spacious city hall, a jail, a custom house, six banks, an Athenæum, containing a library of nearly 5000 volumes, a market house, and 16 churches, three Congregational, one Episcopal, two Unitarian, two Baptist, a Free-will Baptist, three Methodist, a Swedenborgian, a Universalist, a Bethel, and an African.

The harbour is one of the best in the United States; it is near the ocean, easy of access, of a sufficient depth of water for the largest vessels, spacious and safe. At its entrance, on a point called Portland head, is a lighthouse of stone, 72 ft. high, exclusive of the lantern, erected in 1790. By numerous islands it is completely land locked. The harbour is defended by two strong forts on two islands; fort Preble on Bang's island, and fort Scammel on House island. On an eminence in the N.E. part of the town, is an observatory, about 70 ft. high, which affords a fine view of the harbour, with its beautiful islands and variegated scenery, and the city and surrounding country, extending to the White mountains in New-Hampshire. The harbour is not much obstructed by ice, except in unusually cold weather. By the Cumberland and Oxford canal, completed in 1829, a communication is opened between Portland and Sabago pond, and is extended to Long pond, the whole being 50 m. in length. This city receives much of the trade of the N. part of New-Hampshire, and of the N.E. part of Vermont, through a road which leads through a notch in the White mountains; and so important has this road been regarded to the prosperity of Portland, that the legislature of Maine has at times made considerable appropriations for its improvement. The Eastern railroad extending from Boston, has been completed, and was opened for travel in 1842, being 105 m. long between the two places. The total number of vessels cleared from the port in 1841, was 269, with crews amounting to 1910 men, and a tonnage of 42,153. The number of vessels which entered the port in 1841, was 174, with crews of 1259 men, and a tonnage of 27,501. The total amount of the registered licensed and enrolled tonnage of the district at the same period, was 56,135 tons. The total valuation of estate in the city, according to the assessment of 1842, was \$3,106,514. The expenses of the city government in 1842 were \$74,377; of which \$9614 were for the public schools; \$4000 were for the poor; \$1498 for the city watch; \$1389 were for the fire departments. The amount raised by tax for city purposes, was \$50,143. The city debt amounted to \$193,306. The public schools of Portland receive much attention, and there are a number of respectable schools of the higher order. The principal articles of export from the city are lumber, fish, beef, butter, &c. It has an extensive coasting trade, particularly with Boston. The tonnage employed in the coasting trade in 1841, was 13,843;

## PORTO BELLO.

and in the cod and mackerel fisheries, was 3651 tons. Its trade is also extensive to the West Indies, and considerable to several countries of Europe. In the season of navigation, steamboats ply regularly to Boston, and packets to various ports.

According to the census of 1840, there were 40 commercial and eight commission houses in foreign trade, with a capital of \$658,500; 256 retail stores, with a capital of \$574,450; two lumber yards, capital \$4000; the fisheries employed a capital of \$11,300; machinery was produced to the amount of \$3000; one furnace employed a capital of \$5000; two tanneries a capital of \$9000; two potteries a capital of \$4000; two rope-walks a capital of \$18,000; nine printing-offices, five binderies, two daily, seven weekly, and three semi-weekly newspapers, and three periodicals, employed 94 persons, and a capital of \$34,500. The total amount of capital employed in manufactures was \$215,350. There were 11 academies or grammar schools, with 1118 students, 32 common and primary schools, with 1976 scholars.

The settlement of Portland commenced in 1633, and the place was purchased by Gorges, the proprietor, in 1637. It was destroyed in the Indian war in 1675, and again in 1690 by the same enemy. It was rebuilt in 1715, when the foundations of the present city were laid. In 20 years after this, its trade in lumber was extensive, and it particularly supplied the British navy with masts and spars, which were chiefly transported by foreign ships. At the commencement of the Revolutionary war, the population was 1900, and the tonnage belonging to the port was 2555. It had 230 houses, and a Congregational and an Episcopal church. In 1775, it was bombarded by the British fleet, 136 of the principal houses were destroyed, among which were the townhouse, courthouse, and the Episcopal church. The total loss was about \$240,000. The place was then called Falmouth. From the close of the Revolutionary war to the year 1807, this place, in common with many others on the shores of Maine, especially during the wars in Europe, when the carrying trade of the world was extensively in the hands of the Americans, experienced great prosperity. Subsequently the embargo, non-intercourse and war, put a severe check upon this prosperity. In 1789 the tonnage was 5000, and the duties received \$8000; and in 1830, it was \$39,000, and the duties were 346,000. In 1786 the place was incorporated by the name of Portland; and in 1832, it received a charter as a city, and is governed by a mayor, seven aldermen, and 21 common councilmen.

PORTLAND, P. L., Middlesex co., Ct., 15 S. Hartford, 327 W. Bounded W. by Connecticut river, across which is a ferry to Middletown. It was recently taken from the N. part of Chatham.

PORTLAND, P. L., Chautauque co., N. Y., 7 S. Maysville, 332 W. by S. Albany, 352 W. Bounded N. by lake Erie, on which it has a good harbour. It contains two stores, one fulling mill, two grist-mills, 12 saw-mills, two tanneries, one distillery; 14 schools, 716 scholars. Pop. 2136.

PORTO BELLO, a famous seaport and town of Columbia, on the Caribbean sea, on the N. side of the Isthmus uniting the two great continents of N. and S. America, at the point where it is less than 40 m. across; lat. 9° 24' 29" N., long. 79° 43' 35" W. The town, now greatly fallen off, is built along the shore, at the foot of a mountain range which surrounds and shelters the harbour. But this barrier, at the same time that it protects the port, prevents the circulation of the air, and combined with the heavy periodical rains, the influence of the surrounding forests, and the excessive heat, renders this locality a favourite seat of yellow fever, and one of the most unhealthy places in the world. Owing, however, to the excellence of its port, which is one of the finest that can be imagined, and its contiguity to Panama, on the opposite side of the Isthmus, it was, for a lengthened period, an important commercial entrepôt. Down to 1740, the galleons from Old Spain, with merchandise for the Spanish Main, Peru, and the W. coast of America, used to rendezvous at Porto Bello, about the same time that the Peru fleet arrived at Panama, the gold and silver, and other produce brought by the latter, being conveyed across the Isthmus by means of oxen, and conversely. As soon as the galleons had unloaded, and the merchandise from Panama had arrived, a fair was held, which was attended by a great concourse of strangers, and when a great deal of business was transacted. But in 1740 the galleons ceased to resort to Porto Bello; the commerce with Peru and W. America having been since carried on direct by vessels that sailed round cape Horn. In consequence, the importance of Porto Bello rapidly declined; and the advantages of its port not being sufficient to counteract the unhealthiness of its climate, it is now comparatively deserted. But should the project for effecting a communication across the Isthmus, by canal or railway, take effect, it is probable that Porto Bello may recover some portion of its former importance. The climate is said to have

## PORTO RICO.

been improved by an opening made in the mountains that encircle the town, and by the cutting down of a portion of the adjacent forests.

Notwithstanding Porto Bello was formerly very strongly fortified, it was taken, with little loss, by Admiral Vernon in 1739. The importance of this exploit, and the abilities of the admiral, were, at the time, much overrated; and it was supposed that if he were furnished with an adequate force he would have little difficulty in reducing all the Spanish settlements in this quarter. But the events that took place during the next two years, and especially the failure of the attack on Carthage, undeceived the public.

Porto Bello was discovered in 1502, by Columbus, its name being derived from the excellence of its harbour. (*Alcedo's Dictionary; Geog. Account of Columbia*, i. 303; *Smollet's Hist. of England*, cap. 18, &c.)

PORTO BELLO, a pari. bor. and seaport of Scotland, co. Mid Lothian, in a plain on the S. bank of the frith of Forth, 2 m. E. Edinburgh. Pop. in 1831, 2781; but in summer its population, owing to the influx of visitors from Edinburgh, is much larger. It has no public buildings, except a *quoad sacra* church connected with the establishment, and chapels belonging to the Episcopalians, Independents, and Relief. The Episcopal chapel is an elegant building. The main street lies along the line of the public road running E. and W.; a number of cross streets diverge from it, leading down to the sea beach, or stretching in the opposite direction. Some of these consist of lines of detached villas. Separate villas, also, abound throughout the town, some of them fronting the sea. No fixed plan, in truth, has been observed in laying out the town, which has a straggling appearance, and some of the older parts are very mean.

Adjacent to Porto Bello is the village of Joppa, now almost a part of it. There is no harbour at either place; but it has long been proposed to construct one at Porto Bello. There are manufactories of bricks, tiles, earthenware, glass, and crystal. Fire-clay abounds on the E. point of Joppa, where fire bricks are manufactured to a considerable extent. A bank has recently been established in Porto Bello. It is estimated that the average number of visitors for sea-bathing in the town, from May to October, amounts to 500. And, owing to the beauty and salubrity of the situation, many families resort to it as an eligible permanent residence. A branch, leading to Leith, of the Edinburgh and Dalkeith railway passes the town on the S.; and stage coaches ply between Porto Bello and Edinburgh at least every hour.

Porto Bello is quite a modern town. It derives its name from the first house having been built, about a century ago, by an individual who had been with Admiral Vernon, in 1739, at "Porto Bello." The Reform Act united it with Leith and Musselburgh in sending one member to the House of Commons. Registered electors in 1840-41, 243. Municipal councillors, nine.

PORTO FERRAJO, a seaport and principal town of the island of Elba, which see.

PORTO RICO (Span. *Puerto Rico*), one of the West India islands belonging to Spain, being the smallest and most E. of the greater Antilles; chiefly between lat. 17° 55' and 18° 30' N., and long. 65° 40' and 67° 20' W.; having N. the Atlantic, and S. the Caribbean sea, separated on the E. from the Virgin islands by the Virgin passage, and from Hayti on the W. by Mona passage, 80 m. across. Its shape is that of a parallelogram, the length E. to W. being about 100 m., and the breadth about 38 m. Area, 3700 sq. m. Under the old colonial system of Spain, in 1788, the population did not exceed 80,650; whereas it amounted, in 1836, according to the official returns, to 357,086, of whom only 41,818 were slaves; and it is now (1841) probably little, if at all, short of 380,000 or 390,000. A mountain chain runs E. and W. through the centre of the island; the highest summit of which, at the N.E. extremity, is about 3000 ft. in height. Numerous rivers have their sources in this chain, flowing on either side to the sea, some of which are navigable for two or three leagues from their mouth, for schooners and coasting vessels. The coast line is indented with numerous bays and creeks, some of which form excellent harbours for ships of large burden. The surface, which is finely diversified, is well watered, and the soil is generally rich and fertile. The climate is supposed to be less unhealthy, and better adapted to Europeans, than in most of the Antilles; it differs widely, however, in different parts; the N. coast being especially subject to heavy rains, and the S. to droughts. Violent hurricanes often do immense damage. Porto Rico is singularly destitute of wild animals. "There are almost no indigenous quadrupeds; and scarcely any of the feathered tribe are to be found in the forests. The birds are few both in number and species; you may travel whole leagues without seeing a bird, or even hearing their chirp. On the rivers there are a few water-fowl, and in the forests the green parrot. Almost every other island in the West Indies is infested by snakes, and other noxious reptiles. Here are none. But rats of an enormous size,

## PORTO RICO.

and in great numbers, infest the country, and sometimes commit dreadful ravages on the sugar canes; and although continually persecuted, their numbers do not decrease." (*Flinter's Puerto Rico*, 53.)

The resources of Porto Rico are wholly agricultural; no manufactures exist, nor have any mines of gold or silver, or other mineral products, been hitherto explored. In 1830, the lands under cultivation in the island were not supposed to exceed 110,000 acres, not being more than 15th or 16th part of the land suitable for that purpose. According to an official return the lands under the different species of culture in 1830, and their produce, were as follows:—

Articles of Culture.	Acres in Culture.	Produce.
Sugar-cane . . . .	14,803	Sugar (musc.) . . . 414,606 cwts. Molasses . . . . . 1,507,769 galls. Rum . . . . . 12,163 puchos Plantains . . . . . 617,925 loads. Maize . . . . . 63,750 fanegas Rice . . . . . ? Tobacco . . . . . 2,599 Tobacco (cured) . . . 34,640 cwts. Cassava bread . . . . 30,419 loads. Sweet potatoes . . . . 29,570 cwts. Yams . . . . . 7,530 — Pulse . . . . . 4,570 — Coffee . . . . . 16,892 Coffee . . . . . 250,000 — Cotton . . . . . ? Fruit-trees and gardens . 140 Total acres in culture . 109,557

But during the last 10 years there has been a great increase of pop., and consequently, also, of production. Many thousand acres of land have been cleared and brought under tillage; and a very great increase has taken place of the staple products of the island. Indeed, it will be seen from the account of the exports in 1839, that the sugar and molasses exported in the course of that year very materially exceeded the entire quantity grown in 1830, as given in the above return. Indeed, we have little doubt, supposing the previous return to be nearly accurate, that the lands under cultivation in Porto Rico may at present (1841) be estimated at above 200,000 acres.

In 1832, 1,437,285 acres of land were held by 19,140 proprietors, giving to each, at an average, 75½ acres. At the same time 423 individuals were proprietors of estates originally established with slaves; 275 being sugar estates, and 148 coffee plantations. The remaining 17,440 proprietors bred cattle, and raised provisions and small quantities of coffee. In consequence of the small capital required, the inhabitants formerly applied themselves almost exclusively to the latter branches of industry; so much so was this the case, that at the commencement of the present century there were but 29 sugar estates on the island; and in 1802 the total value of the exports did not exceed 57,500 dollars! At present, however, the case is widely different; the S. coast of the island is generally occupied with sugar plantations, and in 1839 the exports of sugar amounted to no less than 692,458 cwts., or 34,622 tons, worth above 2,400,000 dollars. But, with the exception of the S. coast, most parts of the island exhibit a promiscuous cultivation, plantations of sugar being intermixed with those of coffee, and with field rice, maize, plantains, tobacco, and pasture. Artificial irrigation is nowhere practised; but, notwithstanding the drought which prevails in the S., plenty of water for the cane is found at about 2 feet below the surface. The average produce of sugar per acre, for the whole of Porto Rico, is estimated by Flinter at 30 cwt., being more than double the quantity raised on the best lands in the most favoured of the British Antilles! (*Puerto Rico*, 180.) The coffee is of a peculiarly good quality, much care being taken in plucking and preparing it. The trees, which mostly belong to small proprietors, grow to a great height, and sometimes yield from 20 to 40 lbs. each. Every poor family has 20 or 30 trees; and even in the woods trees are to be found in a wild state, laden with coffee. The free labourers at the harvest come into the market, some with 50 lbs., others with a cwt., and so on, being the surplus of their little crops, after leaving enough for the use of their families for the season. They sell to the merchants, to purchase articles of clothing. The plant on the large estates, cultivated by slaves, is pruned and cut low, and yields, at an average, one pound per tree. Flinter estimates that, in 1830, the 148 coffee estates may have produced 300 cwt. each, or altogether 44,400 cwt.; and that the remaining 205,600 cwt. of the estimated produce (250,000 cwt.) of that year was the growth of free labour. The tobacco of Porto Rico, which is but little inferior to that of Cuba, is wholly the produce of free labour. Poor families, white and black, plant a half or quarter of an acre, and cure and dispose of the produce to the shopkeepers in the villages, who are generally agents for the more extensive merchants of the capital. These shopkeepers furnish clothes and money in advance, at an enormous interest, to the cultivators, from whom they receive their crop at a certain price, generally less than half

its value. The soil in many places is particularly suitable for the growth of cotton, the culture of which has been very greatly extended within the last half dozen years. Indigo grows spontaneously, but is not cultivated; and few European vegetables are raised, though the greater number might be produced without much difficulty.

The pasture lands in the N. and E. are superior to any in the W. Indies for breeding and fattening cattle; the total number of which in Porto Rico, in 1830, was estimated at about 200,000. Cattle breeding is, perhaps, more profitable here than any other branch of agriculture; but, owing to the subdivision of property, few individuals possess so many as 1000 head of cattle. In the breeding districts, where there are no arable lands, the cattle are permitted to roam at large, as on the American continent, but on a smaller scale: elsewhere they are penned up in enclosed meadows. They are mostly reared in the valleys distant from the coast, whence the carriage of sugar and coffee would be too expensive for the cultivator. The larger proprietors, who have from 100 to 150 head, if they have not sufficient pasture land of their own, divide their stock among the poorer land-owners, giving them cows, and calves already weaned, to be taken care of; and dividing the produce of the animals, when sold, with them, in a certain proportion. The cattle are turned into the fattening pastures at a year old, and in three or four months are fit for sale. A considerable traffic has long been carried on in cattle from this island with the French, English, and Danish W. India islands; for, in consequence of their being tamer, they are easier managed on board ship, and are not so liable to die or fall off at sea as the wilder cattle of the American continent: they fetch about 33½ dollars per head. The home supplies of cheese and butter are insufficient for the consumption. The island is not adapted for wool growing, the fleece of the sheep degenerating into a species of hair; but the mutton is excellent. The numbers of sheep, goats, hogs, mules, and asses are, however, very limited; but there are, probably, above 80,000 horses of a tolerably good breed. The value of the live stock in 1830 was estimated at about 7,858,000 dollars; of which the cattle made 4,000,000 and the horses 3,900,000. The forests in the interior supply timber of the best quality for ship and house building; and, to prevent their decrease, the government has ordered that three trees should be planted for every one cut down.

Previously to 1815, Porto Rico, being excluded from all direct intercourse with other countries excepting Old Spain, was either stationary or but slowly progressive, the entire value of the exports in that year having amounted to only 63,274 dollars! But at that epoch a royal decree appeared, which exempted the trade between Spain and the Spanish colonies and Porto Rico from all duties for 15 years; and she was then also permitted to carry on a free trade, under reasonable duties, with other countries. In consequence principally of these wise and liberal measures, but partly also of a considerable immigration of rich Spanish colonists from S. America, Porto Rico has latterly made a most extraordinary progress: Great improvements have been effected in the police and internal administration, and roads have been constructed in all parts of the island.

Probably, however, the most advantageous circumstance in the condition of this island is the decided preponderance of the white and free coloured population. According to the census of 1836, the inhabitants consisted of

Whites . . . . .	188,860
Free mulattoes . . . . .	101,275
Free blacks . . . . .	26,124
Slaves . . . . .	41,818
Total . . . . .	357,086

This is a better distribution of classes than prevails in any other part of the W. Indies, Cuba not excepted; and the deep-rooted antipathy that exists between the white and black races in the other islands is nearly unknown in Porto Rico. The slaves have always been particularly well treated in the Spanish colonies; and here they are decidedly comfortable, being well clothed, well lodged, and not over-worked.

"The necessities, and many of the comforts, of life are enjoyed by the great majority of the inhabitants of Porto Rico. The Xivaros, a name applied to all the whites below the better classes, swing themselves to and fro in their hammocks all day long, smoking their cigars, and scraping a guitar. A few coffee plants and plantain trees, a cow and a horse, an acre of land, in corn or sweet potatoes, constitute the property of what would be denominated a comfortable Xivaro; who, mounted on his meagre and hard-worked horse, with his long sword protruding from his basket, dressed in a broad-brimmed straw hat, cotton jacket, clean shirt, and check pantaloons, sallies forth from his cabin to mass, to a cock fight, or to a dance, thinking himself the most independent and happy being in existence.

"The houses of all classes, in the country, are usually

## PORTO RICO.

built of wood. The windows have no glass: they are shut with sliding boards; so that when it rains, or when the wind blows with violence, the family remains in darkness. The roofs of the better class of houses are covered with wooden shingles. There are no inns for travellers either in the towns or country." (*Flinter*, p. 242-251.)

The following statements as to the trade of Porto Rico in 1839, taken from the *Balanza Mercantil*, published in the capital, afford the most conclusive proof of the advancing prosperity of the island:

The government, laws, and institutions are nearly similar to those established by Spain in the rest of her Transatlantic colonies. Porto Rico is governed by a captain-general, whose authority is supreme in military affairs, and who is president of the royal *audiencia* for civil matters. The latter court is composed of the captain-general, a regent, three judges, a fiscal, two reporters, and a marshal; and is superior to all other constituted authorities, including the ecclesiastical tribunal. The captain-general has a *junta*, or council of the principal military officers. In the seven towns and villages, which are the capitals of departments, justice is administered by the mayors: in the smaller towns and villages by inferior magistrates, called lieutenants, who determine debts under 100 dollars, act as justices of the peace, collect the duty of subsidy, receiving six per cent. on the collections, &c. They are appointed by the captain-general, who also appoints the clergy to their different livings, on the recommendation of the bishop. Public instruction is very backward; but schools, though few, are increasing. The island is divided into seven military departments, each under the command of a Spanish colonel. The regular military force comprises about 10,000, and the militia about 46,000 men. The naval force consists of only a man-of-war, a schooner, and about a dozen gun-boats. The tithes and alcavala duties were abolished in 1815, and the subsidy, or direct contribution on landed property, established instead. In 1832 the total revenue of the island amounted to 798,400 dollars: the direct taxes producing 207,140 dollars, the custom-house duties 493,930 dollars, and the in-

## PORTSMOUTH.

direct taxes (on cock-pits, billiard-rooms, lotteries, stamps, saleable offices, legacies, bulls, &c.) 97,000 dollars. The duties on imports, which, in 1839, produced 734,761 dollars, consist of certain rates charged on different articles, according to the presumed value. On some articles they are very heavy, and there is, in consequence, a considerable contraband trade. Articles imported in Spanish vessels pay one third less duty, and Spanish produce imported in Spanish bottoms pay a half less. The chief towns of the island are San Juan de Porto Rico, the capital, Mayaguez, Ponce, Aguadilla, and Pinaro.

Porto Rico, when discovered by Columbus, in 1493, is supposed, though probably on no very good grounds, to have had 600,000 inhabitants, who were, in no very long time, almost exterminated. In the latter part of the 17th century it was taken by the English; but, from the prevalence of dysentery, they were soon after obliged to abandon it; since which it has been mostly in the quiet possession of Spain. A revolutionary movement, which broke out in 1820, was happily put an end to in 1823. (*Flinter's Present State of Porto Rico*; and *Official Returns*.)

PORTO RICO (SAN JUAN DE), the principal city and seaport of the above island, of which it is the capital, on rising ground, at the extremity of a peninsula, joined to the land by a narrow isthmus; lat. 18° 29' 10" N., long. 66° 13' 15" W. Pop. 30,000? The town, which lies along the E. side of the harbour, is strongly fortified. The streets cross each other at right angles: being on a declivity, it is well drained, and may be considered as one of the best and healthiest towns in the W. Indies. In the earlier part of the present century most of the houses were of wood; but at present, except in the suburbs, not a wooden house is to be seen, and they are principally two stories high. There are some good public buildings; including the bishop's palace, and seminary; the royal military hospital, with 350 beds; public jail, house of correction, a handsome theatre, town-house, with a magnificent public hall, several convents, &c. The government house, though old and sombre looking, has some fine apartments. The cathedral is a large, unfinished, heavy fabric; there are several other churches, with a custom-house, arsenal, &c. The harbour has a striking resemblance to that of the Havannah, to which it is but little inferior. Its entrance, about 300 fathoms in width, has the Morro castle, at the N.W. corner of the city, on its E. side, and is defended on the W., or opposite side, by forts erected on two small islands. Within it expands into a capacious basin, the depth of water varying from 5 to 6 and 7 fathoms. On its W. side, opposite to the city, there are extensive sand-banks; but the entrance to the harbour, and the harbour itself, is unobstructed by any bar or shallow. Porto Rico is the residence of the governor, and the seat of the superior courts, &c., for the island. It has a society for the promotion of the fine arts, with numerous public schools, hospitals, &c. It engrosses the larger portion, by far, of the commerce of the island, and has, in consequence, attained to considerable distinction among the emporiums of the W. Indies. (*Flinter's Porto Rico*; *Comm. Dict.*, &c.)

PORTSEA, including its suburb of Portsea, a par. bor., and a celebrated seaport town of England, being the principal naval arsenal of Great Britain, and the grand station of the fleet, hund. Portsdown, co. Hants, on the W. side of Portsea island, at the entrance to Portsmouth harbour, opposite Gosport, and on the N. side of the channel separating the Isle of Wight from the main land: 16 m. S.E. Southampton, and 65 m. S.W. London; lat. 50° 48' 3" N., long. 6° 5' 59" W. The area of the par. bor. and the pop. at the under-mentioned decennial periods have been as follows:

Parishes.	Area in stat. acres.	Pop. in 1801.	Pop. in 1811.	Pop. in 1821.	Pop. in 1831.	Pop. in 1841.
Portsmouth	110	7,839	7,103	7,269	8,033	9,354
Portsea	4,990	24,327	31,365	34,785	38,199	43,673
Guildable		1,060	2,099	3,594	4,107	
Total	5,090	33,266	40,567	45,643	50,339	53,027

Portsea island, which has Portsmouth at its S.W. extremity, is about 4 m. in length (N. and S.), and from 2 to 3 m. in breadth, between Portsmouth harbour on the one side, and Langstone harbour on the other: it is connected with the main land, at its N. extremity, by a stone bridge, and is generally fertile and well cultivated, producing excellent crops of corn, and large quantities of particularly fine garden vegetables. Besides the above towns, Portsea island has several villages; and its coasts are well defended, at numerous points, by strong military works, including, together with the fortifications of Portsmouth itself, fort Cumberland, Southsea castle, a long line of entrenched works at

\* Portsea Guildable is that part of the parish of Portsea not within the jurisdiction of the borough of Portsmouth previously to the passing of the Municipal Reform Act.

## PORTSMOUTH.

Hilsea, &c. The external appearance of Portsmouth and Portsea is greatly embellished by the fine trees which ornament their ramparts; and few towns exhibit so imposing an approach as Portsea at its principal entrance from London. The entrances to Portsmouth, the older and more southerly part of the parliamentary borough, are much less striking; but its interior is far superior to that of its neighbour. Portsmouth may be generally described as consisting of three or four parallel streets, crossed at right angles by two or three other lines of thoroughfares. High-street, the principal, with its angular continuation, Broad, or Point-street, runs entirely through the centre of the town; it is wide and handsome, having on either side many large and excellent houses, several public buildings, and some very superior hotels. It has also been much improved by the removal, in 1836, of the old town-hall, an unsightly brick building, which previously stood about its middle, blocking up the greater part of the coach-road. Many good private houses are to be met with in some of the other streets, and on the Grand-parade, a spacious open area, used for garrison inspections, and for the daily muster of the several guards; but in general the private buildings are of an inferior character, and the back streets, particularly those at the Point and toward the N. part of the town, are of the lowest character, and which is worse, disgustingly filthy. The Point is a small peninsula stretching W. to form the mouth of the harbour, and mostly beyond the walls of the town. It is, with the opposite part of Portsea, the principal seat of naval traffic, most of the ship agents, brokers, &c., having their offices here, and, in time of war especially, it presents a scene of the greatest activity.

Portsea, which has entirely grown up since the beginning of last century, on a tract formerly called Portsmouth Common, N. of Portsmouth, now greatly surpasses the latter in extent and population. It is divided into two nearly equal parts by its main thoroughfare. Queen-street, which runs for about  $\frac{1}{4}$  m. in a direct line from Lion-gate, and is lined on each side with shops, many of which emulate those of the Strand or Fleet-street. Some few of the other streets, as St. James's-street, King-street, the Common Hard, &c., are tolerably broad and well built; but except these, none of the others approach even to mediocrity. The houses in Portsea are rarely more than two stories in height, and their fronts are but seldom succeeded. It has but one handsome open space (St. George's-square), and few public buildings; and, indeed, till within the last few years, it had scarcely an hotel deserving the name. Both towns are well paved, well supplied with water, and well lighted with gas, but their police is said to be very defective.

The suburbs beyond the walls comprise at least half the parliamentary borough, their more densely peopled portion extending over a space fully as large, if not larger, than that occupied by the two towns. Of these suburbs, Southsea alone has any pretensions to beauty. It consists of a succession of well built terraces facing the sea, and the E. ramparts of Portsmouth, being inhabited principally by naval, military, and government civil officers, and visitors resorting thither during the summer season. Behind these terraces are a number of tolerable streets, and some new squares, &c.

Elm Grove and Somerstown are sections of this suburb; the former, a little farther eastward, is a series of elegant detached villas, surrounded by fine plantations and gardens, commanding prospects of Spithead, the isle of Wight, &c., and inhabited by opulent individuals. Landport, Flat-house, &c., immediately to the E. and N. of Portsea, have nothing, in point of appearance, to recommend them; their inhabitants are, in a great measure, retail tradesmen and workmen employed by government. Newtown (Mile End), Kingston, Buckland, &c., E. of the foregoing, are cheerful and agreeable suburbs, principally extending along the London road, and inhabited by much the same classes as those residing in Southsea.

Immediately without the walls of Portsmouth, stretching along the shore, is Southsea Common, a fine large open space, used for reviews and military inspections, and a favourite place of public recreation.

The importance of Portsmouth, like that of Plymouth, depends wholly on the excellence of her harbour, and on her convenient situation as a place for the outfit and rendezvous of the fleets in the channel, or of those cruising off the coasts of France and Spain. It is this that has made her be selected as the principal station of the navy, and has consequently advanced her to the highest destination as a naval depot.

The harbour, which is unequalled in Great Britain, and surpassed but by few in the world, has a narrow entrance, not exceeding 220 yards in width, between Portsmouth and Gosport; but within its width increases, and it expands into a noble basin capable of containing the greater part of the navy of Great Britain. There is a bar outside the entrance to the harbour; but as it has about 13 feet water

over it, even at the lowest spring ebbs, it can hardly be said to be any obstruction to the navigation; and within the harbour there is water sufficient to float the largest men-of-war at any time of the tide. The anchoring ground is excellent; and, being free from sunken rocks, or other obstructions, ships lie as securely in it as if they were in dock.

The dock-yard, which comprises about 120 acres, lies along the E. side of the harbour. It comprises all the establishments necessary for the construction and repair of ships of war, and for their outfit with the greatest despatch, including numerous building and graving docks, partly opening into the harbour, and partly into a large basin, which communicates with the latter. Along the quay, fronting the harbour, extends a noble line of warehouses, having in its centre a handsome octagonal observatory, on the top of which is a telegraph connected, by a line of signal stations, with the admiralty in London. In the rope-house, nearly 1300 feet in length, cables are twisted that are sometimes 30 inches in circumference; and the anchor-Forge produces anchors of the largest size. The iron and copper-mills, the copper foundry, where the copper is rolled into sheets for sheathing by steam-power, the rigging and mast-houses, timber berths, saw-pits, seasoning sheds, masts, &c., are all on the most extensive scale. Probably, however, the most interesting machinery is that invented, or, at all events, vastly improved by Sir Isambert Brunel, for cutting blocks. It is exceedingly ingenious, and has been productive of a vast saving of labour. During the late war upward of 4000 working men were employed in Portsmouth dock-yard, of whom 1500 were shipwrights and caulkers; but in time of peace the numbers are greatly reduced.

In the dock-yard are the navy pay-office, the residences of the port-admiral, the admiral-superintendent, and the heads of the principal departments of the establishment. The port-admiral's residence, formerly that of the commissioner (whose duties are now performed by the superintendent), is an elegant edifice of white brick, surrounded by gardens. Near it is the Royal Naval college, a spacious dark brick edifice, erected in 1729, its centre surmounted by a cupola and observatory well furnished with instruments. Here youths intended for the navy were formerly instructed in navigation, &c.; but, in 1839, the college was remodelled, and is now appropriated to the instruction of junior naval and marine officers in the higher branches of science connected with their profession, and especially the principles and practice of naval gunnery. The officers belonging to this establishment are boarded and lodged in the college, but are borne on the books as part of the complement of a ship of the line in the harbour. Immediately facing the residence of the port-admiral, is a handsome white brick building, intended originally for a school or college of naval architecture, for the education of a "superior class of shipwrights;" a plan which, though on no very satisfactory grounds, has since been abandoned. On the green, in front of the last mentioned building, is a bronze leaden statue of William III. Adjacent to the college is a neat chapel-of-ease for persons attached to the dock-yard. The latter was, during last century, the scene of several conflagrations. One of these, in 1776, was clearly the work of an incendiary, who was convicted and executed for the offence. The dock-yard is, however, daily open to the inspection of visitors who apply for admission at the gate.

To the S. of the dock-yard, and nearer the mouth of the harbour, is the "Gunwharf," or arsenal for ordnance stores. This is an extensive and very complete establishment. As a depot for cannon, it is inferior to the arsenal at Woolwich, but, in most other respects, it is very superior to the latter. It comprises many extensive and handsome store-houses, filled with all kinds of ammunition; a neat armoury roofed with copper, and containing small arms for 20,000 men; a laboratory, and various other offices, spacious quays along the harbour, and a terrace of excellent residences for its officers, fronted by a finely planted inclosure. This establishment is separated into the two divisions of the old and new Gunwharf by the Mill-pond; a dammed up creek between Portsmouth and Portsea, which supplies the moats of both, and also turns a considerable flour-mill formerly attached to the victualling office, but now in private hands. The victualling department, which formerly occupied some large piles of building within the town of Portsmouth, was, in 1828, removed to Weovill (see Gosport); and its former storehouses have partly been purchased by merchants of the town, and partly given place to a handsome row of modern dwellings, the new almshouses, and the building of the Philosophical Society. The Custom-house is an insignificant building, but in a convenient situation. The functions of governor are exercised by a lieutenant-gov. who occupies a noble mansion in High-street, formerly the residence of the port admiral.

Portsmouth appears to have been originally fortified by

## PORTSMOUTH.

Edward V. Its works were greatly augmented and improved during the reigns immediately succeeding, and in those of Elizabeth, Charles II., and James II. Under William III. they were completed, nearly as at present, the town being almost wholly inclosed within a bastioned *enceinte*, the ramparts faced with masonry, and encircled with broad moats, with a glacis beyond. But, owing to the rise of Portsea, the N. side of these works soon became useless; and, in 1770, the government began also to surround Portsea with works on a still more extensive scale. At present a continuous line of ramparts extends round both towns, and the belt of fortification is completed by the works surrounding Gosport, on the opposite of the harbour. The ramparts, being planted with elms and poplars, form the favourite promenades of the inhabitants; and facing the sea is the Platform, a fine stone battery, mounting 25 pieces of cannon, and commanding an extensive and beautiful view. Portsmouth is entered by four, and Portsea by two carriage gateways, some having considerable architectural beauty. Besides the town batteries, Spithead, and the approaches to the harbour, are defended by Southsea castle, and forts Cumberland, Blockhouse, and Monkton. Southsea castle, founded by Henry VIII., about 1 m. S.E. Portsmouth, is built almost wholly of stone; as are forts Monkton and Blockhouse on the main land. Fort Cumberland, on the E. extremity of Portsea island, a structure of the last century, covers a very large space, and has earthen ramparts faced with brick, and barrack-room for 3000 men. The town, its suburbs, and auxiliary fortresses are garrisoned by the Portsmouth divisions of royal marines, and marine artillery, and a certain number of infantry of the line. Within the town are several capacious and excellent barracks; and there are others in the gunwharf, at Tipner, Hilsa, &c. Portsmouth has a military hospital, and a marine infirmary situated between the custom-house and the gunwharf. But Haslar hospital for the reception of sick and wounded seamen, the principal establishment of its kind in the kingdom, is on the opposite side of the harbour at Gosport (which see). The chief engineering department for the S. and W. of England, and the residences of the commandants of the marines and engineers, are among the other principal government buildings.

The parish church of Portsmouth, founded about 1220, but principally rebuilt in 1693, is a spacious stone edifice with a square tower, 120 feet in height, surmounted by a cupola and vane, which forms an important landmark. Among other monuments, it has one to Villiers, duke of Buckingham, assassinated here in 1628. The vicarage, value £555 a year, is in the patronage of Winchester college. Adjoining the grand parade is the garrison chapel and burying-ground. In Portsea are two chapels of ease, St. John's and St. George's. St. Paul's, Southsea, and All Saints', Newtown, are elegant Gothic edifices of similar architecture, the former built, in 1822, at an expense of £15,229, and the latter, in 1827, at a cost of £12,464. Two new churches are in progress of erection, one at Landport, and the other in the town of Portsea. Portsea parish church is an antiquated edifice at Kingston, about 1½ m. from the town, and surrounded by a very extensive cemetery. The living is a vicarage in the patronage of St. Mary's college, Winchester, value £696 a year. There are numerous places of worship for Independents, Baptists, Wesleyans, Bryanites, &c.; the Scotch, Presbyterians, Unitarians, Roman Catholics, and General Baptists have each a chapel, and the Jews a synagogue. The town-hall and jail together occupy a large edifice; the latter, which is clean, convenient, and well-conducted, is under the jurisdiction of the borough magistrates. A new market-house and exchange, the general dispensary, savings' bank, workhouses, female penitentiary, beneficial society's hall, literary and philosophical institution, with a handsome edifice, and a good museum and library; Hampshire library with 5000 volumes, the King's rooms at Southsea, with an excellent bathing establishment, Green row and York rooms used for balls, &c., and a theatre, are the other principal buildings of public interest. There are Lancastrian and national schools, an endowed free grammar school for 50 boys, and St. Paul's school, a joint-stock subscription academy for superior classical and mathematical instruction; besides several good private academies, a mechanic's institute, forensic, philharmonic, &c., societies, and various charities. On the London road, about 1½ m. from the town, is a new and spacious public cemetery, with an elegant entrance, a chapel, officiating minister, &c.

In addition to its other conveniences, Portsmouth harbour enjoys the important advantage of opening into the celebrated road of Spithead, between the Hampshire coast and the Isle of Wight. It derives its name from a sand-bank called the Spit, extending about 3 m. in a S.E. direction, from the narrow neck or tongue of land on which Gosport is built. A ship of war was formerly kept moored, as a guard or receiving ship, at the head of this bank; but

since the peace this practice has been discontinued, and the roadstead is merely marked by buoys placed at regular intervals. It is here that ships fitted out in the docks and harbour rendezvous before going to sea; and it is also a secure and convenient asylum for the channel fleet and other vessels, during the occurrence of storms. From its safety and capaciousness this roadstead is called by sailors, "*the king's bed-chamber*." "Thus," to use the words of Dr. Campbell, "it appears that Portsmouth derives from nature all the prerogatives the most fertile wits and most intelligent judges could devise or desire; and that these have been well seconded by art, without consideration of expense, which, in national improvements, is little to be regarded. Add to all these the striking excellence of its situation, which is such as if Providence had expressly determined it for that use to which we see it applied, the bridling power of France, and, if I may so speak, the peculiar residence of Neptune." (*Survey of Great Britain*, i., 370.)

Inasmuch as Portsmouth depends for support on its being a great naval port and arsenal, its prosperity is necessarily greatest during war. At present, however, if we compare it with previous periods of peace, it may be said to be flourishing. It necessarily has a considerable trade in the importation of the various articles required in its numerous establishments, and for the supply of the inhabitants, and the victualling of the fleet. Above 200 merchant-vessels, of the aggregate burden of above 12,000 tons, belong to the port. The gross customs revenue received here in 1840, amounted to £70,188. Excepting some extensive breweries, no manufacture, unless it be that of ships of war, is carried on within the town. About 3 m. N.E. were some extensive salt-works, so very ancient as to be referred to in Doomsday-book; but they have been abandoned within these few years.

Portsmouth is connected with Arundel and London by a navigable canal, and communicates with Gosport by a floating bridge for passengers, carriages, &c., the property of a company incorporated in 1838; by which also the town is placed in communication with a branch of the South Western railroad. (See Gosport.) Many coaches connect Portsmouth with London, Brighton, Southampton, Bristol, Salisbury, Oxford, &c.; and steam packets ply during the year to Ryde, Cowes, Lynton, Havre, Plymouth, Dublin, London, New-York, &c. A branch of the bank of England, and five private banks, are established here; and it has a weekly newspaper.

Portsmouth received its first charter from Richard I., which was confirmed by various subsequent monarchs. Under the Municipal Reform Act it is divided into seven wards; its municipal officers being a mayor, 13 aldermen, and 42 councillors. Corporation revenue in 1839, £4211. It has a commission of the peace under a recorder; and the boundaries of the municipal and parliamentary borough are co-extensive. A court of record is held here for the recovery of debts under £5; and petty sessions are held three times a week. Portsmouth has sent two members to the House of Commons since the 23d Edward I.: the right of election down to the Reform Act being vested in the mayor and corporation, the number of which seldom exceeded 60. The electoral limits were enlarged by the Boundary Act, so as to include all the parish of Portsea with the old borough; and, in 1839-40, there were 1837 registered electors. Portsmouth is one of the polling places at elections for the S. division of Hampshire. Markets on Tuesdays, Thursdays, and Saturdays. The charter of Richard I. established a fair in the town, called the "Free Mart;" which lasts for 15 days from July 10, and is succeeded by a three days' fair on Portsdown hill, attended by a great concourse of people.

The earliest mention of Portsmouth occurs in the Saxon chronicle, which states that it existed in 501. It probably owes its origin to the sea having retired from Portchester, probably the ancient *Portus Adurni* at the upper end of the harbour; on which account the inhabitants removed thither, and built a town at the mouth of the port. It was taken and burnt by the French, in 1377, but was soon recovered; and in the reign of Henry VIII. had become the principal naval arsenal of England. (*Boundary, Municipal, &c. Reports; Charpentier's New Portsmouth Guide; Private Information.*)

PORTSMOUTH, p. t., port of entry, Rockingham co. N. H., is in 43° 4' 35" N. lat., and 70° 45' 50" W. long., and 6° 15' 34" E. long. from W. It is 14 m. E.N.E. Exeter, 24 m. N. Newburyport, 45 m. E.S.E. Concord, 54 m. S.S.W. Portland, 54 m. N. Boston, and 493 W. The population in 1810, was 6934; in 1820, 7327; in 1830, 8062; in 1840, 7887. It is the largest town, and the only seaport in the state, built on a peninsula on the S. side of Piscataqua river, 3 m. from the ocean. The situation is healthy and pleasant, the land gradually rising from the harbour. It is not laid out with great regularity, but is handsomely built; many of the

## PORTSMOUTH.

houses are neat, and some of them are elegant. There are in the town 63 streets, 41 lanes, 13 roads, and three squares. It is connected with Kittery in Maine by two bridges, one 480 feet in length, on 20 piers; the other 1750 feet long, on 70 piers. For 900 feet under this last bridge, the water is from 45 to 53 feet deep at low tide, and the piers are from 61 to 72 feet high. The tide is here very rapid, and fears were entertained that it would not stand, which have happily been disappointed. It was completed in less than six months from its commencement, at a cost of only \$32,000. A bridge also connects Great Island, comprising the township of New-Castle, with Portsmouth, erected in 1821. It contains seven churches, three Congregational, an Episcopal, Methodist, Baptist, and a Universalist, seven banking houses, two market-houses, an academy, an atheneum, an almshouse, and a state lunatic hospital. The Episcopal church is a spacious and elegant brick edifice, from the cupola of which is a fine view of the town, the river, the islands, and the surrounding country, affording a prospect exceedingly various and beautiful. A brick market-house, erected in 1800 near the centre of the town, is 80 feet long and 30 feet wide, and has in the upper story a large room called Jefferson hall, well adapted to public uses. The atheneum was incorporated in 1817, and has a library of more than 5000 volumes, besides cabinets of minerals and of natural history. On Navy Island, which is on the E. side of the river, and within the bounds of Kittery in Maine, though it is owned by the general government, is the navy yard belonging to the United States, containing every convenience for the construction of vessels of the largest class, having three ship houses. One of these ship houses is 240 feet long, and 131 feet wide, the roof of which is covered with slate, which weighs in the whole 130 tons. Several large vessels have been built here, of which two were 74 gun ships. Ship building also for the merchant service has been, to a considerable extent, carried on, for which the fine white oak timber of New-Hampshire furnishes great facilities. In 1782, the America of 74 guns, the first of the class ever constructed in the United States, was built here and was presented by congress to the king of France. Several other large armed vessels were built here in still earlier times. Good water is brought from a spring in Newington, 3 miles distant, and distributed in pipes, through almost every street in the place, by a company formed in 1799; and a reservoir is filled for the supply of the shipping, at a cheap rate. Portsmouth has one of the best harbours in the United States. In the main channel it has 40 feet depth of water at low tide, and 30 feet at the wharves. The tide here rises 10 feet, and sweeps through the harbour with a powerful current, which prevents it from being obstructed by ice. The harbour is completely land-locked, and protected from winds by a number of islands, the most considerable of which is Great Island, comprising the township of Castleton. This island contains 458 acres, and on the N.E. point of it is a lighthouse, and on the N.W. point is fort Constitution. The main entrance to the harbour passes on the E. side of this island, and opposite in Kittery, is fort McClary. Fort Sullivan and fort Washington, on two other islands, are not garrisoned in time of peace. There is another entrance on the S. side of Great Island, called Little harbour; but the water is shallow. The harbour is already well defended, and is capable of being made impregnable. Portsmouth contains much wealth, and has considerable trade, though its back country is somewhat limited. The trade of the N. part of the state flows naturally to Portland, and much of the central and eastern part goes through Merrimack river and the Middlesex canal to Boston. This will furnish a reason why the population has diminished for the last 10 years. Its unobstructed and excellent harbour, however, gives it great advantages. The tonnage of the port in 1840, was 27,375. There are 35 ships belonging to the port, employed in the freighting business; 100 vessels in the cod and mackerel fisheries; 52 in the coasting trade; three in the West India trade; and one in the whaling business. The railroad from Boston to Portland, passes through the place.

According to the United States census of 1840, there were in the place 18 commercial and six commission houses in foreign trade, with a capital of \$1,251,500; 137 retail stores, with a capital of \$278,500; six lumber-yards, with a capital of \$11,000; the fisheries employed a capital of \$10,600; four furnaces had a capital of \$46,000; one woollen factory employed a capital of \$30,000; five tanneries had a capital of \$15,700; two distilleries a capital of \$5000; two flouring-mills, two grist-mills, and one saw-mill, employed a capital of \$15,000; one rope-walk, a capital of \$6000; three printing-offices, three binderies, and two weekly newspapers, employed 18 persons, and a capital of \$9100. The total amount of capital employed in manufactures was \$187,101. There were three academies, 188 students; 16 schools, 2922 scholars.

Portsmouth was first settled in 1623, under the auspices

## PORTUGAL (KINGDOM OF).

of Gorges and Mason, and was incorporated in 1633. Secured on three sides by water, in early times a stockade fence was constructed across the isthmus, as a defence against the savages; the population was early considerable, and it was therefore exposed to less annoyance than most other places. The first church (an Episcopal), was erected about 1638. The first Congregational church was erected in 1671. The second Congregational church was erected in 1715. The first Baptist church was founded in 1802. The first Methodist church was founded in 1809. The first Universalist society was constituted in 1805. This place has suffered repeatedly and severely by fires. In December 1802, 102 buildings were burned; in December 1806, 14 buildings, including St. John's Episcopal church, were destroyed. In December 1813 a more desolating fire swept over 15 acres, destroying 397 buildings, among which were over 100 dwelling houses. The parts burned have been rebuilt of brick, with additional convenience, and increased beauty.

PORTSMOUTH, p. t., Newport co., R. I., 7 m. N.W. Newport, 24 m. S.E. of Providence, 417 W. It occupies the N. part of the island of Rhode Island, is surrounded on three sides by Narragansett bay, and enjoys great facilities for navigation. Many of its inhabitants are employed in the fisheries. It contains mineral coal, and has four stores, one fulling-mill, one woollen factory, five grist-mills. Pop. 1706. It is connected with Tiverton by a bridge. Several islands are connected with it, the largest of which is Prudence, 6 m. long, and three fourths of a mile wide.

PORTSMOUTH, p. v., port of entry with Norfolk, and capital of Norfolk co., Va., 105 m. E.S.E. Richmond, 213 W. Situated at the mouth of Elizabeth river, on the W. side, opposite to Norfolk, 1 m. distant, and has one of the best harbours in the United States. The largest vessels come to its wharves. It contains a courthouse, jail, five churches, a Presbyterian, Episcopal, Methodist, Baptist, and Roman Catholic, a branch of the bank of Virginia, a masonic hall, a theatre, a military academy, 50 stores, and 6500 inhabitants. A United States navy yard, dry dock, and naval hospital, are located at Gosport, a suburb of Portsmouth. By means of the Portsmouth and Roanoke railroad, and the Wilmington railroad, a daily line of communication is formed with steamboats plying to Charleston.

PORTSMOUTH, p. v., capital of Sciota co., O., 90 m. S. Columbus, 424 W. Situated on the E. bank of Sciota river, at its entrance into the Ohio river, and at the termination of the Ohio canal. It contains a courthouse, jail, a market-house, four churches, 30 stores, seven warehouses, 200 dwellings, and about 1500 inhabitants. It contains a number of mills and manufactories, and occupies an important position. Iron ore, coal and building stone abound in the vicinity.

PORT TOBACCO, p. v., capital of Charles co., Md., 72 m. S.W. Annapolis, 32 W. Situated at the head of a bay which sets up from Potomac river, and contains a courthouse, jail, a church, several stores, 120 dwellings, and about 600 inhabitants.

PORTUGAL (KINGDOM OF), anc. *Lusitania*, the most W. state of Europe, occupying the greater part of the W. portion of the Spanish peninsula, between the 37th and 42d degs. N. lat., and the 6th and 10th W. long., having E. and N. Spain, and S. and W. the Atlantic. Length, N. to S., about 350 m.; average breadth, rather more than 100 m. Area, pop., subdivisions, &c., as follow:

Provinces.	Area in sq. m.	Pop. 1838.	Pop. to sq. m.	Chief Cities.
Minho . . . . .	2,671	872,400	328.5	Oporto.
Tras-os-Montes . . . . .	4,955	331,200	81.5	Vila Real.
Beira, Upper . . . . .	9,596	996,350	124.7	Coimbra.
Lower . . . . .	8,596	109,200		
Esremadura . . . . .	8,834	760,700	89.5	Lisbon.
Alentejo . . . . .	10,255	314,310	30.6	Evora.
Algarve . . . . .	2,099	135,850	64.4	Faro.
Total . . . . .	36,510	3,549,420	97.2	

Geographically considered, Portugal can be regarded in no other light than as a dependency on, or portion of Spain; and, in fact, all the mountain chains and great rivers by which she is traversed originate in the eastern and more extensive portion of the peninsula. The principal mountain chain, the Sierra de Estrella, runs S.W. and N.E. from the Spanish frontier, near Almada, to cape Roca, near Lisbon, the most westerly land in Europe, lat. 38° 46' 30" N., long. 9° 30' 24" W. The culminating point of this chain, near Covilha, is 7524 feet above the sea. Another chain, the Sierra Monchique, runs across the province of Algarve, the most southerly in the kingdom, terminating in cape St. Vincent. There are a great number of inferior chains, and the provinces to the N. of the Douro are especially encumbered with mountains.

The great rivers, the Tagus, Douro, Minho, and Gaudiana, have their sources in Spain, though they are joined by some considerable affluents in their passage through

## PORTUGAL (KINGDOM OF).

Portugal. (*See the names.*) There are but few lakes, and these of no importance; but mineral and hot springs are not uncommon. Water, in many districts, particularly in the S., is both scarce and bad; and, in consequence, extensive tracts in the great plain of Alentejo and other provinces are nearly uninhabitable. The climate is, in general, milder and more agreeable than in Spain, owing to the height of the mountains, and the great extent of coast. In the rugged tracts of the N.E. (Tras-os-Montes) the air is in many parts keen. In the valleys, and in the S. part of the kingdom, the case is generally very different; but all along the coast, the heat is tempered by the sea breezes. Snow seldom lies on the low ground; but the rains of winter are often heavy and long continued; and at this season the vicinity of Lisbon and other parts of the country are very subject to earthquakes. Violent hurricanes are also of frequent occurrence.

The general aspect of Portugal is similar to that of Spain, and even more luxuriant.

It is a goodly sight to see  
What heaven hath done for this delicious land!  
What fruits of fragrance blush on every tree!  
What goodly prospects o'er the hills expand!

*Childe Harold, canto i., st. xv.*

The Vegetable Products are very various, as well from difference of latitude, as from the great variety of elevation. Wheat, barley, oats, flax, hemp, and other products of a northern latitude, are raised in the high grounds; vines and maize in those of warmer temperature; and rice in the low grounds. The chief fruits are olives, oranges, and lemons; but the last two grow only in the warm and sheltered valleys of the S. and central parts of the kingdom. The woods are extensive: in the N. they consist principally of oak; in the central provinces of chestnut, and in the S. of sea pine, kermes, and cork trees. Algarve produces the American aloe, date, and other intertropical products: and Portugal is supposed to have a greater number of indigenous plants than any other part of Europe. (*Balbi, Essai Statistique*, i., 145.) Silk is produced of very good quality; and, in general, any deficiency, whether in the vegetable or animal products, is to be imputed not to the soil or climate, but to the indolence and unskilfulness of the people.

The Agriculture of Portugal, though recently it has begun to improve, is still, speaking generally, in the most backward and degraded state imaginable. A variety of circumstances have conspired to bring about this result; among which, the heat of the climate and the want of water, especially in the southern provinces, have, no doubt, a very considerable influence. Probably, however, the mildness of the climate has been still more injurious than its aridity, for this has at once encouraged the indolence, and lessened the wants of the people. And if to these powerful physical causes we add the pernicious practice of exempting the clergy and nobility from those direct taxes which were made to fall with their full weight on the cultivators; the vast amount of property in mortmain, and prevented from coming into the hands of those who would turn it to the best account; the want of a proper method of letting, and the consequent insecurity of the occupiers; the want of a manufacturing population, and of great towns, that is, of markets for agricultural produce; the extreme badness of the roads, and the difficulties in the way of internal communication; the number of Saints' days, fasts, and other superstitious observances; and the ignorance of the people; we shall certainly have little cause to wonder at the low state of agriculture in most parts of the country.

In the greater portion of the kingdom the farmers are quite unacquainted with the rotation of crops, and, one would be almost disposed to conclude, of the differences of soil, inasmuch as they continue to raise the same crops indiscriminately from all sorts of land. Their implements are of the clumsiest and rudest description; the harrow and the hoe were, till lately, nearly unknown, and thrashing was usually performed by trampling the grain under the feet of horses and cattle. Though, in so dry a country, the command of water and the irrigation of the lands be indispensable, this, in many extensive districts, is quite neglected. In consequence, the country is in parts but little occupied, and the traveller sometimes proceeds a distance of 15 or 20 m., without discovering as many houses. To show the deficiency of the means of communication, it may be sufficient to state, that on travelling from Abrantes to the Spanish frontier, along the N. side of the Tagus, a distance of about 100 m., there are six rivers to cross without a single bridge, though they are fordable only in dry weather.

It must not, however, be supposed that these statements apply equally to the whole country. The inhabitants of the greater part of the provinces of Entre-Douro-e-Minho and Tras-os-Montes, to the N. of the Douro, and of the adjoining portions of Beira, participate, to a considerable ex-

tent, in the industrious qualities of their neighbours the Galicians. (*See GALICIA.*) An abundant supply of water is here provided, partly from natural streams, but principally from wells dug in the sides of the mountains; and, in consequence, good corn crops are raised in the lower grounds, while the hills are covered with vineyards, and olives and other fruits are also extensively raised.

But, with these exceptions, agriculture in Portugal is, at this moment, probably in a more backward state even than in Spain or any other European country. We incline, however, to think that this will not long be the case. The more intelligent classes have at length become aware of the vicious nature of the institutions which have so long prevented the development of industry; and, of late years, most important changes have been effected in the tenures under which landed property is held, and in its distribution. The feudal rights of the nobility and other landed proprietors have been suppressed; an equal system of direct taxation has been introduced; and a large extent of crown property and of estates belonging to monasteries, sold at low prices, has mostly found its way into the hands of industrious proprietors. Hence, though the want of capital, the ignorance and indolence of the peasantry, be most formidable obstacles to the rapid spread of improvement, it has notwithstanding already made a considerable progress. In proof of this we may mention that, despite the facilities afforded for the importation of corn and other bulky products from the interior into Lisbon, by means of the Tagus, which runs through the centre of the kingdom, that city was long indebted to foreign countries for a considerable portion of her supplies of corn; but this, we are glad to say, is no longer the case; and, in 1839, for the first time for centuries, considerable quantities of Portuguese corn were shipped from the Tagus! Flax, hemp, and potatoes are grown only to a small extent; and, owing to the want of due care and attention, olive oil is of an inferior quality.

Wine, however, is the staple produce of Portugal, and that by which she is best known in this country. The red wine, called port, from its being all shipped from Oporto, is produced in the Upper Douro, about 50 m. above Oporto, on a succession of low hills on both sides the river, having the finest soil and exposure. The produce of this district is generally divided into two sorts of wine, the *vinho do Feitoria* or Factory-wine, for exportation; and the *vinho do ramo*, an inferior wine for home consumption and distillation. Great complaints having been made, about the middle of last century, by the merchants in England and their agents in Oporto, of the bad quality and adulteration of the wine, the matter came under the notice of the Portuguese government; and the method which it took to redress the evil is singularly illustrative of its sagacity and principles of action. Instead of leaving the matter to be adjusted between the growers of the wine and the merchants, or, at farthest, contenting itself with confiscating such wines as were found to be adulterated, it made over the whole district to a joint stock company, and invested them with almost despotic privileges! Thus, the agents of the company were authorised to class the wines belonging to individuals, and to fix their maximum price; so that the company became, in fact, the sole buyer, at its own price, of the wines produced within the limits of its charter.

But for the rooted taste for the wines of the Upper Douro established in this country through the influence of the long-continued high discriminating duty on French wines, it is probable that the institution of the company would have destroyed the Portuguese wine trade. It has, however, owing to the continued demand for the British markets, continued to keep its ground, or rather to increase, though not nearly to the extent that, under other circumstances, might have been anticipated. We have elsewhere seen (*art. Oporto*) that, at an average of the three years ending with 1840, the shipments of port wine from Portugal amounted to 34,790 pipes a year. It is a curious fact, that the Oporto wine company, after being suppressed by Don Pedro, as a nuisance, has been re-established, though with less oppressive privileges. (*Henderson on Wines*, 198-214.) In addition to port, considerable quantities of Lisbon, Cal-cavella, and other white wines, are exported. Some red wine is also exported from Figueiras.

The pastures in Minho, and in the Sierra Estrella and some other parts, are excellent. But throughout most part of the kingdom they are very much neglected. In consequence of the great number of fast days enjoined by the church, few cattle were reared; and a large proportion of those required for the consumption of the principal towns were imported from Gallicia and other adjacent Spanish provinces. Horses are scarce; oxen being commonly used for draught, except in towns. Mules, however, are numerous, and of an excellent breed; and, with asses, are generally preferred, on account of the rugged nature of the country, to horses for travelling. Sheep breeding is principally conducted in Beira, whence large flocks are sent to

## PORTUGAL (KINGDOM OF).

winter in Alemtejo. The wool of the Portuguese sheep might, no doubt, with a little attention, be rendered equal to that of the Spanish sheep; but no pains have been taken to improve its quality. Goats and hogs are numerous; and the latter are of a superior kind, and yield excellent hams. The fisheries, which were formerly important, are now insignificant: except in Algarve, where tunny, pilchards, &c., are taken, Galicia and England supply the greater part of the fish made use of.

The mineral products are considerable, though few mines except those of iron have been wrought, in consequence partly of the scarcity of fuel, and partly of the supply of minerals (chiefly copper and lead) from Brazil. The mountains abound in fine marble, and contain traces of gold and silver. Large quantities of salt of a very superior quality are produced in bays along the coast by natural evaporation, especially at Setubal or St. Ubes, whence it is largely exported.

Gold dust is obtained by washings; and in antiquity the Tagus was famous for its golden sands: *Tagus auriferis arenis celebratur.* (Plin. Hist. Nat., lib. iv., cap. 22.) Coal is found near Oporto and elsewhere; and lead, antimony, &c., are raised, but not to any considerable amount.

**Manufactures and Trades.**—An Englishman can with difficulty form an idea of the backward state of manufactures in Portugal: they are in general carried on in separate cottages, like the coarse woollens of North Wales, or the linen of Normandy, and are found on the primitive plan of every family manufacturing for its own consumption. Manufacturing establishments are but few in number, and are principally for the production of woollens, silk, and earthenware. Cotton has, also, been attempted of late years; and paper, glass, and gunpowder are made in a few places.

One might be disposed to think from the pompous enumeration of factories made by Balbi, and his vindication of the Portuguese when he is pleased to call the *reproche banal* of their being without manufactures, that on the contrary, manufacturing industry was in a very flourishing state among them. He even goes so far as to say that the cotton yarn produced at Thomar is at least equal to that of England! It was hardly necessary, perhaps, to notice such ridiculous statements. The cottons, woollens, linens, hardware, and earthenware of England, are all largely imported into Portugal, and are used by all but the very lowest classes. To suppose, indeed, that there should be any thing like really successful manufacturing establishments in a country like Portugal, is to suppose what is all out contradictory and absurd.

"A very superficial knowledge even of some of the commonest arts exists. A carpenter is here the most awkward and clumsy artisan; and the way in which the doors and wood-work belonging to the good houses are finished would have suited the rudest ages. Their carriages of all kinds, more particularly their wagons and carts, their agricultural implements and management, their cutlery, locks, and keys, are ludicrously bad. The chief *forte* of the Portuguese appears to lie in ship-building and stone-masonry; they also excel in embroidery, and make good artificial flowers, and lace." (*Baillie's Lisbon*, i., 17, &c.)

The navigation and commercial intercourse of Portugal are of more importance; and though even in the times of Emmanuel and Albuquerque, they were by no means so extensive as is generally supposed, they were, notwithstanding, very considerable, and appeared immense from the small amount of the shipping and trade of other nations. For a long time past, the import and export trade of the country has been conducted chiefly by foreign merchants, particularly British, settled in Lisbon and Oporto. The exports consist almost entirely of raw produce, or of wine, oil, salt, wool, fruits, cork, &c. The imports have hitherto included corn and flour, but, as already seen, these will now probably be dispensed with; the other articles are cotton goods (by far the most important article), hardware, woollens, fish, linens, earthenware, drugs, tea, coal, &c. We subjoin an

ACCOUNT of the Quantities of the Principal Articles of Foreign and Colonial Merchandise imported into the United Kingdom from Portugal, in 1838.

Articles.	Quantities.	Articles.	Quantities.
Figs . . . cwts.	1,702	Brandy . . . galls.	2,837
Lemons and oranges . . . chests	88,282	Sheep's wool . . . lbs.	627,322
Olive oil . . . galls.	407,946	Wine (Portuguese) . . . galls.	3,055,342
Shumac . . . cwts.	1,550	Cork (unmanufactured) . . . cwts.	47,284
Goat-skins (undressed) . . . No.	23,560		

Newly all the foreign trade centres in Lisbon and Oporto, which see. It is principally carried on with England and Brazil. At an average of the six years, ending with 1838, the real value of the British produce and manufactures exported to Portugal amounted to £1,242,114 a year; but of

this a considerable portion was subsequently re-exported for, or rather smuggled into Spain. Perhaps, at an average, the value of the imports and exports of Portugal may each amount to about two millions a year. Formerly, Lisbon had about 400 large ships employed in the trade with S. America, but now she has not more than 50 or 60 ships in all departments of her foreign trade, and those, too, of comparatively small burden.

The internal traffic of such a country is, as may be supposed, inconsiderable. There is no navigable canal; and till of late years, not a single road in Portugal was practicable for carriages for more than 20 or 30 m. from Lisbon. In fact the only mode of travelling by land from Lisbon to Oporto is in a litter, or on the back of a mule or horse; and in the wine country of the Douro, or in the province of Minho, two oxen sometimes take a whole day to convey a pipe of wine 5 or 6 m.; and to prevent the cart from being overturned, it is attended by two men. Accounts are kept in reis and milreis; the milren contains 1000 reis, and is worth about 4s. 6d. The *dobroa*, or doubloon, = £3 6s. 6d.; the *crusado* = about 2s. 6d. The lb. is 4589 kilogram, or rather more than the lb. avoird.; the arroba = 32 lbs.; the quintal = 4 arrobas. The mayo for grain, &c., = 24 bushels; the almuado =  $\frac{1}{2}$  gallons. The Portuguese foot is a little longer than the English.

**Constitution.**—Like the peninsula kingdoms of Castile and Arragon, Portugal had anciently her Cortes or assemblies of the states. One of these assemblies, held at Lamego in 1141, conferred the title of king on Alfonso Henriquez, who had two years previously defeated the Moors in the great battle of Ourique. The Cortes at the same time enacted a law for regulating the succession to the throne; in which, among other things, it is laid down that females shall not be eligible to the crown, though in the direct order of succession, if they have married a foreigner, and that their marrying a foreigner when on the throne shall be considered equivalent to an act of abdication. The powers of the Cortes corresponded, in other respects, with those of similar assemblies in other countries; but their privileges and those of the sovereign were very ill defined; and the latter contrived, in the course of time, to engross all the powers of the state; the government of Portugal became, in all respects, as despotic as that of Spain; and the last convocation of the Cortes took place in 1697. (See *L'Art de vérifier les Dates*, part ii., tom. vii., 1-40, 8vo. ed.)

From this period down to the administration of the Marquis de Pombal (1750-1776), every abuse continued to multiply, and Portugal was distinguished only by the imbecility of her government, the power and profligacy of the nobility and clergy, and the poverty and indolence of her people. The Marquis de Pombal suppressed the order of the Jesuits and confiscated their estates; he also suppressed some of the more oppressive privileges of the nobility and clergy; and effected various important reforms in several departments of the administration. In other respects, however, his policy evinced the narrowest and most illiberal views; and on his dismissal from power, most part of the old abuses in the government revived, and the country continued in its former state of apathy and abasement.

The events connected with the late war in the peninsula, the emigration of the court to Brazil, the long continuance of the English armies in the country, the organization of the Portuguese army on an improved footing, and the influence of the changes in Spain, laid the foundations of a new order of things. The nation was dissatisfied with the continued residence of the court in Brazil, which, in fact, made Portugal a dependency of the latter, and the wish for some fundamental changes in the frame of the government became general. At length, in August, 1820, a revolution broke out, and a free constitution was soon after established, having for its basis the abolition of privileges, the legal equality of all classes, the freedom of the press, and the formation of a representative body in one chamber. Our limits preclude our attempting to trace the obscure history of the Portuguese government from this period. Suffice it to say, that the constitution of 1820, which was violently opposed by the clergy and privileged classes, having been suppressed, in 1823, was replaced, in 1826, by a constitutional charter, granted by Dom Pedro; and that, in 1836, the latter was suppressed, and the existing constitution established in its stead.

Under this constitution, the government is an hereditary monarchy, with an upper and a lower representative chamber, both of which are elective, the franchise being vested in the holders of a certain small amount of fixed property. The Cortes meet and dissolve at specified periods, without the intervention of the sovereign, and the latter has no veto on a law passed twice by both houses. At present, therefore, the constitution of Portugal is decidedly liberal, probably too much so for a country in its peculiar situation. Each province has a governor, to whom the details of its government are entrusted. Justice is administered in the first in-

## PORTUGAL.

stance by the Juizes de Fora; and appeals are made to the corregidors of the provs., and from these to the *Casa de supplicação* at Lisbon, and the *Relação do porto* at Oporto. All these tribunals are, however, subordinate to the royal court in Lisbon. Great abuses are said to exist in almost every department, both in the judicial and administrative branches, the inadequacy of the salaries leading to the acceptance of bribes. Assassination is more frequent here than it has ever been in Italy; the law and the police being impotent alike either to secure property or life. It is stated in an official return published by the Cortes, that in 1837 there were no fewer than 176 assassinations, and 226 robberies in the district of Oporto; and 166 assassinations, and 234 robberies, in that of Guarda! The country, in fact, teems with ruffians and crime.

The religion of Portugal is the Roman Catholic, unalloyed with any taint of Protestantism, and contributing but little, if anything, to the morality of the people. The inquisition no longer interferes with the freedom of conscience, having been abolished in 1821. The Portuguese church is under the jurisdiction of a patriarch, with extensive powers; three archbishops, and 14 bishops.

Notwithstanding the hostility of the Marquis de Pombal to the monks, who used to say of them that they were *la vermine la plus dangereuse qui puisse ronger un état*, their numbers previous to the late revolution were estimated at about 8000, and the revenue of the conventual establishments was supposed to exceed £1,200,000 a year! Luckily, however, an end has been put to this preposterous state of things: the monks have been turned out of their establishments, to support themselves as they best may, on a small stipend that has been allowed them, so that the public wealth is no longer wasted in maintaining hordes of idle, profligate drones. The nunneries will, it is most probable, share the same fate.

It is said that infidelity is now very prevalent among the more intelligent classes in Portugal; and it is natural that such should be the case. They have never seen religion except in association with all that was most revolting. In Portugal its ministrations have consisted only in idle and unmeaning ceremonies; and its priests have uniformly been the enemies of every thing like popular rights, and the supporters of the most oppressive and offensive privileges. But now that they are reduced to their proper sphere, and are no longer used as instruments for the debasement of the people, it is probable that juster religious views will begin to be entertained; and that the profligacy and corruption of the clergy will cease to react upon religion itself.

The language of Portugal is merely a dialect of the Spanish, differing but little more from the latter than Scotch from English. Education is, at once, little diffused and of bad quality. There is a university at Coimbra; besides which, 17 high seminaries, and numerous schools exist, affording instruction to about 33,000 pupils. With the exception of Camoens, few Portuguese authors are known beyond the limits of their country. The army consists of about 25,000 men; 21,500 infantry, 3700 cavalry, and 2400 artillerymen. The forces of Portugal, whether naval or military, have in general been very inefficient. A partial stimulus was given, in 1760, to the Portuguese army, by a German commander, the Count de la Lippe; but after his death his plans were not followed up; and it was not till 1809, that Portuguese troops, recruited by British funds, and disciplined by British officers, became worthy the ancient renown of their country. It remains, however, to be seen whether left to their own resources, and without the example and assistance of foreigners, they would preserve the laurels they gained during the late war. The navy comprises only two ships of the line, four frigates, six brigs, and some smaller vessels.

The public revenue and expenditure for the year ending with June, 1837, were as follows:

Revenues.		Expenditure.	
	<i>Milrees.</i>		<i>Milrees.</i>
Rent of gov. property . . .	676,086	Royal family, Civil-	
Direct taxes . . . . .	1,670,439	list, &c . . . . .	4,766,727
Indirect do. . . . .	4,241,140	Ministry of interior . .	1,085,727
Various sources . . . . .	1,886,030	“ justice, &c. . . . .	972,582
Insular, &c. rev. . . . .	143,953	“ finance . . . . .	663,986
	1,071,213	“ war, . . . . .	3,191,734
		“ marine . . . . .	1,062,463
		“ foreign . . . . .	245,424
		“ affairs . . . . .	245,424
		Insular, &c. expend. . .	1,073,235
Total. . . . .	9,491,866		18,077,653
Deficit . . . . .			3,585,787

The public debt, in 1834, amounted to 5,689,229 milrees.

The Portuguese are but little indebted to the accounts given of them by travellers. But their character, as drawn by Du Chatelet, though not very flattering, is, we believe, nearly correct. “ Il est, je pense, peu de peuple plus laid que celui de Portugal. Il est petit, basané, mal conformé. L'inférieur répond, en général, assez à cette repoussante enve-

loppe, sur-tout, à Lisbonne; où les hommes paroissent réunir tous les vices de l'ame et du corps. Il y a, au reste, entre la capitale et le nord de ce royaume, une différence marquée sous ces deux rapports. Dans les provinces septentrionales, les hommes sont moins noirs et moins laids, plus francs, plus lians dans la société, biens plus braves, et plus laborieux; mais encore plus asservis, s'il est possible, aux préjugés. Cette différence existe également pour les femmes; elles sont beaucoup plus blanches que celles du sud.

“ Les Portugais, considérés en général, sont vindictifs, bas, vains, railleurs, presomptueux à l'excès, jaloux, et ignorans. Après avoir retracé les défauts que j'ai cru apercevoir en eux, je serois injuste si je me taisois sur leurs bonnes qualités. Ils sont attachés à leur patrie, amis genereux, fideles, sobres, charitables. Ils seroient bons chretiens, si le fanatisme ne les aveugloit pas. Ils sont si accoutumés aux pratiques de la religion, qu'ils sont plus superstitieux que dévots. Les hidalgos, ou les grands de Portugal, sont très bornés dans leur éducation; orgueilleux et insolens; vivans dans la plus grande ignorance, ils ne sortent presque jamais de leur pays pour aller voir les autres peuples.” (*Voyage en Portugal*, i. 69-71.)

The Spaniards and Portuguese regard each other with a deep-rooted national antipathy.

“ Well doth the Spanish hind the difference know  
Tw'xt him and Lusian slave, the lowest of the low.”

“ Strip a Spaniard of all his virtues, and you make a good Portuguese of him,” says the Spanish proverb. “ I have heard it more truly said,” says Dr. Southey, “ add hypocrisy to a Spaniard's vices, and you have the Portuguese character.” The two nations differ, perhaps purposely, in many of their habits. Almost, every man in Spain smokes, the Portuguese never smoke, but most of them take snuff. None of the Spaniards will use a wheelbarrow: none of the Portuguese will carry a burden: the one says, “ it is fit only for beasts to draw carriages,” the other, that “ it is fit only for beasts to carry burdens.” (*Southey's Letters*, ii. 64.) In one respect, however, their tastes are identical, bull-fights being quite as popular among the Portuguese as among the Spaniards. Semple's statements, as to the Portuguese character, coincide with those of Du Chatelet. “ The Portuguese are generally dark-complexioned and thin, with black hair, irascible and revengeful in their tempers, and eager in their gestures on trivial occasions. They are also said to be juddent, deceitful and cowardly; but they are temperate in diet, and that may be classed at the head of their virtues, if, indeed, they have many more. They have no public spirit, and, consequently, no national character. An Englishman, or a Frenchman, may be distinguished in foreign countries by an air and manners peculiar to his nation; but any meagre swarthy man may pass for a Portuguese.” All classes seem to despise cleanliness; and Lisbon, and the Portuguese towns generally, are, certainly, entitled to the not very enviable distinction, of being about the filthiest in Europe. The morals of both sexes are lax in the extreme; and, as already stated, assassination is a common offence. On the whole, we incline to think, that, owing to vicious institutions, the Portuguese rank about as low in the social scale as any people of Christendom. But the fair presumption is, that, under the beneficial influence of the new constitutional arrangements, the abuses that have depressed and degraded the nation will be extirpated; and that the Portuguese will once more recover their ancient place among European nations.

*History.*—This country, anciently called *Lusitania*, was taken possession of by the Romans, about anno 200 B.C.; previously to which some Phœnician and Carthaginian colonies are supposed to have been planted on its shores. It remained a Roman province till the 5th century, when it was invaded by the Suevi, Visigoths, &c.

The Moors landed in the S. of Spain in the early part of the 8th century, and meeting with little resistance from its thinly spread population, easily overran the greater part of Portugal; but the nature of the country favouring the operations of the inhabitants, they were not long in recovering possession of its more northern and mountainous portion. The name of *Lusitania* seems to have been exchanged about this period for that of *Portugale*, subsequently changed into Portugal, from the circumstance of Oporto, the principal of the strong-hold of the Christians, being then called *Calle* or *Porto Calle*. (D'Anville, *Etats formés en Europe*, p. 192.)

In the 11th century Portugal became an earldom, under the kingdom of Leon and Castile; and during the 12th it was erected into an independent kingdom. Its power now rapidly increased; and by the acquisition of Algarve, in 1249, it arrived at its present limits. In the latter half of the 14th century the voyages and discoveries commenced which have shed immortal lustre on the Portuguese name. During the 15th century, Madeira, the Canaries, and Azores were discovered, and colonized; and in 1498, Vasco de Gama doubled the Cape of Good Hope, and opened a new route to India.

## POSEN.

In the following century the Portuguese explored the coasts of Newfoundland and America; took possession of Brazil; made important acquisitions in India and the Persian gulf, and discovered the Moluccas; by which successful enterprises they monopolized the commerce of the east, and a great share of that of the west. But the prosperity of Portugal was short-lived. After the disastrous defeat and death of king Sebastian, in Africa, in 1578, Philip II. of Spain seized on the kingdom, which remained a Spanish prov. from 1580 to 1640; and when she regained her independence; the greater part of her commerce, and her foreign possessions, were in the hands of the Dutch.

But, notwithstanding the emancipation of Brazil, Portugal still preserves the Azores, Madeira, Cape de Verd, and Guinea islands; the settlements of Angola and Mozambique, in Africa, and those of Goa, Dilli (Thimor), Macao, &c., in Asia. In 1807, Portugal was invaded by the French, when the royal family removed to Brazil. John VI. dying in 1826, Dom Miguel usurped the throne in 1827, which he held till 1833; when, after a lengthened contest, Donna Maria II. was established in its possession. (*Baldi, Essai Statistique sur la Royaume de Portugal, &c.; Du Chatelet, Voyage en Portugal; Baillie's Lisbon; Sempie, Southey, Murphy, &c., in Mod. Trav. xix.; Journal Statistique, 1838; Orellu's Geog.; Convers. Lexicon, &c.*)

POSEN, a prov. of the Prussian monarchy, comprising the portion of Poland assigned to Prussia by the treaty of Vienna in 1815, having N. the prov. of Prussia and Brandenburg, E. Poland, and S. and W. Silesia and Brandenburg. It is of a triangular shape. Area, 11,374 sq. m. Pop., in 1837, 1,158,608, of whom 739,527 were Catholics, 314,853 Protestants, and 74,194 Jews. Principal towns, Posen, Bromberg, Nakel, &c. It is divided into two regencies, and these again into six circles. Surface generally flat, and in part occupied by extensive marshes and forests. Principal rivers, Warta, Netze, and Odra. Soil various, but generally clay and black loam intermixed with sand, and naturally very fertile. Principal products, corn, timber, wool, honey, &c. Minerals and manufactures unimportant. A vast number of leeches are taken in this province, especially in the circle of Bomster; above 1,300,000, worth, on the spot, about 65,000 rix-dollars, were exported in 1840; and, in 1839, the exports were still more extensive. This is the most backward of the Prussian provinces. When it first came into the possession of Prussia, in 1792, the great bulk of its inhabitants were in a state of predial slavery, and were as ignorant and brutalized as can well be imagined. The vigorous and enlightened government of Prussia at once put down the excesses of the nobles, and has exerted itself by introducing an improved judicial system, establishing schools and otherwise, to improve the habits and condition of the people. These efforts, combined with the total abolition of servitude (*see Prussia*), have had the best effects; though a lengthened period will still have to elapse before the vices and habits engendered by centuries of slavery and degradation be completely eradicated, and the population become as intelligent and industrious as in the more advanced provinces.

POSEN, a city of Prussia, cap. prov. and reg. of the same name, at the confluence of the Prozna with the Warta, 147 E. by S. Berlin; lat. 52° 29' N., long. 16° 53' E. Pop., in 1838, 32,456. Since the peace of 1815 its fortifications have been vastly improved, and it is now one of the bulwarks of the kingdom on the side of Russia. Though an old town it is pretty well built. Principal edifices, a cathedral and town-house. It is the residence of the provincial authorities, and of an archbishop; and has a court of appeal, a gymnasium, or college, a theological seminary for the education of Catholics, a school of arts, &c. The business of watch-making, is carried on to some extent; and there are manufactures of leather, linen, fire-arms, &c. It has three great annual fairs. Here, as in the rest of Poland, the buying and selling of goods is chiefly managed by Jews, who occupy a particular quarter of the town.

POSEY, county, In. Situated in the S.W. corner of the state, and contains 450 sq. m. Bounded S. by the Ohio river, W. by Wabash river. Drained by Big and Flat creeks. It contained in 1840, 9973 neat cattle, 9521 sheep, 35,818 swine; and produced 55,103 bushels of wheat, 1821 of rye, 607,799 of Indian corn, 1500 of barley, 66,157 of oats, 7841 of potatoes. It had 28 stores, seven flouring-mills, 10 grist-mills, nine saw-mills, four tanneries, three distilleries, two printing-offices, two weekly newspapers; 10 schools, 300 scholars. Pop. 9683. Capital, Mount Vernon.

POTENZA, (an. *Potentia*), a city of the Neapolitan dom., prov. Basilicata, of which it is the capital, on a hill in a wild and rocky tract, near the source of the Basiento, 54 m. E. Salerno. Pop., circa 9,000. It is fortified, and has a cathedral, several other churches, and convents, a seminary, a royal college, lyceum, hospital, government pawn-bank, &c.; but, speaking generally, it is poor and meanly built. It is a bishop's see, and the seat of the superior judicial courts for the province. It suffered greatly from earthquakes,

## POTOSI.

especially in 1684, and 1812. (*Rampol., Corografia; Dict. Geog.*)

POTOMAC, r., Md. and Va. rises by two main branches, the N. and S. branches near the Alleghany mountains, and forms, by the N. branch, and through the greater part of its whole course, the boundary between the states of Virginia and Maryland. It is 550 miles long, and at its mouth 10 miles wide. At Alexandria, it is a mile and a quarter wide, 290 miles from the ocean. It is navigable for ships of the line, 300 miles, to the navy-yard at Washington. The greatest tributary is the Shenandoah, 300 miles long, that carries nearly as much water as the main stream which it enters from Virginia, on the S. side, shortly before its passage through the Blue ridge. This passage forms a grand and picturesque scenery, to view which Mr. Jefferson pronounced worth a voyage across the Atlantic. The Chesapeake and Ohio canal is constructed along the bank of this river as far as Harper's Ferry. The principal places on the E. side of the river are Georgetown, Washington, Port Tobacco, and Leonard Town; and on the W. side, Harper's Ferry, and Alexandria. The Potomac is 42 ft. deep at its mouth, and 18 ft. deep at Alexandria.

POTOSI (SAN LAUS DE), a city of Mexico, cap. of the state of same name, near the source of the river Tampico, 165 m. W. Tampico, and 75 m. N.E. Guanajuato; lat. 22° N., long. 103° 1' W. Population of the city itself about 15,000 (*Poinsett*), but including the *barrios*, or suburbs, which cover a large extent of ground, it may amount to from 50,000 to 60,000 (*Ward*). "It presents a fine appearance: the churches are lofty, and some of them very handsome. The streets are well built, very clean, and intersect each other at right angles. The houses in the square, and in the principal avenues leading to it, are of stone, and two stories high; those in the suburbs are low, and of *adobes* (sun dried bricks). The government house, in the square, is not yet completed; but the front, which is of cut stone, and ornamented with Ionic pilasters, would do credit to any city in Europe. The market-place is well supplied with meat, fruits and vegetables. Pedlars hawk up and down the coarse manufactures of the country. Stalls are erected and set out with *mantas*, blankets, leather breeches and leggings, saddles, bridles, huge wooden stirrups, iron spurs, weighing at least 2 lbs., and a great variety of manufactures from the filaments of the Agave; ropes, cord, twine, and thread, matting, bags, saddle-cloths, &c., &c. Here, as in every part of Mexico, the vendors were satisfied with one half of their asking price, and frequently with one third part of what they, the instant before, had sworn on their consciences the article was worth." (*Poinsett's Notes on Mexico*, pp. 242-246.)

From its situation, this city is the natural *dépot* of the trade of Tampico with the N. and W. Mexican states. Its foreign trade is at present almost wholly in the hands of natives of Old Spain or of the United States. The European imports consist principally of French brandies, wines, silks, and cloths, English hardware and printed cotton goods, with some *mantas* or ordinary cotton manufactures from the United States. In addition to its foreign trade, San Luis supplies the neighbouring states of Leon and Cohahuila with home made goods of various kinds. The town abounds in tailors, hatters, leather dressers, and smiths; and the whole population seems industrious. (*Ward's Mexico*, ii. 227.) The people are better dressed, and there are fewer beggars here, than in almost any other part of Mexico. The mines in the neighbourhood have long ceased to be wrought, from exhaustion of the ores; they were however, formerly very productive. A college, founded by voluntary subscription, and in a flourishing state, affords gratuitous instruction to poor students in Latin, jurisprudence, theology, and constitutional rights. "The city was founded in 1566. (*Poinsett's Notes on Mexico*, p. 242-246; *Ward's Mexico*, ii. 236-230.)

Potosi, a city of Upper Peru or Bolivia, famous for its rich silver mines, on the N. declivity of the Cerro di Potosi, a mountain belonging to the Andes, lat. 19° 36' S., long. 67° 21' 45" W.; 64 m. S.W. Chuquisaca. Early in the 17th century this city is said to have had 150,000 inhabitants; but it is now almost deserted. It is built on uneven ground, and has a spacious square in the centre. The government house, the town house, and the jail, under the same roof, occupy one side; the treasury and government offices another; a convent, and an unfinished church the third; and private houses the fourth. Extensive suburbs, once tenanted by Indians and miners, are now without an inhabitant, and the vestiges of the streets are all that remain. Among the most remarkable public edifices is the mint, substantially built of stone, in 1751, at a cost of 1,148,000 dollars. In the principal square an obelisk 60 ft. high was erected in honour of Bolivar, in 1825. The houses of Potosi, generally, are of stone or brick, and of only one story, with wooden balconies, but without chimneys. The country round is perfectly barren, and the climate disagreeable; the rays of the sun

## POTSDAM.

are scorching at noon, while at night the air is piercingly cold. The market is well supplied; though, from many articles having to be brought from a considerable distance, the necessities, as well as the luxuries of life, are very dear.

The Cerro di Potosi, which is 18 miles in circuit, and rises to the height of 16,037 ft., is supposed to be a solid mass either of the ores or the matrix of the precious metals, of which it has produced a vast quantity. Viewed from the city, it appears dyed all over with numerous tints, green, orange, yellow, grey, and rose colour. The discovery of its wealth was made by an Indian, who, in hunting some goats, slipped, and, to save himself, took hold of a shrub, which, in coming away from the ground, laid bare the silver at its root. The mines were first wrought systematically in 1545, from which time till 1803 they are said to have produced 1,095,500,000 piastres, or £237,358,334, worth of silver on which duty was paid; and during the same period they also produced a large quantity of gold; at the same time that great quantities of both metals were smuggled, or put into circulation without payment of the duty. About 5000 openings are said to have been made in the mountain; but the number of mines wrought during the present century has rarely exceeded 100. At one time, the mines yielded about 30,000 ducats a day; and for a lengthened period they produced about 9,000,000 dollars a year. But they had begun to decline long previously to the revolution; and since then they have been, whether from their exhaustion, defects in the mode of working, or the want of capital, nearly unproductive. The ore is pulverised in water-mills, worked with overshot wheels, at from 1 to 10 miles from the city; but according to Helms, both the mining and reduction of the ore were conducted in the most bungling manner. (*Andrés; Miller; Mod. Trav.*, xxviii.; *Geog. Journal*, v.; *Encycl. Americana*, &c.)

POTSDAM, a town of the Prussian states, prov. Brandenburg, cap. reg., at the confluence of the Rathe with the Havel, on an island formed by the two rivers, a canal and lakes, 17 m. S.W. Berlin. Pop., in 1837, 25,560. Potsdam has been appropriately termed the Versailles of Prussia. It is a favourite royal residence; streets straight, broad, and well paved; and the houses, though frequently small, and not very commodious within, have, for the most part, splendid fronts. It is encompassed by walls and palisades; has numerous gates and bridges, some of which are highly ornamental, and is divided into three parts, the old and new towns, and Frederickstadt. The most remarkable edifices are, the palace a magnificent structure on the Havel, having attached to it a theatre, menagerie, and spacious stables; the church of the garrison, in which are deposited the remains of Frederick the Great; the church of St. Nicholas; the great military orphan hospital, &c. In the old market place is an obelisk of red Silesian marble, 75 ft. high, on a pedestal of white Italian marble; on the base are inscribed the names of the great elector and his successors. A large garrison is always kept at Potsdam, so that the barracks are very extensive. There is a lyceum, a military school, with various public schools of inferior note, and sundry literary establishments. There are also, exclusive of the military orphan hospital, mentioned above, an infirmary, workhouse, &c. Potsdam was formerly said to be more of a barrack than of a town; but for a good many years past it has been distinguished in various branches of manufacture, such as that of silk, hardware articles, arms, &c. Being situated on a navigable river, communicating by canals, &c., with many large towns, and with the Elbe and the Oder, it has a good deal of commerce.

Potsdam is a very old town, having existed in the 8th century; it did not, however, become a place of any importance till the elector Frederick William selected it for a residence, and began the palace. It was materially improved by the king, Frederick William I.; but, like Berlin, it owes its principal embellishments to the taste and liberality of Frederick the Great. In its environs is *Sans Souci*, the favourite residence of that illustrious prince, and the place where he expired, on the 17th of August, 1785. The new palace and the marble palace are also in its vicinity.

POTSDAM, p. t., St. Lawrence co., N. Y., 212 m. N.N.W. Albany, 496 W. Watered by Racket and Grass rivers. It contains six churches, a Presbyterian, Congregational, Episcopal, Methodist and Universalist, a large academy, occupying two buildings, each four stories high, 12 stores, one fulling-mill, one woollen factory, one furnace, four grist-mills, five saw-mills, three tanneries; one academy, 280 students; 36 schools, 1363 scholars. Pop. 4473. The village is situated on the falls of Racket river, and to it most of the above statistics belong.

POTTER, county, Pa. Situated in the N. of the state, and contains 1110 sq. m. Drained by head branches of Alleghany and Genesee rivers, and by Sinnemahoning, Pine and Kettle creeks. Coal and iron ore are found. It contained in 1840, 3315 neat cattle, 4960 sheep, 2330 swine; and produced 11,410 bushels of wheat, 2363 of rye, 6091 of

## POWNAL.

Indian corn, 3818 of buckwheat, 24,759 of oats, 60,571 of potatoes, 103,199 pounds of sugar. It had six stores, eight grist-mills, 30 saw-mills, one printing-office, one weekly newspaper; 23 schools, 476 scholars. Pop. 3371. Capital, Condersport.

POTTER, p. t., Yates co., N. Y., 201 m. W. Albany, 326 W. Drained by Flint creek. It contains seven stores, two fulling-mills, one furnace, two grist-mills, six saw-mills; 14 schools, 830 scholars. Pop. 2345.

POTTER, t., Centre co., Pa., 10 m. S.E. Bellefonte, 71 m. N.W. Harrisburg. It has two stores, one fulling-mill, one woollen factory, five grist-mills, eight saw-mills, one tannery, one distillery; eight schools, 340 scholars. Pop. 1787.

POTTSTOWN, p. v., Pottsgrove t., Montgomery co., Pa., 37 m. N. Philadelphia, 71 m. E. Harrisburg, 164 W. Situated on the E. side of Manatawny creek, near its entrance into Schuylkill river, and is chiefly built on one broad street containing many brick or stone houses. It contains three stores, one flouing-mill, one grist-mill, one saw-mill, one oil-mill, one printing-office, one weekly newspaper; two academies, 45 students, 100 dwellings, and 721 inhabitants.

POTTSVILLE, p. b., Norwegin t., Schuylkill co., Pa., 99 m. N.W. Philadelphia, 62 m. E. Harrisburg, 172 W. Situated at the termination of the Schuylkill canal. It contains two churches, a bank, 33 stores, one furnace, one flouing-mill, two tanneries, three breweries, three printing-offices, three weekly newspapers; one academy, 40 students; eight schools, 170 scholars. Pop. 4345. In 1824 there were but five houses on the spot. The immense coal trade has produced its rapid growth.

POUGHKEEPSIE, p. t., capital of Dutchess co., N. Y., 71 m. S. Albany, 290 W. Bounded W. by Hudson river, E. by Wappinger's creek. Fall creek enters Hudson river at the village by a succession of cascades, with a fall in the whole of over 160 ft. The town contains 54 stores, eight lumber-yards, three cotton factories with 4088 spindles, four flouring-mills, two grist-mills, one saw-mill, two tanneries, one brewery, two potteries, three printing-offices, two weekly newspapers, and two periodicals; two academies, 290 students; 14 schools, 1077 scholars. Pop. 10,006. The village is one of the handsomest and most flourishing in the state, situated about midway between N. York city and Albany, on an elevated plain, 200 ft. above the level of the river, from which it is concealed from the view by the abrupt bank. It is handsomely laid out, and contains 79 streets, the principal of which are paved, with convenient side walks, and compactly built with houses and stores which would do honour to a large city. It contains a court-house, jail, a collegiate school with a fine edifice, 115 ft. long and 35 ft. wide, after the model of the Parthenon at Athens, Dutchess academy, four seminaries for young ladies, three banks with an aggregate capital of \$100,000, besides a bank for savings, two whaling companies, with a total capital of \$400,000, which employ four ships, two market houses, a lyceum, 14 churches, a Presbyterian, Congregational, two Episcopal, two Methodists, a Primitive Methodist, a Dutch Reformed, Baptist, two Friends, a Universalist, Roman Catholic, and an African, 92 stores and groceries, and a large variety of mechanical and manufacturing establishments. The village is supplied with water from the vicinity brought into a reservoir, and distributed through the streets, at an expense of about \$30,000. It contained in 1844, 1251 dwellings and 8158 inhabitants. It has a rich back country, extending to the state of Connecticut. A silk company has been formed, with a capital of \$200,000, who have erected a building 100 ft. long, 36 ft. wide, and four stories high. Several steamboats belong to the place, which tow barges to New-York, and the steamboats from the latter place to Albany stop daily at the landing. A number of sloops are owned here. The constitution of the state of New-York which adopted the constitution of the United States, assembled at this place in 1788, and previously, the state legislature frequently assembled here.

POULTNEY, t., Rutland co., Vt., 60 m. S.W. Montpelier, 46 m. N. Bennington. Watered by Poultny river. It contains four churches, a Congregational, Methodist, Episcopal and Baptist, a bank, five stores, one fulling-mill, one woollen factory, three furnaces, five saw-mills, three tanneries; one academy, 112 students; 15 schools, 648 scholars. Pop. 1878.

POWHATTAN, county, Va. Situated near the centre of the state, and contains 300 sq. m. Bounded N. by James river, S. by Appomattox river. It contained in 1840, 4759 neat cattle, 6594 sheep, 9160 swine; and produced 53,935 bushels of wheat, 188,810 of Indian corn, 138,273 of oats, 6737 of potatoes, 1,849,750 pounds of tobacco. It had 13 stores, seven flouring-mills, 16 grist-mills, four saw-mills, two tanneries, 10 distilleries; five academies, 125 students; four schools, 94 scholars. Pop.: whites, 2432; slaves, 5129; free coloured, 363; total, 7924. Capital, Scottsville.

POWNAL, p. t., Cumberland co., Me., 18 m. N.E. Portland.

## PRAGUE.

land, 42 m. S.W. Augusta, 563 W. Incorporated in 1808. It contains five stores, two saw-mills. Pop. 1210.

POWNAU, p. t., Bennington county, Vt., 126 m. S. by W. Montpelier, 395 W. Watered by Hoosic river, which affords water-power. Chartered in 1760. It contains a Baptist church, and some Methodists, two stores, one woollen factory, one cotton factory, two grist-mills, five saw-mills; 10 schools, 349 scholars. Pop. 1613.

PRAGA, a suburb of Warsaw, of which see.

PRAGUE, a city of Bohemia, of which it is the cap., near the centre of the kingdom, on the Moldau, by which it is intersected, 73 m. S.E. Dresden, and 152 m. N.E. Vienna; lat. 50° 5' 18" N., long. 14° 25' 15" E. Pop., in 1837, 107,358, ex. garrison, inhabs. of the citadel, and strangers; whose united numbers raise it to upwards of 120,000. It stands in a basin, surrounded on all sides by rocks and eminences, upon the slopes of which the buildings rise tier after tier, as they recede from the water's edge; and few, if any, cities of Germany, or, indeed, of any country, have so grand and imposing an external appearance. It is divided into four quarters, of which two, the Altstadt and Neustadt, are on the right, and the others, the Kleinsseite and Hradschin, on the left bank of the Moldau. The Altstadt, or most ancient part of the city, stretches along the margin of the river, and for a considerable distance up the ascending ground; it comprises the university and the archbishop's palace, the municipality, the principal churches and public edifices, the theatre, and all the superior shops. It is the district of commerce and general activity; and is crowded with a dense and active population. Its streets are generally narrow, dark, and winding; the principal edifices massive and gloomy; and the private buildings, usually of succed brick, are black with age and dirt, and so lofty as to exclude the light from the avenues between them; but, on the other hand, there is an air of antiquity, and a singularity of architecture about many of the edifices, public and private, that renders them at once venerable and interesting. The open places are often surrounded by low heavy arcades, beside which are the churches or public buildings, exhibiting a fantastic mixture of Gothic and Italian decorations; while at every turn the eye is met by some memorial of historical events. Beyond the Altstadt, surrounding it on three sides, and separated from it only by a large wide street termed the *Graben*, from its having been formerly the city ditch, is the Neustadt (new city), founded by the emperor Charles IV., the most splendid of Bavarian monarchs: the streets of which are much more open and spacious, and are generally rectangular. Here are the vast convents, hospitals, and other public buildings, which owe their magnificence to the Jesuits; but the houses are poor, and the inhabitants chiefly mechanics, artisans, and traders of the lower class. At one extremity of the Neustadt, up the river, is the fortress and arsenal of the Wisschrad, erected on a bluff rock, and connected with the line of works which extends in a curve behind the old and new city, embracing them both, and descending to the river at each extremity. On the opposite bank of the Moldau, the surface of ground is for a small space comparatively even, behind which arises a range of high, bold, craggy hills. On the even space, and partly up the ascent, is built the Kleinsseite (small side): this is the quarter of the aristocracy; in it are the palaces of the ancient Bohemian nobles, with attached gardens and shrubberies, which often extend high up the irregular ascent behind.

The lofty ridge above the Hradschin forms a magnificent termination of the prospect, as viewed from the bridge below or from the opposite side of the river. Here, on the summit of a long bold eminence, is the vast palace of the old Bohemian monarchs; and close behind it rise the choir and tower of the cathedral. Further on, along the hill, are groups of stately edifices; and beyond these again may be seen, on a loftier point, the fine Premonstratensian monastery of Strahow, with its lofty towers and dark thick groves overhanging the river. The quarters of Prague on the left, like those on the right bank of the Moldau, are inclosed by fortifications; but these are of little strength, and were raised by Charles IV., merely to give employment to the working population, as the chance of invasion was then but inconsiderable.

The bridge which connects Altstadt with the Kleinsseite, the only one hitherto constructed within the limits of the city, is the longest in Germany. It is a ponderous structure of stone, 1780 ft. in length, and 35 in breadth; with a lofty tower at each extremity, and colossal stone statues, single and in groups, among which is pre-eminent that of St. John Nepomuck, the tutelar saint of the city. Not far from the bridge, and attached to the Altstadt, is the Judenstadt, a district allotted to the Jews, whose number is about 8000, living, as usual, in crowded filthy abodes, forming a labyrinth of narrow winding streets. (*Turnbull's Austria*, &c., i., 92-96, and *Reeve's Sketches of Bohemia*, No. ii.)

The Hradschin, or palace on the hill, is a vast pile, more

remarkable, however, for extent than beauty. It is said to be larger than the palace at Vienna, and to comprise 440 apartments, including the hall of Ladislaus, Imperial audience-room, hall of assembly for the states, &c. On a narrow terrace immediately below the palace, two obelisks mark the spot where the imperial commissioners, and their secretary, sent thither with the most intolent edicts against the Bohemian Protestants, were indignantly thrown out of the windows of the great chamber, by the deputies of the kingdom, in 1618. Notwithstanding the great height of the windows whence they were ejected, the commissioners escaped unhurt, by falling, as is said, on a dung-hill. This event may be regarded as the commencement of the 30-years' contest, ended by the peace of Westphalia in 1648, which, while it secured the liberties of the rest of Germany, unfortunately consummated the slavery of Bohemia, which had long been foremost in freedom and toleration. The cathedral, begun in 1344 and finished in 1485, is within the precincts of the Hradschin. It is a fine specimen of Gothic architecture, and is surmounted by a lantern-crown similar to that on the tower of St. Giles, Edinburgh. The choir, built by Charles IV., and the unfinished chapels that surround it, are much admired. In the cathedral are the tombs of many Bohemian sovereigns and other distinguished individuals; a fine altar piece and other paintings; mosaics, and the costly shrine of St. John Nepomuck, &c. Others of the numerous churches, as that of the *Theinkirche*, in which is the tomb of the famous astronomer, Tycho Brahe, who died here on the 13th October, 1601, are interesting for their monuments. Prague had formerly a great number of convents; but Joseph II. secularised most of these establishments. Among the chapels is one which is an exact representation of that of Loreto.

The town-hall, arsenal, military hospital, military orphan asylum, lying in hospital, principal workhouse, and theatre are among the finest of the numerous public edifices. Of the private palaces, that built by the famous Wallenstein, duke of Friedland, is the most remarkable. Though unfinished, it is of immense extent, 100 houses having been pulled down to make room for its site. It still belongs to a collateral branch of Wallenstein's family: the apartments and furniture, which are said to remain in their original state, are shown to strangers, and the park attached to the palace is thrown open to the public; but the residences of the nobility in the Kleinsseite are mostly deserted. "They are generally large ugly buildings, some, however, with a good deal of architectural decoration; and the dirty rubbishy appearance of their brick walls, half covered with worn-out stucco, conveys the idea of prisons or poorhouses rather than of mansions of distinguished nobles. Their proprietors have transferred themselves and their wealth to the Austrian capital; leaving to the Bohemians these sad memorials of times when the court of Prague might have looked with scorn on the inferior splendour of Vienna. Yet, in some of these desolate abodes, covered with dust and rubbish, we found immense collections of books. The Lobkowitz library is said to comprise more than 70,000 vols., the Kinsky 40,000, the Klebelsberg 18,000, the Klam Martinitz 21,000, and others equal or superior numbers. In some of these palaces a few rooms are fitted up and occupied during winter by a minor branch of the family, and in many of them are offices for the stewards and managers of the Bohemian estates; but when, on particular occasions, as, for instance, at the coronation of a sovereign, it is requisite for the proprietors to visit Prague, they usually occupy apartments in some hotel, their own palace being quite unfit for their reception: there are, however, a few exceptions to this general emigration. Here and there may be found the mansion of some great noble, who still upholds the local dignity of his ancestors; and below these highest magnates are a considerable body of resident nobles, inferior in wealth, though perhaps not in blood, who take a part in the provincial administration, and who form among themselves in the winter season an agreeable and elegant society." *Turnbull's Austria*, &c., i., 101. In the palace of Count Nostitz is a gallery rich in cabinet pictures of the Dutch and Flemish masters; and in that of Count Sternberg is the national museum, comprising extensive collections of paintings, book, fossils, and natural objects. The library, in the Strahow monastery, one of the finest apartments of its kind in Germany, comprises a collection of about 50,000 volumes.

The university of Prague, founded by Charles IV. in 1348, occupies a large edifice termed the *Carolinum*, and is remarkable as the first great public school established in Germany. The students were formerly divided into four nations, and are said, though there can hardly be a doubt that the statement is grossly exaggerated, to have amounted, early in the 15th century, to 40,000! In consequence, however, of a measure proposed, in 1409, by Huss, who was then rector, to abridge the privileges of the foreign

## PRAGUE.

students, more than half the pupils attending the university withdrew to Leipsic, Heidelberg, Cracow, and other seminaries. The Carolinum is now exclusively devoted to instruction in medicine, law, and the sciences; while education in theology is conducted in the *Clementinum*, an immense building, founded by Ferdinand III., in 1653, as a convent and seminary for Jesuits. The university library, in the latter, comprises about 150,000 volumes; it has also an observatory, botanic garden, and various museums; and was attended, in 1840, by about 1700 students; but it must be borne in mind that the censorship of the press, the prohibition of foreign works, and the jealousy of the government, oppose the most formidable obstacles to the diffusion of knowledge, and hinder any real progress being made in political or even philosophical science. The same causes render the newspapers and other journals published here of little interest or importance. There are three gymnasia, preparatory to the university, with several other high schools, ecclesiastical, teachers', and Jewish schools; a polytechnic institute, conservatory of music, academy of the fine arts; and many orphan and deaf and dumb asylums, and other charities. The Jews settled here at a very early period, and have an infirmary and orphan asylum of their own, and as many as nine synagogues, one of which is very ancient.

Prague has manufactures of printed cotton, linen, silk and woollen stuffs; leather, hats, liquors, earthenware, refined sugar, &c.; and is the grand centre, not merely of the commerce of Bohemia, but of an extensive and rapidly increasing transit trade. It owes this distinction to its situation on the Moldau, or principal arm of the Elbe, which is navigable by large boats to Budweis (80 m. direct distance from the city), where it is joined by a railway from Linz, on the Danube. Prague is thus rendered the centre, as it were, of the communication between Hamburg on the one hand, and Vienna on the other; and is, besides, intimately connected with Dresden, Leipsic, and other German cities. Several annual fairs are held here, including a large wool fair in June.

Owing to the number of its palaces, churches, public buildings, and other splendid remains of its ancient grandeur, Prague is more imposing than Vienna, and far preferable as a residence; the situation being much more salubrious, and the climate more mild and equable, the cold in winter rarely exceeding 24° Reaum., and generally averaging between 7° and 10°; while, during the greatest heat of summer, the thermometer seldom rises above 23°. Dr. Stultz, a celebrated German physician, who has written upon the relative salubrity of German towns, considers Prague as one of the most healthy in the empire, and affirms that it is no uncommon occurrence for the inhabitants to attain the age of 100, and even, sometimes, 115. Provisions are good and cheap; and an excellent red wine resembling Burgundy is produced in the neighbourhood. The theatre equals that of Vienna, and the musical department and orchestra cannot be too highly praised. Public and private concerts are also very frequent; and, except Vienna, there is no town in Germany where music is cultivated with so much success; indeed, this taste may in the Bohemians be termed truly national, for they excel both in vocal and instrumental music; and not a few of the natives travel to Italy, acquire the language, Italianize their names, and make large fortunes in Vienna. The harp appears to a stranger their native instrument; for we meet with itinerant harpists in every part of the country, whose strains generally accompany the midday repast at every inn, however small, whether in the capital or the provinces. Their language, which is rich and expressive, is also musical, and sounds as pleasing as the Italian when wedded to melody." (*Spencer's Germany and the Germans*, i., 207-8.)

Jerome, the friend of the great Bohemian reformer John Huss, was a native of this city, and was thence surnamed "of Prague." He suffered the same fate as his illustrious friend, having been burnt alive, in pursuance of a sentence of the council of Constance (see CONSTANCE), on the 30th of May, 1416. A very interesting account of the unfair and barbarous treatment he experienced on his trial, and of the singular ability, courage, and eloquence with which he defended himself, and exposed the malignity and bad faith of his adversaries, is given in a letter of Poggio-Bracciolini, who was present on the occasion. (This interesting document may be seen in *Shepherd's Life of Poggio*, or in the art. *Jerome*, in *Aikin's Biographical Dictionary*.)

Prague is very ancient; but the date of its foundation is uncertain.

Bohemia is one of the few countries in which persecution has been successful. At one time the Protestant faith was that of a great and decided majority, not of the citizens of Prague only, but of the whole kingdom. But the sovereigns of Austria having succeeded, in 1526, to the Bohemian crown, succeeded, after a lengthened struggle, partly by

## PRESBURG.

force of arms and partly by the most atrocious persecution of which history has preserved any account, in exterminating every germ of the reformed faith, and in totally subverting the free institutions of the country. For more than 150 years the language of the people was proscribed, their spirit was broken, and they were subjected to every species of insult and indignity. But since the middle of last century, and especially since the reign of Joseph II., the government has been conducted in a more tolerant and liberal spirit; and Prague, with the rest of Bohemia, is now advancing as rapidly in prosperity as any part of the Austrian monarchy. Prague was taken by the Prussians under Frederick the Great in 1741, but they were soon after obliged to evacuate the city, and it has ever since been held by the Austrians. (*Oesterr. Nat. Encyc.*; *Berghaus*; *Reene's Sketches of Bohemia*, in *Metrop. Mag.*, 1837; *Turnbull, Strang, Gleig, Murray, &c.*, passim.)

PRAIRIE DU CHIEN, p. v., capital of Crawford co., Wis., 125 m. W. Madison, 957 W. Situated on the E. bank of the Mississippi river, 300 m. below the falls of St. Anthony, 600 m. above St. Louis. It contains a courthouse, jail, and three churches, a Methodist, Presbyterian, and Roman Catholic; an academy, nine stores, 150 dwellings, and 1500 inhabitants. Fort-Crawford, a United States military post, is situated immediately S. of the village. There are many ancient mounds in the vicinity.

PRATO, a town of the grand duchy of Tuscany, cap. distr. on the Bisenzio, a tributary of the Arno, 10 m. N.E. Florence. Pop. in 1836, 10,849. It is surrounded with a wall and ditch; the streets are regular, and the houses generally good. It has several squares, of which the best is the Piazza Mercatale; but the chief ornament of the town is the cathedral, a fine edifice of white marble, with ornamental parts of dark serpentine. Several other churches are handsome, and worth notice. Prato has two work-houses, several hospitals, the Ciocchini college for secular instruction, normal Lancasterian and infant schools, &c. The manufacture of straw hats and bonnets employs nearly 1000 females; and it has also manufactories of woollen stuffs and caps, the latter for exportation to the Levant; with iron and copper works, paper-mills, a rope-walk, a glass factory, &c. The average wages of the working classes at Prato may be reckoned at  $\frac{2}{3}$  peoli, or 10½ d. a day. (*Bowring's Rep. on Tuscany*, p. 34, 35.) In the middle ages, Prato was the capital of a republic, conquered by the Florentines in 1333. The poet Casti was a native of the town. (*Woods*; *Williams*; *Conder's Italy*; *Bowring's Rep.*; *Geog. Dict.*)

PRATTSBURG, p. t., Steuben co., N. Y., 209 m. W. by S. Albany, 315 W. It contains two churches, a Presbyterian and Methodist; four stores, two filling-mills, three grist-mills, 32 saw-mills; one academy, 204 students; 18 schools, 823 scholars. Pop. 2455.

PRATTSVILLE, p. t., Greene co., N. Y., 38 m. W. Catskill, 54 m. S.W. Albany, 360 W. Watered by Schoharie creek. It contains two churches, a Dutch Reformed and Methodist; seven stores, one flouring-mill, one woollen factory, two grist-mills, five saw-mills, four tanneries; one academy, 25 students; six schools, 150 scholars. Pop. 1613.

PRAYA (PORTO) a seaport town of the Cape de Verd islands, which see.

PREBLE, county, O. Situated toward the S.W. part of the state, and contains 432 sq. m. Drained by St. Clair's and Twin creeks, tributaries of Great Miami river. It contained in 1840, 15,665 neat cattle, 29,255 sheep, 40,785 swine; and produced 198,107 bushels of wheat, 8955 of rye, 1,110,611 of Indian corn, 1340 of buckwheat, 3571 of barley, 270,804 of oats, 24,775 of potatoes, 49,296 pounds of sugar. It had 37 stores, one fulling-mill, three woollen factories, 16 flouring-mills, 18 grist-mills, 34 saw-mills, one oil-mill, nine tanneries, five distilleries; two printing-offices, two weekly newspapers. Pop. 19,482.

PREBLE, p. t., Cortland co., N. Y., 131 m. W. Albany, 324 W. Drained by Touglnioga river. It contains two churches, a Presbyterian and Methodist; one store, one fulling-mill, one grist-mill, one saw-mill; 10 schools, 464 scholars. Pop. 1247.

PRENZLOW, a town of the Prussian states, the chief place in that part of Brandenburg, called the Ucker Mark, at the point where the river Ucker escapes from the lake of that name, 32 m. W.S.W. Stettin. Pop. in 1837, 10,509. It is thriving and well built; has various churches, schools, and hospitals, a valuable public library, and manufactures of linen, woollens, and tobacco, with breweries, tanneries, &c. In 1806, a conflict took place in the suburbs of this town, which ended in the surrender to the French of 20,000 Prussian troops, escaped from the battle of Jena.

PRESSBURG, or PRESSBURG (Hungar. *Posony*, an. *Posonium*), a royal free town, and formerly the cap. of Hungary, and still the seat of the diet, immediately within its W. frontier, cap. co. of its own name, on the N. bank of the Danube, 34 m. E. by S. Vienna; lat. 48° 0' 50" N.,

## PRESCOT.

long. 17° 6' 15" E. Pop. in 1837 (excluding garrison and strangers), 37,380. Travellers differ greatly in their statements as to the appearance of Presburg; but the latest and best authority, Mr. Paget, says it is prettily situated along the banks of the Danube, and for a town of its size, offers a greater number of handsome buildings than are often seen together. It has, however, more of the characteristics of a German than a Hungarian city, and has few public buildings worth notice. The most conspicuous of the latter is the castle, a huge square brick structure, built upon a height above the town. It is now a ruin, having been burned in 1811, by an Italian regiment in the French service; it is, however, memorable as the scene of the appeal made in 1741 by Maria Theresa to the Hungarian states, which was so generously responded to by the latter. The hall of the diet, or *Landhaus*, is a plain, unpretending edifice, both externally and internally. The two chambers, which constitute the Hungarian diet, meet in apartments furnished simply with long tables, round which are benches for the members who speak, as in the House of Commons, from their places, and not, as in France, from a tribune. The lower chamber, visited by Paget, "is a long, plain hall, traversed in nearly its whole length by two tables covered with green baize, at which the deputies sit, with pens, ink, and paper before them. At the upper end is a raised part occupied by the president, vice-president, and secretary; and behind these sit the judges of the royal table." In the intervals between the sessions of the diet, this apartment is used as a concert-room. The members attend the diet armed, in full national costume; and, since 1835, the debates have not been carried on in Latin, but in Hungarian. They are sometimes very stormy. The cathedral, a Gothic edifice, supposed to date from the 11th century, and in which the kings of Hungary are crowned; the county-hall, German theatre, barracks, and archbishop's palace, are the other principal public buildings. There are several handsome noble residences, but they are seldom occupied, for Presburg is not a favourite place of abode with the Hungarian nobility; and most of the members of the diet, when assembled, live in lodgings, dining at one of the numerous *restaurateurs* in the town. Presburg was formerly surrounded with walls, but it has long outgrown these, and they are now mostly demolished. It is a bishop's see, and the residence of the archbishop of Gran, primate of Hungary. It has a Roman Catholic academy and a Calvinist lyceum, both possessing good libraries; a Catholic high gymnasium, Catholic seminary, college for poor students, and various other public schools; five hospitals, including one supported by the Jews, who are very numerous here, and have a quarter to themselves; and many charitable institutions. A fine library, belonging to Count Apponyi, is open to the public; and, according to Mr. Paget (i. 23-4), the booksellers' establishments are well supplied with good works. The manufactures, which are various, include silk and woollen goods, saltpetre, rosoglio, tobacco, &c.; and the town has a large transit trade in corn, linen, and Hungarian wines. Immediately outside the town is the *königsberg* (king's mountain), a small circular mound to which the king of Hungary proceeds to perform an important ceremony, immediately after his coronation. A very beautiful and fertile country extends along the other bank of the Danube, opposite Presburg; and on that side are the favourite resorts of the inhabitants; the promenade in the Au: public gardens; arena, or theatre in the open air for national performances, &c.; the communication across the river being kept up by a bridge of boats. Presburg is very ancient. Joseph II. transferred its previous title of capital of Hungary to Buda. The treaty which gave Venice to the French and the Tyrol to Bavaria was concluded here in 1805. (*Austr. Nat. Encycl.*; *Berghaus*; *Paget's Hungary*, &c., i. 1-28; *Glegl, Elliot, &c.*, *passim*.)

PRESCOT, a market town, par., and township of England, hund. W. Derby, co. Lancaster, 8 m. E. by N. Liverpool, and 23 m. W. by S. Manchester. Area of par., 34,940 acres; do. of township, 240 acres. Pop. of township in 1831, 5055. It is situated on high ground, over a large and rich coal field, and consists of one long principal street, well paved and lighted with gas, on the turnpike road between Liverpool and Manchester, about 1 m. N. the railway between those towns. The principal public buildings are a town hall, sessions-house, prison, and mechanics' institute. The parish church, an ancient structure, has a modern tower and steeple 156 feet in height, forming a conspicuous object to the surrounding country: the living is a vicarage, of the annual value of £893 in the gift of King's college, Cambridge, to which the manor belongs. In the out-townships are eight district churches, the patronage of six of which is with the vicar. There are places of worship in the town for Wesleyan and Primitive Methodists, Independents, and Unitarians, besides which there are within the parish three Roman Catholic chapels, and nine meeting-houses for different denominations of dissenters. A grammar school, with an endowment producing £160 a year,

## PRESTON.

has about 30 foundation boys (sons of inhabitants) with other pay-scholars, those born and educated in the parish having a preference to seven fellowships and several good exhibitions at Brasenose college, Oxford. Several almshouses, erected in 1708, furnish lodging for 19 old women; and there are numerous money-charities. The other benevolent institutions are a ladies' charity, bible society, and savings' bank.

Prescot has long been celebrated for its manufacture of watch tools and movements, in both of which branches it greatly excels: files, also, of first-rate quality, and engravers' tools, are made here. In 1836, 100 men were employed in file-making, and 500 in the construction of watch tools, motion work, &c. The manufacture of coarse earthenware has for many years been carried on, the clay of the neighbourhood being well adapted for such a purpose. Cotton spinning is carried on in two mills, employing, in 1839, 240 hands; and there is a small flax-mill. Coal mines are wrought in every direction round the town; it is estimated that upwards of 2000 men are employed in the collieries within the parish; and Liverpool receives from Prescot its chief supply of coal. Many of the out-townships are very populous, St. Helen's and Eccleston having attained to some importance as manufacturing towns. Prescot has petty sessions, and a baronial court for the recovery of small debts. Markets on Saturday, and fairs on alternate Tuesdays. (*See St. HELEN'S*.) (*Baines's Hist. of Lancaster; Butternorth's Stat. of Lancaster, &c.*)

PRESTEIGN, a par. bor. and market town of S. Wales, hund. New-Radnor, co. Radnor, near the S. bank of the Lug, in a fertile and well-cultivated valley, adjoining the confines of Herefordshire, 12 m. E. by N. Leominster. The parish of Presteign, which extends partly into Wigmore hund., co. Hereford, had, in 1831, 2282 inhabitants, of which the par. bor. had 1629. This is a well-built town, and, notwithstanding its limited size, is the capital of the county, the assizes and quarter sessions being held in it. "A woollen manufacture was once carried on here; but that is now given up, and there is no manufacture at present in the town, unless it be that of malt, which is made in large quantities. It is a sort of metropolis of the country for 5 m. round, supplying it with groceries, drapery, iron-work, and shop goods in general. It has also a considerable trade in timber. The inhabitants are principally professional men, tradesmen, mechanics, handicraftsmen, and a few farmers. There are also some persons of small independent incomes, who reside here for the sake of the cheapness of the place." (*Parl. Bound. Report*.) The church, which is very ancient, has some curious monuments and fine old tapestry. The living, a rectory of the annual value of about £800, is in the gift of the Earl of Oxford. The Wesleyan and Primitive Methodists, and Baptists, have places of worship. The county hall is said to be a handsome structure, and there is also a county jail and a free school. The latter, founded and liberally endowed in the reign of Elizabeth by a clothier of the town, furnishes a plain English education to between 50 and 60 boys; and there are other minor schools and Sunday-schools attached to the Church and the Wesleyan connexion. At the N. end of the town is a fine circular mound, laid out in public walks, presented to the inhabitants by the Earl of Oxford. Presteign unites with New-Radnor and other small boroughs in sending one member to the House of Commons. Registered electors in the whole borough in 1839-40, 522. It is governed by a bailiff and constables.

The Rev. Richard Luens, author of the "Enquiry after Happiness," was a native of Presteign, having been born here in 1648. The work now referred to, which has passed through a great number of editions, and is still held in considerable estimation, was written after the author had become blind. (*Aikin's Biographical Dict.*)

PRESTON, a par. and mun. bor., market town, and par. of England, in its own div. of hund. Amounderness, co. Lancaster, on the N. bank of the Ribble, crossed here by three handsome bridges, 19 m. S. Lancaster, and 28 m. N.N.E. Liverpool. Area of par. bor. (which comprises Preston and Fishwick townships), 2560 acres. Pop., in 1831, 33,871; in 1841, 50,073. The town, which consists of a broad principal street, running N.E. from the river, crossed by several others in different directions, is "well built, well paved, with handsome dwelling-houses and thriving factories; having a perfect drainage, and good roads leading from it." (*Bound. Rep.*) The streets are well lighted with gas, and there is an abundant supply of water. The market-place, at the junction of Fishgate and Friargate, contains about 3000 sq. yards. The public buildings comprise an elegant courthouse, erected in 1826; an exchange or market house, town-hall, assembly-rooms, theatre, borough prison, house of recovery, and a large county penitentiary. The church, originally erected in the 16th century, was rebuilt in 1770: the living is a vicarage, of the annual value of £665, in the gift of the trustees of

## PRESTON.

Hulme's charity. There are also seven district churches, chiefly of modern erection, and four others have been built in the out townships. The places of worship for dissenters comprise four for Roman Catholics (a numerous and increasing body), two each for Wesleyan Methodists and Independents, with others for Unitarians, Huntingdonians, Primitive Methodists, Baptists, Sandemanians, and the Society of Friends; there being, in all, within the town, eight churches and 17 dissenting chapels. National schools are attached to the several churches; and all or most of the dissenting places of worship have large Sunday-schools, furnishing religious instruction to between 7000 and 8000 children. A grammar school, founded prior to 1638, has an endowment of £50 a year; there is, also, a partially endowed blue-coat school, and several day and infant schools, supported by subscription. The other charities comprise nine almshouses, and several money bequests; a dispensary, house of recovery, built in 1829; provident society, workhouse, and savings' bank. Among the literary establishments, the first place is due to the Preston Institution for Diffusing Useful Knowledge, which has a library of about 2500 volumes, and an excellent museum. The Palestine and Dr. Shepherd's libraries are open to all classes, and the town has a public law-library. An agricultural society was founded in 1811. Avenham Walk, on the summit of the hill which rises from the banks of the Ribble, is a favourite promenade, and is kept in order at the cost of the corporation. Two newspapers are published, each once a week.

Preston, from its central position, its vicinity to an important coal district, and its extensive means of communication with the interior by canals and railways, united to the skill and enterprise of its citizens, has of late years rapidly increased in wealth and population, and is now, in fact, one of the great seats of the cotton manufacture. In 1838, there belonged to the town 35 cotton-mills, impelled by a steam power of 1332 horses, and employing above 7000 hands. It has, also, numerous hand-loom weavers, though owing to the competition of the power-loom, their wages had fallen in 1838 to about 7s. a week at an average. The manufacture of linen cloth, formerly the principal branch of industry in Preston, is still pretty extensively carried on; and in 1838, six flax-mills employed about 1400 hands. It has also numerous iron foundries, and other establishments for making machinery and other articles. Leather is tanned in considerable quantities; and there is a small fishery on the Ribble, which abounds with salmon, smelts, and eels. Two banking companies have been recently established, and there are three private banks. The Ribble is navigable at spring tides, as far as Preston-marsh, for vessels of 150 tons; but, being ill adapted for sea-borne vessels, it is frequented almost exclusively by coasters. The navigation, however, which is impeded by sandbanks, is in course of being improved by a company incorporated in 1837-8; and it is expected that a depth of 18 feet water, at ordinary spring tides, will be attained. The river dues produce about £1000 a year. The Lancaster canal, formed in 1796, passes the town; and it is connected with other parts of the county, and of England generally, by the North Union railway (22½ m. in length), which crosses the Ribble on a viaduct of five arches, 68 feet above the river, the Lancaster and Preston railway (20½ m. in length), the Preston and Longridge railway (7 m. long), the Bolton and Preston railway, not yet completed, and the Preston and Wyre railway, which last connects it with the new seaport of Fleetwood, at the mouth of Wyre harbour, now rapidly rising in importance. Large markets on Saturday, with others on Wednesday and Friday for fish, butter, and vegetables. Great fairs in Jan., March, Aug., and Nov.; the first of which, called the "Great Saturday," is celebrated for its show of horses.

Preston is a borough by prescription, and received its first charter from Henry II. By a subsequent charter, granted by Henry III., the officers of the borough were authorized to hold a guild merchant for the renewing of the freedom of the burgesses, and other purposes. This privilege is made the occasion of great festivity. For a long time after their first institution, the guilds were held at irregular periods; but they have now for more than a century been uniformly celebrated every twentieth year, commencing on the Monday next after the decollation of St. John, which generally happens in the last week of August. The last was held in 1832. Processions of the corporation, and the different trades in characteristic dresses, as well as of ladies, and females employed in the factories, take place on two of the days; and the amusements, which are varied and interesting, continue for a fortnight. But for civic purposes, the guild books are open for an entire month. Under the Mun. Reform Act, Preston is divided into six wards, its municipal officers being a mayor and 12 aldermen, with 36 councillors. Corporation revenue in 1839 (exclusive of £670 accruing from the sale of property), £4867. Quarter

## PRINCE EDWARD'S ISLAND.

and petty sessions are held under a recorder; and there is a court for the recovery of debts to any amount contracted within the borough. Quarter sessions for the hundreds of Amounderness, Blackburn, and Leyland, are held here, and there is a monthly county court. Preston has sent two members to the House of Commons since the reign of Edward VI., the right of voting, down to the Reform Act, being in the inhabitants at large. The Boundary Act enlarged the electoral limits, so as to include the township of Fishwick with the old borough. Registered electors in 1839-40, 6633.

Preston is supposed to have risen on the decay of the ancient *Rigetium*, or Ribchester, a city now reduced to the condition of a mere village, about 11 m. higher up the river, and it derived its name of *Priest's-town* from the number of religious houses established here, and of which there are still some remains. It was partly destroyed by Robert Bruce, in 1322. In the parliamentary wars of Charles I., its inhabitants declared for the king, and it was besieged and taken by Sir Thomas Fairfax. In 1715, the Jacobite insurgents took possession of the town, and erected barricades for its defence; but, after a brave resistance, they were compelled to surrender to the royalist force under General Wiles. In 1745, Preston was visited by the Pretender, on his retreat; but he was compelled to withdraw on the approach of the Duke of Cumberland. (*Baines's Hist. of Lancashire; Butterworth's Stat. Sketch of Lancashire*, p. 109-113; *Parl. and Bound. Rep.*)

Preston, county, Va. Situated in the N. part of the state, and contains 501 sq. m. Watered by Cheat river, the principal constituent of Monongahela river. It contained in 1840, 7459 neat cattle, 12,249 sheep, 9069 swine; and produced 2301 bushels of wheat, 17,877 of rye, 42,887 of Indian corn, 16,057 of buckwheat, 128,906 of oats, 35,209 of potatoes, 3892 pounds of tobacco, 27,132 of sugar. It had 11 stores, two fulling-mills, two woollen factories, two cotton factories with 90 spindles, 29 grist-mills, 28 saw-mills, one oil-mill, 11 tanneries, 22 distilleries, one printing office, one weekly newspaper. Pop., whites, 6743; slaves, 91; free coloured, 32; total, 8866. Capital, Kingwood.

Preston, p. t., New-London co., Ct., 45 m. S.E. Hartford, 363 W. Bounded W. and N.W. by Quinebang, Shetucket, and Thames river. It contains three churches, a Congregational, Episcopal, and Baptist; nine stores, one cotton factory with 200 spindles, two grist-mills, four saw-mills; 13 schools, 469 scholars. Pop. 1727.

PRESTONPANS, a bor. of barony, and seaport town of Scotland, co. Haddington, on the shore of the frith of Forth, 7½ m. E. Edinburgh. In 1835, the parish, which is one of the smallest in Scotland, had a population of 2467, of whom the borough may have about 1900. It is straggling and ill-built, consisting principally of a single street parallel to the frith of Forth. It derives its name from its having, for a lengthened period, had a number of salt-works or *pans* for the production of salt by the evaporation of the sea water, and for the refining of rock salt. The latter branch of the business is now the only one that is carried on. It has, also, a brewery, at which some of the best Scotch ale brought to the Edinburgh market is produced, a soap work, and two works for the manufacture of coarse pottery. There are extensive oyster beds in the vicinity of the town, whence the Edinburgh markets derive a large proportion of their supply. Morrison's Haven, the port of Prestonpans, about ¼ in. W. from the town, is a small creek, with not more than 10 feet water at springs. (*New Statistical Account of Scotland*, par. of *Prestonpans*.)

Near this village, on the 21st of September, 1745, the royal army, under Sir John Cope, consisting of about 2100 regular troops, was totally defeated and dispersed with great loss, by the Highlanders, who were but little superior in point of numbers, under the Pretender. The king's troops being panic struck, threw away their arms, and fled at the first fire, and were cut down almost without resistance. (*Johnston's Memoirs of the Rebellion*, p. 34-38.)

PRESTWICH-CUM-OLDHAM. (See *OLDHAM*.)

PREVESA, a town of Turkey in Europe, prov. Albania, at the entrance of the Ambracian gulf, 58 m. S.S.W. Yanina. Pop. 4000? It is ill built, badly paved, and dirty; but it is in a good situation for commerce, and was formerly the entrepôt of the trade of Epirus. On the isthmus, connecting the peninsula upon which it stands with the main land, are the remains of Nicopolis, consisting of the ancient walls, a theatre, some baths, and various other vestiges of antiquity. (*Burgess's Greece*, &c., i., 93-96; *Hobhouse, Hughes, &c.*)

PRINCE EDWARD'S ISLAND, (formerly *St. John's*), an island of N. America, belonging to Great Britain; in the gulf of St. Lawrence, principally between the 46th and 47th degs. of N. lat., and the 62d and 64th of W. long., from 20 to 25 m. E. New-Brunswick. Length, of a curved line, passing through its centre E. to W. about 140 in.; greatest breadth 34 m. Area estimated at 1,390,700 acres, or about

## PRINCE EDWARD.

2150 sq. m. Pop. about 33,000, principally Highland, Scotch, Irish, and Acadian French, with some English, Dutch, Americans, and Swedes. A chain of hills of moderate height partly intersects it; but the surface in general is level, or at most only undulating. It is well watered, and its shores are deeply indented with numerous bays. The climate is milder than in any of the surrounding British colonies, and appears to be favourable to longevity. The atmosphere is nearly free from the fogs prevalent in Cape Breton and the adjacent countries. Below the thin vegetable mould the soil is generally clay or loam, resting on a base of sandstone: there are some swamps, and pine barrens; but these bear only a small proportion to the whole surface. The island in general is well wooded, the principal trees being spruce, fir, beech, birch, and maple. Oak, ash, larch, &c., are scarce, and the quality of the first is very inferior. All kinds of grain and vegetables raised in England come to perfection. Wheat is grown in abundance, and the surplus is exported to Nova Scotia. Barley, oats, and beans, are said to be equal in weight and quality to any met with in the English markets. Flux of excellent quality is raised, and manufactured into linen for domestic use. Hemp will grow, but not to the same perfection as in the adjacent colonies. It is said, though we apprehend the statement must be taken with large qualifications, that had the natural advantages of this island been turned to proper account, it might at this time have been the granary of the British colonies, instead of barely supporting a poor and limited population. Of nearly 1,400,000 acres contained in the island, only 10,000 are said to be unfit for the plough; but only 100,000 are now under cultivation. The origin of this state of things is ascribed, in Lord Durham's Report, to the injudicious grants made to absentee proprietors, under conditions that have been totally disregarded. "The absent proprietors neither improve the land, nor will let others improve it. They retain it, and keep it in a state of wilderness." (Report, p. 70-86.) What land is under the plough, is cultivated in a very slovenly manner; though the establishment of an agricultural society of late years has done something to improve husbandry.

Pastures are good, and suitable for cattle and sheep; owing to the want of proper attention, hogs are said not to thrive so well as the former. Live stock used to suffer greatly from the ravages of bears, lup-cerviers, and other wild animals; but these are much less numerous now than formerly. The island has no mines. Its fisheries are, however, of some importance; the value of the fish cured in 1839 having amounted to £5340 sterling. But owing to the want of capital and industry, the Americans have an ascendancy in the fisheries. A good many ships are built in the colony; 69 vessels of the aggregate burden of 9934 tons having been built and registered in 1839. Total value of exports from the colony, in 1837, £7271, timber, deals, &c., making £7074 of this amount. Total value of imports, £1946.

The constitution is nearly similar to that of Nova Scotia, and in all civil matters independent of any jurisdiction in America. The government and legislature is vested in a lieutenant-governor, a council of nine members, and a House of Assembly of 18 representatives, elected by the people. The governor is chancellor of the court of chancery; the chief justice and attorney-general are appointed by the sovereign; and the high sheriff is appointed annually by the local government. In the supreme court of judicature all criminal and civil matters of consequence are tried by jury. Cases of petty debt and breaches of the peace are decided by special magistrates and justices of the peace. There are two superior schools in Charlotte town, and about 40 district schools. Charlotte town, the capital and seat of government, on Hillsborough river, near the S. coast, has one of the best harbours in the gulf of St. Lawrence. The town, on gently rising ground, is regularly built, and clean, with about 3500 inhabitants. The courthouse, Episcopal and Scotch churches, several chapels, the barracks, and the fort, are its only conspicuous public buildings.

This island was taken from the French in 1758. It was annexed with Cape Breton to the government of Nova Scotia in 1763, but since 1768 has formed a separate colony. (*Macgregor's America*; *Durham's Report on N. America*, &c.)

PRINCE EDWARD, Co., Va. Situated centrally toward the S. part of the state, and contains 375 sq. m. Bounded N. by Appomattox river, by branches of which it is drained. It contains Hampden Sidney college, 1 m. from the courthouse, which was founded in 1783, has a president and four professors, or other instructors, 65 students, and 8000 volumes in its libraries. The commencement is on the fourth Wednesday in September. A preparatory academy is connected with the institution. There were in the county in 1840, 7634 neat cattle, 11,698 sheep, 15,438 swine; and produced 57,293 bushels of wheat, 303,997 of Indian corn, 129,210 of oats, 13,147 of potatoes, 3,106,950 pounds of to-

## PRINCE OF WALES'S ISLAND.

bacco, 11,121 of cotton. It had 33 stores, 22 flouring-mills, 28 grist-mills, eight saw-mills, three tanneries; two colleges, 66 students; three academies, 52 students; 28 schools, 465 scholars. Pop.: whites, 4923; slaves, 6576; free coloured, 570; total, 14,069. Capital, Prince Edward, C. H.

PRINCE FREDERICKTOWN, p. v. capital of Calvert co., Md., 46 m. S. by W. Annapolis, 76 W. Situated on Parker's creek, which flows into Chesapeake bay. It contains a courthouse, jail, a church, several stores and about 500 inhabitants.

PRINCE GEORGE, county, Va. Situated toward the E. part of the state, and contains 305 sq. m. Bounded N.E. by James river, N.W. by Appomattox river. Drained by Blackwater river. It contained in 1840, 3095 neat cattle, 2727 sheep, 5911 swine; and produced 31,439 bushels of wheat, 176,640 of Indian corn, 35,231 of oats, 6463 of potatoes, 115,000 pounds of tobacco, 23,340 of cotton. It had eight stores, nine grist-mills, two saw-mills, seven distilleries; six schools, 117 scholars. Pop.: whites, 2692; slaves, 4014; free coloured, 469; total, 7175. Capital, Prince George, C. H.

PRINCE GEORGE'S, county, Md. Situated in the W. part of the state, and contains 375 sq. m. Bounded E. by Patuxent river, W. by Potomac river. A part of the district of Columbia was taken from this county. It contained in 1840, 10,432 neat cattle, 13,833 sheep, 24,201 swine; and produced 89,147 bushels of wheat, 32,209 of rye, 507,266 of Indian corn, 107,070 of oats, 21,570 of potatoes, 9,250,423 pounds of tobacco. It had 31 stores, one flouring-mill, 19 grist-mills, six saw-mills, one printing-office, one weekly newspaper: four academies, 42 students; 12 schools, 253 scholars. Pop.: whites, 7823; slaves, 16,636; free coloured, 1080; total, 15,539. Capital, Upper Marlboro'.

PRINCE OF WALES'S ISLAND (native PULO PINANG, 'the Arca island'). An island and British settlement in the eastern seas, about 2 m. from the W. coast of the Malay peninsula, lat. 5° 15' N., long. 100° 25' E. Length, N. to S., nearly 16 m.; breadth varying from 8 to 12 m. Area about 160 sq. m. Pop., in 1836, 38,450, principally Malays, Chinese, and Chulihais, the Europeans being under 800. The N. part of the island is mountainous, and a range of hills runs through its centre, declining in height as it approaches the S.W. extremity. But two thirds of the whole surface are level, or of gentle inclination, and like the hills, covered with woods. The thermometer, in the plains, ranges between 76° and 90° Fahr., and on the higher hills at from 64° to 76°. Except in a few places, Pinang is considered very healthy. Refreshing showers fall at short intervals throughout the year. The climate of the high lands is said to resemble that of Funchal, in Madeira. The geological formations are primitive. Nearly all the hills are of granite; and the subsoil, where not alluvial, is principally the detritus of that rock. Tin ore is found at the base of the mountains. The island produces a good deal of timber, well adapted for ship-building and masts; and fine fruits; and it is well adapted for the growth of spices. As a commercial mart, this settlement is much inferior to Singapore; but, according to Mr. Newbold, "it bids fair by its plantations of nutmegs and cloves, to render us independent of the spice islands which we have given up to Holland." (*Malacca*, &c.)

The attention of the agriculturists is now almost exclusively directed to the improvement and extension of the spice-plantations, and dry waste land for that purpose may be obtained from the government on leases of 40 years, at a small quit-rent. The annual produce of the staple articles is estimated as follows:

Articles.	Quantities.	Value in Spanish Dollars.
Nutmegs . . . . .	400	12,000
Mace . . . . .	130	18,200
Cloves . . . . .	200	4,000
Pepper . . . . .	16,000	80,000
Total value . . . . .		114,200

The value of the nutmegs, mace, and cloves, exported in the years 1836-37, amounted to 156,800 rupees. A good many cocoa-nuts are grown; and gambir, indigo, cotton, areca, and tobacco in small quantities. Coffee, sugar-cane, betel nut and leaf, rice, cotton, and ginger, are also raised. The trade of Pinang is chiefly that of transit, between Great Britain and British India, on the one hand, and the Malay peninsula and Tenasserim, provinces Siam, Anam, Borneo, Java, Sumatra, China, &c., on the other. A considerable trade in cotton cloths is kept up by the Chulihais with the Coromandel coast.

The revenue of Pinang and province Wellesley is derived from lands, customs, licences, and the sale of the government monopolies of opium, spirits, pork, betel-leaf, and the market. In 1835-36 it amounted to 178,930 rupees; but the disbursements, not including the expenses of the military and the convict establishment, amounted to 253,328 rupees, leaving a deficit of 74,398 rupees.

## PRINCESS ANN.

Province Wellesley, a dependency of this settlement, is a strip of coast land on the Malay peninsula, opposite Pinang, 35 m. in length, by about 4 m. in breadth. Area, 140 sq. m. Pop., in 1836, 47,555, of whom 43,000 were Malay. It has an undulating surface, chiefly of alluvial soil, and a healthy climate. Its principal products are rice, pepper, sugar, and cocoa-nuts; and the gross value of its surplus agricultural produce is estimated at 80,000 Spanish dollars. It supplies Pinang with cattle and poultry. These settlements are under the Bengal presidency, and governed by a resident at George Town, and an assistant resident in province Wellesley.

George Town, the capital, at the N.E. extremity of Pinang, has a population of about 13,000. It is built on level ground, and consists of a long and broad street, intersected by others of inferior dimensions. It has a fort, a handsome church, an Armenian chapel, two Roman Catholic chapels, a courthouse, jail, public school, poor-house, the governor's offices, and the civil and military hospitals. An English weekly newspaper is published in the town, and a few shops are kept by Europeans, but the major portion by Chinese. There are cantonments for the native troops near the town. Penang was purchased by the East India company in 1786, and province Wellesley in 1800. *Newbold's Malacca, &c.*

PRINCESS ANN, county, Va. Situated in the S.E. part of the state, and contains 374 sq. m. Bounded E. by the Atlantic, N. by Chesapeake bay. Back bay, a branch of Currituck sound, sets up in its S. part. It contained in 1840, 10,588 neat cattle, 6822 sheep, 20,761 swine; and produced 6655 bushels of wheat, 298,960 of Indian corn, 84,771 of oats, 37,029 of potatoes, 951 pounds of cotton. It had five stores, 16 grist-mills, three tanneries, 10 distilleries; one academy, 49 students; eight schools, 179 scholars. Pop.: whites, 3896; slaves, 3087; free coloured, 202; total, 7285. Capital, Princess Ann C. H.

PRINCESS ANN, p. v., capital of Somerset co., Md., 110 m. S.E. Annapolis, 150 W. Situated on the E. side of Manokin river, 18 m. from its entrance into Chesapeake bay, and is near the head of tide water. It contains a courthouse, jail, a bank, three churches, a Presbyterian, Episcopal, and Methodist, and about 120 dwellings. It is laid out with streets crossing each other at right angles, and neatly built, with brick or with wood houses, painted white. Washington academy is in the vicinity.

PRINCESS ANN, C. H., p. v., capital of Princess Ann co., Va., 132 m. S.E. Richmond, 256 W. It contains a courthouse, two Methodist churches, one store, 20 dwellings, and about 150 inhabitants.

PRINCETON, p. t., Worcester co., Mass., 16 m. N. by W. Worcester, 47 m. W. by N. Boston, 417 W. Drained by branches of Nashua river. It contains Wachusett mountain, an isolated summit, 3000 feet above tide water, and 1900 feet above the surrounding country. The prospect from its top is extensive, various and grand. The township contains four churches, a Congregational, Presbyterian, Baptist and Universalist, three stores, three grist-mills, nine saw-mills, two tanneries; 10 schools, 404 scholars. Pop. 1347.

PRINCETON, p. b., Mercer co., N. J., 11 m. N.E. Trenton, 177 W. It is a neat and pleasant village, chiefly built on one extended street, and contains four churches, two Presbyterian, an Episcopal, and an African, a number of stores, 200 dwellings, and about 1400 inhabitants, exclusive of those connected with the literary institutions. The Delaware and Raritan canal passes within a mile of the bor., and have the office of the company in the village. It is on elevated ground, in a healthy location, and distinguished as a pleasant place of residence. The society is intelligent and refined. The college of New-Jersey was founded at Elizabethtown in 1746, was removed to Newark in 1748, and it was permanently located at Princeton in 1756. It has had a list of venerable presidents, and has educated many of the distinguished men of the country. It has a president and 12 professors or other instructors, 2554 alumni, of whom 453 have been ministers of the gospel, 190 students, and 12,500 volumes in its libraries. The commencement is on the last Wednesday in September. Its buildings are convenient, spacious and neat. The Theological seminary of the Presbyterian church is also located here, founded in 1812, has four professors, 109 students, 753 have completed their course, and there are 7000 volumes in its libraries. It has spacious and convenient buildings, and is one of the most respectable institutions of the kind in the country. Princeton township according to the United States census of 1840, had nine stores, capital \$47,000; one lumber-yard, capital \$2500; two grist-mills, one saw-mill, two printing-offices, one bindery, one weekly newspaper; two colleges, 328 students; two academies, 90 students; four schools, 110 scholars. Pop. 3055. In the immediate neighbourhood of this place, was fought the memorable battle of Jan. 3rd, 1777, in which the British army was

## PROVIDENCE.

roured by the Americans, under General Washington, immediately subsequent to the battle of Trenton, and when General Mercer was mortally wounded. In the college chapel is a large painting, commemorative of this event.

PRINCE WILLIAM, county, Va. Situated in the N.E. part of the state, and contains 370 sq. m. Bounded N.E. by Occoquan river, E. by Potomac river. It contained in 1840, 6614 neat cattle, 8202 sheep, 8900 swine; and produced 47,471 bushels of wheat, 3704 of rye, 180,463 of Indian corn, 2181 of buckwheat, 105,376 of oats, 6476 of potatoes, 4974 pounds of tobacco. It had 18 stores, one cotton factory with 1088 spindles, 10 flouring-mills, 13 grist-mills, 10 saw-mills, five distilleries; five schools, 118 scholars. Pop.: whites, 4867; slaves, 2767; free coloured, 510; total, 8144. Capital, Brentsville.

PROSPECT, p. t., Waldo co., Me., 53 m. E. by N. Augusta, 649 W. Situated on the W. side of Penobscot river, at its entrance into Penobscot bay. Incorporated in 1794. It has 15 stores, one fulling-mill, two grist-mills, 12 saw-mills, two tanneries; 20 schools, 1416 scholars. Pop. 3492. Considerable ship-building is carried on.

PROVENCE, one of the former provs. of France, in the S.E. part of the kingdom, now subdivided into the depts. Basses-Alpes, Bouches-du-Rhone, Var, and a portion of Vaucluse.

PROVIDENCE, county, R. I. Situated in the N. part of the state, and contains 380 sq. m. Watered by Pawtucket, or Blackstone, Wanasquackett, Mashusuck, and Pawtuxet rivers, which afford extensive water-power. It is particularly distinguished for its manufactures. It contained in 1840, 13,157 neat cattle, 11,861 sheep, 10,669 swine; and produced 641 bushels of wheat, 16,870 of rye, 157,577 of Indian corn, 1573 of buckwheat, 13,374 of barley, 16,249 of oats, 347,389 of potatoes. It had 78 houses in foreign trade, capital \$1,588,850; 550 retail stores, capital \$1,987,200; 19 lumber-yards, capital \$185,500; capital invested in the fisheries, \$130,000; five furnaces, 18 fulling-mills, six woolen factories, 130 cotton factories, with 367,251 spindles, 15 dyeing and printing works, 59 grist-mills, 73 saw-mills, two paper-mills, two rope-walks, eight tanneries, two distilleries, two breweries, 10 printing-offices, six binderies, two daily, five weekly, and four semi-weekly newspapers, and two periodicals. Total capital in manufactures \$7,165,887; two colleges, 324 students; 37 academies, 2935 students; 209 schools, 9705 scholars. Pop. 50,073. Capital, Providence. The above statistics, of course, include those of Providence city.

PROVIDENCE, city, port of entry and semi-capital of Rhode island, is situated in 41° 49' 22" N. lat., and 71° 24' 48" W. long., and in 1° 23' 24" E. long. from W., 30 m. N. Newport, 42 m. S.S.W. Boston, 55 m. N.E. New-London, 70 m. E. Hartford, 173 m. E. New-York, 396 W. The population in 1820 was 11,767; in 1830, 16,832; in 1840, 23,171. Of these 929 were employed in commerce; 3948 in manufactures and trades; 422 in navigating the ocean; 90 do. rivers and canals; 165 in the learned professions.

Its present limits contain an area of about 9 square miles. Its compact part is nearly equally divided by Providence river and cove, which is here in fact an arm of Narragansett bay, across which are convenient bridges, connecting the two parts of the town. On the east side of the place flows Seekonk river, which is the estuary of Pawtucket or Blackstone river. Over this estuary are two bridges, the one called Indian bridge, and the other Central bridge, connecting the place with Seekonk, in Massachusetts. It was, at the census of 1840, the second city in population in New-England. The city is handsomely laid out, though not with entire regularity. On the E. side are three principal streets running parallel with the river and cove, which are Water-street, Main-street, and Benefit-street. On Main-street stand a number of public buildings, and a considerable proportion of the stores and offices. This is an ancient and populous street, and contains many elegant, stately and substantial brick edifices. Market-square extends from this street to a bridge which connects the two parts of the town. On this side, the ground rises abruptly, and the cross streets have a steep ascent. Benefit-street has an elevated and slightly situation, and east of it the city is laid out with considerable regularity, the streets generally running in an east and west direction, crossed by others, nearly at right angles. On this side of the water are the governor's official residence, the buildings of Brown university, the atheneum, most of the banks and insurance offices, and many elegant residences of the wealthy citizens, enjoying fine prospects. On the west side of the river, the ground is more level, the streets are broad, and the plan of them more regular. On this side the two principal streets are Westminster and Weybosset-streets, the latter somewhat serpentine in its direction. Numerous other streets are well-built and populous.

Among the public buildings of Providence are a state-house built of brick, of not very imposing appearance, a

## PROVIDENCE.

city hall, jail, and state prison, hospital, three market-houses, a custom house, atheneum, the buildings of Brown university, a high school, theatre, six public school buildings, 30 churches, seven Baptist, three Congregational, two Unitarian, four Methodist, two Episcopal, a New Jerusalem, Free-will Baptist, a Universalist, Friends, Christian, two Roman Catholic, coloured, a Methodist, Baptist, and Episcopal, a coloured Bethel, and a seamen's Bethel. Several of the churches have fine edifices, with lofty spires. The first Baptist, two Unitarian, one Congregational with its chaste portico and dome, and one Episcopal with its square Gothic tower and pinnacles, add much to the beauty of the city. The buildings of Brown university occupy a commanding situation on Prospect-street, at the head of College-street, on the E. side of the river. They are four in number, University hall, Hope college, Manning hall, and Rhode Island hall. Manning hall has a Doric portico in front, and is occupied by the chapel and library. This institution which derived its name in 1894, from Nicholas Brown, Esq., its principal benefactor, was originally founded in Warren in 1766, and removed to Providence in 1770. The president and a majority of the trustees are required to be Baptists. It has a president and eight professors, 1496 alumni, of whom 474 have been ministers of the gospel, 167 students, and 17,200 volumes in its libraries. The commencement is on the first Wednesday in September. It has an extensive philosophical and chemical apparatus; and the cabinet of mineralogy and natural history are very complete, and occupy Rhode Island hall, which has also a number of spacious lecture rooms. A university grammar school is connected with the institution. The atheneum is a handsome Grecian Doric edifice of 40 feet front and 78 feet deep, and is occupied in the basement by the Franklin and Historical societies, the first of which has an extensive collection of models, philosophical instruments and curiosities; and the latter, a valuable collection of books, papers, and records. The upper story is occupied by the atheneum society, with its valuable library, reading room, librarians office and committee room. The cost of the building and its furniture was about \$20,000, and of the library about \$20,000. The arcade, though not strictly a public building, deserves to be mentioned as one of the finest of its kind in New-England. It extends from Weybosset-street on the one front to Westminster-street on the other, having an imposing Doric portico of six granite columns of one entire stone, 3 feet in diameter and 25 feet high, on each front. It is 325 feet long, 80 feet broad, and 72 feet high, divided into three stories, containing 82 shops or warehouses in the interior, and the whole is lighted by a glass roof from above. It is built of granite, and cost \$130,000. The Friends boarding school, belonging to the yearly meeting of this denomination in New-England, is a flourishing high school, situated three quarters of a mile N.E. of the university, has a spacious edifice of stone and brick in a commanding situation, has 10 instructors, and about 200 pupils.

Providence has 26 religious and benevolent societies of various kinds, some of which are very efficient. There are in the place 21 banks, with an aggregate capital of \$7,082,750, and three insurance companies, with a total capital of \$390,000, besides three mutual insurance companies without a definite capital.

Providence possesses great commercial facilities, which have been well improved. The harbour, at the head of Narragansett bay, 33 m. from the ocean, is spacious, and has a sufficient depth of water for the largest ships. There belong to the port 106 vessels, viz., 17 ships, 14 barques, 24 brigs, 27 schooners, and 24 sloops. The registered licensed and enrolled tonnage of the port in 1840, was 16,610 tons. Formerly the East India trade was extensive, but is now less considerable than formerly. The trade is principally with parts of Europe, with the West Indies, particularly the island of Cuba, and with the southern states. The extensive cotton manufactories in the vicinity require a large supply of cotton, and furnish a great amount of cotton goods to be sent abroad. There are two lines of packets which ply regularly to New-York; two lines to Albany; one line to Philadelphia, and one to Baltimore. These several lines contain 23 vessels, of different descriptions. A railroad 41 m. long extends to Boston, and with this is connected a daily line of steamboats to the city of New-York, during the season of navigation, which is most of the year. A railroad extends from Providence to Stonington, which has also a connected line, by steamboats, to New-York. When the Long Island railroad shall be completed, as it is expected to be by the fourth of July 1845, that, with the railroad from Stonington through Providence to Boston, will constitute the most speedy route between New-York and Boston. The Blackstone canal extends from Worcester to Providence, 45 m., passing through a region of manufactories, scattered along the whole course of the Blackstone and Pawtucket rivers.

According to the census of 1840, there were in Providence

## PRUSSIA.

23 commercial and 55 commission houses in foreign trade, with a capital of \$1,532,850; 392 retail stores, with a capital of \$1,758,040; 18 lumber-yards, with a capital of \$170,500; the fisheries employed a capital of \$130,000; machinery was manufactured to the amount of \$270,000; the precious metals to the amount of \$147,550; one fulling-mill, and one woollen factory employed a capital of \$10,000; 32 cotton factories with 76,554 spindles, and eight dyeing and printing works, employed a capital of \$1,449,000; three tanneries employed a capital of \$22,000; two distilleries and two breweries, a capital of \$63,000; paints and drugs employed a capital of \$20,000; one paper-mill produced to the amount of \$15,000; five grist-mills employed a capital of \$6500; eight printing-offices, five binneries, two daily, three weekly, and four semi-weekly newspapers, and two periodicals, employed a capital of \$23,100. The total amount of capital employed in manufactures was \$3,012,538. There were two colleges, 324 students; 21 academies, 2299 students; 42 schools, 6629 scholars.

Providence was first settled in 1636 by Roger Williams, who was banished from Massachusetts on account of his religious opinions, and who adopted in his new establishment the principles of universal toleration. It was incorporated as a town in 1649. It suffered considerably in the Indian war of 1675. In September 23rd, 1815, a southerly storm drove an unusual tide into the harbour, raising the water 12 feet higher than the usual spring tides, spreading devastation and ruin along the wharves, destroying the bridge, demolishing one church, overturning houses and stores, and doing immense damage to the shipping. The total loss was estimated at over a million of dollars. In 1831 Providence was chartered as a city, and is governed by a mayor, six aldermen, and 24 common councilmen.

PROVIDENCE, p. t., Saratoga co., N. Y., 15 m. N.W. Ballston Spa, 41 m. N.W. Albany, 409 W. Watered by Sacandaga river. It has two stores, one woollen factory, three grist-mills, 30 saw-mills, two tanneries; nine schools, 313 scholars. Pop. 1507.

PROVIDENCE, p. t., Luzerne co., Pa., 146 m. N.E. Harrisburg, 250 W. Watered by Lackawannock creek. It abounds with anthracite coal, and contains six stores, three flouring-mills, eight saw-mills. Pop. 1169.

PROVIDENCE, one of the Bahama islands, which see.

PROVINCETOWN, p. t., Barnstable co., Mass., 123 m. S.E. Boston, 524 W. Occupying the extreme N.W. part of cape Cod. It has a good harbour within the point of the cape, with a sufficient depth of water for the largest ships. The inhabitants are chiefly employed in the cod and mackerel fisheries. Salt is extensively manufactured. It contains 15 stores, two lumber-yards; two academies, 109 students; eight schools, 667 scholars. Pop. 2122.

PRUSSIA, an important European kingdom, between the 49th and 56th deg. N. lat., and the 6th and 23d deg. E. long. The principal part of the Prussian dominions lies continuously along the S. shore of the Baltic, between Russia and Mecklenburg, comprising the N. part of what was formerly Poland, and most part of the N. of Germany. The inland frontier of this part of the monarchy on the E. and S. is sufficiently connected; but on the W. side it is very ragged, some small independent states being almost entirely surrounded by the Prussian dominions. But exclusive of this principal portion, there is an extensive Prussian territory on both sides the Rhine, divided into the provinces of Westphalia and Rhine. This portion is separated from the rest of the monarchy, or from what may be called the Eastern states, by Hesse Cassel, part of Hanover, Brunswick, &c. The Canton of Neuchâtel, in Switzerland, and some detached territories in Saxony, also belong to Prussia.

Eastern Prussia has on the N. the Baltic; on the E. Russia, Russian Poland, and Cracow; and on the S. and W. the Austrian states of Galicia, Moravia, and Bohemia, with Saxony and other German states. West Prussia, or the provinces on the Rhine, have on the N. and E. Hanover and other German states; on the S. France; and on the W. Belgium and the Netherlands. From the extreme eastern frontier of Prussia to Aix-la-Chapelle, in an E.N.E. and W.S.W. direction, the distance is about 75 m.; and from the promontory on the Baltic, above Stralsund, to the extreme southern frontier of Silesia, in a N.E. and S.W. direction, the distance is 404 m. Owing, however, to the irregularity of the frontier, and the intervention of other countries, these measurements give no information as to the extent of the monarchy.

The disjointed state of the dominions of Prussia detracts materially from her power. The possession of Warsaw gives Russia a position whence she may attack the very centre of the monarchy. An alliance with Saxony would bring an Austrian army within a few days' march of Berlin; and the Rhenish provinces are exposed to be overrun by France. The government, aware of the weakness occasioned by the circumstances now alluded to, have systematically laboured to give a more compact form to its

# PRUSSIA.

dominions. But they have only partially succeeded; and it is, in consequence, necessary for the public security that the military establishment should be placed on a very imposing footing.

*Aggrandisement of Prussia.*—The rise of the Prussian power has been rapid and extraordinary. The kings of Prussia are descended from petty German princes, who, in the 14th century, were burgraves of Nuremberg. In 1415, Sigismund, emperor of Germany, sold the marquise (afterwards electorate) of Brandenburg to Frederick, one of these burgraves, for 400,000 ducats, who, by this purchase, laid the foundation of the future grandeur of his family. (Pffefel, *Histoire d'Allemagne, anno 1417*.) In 1515, Albert, margrave of Brandenburg, was elected grand master of the Teutonic knights, who then possessed ducal Prussia; and by a treaty concluded in 1525, this territory was secularised and erected into a duchy in favour of Albert and his successors. (Pffefel, 1525.) In 1657, Prussia was acknowledged by Poland to be a free and independent state; and, after other aggrandisements, it was advanced to the dignity of a kingdom in 1700. Part of Pomerania was not long after added to Prussia.

But notwithstanding these acquisitions, when Frederick the Great ascended the throne, in 1740, his disjointed dominions did not contain 2,500,000 inhabitants, who had made but little progress in the arts, or in the accumulation of wealth. But this extraordinary man, with no extrinsic assistance, and by mere dint of superior talent, wrested, in the early part of his reign, the valuable and extensive province of Silesia from the house of Austria. He afterwards defended himself, during the seven years' war, against the combined efforts of Austria, Russia, and France, and forced these powers to conclude a treaty, by which Silesia was solemnly guaranteed to Prussia. In the latter

part of his reign, in conjunction with Russia and Austria, Frederick planned, and partly carried into effect, the partition of Poland, acquiring as his share the western parts of Prussia, and secured in addition to the increase of territory, an unrestricted communication between the different great divisions of his kingdom.

By these different acquisitions, Prussia, at the death of Frederick, in 1786, had been increased in size nearly a half; while, owing to the superior fertility of the conjoined provinces, and the improvement effected in every part of his dominions, after the peace of 1763, the population had increased, according to the estimate of the Prussian writers, to about 6,000,000.

Prussia acquired by the subsequent partition of Poland in 1792, and its final dismemberment in 1795, a great extension of territory, including the important city of Dantzic, and upward of 2,000,000 inhabitants. In addition to this, she acquired the bishopric of Paderborn and the principalities of Bayreuth and Anspach, with several lesser districts in Germany; so that in 1805, according to the statement of Krug, she contained nearly 5000 geographical square miles of territory, and a population of 9,640,000.

Her disastrous contest with France in 1805, and her subsequent humiliation, are well known. But the spirit of the people was not subdued; and after Napoleon's campaign in Russia, the population rose *en masse*, and the zeal and bravery of the Prussians were mainly instrumental in effecting the final overthrow of Napoleon. At the general peace of 1815, Prussia became more powerful than ever. She recovered all her former possessions, except a portion of her Polish dominions assigned to the kingdom of Poland; but this was more than compensated by valuable acquisitions in Saxony, Pomerania, and the Rhenish provinces.

ACCOUNT of the Provinces and Regencies of the Prussian Monarchy in 1837, specifying their Extent in Geographical and British Square Miles; their Population in 1816, 1825, and 1837, and the Density of the Population per Geographical Square Mile in 1837.

## PRUSSIA.

Considering, however, the importance of Prussia, as a counterpoise to Russia on the one hand, and to France on the other, it were to be wished that her territories were both more extensive and more compact. One of the greatest faults committed by the congress of Vienna was the diminution of the acquisitions of Prussia in Poland. This was to be regretted, as much on account of the general interests of Europe, which requires that Prussia should be a power of the first order, as of the inhabitants of the provinces separated from her dominions.

**Divisions and Extent of the Country. Population.**—The Prussian monarchy is divided into eight provinces, and these again into 25 regencies, which are farther subdivided into 335 circles. Each regency takes its name from its principal city, as is seen in the preceding Table, which also shows their extent and population at different epochs.

**Face of the Country. Mountains.**—The surface of the Prussian states is generally flat. With the exception, indeed, of part of the Hartz mountains, in the province of Saxony, the Teutoburger Wald, and some other mountains in Westphalia and Saxony, the volcanic districts in it and the lower Rhine, and the Riesengebirge, or Giant's mountains, on the S.W. confines of Silesia, there is no other tract that is more than hilly. Prussia is, in fact, a country of vast plains; and is in most parts so very level, that many marshes and small lakes have been formed by the inundations of the rivers. The eastern, or principal part of the monarchy slopes imperceptibly from the S. frontier toward the Baltic, the shore of which is low and sandy. From this circumstance, and the nature of the soil, which in many places consists of little else than sea mud or loose sand, some geologists have supposed that the sea had at one time over-spread the greater part of its surface; and there would seem to be considerable plausibility in the supposition. At a comparatively recent period the country was covered in most parts with immense forests, of which there are still very extensive remains. These, when they belong to the crown, are under the control of the administration of forests.

**Soil.**—The quality of the soil is very various. In Brandenburg and Pomerania it is generally poor: in many parts, indeed, it consists of tracts of loose barren sand, diversified with extensive heaths and moors; but, in other parts, particularly along the rivers and lakes, there is a good deal of meadow, marsh, and other comparatively rich land. In Ducal Prussia and Prussian Poland, including the province of Posen, the soil consists generally of black earth and sand, and is in many parts very superior. But Silesia, and the Saxon and Rhenish provinces, are naturally, perhaps, the most productive. The plain of Madgeburg, on the left bank of the Elbe, is, perhaps, the most fertile and best cultivated district of the monarchy.

**Rivers and Lakes.**—Prussia is extremely well watered. The Rhenish provinces are traversed by the Rhine, while their E. frontier is partly formed by the Weser. The Elbe traverses the Saxon provinces; the Oder, which is almost entirely a Prussian river, runs through the whole extent of the monarchy, from the S. frontier of Silesia to the Isle of Usedom, where it falls into the Baltic. Polish Prussia (or Posen) is watered by the Wartha; West Prussia by the Vistula; and Ducal Prussia by the Pregel and Niemen. And, besides the above, there are many other large rivers, as the Ems, Moselle, Spree, Havel, Netz, &c.

Owing to the flatness of the country through which they flow, none of the great rivers are interrupted by cataracts, and they are all navigable—the Rhine, Elbe, and Vistula throughout their whole course in the Prussian dominions: the Oder is navigable, for barges, as far as Ratibor in S. Silesia; and the Pregel and Niemen to a considerable distance inland. The establishment of steam-packets on these rivers, and the freeing of the navigation of the Rhine and the Elbe from the oppressive tolls and regulations by which it was formerly obstructed, have already been, and will no doubt continue to be, of vast service to the country. Canals have also been constructed, connecting the Elbe, the Oder, and the Vistula; so that goods shipped at Hamburg may be conveyed by water to Dantzic, and conversely. (See the accounts of the above rivers, under their different names.)

Lakes are exceedingly numerous, particularly in Ducal Prussia and Pomerania. There are also along the coast several large bays, or rather lagoons, communicating with the sea by narrow mouths, and possessing more of the character of fresh-water lakes than of arms of the sea. They are denominated *Haffs*, the principal being the Curische Haff and the Frische Haff, on the coast of Ducal Prussia, and the Haff at the mouth of the Oder.

**Seaports.**—The principal seaports are Memel, Königsberg, or rather Pillau, Dantzic, Stettin, and Stralsund. With the exception of Stettin, or rather of its outport, Swinemunde, the water at these ports is rather shallow, seldom exceeding from 10 feet to 12 feet. But at Swinemunde there are from 19 feet to 21 feet.

**Climate.**—The climate of Prussia is not less various than

the soil. Along the Baltic it is moist, and, in Ducal Prussia especially, the winter is long and severe. It is also severe in the S. parts of Silesia, contiguous to the Carpathian mountains. In N. Silesia; Brandenburg; and the Saxon and Rhenish provinces, it is comparatively mild.

**Minerals.**—The Prussian monarchy is richer in minerals than might have been anticipated from its flatness. Iron is the most generally diffused. It is very extensively wrought in Silesia, principally on account of the crown, but also by private individuals. The iron-works in the Rhine provinces, near Dortmund, Solingen, Iserlohn, &c., and those near Schmiedeburg, Tarnowitz, Sprottau, &c., in Silesia, are very extensive. Coals are very abundant in the Rhenish provinces, Saxony, and parts of Silesia, and large quantities are annually produced. Salt, which is a government monopoly, is produced principally in the Saxon provinces, which also yield considerable quantities of copper, and some silver. Silesia furnishes annually large quantities of zinc, lead, and tin; but the last-mentioned metal is partly, also, supplied by Brandenburg. Amber has long been known as a product of Ducal Prussia. It is principally found along the low narrow tongue of land between the Curische Haff and the sea.

If we distinguish the mineral products into, I. metals; II. combustible minerals; III. stones; IV. clay, sand, earth; V. salt, alum, &c.—we have in Prussia.

I. Metals.—*Silver*, in Saxony (Mannfeld), Westphalia (Siegen), Silesia. *Copper*, Saxony (Mannfeld), Westphalia (Siegen), Silesia. *Lead*, Silesia, Rhine, Westphalia, Saxony. *Iron and steel*, in every province, but principally in the mountains of Silesia, Westphalia, and Rhine. *Cobalt*, Westphalia (Siegen) and Saxony. *Arsenic*, Silesia. *Calamine and zinc*, Silesia, Rhine, and Westphalia.

II. Combustible Minerals.—*Sulphur*, Silesia. *Amber*, Prussia. *Pit-coal*, Silesia, Westphalia, Rhine, Saxony. *Brown-coal*, Saxony and Rhine. *Turf*, in every province, principally in Brandenburg.

III. Stones.—*Amethyst, agate*, in Silesia. *Alabaster*, Saxony. *Marble*, Westphalia, Saxony, Rhine, Silesia. *Volcanic tephros*, Rhine province, and very important. *Serpentine stone*, Silesia. *Of sandstone, mill-stones*, in Silesia, Saxony, Westphalia, Rhine. *Grinding, or whet-stones*, in Westphalia, Silesia, Saxony. *Limestone*, in Silesia, Westphalia, Rhine, Saxony, Brandenburg. *Gypsum* in the same provinces as limestone. *Slate*, Westphalia and the Rhine.

IV. Clay, Sand, Earths.—*Porcelain earth*, in Saxony, near Halle. *Pipe-clay and fuller's earth*, Silesia. *Sand*, suitable for the fabrication of glass, in all provinces. *Brick-clay and marl*, in all provinces.

V. Salt.—*Kitchen salt*, in Saxony, Westphalia, Pomerania, Rhine. *Alum*, Silesia, Saxony, Westphalia, Rhine, Brandenburg. *Salt-petre*, in some provinces.

In 1835 there were produced in the monarchy 184,280 cwt. zinc, 1,653,297 cwt. iron, 10,896,433 tons coal, 181,534,150 lbs. salt, &c. The total value of the minerals produced in that year has been estimated at 9,196,366 rix-dollars.

(See, for farther details, the valuable and important work of the able statistical writer, Von Dietrich, *Statistische Übersicht der wichtigsten Gegenstände der Verkehre und Verbrauchs im Preussischen Staate*, Berlin, 1836.)

**Vegetable and Animal Productions.**—These do not differ materially in Prussia and Great Britain. Rye and wheat, with buckwheat, oats, barley, potatoes (now very extensively cultivated), and flax and hemp, are the principal products of Prussian agriculture. About 700,000 emers of very fair wine are made in the Rhenish provinces. It is mostly consumed in the country, the exports being so very trifling as not to exceed from 5000 to 6000 emers a year. The average price of Prussian wine may be estimated at from 15 to 20 rix-dollars per emer. The animals of Prussia are the same with those of this country, except that wolves and wild boars, which were long since exterminated in Great Britain, continue to exist in considerable numbers in the Prussian territories.

**Agriculture.**—Down to a comparatively recent period, the state of landed property in Prussia, and the condition of the occupiers of the soil, was similar to its state and their condition in most parts of continental Europe. The country was mostly divided into pretty considerable estates; and, down to 1807, none but nobles or privileged persons could acquire landed property. Such parts of an estate as were not in the immediate possession of the lord, were held by occupiers, in a sort of predial slavery, on condition of their paying a certain rent, consisting sometimes of services to be performed on the lord's land, sometimes of the delivery of a certain proportion (generally a half) of the produce, and more frequently, perhaps, of both the one and the other. In some places the tenants had acquired a sort of hereditary right to their possessions on their making the accustomed payments; but in other parts the title to the lands they occupied was only for life or for a certain number of years; though, by a most absurd regulation, the proprietor could

## PRUSSIA.

not then resume the lands into his own hands, but was obliged to relet them to an occupier of the same grade as the one who had left them! In 1807, however, the regulation which prevented peasants, tradesmen, &c., from acquiring land was abolished; and in 1811 appeared the famous edict which enacted that all the peasants who held perpetual leases, on condition of paying certain quantities of produce, or of performing certain services on account of the proprietors, should, upon giving up *one third* part of the land held by them, become the unconditional proprietors of the other *two thirds*! And with respect to the other classes of peasants, or those who occupied lands upon life-leases, or leases for a term of years, it was enacted that they should, upon giving up *half* their farms, become the unconditional proprietors of the *other half*! This edict certainly effected the greatest and most sweeping change that was ever peaceably effected in the distribution of property in any great country. It was regarded at the time, and in some respects justly, as a dangerous interference with the rights of individuals. But the abuses which it went to eradicate were so injurious to the public welfare, and were, at the same time, so deeply seated, that they could not have been extirpated by any less powerful means. It has given a wonderful stimulus to improvement. The peasant, relieved from the burdens and services to which they were previously subjected, and placed, in respect of political privileges, on a level with their lords, have begun to display a spirit of enterprise and industry that was formerly unknown. Formerly, also, there were in Prussia, as there have been in England and most other countries, a great extent of land belonging to towns and villages, and occupied in common by the inhabitants. While under this tenure, these lands rarely produce a third or fourth part of what they would produce, were they divided into separate properties, and assigned to individuals, each reaping all the advantages resulting from superior industry and exertions. The Prussian government, being aware of this, has succeeded in effecting the division of a vast number of common properties, and has thus totally changed the appearance of a large extent of country, and created several thousand new proprietors. The want of capital and the force of old habits rendered the influence of these changes at the outset less striking than many anticipated; but these retarding circumstances have daily diminished in power; and it may be safely affirmed, that the country has made a greater progress since 1815 than it did during the preceding hundred years.

The frequency of mortgages, and the embarrassed state of great numbers of the landed proprietors, are still, however, loudly complained of. Perhaps the extent of the evil is exaggerated; and we incline to think that it is in no inconsiderable degree ascribable to the institution of land-banks, or rather of associations for the lending of money on the security of land. These associations were established with the most laudable intentions: but the facilities they have afforded of contracting debt, coupled with the little risk there is of the principal ever being demanded, provided interest be paid, have tempted many individuals to indulge in inconsiderate expenditure, and have made them injurious rather than otherwise.

Rye used to be in Prussia an article of universal consumption, occupying the same place there that wheat occupies in England, and potatoes in Ireland. Latterly, however, potatoes have been gaining upon it, and now form a very important part of the food of the people. The usual course is to follow every third year, taking either first a crop of rye, and then wheat, or conversely. The greater part of the wheat shipped at Dantzic is brought from the Polish provinces under Russia and Austria. Flax and hemp are cultivated for domestic use, and also for sale, in all parts of the monarchy, but especially in Silesia. The best flax is raised from foreign seed, the seed produced at home being used to make oil-cake. Tobacco, hops, madder, and other plants, used in dyeing, are also raised. Chicory is largely cultivated. Beet-root plantations are very extensive, and have recently made great progress, especially in Saxony and Silesia. Their produce may be estimated at from 100,000 to 120,000 quintals, being about a fourth part of the sugar consumed in the monarchy.

Except on the crown estates, there are few farms. Most considerable landed proprietors are accustomed to manage their estates by stewards; and, as already seen, the smaller occupiers are mostly all proprietors. It is impossible to form any accurate estimate of the productiveness of the soil, differing as it does so very widely in quality, culture, &c. In the most fruitful and best cultivated districts, as near Magdeburg, the produce of wheat is reckoned at from 14 to 16 *scheffel* the *morgen* (1 *scheffel* = 1.6 bushel; 1 *morgen* = 1.52 acre); whereas, in Brandenburg and Pomerania, the produce of wheat is not reckoned at more than from 6 to 10 *scheffel* the *morgen*. The produce of rye varies in the best districts from 4 to 8 sch. per *morgen*. But

in the sandy and sterile portions of Pomerania, Brandenburg, and W. Prussia, the produce is often not more than 2 or three sch. per *morgen*. The rent of cultivated land is as various as the crops, being dependent partly on soil and partly on situation. In the immediate neighbourhood of Berlin, the best lands yield a rent of 15 *rix* dollars per *morgen*; in the country around Magdeburg the rent is in general about 10 *r.-d.* per *do.*; in Brandenburg, if it be not in the neighbourhood of Berlin, the rent is seldom more than 2½ *r.-d.* per *morgen*; and in the sandy and sterile tracts, the rent is sometimes not more than 1 or 2 silver groschen per *morgen*.

Horses, cattle, and sheep are raised everywhere throughout Prussia. The growth of the latter has been of late years an object of much attention, particularly in Brandenburg, Saxony, and Silesia. In consequence of the improvements effected by the introduction of merino sheep into Germany, the wool of Saxony, Silesia, and some other provinces, has become superior even to that of Spain. The fall in the prices of corn, subsequent to 1815, gave a great stimulus to this branch of industry. Wool now constitutes, in fact, the principal article of export from Germany, and has been productive of much wealth to many Saxon and Silesian proprietors, as well as to many in other provinces. The number of sheep in the Prussian dominions is estimated at about 15,000,000, and the total produce of wool at from 80,000 to 100,000 quintals, of which about a third part is exported. Hogs are very extensively reared in Westphalia, and immense numbers of geese are bred in Pomerania and the N. part of Brandenburg. We subjoin

An Account of the number of Horses, Cattle, Sheep, and Hogs, in the different Provinces of Prussia, as determined by an enumeration made in 1837:

Provinces.	Horses and Foals.	Black Cattle.	Sheep.	Goats.	Hogs.
Prussia . . . . .	442,235	870,009	2,139,577	6,464	531,833
Posen . . . . .	134,124	476,308	2,165,020	3,321	222,320
Brandenburg . . . . .	179,968	554,318	2,489,893	43,773	175,424
Pomerania . . . . .	135,035	401,436	2,118,019	10,749	139,841
Silesia . . . . .	181,230	821,167	2,759,199	34,955	197,263
Saxony . . . . .	141,740	425,736	2,170,752	71,164	238,723
Westphalia . . . . .	130,405	312,335	650,209	73,392	227,966
Rhine prov. . . . .	122,114	773,813	608,763	83,124	276,934
Total . . . . .	1,472,901	4,838,682	15,011,452	327,525	1,936,304

*Manufactures.*—Though more of an agricultural than a manufacturing country, Prussia has greatly distinguished herself, particularly of late years, in various branches of manufacture. The Rhenish provinces, Saxony and Silesia, are the districts most prominent in this department. Linens and coarse woollens for domestic consumption are made in every village, and, indeed, in most cottages throughout the kingdom. The linens that are exported are chiefly produced in Silesia, Westphalia, and the Ermland, or portion of Ducal Prussia containing the circles of Braunsberg, Heilsberg, Rossell, and Allenstein. The manufacture in Silesia was formerly very extensive, but lately it has been, to a considerable extent, interfered with by that of cotton. The total value of the linen stuffs annually manufactured is estimated at from 25 to 30 millions *rix-dollars*, of which a fourth part is exported. Hirschberg, and the adjacent towns and villages, are the principal seats of Silesian manufactures. Large quantities of silk and cotton goods, linens, &c., are produced in Elberfeld, and other towns in the Rhenish provinces. Very superior broad cloth is largely manufactured at Eupen, Malmedy, Berlin, Aix-la-Chapelle, &c. Prussia occupies a respectable rank in the production of the useful metals. The total quantity of bar and pig iron annually produced may (1840) be estimated at about 130,000 tons. The articles of hardware, cutlery, &c., made at Iserlohn, Hagen, Solingen, Olpe, Essen, &c., enjoy a high reputation; but in this respect they are very inferior to the cast-iron articles, whether of fancy, ornament, or utility, produced at Berlin: these, as regards beauty and delicacy of execution, are unequalled by any made either in England or any other country. Porcelain, jewellery, watches, coaches, &c., are largely produced at Berlin and other towns. Vast numbers of books annually issue from the presses of Berlin and Halle. Beer and spirits are very extensively produced, and consumed in all parts of the monarchy. The consumption of spirits amounts, in fact, to from 160,000,000 to 180,000,000 quarts, or from about 40 to 45 millions imperial gallons! (3.9 Prussian quarts = 1 imp. gall.) Now, it may be worth while observing, as illustrative of the habits of the people, that the entire quantity of British and foreign spirits entered for home consumption in the United Kingdom in 1840, amounted to only 25,517,326 gallons, notwithstanding our population is about double that of Prussia. Indeed, if we take Prussia for a standard, the people of the United Kingdom may be said to be temperate in the extreme; for, while the consumption of spirits in Prussia amounts, at an average, to about three

# PRUSSIA.

gallons to each individual, the consumption in Great Britain and Ireland is only about three fourths of a gallon: and we believe that the consumption of beer in Prussia exceeds its consumption in the United Kingdom in a corresponding proportion.

The principal manufacturing district of Prussia, and probably of the continent, is in the Rhenish provinces on the Wupper, having Elberfeld and Solingen for its principal towns. It is well supplied with coal and water-power; and the inhabitants are alike industrious and inventive. The population of Elberfeld has increased during the present century from 11,720 to 38,162; and the progress of many of the other towns and villages in the vicinity has been hardly less remarkable.

Some of the manufacturing establishments in the Rhine

district are on a large scale, employing from 400 to 500 work-people. The first steam-engine used in Prussia was set up in 1780. In 1840, there were about 450 steam-engines in the monarchy, of which above 30 were in Berlin. The wages of the work-people employed in manufactures vary according to the work to be performed, the expense of living, &c. At Elberfeld, weavers earned in 1838 from 2 to 3 rix-dollars, or from 6s. to 9s. a week, working from 10 to 12 hours a day. Children employed in factories make from 3d. to 4d. a day.

We subjoin an official return of the looms at work in the different provinces of the monarchy in 1837, specifying the departments in which they were employed, and whether they were employed as a principal or secondary business.

Provinces.	Looms:—Principal Business.					Looms:—Secondary Business.				
	Cloths and Stuffs of all kinds.				Stockings.	Ribands.	Linens.	Coarse Woollen Stuffs.	Other Stuffs.	
	Silk or mixed Silk.	Cotton or mixed Cotton.	Wool of mixed Wool.	Linen.

Commerce.—The exports from Prussia consist principally of corn, wool, timber, Westphalian hams, zinc, flax, bristles, salted provisions, and other articles of raw produce; with linen and woollen cloths, silk wares, iron and hardware, jewellery, watches, and wooden clocks, Prussian blue, spirits, beer, &c. The imports consist chiefly of sugar, coffee, and other colonial products, raw cotton, and cotton twist and stuffs, indigo and other dye stuffs, spices, French and other wines, coals for the use of the ports on the Baltic, salt, &c. The amount of the trade of Prussia cannot, owing to the free system of internal commerce now established in Germany, be ascertained with any precision; but it is very considerable, and is rapidly increasing. Except in dear years, when we are large importers of corn, our trade with Prussia is carried on at second-hand through Hamburg, Bremen, and the Netherlands ports. But we have elsewhere shown that the real value of our exports to Prussia may be fairly estimated at nearly three millions a year. (*Supp. to Commercial Dictionary.*) Besides the facilities afforded to internal commerce by the rivers and canals already alluded to, others of a very important nature have recently been furnished. Previously to 1815, the roads in Prussia were, with few exceptions, about the very worst in Europe. They were, in fact, mere pathways, without any artificial construction; and owing to the loose sandy nature of the soil, the wheels not unfrequently sunk in them to the axle, and the carriage was drawn rather through than over the ground. But since the period alluded to, a very great change has been effected. New roads, constructed on the most approved principles, macadamised, and equal to any in England, are now carried from Berlin to all the most distant parts of the monarchy. The cross roads have also been materially improved; and every day is adding to the means of communication thus afforded. In all, about 1200 German miles of road have been constructed since 1815, three fourths of which have been made at the expense of government, and the rest by the country districts. Mail-coaches, which travel at the rate of about six miles an hour, are established along the principal lines of road. They are under the orders of the government, and are well conducted. All travelling charges are regulated by a tariff fixed by the police. Railways have been opened, or are about to be, from Berlin to Potsdam, and from Cologne to Aix-la-Chapelle; and others

either have been opened, or are in the course of being constructed.

Within the last few years Prussia has prevailed on by far the greater number of the secondary and smaller German states to enter into a commercial league, by adopting a uniform tariff of duties on imports, and establishing a free system of internal commerce. Previously to the adoption of this plan, each petty state had its own custom-houses, and its own system of duties and revenue laws: these frequently differed widely from those of its neighbours, so that the internal trade of the country was subjected to all the vexatious restrictions that are usually laid on the intercourse between distant and independent states, and was, in consequence, comparatively trifling. But these restraints are now entirely got rid of. Internal custom-houses and separate custom duties no longer exist. Each state participates, in proportion to its population, in the amount of the duties collected at the frontiers of the league; and a commodity admitted at any one of the external custom-houses may be subsequently conveyed, without let or hindrance, from Aix-la-Chapelle to Tilsit, and from Stettin and Dantzic to the frontiers of Switzerland and Bohemia. It has been supposed by many that this system threatened to be very injurious to the trade of Britain and Germany; but there seems to be no ground whatever for any such apprehension. The freedom of internal commerce will do more to promote the prosperity of the countries included within the league, than any other measure their rulers could have adopted; and, as population increases, and the inhabitants become more wealthy, there will, no doubt, be an augmented demand for foreign products. Generally speaking, the duties are moderate. It is, indeed, obvious that were any attempt made to raise them to an exorbitant height, the facilities for smuggling along the frontiers of the league are so very great, that its territories would very speedily be deluged with overtaxed products. And in addition to this signal reform, the tolls and other impediments that formerly obstructed the free navigation of the Rhine to the Elbe are now mostly removed; and there are no longer any exclusive companies, or incorporated guilds or bodies, to obstruct the general freedom of industry and competition.

Shipping.—Considering the extent of sea-coast possessed by Prussia, and the facilities she enjoys for ship-building, the shipping is not very considerable. In 1825 there be-

## PRUSSIA.

longed to the different Prussian ports 576 ships, of the burden of 58,007 lasts of 4000 lbs. each. In 1838, Prussia had 604 ship, of 73,696 lasts. Stettin possesses the largest amount of shipping, and next to it Dantzig. Prussia has entered into reciprocity treaties with most foreign powers.

**Money, &c.**—Accounts are kept in rix-dollars, or thalers, of 30 silver groschen. Each rix-dollar should contain 257·63 gr. fine silver, and is worth 2s. 11½d. but is generally taken at 3s. The centner, or quintal of 110 lbs., is equal to 113·381 lbs. avoirdupois. The last, by which ships' tonnage and freights are estimated, contains 4000 Prussian lbs. One Prussian mile is equivalent to 4·68 English miles. The morgen is equal to 1·52 imp. acres.

**Races; Population.**—The people of Prussia belong mostly to the great German and Slavonian families; the Poles in Posen, W. Prussia, &c., belonging to the latter, and the great bulk of the inhabitants in the other districts to the former. German is the language of the court, and of all the better informed classes in all parts of the kingdom. We have seen that the population of the monarchy, exclusive of Neuchâtel, has increased from 10,349,031, in 1816, to 14,098,125 in 1837. As only 35,029 of this augmentation is due to an enlargement of territory (the Duchy of Lichtenberg, acquired in 1834), it is a more rapid rate of natural increase than has taken place during the same period in any other country; and the condition of the people being, at the same time, materially improved, it affords the most unequivocal evidence of the increase of prosperity.

No doubt a considerable portion of this increase may be ascribed to the change already noticed in the distribution of property. It is more than doubtful, however, whether the influence of this change will continue to be as advantageous as it has been hitherto. With few exceptions, there are neither entails nor majorats in Prussia; but when an individual dies, his property, whether it consists of land or moveables, is *equally divided* among his children, without respect to sex or seniority. The influence of this law in causing the splitting of property was limited, previously to 1807, by the regulation that none but nobles could hold land. But, as it may now be held by any one, the system of equal partition will exert its full force; and there is but too much reason to fear that, in the end, it may occasion the too great subdivision of landed property, and an excess of agricultural population.

We regard this as being, in fact, by far the most formidable of the unfavourable contingencies to which Prussia would seem to be exposed; and, unless it be met by the organization of such a system of poor-laws as will make it to the interest of the proprietors to oppose themselves to a too great subdivision of the land, and a too rapid increase of population, the consequences may be most disastrous. Already, indeed, there are in several quarters symptoms of an excess of population. This is a matter to which the attention of government cannot be too early and steadily directed.

The population, in 1837, was divided as follows:

Age.	Males.	Females.
To 14 (completed) years of age . . . . .	2,457,154	2,146,745
From 14 to 60 (completed) . . . . .	4,153,610	4,191,353
Above 60 years . . . . .	408,459	430,571
Total . . . . .	7,039,223	7,058,902

At an average of the three years ending with 1837, the number of births, marriages, and deaths, in the different provinces of the monarchy, was as follows:—

Provinces.	Births.	Marriages.	Deaths.
Prussia . . . . .	94,492	21,411	72,436
Posen . . . . .	49,603	11,244	37,056
Brandenburg . . . . .	64,054	15,279	45,642
Pomerania . . . . .	33,542	8,573	25,032
Silesia . . . . .	111,812	25,504	94,214
Saxony . . . . .	57,331	13,339	44,039
Westphalia . . . . .	49,115	12,063	41,550
Rhine province . . . . .	92,414	20,549	76,024
Total . . . . .	557,593	128,022	438,603

There are in Prussia, exclusive of Neuchâtel, 535 towns with a population of 2000 and upward; the inhabitants of which amount in all to 3,060,331, or to about three fourteenths of the population.

**Government.**—The government of Prussia is monarchical, the exercise of the royal prerogative being modified by the privileges of the different ranks and orders of the people, and still more by their intelligence and the power resulting from their military organization. The succession is hereditary in the direct male line. The king is assisted by a council of state; and there are nine ministers for particular departments, each having a salary of 12,000 rix-dollars (£1800). States have been established in the different provinces by virtue of an ordinance issued in 1823. Projects of all laws respecting their peculiar provinces, or which involve changes of taxes, or of the rights of property or individuals, are submitted to their deliberation, and are rarely passed without

their sanction; but they have no power directly to originate any measures, though they may effect this indirectly by making representations to the king. The electors in the provinces of Silesia, Saxony, Westphalia, and the Rhine, are divided into four classes or states: consisting, 1st, of mediatised princes and other superior nobles; 2d, of inferior nobles and great landholders; 3d, of burgesses; and, 4th, of peasants, little landholders, and free-farmers: the electors in the provinces of Prussia, Posen, Brandenburg, and Pomerania are divided into three classes or states, consisting, 1st, of nobles; 2d, burgesses; 3d, peasants, little landholders, and free-farmers. The deputies are chosen by, and represent, these states. The following table shows the number of representatives for each state in each province:

Provinces.	Classes of States.			Total Rep.
	I.	II.	III.	
Prussia . . . . .	45	23	22	95
Posen . . . . .	25	16	8	49
Brandenburg . . . . .	35	23	12	70
Pomerania . . . . .	25	16	8	49
Total . . . . .	130	83	50	263

Provinces.	Classes of State.				Total Rep.
	I.	II.	III.	IV.	
Silesia . . . . .	10	36	30	16	92
Saxony . . . . .	6	29	24	13	72
Westphalia . . . . .	11	50	20	20	71
Rhine province . . . . .	5	25	25	25	80
Total . . . . .	32	110	99	74	315
142					
And the 4 other provinces . . . . .	130	83	50		263
Gross total . . . . .	272	192	121		578

It is next to certain, however, that very material modifications will speedily have to be made in this system of representation. Considerable disappointment was experienced at the outset of the reign of his present majesty from his not at once conceding an extension of popular rights and privileges; and the general opinion seems to be that such concessions cannot long be withheld. The city of Breslau, and other important bodies, have already petitioned the king on the subject; and should the wish for an extension of popular privileges become general, and be vigorously pressed upon the government, it will, no doubt, have to be granted.

It is common in this country to call the government of Prussia a despotism; but if we mean by a despotism a government in which the monarch may do as he pleases, with little, if any, regard for the feelings and interests of his subjects, there is, perhaps, no government less a despotism than that of Prussia. It, in fact, may be said to be self governed; for, though the king be all-powerful so long as his conduct is approved by the bulk of the people, he would, on the contrary, be quite powerless were he to lose their confidence and support. The king of Prussia has no extrinsic resources, or peculiar interests, on which to fall back in the event of his becoming unpopular. There is neither a powerful church nor a powerful aristocracy in Prussia; the army, too, is merely a portion of the citizens; and where every man is educated and every man is a soldier, the acts of the government cannot, speaking generally, be other than the acts of the public. But it is most probable, as stated above, that the Prussians will insist upon a direct control over the measures of government; but whether that should be so or not, no one acquainted with the state of society in Prussia can doubt that public opinion is there all but omnipotent.

The deputies are elected for six years, and must be 30 years of age, and the electors 25. The king nominates a president and vice president of each state, chosen from the first or second order, and fixes the duration of the session. A majority of *two thirds* is necessary on all questions proposed by the king, but on other matters a mere majority suffices. Their sittings are not public, and the results only of their proceedings are published. All Prussians are entitled to address themselves by petition directly to the sovereign; and there is no instance of any petition, however humble the party presenting it, remaining without a distinct answer. Political writings are subject to a censorship.

A president, with powers similar to those of a French *préfet*, and a salary of 6000 rix-dollars (£900), is placed at the head of each of the eight provinces into which the kingdom is divided. Each province has also a military commandant, a superior court of justice, a provincial director of taxes, a provincial consistory, all appointed by the king. The last is divided into three sections—one having the superintendence of schools, another of ecclesiastical affairs, and another of the public health. The provinces are subdivided into regencies or counties, and these again into *kreise*, or circles (*arrondissements*), and the latter into *gemeinden*, or parishes (*communes*). Each regency has a president and an administrative board or council; and the farther subdivisions have also their local authorities. The

# PRUSSIA.

municipal organization of the towns is more complicated than that of the communes. The principal functionaries are all elective; but the elections must be confirmed by the king or the authorities.

The system of law principally in force in the E. states of the Prussian monarchy is embodied in the well-digested code entitled *Landrecht für die Preussischen Staaten*, which received the royal sanction in 1791, and became a law in 1794; but it is occasionally modified by custom; and Polish, Swedish, and German laws are still in force in certain parts of the monarchy. The Rhenish provinces follow, with some exceptions, the rules laid down in the *Code Napoleon*. The primary proceedings in judicial matters take place before local courts established in the circles and towns; thence they may be carried before the provincial courts (*oberlandesgerichte*); and in the last resort before the supreme tribunals at Berlin. The judges are independent; and justice is purely and cheaply administered. Juries are employed in the Rhenish provinces, but not in the other parts of the monarchy. Tribunals of arbitration have also been established in the provinces of Brandenburg, Pomerania, Prussia, Silesia, and Saxony, similar to those established in Denmark (which see), and with the same beneficial results.

In 1836 of 13,831 cases brought before these tribunals in the above provinces (excepting Prussia, from which there are no returns), 11,835 were settled, and only 1996 sent to the higher courts. In no other country, perhaps, is patronage of so little consequence, and merit so sure to lead to distinction and advancement. Candidates for public employment go through a course of education appropriate to the functions they are desirous to fill; and, before being appointed, have to submit to a severe examination as to their knowledge, conduct, and fitness for the office. "*En Prusse*," says M. Cousin, "*tous les fonctionnaires sont salariés; et comme ils n'arrivent à aucune fonction qu'après des examens sévères, tous sont éclairés; et comme de plus ils sont pris dans toutes les classes, ils portent dans l'exercice de leurs emplois l'esprit général du pays, en même tems qu'ils y contractent l'habitude du gouvernement.*"

The king of Prussia is, next to the emperor of Austria, the most important member of the Germanic Confederation. His contingent to the army of the Confederation is 79,234 men.

*Revenue and Expenditure.*—The following is an official statement of the Revenue and expenditure of the Prussian monarchy for 1835:—

REVENUE.			EXPENDITURE.		
	Rix-d.	Rix-d.		Rix-d.	Rix-d.
Produce of the administration of domains and forests, after deducting the revenue reserved for the fee-fine trust of the crown . . . . .		4,212,000	National Debt, viz.: Interest of the general and provincial debt, and expenses of management . . . . .	6,397,000	
Of the sales of domains, &c. for the more speedy paying off of the national debt . . . . .		1,000,000	Sinking fund . . . . .	2,450,000	
Of mines, forges, and salt-mines, and of the royal china manufactory at Berlin . . . . .		717,000		8,847,000	
Of the post-office . . . . .		1,200,006	Interest and sinking fund of debts of different provinces . . . . .	41,000	
Of the lottery . . . . .		669,000			8,918,000
Of the Administration of Taxes, viz.: (a) Taxes on landed and house property . . . . .	9,735,000		Pensions and Life-Rents, viz.: Pensions to servants of the state, and their widows and children, and other charities . . . . .	966,000	
(b) <i>Classement</i> (poll-taxes) . . . . .	6,401,000		Pensions for life to members of suppressed spiritual corporations, &c. . . . .	1,584,000	
(c) Taxes on trade (patents) . . . . .	1,973,000				2,550,000
	18,112,000		Perpetual Rents, viz.: Indemnification for abolished claims and usufructs for capitals and securities called in . . . . .	360,000	
(d) Importation, exportation, and transit duty, on the consumption of home products: tolls; duty on navigation and the use of harbours, canals, and bridges, and other communications; and stamp duty . . . . .	20,052,000			603,000	
(e) Revenue from salt . . . . .	5,366,000		For the cabinet, the office of the minister of state, accountant-general's office, and the administration of the treasury, the mint, archive of the state, and provincial archives, the secretary of state's office, the account-office, the chancery royal, and the statistical office . . . . .		963,000
Surplus revenue from the principality of Lichtenberg . . . . .		80,000	Ministry of spiritual, educational, and medical affairs . . . . .		2,683,000
Various items not comprised under the above . . . . .		332,000	Ministry of the interior and police . . . . .		2,184,000
Total . . . . .		51,740,000	Ministry of the interior for trades and general commissions . . . . .		173,000
			Administration of commerce and manufactures, including land and aquatic buildings, but exclusive of roads . . . . .		9,600
			Maintenance of old and making new roads, including interest of capital raised for making roads, &c. . . . .		2,852,000
			Ministry of foreign affairs . . . . .		691,000
			Ministry of war, including the supplies for the great military orphan asylum at Potsdam, and its affiliated institutions . . . . .		23,462,000
			Central Administration of Finance, viz.: (a) The finance office and for the state treasury office . . . . .	159,000	
			(b) The general administrations of the domains and forests . . . . .	94,000	
					253,000
			Ministry of justice . . . . .		2,061,000
			Chief president's and provincial courts ( <i>Regierung</i> ) . . . . .		1,766,000
			Breeding of horses ( <i>Haupt- und Landgestüte</i> ) . . . . .		167,000
			Revenues not recovered, extra expenses, and improvements . . . . .		1,350,000
			Total . . . . .		51,740,000

In 1834 the revenue amounted to 52,681,000 rix-dollars, which, as above, exactly balanced the expenses.

It should, however, be observed, that the above statement represents only the nett amount of revenue after the expenses of collection are deducted. These are estimated at from 3 to 4 per cent. on the produce of the direct taxes, and at from 10 to 12 per cent. on the produce of those that are indirect. It will also be observed, that in the account of expenditure nothing is set down for the civil list, or for the support of the monarch and his court; a sum of 2,500,000 dollars. is, however, specially appropriated for this purpose.

The tax on classes is a kind of poll-tax imposed on the inhabitants of the country and towns, according to the amount of their property, and the population of the towns. The tax on industry or trades consists of the sums charged for patents or licences for leave to carry on trades, &c.

*National Debt.*—Frederick the Great effected all his extraordinary achievements without contracting any debt, and left at his death a large sum in the coffers of the state. Though his successors were not so economical, still, at the breaking out of the war with France, Prussia was free from debt. In the course of that contest she was compelled to borrow pretty large sums, which, however, have been con-

siderably reduced since the peace. The public debt of Prussia amounted, in 1840, to about 130,000,000 rix-dollars, or £19,500,000.

*Religion.*—The royal family belongs to the reformed or Protestant religion; but all denominations of Christians enjoy the same privileges, and are equally eligible to places of trust or emolument. In 1837 the population consisted of 8,604,748 Protestants, 5,294,003 Catholics, 183,579 Jews, and 14,495 Memnonites. The Protestants predominate very decidedly in Brandenburg, Pomerania, Saxony, and Ducal Prussia; while the Catholics predominate in the Rhine provinces and Westphalia, in the regency of Oppeln, in Silesia, and in Posen. When Silesia was acquired by Prussia, the mass of the population were Catholics; but at present the Protestants predominate in the regencies of Breslau and Liegnitz, particularly the last.

The Protestant church is governed by *consistories*, or boards appointed by government, one for each province. There are also synods in most circles and provinces, but no general synod has yet been held. The constitution of the Catholic church differs in different provinces. In the Rhenish provinces it is fixed by the concordat entered into be-

## PRUSSIA.

tween the French government and Pope Pius VII. But in every part of the monarchy the crown has wisely reserved to itself a control over the election of bishops and priests. In the entire kingdom there were, in 1837, 5740 ordained Protestant clergymen, and 140 assistant do.; there were, at the same time, 3510 Catholic priests, and 2033 vicars, chaplains, &c.; so that the proportion of Catholic clergymen rather exceeds that of Protestants.

The incomes of the clergy are very different. The higher Catholic clergy are paid by the state, the archbishop of Breslau receiving £1700 a year, and the other bishops about £1135. The incomes of the parochial clergy, of both sects, mostly arise from peculiar endowments. Generally government does not grant the stipend either of Protestant or Catholic clergymen; but in many parishes the clergy enjoy a public provision from the state. This is peculiarly the case in the Rhenish provinces, in virtue of the concordat already alluded to. Proselytism, or the attempting to induce a person to change his religion, whether by force or by persuasion, is prohibited by law; and all controversial sermons, or peculiar displays of religious zeal, would certainly attract the notice, and incur the displeasure, of the authorities. If we except the Rhine province and Westphalia, the population of which are bigoted Catholics, perhaps there is in no country less of religious acrimony and contention than in Prussia. For farther details as to the religious state of Prussia, see the parliamentary paper drawn up by Mr. Lewis from the official returns furnished by the Prussian government.

**Education.**—Prussia can boast of possessing a more perfectly organized and complete system of national education than has ever existed in any country. Frederick the Great has the merit of having introduced the system into Silesia, after he had wrested it from Austria; and such of our readers as are curious about these matters, will find in "*Adam's Letters on Silesia*" a very full and interesting account of the plans of Frederick in relation to this important subject, of the obstacles he had to encounter in carrying them into effect, and of their result. From Silesia the system has been gradually extended to the other provinces, and is now in full vigour in every part of the monarchy. Attendance at school is enforced by law. Every child, whether male or female, rich or poor, must attend a public school from the age of five years complete, till such time as the clergyman of the parish affirms that the child has acquired all the education prescribed by law for an individual in its station: generally speaking, the school time extends from 6 to 14 years complete. Should a child not attend, its parents or guardians must satisfy the public authorities that it is receiving an appropriate education at home or in a private seminary. The school fees are exceedingly moderate; and the children of such poor persons as are unable to pay them, are instructed gratuitously at the public expense. Accord-

ing to the census of 1837, the population of the monarchy exclusive of Neuchâtel, was 14,098,125. It is calculated that of this number 2,830,328 were between the ages of 6 and 14, complete; and it appears, from the official returns, that of this number 2,171,745 were actually at school, or were otherwise receiving sufficient instruction. It must not, however, be supposed that the 658,583 (2,830,328—2,171,745) apparent excess of children not at school are not instructed. The 2,830,328 includes, as already stated, all the children between 6 and 14 years complete; but the school education of a good many children is completed by the time they complete their 12th or 13th year; and, owing to the delicate state of their health, and other circumstances, a good many do not go to school till they have attained their seventh or eighth year. And, allowing for these circumstances, we believe it may be safely affirmed of Prussia, with the exception of a few districts in Posen, that every child born within her limits is educated! In so far, too, as we are able to judge, Prussian education is of the most excellent quality; and is, in this respect, as much superior to that of the lower and middle classes in England and Scotland as can well be imagined. The late king of Prussia deserved the esteem and gratitude, not of his own subjects only, but of every friend to humanity in every part of the world, for the zeal, perseverance, and discretion he displayed in maturing this system. Nothing has been omitted that could render it perfect. In the schools for the instruction of the masters, the examinations to which they are subjected, and the supervision exercised over every part, the utmost anxiety is evinced to render it as perfect as possible.

No particular religious creed is allowed to be taught in any school; but on particular days, set apart for the purpose, the children are instructed by the clergymen of the different sects to which they belong. Their religious instruction is not, therefore, neglected; while the intermixture of the different sects from their earliest years, on a perfect footing of equality, removes all asperities and religious animosities. All matters relative to the public schools are managed in each province by a public board appointed for that purpose; and the expense is defrayed by government. (For farther information as to the Prussian schools, see the Report of M. Cousin, *Sur l'Instruction Publique en Prusse*, &c.)

Exclusive of the gymnasiums and superior schools, Prussia has six universities, and the two semi-universities of Munster and Braunsberg. These are placed directly under the control of the minister of public instruction; and much pains has been taken to render them efficient and useful. The number of professors and subordinate teachers in the Prussian universities is very great; and we should incline to think that they had been needlessly multiplied. The following statement exhibits the attendance at the Prussian universities in 1834 and 1837.

ACCOUNT of the Number of Pupils attending the different Universities and Semi-Universities of Prussia during the Summer Sessions of 1834 and 1837 respectively.

**Military Force.**—The situation of Prussia, surrounded by powerful monarchies, and with a disjointed territory, requires for her security a large military force. But as the revenue of the country is comparatively limited, it became indispensable to endeavour to organise the army so that it might embrace the maximum of force with the minimum of expense. The Prussian government seems to have pretty satisfactorily solved this important and difficult problem. The obligation of military service is universal; every man being obliged to enter the army of the line, or the *landwehr*

(provincial army), between the ages of 20 and 32, as a private, and to serve in the one or the other for three years. At the end of this period he may enter the army of the line for a limited period as a volunteer, of which description of recruits it chiefly consists, or return home to prosecute some civil employment, his service in the army having secured for him various privileges. But the individuals whose period of service in the army of the line, or the *landwehr*, has been completed continue bound, on returning home, to serve in the second band of the *landwehr* till they be 39

## PRUSSIA.

years of age. They are seldom, however, called on to be exercised, and then only for limited periods. The *land-sturm*, or levy *en masse*, consists of all the men not in the army or the landwehr up to the age of 50, and of young men between 17 and 20. This force is only called out in case of invasion. The army of the line may at present be estimated at 122,000 men, distributed as follows, viz.: infantry 83,000, cavalry 20,000, artillery 12,000, engineers 2000, and permanent landwehr 5000. The reserve and the first ban of the landwehr amount to 223,000 men, and the 2d ban of the landwehr comprises 180,000, making the total military force of the country about 530,000 men. Of these the regular army and the first ban of the landwehr, amounting to 350,000, are ready to act immediately against an enemy. There are numerous institutions, at Berlin and elsewhere, for military education. The greatest pains are taken to have the officers well instructed, and equal to their duties. Their appointments are good. The condition of the common soldier has also been vastly improved. He is seldom subjected to corporal punishment; and his pay and rations have been nearly doubled since 1806. The Marquis de Caraman estimates the total annual expense of a Prussian foot soldier, including rations, at 634 rix-dollars (£9 9s. 6d.) a year; and that of a cavalry soldier, including the keep of his horse, at 213 rix-dollars (£31 19s.) a year. These allowances, considering the cheapness of provisions in Prussia, place the Prussian soldiers on a level, in point of comfort, with those of England or of any other country. Nothing, in fact, is omitted that seems calculated to benefit the army, and to keep up the martial spirit of the people.

This system imposes, no doubt, severe privations on the public. But there is a general conviction of its being necessary; and its universality, and the impartiality of the laws, prevent it from being felt as a peculiar burden by any particular class. At all events, it is clear, whatever difference of opinion may exist as to its merits in other respects, that it has *completely nationalised the army*; which must be always actuated by the sentiments and feelings that prevail among the mass of the people from which it is taken, and to which it is constantly being returned. When, therefore, it is said that Prussia is a "military monarchy," it is necessary to bear in mind that the army is not composed of mercenary troops, but of citizens serving for a limited period, and that it has very little analogy indeed to most other European armies. (For farther and ample information as to the Prussian army, see the excellent Essay of the Marquis Caraman, *Sur l'Organisation Militaire de la Prusse*, passim.) Prussia has no ships of war.

**Provision for the Poor.**—The question as to the provision for the poor has only become of importance since the abolition of vassalage in 1810. Previously to that epoch they were provided for by their lords. At present poor persons, or those unable to provide for themselves, have a legal claim to support. But it is rarely necessary to resort to compulsory proceedings to enforce this claim, the really necessitous being generally provided for by voluntary subscriptions. There are workhouses in most large towns. That of Berlin had, in 1838, an average population of from 850 to 900 persons; which cost at an average 50 rix-dollars a year each.

**Food, Dress, Diversions, and Habits of the Bulk of the People.**—The food, dress, diversions, and habits of the people are very different in different provinces. In general, rye is the ordinary bread-corn. About half a century since the consumption was estimated at from 5 to 6 scheffel per head, but now it is not more than 3 scheffel; the defect being made up by the increased consumption of potatoes. In many districts, indeed, potatoes are now almost the only vegetable food. Besides rye-bread and potatoes, the people use barley, buckwheat, and milk. In the Rhenish provinces wheat is more extensively used than in the other provinces. The wheat cultivated in Prussia Proper and Posen is rather for sale than for inland consumption. Beans and peas are extensively used in most parts of the monarchy. Coffee, mixed with chicory, is extensively used; and on Sundays it is used by all classes: tea is but little used. The consumption of sugar has rapidly increased; and now amounts, at an average, to about 4 lbs. per individual, notwithstanding the substitution of honey for sugar in very extensive districts. The consumption of butchers' meat is considerable, principally in towns. It is estimated over the whole monarchy at from 36 to 37 lbs. a year to each individual. (Dieterici, *Statistische Uebersicht*, s. 234.) But in the towns it may be from 40 to 50 lbs., and in the country, perhaps, not more than from 20 to 30 lbs. In Berlin the consumption of butchers' meat exceeds 100 lbs. per individual: and this, in all cases, is exclusive of poultry, fish, and game. Game,

indeed, is only used by the richer families; but fish is an ordinary food of the peasantry in many districts. Poultry, especially geese, are largely used by the common people in Pomerania. There is also no want of butter for the common people, but the consumption of cheese is greater.

We have already seen that the consumption of spirits is quite immense; it is less, however, in the Rhenish provinces, where wine is extensively used, than in other parts of the monarchy. Beer also is an ordinary beverage, and the consumption is very great. The consumption of tobacco is estimated at 3½ lbs. per individual. The common people (males) use, in winter, a woollen great-coat, and in summer a linen coat. Women now begin to be pretty extensive consumers of cotton stuffs; it is still, however, customary for the young female peasants to prepare stocks of linen in anticipation of their marriage. Wooden shoes are worn, but are not so frequent as in France or Ireland; and in bad weather almost every body is well shod with leather boots and shoes: but in fine weather the common people often go barefoot. Silks are only used by the wealthier classes.

It is usual for the peasants to go to church regularly on the Sunday forenoon; and it is customary for them to spend the evening of the day in diversions of some sort or other, frequently in the ale-house, and in Silesia in dancing-parties. Most little towns have shooting-places; and the meetings of the landwehr for exercise are looked forward to with much satisfaction. (From *Official Doc. and Priv. Inform.*)

## PRUSSIA PROPER.

PRUSSIA (PROPER), an extensive and important prov. of the Prussian dominions, formerly divided into the provinces of East or Ducal Prussia, and W. Prussia, having N. the Baltic, E. and S. Russia, Poland, and the prov. of Posen, and W. Brandenburg and Pomerania. Area, 24,974 sq. m. Pop., in 1837, 2,125,535, of whom 1,532,326 were Protestants, 555,230 Catholics, and the rest Jews and Memnonites. It is divided into four regencies, and 57 circles. Principal towns, Königsburg, Dantzic, Elbing, Tilsit, Marienwerder, &c. It consists principally of an immense plain, traversed by the Vistula, Pregel, Passarge, and other rivers, and interspersed with numerous lakes and immense forests. Soil various, but generally fertile, particularly the delta of the Vistula and the country watered by the Niemen. Principal products, wheat and other sorts of corn, timber, hemp, and flax, provisions, wool, ashes, &c. Rye is more cultivated than any other sort of grain; wheat is also largely cultivated, but more for exportation than for internal consumption, rye being the ordinary bread corn. Oats, barley, and peas, are also raised; and latterly potatoes have been extensively cultivated. Farming implements defective and ill constructed; the harrows are made of wood, without any iron even for teeth. With the exception of the crown estates, which are let on lease, but little land is rented. In the circles of Dantzic, Elbing, and Marienwerder, good land fetches, when let, from about 4s. 6d. to 5s. an acre, the tenant bearing all taxes. But in other districts the rent of the cultivated land does not exceed from 1s. 3d. to 2s. 6d. an acre. The wages of farm labour vary in summer from 4d. to 8d., and in winter from 3d. to 5d., without food; but with a cottage free, or at a low rent, a garden, and pasture for a cow. In harvest the wages are a good deal higher. The peasantry live in wooden or clay cottages, with but few luxuries, principally on potatoes, rye bread, and milk, rarely tasting animal food, but drinking great quantities of spirits and beer. Linen, from flax of their own growth, and wool spun in their cottages, furnish their clothing. Domestic servants get butchers' meat, generally pork, once or twice a week. Wood and turf are almost every where abundant, and are the principal articles of fuel. Amber is found along the sea-shore, but otherwise minerals are quite unimportant. There are many distilleries and breweries, but, with the exception of Posen, this is the least manufacturing province in Prussia. (*Jacob's First Rep.*, p. 13-22; *Parl. Pap.*, No. 84, Sess. 1836, &c.—See *Prussia* and *Königsberg*.)

PSKOF, a government of European Russia, chiefly between the 56th and 58th degs. N. lat., and the 28th and 32d E. long., having N. Petersburg and Novgorod, of each of which gov. it formerly made a part; E. Tver and Smolensk; S. Witepsk, and W. Livonia. Area estimated at 22,154 sq. m. Pop., in 1838, 705,300. The surface is nearly flat, with a slope to the N., the direction taken by most of the rivers. None of these are of considerable size; but the gov. is, notwithstanding, well watered. At the N.W. extremity is the lake of Pskof, connected by a strait with that of Peipus. Marshes are numerous. The atmosphere is usually damp, though, on the whole, the climate is far from unhealthy. Soil thin, and not very fertile; but owing to the fewness of the inhabitants, more corn is grown than is required for home consumption. The produce averages 3,500,000 chetwerts a year, of which upward of one million may be exported. It consists chiefly of rye, barley, and oats, the proportion of wheat being small. A good deal of hemp and flax is raised. The forests are extensive, and abound with game. Cattle are not of great importance, and bees are less reared than in most provinces. Manufactures have increased during the present century, but they are still of no great consequence. The leather of this government is much esteemed, but its principal wealth consists in its corn and natural produce. Pskof is divided into eight districts: chief towns, Pskof, the capital, Toropez, and Velikie-Louki. Its population consists mainly of Russians, with some Lithuanians and Finns. Public education is little extended, in 1831, only 2110 individuals were receiving instruction, or 1 in 302 of the population; and only one printing-press existed in the government.

PSKOF, or PLESKOW, a town of European Russia, cap. of the above gov., on the Velikaia, 165 m. S.W. Petersburg. Pop., in 1831, 8731. It covers a large space of ground, and is divided into three parts, the Kremlin or citadel, the Middle Town, and the Greater Town, all surrounded with an earthen mound. It is mostly built of wood, but has two good edifices belonging to the archbishop and the consistory; a number of churches, two convents, and a high school. Its only manufactures are of leather; but it has a considerable trade in the export of the products of the country. A large annual fair is held here in February, at which large quantities of woollen, silk, and cotton fabrics, leather, books, jewellery, &c., are sold. This town is rather ancient, being mentioned in history as early as 903. (*Schnitz, La Russie*.)

PUEBLA (LA), a city of Mexico, cap. of the state of its own name, on the declivity of a hill, 76 m. E.S.E. Mexico,

## PULASKI.

and 125 m. W. by S. Vera Cruz, lat. 19° 0' 15" N., long. 98° 2 30' W. Pop. 50,000. (*Ward*.) It is compactly and uniformly built. The streets, which, though not very wide, are straight, and intersect each other at right angles, are paved with large diamond-shaped stones, with broad and well kept footpaths on either side. The houses, of stone, are generally two stories high, with flat roofs, having mostly a court in the centre, surrounded with open galleries, and a fountain of fine water, conveyed thither by earthen pipes. Many have iron balconies toward the street, and their fronts are inlaid with highly glazed tiles, or else gaudily and fantastically painted. The apartments are spacious: according to Mr. Ward, they are mostly paved with porcelain, carpets not being in use; and their walls are adorned with paintings in fresco. The family of the proprietor usually resides in the upper story, the ground-floor being occupied with shops, warehouses, or offices, and the second story by servants.

This would seem to be a perfect hotbed of priests; when Bullock visited Mexico, Puebla had no fewer than 69 churches, nine monasteries, 13 nunneries, and 23 colleges. He says of the churches that they were the most sumptuous he had ever seen. "Those of Milan, Genoa, and Rome are built in better taste; but in the expensive interior decorations, the quantity and value of the ornaments of the altar, and the richness of the vestments, they are far surpassed by the churches of Puebla and Mexico." The cathedral, which forms one side of the principal square, has nothing remarkable in its exterior, but its interior is very rich. The high altar, which, however, is too large for the building, is particularly splendid. Several of the other churches are handsome, and, with the cathedral, abound in gold and silver ornaments, paintings, statues, &c. The bishop's palace has a library 200 ft. in length, which has a tolerable collection of Spanish and French books.

La Puebla is governed by 4 *alcaldes* and 16 subordinate magistrates. Its market is well supplied with all sorts of provisions, except fish. Many of the inhabitants are wealthy, and have handsome carriages drawn by mules; but, like Mexico, the city swarms with beggars, a consequence of the want of industry, occasioned partly and principally by the mildness of the climate, but partly, also, by the distribution of provisions at the convent doors. It was formerly famous for its manufactures of coarse woollens, cottons, glass, earthenware, soap, &c.; but most of these have declined with the decrease of the trade formerly carried on with Acapulco, Callao, and the other ports on the Pacific. The manufactures of glass and earthenware however, keep up their reputation, and the soap made here is sent to most parts of Mexico.

La Puebla was founded by the Spaniards. The state of which it is the capital comprises the towns of Cholula, Tlaxcala, Huexotzingo, and other ancient Mexican cities; it also includes Pucoatepetl, 17,716 ft. above the sea, being the highest mountain in North America. (*Ward's Mexico*, ii., 72-74; *Poinsett's Notes*, &c., p. 51-58; *Humboldt, Bullock, &c.*, in *Mod. Trav.*, xxv.)

PUERTA DE STA. MARIA. See *ST. MARY'S*.

PUERTO-REAL, a town of Spain in Andalusia, prov. Cadiz, and on the bay of that name, 5 m. E. Cadiz, and 60 m. S.S.W. Seville. Pop., in 1826, according to Miñano, 5000; but according to Inglis, in 1830, 12,000. It is tolerably well built, with straight, regularly formed streets, crossing each other mostly at right angles, and lined with good houses. The market-place, an oblong space of considerable extent, has covered passages for provision-stalls, &c. There are two other public squares, both of which, as well as that last mentioned, are ornamented with handsome fountains. The only public buildings are a parish church and two hospitals. Fronting the sea is a wharf rising about 1½ yard above the level of the highest tides; and a mole, 50 yards broad, runs out 300 yards to low-water mark, having steps on each side, for embarkation at all times of the tide; the whole is of stone, and has a handsome appearance. Near the town are extensive salt works, the annual produce of which was estimated by Laborde at 21,300,000 quintals; and hence salt is an important article of commerce. The process of manufacture is by evaporation in wide and deep basins, communicating with the sea by locks. There are three series of these basins, and the salt undergoes a three-fold evaporation before it is considered sufficiently crystallized.

Puerto-Real is of no great antiquity; it was taken by the French in 1809, but soon abandoned; and during the war of independence it was the great *dépôt* for the French troops during their investment of Cadiz. (*Miñano; Laborde, &c.*)

PULASKI, county, Ga. Situated a little S. of the centre of the state, and contains 680 sq. m. Watered by Ockmulgee r. and its branches. It contained in 1840, 16,204 neat cattle, 2268 sheep, 15,115 swine; and produced 7439 bushels of wheat, 1433 of rye, 153,764 of Indian corn, 5369 of oats, 21,778 of potatoes, 1,735,783 pounds of cotton. It had 14

## PULTNEY.

stores, 10 grist-mills, six saw-mills. Pop.: whites, 2972; slaves, 2385; free coloured, 32; total, 5389. Capital, Hawkinsville.

PULASKI, county, Va. Situated toward the S.W. part of the state, and contains 350 sq. m. Watered by New r. It contained in 1840, 6920 neat cattle, 9653 sheep, 11,752 swine; and produced 46,093 bushels of wheat, 16,940 of rye, 144,067 of Indian corn, 2446 of buckwheat, 80,170 of oats, 15,064 of potatoes. It had 10 stores, seven grist-mills, five saw-mills, one oil mill, one paper-mill, six tanneries, 20 distilleries; seven schools, 136 scholars. Pop.: whites, 2768; slaves, 954; free coloured, 17; total, 3739. Capital, Newbern.

PULASKI, county, Ky. Situated in the S.E. part of the state, and contains 800 sq. in. Bounded S. by Cumberland r., by branches of which it is drained. It contained in 1840, 10,862 neat cattle, 13,366 sheep, 19,490 swine; and produced 43,965 bushels of wheat, 120,301 of Indian corn, 94,655 of oats, 4504 of potatoes. It had 10 stores, four tanneries; 29 schools, 754 scholars. Pop.: whites, 8583; slaves, 1019; free coloured, 18; total, 9620. Capital, Somerset.

PULASKI, county, Ia. Situated toward the N. part of the state, and contains 342 sq. in. Watered by Tippecanoe r. It contained in 1840, 591 neat cattle, 270 sheep, 1589 swine; and produced 1399 bushels of wheat, 13,075 of Indian corn, 1825 of oats, 3381 of potatoes, 2131 pounds of sugar. It had one store, one saw-mill, three potteries. Pop. 561. Capital, Winamac.

PULASKI, county, Mo. Situated toward the S. part of the state, and contains 1332 sq. m. Drained by head branches of Gasconade r., and by branches of Osage r. It contained in 1840, 10,513 neat cattle, 6600 sheep, 25,131 swine; and produced 18,689 bushels of wheat, 385,680 of Indian corn, 23,143 of oats, 11,622 of potatoes, 19,091 pounds of tobacco, 7727 of cotton, 2602 of sugar. It had 10 stores, 22 grist-mills, 15 saw-mills, one tannery, 11 distilleries; six schools, 116 scholars. Pop.: whites, 6338; slaves, 190; free coloured, 1; total, 6529. Capital, Wayneville.

PULASKI, county, Ark. Situated near the centre of the state, and contains 2050 sq. m. Watered by Arkansas r. and its small tributaries. It contained in 1840, 7935 neat cattle, 949 sheep, 12,031 swine; and produced 559 bushels of wheat, 164,324 of Indian corn, 6920 of oats, 10,312 of potatoes, 7699 pounds of cotton. It had 20 stores, 12 grist-mills, 10 saw-mills, three printing-offices, three semi-weekly newspapers; one school, 48 scholars. Pop.: whites, 3961; slaves, 1284; free coloured, 105; total, 5350. Capital Little Rock.

PULTNEY, p. t., Steuben co., N. Y., 15 m. N.E. Bath, 213 m. W. by S. Albany, 316 W. Bounded E. by the W. branch of Crooked lake, into which its streams flow. It has two stores, one grist-mill, eight saw-mills; 12 schools, 1174 scholars. Pop. 1784.

PUNJAB (THE), (country of the *Five Rivers*), or LAHORE, a nominally indep. territory of N.W. Hindostan, consisting of most part of the region watered by the five great arms of the Indus: the Sinde, or Indus proper; the Jhylum, or Behul (an. *Hydraspe*); the Chenab (an. *Acsenidras*); the Ravee (an. *Hydraspe*); and the Sutledge (an. *Hydraspe*); with its tributary, the Beas (an. *Hydraspe*). It extends principally between the 29th and 44th degs. of N. lat., and the 70th and 77th E. long.; and formed, with some adjacent states, the extensive doab, of the late Maharajah Runjeet Singh. It is of a triangular shape, the apex directed S.W.; it has S.E. Rajpootana and the Bahawalpore territories, W. Beloochistan and Caubul, and N.E. the ridge of the Himalaya, separating it from Cashmere, Ladakh, and Little Thibet. Area estimated at 60,000 sq. m. Pop. probably 4,000,000, chiefly Seiks, Jauts, Rajpoots, Hindoos of low caste, and Mussulmen.

Nearly the whole country is flat: it is in many parts fertile, especially along the banks of the larger rivers; but it also comprises some wide, sandy, and barren tracts, especially between the Indus and Hydraspe. Cultivation generally increases and improves as we proceed eastward. Of the four divisions of the Punjab E. of the Hydraspe, the two nearest to that river are principally depastured by herds of oxen and cattle; and that most to the E. is the best cultivated. Sir A. Burnes says, "there is, perhaps, no inland country which possesses greater facilities for commerce than the Punjab, and there are few better supplied with the products of the mineral, vegetable, and animal kingdoms. These relieve it from any great dependence on external resources. The wheat and barley of the plains are expended within the country; and such is the number of horses, that gram, bajree, and other grains reared in a dry soil, are imported. Rice is exuberantly produced under the mountains; but it is not a diet which suits the palate of the people. The cane thrives luxuriantly, and sugar is manufactured for exportation. The smallness of its stalk is remarkable; but it is said to produce the most saccharine fluid, and is preferred to the thicker canes of India. Indigo is reared E. of Lahore, and exported to the Mohammedan countries westward. A valuable oil is extracted from the *siraya*, or sesamum plant,

## PUNJAB.

and used both for the lamp and culinary purposes. Esculent vegetables, such as turnips, carrots, &c., are produced everywhere; and most of the vines and fruit trees common to Europe may be seen in the mountains. The climate is not very favourable to the cotton shrub; it is produced in the 'doab' between the Sutledge and Beas rivers; but it is also imported from the dry country S. of the former river. The mineral resources of the Punjab have been very imperfectly explored. A range of hills, extending from the Indus to the Hydraspe, formed entirely of rock-salt, furnishes an inexhaustible supply, and, being a close monopoly, contributes to enrich the ruler. It is in general use throughout the country, and most extensively exported, till it meets the salt of the Sambre lake in Rajpootana and the Company's territories. There is another deposit of salt on the verge of the mountains towards Mundi, but of an inferior description. In the same vicinity, it is said, some mines of coal have been discovered; and there are also extensive mines of iron. The salt range, and the other high lands, yield alum and sulphur; and nitre is gathered in large quantities from the plains." (*Bokhara*, &c., iii., 316-322.) But these statements must be received with considerable limitation. Vegetable products are abundant only in the central parts of the country, through which Burnes travelled. The climate in the N., though hot in summer, is as cold in winter as that of France and central Europe, and never sufficiently warm to mature the most valuable products of Hindostan. Rice is grown in the valleys, but in limited quantities, the usual food of the population being wheat or peas, made into a thick soup; and, according to Mr. Trevellyn (*Part. Report on India*, 1840), the Punjab does not produce sufficient sugar for its own consumption, but imports it from British India. Mr. Elphinstone, who travelled both in the N. and S. parts of this country, states that not one third part of the surface seen by him was under tillage; and there can be no doubt of the correctness of his statement, that, except near the rivers, no part of the Punjab will bear a comparison for productiveness with British Hindostan. (*Elphinstone's Caubul*, i. 109.)

The plains, which are diagonally intersected by so many rivers, might be successfully irrigated by canals; as is proved by the existence of some, and the remains of many others, the work of the Mogul emperors. The country abounds in cattle and horses, though the former is small and ill-conditioned, and no attention is paid to the breed of either. The salt mines, which were opened at a very early date, are one of the most productive sources of revenue. Burnes states that they yield about 800,000 maunds a year. The salt is sold at 2 rupees the maund, or at a third part of the price of that of Bengal; the working the mines costs  $1\frac{1}{2}$  lac rupees a year; but the profit to the government amounts notwithstanding to 1,100 per cent. (*Burnes*.) The remainder of the public revenue, which amounts to about  $2\frac{1}{2}$  crores rup., is principally derived from exorbitant taxes on land and agricultural stock. Moorcroft mentions a peculiar method of assessing the land tax, adopted, in his time between the Beas and Sutledge, by a collector, who had been chief financial minister to Runjeet Singh. "A given quantity of earth was put into a fine muslin sieve, and washed with water until all the mould was carried through, and nothing but the sand left, and, according to its proportion to the whole, a deduction was made from the assessment. Four rupees for 2 begas was the fixed rate for the rich soil; 3 if it contained one fourth of sand; 2 if it had a half; and 1 where the sand was three fourths the quantity. The general character of the soil of the Punjab, composed chiefly of mould and sand, renders this mode of appreciating its assessment more correct than might be supposed, and it was, at any rate, preferable to the old plan of assessing the land according to the estimated out-turn of the standing crops." (*Moorcroft's Trav. in the Himalayas*, vol. i. p. 121.)

As respects the commerce of the Punjab, the staple commodities are the shawls of Cashmere, which reach India and Europe wholly through this channel. The annual revenue from the shawl manufacture, exclusive of every expense, is rated at 18 lacs of rupees, though, from frauds of all kinds, this sum greatly exceeds the amount that actually reaches the treasury. It is a curious fact, that the silk-worm is unknown in the Punjab, though the silks of the immediately adjacent state of Mooltan have a high reputation in India. The natives in the E. of the Punjab excel in the manufacture of cotton, and their looms furnish white cloth at from  $\frac{1}{4}$  to 1 rupee a yard, which, though inferior in appearance to that of British manufacture, is stronger and more durable. There is a considerable demand for foreign copper, brass, tin, and lead; all kinds of British hardware and woollens are much prized. There is a considerable importation of European articles; and British chintzes have wholly superseded those of Mooltan.

The Punjab is interesting to the classical scholar, from its being the theatre of Alexander the Great's Indian victories. Mr. Elphinstone supposes the scene of the defeat of Porus to

## PUTIWL.

have been at Jelalpoor, on the Hydaspes, while, according to Burnes, it was most probably at Jelum, about 25 m. higher up the river. Burnes imagines he has discovered on the opposite sides of the Jhylum, about lat.  $32^{\circ} 40'$  N., long.  $73^{\circ} 40'$  E., the sites of Nicæa (victory town), built by Alexander at the point where he crossed the Hydaspes, and of Bucephalus, built in commemoration of his favourite horse, Bucephalus, which expired in this region. (*Mitford*, viii. 200.) Burnes joins Major Wilford in identifying the neighbourhood of the celebrated tope of Manikyala, between the Indus and the Hydaspes, with the site of the anc. Taxila. There are, however, very few Greek remains in the Punjab; and the statements of the historians of Alexander, as to the places where the great events in his Indian expedition occurred, are far too indistinct to allow of any certain conclusions being deduced from them. The seiks, now the ruling race in this quarter, originated as a Hindoo sect, about the middle of the 15th century, and remained in a turbulent feudal condition till early in the present century. About that period, Runjeet Singh, having subdued the other Seik chieftains, established a despotism; which, though far behind the governments of Europe, was yet far in advance of most native governments in the east. He maintained an army of about 25,000 regular infantry, drilled as Europeans, 5000 regular cavalry and artillery, and perhaps, 50,00 irregular horsemen, who were paid by assignments of land for military service; and by their means he made himself feared and respected by his neighbours. His government was vigorous, without being either cruel or unnecessarily severe. But, since his death, which occurred in 1839, no successor adequate to the task of government seems to have appeared; and it is probable that this territory will, at no distant period, be definitively incorporated with the British dominions. (*Burnes's Travels*, 3 vols.; *Elphinstone's Caubul*, &c.; *Moorecroft*; *Parl. Reports*.)

PUTIWL, or POUTIVL, a town of European Russia, gov. Koursk, cap. distr., on the Seim, a tributary of the Dniepr, 110 m. W.S.W. Koursk. Pop. 9000. It has a high school, and a great number of churches, most of which are, however, only wooden structures. Its general trade is considerable, and it has a large annual fair. (*Schnitzler La Russie*.)

PUTNAM, county, N. Y. Situated in the S.E. part of the state, and contains 216 sq. m. Bounded W. by Hudson r. It is very mountainous, containing the Highlands. Drained by head branches of Croton river. It contains iron ore. It had in 1840, 14,971 neat cattle, 14,945 sheep, 12,888 swine; and produced 12,250 bushels of wheat, 35,367 of rye, 86,679 of Indian corn, 37,099 of buckwheat, 86,421 of oats, 142,584 of potatoes. It had 47 stores, one furnace, two forges, 11 fulling-mills, one woollen factory, two flouring-mills, 27 grist-mills, 36 saw-mills, two paper-mills; 63 schools, 2935 scholars. Pop. 12,835. Capital, Carmel.

PUTNAM, county, Ga. Situated a little N. of the centre of the state, and contains 340 sq. m. Bounded E. by Oconee river, by branches of which it is drained. It contained in 1840, 9497 neat cattle, 7071 sheep, 29,991 swine; and produced 35,688 bushels of wheat, 1174 of rye, 360,230 of Indian corn, 21,332 of oats, 13,626 of potatoes, 2,279,145 pounds of cotton. It had 15 stores, one cotton factory with 2000 spindles, eight flouring-mills, 16 grist-mills, 14 saw-mills, two tanneries; five academies, 210 students; five schools, 174 scholars. Pop.: whites, 3741; slaves, 6482; free coloured, 37; total, 10,260. Capital, Eatonton.

PUTNAM, county, O. Situated in the N.W. part of the state, and contains 376 sq. m. Drained by Auglaize river, and its tributaries. It contained in 1840, 5570 neat cattle, 2385 sheep, 11,799 swine; and produced 43,929 bushels of wheat, 1203 of rye, 136,465 of Indian corn, 20,587 of oats, 30,115 of potatoes, 45,979 pounds of sugar. It had 18 stores, eight grist-mills, 11 saw-mills, five tanneries, two printing-offices. Pop. 5189. Capital, Kalida.

PUTNAM, county, Ia. Situated in the W. part of the state, and contains 486 sq. m. Watered by El r. It had in 1840, 16,022 neat cattle, 21,077 sheep, 42,531 swine; and produced 72,274 bushels of wheat, 2212 of rye, 824,792 of Indian corn, 98,208 of oats, 25,163 of potatoes, 27,582 pounds of tobacco, 232,075 of sugar. It had 39 stores, one fulling-mill, three flouring-mills, 33 grist-mills, 32 saw-mills, two oil-mills, 13 tanneries, 10 distilleries, three potteries, one printing-office, one weekly newspaper, and one periodical; one academy, 87 students; 44 schools, 2414 scholars. Pop. 16,842. Capital, Green castle.

PUTNAM, county, Ill. Situated toward the N. part of the state, and contains 325 sq. m. Watered by Illinois and Spoon rivers. It contained in 1840, 2975 neat cattle, 1732 sheep, 6410 swine; and produced 40,855 bushels of wheat, 71,223 of Indian corn, 46,572 of oats, 18,818 of potatoes, 11,030 pounds of sugar. It had nine stores, two saw-mills, two printing-offices, two weekly newspapers; 12 schools, 675 scholars. Pop. 2131. Capital, Hennepin.

PUTNAM, p. t., Muskingum co., O., 55 m. E. Columbus

## PUY-DE-DOME.

340 W. Situated on Muskingum river, opposite to Zanesville. It has one academy, 154 students, one school, 54 scholars. Pop. 1071.

PUTNAM VALLEY, p. t., Putnam co., N. Y., 9 m. W. Carmel, 100 S. Albany. It is mostly covered by the Highlands. Iron ore is extensively found. It has three stores, two forges, one fulling-mill, five grist-mills, eight saw-mills; 10 schools, 461 scholars. Pop. 1659.

PUTNEY, p. t., Windham co. Vt., 111 m. S. Montpelier, 432 W. Bounded E. by Connecticut r. Sacket's brook has a fall of 75 feet in 80 rods, and affords extensive water-power. It contains a Congregational and a Baptist church, three stores, two fulling-mills, two woollen factories, two paper-mills, three grist-mills, four saw-mills, two tanneries; 12 schools, 462 scholars. Pop. 1363.

PUY (Le) (an. *Reversio* and *Vellavi*), a town of France, dep. Haute-Loire, of which it is the cap., on the Borne, here crossed by a bridge of eight arches, 36 m. S.W. St. Etienne. Pop., in 1836, 14,738. It stands on a steep acclivity, and has, when seen from a distance, a picturesque appearance; and, in reality, it is ill-built, and the streets, which are narrow, dirty, and ill-paved with smooth pieces of lava, are frequently impracticable for vehicles of any kind, and even dangerous for foot-passengers. Lately, however, the commerce of Le Puy has revived, and the town has been a good deal improved. The cathedral, in a very conspicuous situation, a Gothic structure of the 10th century, has a richly ornamented altar, on which is a statue of the Virgin, brought by Louis IX. (St. Louis) from Egypt, and presented by him to the city in 1254, on his return from his unfortunate expedition to that country. Adjacent to the town is a very singular needle-shaped rock, about 300 ft. in height, on the summit of which another church is erected. There are several other churches; and it is said that the remains of the constable Duguesclin, originally deposited in the abbey of St. Denis (*Biographie Universelle*), have been transferred within these few years to the church of St. Laurence, in this city. (*Hugo*; *Guide du Voyageur*.) Among the other public buildings are the prefecture, a handsome new edifice; a public library, with 5000 vols.; town-hall, bishop's palace, seminary, college, hall of the tribunal of commerce, two hospitals, barracks, and theatre. Le Puy has a tribunal of original jurisdiction, a chamber of manufactures, a commercial college, normal school, a society of agriculture, science, and arts, gratuitous courses of geometry and mechanics, applied to the arts, and a small museum of antiquities and paintings. It is celebrated for its manufacture of white and black lace. Le Puy is very ancient, but its origin is uncertain. It is called *Vellavaurbs* by Gregory of Tours; and in the middle ages several ecclesiastical councils were held in it. It suffered considerably in the wars of the League; and till lately its trade and prosperity were much depressed. (*Hugo*, art. *Haute-Loire*, &c.; *Guide du Voy.*; *D'Anville*, *L'Ancienne Gaule*, 545.)

PUY-DE-DOME, a central dep. of France, formerly a part of Auvergne, between lat.  $45^{\circ} 17'$  and  $46^{\circ} 13'$  N., and long.  $2^{\circ} 20'$  and  $4^{\circ} E.$ ; having N. Allier, E. Loire, S. Haute-Loire and Cantal, and W. Corrèze and Creuse. Area, 797,238 hectares. Pop., in 1836, 573,106. This dep. is mostly covered with mountains of volcanic formation, the highest of which, the Pic-de-Sancy, is 6223 ft. in height: the Puy-de-Dome, whence the dep. takes its name, has an elevation of 4842 ft.\* Principal rivers, Allier, Dore, Sioule, and Dordogne, most of which have a N. direction; the Allier, intersects the dep. about its centre, and its valley, the Limagne of Auvergne, is exceedingly fertile. In general, however, the soil is sandy, stony, and otherwise indifferent; and agriculture, owing to the poverty and ignorance of the natives, is in a more backward state than in most other parts of France. Great numbers of the inhabitants annually emigrate in search of labour into the adjacent provinces. In 1834, 366,339 hectares of the surface were said to be arable, 90,131 hect. in pastures, 29,152 in vineyards, 82,389 in woods, and 192,112 in heaths and wastes. Rye, oats, and wheat, are the principal grains cultivated, and in 1835 the total produce of corn was estimated at 2,965,000 hectolitres, in addition to which 1,300,000 hect. of potatoes were grown. The annual produce of wine is estimated at from 400,000 to 500,000 hect.; it is mostly of inferior quality, cannot be conveyed from place to place without the risk of being spoiled, and, generally speaking, is good for little, unless it be mixed with other wines. (*Jullien*, 173.) The annual produce of wool is estimated at 900,000 kilogr. Chestnuts, timber, hony, walnut oil, and

\* We may remark, by the way, that it was here, on the 19th of Sept. 1686, that the decisive experiments recommended by Pascal, for determining the weight of the air, and its influence on the height of the mercury in the barometer, were carried into effect, by conveying the instrument to the summit of the mountain. The result was precisely such as Pascal had anticipated, the mercury falling as the barometer reached a higher elevation. (See *Montucla*, *Histoire des Mathématiques*, ii., 205; and *Diogenes Université*, art. *Pascal*.)

## PYRENEES.

cheese, are among the principal sources of its wealth. In 1835, of 225,172 properties subject to the *Contribution foncière*, 113,695 were assessed at less than 5 fr., and 37,485 at from 5 to 10 fr. Puy de Dome yields lead, antimony, coal, granite, &c. Its manufactures, which are mostly confined to the arrond. of Thiers and Ambart, consists in the former principally of cutlery and hardware, paper, leather, wax lights, &c.; and in the latter, of woollen, linen, and cotton goods, lace, and paper. The dep. is divided into 5 arronds.; chief towns, Clermont-Ferrand, Ambert, Issoire, Riom, and Thiers. It sends seven members to the chamber of deputies. Registered electors in 1838-39, 2106. Total public revenue in 1831, 10,057,196 fr. (Hugo, *art. Puy de Dome; French Official Tables; Dict. Geog.*)

PYRENEES, a lofty chain of mountains in S.W. Europe, separating Spain from France, and which, taken in its largest extent, may be regarded as stretching from cape Creux, in Spain, on the Mediterranean, near the frontier of France, W. to the coast of Galicia, a distance of about 650 m. It is more usual, however, to confine the term to that portion of the chain which separates Spain from France:—

"Pyrene celsa nimborum verticis arce  
Divisus Cælia late prospectat Iberos,  
Alque æthere tenet magnis divitiæ lerris"  
*Silius Italicus*, iii. lin. 417.

When thus restricted, the chain terminates on the W. near Fontenrriente, between lat. 42° 10' and 43° 20' N., and long. 3° 20' E. and 2° W., its length being about 270 m., its average breadth about 38 m., and the area about 1100 sq. m. This great range may be considered as consisting of two parts, both having the same direction, though not in one continued line, the point of division being formed by the Val d'Arnan, near the head waters of the Garonne; of these the W. part is more southerly than that to the E. The steep escarpment is on the side of Spain; the slope towards France being much more gradual, owing to the elevation of the level districts about the Adour and Garonne. It may be remarked, also, that the French valleys ascend the crest of the chain by easy steps, more or less lofty, while the opposite side presents a continued succession of rugged chasins, abrupt precipices, and huge masses of naked rock. The chain at each extremity declines towards the sea; but the fall on the E. is much more sudden than on the W.; the elevation only 50 m. from the Mediterranean being 8500 ft., whereas on the opposite side this altitude is not found nearer than 70 m. from the coast. The following table gives the position and elevation of the principal summits of the Pyrenees.

	Lat.	Long.	Height in feet.
Le Canigou . . . . .	42° 31' N.	2° 25' E.	8,111
Pic Pedrons . . . . .	42 34 —	1 56 —	9,511
Pic de Serrère . . . . .	42 39 —	1 20 —	9,616
Montcain . . . . .	42 41 —	1 30 —	10,663
Pic des Eials . . . . .	42 40 —	1 23 —	10,611
Carabioules . . . . .	42 42 —	0 37 —	10,515
Troumouse . . . . .	42 43 —	0 13 —	10,190
* La Maladetta, or Pic de Neton . . . . .	42 33 —	0 47 —	11,424
* Pic Poetsa . . . . .	42 40 —	0 31 —	11,277
* Mont Perdu . . . . .	—	—	11,168
Pic de Cascade . . . . .	—	—	10,743
Do. Vignemale . . . . .	42 46 —	0 4 W.	11,001
Do. Soube . . . . .	42 49 —	0 21 —	10,276
Do. Midi de Bigorre . . . . .	42 55 —	0 12 —	9,511

The above measurements are those given by Bruguieré (*Orographie de l'Europe*), from the extensive surveys made by Charpentier, Ramond, Bebon, Vidal, &c. The summits marked with an asterisk, which comprise the three highest points of the chain, are on its S. face. Glaciers are found, as in the Alps, on some of the higher mountains; but these masses of permanent ice are much less extensive, the point of perpetual congelation being at a height of 10,000 ft., or about 2000 ft. higher than in the Alps, a difference owing chiefly to the vicinity of the sea on either side.

The valleys of the Pyrenees are numerous, and of singular conformation; for, whereas the depressions of the Alpine system run from 40 to 70 m. nearly in the direction of the chain, all the great valleys of the Pyrenees are transverse, taking their origin at a *col* in the crest, and running N. and S. almost at right angles with the main ridge. The largest valleys are found in the central Pyrenees, the principal being those of the Garonne and Lavedan, each of which is from 40 to 50 m. in length. These transverse valleys are commonly the beds of rivers, or rather torrents; which, in the wider and less elevated parts, take a slow and serpentine course, but in the defiles become rapid and impetuous torrents, often interrupted by cascades, and sometimes by a series of falls. Lakes are frequently enclosed in the basins formed in the higher ridges of the valleys, and several of those in the central Pyrenees, which are sheltered from the sun, are perpetually covered with ice. Some valleys, also, instead of running in a deep and narrow defile, or a series of little basins, more or less extensive, rising by

degrees to the height of the central ridge, present at their origin a single basin, surrounded on three sides by a lofty wall of rock, and opening by a narrow gully into the vale below; and these natural amphitheatres, or *cirques*, as they are termed (the principal of which is that of Gavarnia, in the valley of Barèges), constitute the grandest and most distinctive features of the Pyrenees. About 50 passes are formed through the valleys now noticed; but by far the greater number are practicable only for the pènsanry, and *contrabandistas*, who are found in all parts of the Pyrenees. There are only five good carriage roads over the chain;—1. the Col de Pertus, the extreme E. pass between Perpignan and Jonquera, practicable at all seasons, and by all kinds of vehicles; 2. the Pass of Puymoreins, leading from the valley of the Seine to that of the Arriège (6299 ft. high); 3. the Port de Caufrane, between Pau and Saragossa (6713 ft.); 4. the Port de Roncevaux, between St. Jean and Pampeluna (5771 ft.); and 5. the Pass of Bidassoa, along the high road connecting Burgos and Vittoria with Bayonne. The first and last of these passes are those most generally used by travellers between Spain and France. The two highest passes are the Port d'Or (9843 ft.), and the Brèche de Roland (9856 ft.); but they are practicable only during about two months of the year.

The geology of the Pyrenees is still very imperfectly known, notwithstanding the researches of Charpentier, Palasson, and other naturalists. The extent of primitive rock is smaller than in the Alps; but its arrangement is very peculiar; not in isolated masses, bursting here and there through the transition and secondary formations, but in a band or zone running in the direction of the chain, but only occasionally falling in with the crest or central chain; the granite in the W. section is on the S., and in that to the E. on the N. side of the main ridge. The primitive formation is extremely simple, consisting of three rocks only, granite, micaceous schist, and primitive limestone, which, together, form a pretty continuous band, stretching three fourths across the isthmus. The transition rocks, comprising the great bulk of the mountain system, are arranged in vertical bands flanking the primitive formation, and consist of argillaceous schist, schistose and common grauwacke, with blue limestone: these strata occur mostly on the N. side, the beds S. of the primitive formation being chiefly secondary rocks, as red sandstone, Alpine and Jura limestone, &c. The oolite and chalk formations are found in the lower parts of the chain on either side. The existence of volcanic action is proved by the trap and other similar formations, interspersed in different parts of the chain; by the peculiar manner in which many of the strata are upheaved; by the frequency of earthquakes on both sides of the range, and by the abundance of thermal springs, especially in the valley on the French side of the Pyrenees. The most celebrated springs are those of Bagnères de Bigorre and Barrège, Bagnères de Luchon and St. Sauveur; all of which are visited, during the summer months, by persons labouring under rheumatism and chronic disorders, as well as by others in search of pleasure and picturesque scenery.

Iron, copper, zinc, and lead are found in the Pyrenees; but, with the exception of iron, these ores are not wrought, though it be a well-known fact that great mineral riches were extracted from these mountains by the Carthaginians and Romans. Indeed, there are the remains of 300 or 400 deserted mines in different parts of the Pyrenees, some of which are said to be very rich. The veins of marble are numerous and valuable, one of them, a white marble, being equal, in purity and closeness of texture, to that of Carara.

The flora of the Pyrenees comprises the rhododendra, the alpine rose, and a large variety of plants common to high elevations; the principal forest trees being the box, fir, pine, and, in lower situations, the deciduous oak. The fauna comprises the *izzard*, a species of chamois, the wolf, and the bear; with a variety of birds, many of them are migratory.

The Pyrenees give rise to numerous rivers. Those on the N. side comprise the Adour and its tributaries, the Pau, Oleron, Saison, Nive, &c.; the Garonne, with the Gers, Arriège, and others of its affluents, all sending their waters into the Bay of Biscay; and the Aude, the Tet, and the Tech, falling into the Mediterranean. The rivers descending from the S. slope are mostly tributaries of the Ebro, the principal being the Arragon, Gallego, Cinca, and Segre, all of which have numerous branches; the other rivers of this slope are the Ter and the Llobregat, the latter flowing into the sea close to Barcelona.

With respect to the scenery of the Pyrenees, as compared with that of the Alps, Mr. Inglis observes, that each has its peculiar charms, but that scenes of savage sublimity are more frequently met with in Switzerland than in the Pyrenees; the N. lat. of the former, as well as the greater size of its rivers and lakes, adding to its features of wild grandeur. The Pyrenees, however, appear to exceed the Alps in elevation, owing to the much lower level of the valleys,

## PYRENEES (BASSES).

as compared with those of Switzerland, some of which are nearly 4000 ft. high, while those of S.W. France scarcely exceed 2000 ft. The presence of oaks, also, in the forests, clothing the sides of the mountains, gives a beauty to the Pyrenees which is wholly absent on the fir-covered steep slopes of the Alps. But, however worthy of the traveller's notice, these valleys will probably never become the frequent resort of the tourist, because access to them is extremely difficult, and the accommodation for travellers worse than indifferent; while Switzerland, accessible in several directions by good roads, is visited not only on its own account, but because it is the high road to Italy. (*Inglist's Switz., France, and Pyrenees*, p. 242-5.)

The mountaineers of the Pyrenees are shepherds, and small proprietors both of land and cattle; but owing to the deficiency of nutritious vegetation, their condition as graziers is far inferior to that of their brothers of the Alps. They are patient and industrious, though seldom raised above want; besides which, they are in every thing, but especially in food and clothing, more simple and primitive than the Alpine mountaineers, than whom, however, they are unquestionably handsomer and more vigorous. Their food usually consists of rye or barley bread and paste, made from Indian corn, with, occasionally, salted kid's flesh and pork. Mr. Inglis speaks favourably of their character for kindness and generosity; adding also, that "crime of every description is rare in the Pyrenees, theft very unfrequent, and murder altogether unknown." (P. 249.) On these mountains is found the extraordinary race of people, called *Cagots*, distinguished by their sallow and unhealthy countenances, stupid expression, want of vigour, relaxed appearance, imperfect articulation, disposition to goitres, and inferior share of mental capacity. They live in the most retired valleys, secluded from and studiously avoiding intercourse with the rest of the inhabitants, by whom they are looked upon as a degraded race: and though they are not persecuted, enslaved, and debarred the privileges of religion as formerly, they are "still a separate family, still outcasts; a people having evidently no kindred with those who live around them, but the remnant of a different and more ancient family." The origin of this curious race is hidden in obscurity; but M. Ramond and others conceive them to be the miserable remains of the Germanic conquerors of the Spanish peninsula.

The Pyrenees, which seem to have been known to the Greeks under the name of *Ilypyn*, are connected with many important historical events. Hannibal crossed them on his way to Italy, at the beginning of the second Punic war, most probably by the pass of Pertus, near the E. end of the chain. Julius Cæsar also traversed them with his army, when marching into Spain against Pompey. Charlemagne carried his victorious arms over these mountains, and added Spain to the empire of the Franks. Edward the Black Prince led his army over one of the western passes, when fighting in defence of Peter the Cruel against Henry of Trastamare; and these mountains have obtained a more recent celebrity from having been the scene of several obstinate struggles between the French and English at the close of the Peninsular war, the result of which set in a striking point of view the great military talents of the Duke of Wellington. (*Les Pyrénées, par Chauvaneque*, p. 9-43; *Palascon, Histoire Nat. des Pyrénées*, 2 vols. passim; *Encycl. Metrop.*, art. *Pyrenees*, by the Rev. G. C. Renouard; *Milano*, *Inglist*, &c.)

PYRENEES (BASSES), a frontier dep. of France, reg. S.W., formerly comprised in Gascony, Bearn, and Navarre; between lat. 42° 47' and 43° 35' N., long. 0° and 1° 48' W., having N. Landes, E. Hautes-Pyrenees, S. and W. Spain, and N.W. the bay of Biscay, on which it has a coast-line of about 25 m. Area, 749,490 hect. Pop. in 1836, 428,400. The Pyrenees bound this dep. on the S.; their highest point in this part of the range, the Pic du Midi, being 9546 ft. in height. Their ramifications cover the greater part of the dep., which is traversed by the rivers Gave de Pau, Oleron, Bidouze, Nèze, &c., tributaries of the Adour, and flowing N.W. Small lakes, mineral springs, &c., are very numerous. Except on the mountains, the climate is temperate and healthy; the soil in the lower parts of the country is very fertile, while the mountain sides are covered with fine pastures and forests, which maintain great numbers of cattle and hogs. In 1834, 156,223 hectares of the surface was said to be arable, 66,254 in artificial meadows, 23,175 in vineyards, 130,172 in woods, and 340,732 occupied with natural pastures, heaths, wastes, &c. (*French Official Tables*.) "Between Bethuram and Pau, the country is beautiful. We are traversing the rich vales of Bearn, every inch of land is cultivated, and the road is a constant succession of villages and houses. The principal products of this country are fruit, wine, and Indian corn, all of which grow in great perfection. It is in this district that the prunes so much prized in England are grown and prepared; and every description of fruit that is produced in the lower parts

## PYRENEES (HAUTES).

of Bearn is excellent of its kind. Here too, we find the vine, not as it is found in the other parts of France, an insignificant shrub, covering the acclivities, and possessing not much greater beauty than a potato-field; but trained from tree to tree, as in some parts of Italy and in the Tyrol. This district, excepting the valleys of the Pyrenees, is certainly the most beautiful part of France." (*Inglist's Switz., France, and Pyrenees*, p. 308.) Agriculture is, however, in a very backward state: by what would seem to be a singular contradiction, the sides of the hills are cultivated, while the plains, which, it may be presumed, would be much more productive, are left waste or in pasture; and the corn is insufficient for the home supply. Maize and wheat are the grains principally cultivated; flax and hemp are, also, raised in large quantities. The produce of wine is estimated at about 300,000 hectolitres a year, of which about one third part is consumed by the inhabitants; some growths, particularly those of Jurançon, near Pau, are of a superior quality. In 1830, there were estimated to be nearly 117,000 head of cattle in the dep., and 464,000 sheep, the produce of wool being supposed to amount to about 1,000,000 kilogr. The breed of horses has been greatly improved by the stud at Pau: a great many mules are bred for export into Spain. The hogs furnish the hams so well known under the name of *jambons de Bayonne*. In 1835, of 94,893 properties subject to the *Contribution foncière*, 47,053 were assessed at less than 5 fr., while 14 only were assessed at 1000 fr. and upwards. Copper, iron, sulphur, cobalt, slate, marble, and granite, are among the mineral products; and mining industry is carried on upon a pretty extensive scale. The manufactures comprise woollen and linen stuffs and yarn, printed handkerchiefs (called *mouchoirs de Bearn*), leather, hardware, earthenware, paper, chocolate, brandy, &c.; and the dep. furnishes supplies of planks, with cordage, &c., for the dock-yard at Bayonne. The value of the cattle, wine, hams, salted geese, &c., exported to foreign countries, especially to Spain, is estimated at 4,000,000 fr. a year, and that of the exports to other parts of France at about 3,000,000 fr. Basses-Pyrenees is divided into five arrondissements; chief towns, Pau, the cap., Bayonne, Mauleon, Oleron, and Orthez. It sends five mems. to the chamber of deputies. Registered electors in 1838-9, 1106. Total public revenue in 1831-2, £7,858,744. (*Hugo*, art. *Basses-Pyrenees*; *Dict. Geog.*; *French Official Tables*; *Inglist*.)

PYRENEES (HAUTES), a frontier dep. of France, reg. S.W., formerly included in Gascony, between lat. 42° 42' and 43° 35' N., and long. 2° W. and 3° E., having N. Gers, E. Haute Garonne, W. Basses-Pyrenees, and S. Spain, the ridge of the Pyrenees forming the line of demarcation between the two kingdoms. Area, 452,790 hectares. Pop. in 1836, 233,031. Within the limits of this dep. are some of the most remarkable places of resort and objects of curiosity in the Pyrenees, as the baths of Bagnères, Bagnères, and Cauterets, the valley of Gavarnie, *Breche de Roland*, &c. By far the greater part of the surface is covered with ramifications of the Pyrenees, among which the Gave de Pau, Gers, Adour, &c., take their rise. Small lakes are very numerous in the mountains. In 1834, of the surface of the dep., 94,539 hectares were estimated to be arable, 44,376 in meadows, 15,382 in vineyards, 84,611 in woods, and 173,579 in heaths, wastes, &c. There is a larger proportion of good soil in this than in the neighbouring dep. of the *Basses-Pyrenees*, though the produce of corn (chiefly maize and wheat), be still insufficient for the inhabitants. Property is much subdivided: most of the peasants are proprietors of the soil they cultivate; and the greater number of the other proprietors are engaged in the cultivation of their own lands. In 1835, of 78,713 properties subject to the *contribution foncière*, no fewer than 44,031 were assessed at less than 5 fr., and 12,865 at from 5 to 10 fr., while only eight were assessed at 1000 fr. or upwards. (*French Official Tables*.) Inglis describes a family in the mountains whose condition might be taken as a fair sample of that of the poorer mountaineers of the Pyrenees. "The property of peasant," says he, "consisted of two cows and three goats. A small meadow in the neighbourhood of the hut was fertilized, and allotted to rye, and about a rood of land was laid out in potatoes and cabbages. The peasant and his family consumed the whole produce of the animals. Meat of no kind ever entered the cabin; but the lake, one and a half league distant, occasionally supplied a few fish. A kind of cheese, like some of the poorer Scotch cheeses, was made from the goats' milk; and the sale of this to the lower orders at Cauterets was the only source of the money necessary for the purchase of clothes and whatever else was not produced by cows and goats." (*Switzerland, the Pyrenees, &c.*, p. 280, 281.) The dep. produces about 270,000 hectolitres a year of inferior wine, about half of which is exported or converted into brandy. A good many cattle are reared, and the horses bred in the plain of Tarbes are extensively purchased for the service of the light cavalry. Mules are bred for export into Spain. The produce of wool is reckon-

ed at about 370,000 kilogr. a year; and a good deal of butter is made of the milk of the sheep. The produce of honey and wax is also considerable. Minerals and manufactures, though of little importance, are not quite valueless, there being good marble quarries, and some fabrics of woollen, linen, and cotton stuffs, with tanneries, distilleries, &c. The dep. is divided into three arronds.; chief towns, Tarbes (the cap.), Argeles, and Bagnères de Bigorre. It sends three mems. to the chamber of deputies. Registered electors in 1838, 39,545. Total public revenue, in 1831, 3,118,056 fr. (Hugo, art. *Pyrenées-Hautes*; *Dict. Géog.*; *French Official Tables*.)

**PYRENEES-ORIENTALES**, a marit. and frontier dep. of France, reg. S., consisting principally of the old prov. of Roussillon, with a portion of Languedoc, E., having N. Ande, W. Argeles, S. Spain, the ridge of the Pyrenees forming the line of demarcation between the two kingdoms, and E. the Mediterranean. Shape nearly triangular. Area, 411,623 hectares. Pop., in 1836, 157,052. The Pyrenees in this dep. are less lofty than in the greater part of the rest of their course; still, however, the Canigou, their highest peak, attains an elevation of 9140 ft. The dep., though in great part mountainous, comprises a large extent of plain country. The principal rivers are the Tet, Tech, and Agly, but none of these are navigable. In 1834, 92,554 hectares of the surface were supposed to be arable, 9796 in artificial pastures (probably meadows), 58,442 in vineyards, 43,877 in woods, and 188,407 in heaths, wastes, &c. The arable lands are of two classes,—wet and dry. The irrigable, or wet, are always under culture; in the rotation to which they are subjected they usually yield three crops in two years; one of which is wheat, and the others trefoil, or beans, maize, potatoes, hemp, or flax, when they are kept in grass for an equal period. The dry, or non-irrigable, lands, are alternately under wheat or rye, or in fallow. But though agriculture be better conducted than in most of the adjacent depts., the corn continues to be separated from the grain by treading out with horses, as in Aude. The total produce of corn, chiefly wheat, maize, and rye, was estimated, in 1835, at 442,160 hectolitres a year, a quantity obviously much below the demand of the population. The dep. also furnishes in ordinary years about 300,000 hectol. of wine, and 12,000 of oil. The *vins ordinaires* are highly coloured and heavy, and are but little drunk in a pure state in other parts of France, but are extensively employed to give colour and body to the weaker wines of other depts. The red wines of Bagnols, and the white wines of Rivesaltes are, however, of a very superior description. The former are *pleins de corps et de spiritueux, avec de la moelle, du velouté, et un fort bon goût. En vieillissant ils acquièrent de la finesse du bouquet, et un couleur de l'or.* (Jullien, p. 282.) The white Muscat wine of Rivesaltes is said by the same distinguished authority to be decidedly the best *vin de liqueur* produced in France. *Il est plein de finesse, de feu, et de parfum, il embaume la bouche et la laisse toujours fraîche; et il est bien constant que ce vin est l'un des meilleurs de l'univers, lorsqu'il provient d'une bonne année et qu'il a vieilli.* (p. 285.)

The horses of the department have been very much improved by the royal stud at Perpignan and otherwise; sheep and goats are, however, the most valuable domestic animals; the former yield annually about 50,000 kilogr. of wool for exportation, after supplying the home consumption. The mulberry has been introduced, but this department ranks last among those in which silk is grown. About 300,000 kilogr. a year of cork are collected. Property is very much subdivided. Of 54,906 properties subject to the *contrib. foncière*, in 1835, 27,018 were assessed at less than 5 francs, and 9454 at from 5 to 10 francs; only 32 properties were assessed at 1000 francs and upwards. Iron, copper, bismuth, and lead are raised, but in no great quantities. Many of the inhabitants of the coast are occupied in the tunny and anchovy fisheries; and there are manufactures of coarse woollen stuffs and hosiery, with iron forges, tanneries, paper-mills, distilleries, &c. The department is divided into three arronds.; chief towns, Perpignan (the cap.), Céret, and Prades. It sends three members to the chamber of deputies. Registered electors, in 1833, 39,849. Total public revenue, in 1831, 3,182,498 francs. Roussillon belonged successively to the kings of Majorca and of Arragon, till Louis XI. took it from the latter. It was restored by Charles VIII., and remained attached to the Spanish monarchy till 1640, when it was finally annexed to France. (Hugo, art. *Pyrenées-Orientales*; *Dict. Géog.*; *French Official Tables*.)

## Q.

**QUEBEC**, a city and seaport of Canada, of which, and of the British possessions in N. America, it is the capital, on the N.W. bank of the St. Lawrence, at the point where

it is joined by the St. Charles, about 340 m. from the mouth of the former, lat. 46° 45' 49" N., long. 71° 10' 45" W. Pop., in 1831, 27,562, but now probably above 30,000. It occupies the extremity of a ridge, terminating in the angle formed by the junction of the two rivers, in the point called cape Diamond, rising to the height of nearly 340 ft. above the St. Lawrence. The cape is surmounted by the citadel; and the town extends from it, principally in a N.E. direction, down to the water's edge. It is divided, from the difference of elevation, into the upper and lower towns. The old town, which lies wholly without the walls, partly at the foot of cape Diamond and round to the St. Charles, has narrow and dirty, and, in parts, steep streets; "the most crowded parts of the old town of Edinburgh not being more irregular or confined than the lower town of Quebec." (*Macgregor*.) The ascent from the lower to the upper town, which crosses the line of the fortifications, is by a winding street, and by flights of steps. The streets in the latter, though rather narrow, are generally clean, and tolerably well paved, or macadamised. Both towns are wholly built of stone; and the public buildings, and most of the houses in the upper town are roofed with tin plates, the glitter of which, in the sun, has a brilliant and striking effect, but is destructive of every thing that Europeans have been accustomed to call grand and venerable. In the lower town the houses are mostly covered with shingles.

Quebec is very strongly fortified, and may, in fact, be called the Gibraltar of America. The citadel over cape Diamond includes an area of about 40 acres; and is formidable alike from its position and its works, constructed on a gigantic scale, and on the most approved principles. The line of the fortifications, which stretches nearly across the peninsula on the W., and runs along a ridge between the upper and lower towns, is intersected by five gates, and has an inner circuit of about 2½ miles. Beyond the ramparts, on the W., are the extensive suburbs of St. Roch, St. John, and St. Louis.

The public buildings are substantial, rather than elegant. The Château St. Louis, the residence of the governor-general, a large, plain building, on a height overhanging the river, was burned down early in 1835. The Roman Catholic cathedral of Notre Dame, the Protestant cathedral, with sundry other Catholic and Protestant churches; the old episcopal palace, now the seat of the Canadian legislature; the quadrangular edifice formerly the college of the Jesuits, but now a barrack; in the upper town, with the Quebec bank; the Exchange reading-room, well furnished with American, British, and other newspapers and periodical publications; and the government warehouses in the lower town, comprise the principal public buildings.

There are three nunneries, one of which, the Hôtel du Dieu, is a very valuable hospital. The nuns are here, in fact, a most useful class of persons, acting as nurses to the sick admitted within these establishments, and as instructresses of young girls.

Among the establishments for educational purposes, the first place is due to the French college. It has a principal, and professors of theology, rhetoric, and mathematics, with five regents for the Latin and Greek classes. Here is, also, a royal grammar school, a classical academy, a national school, and many French and English private schools. A Royal Institution for the advancement of learning within the province, and a Literary and Historical Society, respectively enjoy the patronage of the government and of the principal inhabitants. A Mechanics' Institute was established in 1830; and it has numerous benevolent associations. The city public library, though not very extensive, is said to be well selected, and to contain a great variety of standard works. The garrison, also, has a good library. Several newspapers are published in the city.

Though not a manufacturing town, Quebec has various distilleries, breweries, with tobacco, soap, and candle works; and numbers of fine ships have been launched from its yards. It has two or three banks, and a savings-bank. The markets are well stocked with most sorts of produce, except good fish, which is rather scarce and dear.

The climate, though on the whole good and healthy, is in extremes. In summer the heat is equal to that of Naples, while the cold of winter is not inferior to that of Moscow. This inequality occasions a corresponding difference in the modes of life during the different seasons in the year. In winter travelling is carried on by means of sledges and carriages, in the same way as in Russia. The first view of Quebec in sailing up the St. Lawrence is striking in the extreme; and Mr. Macgregor speaks in high terms of the magnificent prospect from the citadel on cape Diamond.

The majority of the population being of French extraction, the French language, which is still spoken in some of the best circles with great propriety, and the Roman Catholic religion, predominate. Society is here more polished and refined than in any other town of British America; and the higher provincial gentry of French descent are distinguish-

## QUEBEC.

ed by the courteousness and urbanity of their manner. But, in consequence, perhaps, of the seductive example of the mimic court established among them, all classes are much given to show, and generally indulge in expenses beyond their means. Hence Quebec is very expensive; and owing to the jealousies that exist, and the violence of provincial politics, society is split into different parties. Great attention is, also, paid to etiquette; and those admitted to the governor-general's parties rarely associate with those who do not enjoy that honour.

Vessels of the very largest burden arrive at Quebec. Its harbour or basin, between the city and the Island of New-Orleans, is of great extent, having in general about 28 fathoms water, the tide rising from 16 to 18 ft. at neaps, and from 25 to 30 ft. at springs. Ships lie alongside the wharfs along the St. Lawrence. There are extensive flats between the lower town and the St. Charles, where, if it were deemed of importance, wet docks might be easily constructed.

The trade of the city is very extensive. It engrosses almost the entire trade of the prov. with the mother country, the West Indies, &c.; and is annually resorted to by vast numbers of immigrants, who partly settle in Canada, but who mostly re-emigrate to the United States. It has a regular intercourse, by means of steamers, with Montreal, and other ports higher up the St. Lawrence, and with Halifax, and other ports on the Atlantic. Still, however, it must

Account of the Arrivals of Ships in Quebec, specifying the Amount of Tonnage, the number of Seamen employed, and Number of Immigrants; with the Number of Vessels built in Quebec, the Tonnage, and Number of Men employed in building the same; in each Year from 1833 to 1839, both inclusive:

	1833.	1834.	1835.	1836.	1837.	1838.	1839.
Arrivals . . . . .	1,005	1,122	1,132	1,185	1,032	1,125	1,175

Quebec, as every one knows, was taken from the French in 1759. A British army, under General Wolfe, having effected a landing near the city, attacked and defeated the French army under Montcalm, on the heights of Abraham, to the W. of the town. Wolfe fell in the moment of victory; and Montcalm, who was also mortally wounded in the action, expired soon after. The French, panic-struck by the loss of the battle and the death of their commander-in-chief, surrendered the city before even a single battery had been opened against it. A monument was erected, under the patronage of Lord Dalhousie, in the gardens of the chateau, inscribed to the "Immortal memory of Wolfe and Montcalm."

QUEDLINBURG, a town of Prussian Saxony, reg. Magdeburg, circ. Aschersleben, on the Bode, a tributary of the Saale, 7 m. S.E. Halberstadt, and 33 m. S.W. Magdeburg. Pop. in 1838, 12,903. It is well built, and is surrounded by turreted walls, pierced by four gates. On an eminence immediately above the town is an old castle, now falling into decay, but which has a good library, and is in part convert-

## QUEENSBOROUGH.

not be forgotten, that in so far as the United Kingdom is concerned, the trade with Canada and Quebec is wholly forced and factitious, and is not a source of profit, but the reverse. It is in fact, as has been already shown (i. 534.), almost wholly a consequence of the high discriminating duties laid in our ports on timber from the N. of Europe, by which we exclude a cheap and good to make room for a comparatively bad and dear article. But for this preposterous arrangement, the trade between Great Britain and Quebec would be extremely unimportant. Thus, in 1837, of the total value of the imports from Canada, amounting in all to £908,792, timber made £651,786! the only other article of any importance being ashes. The principal articles of import into Canada consist of corn, cottons, woollens, silk, and other manufactured goods; glass ware, spirits and wines, iron and hardware, sugar and tea, &c. The total value of the imports into Lower Canada (nine tenths of which went to Quebec), in 1837, amounted to £1,602,353.

It is material, however, to bear in mind, that little more than a third part of these imports were paid for by the exports; they were, in fact, principally paid for by the treasury at home, and are to be regarded as the means sent out by England to pay the troops and meet the other heavy expenses she has to incur in the preservation of this most unprofitable colony. We subjoin some returns relative to the trade and navigation of Quebec during the seven years ending with 1839.

Account of the Arrivals of Ships in Quebec, the number of Seamen employed, and Number of Immigrants; with the Number of Vessels built in Quebec, the Tonnage, and Number of Men employed in building the same; in each Year from 1833 to 1839, both inclusive:

ed into a school. It was formerly the residence of the abbesses of Quedlinburg, who were princesses of the empire, and had a seat on the Rhenish bench of bishops. Many of these abbesses are buried in the *Stiftskirche*, or church of the ancient abbey; in which are also the tombs of Henry the Fowler, his empress, the beautiful countess Königsmark, mother of Marshal Saxe, &c. Quedlinburg has several hospitals, public schools, and various charities; with manufactures of woollen stuffs, distilleries, sugar refineries, &c. The rearing of cattle and hogs employs many of the inhabitants. Klopstock, author of the "Messiah," was a native of Quedlinburg, having been born here on the 2d of July, 1733; since his death a monument has been erected to his memory in the Brühl garden near the town. Quedlinburg was formerly a free imperial city, and has been frequently the residence of the German emperors and the seat of ecclesiastical councils. (*Berghaus, Allg. Länder, &c.*, iv. 654; *Murray's Handbook for N. Germany*.)

QUEEN ANNE, county, Md. Situated in the E. part of the state, on the E. side of Chesapeake bay, and contains 400 sq. m. Bounded N.W. by Chester river; Kent island in Chesapeake bay belongs to it. It contained in 1840, 9056 neat cattle, 12,881 sheep, 12,520 swine; and produced 113,411 bushels of wheat, 35,767 of rye, 501,274 of Indian corn, 117,765 of oats, 15,275 of potatoes. It had eight stores, five grist-mills, one tannery; six academies, 96 students; 12 schools, 384 scholars. Pop.: whites, 6132; slaves, 3960; free coloureds, 2541; total, 12,633.

QUEENSBOROUGH, a bor., seaport, and par. of England, county Kent, lake Scray, on the E. coast of the Isle of Sheppey, at the junction of the channel of the Swale with the estuary of the Medway, 2 m. S. Sheerness, and 37 m. E. by S. London. Area of parish, 380 acres. Pop. of do., in 1831, 786. The town, which is poor and mean, consists principally of a main street, having the guildhall, with a jail underneath, near its centre. The church, an ancient structure, has a tower at its W. end; and there is, also, a chapel for Independents. A charity-school for the education of the sons of the freemen used to be supported by the corporation and the parliamentary representatives for the borough, and there are some minor-schools, and a Sunday-school. The inhabitants are almost wholly engaged in the breeding and supplying of oysters for the London market.

Inconsiderable as it has long been, Queensborough enjoyed the privilege of sending two members to the House of Commons from the era of Elizabeth down to the passing of the Reform Act, when it was most properly disfranchised. It was reckoned too unimportant to be included in the provisions of the Municipal Reform Act. A fine old castle in

## QUEENSBURY.

the vicinity of the town was demolished by order of parliament in 1650.

QUEENSBURY, p. t., Warren co., N. Y., 57 m. N. Albany, 429 W. Bounded S. by Hudson river, and contains the village of Glen's Falls. It contains a Methodist and an Episcopal church, 25 stores, one fulling-mill, one grist-mill, nine saw-mills, one powder-mill; one academy, 44 students; 22 schools, 918 schools. Pop. 3789.

QUEEN'S COUNTY, an inland co. of Ireland, prov. Leinster, having N. King's co., E. Kildare and Carlow, and a detached portion of King's co., S. Kilkenny, and W. Tipperary. Area 336,810 acres, of which 60,972 consist of unimproved bog and waste lands. Surface generally flat; and soil, except where bog occurs, for the most part very fertile. Estates mostly large; but many of them are let on perpetual leases; the head lessees on these estates forming the middle class of gentry. These, however, have mostly relet their farms, generally in smaller divisions, to inferior tenants; and these again have subdivided them to others; so that many of the occupancies are extremely small, and held by persons too poor to be able to make any improvement. But where farms have been let on terminable leases, they are larger, and on these various improvements have been introduced, both as respects the rotation of crops, the implements of husbandry, and the stocks. Dairying is carried on to some extent, and a good deal of cheese is made for the Dublin market. Average rent of land 14s. an acre. Coal and limestone are found in this co.; but the former is not wrought. Principal rivers, Barrow and Nore. It is divided into eight baronies, and 50 parishes; and sends three members to the House of Commons, being two for the county, and one for the borough of Portlinton. Registered electors for the county, in 1839-40, 2347. In 1831, this county had 23,783 inhabited houses, 25,403 families, and 145,851 inhabitants, of whom 72,469 were males, and 73,382 females.

QUEEN'S, county, N. Y., the central county of Long Island, and contains 396 sq. m. It has the East river and Long Island sound on the N., and the Atlantic ocean on the S. There is a lighthouse on Sand's point on the sound. It contained in 1840, 14,181 neat cattle, 26,477 sheep, 21,518 swine; and produced 97,741 bushels of wheat, 105,399 of rye, 336,401 of Indian corn, 64,027 of buckwheat, 3593 of barley, 348,447 of oats, 214,121 of potatoes. It had 83 stores, 13 lumber-yards, seven fulling-mills, seven woollen factories, seven flouring-mills, 41 grist-mills, 17 saw-mills, three paper-mills, one rope-walk, five tanneries, one distillery, one glass-cutting works, four printing-offices, three weekly newspapers; one college, 36 students; eight academies, 429 students; 78 schools, 3670 scholars. Pop. 30,324. Capital, North Hempstead.

QUEENSFERRY (SOUTH), a parl. bor. and seaport of Scotland, co. Linlithgow, on the S. shore of the frith of Forth, nearly opposite to N. Queensferry, 8 m. W. by N. Edinburgh. It is a poor decayed place, which was originally founded for, and is still principally dependant on, the ferry, which has long been established at this point, across the Forth. Pop., in 1831, 684. It consists chiefly of one street, running parallel to the frith. The only public buildings are the parish church, a dissenting chapel, and the town-hall: it has a soap manufactory and a brewery. New-hall, immediately to the E. of the town, is now the principal ferry station across the Forth; though, under certain circumstances, the ferry-men prefer the pier of the borough.

North Queensferry, on the opposite side of the frith, which is here less than 2 m. across, is still more considerable. The principal ferry business across the Forth is now, in fact, carried on between Newhaven and Brunt-island, and Newhaven and Kirkcaldy. Dr. Wilkie, author of the "Epigoniad," was a native of S. Queensferry, having been born there in 1721. Queensferry unites with Dunfermline, Inverkeithing, Culross, and Stirling, in sending one member to the House of Commons. Registered electors in this bor., in 1839-40, 42. Hopetoun House, the splendid mansion of the Earl of Hopetoun, is situated a little W. from S. Queensferry. It occupies a commanding position, and has a noble view.

QUENTIN, ST. (an. *Augusta Vermanduorum*), a manufacturing town of France, dep. Aisne, cap. arrond., on the Somme and on the canal of St. Quentin, 24 m. N.W. Laon; lat. 49° 50' 51" N., long. 3° 17' 38" E. Pop., in 1836 (exc. comm.), 19,892. It was formerly a place of strength; but since the time of Louis XIV. its ramparts have given place to suburbs and public walks, and a fine public promenade extends on the E. side of the town, along the banks of the canal. St. Quentin is tolerably well built; its principal streets being wide, its new quarters handsome, and most of its houses modern. In the centre of the town is a large square, in which is the town-hall, a curiously ornamented Gothic edifice. The principal church, or cathedral, is a vast and majestic pile, 416 feet in length internally, and its nave 212 feet in height. The hospitals, the public library, with 14,000 volumes, the courthouse, belfry, theatre, and

## QUENTIN (ST.)

concert-hall, comprise the other buildings worth notice. It has tribunals of original jurisdiction and commerce, a chamber of manufactures, a council des prud'hommes, &c., a communal college, drawing and commercial schools, courses of practical geometry and mechanics, and a society of arts and sciences.

St. Quentin was formerly the centre of an extensive manufacture of linen fabrics and yarn. This branch of industry has now almost disappeared; but its place has been supplied by the cotton manufacture. In 1834, within an area of 12 leagues round St. Quentin, embracing its arrond., with parts of the depts. Somme, Du Nord, and Pas de Calais, it was estimated that nearly 75,000 hands were employed in weaving, bleaching, and spinning cotton: besides many more employed in subordinate departments. The principal articles are striped and spotted muslins, yarn, &c., and the town and its neighbourhood have about 700 bobbinet frames. The cotton spinners, whose number is about 4000, reside principally in the town; the weavers live in the villages and surrounding country, where most of them are petty proprietors, occupied in agricultural labours for three or four months of the year. But it is obvious that goods produced by semi-manufacturers of this sort could never withstand, for a moment, the free competition of goods produced in factories supplied with the best machinery, and with a proper distribution and division of labour, and that they must depend wholly on the artificial market produced by the exclusion of cheaper articles. At St. Quentin the weaving of 1200 and 1400 checked muslins of a coarse description, 32 inches wide, and sold for 9d. per ell of 44 inches, is paid at the rate of 10d. a day: a still coarser description is sold for 6½d. or 7d. the ell, and the weaver gets 8d. a day. For finer goods the weavers' wages vary from 1s. to 1s. 6d. a day: these prices are wholesale, with 5 or 8 per cent. discount, ready money. The wages are gross, the winding only being paid by the manufacturer. At an average, the weavers in the country gain, children from 3d. to 6d., women from 7d. to 10d., and men from 1s. 3d. to 2s. 6d. a day. In the cotton-mills in the town, the average wages of a male adult may be from 6s. to 7 fr. a week. The workmen on the bobbinet frames get from 1 fr. 50 c. to 1 fr. 75 c. a day; and from 40 to 50 Mechlin frames have been set up, for the produce of which a considerable demand has arisen, and on which the wages amount to 6 fr. and 7 fr. a day. The workpeople in the town, of all ages, work 13 hours a day. In the country the hours are not regulated; but they work nearly as much as in the town, especially in winter. (*Symons, in Handloom Weavers' Rep.*, p. 128.)

The cotton-mills of St. Quentin are by no means so extensive as those of the dep. Haut-Rhin: few employ more than 200 hands. Children are employed here at an earlier age than in the cotton factories of Alsace; but the workpeople of all ages appear to enjoy much better health and more comforts in St. Quentin than either at Mulhausen or Lille. "The working classes make no complaints; they seem all pretty well supplied with the necessaries, and many of the comforts of life. They are all well clothed, and have plenty of vegetables to eat; little meat is consumed, or desired by them." (*Symons's Rep.*)

Table linens, leather, soap, and sulphuric acid, are also produced here; and the commerce of the town with the adjacent parts of France, Belgium, and Germany, is much facilitated by good roads and by the canal of St. Quentin. The latter connects the inland navigation of France with that of the Netherlands, by forming a communication between the Oise, the Somme, and the Scheldt. It is remarkable chiefly for the tunnels cut through the high ground, about 4 m. N. St. Quentin. The first of these is 160 feet below the surface, 24 feet in width, the same in height, and ½ m. in length. The second tunnel is on a still larger scale, being 3 m. in length, and 300 feet below the surface. Daylight is admitted at certain distances, by openings carried to the surface; and the tunnel being cut through a chalk rock, the sides are not built. It was finished in 1810. (*Hugo, art. Aisne; Villermé, Tabl. des. Ouvr.; in Handloom Weavers' Rep.*)

St. Quentin, as previously stated, was formerly strongly fortified, and was regarded as one of the bulwarks of France on the N. In 1557, in the earlier part of the struggles between Philip II. and France, the army of the former, under the Duke of Savoy, having threatened to attack the town, defended by the famous Admiral Coligny, and a weak garrison, the constable Montmorency advanced with a considerable army to its relief, and succeeded in throwing some reinforcements into it. On his retreat, however, he was overtaken by the Spaniards, when a general action ensued, which ended in the total defeat of the French, who lost all their artillery and baggage, with about 7000 men killed and prisoners, including many persons of distinction. The town soon afterwards fell into the hands of the Spaniards. The battle having been fought on the 10th of August, St. Lawrence's day, the vast palace of the Ecurial, built by

## QUERETARO.

Philip II., was dedicated to the saint in commemoration of the victory. (*Watson's Philip II.*, vol. i., 70, &c.)

Pierre la Ramee, better known by his Latin name of *Ramus*, one of the earliest and ablest opponents of the scholastic system of philosophy, and the Marquis Condorcet, were natives of the vicinity of St. Quentin, though not, as is frequently stated, of the town itself.

QUERETARO, a city of Mexico, cap. of the state of its own name, in a rich and fertile valley, 110 m. N.E. Mexico, and 60 m. E.S.E. Guanajuato; lat.  $20^{\circ} 36' 39''$  N., long.  $100^{\circ} 10' 15''$  W. Pop. at least 40,000. (*Ward.*) It is a well-built city, with three large squares, many handsome public and private edifices, and the usual excess of convents and churches. The Franciscan monastery is spacious, and surrounded with extensive gardens; and the convent of Santa Clara is an immense building, inhabited by 250 females, including many young ladies sent thither for their education. The streets have side pavements, laid with flags of porphyry: the city is well supplied with water, brought to it by an aqueduct about 10 m. in length, carried across the valley upon 60 arches.

It is divided into five parishes; four in the body of the town, and one in the suburbs, separated from the rest by a little stream. "We were much struck with the busy look of Queretaro, which has quite the air of a manufacturing town. More than half the houses contain shops, and the population is engaged either in small trades or in the wool manufactures, which are still very numerous. These are divided into two classes, *orabres* and *trapiches*. The first comprises the establishments that employ from 10 to 30 looms; the last those in which only one or two are in activity. In both coarse cloths, of different patterns and sizes, are manufactured; part of which are retailed upon the spot in the great Plaza, where a market is held every evening by torchlight, and part sent to the capital or other great towns of the confederation. The demand for these manufactures has decreased very much since the ports were opened to European imports: indeed, the woollen trade is now principally kept up by a government contract for supplying the army with clothing. The price paid for scarlet, green, and yellow cloths of the very coarsest texture, varies from 24 reals (12s.) to 15 reals (7s. 6d.) per vara: and there is no doubt that they might be obtained of a better quality at a much lower price from abroad. The wool is brought principally from the northern states, San Luis de Potosi, and Zacatecas; its price fluctuates from 16 to 24 reals the arroba of 25 lbs., including carriage; but the wool most esteemed is the produce of the state itself. It acquires its value, not from any superiority in the breed of the Queretaro sheep, but from the circumstance of the fleeces being so much smaller than those of the north that they can be better attended to, fed in richer pastures, and kept more clear from thorns, which deteriorate the fleece. This wool sells for  $\frac{3}{4}$  dollars (or 30 reals) the arroba." (*Ward's Mexico*, ii., 183, 184.) The manufactures of this city are conducted on the same nefarious system that prevails elsewhere in Mexico (*see this vol.*, p. 352), of inveigling the Indians into debt by the voluntary advance of money, and then shutting them up in the factories, under prison discipline, with criminals of all kinds, till they have liquidated the debt by their labour, a circumstance which every pains is taken to prevent, and which rarely occurs. (*Poinsett's Notes on Mexico*, p. 186, &c.)

QUIMPER-CORENTIN, a town and river port of France, dep. Finistère, of which it is the cap., at the junction of the Elir with the Odet, about 11 m. above where the latter falls into the bay of Benaudet, 115 m. W. by S. Rennes; lat.  $47^{\circ} 58' 29''$  N., long.  $4^{\circ} 6' 15''$  W. Pop. in 1836, 9715. It stands on the declivity of a hill, and is divided into the old and new town. The former, surrounded by walls flanked with towers, is ill built; but in the new town there are some good streets and houses. The cathedral, a handsome Gothic edifice of the 15th century, and other churches; the military hospital; the college, a large structure formerly belonging to the Jesuits; the theatre, and some public baths, are the principal public buildings. The river is navigable as far as the town for vessels of 200 tons burden, those of greater size anchoring opposite its embouchure, in the bay of Benaudet. It has manufactures of earthenware, and building docks; its inhabitants, also, engage in the pilchard fishery, and carry on a pretty brisk trade in provisions. Quimper is a bishop's see, and derived its present name from its first bishop, in the 5th century; previously to which it was called *Coriosiplum*. It was sacked by Charles of Blois in 1345.

Among the distinguished men, of whom Quimper has to boast, may be mentioned Hardouin, the commentator of Pliny, celebrated alike for his learning and his paradoxes; and Freron, the most voluminous, but, at the same time, the least valuable of the French critics of last century. (*Hugo, art. Finistère; Dict. Géog.*, &c.)

QUINCY, p. t., Norfolk co., Mass., 9 m. S. by E. Boston,

## QUITO.

449 W. It contains large tracts of salt meadow. Three miles back from the shore is an elevated range, rising in some places 600 feet above the level of the sea, which contains an inexhaustible quantity of the celebrated Quincy granite, which is extensively exported. The Merchants' Exchange in the city of New-York is built of it. A railroad extends 3 m. from the quarry to tide water on Newponset river, constructed in 1836, at an expense of \$30,000, the first railroad built in the United States. It has some vessels, employed chiefly in the fisheries. It contains four churches, two Congregational, an Episcopal, and a Universalist; 15 stores, four lumber-yards, two tanneries, one printing-office, one weekly newspaper; eight academies, 137 students; six schools, 708 scholars. Pop. 3486.

QUINCY, p. t., Franklin co., Pa., 57 m. S.W. Harrisburg, 83 W. It has seven stores, one furnace, three forges, six flouring-mills, two grist-mills, eight saw-mills, two tanneries, three distilleries; eight schools, 258 scholars. Pop. 2503.

QUINCY, p. v., capital of Adams co., Ill., 104 m. S. Springfield, 884 W. Situated on a bluff on the E. side of Mississippi river, 125 m. by water, above the mouth of Illinois river. It contains a brick courthouse, which cost \$20,000, on a fine public square, four churches, a Congregational, Episcopal, Methodist, and Baptist; 25 stores, a United States land office, a large steam flouring and saw-mill, 200 dwellings, and about 1500 inhabitants. There are 300 steamboat arrivals in a year, and flour and pork are exported to the amount of \$100,000 annually.

QUITO, a celebrated city of S. America, cap. of the republic of Ecuador (*Ecuador*), in a ravine on the E. side of Pichincha (a volcanic mountain, which, at no very distant period, was in a state of activity), above 9500 feet above the sea, 160 m. N.N.E. Guayaquil, and 460 m. S.W. Bogota. Lat.  $0^{\circ} 13' 27''$  S., long.  $78^{\circ} 10' 15''$  W. Pop., variously estimated at from 40,000 to 70,000. Quito is, on the whole, one of the best built cities in the New World. It has four broad, straight, and well-paved streets, and three large and some smaller squares, in which are the principal public buildings, and the best private residences. The streets which run N. and S. are pretty level, but those which cross them ascend the skirts of the Pichincha on the one hand, and descend on the other towards a small river, over which is a small bridge; and from this unevenness of the ground some of them are so steep as to be impracticable for carriages, besides being, for the most part, narrow, crooked, unpaved, and almost impassable after heavy rains. So numerous, also, are the crevices in the mountain, that, in the suburbs particularly, several of the houses have been raised on arches. The houses, which are large and convenient, are mostly built of unburnt brick, cemented with a species of mortar, used by the ancient Peruvians, which soon becomes extremely hard. On account of earthquakes, they are seldom more than one story in height, exclusive of the ground floor, or *rez-de-chaussée*. They are flat roofed, and have usually a balcony towards the street. Generally speaking, they are indifferently furnished, and deficient in cleanliness. The city has an abundant supply of indifferent water, obtained from several streams, which flow through its conduits. The principal square has, in its centre, a fine brass fountain; and on its sides are the cathedral, the bishop's palace, the town hall, and the palace of the president. The last is a gloomy-looking building, with a terrace in front, ascended by two flight of steps. In it are the halls of the *audiencia*, treasury, and archives, the president's apartments, with the offices of the public secretaries, and the jail. The cathedral, a plain building, with a steeple at one corner, is much less handsome than several of the other churches. Quito has numerous convents. The ex-Jesuits' college has a beautiful front, with Corinthian columns, finely sculptured by native artists. The interior of this edifice is very rich, and when visited by Stevenson it had a library, said to comprise 20,000 volumes, including several rare works. A part of the edifice has been converted into halls for the university, and another part into barracks. Ulloa speaks in high terms of the Franciscan convent, which, he says, from its size, fine proportions, and beauty, might be classed with the best edifices in Europe. Previously to the revolution, the churches and convents were richly furnished with silver ornaments, plate, paintings, &c.; but a part of this wealth, we believe, been since turned to more useful purposes. It has a workhouse and orphan asylum on a large scale, and said to be well conducted, a hospital, &c.

Quito ranks pretty high, at least among Spanish American cities, as a place of education. It had two universities before the time of Charles III., but they were then united into one. Besides this university, which still exists, there are several colleges under the guidance of the different religious orders. Ulloa states, that young men of distinction usually studied philosophy, theology, and jurisprudence. "They succeed pretty well," he adds, "in the exact sciences, but are extremely ignorant in all that respects politics, his-

## RAAB.

tory, and those philosophical studies that contribute most to expand and enlarge the mind." There can be no doubt that this is a perfectly accurate statement; but we apprehend the students of Salamanca in Old Spain were, at the epoch of Ulloa's visit to Quito, but little more advanced than those belonging to the latter. It were absurd to suppose that colleges conducted by priests, under an arbitrary government, should supply any sound instruction, either in politics or philosophy.

The city was made a bishop's see in 1545, and is the residence of the president, and the seat of all the superior courts and offices of the republic.

Coarse cottons, and woollen cloth, baizes, flannels, ponchos, stockings, &c., are made in Quito, which is also highly celebrated for its confectionary; but its chief exports consist of the corn, and other agricultural products of the province. These, with some of its manufactures, are sent by way of Guayaquil to Central America, in exchange for indigo, iron, and steel; and to Peru, in return for brandy, wine, and oil, and for gold, silver, and other metals, Ecuador not being very rich in mineral wealth. The foreign imports comprise all kinds of European manufactured goods, with iron, steel, and some other raw materials. "The European manufactures most in demand are English broad cloths, kerseymers, coloured broad flannels, calicoes, plain and printed dimities, muslins, stockings, velveteens; Irish linsens, in imitation of German *plattins*; all kinds of hardware and cutlery, and foreign silk velvets, satins, &c., as well as English ribbons and silks. As for the Lima market, the articles should be of a good quality, and of the newest fashion; the more this point is attended to, the better the market will be found." (*Stevenson's S. America*, li., 319.) The markets of Quito are abundantly provided with beef, mutton, pork, and poultry, both cheap and good; vegetables and fruits of all kinds, bread, &c. The consumption of cheese is said to be very great; its cost price being estimated at from 80,000 to 90,000 dollars a year, and many of the neighbouring farmers are principally engaged in its manufacture.

The inhabitants of Quito do not differ materially from those of other Spanish American cities; bull fights, masquerades, dancing, music, and religious processions being their principal amusements. When Ulloa visited the city, indolence was, and we suspect, still is, the distinguishing characteristic, if we may so speak, of all classes. This is, in great part, no doubt, to be ascribed to the mildness of the climate, and the ease with which the ordinary necessities of life may be produced. The city enjoys, as it were, a perpetual spring. Vegetation never ceases at any period of the year; but from December to March violent storms of rain and lightning almost daily occur in the afternoon. Earthquakes are, also, frequent; and one of those visitations that occurred in 1797 is said to have destroyed in the province above 40,000 persons, and to have had a permanent influence over the climate. A plain, about four leagues N.E. from the city, was made choice of by the French and Spanish astronomers, in 1736, for measuring a degree of the meridian; and an inscription on a marble tablet on the wall of the ex-Jesuits' church in Quito commemorates the event, and the labours of the commission; but the most enduring memorial of that great undertaking is to be found in the *Historical Voyage* of Ulloa, one of the best works of its kind that has ever been published. Quito was founded by Sebastian Benalcázar in 1534, and incorporated as a city by Charles V. in 1541. (*Ulloa*, liv. v., caps. 4, 5; *Stevenson's S. America*, li., 279-325; *Geog. Account of Columbia*, &c.)

## R.

RAAB (Hung. *Győr*, or *Nagy Győr*, an. *Jaurinum*, *Arabo*, or *Arabonia*), a royal free town of Hungary, cap. the co. Raab, at the confluence of the river of the same name with the Danube, 22 m. W.S.W. Comorn, and 39 m. S.E. Presburg. Population about 13,500. It stands in a low and marshy plain, and is rather unhealthy. Like Vienna, the city is separated from the suburbs by its old fortifications, and an open glacis, planted with trees, and forming public walks. Some of the streets are regularly built; and, besides three or four churches and a cathedral, the city has the bishop's palace, the public buildings belonging to the county and the corporation, and some handsome residences belonging to the Esterhazy and Zichy families. (*Bright's Travels*, 298.) It has, also, a royal academy of law and philosophy; and Roman Catholic, Greek, and Lutheran high schools. In the centre of the city is an immense Capuchin convent, its roof surmounted with two very high and conspicuous spires. There are various other conventual establishments, two work-houses, two barracks, a theatre, arsenal, &c. Raab is the seat of a larger trade in

## RADNOR.

corn than any other city in Hungary, and is a great *dépôt* for the trade of Pesh with Germany and Italy. (*Berghäus*.) It has several large annual fairs, its commerce depending, for the most part, on its favourable position on two navigable rivers. It was a strong post under the Romans, and has been generally kept in a defensive state by the Hungarian kings; but it was twice taken by the Turks, and, in 1808, an Austrian force was routed by the French under its walls. (*Oesterr. Nat. Encyc.*; *Berghäus*; *Bright's Travels in Lower Hungary*; *Walsh's Constantinople*, &c.)

RABUN, county, Ga. Situated in the N.E. part of the state, and contains 330 sq. m. Bounded S.E. by Chatuga river, S.W. by Turroree river, which unite in the S. point of the county, to form Tugaloo river. It contained in 1840, 2790 neat cattle, 2024 sheep, 5526 swine; and produced 1452 bushels of wheat, 1635 of rye, 62,521 of Indian corn, 13,151 of oats, 4734 of potatoes, 3208 pounds of tobacco. It had three stores, 23 grist-mills, five saw-mills, one tannery, 13 distilleries; four schools, 131 scholars. Pop.: whites, 1828; slaves, 84; total, 1912. Capital, Clayton.

RACCONIGI, or RACONIGI, a town of the Sardinian dom., div. Coni, prov. Saluzzo, cap. mand., near the Maira, and 21 m. S. Turin. Pop., in 1838, inc. com., 10,102. It is walled, and tolerably well built: it has several good churches; but its chief ornament is a noble castle and park, belonging to the Prince of Carignano. Among the works of art in the castle are some pictures (if they may be so called), beautifully executed in silk. Silk weaving and spinning are the principal branches of industry in and round this town. (*Dict. Geog.*, &c.)

RACCOON, t. Gallia co., O., 94 m. S.E. Columbus. Organized in 1806. Watered by Raccoon creek. It has five stores, three grist-mills, three saw-mills, two tanneries. Pop. 1610.

RACINE, county, Wis. Situated in the S.E. part of the territory, and contains 610 sq. m. Bounded E. by lake Michigan. Watered by Fox, Root, and head branches of Des Plaines rivers. It had in 1840, 4506 neat cattle, 340 sheep, 6459 swine; and produced 36,099 bushels of wheat, 30,168 of Indian corn, 3481 of barley, 1796 of oats, 41,028 of potatoes, 6051 pounds of sugar. It had two commission houses in foreign trade, 19 retail stores, two grist-mills, 13 saw-mills; two academies, 65 students; 20 schools, 607 scholars. Pop. 3475. Capital, Racine.

RADNOR, an internal co. of England, S. Wales, having N. the cos. of Montgomery and Salop, E. Hereford, S. Brecon, from which it is separated by the Wye, and W. Cardigan. It is of a triangular shape, and comprises 272,640 acres. With the exception of some low and comparatively fertile tracts along the borders of Hereford and Salop, and in the valley of the Wye, the larger portion by far of this county is wild, mountainous, and dreary. It is stated, in Davies' *Survey of S. Wales*, published in 1815, that about *two thirds* the surface consisted of waste land, mostly moor, but partly also bog! Several divisions and some extensive enclosures have, however, been effected in the interim; so that the extent of waste or common land, though still very great, has been materially diminished. At present the wastes are mostly depastured by sheep; and this county rears, in proportion to its size, more sheep than any other in the principality. They are mostly of a small hardy breed. Numerous encroachments have, from time to time, been made on the wastes or commons by persons who had property adjoining, and by cottagers, who erected huts on their borders, and gradually extended their gardens, till they sometimes included acres of land. A good many of the manors on which these encroachments were made formerly belonged to the crown; and having been lately sold, the purchasers have attempted to oust those who had made these encroachments. But though, no doubt, the act was illegal, still under the circumstances, it was beneficial rather than otherwise; and having been permitted in the first instance, their rights should have been protected. The farms in the low grounds vary from 20 to 200 acres: they are mostly held at will, or from year to year; and as there are no conditions to enforce a proper system of management, agriculture is in the most backward state, there being no proper rotation of crops, and the land being frequently foul and out of order. Many of the low farms have a portion of moor or common pasture attached to them. The cattle in the low grounds are principally of the Hereford breed: there are some extensive meadows, and irrigation is well understood. There are some rather large estates; but there are, also, many of an inferior size. Average rent of land, in 1810, 6s. 3d. an acre. The minerals and manufactures of the county are of no importance. Radnor is divided into 6 hundreds and 50 parishes; and sends two members to the House of Commons; being one for the county, and one for New-Radnor and its contributory boroughs. Registered electors for the county, in 1839-40, 2034. In 1831 this county had 4437 inhabited houses, 4872 families, and 24,641 inhabitants, of

## RAGUSA.

whom 12,453 were males, and 12,198 females. Sum contributed to the relief of the poor, in 1838-39, £8836. Annual value of real property, in 1815, £103,578. The borough of New-Radnor, referred to above, is of great extent, embracing an area of nearly 30 m. in circumference. In 1831, it had a population of 2501; but the town itself has not more than 400 inhabitants, and would not be worth notice but for its being the head of the parliamentary borough. PRÆSTON (which see) is the only town in the county of any importance.

RAGUSA, a town of Sicily, prov. Syracuse, co., Modica, near the W. bank of the river of its own name, about 14 m. above the embouchure of the latter on the S. coast of Sicily, and 30 m. W.S.W. Syracuse. Pop., in 1831, 21,466. The inhabitants, who are said to be active and industrious, have considerable cloth and silk manufactures, and a rather extensive trade in the corn, oil, wine and cheese of the surrounding territory. It is near the site of the anc. *Hybla Ærea*; but being seldom visited by travellers, little is known of its state. (*Rampoldi, Geografia.*)

RAGUSA (Slav. *Dubrovnik*, Turk. *Paprownik*, an. *Ran-sium*), a seaport town of the Austrian dominions, prov. Dalmatia, cap. circ. of its own name, on a peninsula in the Adriatic, 37 m. W.N.W. Cattaro; lat. 42° 36' 30" N., long. 18° 11' 55" E. Pop., in 1837, 3039. It is walled, and has two good harbours, one to the N.W., and the other to the S.E.; which, as well as the town, are protected by several modern forts. Its streets are narrow, except one, the Corso, which intersects it from N. to S.; its houses are well built, in the Italian style, but many of them are now unoccupied. It has a cathedral, a Greek church, a Piarist gymnasium, high school, military hospital, (once the Jesuits' college), lazaretto, and theatre. It is the see of a Roman Catholic vicar-bishop, and the seat of the superior judicial courts for the circuit: it has manufactures of silk, leather, and rosoglio. Though Ragusa has greatly declined from her former importance, she still has a considerable coasting trade; and in 1838, 236 vessels belonged to the port, 30 of which traded to the Levant and the western ports of the Mediterranean. Ragusa was founded in the seventh century by some fugitives from Epidaurus in Illyria, when that city was destroyed by the Slavi. It continued to be a republic under the successive protection of the Greeks, Venetians, and Turks, till 1806, when it was taken by Napoleon, who erected it into a dukedom, which he conferred on Marshal Marmont. On the fall of the former, Ragusa was given to Austria. (*Berghaus, Allgemeine Länder. &c.*, iv., 968; *Austria, Nat. Encyc.*)

RAHWAY, p. t., Essex county, N. J., 9 m. S.W. Newark, 39 m. N.E. Trenton, 205 W. Drained by Rahway river, and its tributaries. The village is partly in Woodbridge t., Middlesex county, and partly in Rahway t., Essex county, on both sides of Rahway river, at the head of tide-water, 5 m. from its mouth. The village is in several detached parts, and contains six churches, a Presbyterian, Methodist, Baptist, two Friends, and an African, the Athenian academy, with an edifice 68 ft. long, and 36 ft. wide, and 2 stories high, the Rahway female institute, with a neat and commodious building, a bank, an insurance office, 30 stores, a large saw-mill, about 400 dwellings, and 2000 inhabitants. The railroad from Jersey city to Philadelphia passes through the place. The town contains 10 stores, 14 flouring-mills, four grist-mills, five saw-mills, one paper-mill, one tannery, one distillery; one academy, 41 students; seven schools, 244 scholars. Pop. 2533.

RAISIN, r., Mich., rises in Wheatland t., Hillsdale co., and flowing in a winding course, 130 m. by the course of the river, it enters lake Erie, 2½ m. below Monroe. It is one of the most important streams in Michigan, affording extensive water-power. It flows by several important villages.

RAJAHMUNDRY, a distr. of the Madras presid. in British India. (See CIRCARS, NORTHERN.)

RAJAHMUNDRY, a town of Hindostan, cap. of the above distr., on the Godavery, about 50 m. from its mouth, and 65 m. N.E. Masulipatan. It stretches along the river for some distance, and has an old fort, several mosques, a fine bazaar, &c. It is the seat of the district court, and a station for two companies of sepoy. (*Madras New Almanac, &c.*)

RAJEMAHAL (*The Royal Residence*), a town of British India, presid. Bengal, prov. Bhagulpore, on the Ganges, 66 m. N.W. Moorsheadab. Under Achar, and Sultan Shujah, the brother of Aurungzebe, it was the capital of Bengal; and, though much decayed, it is still estimated to have 30,000 inhabitants. It consists principally of one long street of stone or mud houses, generally with two stories; about a dozen market places, scattered over a wide extent of ground; a few tombs and mosques, and the ruins of a spacious palace. The inhabitants have some traffic with the hill people of the district, but their main source of profit is derived from their supplying necessaries to travellers on the Ganges. (*Hamilton's E. I. Gaz.*; *Mod. Trav.*)

## RAMGHUR.

RAJESHAYE, a distr. of British India, presid. and prov. Bengal, principally between the 24th and 25th degs. of N. lat., and the 88th and 90th of E. long., having N. Dinajepoor, and Rungpore; E. Myemensing, and Dacca Jelal-poor; W. Parneah; and S. the Ganges, separating it from Jessore, Nuddea, and Moorsheadab. Area, 3950 sq. m. Pop., in 1832, 1,087,155; about two thirds Hindoos, and the rest Mohammedans. The whole surface is so low that from the beginning of July to the end of November it is nearly submerged by the inundations. Towards the E. it is thickly wooded. Few solid edifices, and no fortresses exist in this district; but it comprises many populous commercial villages, and the towns of Nattore, Bauleau, and Hurrial. Land revenue, in 1827-30, 14,64,299 rupees. (*Parl. Rep., &c.*)

RAJPOOTANA, the largest prov. of Hindostan, towards its N.W. quarter, between 24° and 21° N. lat., and 70° and 77° E. long.; having W. and N. Multan and Lahore, E. Delhi and Agra, S. Malwah and Gujrat, and S.W. Sind. Its length, N. and S., is estimated by Hamilton at 350 m., and its average breadth at 200 m., giving it an area of about 70,000 sq. m. It comprises a large extent of sandy desert, but in the S. and E. are many fertile tracts. This province, is wholly subsidiary to the British, consists of a number of feudal principalities, the chief of which are Judoop, Jesselmere, Jeypore, Odeypoor, and Bicanere, which see. For further and full particulars respecting this portion of Hindostan, the reader may consult the copious work on Rajastan by Colonel Tod.

RALEIGH, city, capital of Wake county, N. C., and of the state, is in 35° 47' N. lat., and 78° 48' W. long., 123 m. N.W. Newbern, 60 m. N. Fayetteville, 164 m. S.S.W. Richmond, Va., 288 W. The population in 1820, was 2674; in 1840, 2224. It is pleasantly situated 6 m. W. of Neuse river and 27 m. N.W. Smithfield, the nearest ordinary point of navigation; though boats sometimes ascend the Neuse, to within 8 m. of Raleigh. It is laid out with great regularity, having at its centre Union-square of 10 acres, from which extend four broad streets 99 ft. wide, dividing it into four quarters. In the centre of each of these quarters are four other squares of four acres each, and the streets which intersect the quarters are 66 ft. wide. The state-house is a splendid granite edifice, in the centre of Union-square, 166 ft. long, and 90 ft. wide, surrounded by massive granite columns, 5½ ft. in diameter and 30 ft. high, after the model of the Parthenon at Athens. It has a fine dome, and spacious and handsome legislative halls, and cost \$500,000. The other public buildings are a courthouse, jail, governor's house, secretary of state's office, a theatre, market, two banks, five churches, an Episcopal, Presbyterian, Methodist, Baptist and Roman Catholic, and about 400 dwellings. According to the census of 1840, there were 43 stores, capital \$191,200, four printing-offices; two binneries, five weekly, and one semi-weekly newspapers; four academies, 95 students; two schools, 33 scholars. The former state-house, containing a beautiful marble statue of Washington, by Canova, was burned in 1831, and this fine work of art was destroyed. A railroad extends 85 m. from this place to Gaston on Roanoke river, whence it communicates with a railroad leading to Petersburg, Va.

RALLS, county, Mo. Situated toward the N.E. part of the state, and contains 470 sq. m. Drained by Salt river, and its branches. It contained in 1840, 5440 neat cattle, 6344 sheep, 17,245 swine; and produced 23,954 bushels of wheat, 1524 of rye, 240,225 of Indian corn, 34,148 of oats, 9366 of potatoes, 79,119 pounds of tobacco, 10,984 of sugar. It had nine stores, one flouring-mill, 15 grist-mills, 11 saw-mills, one oil-mill, four tanneries, seven distilleries; one academy, 38 students; nine schools, 243 scholars. Pop.: whites, 4450; slaves, 1209; free coloured, 11; total, 5670. Capital, New-London.

RAMAPO, t., Rockland co., N. Y., 8 m. W. New-city, 132 m. S. Albany. Drained by Ramapo and Saddle rivers. The New-York and Erie railroad passes through it. It has eight stores, two fulling-mills, two woolen factories, one cotton factory with 516 spindles, five grist-mills, two saw-mills; eight schools, 315 scholars. Pop. 3222.

RAMGHUR, a distr. of British India, by far the largest under the Bengal presid., occupying all the S. part of the prov. Bahar, between the 23d and 25th degs. of N. lat., and the 83d and 87th of E. long.; having N. Shahabad, Bahar, and Bhagulpore; E. Beerboorn, and the Jungle Melials; and S. and W. the territory ceded by the rajah of Berar. Area estimated at 22,430 sq. m. Pop. in 1832, 2,252,985. A large proportion of this district is rocky and unproductive, or covered with wood. Iron, coal, lead, and antimony, exist in the hilly region of the S., but from want of capital and enterprise among the inhabitants, few, if any, mines are wrought. Many of the zemindars have very extensive possessions, and are, in a great measure, independent of British authority. Slavery, though of a very mild character, is universally prevalent. There are

## RAMILLIES.

many old brick forts in Ramghur, affording protection to hordes of banditti, and other refractory persons; but few other durable buildings. This district has always been notorious for crime; and hitherto, notwithstanding its great extent, has been of little value to the British Indian government. The land revenue in 1823, amounted to only 161,293 rupees. (*Parl. Reps.; Hamilton's E. I. Gaz.*)

RAMILLIES, an inconsiderable village of Belgium, prov. S. Brabant, 18 m. S.E.E. Louvain. This village is famous in history from its being the scene of the great victory gained on the 23d of May, 1706, by the allied forces, under the Duke of Marlborough, over the French, under Marshal Villeroi. The French army amounted to about 80,000 men, being superior in numbers to that of the allies. The latter, however, owing, as is alleged, to the bad dispositions and incapacity of Villeroi, gained an easy as well as a complete victory. The French lost about 8000 men, killed and wounded, and nearly 7000 prisoners, including 600 officers, with all their artillery and baggage. The loss of the allies did not amount to 3000 men. The Duke of Marlborough, whose gallantry was as conspicuous as his great talents as a general, had a horse shot under him in the action; and the head of Colonel Brienfield, who was assisting his grace to remount, was carried off by a cannon-ball! (*Smollett's Continuation of Hume, cap. 9; Voltaire, Siècle de Louis XIV., cap. 20.*)

RAMPOOR, a large town of British India, prov. Delhi; on the Cosilla, a tributary of Ganges, 112 m. E. by N. Delhi. It has two brick palaces, a lofty mosque in the principal street, the magnificent mausoleum of a former chief, and some good houses; but the greater part of the town consists of sun-burnt brick houses, with thatched or tiled roofs. Its territory is exceedingly productive, and well cultivated.

Another town, called Rampoor, situated on the Sutleje, about 160 m. E. by N. Umritsir, is a favourite place of Hindoo pilgrimage, and an *entrepôt* for the commerce of Hindostan with the countries beyond the Himalaya, on which account it has a large yearly fair. (*Hamilton's E. I. Gaz.*)

RAMREE, a town of British India, prov. Aracan, cap. of the prov., and on the island of the same name, about 115 m. S. by E. Aracan. Pop. estimated, in 1835, at 8000, and increasing. It stands at the head of a creek, in which there is pretty good anchorage, and has a bazaar, supplied, though meagerly, with British goods. Its inhabitants, who are a fine athletic race, carry on a brisk trade with Chittagong, Sandoway, Bassein, and Calcutta. (*Pemberton; Rep. on the E. Frontier, p. 93, &c.*)

RAMSAY, a town and par. of England, co. Huntingdon, hund. Huntingston. The par., which extends into the co. Cambridge, and has an area of no less than 17,690 acres, had, in 1831, a pop. of 3006, of whom about 1600 may be long to the town. The latter, about 10 m. N.N.E. Huntingdon, consists principally of one long street, running E. and W., with another branching off to the N. Houses mostly brick. The church, a fine old edifice, has a nave, chancel, and aisles, with an embattled tower at the W. end. The town formerly belonged to the Cromwell family, several of whom are buried in the church, but there are no monuments to their memory. It has a free school, founded and endowed in 1663, which educates about 70 boys; and a charity school, which educates about 50 girls, was founded towards the beginning of last century by John Dryden, Esq., a relation of the great poet. The town suffered severely from the fire in 1731. Ramsay is within the great level of the fens; and in its vicinity are several shallow lakes, or meres, that called the Whittessea, about 4 m. N.W. from the town, being the largest in the kingdom. A magnificent Benedictine abbey, founded here in 969, acquired in the sequel, great wealth and celebrity. At the dissolution, its revenues amounted to £1988 a year. A ruined gateway is all that now remains of this once famous fabric. Market day Saturday; fair, 2d July, for pedlery.

RAMSAY, a town of the Isle of Man, which see.

RAMSGATE, a seaport, watering-place, and parish of England, co. Kent, on the E. coast of the Isle of Thanet, 15 m. E. by N. Canterbury, and 65 m. E.S.E. London. Area of par., 260 acres. Pop. in 1841, 10,909. The town, which, till the beginning of the last century, was little more than a small fishing village, has risen to its present importance, partly in consequence of the construction of its artificial harbour, the largest of its kind in England, but principally from its having become a favourite summer resort of visitors from the metropolis. Its older portions, irregularly built, with narrow streets and mean-looking houses, occupied chiefly by the trades-people, lie in a flat opening towards the sea by a narrow gully, (here called *gate*, whence the name of the town,) between two very steep cliffs; the latter, which are ascended by stone steps, are now covered with good looking, though, in general, not very substantial houses, laid out in terraces, crescents, &c. Building is still going forward on a pretty extensive scale. The town is well

## RAMSGATE.

lighted with gas. Till 1838 the supply of water was insufficient, and constituted no small item of expense to the inhabitants of the houses on the cliffs, but an ample supply was then introduced from the neighbouring village of St. Laurence. A market-house stands at the intersection of the principal streets of the old town, opposite to which is the principal public library and town bank. Facing the sea are several hotels (in one of which are the assembly-rooms), a public library and well-constructed baths on the W. cliff, with the Clarence and other baths, bazaars, and a custom-house, in the lower part of the town, abutting on the inner basin. The church, recently erected, a large and handsome building, in the perpendicular style, with an octagonal tower, provides accommodation for about 2000 persons: the living (created by act of parl. in 1827) is a vicarage of the annual value of £400, patron the archbishop of Canterbury. A chapel-of-ease, till lately the only episcopal place of worship in the town, is supported chiefly by voluntary subscriptions and pew rents; besides which, there are places of worship for Wesleyan Methodists, Independents, Baptists, and Unitarians, and a Jews' synagogue. The town has four Sunday schools, attended by about 800 children, and there are national Lancastrian and infant schools, furnishing instruction to nearly 500 young persons of both sexes.

The most striking feature of the town, however, is its harbour, one of the most magnificent works of its kind in the kingdom, formed by double piers, built under the superintendence, successively, of Smeaton and Rennie. It was commenced, at the public expense, in 1750, with the intention of forming an asylum for vessels in the Downs, which might otherwise be driven on the Goodwin sands. The E. pier extends, in a curvilinear direction, upward of 300 yds. into the sea, its total length, including its angles, amounting to 2000 ft., that of the W. pier being about 1500 ft. The width of the entrance is 240 ft., and the harbour area 48 acres.

The general breadth of the piers is 26 ft., including a strong parapet on the outer sides next the sea. They are constructed chiefly of Portland and Purbeck stone. After the piers were nearly finished, the deposition of sand and mud within the harbour being so great as to threaten ruin to the entire project, Smeaton recommended the construction of a basin within the harbour, to be filled at high water and let out again at ebb tide, so that any deposit might be carried off by the artificial current. This was accordingly done, and has been found to answer the purpose; and in 1787, an advanced pier was undertaken to facilitate the entrance of shipping in tempestuous weather. About the same period a dry dock was excavated, and storehouses erected. There is a lighthouse on the head of the W. pier, whence a clear red light is displayed at night, when there are 10 ft. water in the mouth of the harbour; this notice being given, during the day, by a red flag from Sion hill. A wet dock has lately been constructed near the basin for the repair of vessels. Still, however, it must be admitted, that though no cost has been spared to render this harbour as useful as possible to the shipping in the adjacent dangerous part of the channel, it is, owing to the want of water, very defective, and, as it can be entered only at certain times of the tide, it is far from realising the expectations that were formed of its being a good refuge harbour. It is under the superintendence of an incorporated company of trustees, who appoint the chief and deputy harbour-master and other officers. It was made a royal port in honour of a visit from George IV. in 1821; and an obelisk near the piers, gates has since been erected to commemorate that most unimportant event.

Ramsgate had formerly an extensive commerce with the Baltic, but this has long declined. It has still some trade with France and Holland, chiefly in the importation of eggs, fruit, provisions, &c.; the gross customs revenue of the port (which includes Margate and Broadstairs), amounted in 1840, to £7083. Its coasting trade is pretty extensive, chiefly with London, Newcastle, and Sunderland. A considerable fishery of turbot and soles is carried on off the coast by boats from the W. ports of England; but only a small share of it is taken by the inhabitants of Ramsgate. Indeed the town displays little activity beyond what is caused by the influx of visitors during the summer season, and for whose accommodation steam-packets ply daily to and from the metropolis. The smoothness of the sands E. of the harbour, and the clearness of the water, make the beach particularly well adapted for bathing, and it constitutes a favourite resort for visitors, hundreds of whom may here be seen in the height of the season strolling about, lounging on chairs, and enjoying the sea-breeze. The pier furnishes another delightful promenade, and on the W. cliff, which is ascended from the inner basin by a flight of stone stairs, is a fine broad walk, extending westward towards Pegwell bay. Two well-conducted bath establishments are replete with accommodation for invalids; and libraries, news-rooms (one of which is in a marquee on the sands), bazaars, concerts, &c., furnish ample means of

## RANDOLPH.

occupation and amusement. Ramsgate is a member of the Cinque Port of Sandwich, and is governed by a deputy, appointed by the mayor of that borough; but judicial affairs are regulated by a local magistracy under a local act, passed in 1812. Markets on Wednesday and Saturday, but daily during summer, and exceedingly well supplied.

**RANDOLPH, county, Va.** Situated toward the N.W. part of the state, and contains 2060 sq. m. Drained by Cheat river and its branches, and by branches of the E. fork of Monongahela river. It contained in 1840, 10,166 neat cattle, 13,818 sheep, 9349 swine; and produced 27,212 bushels of wheat, 6861 of rye, 151,009 of Indian corn, 5039 of buckwheat, 86,784 of oats, 29,732 of potatoes, 7280 pounds of tobacco, 81,240 of sugar. It had 10 stores, 42 grist-mills, 23 saw-mills, five tanneries, 10 distilleries; five schools, 103 scholars. Pop.: whites, 5799; slaves, 216; free coloured, 193; total, 6208. Capital, Beverly.

**RANDOLPH, county, N. C.** Situated a little W. of the centre of the state, and contains 900 sq. m. Drained by Deep creek, and by branches of Yadkin river. It had in 1840, 10,111 neat cattle, 13,962 sheep, 25,529 swine; and produced 78,095 bushels of wheat, 1552 of rye, 235,628 of Indian corn, 47,671 of oats, 9607 of potatoes, 60,790 pounds of tobacco, 81,533 of cotton. It had 23 stores, two cotton factories with 1156 spindles, 24 flouring-mills, 27 grist-mills, 33 saw mills, 16 tanneries, 40 distilleries, two potteries, one printing-office, one weekly newspaper; two academies, 65 students; two schools, 32 scholars. Pop.: whites, 11,107; slaves, 1407; free coloured, 361; total, 12,875. Capital, Ashboro'.

**RANDOLPH, county, Ga.** Situated toward the S.W. part of the state, and contains 620 sq. m. Bounded W. by Chattahoochee river, and drained by its tributaries, and by branches of Flint river. It contained in 1840, 4834 neat cattle, 327 sheep, 5947 swine; and produced 1270 bushels of wheat, 63,740 of Indian corn, 2301 of oats, 6513 of potatoes, 327,067 pounds of cotton. It had four stores, two grist-mills, one saw-mill; three schools, 97 scholars. Pop.: whites, 5586; slaves, 2679; free coloured, 11; total, 8276. Capital, Cuthbert.

**RANDOLPH, county, Ala.** Situated in the E. part of the state, and contains 875 sq. m. Watered by Tallapoosa river and its branches. It had in 1840, 38,234 neat cattle, 3356 sheep, 19,740 swine; and produced 13,426 bushels of wheat, 918,997 of Indian corn, 5031 of oats, 21,541 of potatoes, 2939 pounds of tobacco, 240,540 of cotton. It had 11 grist-mills, five saw-mills; three schools, 302 scholars. Pop.: whites, 4446; slaves, 526; free coloured, 1; total, 4973. Capital, McDonald.

**RANDOLPH, county, Ia.** Situated toward the E. part of the state, and contains 440 sq. m. Drained by the W. fork of White river and by Mississinewa river, and their branches. It contained in 1840, 8564 neat cattle, 11,444 sheep, 27,341 swine; and produced 63,639 bushels of wheat, 2626 of rye, 401,291 of Indian corn, 115,846 of oats, 25,893 of potatoes, 8325 pounds of tobacco, 167,782 of sugar. It had 17 stores, two flouring-mills, 17 grist-mills, 20 saw-mills, eight tanneries, one distillery; 25 schools, 610 scholars. Pop. 10,634. Capital, Winchester.

**RANDOLPH, county, Ill.** Situated in the S.W. part of the state, and contains 540 sq. m. Drained by Kaskaskia river and its branches. Bounded S.W. by Mississippi river. It contained in 1840, 16,847 neat cattle, 7688 sheep, 25,338 swine; and produced 56,792 bushels of wheat, 1042 of rye, 301,342 of Indian corn, 76,051 of oats, 18,177 of potatoes, 11,174 pounds of tobacco, 5776 of cotton, 719 of sugar. It had 10 commission houses in foreign trade, 32 retail stores, one fulling-mill, one woollen factory, six flouring-mills, eight grist-mills, 11 saw-mills, six tanneries, four distilleries, two printing-offices, two weekly newspapers; one college, 50 students; one academy, 25 students; 14 schools, 403 scholars. Pop. 7944. Capital, Kaskaskia.

**RANDOLPH, county, Mo.** Situated N. of the centre of the state, and contains 450 sq. m. Watered by the E. fork of Chariton river and its branches. It had in 1840, 9369 neat cattle, 9443 sheep, 24,443 swine; and produced 5843 bushels of wheat, 371,875 of Indian corn, 77,172 of oats, 13,187 of potatoes, 841,204 pounds of tobacco, 9067 of sugar. It had 20 stores, 15 grist-mills, eight saw-mills, four tanneries, 10 distilleries; 25 schools, 655 scholars. Pop.: whites, 5749; slaves, 1437; free coloured, 12; total, 7198. Capital, Huntsville.

**RANDOLPH, county, Ark.** Situated toward the N.E. part of the state, and contains 820 sq. m. Drained by branches of Big Black river. It contained in 1840, 4174 neat cattle, 2586 sheep, 12,454 swine; and produced 5843 bushels of wheat, 86,170 of Indian corn, 9940 of oats, 5761 of potatoes, 3150 pounds of tobacco, 8156 of cotton. It had six stores, one woollen factory, nine grist-mills, one saw-mill, one tannery, eight distilleries; 25 schools, 655 scholars. Pop.: whites, 1973; slaves, 216; free coloured, 7; total, 2196. Capital, Pochontas.

## RANGOON.

**RANDOLPH, p. t., Orange co., Vt., 23 m. S. Montpelier, 498 W.** Drained by branches of White river, which afford water-power. It contains three churches, a Congregational, Methodist, and Universalist, seven stores, one fulling-mill, one woollen factory, three grist-mills, 10 saw-mills, one oil-mill, four tanneries; one academy, 181 students; 21 schools, 915 scholars. Pop. 2678.

**RANDOLPH, p. t., Norfolk co., Mass., 16 m. S. Boston, 444 W.** It contains five churches, two Congregational and three Baptist, a bank, 20 stores, one grist-mill, four saw-mills; one academy, 90 students; 11 schools, 820 scholars. Pop. 3213.

**RANDOLPH, p. t., Cattaraugus co., N. Y., 313 m. W. by S. Albany, 336 W.** Watered by Alleghany river and its tributaries. It contains a church, five stores, one grist-mill, 13 saw-mills, two tanneries; seven schools, 246 scholars. Pop. 1283.

**RANDOLPH, t., Morris co., N. J., 7 m. N.W. Morristown.** It has Schooley's mountain in its N. part. Drained by Den's branch of Rockaway river. Magnetic iron ore is abundantly found. It has seven stores, one fulling-mill, one woollen factory, one furnace, one forge, one grist-mill, eight saw-mills, two tanneries, seven distilleries; seven schools, 267 scholars. Pop. 1801.

**RANDOLPH, p. t., Portage co., O., 139 m. N.E. Columbus, 315 W.** It has eight schools, 435 scholars. Pop. 1649.

**RANGOON, a town, river-port, and the chief, and indeed almost the only, entrepôt for the foreign trade of the Birman empire, prov. Pegu, on the E. and principal branch of the Irrawaddi (called the Rangoon river), about 26 m. from the sea, 50 m. S.S.W. Pegu, and 90 m. W. by N. Martaban; lat. 16° 42' N., long. 96° 20' E.** Pop., according to a census in 1826, about 18,000, which is perhaps not far from its present (1841) amount, though it has been stated to amount to 40,000, and even 50,000! The town and suburbs extend lengthwise along the bank of the river for about 1 m. by  $\frac{3}{4}$  in depth; but the houses are very unequally scattered over the area. The fort, or rather wooden stockade, which constitutes the town properly so called, is an irregular oblong, entered by eight gates and several sallies-ports. (*Crauford's Embassy*, ii., 51.) According to Mr. Malcolm, who visited Rangoon in 1835, "the city is spread upon part of a vast meadow, but little above high tides, and at this season (May) resembling a neglected swamp. The fortifications are of no avail against modern modes of attack. They consist of merely a row of wooden timbers set in the ground, rising to the height of about 18 feet, with a narrow platform running round inside for musketeers, and a few cannon lying at the gateways in a useless condition. A dozen foreigners have brick tenements, very shabby; there are also four or five small brick places of worship for foreigners, and a miserable custom-house. Besides these, it is a city of bamboo huts, in appearance as paltry as possible. The eaves of the houses generally descend to within 6 or 8 feet of the ground; very few being of more than one story, or having any other covering than thatch. Cellars are unknown, and all the houses are raised two or three feet above the ground, for coolness and ventilation. As the floors are of split bamboo, all dirt falls through; and what is not picked up by crows, dogs, fowls, &c., is occasionally swept out and burned. The streets are narrow, and paved with half-burned bricks, which, as wheel-carriages are not allowed in the city, are in tolerable repair. There is neither wharf nor quay: in four or five places are wooden stairs, at which small boats may land passengers; but even these do not extend to within 20 feet of low-water mark. Vessels lie in the stream, and discharge into boats, from which the packages, slung to a bamboo, are lugged on men's shoulders to the custom-house." (*Travels in S. E. Asia*, i., 76, 77.)

The river opposite Rangoon is about 600 yards across; and the town is accessible to ships of 1200 tons burden. The navigation, though somewhat intricate, is safe and practicable with the aid of ordinary native pilots. At neaps the tide rises and falls about 18 feet, and at springs, from 25 to 30 feet. Rangoon presents many facilities for ship-building. The banks of the river are so flat and soft, as to render docks almost unnecessary; and there is nearly a complete water communication with the teak forests of Pegu, by far the most abundant in India. Ship-building has, in fact, been carried on at Rangoon since 1786; and in the 38 years which preceded our capture of the town, 111 square-rigged vessels of European construction had been built, the total burden of which amounted to upward of 35,000 tons. Several were of from 800 to 1000 tons. But Malcolm says that this branch of business is now almost annihilated.

The markets of Rangoon are well and cheaply supplied with many sorts of provisions, as rice, poultry, fish, &c. The foreign commerce of the town is still considerable, though greatly crippled by enormous port-charges and absolute prohibitions against exporting rice or the precious

## RANKIN.

metals. Specie is, indeed, exported, but only clandestinely. The trade of the empire seaward is principally with the ports of Chittagong, Dacca, Calcutta, Madras, Masulipatam, and Penang, and occasionally with the Persian and Arabian gulfs. No direct trade has yet been carried on between Birmah and any European country. The articles exported to foreign countries from Rangoon are teak wood, catechu, stick lac, bees' wax, elephants' teeth, raw cotton, ornament, gold and silver, gems, and ponies, which are much esteemed at Madras. By far the most important of these commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7500 full-sized trees. The principal imports are cotton piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, borax, sulphur, gunpowder, saltpetre, fire-arms, coarse porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these by far the most important is cotton piece goods. In 1826-27, the exports and imports of Rangoon were estimated each at £300,000. (*Crawford, &c., in Commerc. Dict.*)

About 2 m. N.W. Rangoon, is the celebrated Shoe-Dagon temple, which, though rather smaller than that of Shoe-Madon, at Pegu (which see), is much more highly ornamented. The two principal roads leading to it are lined on either side with numerous pagodas, some of considerable size. The great temple, similar to that of Pegu, stands on a planted terrace, raised upon a rocky eminence, and reached by an ascent of 100 stone steps. The area of this terrace is about two acres; the temple at its base is 310 feet in diameter, and 338 feet in height, surmounted by a tee, or umbrella of open iron-work, 45 feet in height, and richly gilt. "The golden temple of the idol may challenge competition, in point of beauty, with any other of its class in India. The building is composed entirely of teak-wood, and indefatigable pains are displayed in the profusion of rich carved work which adorns it. The whole is one mass of the richest gilding, with the exception of the three roofs, which have a silvery appearance. A plank of a deep red colour separates the gold and silver, which has a happy effect in relieving them. All round the principal pagoda are smaller temples, richly gilt, and furnished with images of Gaudina, whose unmeaning smile meets you in every direction; and the sight of which, accompanied by the constant tinkling of the innumerable bells hung on the top of each pagoda, combines, with the stillness and deserted appearance of the place, to produce an impression on the mind not speedily to be effaced." (*Mod. Trav.*, xi., 124, 125.) This temple, having long enjoyed a higher reputation than any other in the Birmane dominion, is resorted to by numerous devotees; and near it live 150 families, called "the slaves of the pagoda," to whose care it is entrusted. (*Malcolm's S. E. Asia*, i., 76-82; *Crawford's Embassy to Ava*, ii., 51-57; *Mod. Trav.*, xi.)

RANKIN, county, Miss. Situated a little S. of the centre of the state, and contains 800 sq. m. Bounded W. by Pearl river, by branches of which it is drained. It contained in 1840, 4379 neat cattle, 1282 sheep, 25,797 swine; and produced 176,520 bushels of Indian corn, 9412 of oats, 25,125 of potatoes, 18,920 pounds of rice, 1,356,400 of cotton. It had eight stores. Pop.: whites, 2777; slaves, 1851; free coloured, 3; total, 4631. Capital, Brandon.

RAPHOE, t., Lancaster co., Pa., 12 m. N.W. Lancaster. Bounded S.E. by Great Chiques creek, and W. by Little Chiques creek, which unite at the S.W. angle of the t. It contains 12 stores, three fulling-mills, two furnaces, two flouring-mills, eight grist-mills, five saw-mills, two tanneries, four distilleries; 16 schools, 688 scholars. Pop. 3557.

RAPIDES, parish, La. Situated near the centre of the state, and contains 600 sq. m. Watered by Red river and its branches. It contained in 1840, 19,706 neat cattle, 4350 sheep, 31,065 swine; and produced 456,850 bushels of Indian corn, 3043 of oats, 44,752 of potatoes, 16,527,810 pounds of cotton. It had 25 stores, nine saw-mills, two printing-offices, two weekly newspapers; one college; 29 students; four academies, 136 students. Pop.: whites, 3243; slaves, 10,511; free coloured, 378; total, 14,132. Capital, Alexandria.

RAPPAHANNOCK, r., Va., rises in the Blue Ridge, and flowing S.E. 130 m., it enters Chesapeake bay, by a large estuary, 25 m. below the mouth of the Potomac. It is navigable, for vessels requiring 10 feet of water, 110 m. to Fredericksburg.

RAPPAHANNOCK, county, Va. Situated toward the N.E. part of the state, and contains 100 sq. m. Drained by head branches of Rappahannock river. It contained in 1840, 9257 neat cattle, 13,195 sheep, 18,480 swine; and produced 179,850 bushels of wheat, 309,950 of Indian corn, 4784 of buckwheat, 93,794 of oats, 24,274 of potatoes, 4900 pounds of tobacco. It had 15 stores, 20 flouring-mills, 38 grist-mills, 32 saw-mills, eight tanneries; three academies, 49 students; 15 schools, 453 scholars. Pop.: whites, 5307; slaves, 3663; free coloured, 287; total, 9257. Capital, Washington.

## RATISBON.

RARITAN, r., N. J., is formed of two branches which unite in Somerset co., and enters Raritan bay at Amboy. Sloops ascend the river 17 m. to New-Brunswick, with 8 feet water, and steamboats run daily from that place to New-York city.

RARITAN, t., Hunterdon co., N. J., 20 m. N. Trenton. Drained by branches of Raritan river. It contains nine stores, four grist mills, four saw-mills, one oil-mill, one tannery, one distillery, one pottery, two printing-offices, two weekly newspapers; 15 schools, 351 scholars. Pop. 2510.

RASTADT, a town of W. Germany, grand duchy of Baden, circ. Middle Rhine, of which it is the cap., on the Murg, a tributary of the Rhine, 13 m. S.W. Carlsruhe. Pop. 5650. It is walled, and has wide streets, several Roman Catholic and Lutheran churches, a gymnasium, lyceum, various other schools, and a palace, the residence of the last margraves of Baden, in which is a curious collection of Turkish trophies. Rastadt is the seat of the superior judicial court for the circ. It has manufactures of tobacco, chicory, carriages, and machinery and instruments of various kinds; but is principally noted for two congresses held in it; the first, in 1714, when a treaty was concluded between Marshal Villars and Prince Eugene; and the second, in 1798-99, which terminated abruptly in the unexplained assassination of two of the French envoys. (*Bergkass; Dict. Geog.*)

RATHKEALE, an inland town of Ireland, prov. Munster, co. Limerick, on the Deel, 17 m. W.S.W. Limerick. Pop., in 1831, 4972. It principally consists of one street, nearly 1 m. in length, which has many good houses and shops. A parish church, a Roman Catholic chapel, with an Independent and a Methodist meeting-house, a fever-hospital, dispensary, courthouse, and bridewell. Several families of German palatines are settled in the town. General sessions are held four times a year; petty sessions on Thursdays. It is a constabulary station, and has a considerable retail trade. Markets on Thursdays: fairs on 7th Feb., 4th April, 1st and 17th June, 5th Aug., 18th Sept., and 18th Nov. Postoffice revenue, in 1830, £376; in 1836, £580. A branch of the national bank was opened here in 1835.

RATISBON (Germ. *Regensburg*, an. *Castrum Reginum*, afterwards *Augusta Tiberi*), a city of S. Germany, capital of the Upper Palatinate, in Bavaria, on the Danube, across which it communicates with its suburb, Stadt-am-Hof, by a bridge 1000 German feet in length, 64 m. E.N.E. Mimich. Lat. of St. Emmeran's Tower 49° 0' 59" N.; long. 12° 5' 43" E. Pop. about 22,000, two thirds being Roman Catholics. It is one of the oldest towns in Germany, and has a proportionally antique appearance. Its streets are narrow and irregular; and its houses, though lofty, are altogether old-fashioned and inconvenient. Many have tall battlemented towers, loopholes for musketry, &c.; and among the large-residences are several ornamented with heraldic bearings. The cathedral is a fine Gothic edifice, begun in the 13th century, but the greater part appears to have been constructed in the 15th: its interior was formerly crowded with a number of extraneous ornaments; but these have been removed. In it are a few fine works of art, including a *bas relief* on the tomb of the Primate Dalberg, designed by Canova. Two older cathedrals adjoin this edifice; one, now used as a baptistry, is supposed to date from the 10th or 11th century, and the other is of a still earlier date.

Near the cathedral is also a massive square tower, probably a remnant of an ancient Roman fortress. The church of St. Emmeran has some very curious monuments of high antiquity, but it is now half in ruins; and St. Emmeran's abbey, a large though not a fine building, has been converted into the palace of the prince of Tours and Taxis. The establishment to which the latter belonged was founded long before the time of Charlemagne, by whom it was enlarged; and, at the time of its dissolution, it is said to have been 1200 years old. The Scotch Benedictine convent, a monastic institution in Ratisbon, the small revenues of which has prevented its secularization, supports two monks and five young Scotch ecclesiastical students. It has a very curious church, supposed to date from the 10th or 11th century. The town-hall, a gloomy and irregular structure, is interesting as being the seat of the German diets from 1663 to 1806. The apartments formerly occupied by the diet present little that is remarkable; but beneath the edifice are some dungeons, in which are preserved the rack, and other machinery of torture, formerly in use. (*See Murray's Handbook for S. Germany*, p. 66.)

The old bishop's palace, in which the emperor Maximilian II. died, is now a brewery. The ramparts of Ratisbon are no longer of use as a means of defence, but serve as public walks. Within the city is a monument to the great astronomer Kepler, who expired here in 1630. Ratisbon has a royal academy, Roman Catholic lyceum, Lutheran gymnasium, theological seminary, observatory, public library with 20,000 volumes, school of design, museum of mathe-

## RAVENNA.

matical and philosophical instruments, botanic society, &c. Since it has ceased to be the seat of the German diet, it has been mostly shorn of its importance; but a good many vessels for the navigation of the Danube are built here; and it has several breweries, distilleries, tanneries, and iron-works. It formerly enjoyed the exclusive right of the navigation of the Danube, upwards to Ulm, and downwards to Vienna. This privilege is extinct, but it still has a large share of the traffic on the river. At Donaustadt, on the Danube, about 6 m. distant, is the *Valhalla*, a fine Doric marble temple, built by the present king of Bavaria, for the reception of statues and busts of the distinguished men of Germany. This edifice, commenced in 1830, was to be completed in the course of 1841.

Ratisbon was the capital of the dukes of Bavaria, till their duchy was overturned by Charlemagne. It was afterwards a free imperial city, governed by a count of the empire. In 1809, some severe fighting took place before it between a part of the grand French army, and Napoleon, and the Austrians, to the disadvantage of the latter, who were forced to retire towards Bohemia. (*Berghaus, Allg. Lander, &c.*, iv., 135; *Dict. Geog.*, &c.)

RAVENNA, a city of the Papal states, cap. leg. of the same name, on the Montone, amid extensive but fertile marshes, 43 m. E.S.E. Bologna, 84 m. N.W. Ancona, and 43 m. from the Adriatic; lat. 44° 25' 16" N., long. 12° 12' 11" E. Pop. about 16,000. It is chiefly deserving of notice for its architectural remains. Having been the capital of Italy during the last years of the W. empire, and successively the residence of Honorius, Valentinian, Odoacer, Theodoric, and the succeeding Gothic monarchs, it presents many interesting specimens of the architecture of that period, few of which are elsewhere to be found. The empress Placidia, from 422 to 450, and Theodoric, from 492 to 526, embellished it with the best edifices the times were capable of producing; and many of these exist in singularly good preservation. The church of San Vittore is said to date as far back as the early part of the 4th century; but, according to Mr. Woods, what remains of it, even if the date be accurate, is a mere barn, without character. The earliest perfect church is that of Santa Agata Maggiore, completed in the early part of the 5th century, having granite columns, rich marbles, &c., apparently taken from some more ancient edifice. San Giovanni del Sagra was built by Placidia, anno 435; San Francesco apparently about the same date; St. Apollinaris Nuovo, a foundation of Theodoric, and having mosaics of that period; St. Apollinaris, at Chiassi, built by Justinian, on the ruins of an ancient temple of Apollo; and Spirito Santo, also of the 6th century. In all these churches the general plan and style are nearly the same. They consist of three naves divided by columns, supporting arches; the middle nave terminating in a semicircular recess, covered with mosaics. The roof is of timber, and not concealed. No very distinct marks of specific difference are observable in the workmanship, between the structures of the 4th and 6th centuries, except in the ornamental parts; the capitals and mouldings of the later period are much more fanciful. The cathedral of Ravenna was originally founded towards the end of the 4th century; but the present building is modern, and has some frescoes by Guido, bas-reliefs, and rich altars. Near it is the baptistry, an octagonal building, probably of the same date as the ancient cathedral, and almost covered with mosaics, attributed to an archbishop who lived about 430. The baptism of Christ is represented on the dome in mosaic, "and the river-god seems also to be introduced into the composition." The church of San Vitale, another octagonal structure, dates from the first half of the 6th century. Here, also, is a little church, built by Placidia, whose tomb it contains, with those of Honorius, Constantius, Valentinian III., &c. Without the city is the mausoleum of Theodoric, constructed by his daughter Amalsunda.

But by far the most interesting of all the structures to be seen at Ravenna is the tomb of Dante, the immortal author of the *Divina Commedia*, who expired here, in exile on the 14th of September, 1321.

"Happier Ravenna! on thy hoary shore,  
Fortress of falling empire! honour'd sleeps  
The immortal exile." (*Childe Harold*, iv., 59.)

He was buried in the church of the Franciscan monastery, in a handsome tomb erected by his protector Guido da Polenta, restored by Bernardo Bembo in 1483, again restored by Cardinal Corsi in 1692, and replaced by a more magnificent sepulchre in 1780, at the expense of Cardinal Louigi Gonzaga. The Florentines repeatedly demanded the ashes of the mighty dead, but these demands were uniformly met by a flat and firm denial.

The *Porta Aurea*, a triumphal arch at the W. entrance of the city, and a few remains, said to be portions of Theodoric's palace, and having, according to Woods, some similarity to those of the palace of Diocletian, at Spalatro, comprise the principal remaining antiquities. The city has ramparts, which, however, are of little service as means of

## READFIELD.

defence. Some of its squares are neat, and ornamented with statues of popes, &c.; and the streets are mostly wide and regular, but dirty; and the houses are old-fashioned, and gloomy. It has a few silk manufactures, and a large annual fair; but, like Padua, it is very dull, and unfit for study than for active business. A monastery has been appropriated to a public library, containing from 30,000 to 40,000 volumes; and a museum, with a few objects of natural history, antiquities, casts, and paintings. Few of the churches are rich in paintings; but there are some good private galleries. Byron praises Ravenna for its climate, and says, he found much education and liberality of thinking among the higher classes. It is an archbishopric, and the residence of a Papal legate.

Ravenna was originally founded by a colony of Thessalians, most probably on the sea-shore, but in the days of Strabo, it was owing to accumulation of mud, surrounded by marshes. (*Lib. v.*, p. 148.) Hence, says Silius Italicus,

"Lenta paludosa perscindunt stagna Ravenna."  
(*Lib. viii.*, v. 602.)

Being difficult of approach, and well fortified, its advantages as a stronghold and a naval station were perceived by Augustus, who constructed a new harbour, about 3 m. from the old town, which he connected with the Po and the old city by a canal, and with the continent by a causeway. Ravenna henceforward became the principal station of the Adriatic fleet, and the new and old cities were nearly joined by intermediate buildings. But the same cause, the accumulation of mud and other matters, brought down by the Po and other rivers, that had destroyed the port of the ancient city, in no very long time destroyed that constructed by Augustus: it is now, in fact, about 4½ m. from the sea, and so early as the fifth or sixth century of the Christian era "the port of Augustus was converted into pleasant orchards; and a lonely grove of pines covered the ground where the Roman fleet once rode at anchor!" (*Gibbon*, v. 209, 8vo. ed.) But this very circumstance, though it lessened the naval importance, increased the strength of the new city, which, from the beginning of the fifth to the middle of the eighth century, was considered as the seat of government, and the capital of Italy. At length the Greek exarchate being overthrown, the city and its territory was given by Pepin to the Holy See in 773. Subsequently Ravenna successively belonged to its own lords, the Bolognese, and the Venetians, till 1509, when it reverted to the pope. In 1512 the French, under the Duke de Nemours, gained a signal victory over the Spaniards, at a short distance from Ravenna; an event commemorated by an obelisk erected on the field of battle.

RAVENNA, p. t., capital of Portage co., O., 34 m. S.E. Cleveland, 140 m. N.E. Columbus, 319 W. Watered by a branch of Mahoning river, which flows to the Ohio, and by a branch of Cuyahoga river, which flows to lake Erie. The village, which was made the capital of the county in 1808, when the site and surrounding country were a wilderness, is a neat and flourishing place, laid out with streets which cross each other at right angles. State-street, running E. and W. through the centre, is 100 feet wide; and the other streets are 60 feet wide. It has a handsome courthouse of brick, 68 by 45 feet, a jail of stone, 60 by 40 feet, five churches, a Congregational, Methodist, Baptist, a Disciples, and a Universalist, an academy, eight stores, about 100 mechanics of various descriptions, occupying 50 mechanic shops, 125 dwellings, and about 800 inhabitants. The Pennsylvania and Ohio canal passes through the S. part of the village, and affords water-power, and great facilities for business. There are in the t. nine schools, 371 scholars. Pop. 1542.

RAY, county, Mo. Situated toward the N.W. part of the state, and contains 570 sq. m. Bounded S. by Missouri river. Watered by Crooked river. It contained in 1840, 7925 neat cattle, 6702 sheep, 25,909 swine; and produced 15,284 bushels of wheat, 271,000 of Indian corn, 65,793 of oats, 45,600 of potatoes, 61,700 pounds of tobacco. It had 15 stores, eight grist-mills, seven saw-mills, two tanneries, four distilleries; 10 schools, 206 scholars. Pop.: whites, 5714; slaves, 834; free coloured, five; total, 6553. Capital, Richmond.

RAYMOND, p. t., Cumberland co., Me., 58 m. S.W. Augusta, 561 W. Bounded S.W. by Sebago pond. Incorporated in 1803. It has three grist-mills, four saw-mills; 19 schools, 488 scholars. Pop. 2032.

RAYMOND, p. v., capital of Hinds co., Miss., 18 m. W. by S. Jackson, 1028 W. It contains a courthouse, jail, a number of stores and neat dwellings, and about 500 inhabitants. Nett proceeds of the postoffice in 1841, \$871.

RAYNHAM, t., Bristol co., Mass. First settled in 1650. The first forge in the U. States was erected here in 1652. It contains three churches, a Congregational, Unitarian, and Baptist, two stores, one furnace, one forge, five grist-mills, six saw-mills; seven schools, 358 scholars. Pop. 1329.

READFIELD, p. t., Kennebec co., Me., 12 m. W. Augusta, 604 W. A large pond in its S. part lies partly in Winthrop. It contains the Maine Wesleyan seminary, founded

## READING.

In 1822, seven stores, one fulling-mill, one woollen factory, one grist-mill, two saw mills, one oil-mill, three tanneries; two academies, 320 students; 12 schools, 700 scholars. Pop. 2937.

READING, a parl. and mun. bor. and market town of England, hund. its own name, co. Berks, of which it is the cap., on the Kennett, close to its junction with the Thames, and on the line of the Great Bath-road and of the Great Western railway, 38 m. W. London. Area of parl. and mun. bor., which are coextensive, 2080 acres. Pop., in 1841, 19,512. "The town is of considerable size, and apparent prosperity, the inhabitants having increased rapidly within the last 15 years. A new high road into the heart of the town, recently completed, is an important improvement. There are many excellent houses, and the main streets are spacious, containing very good shops, and being well lighted with gas." (*Bound. Rep.*) The town-hall, completed in 1788, is a substantial building, well adapted for municipal purposes. The borough jail is small and inconvenient; and the house of correction, though large, is reported to be "deficient in various important requisites, badly ventilated, insecure, and without punishment cells." (*Prison Inspectors' 5th Rep.*) Reading has three parish churches. St. Lawrence is a large structure, with a fine tower of flint and stone, chiefly in the perpendicular style; the other churches are of a mixed architecture; and St. Mary's is remarkable for a handsome tessellated tower. Two of the livings are in the gift of the lord chancellor, and St. Lawrence belongs to St. John's college, Oxford. There is a chapel-of-ease and a licensed episcopal chapel in the parish of St. Mary's, and a district church in that of St. Giles; and there are places of worship for Roman Catholics, Baptists, Independents, Wesleyan Methodists, and the Society of Friends. The town has numerous Sunday schools, furnishing religious instruction to nearly 2000 children, and there are several subscription day-schools, attended by about 800 children. The grammar school, originally founded in the reign of Henry VII., and endowed with property belonging to the decayed hospital of St. John, received great additions from Archbishop Laud, and Sir Thomas White conferred on it two fellowships at St. John's college, Oxford. It enjoyed a high reputation as a classical seminary, while the Rev. Dr. Valpy was head master, and was then attended by 120 boys, partly day scholars and partly boarders; since then, however, it has greatly declined; but it continues to be a respectable school, and is improving. The school is open to all boys, whether natives or residents of Reading; but none are admitted free. (*Char. Comm. 32d Rep.*) A blue-coat school, founded in 1646, has an endowment producing an average income of £850 a year, and furnishes clothing, instruction, and an apprentice-fee to 40 boys (elected by the corporation): a girl's green-coat school, in St. Mary's parish, is supported by subscription. Reading has a county hospital, opened in 1839, and numerous almshouses and money-charities, few towns in England having so large an amount of property held in trust for charitable purposes. A dispensary, eye-infirmary, and savings' bank have been established within the last few years. The Reading institution has an excellent library and news-room, and it has also a subscription news-room, mechanics' institute, small theatre, and two weekly newspapers are published.

The trade of Reading is very considerable, but more of a general than specific character. The manufacture of woollens was formerly pretty extensively carried on, chiefly in a large range of buildings known as the Oracle; but the business is now wholly abandoned, and the buildings are occupied by riband and silk weavers, of whom there is a considerable number in and about the town. Floor-cloth and sail-cloth are also produced, and there are several large breweries. The trade of the town has been greatly facilitated by the Kennet and Avon canal and the Thames navigation, and it will be still more facilitated by the opening of the Great Western railway, which has here a principal station.

Reading, "which claims to be a borough by prescription," was incorporated by Henry III., and has received many subsequent charters. Under the Municipal reform Act, the borough is divided into three wards, the municipal officers being a mayor and five other aldermen, with 18 councillors. Corporation revenue in 1839, £2400, exclusive of £93 accruing from the sale of property. Quarter and petty sessions are held under a recorder, besides which there is a civil court for debts under £10. The Lent assizes and winter quarter sessions for the county are held here, besides weekly petty sessions. Reading has sent two members to the House of Commons since the 23 Edward I., the right of voting down to the Reform Act being in the inhabitants paying scot and lot. The electoral limits were left unchanged by the Boundary Act, and in 1839-40 it had 1141 registered electors. Reading is likewise one of the polling places at elections for the county. Markets on Wednesday and Saturday; on the latter for corn. Fairs, February 2d, May 1st,

## RED HOOK.

July 25th, and September 21st; the last being for cattle and cheese, and extremely well attended.

Reading is of great antiquity, though its origin be unknown. In 1263 Henry III. held a parliament here, and another was adjourned thither in 1453. In the great civil war it was successively occupied by the forces of parliament and of the king. Archbishop Laud was the son of a clothier in this town, where he first saw the light in 1573. In his prosperity he did not forget the place of his birth, to which he was a liberal benefactor.

READING, p. t., Windsor co., Vt., 61 m. S. Montpelier, 478 W. Drained by Mill river, and branches of Queechy and Black rivers. It contains three churches, a Congregational, Methodist, and Universalist, five stores, four fulling-mills, two woollen factories, two grist-mills, seven saw-mills, two tanneries; 15 schools, 403 scholars. Pop. 1363.

READING, p. t., Middlesex co., Mass., 12 m. N. Boston, 452 W. Incorporated in 1644. Watered by Ipswich river. It contains four churches, two Congregational, a Unitarian, and a Baptist, 12 stores, four forges, four grist-mills, three saw-mills; one academy, 71 students; nine schools, 40 scholars. Pop. 2193.

READING, p. t., Fairfield co., Conn., 15 m. N.W. Bridgeport, 79 m. S.W. Hartford, 234 W. Watered by Saugatuck and Norwalk rivers. It has four churches, an Episcopal, Methodist, Congregational, and Baptist, six stores, five grist-mills, seven saw-mills; one academy, nine students; nine schools, 250 scholars. Pop. 1674.

READING, p. t., Steuben co., N. Y., 21 m. E. Bath, 194 m. W. by S. Albany, 305 W. Bounded E. by Seneca lake. It contains two churches, a Presbyterian and Methodist, five stores, eight saw-mills, two tanneries; 13 schools, 564 scholars. Pop. 1541.

READING, p. b., capital of Berks co., Pa., 57 m. N.W. Philadelphia, 52 m. E. Harrisburg, 145 W. Situated on the E. bank of Schuylkill river, 1 m. below the mouth of Tulpehocken creek. The streets are spacious and straight, crossing each other at right angles, chiefly covered with a hard white gravel from sandstone, superior to macadamized streets. It contains a courthouse, a jail, three banks, an academy, three public libraries, one of which is in German, a female seminary, 12 churches, a Lutheran, German Reformed, Episcopal, Presbyterian, Methodist, Baptist, Friends, Universalist, Roman Catholic, and three African. The courthouse is on elevated ground, on a square 200 feet long and 220 feet deep, and has a portico of sandstone in front, presenting an imposing appearance, and commanding an extensive prospect: it cost \$59,000. The Lutheran church is a large and handsome structure, capable of containing 1500 persons, and has a steeple 201 feet high; said to be the highest in the state. The German Reformed church, erected in 1832, of brick, has a steeple 151 feet high. There are two market-houses, in which market is held twice a week. Seven weekly newspapers are published, three of which are in the German language. Fifty-five thousand dozen wool hats have been manufactured in a year, for the southern and western markets. There is a rolling-mill and nail factory, capable of rolling 3500 tons of bar iron, and of manufacturing 1500 tons of nails annually. The fires are exclusively of anthracite coal. White wines, of an excellent quality, are made and sold to the amount of 100 barrels a year. There are two flouring-mills in the borough, one of which is said to manufacture 8000 barrels annually. The place is supplied with spring water from a spring on Penn's mount, conducted into a reservoir near the head of Penn-street, and distributed in iron pipes through the various streets; and it has sufficient head to render it very useful in extinguishing fires. The Schuylkill and Union canals meet here, and the Philadelphia and Reading railroad passes through the place. There are two bridges across the Schuylkill, one of which was built in 1816, and cost \$60,000. The borough had, in 1840, 23 stores, capital \$161,600, three lumber-yards, capital \$50,000, one forge, two grist-mills, three tanneries, one distillery, two breweries, one pottery, 1365 dwellings, and 8410 inhabitants. It was laid out in 1748, by Thomas and Richard Penn, proprietors and governors of the province.

READINGTON, p. t., Hunterdon co., N. J., 8 m. N.E. Flemington. Bounded S.W., S., and S.E. by the South branch of Raritan river. Drained by Rockaway creek and its branches. It has nine stores, six grist-mills, five saw-mills, one oil-mill, three tanneries, three distilleries; 11 schools, 366 scholars. Pop. 2373.

RED BANK, p. t., Clarion co., Pa., 190 m. W. N.W. Harrisburg, 256 W. Drained by Red Bank, Mahoning, and Beaver creeks. Alum is found in the S.W. angle of the t. It contains six stores, five grist-mills, eight saw-mills, one distillery, one pottery; 24 schools, 836 scholars. Pop. 3078.

RED HOOK, p. t., Dutchess co., N. Y., 32 m. N. Poughkeepsie, 49 m. S. Albany, 321 W. Bounded W. by Hudson river, on which it has two landings, called *Lower Red Hook* and *Upper Red Hook*, at each of which is a small village.

## RED RIVER.

It contains two Dutch Reformed churches, 11 stores, seven grist-mills, three saw-mills; one academy, 33 students; five schools, 155 scholars. Pop. 2829.

RED R., La. and Ark., is the first large river which enters the Mississippi above its mouth, and rises in the base of the range of the Rocky mountains, near Santa Fe, in Mexico. The S. bank of it forms, for a considerable distance, the boundary between the United States and Texas. A greater part of its course is through fertile prairies of a reddish soil, which gives its colour to the waters, and to this circumstance it owes its name. Its shores are covered with grass, and abound with grapevines, which produce a delicious fruit. On its banks is the favourite range of the buffalo, and other wild animals peculiar to the western prairies. About 90 m. above Natchitoches commences the *Raft*, which consists of a swampy expansion of the river, to the width of 20 or 30 m. The river divides into a great number of channels, many of which are shallow; and these channels have been obstructed by fallen trees, brought down by floods from its upper parts. Between these masses the river flows, sometimes completely covered by the raft, on which grow grass and willows in the alluvial soil collected on it; but more generally the river is visible between the masses of timber. In some places it has even been said that it could be passed on horseback, but not without danger. At a great expense, this raft has been so far removed that steamboats, though not without difficulty, have passed through it. If this raft were effectually removed, the river would be navigable for 400 m., and the fertile soil on its banks would invite settlers. Below the raft, and 4 m. above Natchitoches, the whole volume of the river is again united, but soon divides into a number of channels, and fills many bayous and lakes which lie parallel to it. In its lower parts the main channel of the river is narrower than above the raft; but its depth is increased.

REDRUTH, a market town and par. of England, co. Cornwall, hund. Penrith, on an acclivity on the high road between Truro and St. Ives, 8 m. W.S.W. the former, and 11 m. E. the latter. Area of par. 377½ acres. Pop., in 1831, 8191. The town consists principally of one long street, built on the side of the hill. It has been greatly extended and improved of late years, having fully doubled its population since 1801; and is pretty well built, paved, and lighted with gas. Among the more recent buildings are a handsome square granite tower, with an illuminated clock in its upper part; and the savings' bank, a neat edifice with a colonnade in front. The parish church, at the foot of the Carn Bre hill, half a mile S.W. the town, was rebuilt about 1770. The living is a rectory, in the patronage of Lord de Dunstanville, of the gross annual value of £501. A chapel of ease, in the pointed style, has, however, been erected contiguous to the town, partly by a grant from the parliamentary commissioners, and partly by subscription; the living is a curacy, in the patronage of the rector. There are also meeting-houses for Baptists, Methodists, and Quakers; a grammar school, erected by voluntary contribution in 1803; with various other private and Sunday schools, a subscription reading-room, and a small theatre.

Redruth owes its importance wholly to the extensive copper and tin mines in its vicinity. The Consolidated and United mines between it and Gwennap, are the most extensive of any in Cornwall. In 1836 they employed in all 3196 individuals, and 21 steam-engines, some of which were of the greatest power. One of the shafts in these mines was more than 300 fathoms deep, the temperature at the bottom being from 96° to 99° Fahr. (*See De la Beche's Geology of Cornwall*, p. 601; *Statistics of the British Empire*, i. 557.) The ore is conveyed by railways to Deveron, on a creek belonging to Falmouth harbour, and to Portreath, Hayle, &c., on the N. side of the peninsula. Redruth has a brisk general trade. Markets on Wednesday and Friday, which last is one of the largest corn markets in the W. of England. Fairs, May 2d, August 3d, and October 12th, chiefly for cattle. Tehiddy-park, the seat of Lord de Dunstanville, is about 2 m. from the town.

RED SEA (an. *Arabicus Sinus*, or *Rubrum Mare*), an extensive inland sea between Africa and Arabia, connected with the Indian ocean by the strait of Bab-el-Mandeb, less than 20 m. across, between lat. 12° 40' and 30° N., and long. 32° and 44° E. Extreme length, 1420 m.; do. breadth, 230 m.; average breadth, 135 m.; estimated area, 185,000 sq. m. It runs in a pretty direct course from N.N.W. to S.S.E., being divided at its N. extremity into two arms, the longest and most westerly of which is the gulf of Suez, at the head of which is the port of the same name, which see. The other branch, which runs N.N.E., having a length of 120 m., is called the gulf of Akaba, which see. On the promontory between these gulfs is the mountain group of Djibbel-Musa, including mounts Sinai and Horeb, famous in Scripture history. The gulf of Suez is more than 180 m. in length, and its breadth may average about 92 m. The strait of Djubal, the entrance to this gulf, is nearly 16 m. across.

## RED SEA.

The present charts of the Red sea were formed in 1829, by order of the E. India company, under the superintendence of Captains Elwin and Moresby; but a considerable section of its S. part had been surveyed in 1801 by Sir H. Popham under Lord Valencia. The more recent, however, is the only complete survey that has been made of this important gulf.

The Red sea, though, generally speaking, of great depth (probably averaging 100 fathoms), is in parts situated with rocky islets and hidden coral banks, which extend far into the channel, and sometimes impede the course of vessels. The islands are scattered pretty abundantly in all parts of the sea. Several occur near the entrance of the two northern gulfs; but by far the greater number are found at its S.W. extremity, nearly opposite Massouah, this group being denominated the Dhalak archipelago. Farther S. are several other islands, one of which (called Djibbel-Teer) comprises an active volcano, rising nearly 1200 feet above the sea. (*See Moresby's Sailing Directions for the Red Sea*, p. 26.) The island of Cameran lies S.W. Lohieia; and nearly opposite Hodeida, in lat. 15° N., is the group of the Zebayer islands. The coral reefs of this sea are more numerous and extensive than in any other body of water of equal extent. They extend most commonly in long strips parallel to, and about a quarter of a mile from, shore, with which they are in many cases united: the deep water runs close up to their edge; but the banks themselves are seldom more than 5 feet below the surface. Among the reefs unconnected with the shore, several are at some distance from it, a channel intervening of sufficient depth to admit of navigation by small vessels, and having good anchorage in stormy weather. These reefs are more numerous on the E. than on the W. coast; but the Dhalak archipelago is, perhaps, more extensively intersected with them than any other part of the sea. There are also many isolated reefs; but they present few obstacles, owing to the transparency of the water, which renders them easily discoverable. No surf is ever observed on them, how boisterous soever the weather, a circumstance attributed to the porous nature of the coral on the outer edge of the reef. (*Vellsted's Arabia*, ii. 246.) After all, however, these reefs offer no considerable obstacle to ships, and the shelter which they afford in some cases facilitates navigation without decreasing its speed.

The existence of the islands and reefs just described has led to a division of the Red sea into a central and two lateral channels. The central channel, between the outer extremities of the reefs extending from either shore, is very deep throughout, and in some parts no bottom has been found, even at a depth of 250 fathoms. The breadth of this channel in the parallel of Djidda is 110 m.; but farther S. it diminishes to little more than 40 m., and continues gradually decreasing down to the strait of Bab-el-Mandeb. The inner channel, on the Arabian side, is formed partly by broken reefs and sunken rocks, partly by islands and long-continued reefs, a large part also being open to the sea: its average width is from 2 to 3 m., and the depth is very considerable, though the anchorage is so insecure as to afford little protection from the sea. The inner channel, on the opposite coast, is similarly bound to that now mentioned; but it is much narrower, and soundings can be obtained only in a few places: the harbours, of which there are seven or eight, furnish tolerably good anchorage, but it is very unsafe to anchor on the rocky shelves projecting from the reefs. Both these lateral channels are connected with the open sea by cross channels, some of which, especially N. of lat. 17°, are of great width and depth.

The winds of the Red sea are not uniform in its different parts and channels. With respect to the central channel, it may be observed that the N.E. monsoon here becomes a S.E. wind of considerable force, decreasing, however, as it passes northward, and disappearing about lat. 18°, where it is replaced by the N. breezes that prevail during the warm season. The S. winds commence in October, and subside at the end of May, when they are succeeded by N.W. winds, which usually bring with them thick, hazy weather, especially on the Arabian side. In the lateral channels, N. winds, inclining to land and sea breezes, are more or less prevalent, land-squalls being very common both in April and May.

The currents of the Red sea appear to be entirely governed by the winds; for it is observed that with S. breezes they set northward, and with N. winds to the S. It is probable, also, that they increase according to the strength, of either, as little or no current is perceptible during the prevalence of light, variable breezes, just before the monsoon. N. of Djidda, however, both the winds and currents are very variable throughout the year; but here even the latter depend on the former, and a strong S. wind will cause a current of 20 or 30, and even 40 m. a day. Tides have been observed in a few parts of the coast; but the rise and fall are not sufficient to allow of the conclusion that this sea is subject to lunar influence. The idea that the waters of the

## RED SEA.

Red sea were formerly at a higher level than the Mediterranean, and that the surface has been depressed by the constancy of currents flowing towards the Indian ocean, is wholly chimerical: the fact is, that from May to October, during the prevalence of N. winds, the water is 2 feet lower than the average level; whereas from December to February, when the currents run in an opposite direction, the water collects at the N. part, which accordingly becomes unusually elevated. (*Geog. Journ.*, vi., 82; *Wellsted's Arabia*, ii., 300, and *Append.*; *Sailing Directions*, p. 211-219, &c.)

The country about the Red sea is more or less mountainous, though the high lands seldom abut directly on its coasts: indeed, this sea may be described as the lower part of a valley bounded eastward by the table-land of Arabia, and westward by a range of mountains rising from 4000 to 6000 feet above the sea. Between the high grounds and the shore, however, a level district intervenes, of some extent, and considerable fertility; but it is almost uncultivated, the inhabitants living in idleness, and contenting themselves with the wretched pittance that may be obtained by pasturage, and the plunder of the Hadj season. Nothing, indeed, can be conceived more wretched and degraded than the condition of the people dwelling in the villages bordering the Red sea.

The principal harbours on the E. side of this sea are Mocha, Hodeida, Loheia, and Djidda, the first and last being by far the most important: Suez, Cosseir, Suakim, and Massouah are the chief places on the African side; and a pretty active communication is kept up between the inhabitants of the opposite shores, more particularly as the sea is crossed by all the African pilgrims on their way to Mecca and Medina. The vessels employed in transporting the pilgrims and their merchandise may amount to about 400, each averaging 130 tons; and the pilgrims from Africa alone are said to average 30,000 annually. (*Geog. Journal*, vi., 89.) Grain, also, and slaves, are large articles of trade between the two shores: the grain is shipped at Cosseir, wholly on account of Mehemet Ali, pacha of Egypt; the slaves are brought almost exclusively from Suakim and Massouah. Mocha being the only port whence goods are exported, the Red sea has not, till within the last few years, been much frequented by foreign vessels, except those belonging to pilgrims from Persia and India, with the merchandise of both countries; wheat, tobacco, dates, and Persian carpets being brought by the former, and rice, sugar, muslins, and other fabrics, indigo, spices, and handsome young females, by the latter. Coffee, frankincense, and gums are sent in exchange from Mocha; but the returns from the other ports are in cash, pearls, &c. (*Geog. Journal*, vi., 91.) Within the last few years, however, the navigation and commerce of this sea has greatly increased; and steamers have been regularly established between Suez and India, by means of which, and of the steamers from Alexandria to Marseilles, Bombay is now brought within less than 60 days' distance of England! The gales in the N. part of the Red sea offer some impediments to steamers; but we learn from Wellsted and other Indian officers, who have engaged in the survey and packet-service, that there are no obstacles which experience and perseverance may not overcome. *Dépôts* for coal, &c., are already established in different parts, and the steam-packets now run with almost undeviating regularity. The beneficial consequences of this communication, too, will, in all probability, not be confined to England, Egypt, and India; for it is scarcely to be supposed that the Red sea can become the high road from Britain to her Indian possessions, without a portion of the commerce carried on between the eastern and western worlds again reverting to this its ancient and most direct channel, and without the diffusion of industry and civilization among the barbarous hordes that now inhabit its coasts.

The Red sea is first mentioned in sacred history in connexion with the miraculous passage of the Israelites across the gulf of Suez. (*Exod.* xiv. 21.) In the time of Solomon two ports, Elath and Eziongeber, were established on the gulf of Akaba; and the Phœnicians seem to have carried on a large trade on this sea, though, probably, they had no direct communication with India. The early Greek writers, including Herodotus, seem to have had very vague notions respecting the Red sea; for the *Ῥωβρὰ Σάλας* apparently comprises, in their estimation, the whole extent of coast from the Indus to the coast of Africa. During the flourishing period of the Persian empire, the Persian gulf was the medium through which Europe and Western Asia received the wealth of the east; but under the successors of Alexander, especially the Ptolemies, who exerted themselves to promote the trade of this sea, it became an important channel of intercourse between Europe and India and the east. This intercourse continued with little intermission, though not to the same extent at all times, till the discovery of the passage round the cape of Good Hope, by which commerce

## REHOBOTH.

was diverted into a wholly different channel. The time, however, seems now to have arrived when the Red sea is again to recover a portion, if not the whole, of its ancient importance as a great commercial highway.

Great discrepancy of opinion has prevailed respecting the origin of the name. According to Pliny (*Hist. Nat.* lib. vi. cap. 23) and Quintus Curtius (lib. viii. cap. 9), its Greek name, signifying red, is derived from Erythros, a king of the adjoining country. But the more probable opinion seems to be that it is derived from the great abundance of coral found in it. (*Wellsted's Arabia*, vol. ii. passim; *Moresby's Sailing Directions*, pp. 200-223; *Geog. Journ.* vols. vi. and vii., &c.)

REGGIO, (an. *Rhegium Julii*), the most S. city and seaport of Italy, in the Neapolitan dom., prov. Calabria Ultra I., of which it is the cap., on the E. side of the strait of Messina, 8 m. S.E. Messina, and 78 m. S.W. Catanzaro; lat. 38° 7' N. long. 15° 55' E. Pop. 8000. As a city, it is inferior to its opposite neighbour Messina; but it has a fine situation in the midst of orange groves, is well supplied with excellent water, and its climate is said to be the best in all the continental dom. of Naples. The former town was destroyed by the earthquake of 1783, since which Reggio has but slowly recovered its prosperity. It has been laid out on a regular plan, which, when completed, will render it a handsome city. A wide road, called the *Marina*, extends along the sea shore, parallel with which the principal street runs through the centre of the town. The houses are in general good; and as it stands on a gentle declivity, it is well drained. It has a collegiate and many other churches, several convents, a royal college, hospital, foundling asylum, and a handsome theatre. It is surrounded with walls, outside which are several suburbs. Its ancient fort no longer exists. Reggio is the seat of an archbishop, and of a civil and criminal tribunal. It has manufactures of gloves, stockings, &c., of silk, and produces some articles from the filaments of the *Pinna marina*; which, with oil and fruit, are its chief exports.

The ancient Rhegium was one of the most celebrated and flourishing cities of *Magna Græcia*. It was founded nearly 700 years B.C., by a party of Chalcidians, Zancleans, and other Greek colonists; and was for 200 years the cap. of one of the principal republics of S. Italy. The government was subject to the same mutations as that of the other Greek cities, being sometimes under a democracy, but more frequently under an oligarchy, or a single tyrant. It was besieged by the elder Dionysius, tyrant of Syracuse, who having succeeded in cutting off all communication between the sea on the one hand and the country on the other, reduced the inhabitants to such distress for want of food, that a bushel of wheat is said to have been sold for 5 minas, or, according to the usual method of computing, about £15 12s. 6d. At last, after sustaining the most dreadful privations, they were obliged to surrender, when most of those who survived were sent as slaves to Syracuse. It, however, again recovered some portion of its former importance, and succeeded in repelling an attack of Hannibal. Augustus established a colony in the city. It produced several distinguished followers of Pythagoras, some historians of celebrity, and some distinguished sculptors. It suffered in antiquity, as well as in more modern times, from earthquakes. (*Mitford's Greece*, v. 452, ed. 1838; *Ancient Universal History*, viii. 29, 8vo. ed. &c.)

REGGIO (an. *Regium Lepidi*), a city of N. Italy, cap. of a distr. of the duchy of Modena, between the Tessone and Crostolo, tributaries of the Po, 16 m. W.N.W. Modena, and 15 m. S.E. by E. Parma. Pop. about 18,000. It is defended by ramparts and a citadel, and is a well-built and rather handsome, though miserably dull town. Its streets are regular, and bordered with arcades. It has some handsome churches, numerous convents, a town hall, theatre, lyceum, public library, and a library and museum of antiquities, collected by Spallanzani. No antiquities remain, except a statue in the principal square, traditionally said to represent Brennus, the Gallic lender. Reggio has manufactures of silk and linen fabrics, horn, wooden, and ivory articles, &c.; with some trade in cattle and agricultural produce, and a large fair, which lasts during the entire month of May. It is supposed to have been founded by M. Æmilius Lepidus, who constructed the famous Æmilian way. It was here that the elder Brutus was slain by order of Pompey. Napoleon erected Reggio into a dukedom for Marshal Oudinot. Among other distinguished individuals to whom this town has given birth, may be mentioned Ariosto, perhaps the greatest of Italian poets, born here on the 8th of Sept. 1474; and the naturalist Spallanzani: its vicinity has also to boast of being the birth-place of the great painter, Antonio Allegri, surnamed Coreggio. (*Cramer's Anc. Italy*, i. 85; *Rampoldi's Dict. Geog.*, &c.)

REHOBOTH, p. t., Bristol co., Mass., 40 S by W. Boston, 413 W. Palmer's river affords water-power. It contains five churches, two Baptist, a Congregational, and a Reformed

## REICHENBERG.

Methodist, and a Christian, five stores, two cotton-factories with 1840 spindles, four grist-mills, four saw-mills; 15 schools, 324 scholars. Pop. 2169.

REICHENBERG, a town of Bohemia, and, next to Prague, the largest and most flourishing in that kingdom, circ. Bunzlau, in a well wooded part of the Lausnitz mountains, 27½ m. N.N.W. Gitschin, and 56 m. N.E. Prague. Pop. 11,500. It has three parish churches, two castles, a fine school-house, a new theatre, and the largest brewery in Bohemia. It has manufactures of woollen cloth and yarn, cottons and linens, with numerous dyeing-houses, &c. (*Aust. Nat. Encyc.; Berghaus.*)

REIGATE, a pari. bor., market-town, and par. of England, co. Surrey, hund. its own name, in the valley of Holmsdale, at the foot of a range of chalk hills, traversing the co. from E. to W., 16 m. E. Guildford, and 18½ m. S.S.W. London. Area of pari. bor., which is co-extensive with the par., 5900 acres. Pop., in 1831, 3307. The town, which consists of a principal thoroughfare running E. and W., crossed at one end by another at right angles to it, is "small, but remarkably neat, with a greater number than usual of gentlemen's houses attached to it." (*Bound. Rep.*) The church, in the fields a little E. the town, is a large structure, in the perpendicular style, with an embattled stone tower, the rest of the building being of grey limestone: in the interior are many handsome monuments, and in an attached building is a public library. The living is a vicarage of the annual value of £418, in private patronage. The Wesleyan Methodists, Baptists, and the Society of Friends, have their respective places of worship, with attached Sunday-schools; there is, also, a large national school for children of both sexes, and a small grammar-school. The market-house and town-hall is a small brick building of no pretensions to beauty; and near it is a clock house, occasionally used as a prison. A castle once stood on an eminence N. from the town; but the only parts now remaining are the moat, and a curious excavated chamber, once used either as a prison or storehouse. The priory, the property of Earl Somers, an elegant modern mansion at the S. end of the town, built on the site of an Augustine monastery, has an attached park of 70 acres. Reigate formerly carried on a pretty considerable trade in oakenal, no fewer than 20 mills being employed, previously to the American war, in its manufacture; but this business has since so much declined, that only one mill remains. At present it depends principally on its being on the line of the principal thoroughfare between Brighton and London; an advantage which, however, it will probably lose, now that the Brighton railway, which passes about 1½ m. W. from the town, is completed. Fuller's earth and white sand are found in considerable quantities in the neighbourhood, which produces an abundance of medicinal and other plants.

Reigate is a bor. by prescription, its governing officer being the bailiff of the lord of the manor. It sent two members to the House of Commons, from the 23 Edw. I., down to the Reform Act, the right of election being in the burgage holders, of whom, in 1831, there were only eight, wholly under the influence of Earl Somers, the lord of the manor. The Reform Act deprived the bor. of one of its members, and extended the electoral limits so as to comprise the entire par. Reg. electors, in 1839-40, 198. It is a polling place at elections for E. Surrey. Petty sessions for the hund. and the spring quarter sessions for Surrey are held here by the co. magistrates. Markets for corn, &c., on Tuesday; and a cattle market on the first Tuesday in each month. Fairs, Whit-Monday, Sept. 14, and Dec. 9.

REMI, or REMY (ST.), a town of France, dép. Bouches-du-Rhône, cap. cant., in a valley 15 m. N.E. Arles. Pop., in 1836, ex. com., 3238. It was formerly surrounded with a double line of ramparts; but these have been levelled, and their place is occupied by a fine circular promenade. Streets, narrow and irregular; but there are many good houses. The town-hall, new par. church, and a lunatic asylum are the principal public buildings. St. Remi is chiefly remarkable for its Roman antiquities, about 1 m. from the town, and supposed to belong to the ancient *Glanum*. They consist of two edifices; one an arch somewhat similar to the central portion of that at Orange, but much mutilated; the other a beautiful Corinthian monument, square at its base, but circular above, appearing from an inscription to have been erected by Sextus L. Marcus to his parents, whose statues are in the circular portion of the structure. This relic of antiquity, an engraving of which is given in *Wood's Letters*, i. 159, appears to be in good preservation.

The Abbé Expilly, one of the most laborious and useful topographical writers of the last century, was a native of St. Remi, where he first saw the light in 1719. His principal work, entitled *Dictionnaire Géographique, Historique, et Politique des Gaules et de la France*, in six tomes folio, is incomplete, reaching only to the letter S: it contains a vast fund of information.

## RENNES.

REMSEN, p. t., Oneida co., N. Y., 18 N. Utica, 100 W.N.W. Albany, 405 W. Watered by Black river. It contains two churches, a Baptist and Presbyterian, six stores, one grist-mill, seven saw-mills; 13 schools, 600 scholars. Pop. 1638.

RENAIX, or RONSE, a town of Belgium, prov. E. Flanders, arrond. Oudenarde, cap. canton, 20 m. S.S.W. Ghent. Pop. in 1836, 12,320. (*Henschling.*) It is a fine situation, and is embellished with several public fountains; its old castle is now in ruins, but it has some good public buildings. It has manufactures of cotton, woollen, and linen stuffs, hats, beer, and chocolate; with a considerable trade in linens, a monthly and two weekly markets, and two large annual fairs. (*Vandermaelen, Dict. Fland. Orientale.*)

RENFREW, a small maritime co. of Scotland, having N. and W. the river and frith of Clyde, S. Ayrshire, and E. Lanarkshire. Area, 145,280 acres, of which about a half may be arable. There is a large extent of hilly, moorish ground, in the W. parts of the county, and along the confines of Ayrshire; but from Port Glasgow, eastwards along the Clyde it is comparatively flat. Soil very various; being in parts thin and sandy, while in others it consists of a deep, loamy, fertile clay; and the country being in general well enclosed with hedges, and ornamented with gentlemen's seats and plantations, has a rich appearance. Tillage husbandry is still in a rather back state, and neither the rotation of crops nor the management of the land is so well understood as might have been expected. "Much, however, has been done in the way of improvement during the last 40 years; enclosures have become general; new roads have been constructed; the land has been drained, and limed, and the rotation of crops improved." (*New Statistical Account of Scotland, art. Lochrinnoch, co. Renfrew.*) Farm-houses and offices have, also, been greatly improved. On the whole, however, the county from the humidity of the climate and the nature of the soil, is better adapted for grazing and dairying (the latter of these is extensively followed) than for tillage. There are several large estates, but property is, notwithstanding, a good deal subdivided. Farms of a medium size. Average rent of land, in 1810, 17s. 7d. an acre. There are valuable coal-mines near Paisley and the eastern parts of the county, and limestone and freestone are very generally diffused. Paisley is the principal seat of the Scotch shawl manufacture; and next to Glasgow, of the Scotch cotton manufacture; manufacturing industry is also extensively prosecuted at Pollockshaws, Neilston, and other places. Greenock and Port Glasgow, which are both in this county, are considerable sea-ports. Principal rivers, White-Cart, Black-Cart, and Gryfe. The county is divided into 16 parishes, and sends three members to the House of Commons, being one for the county, and one each for Paisley and Greenock. Renfrew and Port Glasgow are associated with other boroughs in the return of a member. Registered electors for the county, in 1839-40, 2289. In 1831, this county had 11,153 inhabited houses, 28,204 families, and 133,443 inhabitants, of whom 61,154 were males, and 72,289 females. Valued rent £69,172 Scotch: annual value of real property in 1835, £265,534.

RENFREW, a pari. bor. of Scotland, co. Renfrew, of which it is the cap., within about ½ m. of the S. bank of the Clyde, 5 m. W. Glasgow. Pop. 2002. It consists merely of a single street, from which several lanes issue. The only public buildings are the parish church, town-hall, and jail. There is no dissenting chapel. There are no native manufactures in the town; but about 260 looms are employed on account of Glasgow manufacturers. It has also a distillery, and a considerable dairy establishment. The borough was connected with the Clyde by a canal in 1786, but it has been allowed to go into disrepair. A quay was constructed on the Clyde opposite to the town in 1835; and a railway, 3½ m. in length, connects the borough with Paisley. On the whole, however, it has but little trade or enterprise. The royal family of Stewart, so called from their office, had their original residence near this town. It joins with Port Glasgow, Dumbarton, Rutherglen, and Kilmarnock, in sending one member to the House of Commons. Registered electors in this borough, in 1839-40, 91; councillors, 19; corporation revenue, £1500.

RENNES (an. *Condate*, afterwards *Redones*), a city of France, dep. Ille-et-Vilaine, of which it is the cap., in a plain, at the confluence of the Ille and Vilaine, 61 m. N. by W. Nantes; lat. 48° 6' 50" N., long. 10° 40' 47" W. Pop. in 1836, ex. com., 29,909. The Vilaine divides Rennes into an upper and lower town. The former, which is the largest, is regularly built, and handsome; the lower town is quite the contrary. The houses in both are, however, of a dull grey stone, which gives the city a sombre appearance.

Rennes has several tolerable squares, as that of the *Palais de Justice*, in which was formerly a bronze equestrian statue of Louis XIV.; and the *Place aux Armes*,

## RENSELLAER.

paraded with lime trees, and forming a favourite promenade. But it has neither public fountains nor covered market-places; and, for a city of its size, there are few public buildings worth notice. Though not fortified, it has several gates, on one of which is an almost effaced Latin inscription in honour of the emperor Gordian. Opposite this gate is the cathedral, a heavy-looking edifice, with a front flanked by two square towers, and ornamented with five rows of columns of different orders. Several of the other churches are in much better taste. The town-hall is one of the best public edifices. It has been rebuilt, together with a large part of the city, since a destructive fire in 1720, and comprises a large saloon, used for public fêtes, the halls of various judicial courts, a public library of above 30,000 volumes, schools of design and architecture, and the apartments occupied by the mayor. The hotel appropriated to the use of the royal court, tribunal of commerce, law-school, &c., is a building in the Tuscan order, having some good paintings and arabesques.

Rennes has several hospitals, a house of correction, in which various manufactures are conducted, an arsenal, artillery forges, and various military schools. It is the seat of a bishop, whose diocese comprises the department Ille-et-Vilaine; it is also the seat of the royal court for the five departments of Brittany, the capital of the 13th military division, and has a chamber of manufactures, a faculty of law, a secondary school of medicine, two seminaries, a tolerable museum of painting, and some other scientific establishments. In the immediate vicinity are several good promenades; the principal, the Thabor, formerly a garden of the Benedictines, on a height above the city, has a statue of Duguesclin.

Though favourably situated for trade, Rennes has few manufactures: the principal are those of sail-cloth, for the navy, &c., fishing-nets, and twine. It has, however, a considerable traffic in linens, butter, cider, and provisions, which is much facilitated by the canal of Ille and Rance, and that between Nantes and Brest. It has 12 annual fairs.

Rennes was the capital of Brittany from the 9th century to the revolution. It has produced numerous distinguished men, among whom may be specified the famous constable Duguesclin, born in the castle of Motte-Broon, in the immediate vicinity, in 1314; La Bletterie, the author of the lives of Julian and Jovian; Ginguène, the author of the *History of Italian Literature*, &c. (Hugo, art. *Ille-et-Vilaine*; *Guide du Voyageur*; *Dict. Géog.*)

RENSELLAER, county, N. Y. Situated in the E. part of the state, and contains 626 sq. m. Organized in 1791. Bounded W. by Hudson river. Watered by Hoosic river, Poestenkill, and Wynthskill. The Albany and West Stockbridge railroad, which has a branch to Troy, passes through it. It connects at Troy with railroads to Schenectady and Saratoga. It contained in 1840, 32,174 neat cattle, 134,864 sheep, 27,916 swine; and produced 21,454 bushels of wheat, 247,703 of rye, 329,193 of Indian corn, 54,767 of buckwheat, 9488 of barley, 810,333 of oats, 759,346 of potatoes, 2500 pounds of hops, 30,543 of sugar. It had 44 commercial and 13 commission houses in foreign trade, 403 retail stores, 19 lumber-yards, four furnaces, eight forges, 16 fulling mills, 13 woollen factories, 21 cotton factories with 54,035 spindles, 18 flouring-mills, 37 grist-mills, 106 saw-mills, eight oil-mills, four paper-mills, two powder-mills, three rope-walks, 22 tanneries, one distillery, four breweries, one glass factory, six printing-offices, two daily, four weekly, and one semi-weekly newspapers, and one periodical; 12 academies, 546 students; 239 schools, 11,512 scholars. Pop. 60,259. Capital, Troy.

RENSELLAERVILLE, p. t., Albany co., N. Y., 26 m. W. Albany, 369 W. Watered by Catskill and Foxes creeks. It contains five churches, a Presbyterian, Episcopal, Methodist, Baptist and Friends, 22 stores; one fulling-mill, one woollen factory, one furnace, three grist-mills, 11 saw-mills, nine tanneries; one academy, 55 students; 20 schools, 1188 scholars. Pop. 3705.

REPTON, or REPINGTON, a par. and village of England, co. Derby, hund. Repton, on a small affluent of the Trent, 6 m. S.W. Derby, Area of par. with Bradby chapelry, 6440 acres. Pop., in 1831, 2083. The town consists principally of a street of scattered houses, about one mile in length; its inhabitants being chiefly agricultural. The parish church is a spacious structure, with an elegant spire, and several handsome monuments. The living a perpetual curacy, in the gift of Sir G. Crewe, is worth £123 a year. A free-school, well endowed in 1566, is held in the remains of a priory of Black Canons, established in 1172.

REQUEÑA (an. *Loretum*), a town of Spain in New-Castile, prov. Cuenca, on the Magro (a tributary of the Júcar), 43 m. W.N.W. Valencia. Pop., according to Miñano, 10,893. It is surrounded with walls, and commanded by an old castle, built on an eminence: the streets are tolerably straight, lined with well-built houses, and, as in most

## RETHEL.

Spanish towns, there is a spacious plaza, in the centre of which is an ornamental fountain. Three parish churches and a college are the only public buildings. The chief employment of the inhabitants is in weaving ribands and silk goods. There has been a great increase of activity since the restoration of tranquillity; and Requeña now furnishes a large supply of these articles to Madrid, Seville, and Cadiz. A fair is held annually in September. The neighbourhood, a portion of which is irrigated, is well cultivated, and furnishes corn, wine, fruit, saffron, and large quantities of silk. During the war of the succession, in 1706, the castle was taken by the English, but retaken the following year by the French under the duke of Orleans. (Miñano; *Dict. Géog.*, &c.)

RETFORD (EAST and WEST), a parl. and mun. bor. of England, co. Nottingham, hund. Basselaw, on the Idle, a tributary of the Trent, 26 m. N.N.E. Nottingham, and 129 m. N.N.W. London. Area of the former parliamentary borough, which was coextensive with the parish of East Retford, 130 acres; its population, in 1831, being 2491. The modern municipal borough, however, comprises, together with the parish of East Retford, parts of those of West Retford, Clarendon, and Ordsall, and may have a population of between 4000 and 5000. The town consists principally of several thoroughfares, which meet in a common centre, and are united by several cross streets. To the N.E. are the hamlets of Moorgate and Spittal Hill; and to the S. South Retford and Thrumpton, to which last houses extend from East Retford, so as to form almost one continued line of buildings. West Retford is divided from East Retford by the Idle; the bridge over which being in the line of the streets of both towns, they seem to be, what, in fact, is substantially the case, a single town. The houses of East and West Retford have a respectable appearance, and the streets are lighted with gas. (*Mun. Corp. Rep.*) East Retford church is a spacious edifice of different dates, with a lofty square tower. The church of West Retford is small, but has a handsome spire. The living of East Retford is a vicarage, value £140 a year; patron, Sir R. Sutton: that of West Retford is a rectory, in the gift of the corporation of East Retford, value £364 a year. (*Ecl. Rev. Rep.*) In the suburb of Moorgate is a new chapel of ease, in the Gothic style: there are in the town places of worship for Baptists, Independents, Wesleyans, &c. The town-hall is a convenient building, surmounted by a cupola, and having beneath a good market-place. There are two almshouses, one for old men, the other for women; a free grammar school, founded by Edward VI., of which the municipal authorities are trustees; a national school, established in 1813, various minor charities, a news-room, and a small theatre. There is no manufactory of any kind in the town, which depends entirely for its support upon the retail trade carried on with the inhabitants of the surrounding agricultural districts. (*Mun. Corp. Rep.*) Malting was formerly extensively carried on, and hat-making and the manufacture of worsted were introduced; but these branches have nearly ceased. The Idle is not navigable at Retford; but it communicates with the Trent by the Chesterfield canal, which passes S. of the town, and is carried over the Idle by an aqueduct. East Retford is governed by four aldermen and 12 councillors, and had formerly petty sessions, &c.; but the Municipal Reform Act orders that it shall not have a commission of the peace unless upon petition or grant. Previously to this act, its police was reported to be very inefficient, and the administration of the corporate and other revenues had been very unsatisfactory. (*Mun. Rep., Append.*) It is said to have been a borough by prescription: it received many charters from Henry III. and subsequent sovereigns, down to James I. East Retford returned two members to the House of Commons in the 9th Edward II., and continued to enjoy this privilege down to 1826. But it having been proved that gross bribery had been practised at the election that then took place, it was proposed by one party to incorporate the adjoining hundred of Basselaw with the borough, and by another to transfer the franchise to Manchester, Birmingham, or some other of the great towns that were then unrepresented. After lengthened discussion, the first-mentioned plan was agreed to, so that the parliamentary borough of East Retford is now identical with the hundred of Basselaw. Registered electors, in 1830-40, 2785. Markets at East Retford on Saturdays; fairs, March 23 and Oct. 2, for horses, cattle and cheese. (*Parl. Reports*, &c.)

RETHEL, a town of France, dep. Ardennes, cap. arrond., on a steep declivity beside the Aisne, here crossed by a wooden bridge, 24 m. S.W. Mézières. Pop. in 1836, ex. com., 6,771. It is pretty well laid out, and is improving; but the houses are still mostly of wood, and there is no remarkable public building.

Rethel was formerly the cap. of the co. of Champagne, and was fortified. It has a court of original jurisdiction, a communal college, society of agriculture, theatre, several

## REUS.

hospitals, and two prisons. It is chiefly noted for its woollen manufactures, which are estimated to employ from 1400 to 1800 hands, mostly spinners. As in most small manufacturing towns, the workpeople are generally employed at their homes. The prices of labour are somewhat lower than in Rheims; but provisions, &c., are cheaper, and, on the whole, the woollen spinners of Rethel are in a better condition than those in that city. Its trade has been considerably augmented by the opening of the canal of Ardennes; besides woollen manufactures, the town has many iron forges, breweries, and tanneries. (*Hugo, art. Ardennes; Villermé, Tableau des Ouvriers*, i. 248-252.)

REUS, a town of Spain, in Catalonia, 9 m. W. Tarrigona, and 54 m. W. by S. Barcelona. Pop., according to Miñano, 24,600. It stands on a plain gently sloping towards the coast, and comprises several streets lined with good houses, with numerous churches, hospitals, barracks, an orphan asylum, theatre, and handsome public fountains. The inhabs. are extensively employed in the manufacture of silk and cotton fabrics, hats, soap, &c.; besides which, there are large dye-houses, bleaching grounds, tanneries, spirit distilleries, glass-houses, &c.; in fact, Reus may be regarded as one of the most important manufacturing towns of Catalonia, and the numerous handsome houses in its neighbourhood sufficiently indicate the industry and prosperity of its inhabitants. The town is connected by a canal with the port of Salou, whence its products are exported in exchange for rice, flour, codfish, anchovies, &c. Its weekly market is one of the largest in Spain, and is frequently attended by upwards of 10,000 persons. The town was founded in the middle of the 12th century; but its present importance is wholly consequent to the establishment of silk and cotton manufactories at the close of the last century. (*Miñano; Laborde, Itinéraire de l'Espagne; Dict. Géog.*, &c.)

REUSS, a territory of central Germany, forming two indep. principalities, between lat. 50° 20' and 51° N., and long. 11° 45' and 12° 15' E., having S. Bavaria, E. Saxony, and N. and W. the territories of Prussia, Cobourg, Gotha, and Weimar, the last dividing it into two unequal portions. Area, 591 sq. m. Pop., in 1838, 101,800. Surface generally hilly; in the N. it is watered by the Elster, in the S. by the Saale. Tillage is less an occupation of the inhabs. than the rearing of cattle and sheep. The most fertile tract adjoins the town of Gera. Woods comparatively extensive, and one of the chief sources of national wealth. Woollen, linen, and cotton fabrics are produced; mining is little followed, and the only metallic works are a few iron forges. The inhabitants are almost all Lutherans. The territory of the elder branch of Reuss consists of the lordships of Greiz and Burgh, having an area of 144 sq. m., and a population in 1838, of 32,100. Greiz is the chief town, and seat of the superior judicial court whence appeal lies to the tribunal of Jena. The public revenue amounts to about 80,000 dollars a year; the contingent to the army of the confed. being 223 men. The younger branch of Reuss has a territory of 447 sq. m., composed of the lordships of Schleiz, Lobenstein-Ebersdorf, and Gera, with a population of 69,700; chief town, and seat of government, Schleiz. Appeal from the courts of this principality lies also to Jena. Public revenue, about 235,000 dollars; contingent to army, 522 men. Each branch has a separate vote in the full diet of the German Confederation, and, together with Hohenzollern, Lippe, Liechtenstein, and Waldeck, the 16th place, and a vote in the committee. (*Berghaus, Allg. Länder, &c.*, iv. 392-394; *Almanach de Gotha*.)

REUTLINGEN, a town of Wirtemberg, circ. Schwarzwald (Black Forest), of which it is the cap., on the Eschatz a tributary of the Neckar, 19 m. S. Suttgart. Pop. in 1838, 11,500. Reutlingen presents a contrast to many other old imperial cities, having mostly regular streets, and well-built though antiquated houses. It is fortified, and has several suburbs. One of its churches has a tower, said by Berg-haus, to be 320 ft. in height; the town-hall, lyceum, a well-endowed hospital, and orphan asylum, are the other most conspicuous edifices.

It has manufactures of leather, lace, net for women's caps, of the annual value of 100,000 florins; clocks and watches, &c.; with dyeing and bleaching factories, and printing establishments, whence many pirated editions of German works have issued.

Reutlingen was the first town in Swabia which embraced the Reformation. (*Memminger Besch. von Wirtemberg; Berghaus, &c.*)

REVEL, a gov. of European Russia. (See ESTHONIA, i. 576.)

REVEL (Esth. *Talline*, Russ. *Kolyvan*), a seaport town of Russia in Europe, cap. of the above gov.; on a small bay on the S. side of the gulf of Finland, 200 m. W.S.W. Petersburg; lat. 59° 28' 33" N., long. 24° 44' 30" E. Pop. about 13,000. The city proper, included within the ramparts, is small; and although it has many good brick houses, its streets are narrow and irregular. There are several Luthe-

## RHEIMS.

ran, a Roman Catholic, and some Greek churches, all stone edifices; and various charitable and educational establishments, the latter including a gymnasium, episcopal seminary, and a school (*pension*) for nobles. The castle, a modern edifice, is appropriated to the provincial authorities: the municipal officers, who are elected by the city, reside in the town-hall. The admiralty is the principal remaining public building. The suburbs, consisting mostly of wooden houses, cover a large extent of ground along the shore. Revel is much resorted to as a watering place, and has some good warm baths, a theatre, several clubs or *casinos*, and three or four public libraries; one of which, the property of the city, is said by Possart to comprise 10,000 vols. This town is one of the stations for the Russian fleet, and has a harbour defended by several batteries. This port, which was materially improved in 1820, is deeper than that of Cronstadt, though more difficult of entrance. The roadstead, formed by some islands, is well sheltered; the long duration of the frost is the principal drawback on Revel as a naval station, though that is a disadvantage which it shares in common with the other Russian ports in the Baltic. Though not connected with the interior by any navigable river, Revel has a considerable trade. Its principal exports are corn, spirits, hemp, flax, timber, and other Baltic produce; the imports consist of colonial produce, herrings from Holland and Norway, salt, cheese, wine, tobacco, fruits, dye stuffs, cotton yarn, stuffs, and other manufactured goods, &c. A portion of the customs' revenue is enjoyed by the town.

Revel was founded by the Danes in 1218, and afterwards sold by them to the Knights of the Teutonic Order. In 1561 it came into the possession of the Swedes, but was taken from them by the Russians in 1710. Near it is the Katharinenthal Palace, built by Peter the Great; the gardens of which are a favourite public promenade. (*Schmitzler; Possart, &c.*)

REYNOLDSBURG, p. v. capital of Humphreys county Tenn., 69 m. W. Nashville, 783 W. Situated on the E. side of Tennessee r., on a beautiful plain rising gradually from the river to the height of 15 feet above it, and entirely above high water mark. Laid out in 1812, and is 12 m. below the mouth of Duck river. It contains a courthouse, jail, 8 stores, and about 200 inhabitants.

RHEA, county, Tenn. Situated toward the S.E. part of the state, and contains 440 sq. m. Bounded E. by Tennessee r., and drained by its tributaries. It contained in 1840, 4156 neat cattle, 2843 sheep, 13,386 swine; and produced 19,648 bushels of wheat, 3551 of rye, 248,477 of Indian corn, 44,760 of oats, 5689 of potatoes, 5305 pounds of tobacco, 8741 of cotton. It had six stores, one forge, seven grist-mills, four saw-mills, seven tanneries, 13 distilleries. Pop.: whites, 3580; slaves, 377; free coloured, 28; total, 3985. Capital, Washington.

RHEIMS or REIMS (anc. *Durocoraturn*, post. *Remi*) a celebrated city of France, dep. Marne, of which, though not the capital, yet it is by far the largest town, cap. arrond., in a plain near the Vesle, a tributary of the Aisne, 27 m. N.N.W. Chalons, and 95 m. E. by N. Paris; lat. 49° 14' 41" N., long. 4° 2' 47" E. Pop. in 1836, 38,359. It is surrounded by ramparts faced with stone, which, being planted with trees, form agreeable public walks; and there are other promenades in the immediate neighbourhood. It is about a league in circuit, and is entered by six gates, one of which, the *Porte Neuve*, a triumphal arch, with handsome doors of open iron-work, was raised in honour of Louis XVI. at his coronation. Two principal thoroughfares, which meet in the *Place Royale*, divide the city into four unequal portions. It is tolerably well laid out, its streets being wide, straight, and generally clean; it has several good squares; but its houses are small, having mostly only two floors, and are constructed with monotonous uniformity. Water-works, beyond the walls, distribute the waters of the Vesle through the town, but, according to Hugo, in insufficient quantity; and there is not one handsome public fountain. It has, however, some remarkable public edifices.

The cathedral, one of the largest and most magnificent in Europe, is that in which the coronation of the French kings has taken place, with few exceptions, from the era of Philip Augustus. It was chiefly constructed between 1212 and 1242. It is 479 ft. in length, 99 ft. in breadth, and 144 ft. in height. It has a noble front, flanked with two square towers, 262½ ft. in height. Of the three grand entrances on this side, the central is 90½ ft., and those on either side 22½ ft. in width; above the former is a beautiful circular window. The whole front is ornamented with nearly 550 statues, and a great number of columns and bas-reliefs; and similar decorations abound in every part of the exterior. In one of the towers is a bell weighing 23,000 lbs. This cathedral has some fine stained glass, tapestry, marble pavements, &c.; a very fine organ; the "washing the feet," a *chef d'œuvre* of Poussin; various curiosities, including the font said to have been used in the baptism of Clovis, and the tomb of Jovinus, a citizen of Rheims, who arrived at

## RHIN (BAS).

the dignity of Roman consul, anno 366. The last, an admirable specimen of ancient art, was transferred from the church of St. Nicaise, destroyed, during the phrenzy of the revolution.

Rheims, which was a place of great consideration under the Romans, had various other antiquities, but they were mostly destroyed or carried off during the period in question. The most remarkable ancient monument now existing is the *Porte de Mars*, one of the city gates; a triple archway, ornamented with eight Corinthian columns, and numerous bas-reliefs, though these are now greatly defaced. This arch appears to have been erected in honour of Cæsar and Augustus, when Agrippa was governor of Gaul. Without the walls are the traces of an amphitheatre.

The church of St. Remi, constructed in 1041, is considered the oldest in the city. It occupies almost as much ground as the cathedral; and though much less lofty and ornamented, is in a similar style of architecture. It contains the remains of the ancient and curious mausoleum of St. Remi. The town-hall, an edifice of the time of Louis XIII., with whose statue its front is ornamented, the new prison, *maison rouge*, which has some historical interest, theatre, several hospitals, &c., are among the other chief objects of notice. In the centre of the *Place Royale* is a bronze statue of Louis XV., surrounded with allegorical figures, erected in 1818, to replace a similar statue destroyed in 1793. Rheims is the seat of an archbishop, whose suffragans are the bishops of Amiens, Beauvais, Chalons, and Soissons, and of courts of assize, original jurisdiction, and commerce, a council des *prud'hommes*, chamber of manufactures and arts, a royal college, &c. It has a public library of 24,000 printed vols. and 1,000 MSS., a botanic garden, schools of mutual instruction, a *mont de piété*, savings' bank, &c.

Rheims is the centre of the manufacture of woollen stuffs, which extends over nearly the whole dép. of Marne, and the adjacent dép.s of Aisne and Ardennes. In 1834, these manufactures were estimated to occupy 50,000 hands, of whom 12,000 were settled in Rheims. About 3000 of the latter were weavers, one tenth part of whom wrought at jacquard-ooms; 1500 were employed in spinning yarn, 4000 in fulling, washing, and otherwise preparing the fabrics made. For the last 25 years the woollen manufacture of Rheims has made a considerable progress in most of its branches. Wages are good. Those of workmen vary, according to the work, from 1½ up to 4½ fr. a day; women from 75 c. to 1½ fr.; and children from 50 to 75 c. But the average is estimated to be, for 1st class workmen, 2½ fr. to 3 fr.; 2d class, 1½ fr. to 2 fr.; and women 75 c. to 1 fr. 25 c. daily. They usually work for about 12 hours a day; those living in the city being mostly employed in the workshops of the manufacturers. In general the workpeople are well clothed and well fed; but they are said to be improvident, and few save money. The vice of drunkenness is very prevalent; and morals are as bad or worse, perhaps, than in most manufacturing towns of France. From 1825 to 1833, the proportion of illegitimate to total births amounted to about 1 in 4. (*Villermé, Tableau des Ouvriers*, i. 216-247.) Rheims also produces soap, candles, biscuits, and gingerbread; and has breweries, tanneries, leather factories, &c. It is a principal *dépôt* for the wines of Champagne, large quantities of which are stored up in cellars, similar to those of Epernay, which see. Besides its trade in woollen manufactures and wines, it has a considerable trade in cotton stuffs, flour, and other agricultural products, &c. Under the Romans, *Durocortarum* was the cap. of Belgica II., and was distinguished as a seat of letters and philosophy. It became a bishopric before the irruption of the Franks, and received many privileges from the Merovingian kings. In 1359, Rheims successfully resisted the arms of Edward III. In 1547, a university was founded in it, which lasted till the revolution, when it was suppressed. In 1814, it was taken by the Russians, who were soon after expelled by Napoleon, with great loss.

Among the great men of whom Rheims has to boast, the most distinguished by far is Colbert, minister of finance during the most splendid period of the reign of Louis XIV., born here on the 29th of August, 1619. It has also given birth to the Abbe de la Pluche, the historian Vely, &c. (*Hugo, art. Marne*; *Villermé, Tabl. des Ouvriers*; *D'Anville, Notice de la Gaule*, 280, &c.)

RHIN (BAS, or LOWER-RHINE), a frontier dép. of France, in the E. part of the kingdom, which, with Haut-Rhin, formerly constituted the prov. of Alsace, chiefly between the 48th and 49th degs. of N. lat., and the 7th and 8th E. long.; having N. Rhenish Bavaria, and the dép. of Moselle, W. Meurthe and Vosges, S. Haut-Rhin; and E. the Rhine, separating it from the Grand Duchy of Baden. Area, 464,781 hectares. Pop., in 1836, 540,213. The W. part of the dép. is covered by the Vosges mountains, and their ramifications. The average elevation is 2000 to 2500 ft.; but the Hochfeld rises to 4460 ft., and the Schneeberg to 2850 ft. The surface declines towards the E. Principal

## RHIN (HAUT).

rivers, the Ill, with its numerous tributaries, the Moder, Zorn, Sarre, &c. In 1834, the arable lands were estimated at 180,920 hectares, meadows 56,024 ditto, vineyards 13,123 ditto, orchards 5924 ditto, and woods 117,754 ditto. The marshes in the E., and the stony tracts of the W., are unsuitable for agriculture; and though the middle of the dép. be fertile and well cultivated, the produce of corn is not sufficient for home consumption. More potatoes are grown than in any of the neighbouring dép.s; nearly 4,745,000 hectolitres having been produced in 1835. A good deal of tobacco is raised, and bought by the government. The annual produce of wine may be estimated at about 460,000 hectolitres: it is of a medium quality, but, speaking generally, is inferior to that of the Haut-Rhin. About a half of the produce is consumed in the departments, the rest being sent, partly to other departments and partly to Baden, &c. Hops, wood, hemp, onions, and other vegetables, are articles of extensive cultivation. The plough is usually drawn by horses. Horned cattle are pretty numerous, but sheep are scarce. Poultry is extensively reared near Strasburg; particularly geese, the livers of which serve to make the *pâtes de fois gras*, for which that city is so celebrated. In 1835, of 231,956 properties subject to the *contrib. foncière*, 141,962 were assessed at less than 5 fr., and only 83 at 1000 fr. and upward. Iron mines are wrought; lead, antimony, cobalt, coal, and bitumen are met with; and salt is made from springs, in the N. and W. The dép. has manufactures of cotton yarn, muslins, woollen, and linen cloths, leather, saddlery, carriages, glass wares, &c. There are many iron-forges; and fire-arms are manufactured at Mutzig and Kilstenthal. Strasburg is the seat of an extensive general commerce and transit trade. Bas-Rhin is divided into four arrondis.; chief towns, Strasburg the cap., Saverne, Schlestadt, and Weissenbourg. It sends 6 members to the chamber of deputies. Registered electors (1838-39), 1762. Total public revenue (1831), 14,336,474 francs. The majority of the population is Protestant.

RHIN (HAUT, or UPPER RHINE), a frontier dép. of France, in the E. part of the kingdom, formerly comprised in the prov. of Alsace; between lat. 47° 27' and 49° 18' N., and long. 6° 45' and 7° 35' E., having N. Bas-Rhin, W. Vosges and Haute-Saône, S. Doubs, and the Swiss cantons of Neuchâtel, Berne, and Basle, and E. the Rhine, separating it from the territories of Baden. Area, 406,032 hectares. Pop. in 1836, 494,258. In the W. are the chains of the Vosges and Jura; one summit of the former, the *ballon d'Alsace*, rises to 4602 ft. above the sea. The rest of the surface is mostly plain. Except the Rhine, the Ill is the only navigable river; but the canal between the Rhine and Rhone intersects the dép. in its whole length. As in Bas-Rhin, the most fertile portion of the surface is in the centre of the dép., where agriculture is in a pretty advanced state. In 1835, the arable lands were estimated to comprise 155,571 hectares; meadows, 52,566 do.; vineyards, 11,141 do.; orchards 5819 do.; and woods, 113,215 do. Principal crops, wheat and barley; 2,460,000 hectolitres of potatoes were said to be raised in 1835. The produce of wine is estimated at above 400,000 hestol. a year. Some of the white wines, especially those of Guebwiller, Riquevir, Thau, &c., are highly esteemed. The *vins gentils* are extensively purchased by the merchants of Cologne and Frankfort, who mix them with the wines of the Rhine, to which they impart strength and vivacity. They keep for more than twenty years, improve as they grow older, and sustain no injury from travelling. The dép. also produces excellent beer. In 1835, of 174,015 properties subject to the *contribution foncière*, 100,859 were assessed at less than 5 fr., and 26,810 at from 5 to 10 fr. There are various iron and other mines, and good building stone and other minerals are met with in various parts. "Hand-ooms are scattered over nearly the whole of the dép.s of the Haut and Bas-Rhin; the articles produced are chiefly muslins and fine calicoes, the wages of the hand-loom weavers vary; for the most skilled class, from 6 to 9 fr. per week; for the second-rate class, from 4½ to 6 fr.; and for women and children, forming the third or lowest class, from 2 to 4½ fr. These are nett wages, the manufacturers either beaming the warps and furnishing the looms in factories, or paying equivalently." (*Symon's Report*, p. 119.) Villermé states that in 1834, the cotton manufactures of the Haut-Rhin employed 100,000 individuals, or nearly a fourth part of the entire population and, since that period, he affirms the number has still further increased; but a large proportion of these persons prosecute the cotton trade as a subsidiary employment only, carrying it on in their cottages when they are not necessarily engaged in the culture of their little patches of ground. Mulhausen, Thau, Guebwiller, Sultz, and Sainte Marie aux Mines, are the chief seats of the cotton manufacture. "The homes of the weaving classes (in these towns) are, for the most part, dirty and comfortless, and evince every symptom of bad management and poverty. Even those who have children in the cotton-mills do not

## RHINE.

keep up any appearance of comfort. The Alsatian weavers have generally speaking a sufficiency of food, though in all other respects they are badly off. In the mountains of the Vosges, the peasantry are worse off still: the looms found there are chiefly on the system of the 'customer' weavers of Scotland, but there are some who weave for manufacturers at very low wages." (*Symon's Reports*, p. 120.)

Villermé gives a deplorable account of the abject poverty of a great proportion of the cotton weavers of the Haut-Rhin, many of whom come from Switzerland and beyond the Rhine. (*Tableau des Ouvriers*, i., 24-30, &c.) This dep. has also manufactures of hardware, clocks, and watches, with various iron and steel forges.

It is divided into three arronds.: chief towns, Colmar, the cap., Altkirch, and Belfort. It sends five members to the chamber of deputies. Number of electors (1838-9), 1596. Total public revenue (1831), 9,338,247 francs. Unlike Bas-Rhin, the majority of the population in this dep. are Roman Catholics, but Protestants are numerous.

Alsace, which formed a part of the kingdoms of Austrasia and Lorraine, afterward belonged to the German empire till 1298, when it became mostly independent. It subsequently belonged to Austria; but was finally annexed to France by Louis XIV., in 1697. (*Hugo, art. Haut-Rhin; Villermé; Parl. Papers; French Official Tables*, &c.)

RHINE, a large river of W. Europe, rising on the N. side of the Alps, flowing through Switzerland and Germany, and falling into the North sea or German ocean, between lat. 46° 30' and 52° N., and long. 3° 40' and 9° 50' E. Length, measured along the stream, 950 m.: area of basin, including tributaries, 83,298 sq. m., or about 1-43d part of Europe. It originates in two principal streams, which have their sources on the N. side of the Pennine Alps: the principal of these, called by the Germans Vorder-Rhine, is formed by the junction of two small streams flowing from the N. side of mount St. Gothard, at an elevation of 6381 feet above the sea, lat. 42° 32' N., long. 8° 53' E., only a few miles from the source of the Rhone. Hence the main stream, which soon becomes enlarged by the affluence of numerous brooks and mountain torrents, takes at first a N.E. direction through the magnificent and stupendous ravine of the Rhenwald, enclosed on both sides by almost perpendicular rocks, rising 3000 feet above the river, and clothed to their very summit with stately firs. At the lower end of this valley, and only a few miles above Chur, near Reichenau, the river is joined by its E. branch, the Hinter-Rhine, which rises on the side of the Moschelhorn or Vogelberg, near the pass of St. Bernard. At Chur the river defects N., maintaining that general direction through a fertile and romantic valley, abounding with vineyards, as far as the lake of Constance, into which it pours its waters, their level at this point being 1255 feet above the sea, or 5326 feet below the source. The river, leaving this beautiful lake at its W. end, near the town of Constance, enters a smaller expanse of water, called the Unter or Zetter-See, in which is the island of Reichenau, and thence, narrowing its channel, runs W. to Schaffhausen; 3 m. below which the stream, pent between lofty rocks, and divided by craggy islets, falls over a ledge of rocks 76 feet in height, forming one of the most celebrated European cataracts. See SCHAFFHAUSEN.) The channel, from this point to Basle, is extremely tortuous, winding through lofty rocks, which confine the waters within a narrow compass, and consequently increase the rapidity of the current. At Zuzach, about 1 m. above the confluence of the Aar, occurs a second fall, down which, however, the natives venture their loaded barks, except during the spring-floods. The river maintains its W. direction through a rocky valley, interrupted with frequent crags rising above the stream, as far as Basle, where it is crossed by a wooden bridge, 600 feet in length, with stone abutments. Here also commences the navigation of the river, its level at this point being 827 feet above the German ocean.

Basle, indeed, seems to be the proper point of division between the upper and lower Rhine; for the navigation above this town is so interrupted by falls and rocks as to be scarcely of any importance, whereas from hence to the mouth boats pass at almost all seasons of the year. Assuming at Basle a pretty constant N. course, the Rhine becomes the boundary between France and the grand duchy of Baden, and afterward between Baden and Rhenish Bavaria, the cities and towns in this part of its course being Mannheim, on the E. bank, at the confluence of the Neckar, and Strasburg, Speier, Oppenheim, and Mayence, on the W. bank. At the last of these towns, at the junction of the Mayn, the stream takes a sudden turn W. to Bingen, on the W. bank, from which point the course of the river is pretty uniformly N.W. to the delta at its mouth. Coblenz, at the confluence of the Moselle, Bonn, Cologne, and Clèves, are the chief towns on the W. bank; those on and near the E. side comprising Wiesbaden, Dusseldorf, Wesel, and other places of inferior size. The delta of the Rhine is

the largest in Europe, not even excepting that of the Volga: it extends, with its ramifications, 110 m. along the coast, from the E. shore of the Zuyder-Zee to the S. branch of the Maas; and the distance from the apex, about 10 m. below Emmerich, being 72 m., the total area of the country comprised within its limits is 4150 sq. m. When the river divides, the left or S. arm takes the name of Waal; and the other retaining that of the Rhine, is connected, a little farther N., by an artificial canal with the Yssel. Still lower down the Rhine takes the name of the Leek, in order to distinguish it from the old Rhine, now sanded up, which passed by Utrecht and Leyden to the sea at Catwyk. The Rhine has at present three mouths. About two thirds of its waters flow to the sea by the Waal, the remainder being carried partly to the Zuyder-Zee by the Yssel, and partly to the ocean by the Leek and Maas, on which is the great Rhenish port of Rotterdam. These branches, however, are so interlaced with natural and artificial channels, and there are so many lagoons, marshes, &c., in this district, that a map becomes indispensable to any detailed description. (*Lyell's Geol.* ii., 52-59.)

The entrance to the Maas, leading to Rotterdam, lies in lat. 51° 36' N., and is commonly called the Briel-gat or channel: it has a bar across, on which there are 7½ feet water at neap-tides. Spring-tides rise here from 11 to 12 feet, and neaps 6 or 7 feet. (*Norie's Sailing Directions for the North Sea*, p. 153.)

The breadth and depth of the Rhine in different parts of its course have been pretty accurately determined by repeated observations. At Chur, in the Grisons, it is about 260 feet in width, or about as broad as the Thames at Richmond; at Schaffhausen the width is estimated at 370 feet, and at Basle about 550 feet. The breadth of the stream between Basle and Strasburg is much increased by the numerous islands that interrupt the current; but from the last mentioned place to Speiers the width varies from 1000 to 1200 feet. The size of the Rhine thence downward to Coblenz gradually increases to near 2000 feet in width; but near that point it enters a mountainous defile, and becomes much narrower, widening again at Cologne, where it is 1400 feet across; and lower down to its mouth, in the principal navigable branches, it has a breadth exceeding 3000 feet. The depth of the channel from Basle to Strasburg averages about 12 feet; and below the latter town the river is navigable by large steamers and vessels of considerable tonnage. July is the season when the river is fullest, and it then rises about 12 feet above its average height. May and October are the seasons of low water. The descent of the river, and consequently the rapidity of the current, are extremely variable in different parts; but the mean inclination from Strasburg is estimated at about 1-3 feet per mile; and the current may average somewhat more than 3 miles an hour, though below Cologne it is greatly decreased, the Rhine there becoming comparatively a sluggish river.

The affluents of the Rhine are very numerous; but the chief tributaries belong to the portion below Basle. The only navigable affluent above that point is the Aar, a stream which drains the greater part of Switzerland, and brings down nearly an equal volume of water with the Upper Rhine itself. It rises in the great mass of St. Gothard, passes through a narrow valley, in which is the cataract of Aarfall, 150 feet in height, afterward enters the lake of Brienz, and thence, after passing through the lake of Thun (1875 feet above the sea) runs past Berne, and enlarged by different tributaries, bringing down the waters of lakes Lucerne, Wallendstadt, Zurich, &c., joins the main river at Coblenz (47° 26' N., and 8° 15' E.), with a wide and powerful current. Its chief affluents are the Reuss and the Limmath; the former rising on the N.W. side of mount St. Gothard, receives the waters of lakes Lucerne and Zug, while the latter rises in the Oberland Alps, and runs through the lake of Zurich, both joining the Aar on its E. bank, about a mile from each other; both are navigable except during the spring floods, but owing to the rapidity of the current boats ascend easily.

Below Basle the Rhine is joined by many large tributaries, the most important of which enter from the E. or right bank. The first of these is the Neckar, which falls into the main river at Mannheim, about 214 m. below Basle. It rises in the Black Forest, in about lat. 48° N., and 8° 30' E., and has a very tortuous course, first N.E., subsequently N.N.W., and lastly W., of more than 180 miles. It is navigable for large barges up to Heilbronn, and for small craft as far as Stuttgart. The Mayn, which enters the Rhine at Mayence, or Mainz, about 20 miles below Frankfurt, which is on its N. bank, is a most important tributary. Large river barges, vessels of 100 tons burden, ascend as high as Kitzingen, which is 165 miles from the mouth: its entire course is estimated at 320 miles. (*See MAYN*.) The Lhan joins the Rhine about 48 miles below Mayence; it is about 140 miles long, but is not navigable above Limburg, 24 miles

## RHINE.

from the mouth. The Ruhr and the Lippe, are two other considerable tributaries on the E. side; both navigable for about 100 miles. The principal affluent on the W. bank is the Moselle, which rises on the W. side of the Vosges, at an elevation of 2356 ft., and after flowing past Nancy, Metz, Trèves (near which it is joined by the Sarre) enters the main river at Coblenz, after a course of 280 miles. The confluence of the Meurthe, 160 miles below the source, marks the extent of the navigation. The Meuse, or Maas, rises in the department of the Upper Marne, on one of the W. off-sets of the Vosges, and running with a tortuous course, somewhat like the letter S., past St. Mihiel, Verdun, Sedan, Mézières, Namur, Liège, and Maestricht, joins the Waal, or principal stream of the delta, near Gorkum, below which, as already observed, the main stream assumes the name of Maas down to its mouth.

The geology of the valley of the Rhine has been rather extensively investigated by Boué, Von Buch, Brongniart, and other French naturalists. The bed of the Upper Rhine, from its source to the Chur, is formed of primitive rocks, chiefly gneiss and porphyritic granite; but at this point, grauwacké, blue limestone, and old red sandstone become the prevailing rocks, as far as the lake of Constance, where they are succeeded by tertiary formations, probably of more recent date than the gypseous strata of the Paris basin. Secondary and tertiary rocks line the river from Basle to the Neckar; but from this point to Bingen, below the confluence of the Mayn, granite, gneiss, and mica-schist form the substance of the high crags that line the river on both sides. Lower down the cliffs are composed of secondary limestone, with superimposed strata of new red sandstone, and in some parts volcanic rocks are found curiously interspersed with the inferior chalk strata. The coal formations are found in the upper parts of the Ruhr and Lippe, this part of Rhenish Prussia furnishing the chief supply of that mineral for the purposes of steam-navigation. Below Düsseldorf the tertiary rocks are replaced by diluvial and alluvial formations, which form the subsoil of the delta. Geologists, however, are of opinion that the numerous islands in this intricate delta have been formed not so much by deposits brought down by the river, as by the inroads which the sea is continually making on this coast. (*Lyell's Geol.* ii. 53; and *Encyclopédie Method.*, art. Rhin.)

The scenery of the Rhine has been justly admired by travellers. Wildness and rude grandeur characterise it in the defiles above the lake of Constance, and the country from the Unter-See westward, as far as Rheinfelden, 6 miles above Basle, is almost equally romantic. But at this point the character of the scenery changes, and the river, formerly an inconsiderable feature in the landscape, becomes a broad and majestic stream, flowing as far as Mannheim through a rich open valley, from 30 to 50 miles in breadth. The banks there begin to be more bold and rocky; but the scenery most generally admired is chiefly between Mayence and Coblenz. "The Rhine here pursues a meandering course pent between lofty and craggy mountains, and resembles rather a succession of lakes than a river. Here, indeed,

\*The river nobly foams and flows,  
The charm of this enchanted ground,  
And all its thousand turns disclose  
Some fresher beauty varying round.'

(Childs Harold.)

"These mountains, however, are after all only mountains in miniature. They have often, indeed the steepness, rudeness, and overhanging ridges of the mountains bordering the Rhone; but as compared to them in size, they are but mole-hills. The groves on the hill sides are few and far between; but there is no grove without a church spire rising in the midst, and overtopping the trees. Frequently a daring and fantastic cliff, crowned by an ancient castle, frowns over the river, or rises majestically from the brow of the steep; but the woods, unlike those of the Rhone, look like plantations, and the vines obtrude an unceasing idea of the artificial." (*Leitch Ritchie's Travelling Sketches on the Rhine*, p. 79.)

The Rhine, with its various affluents, comprises a navigation of about 1500 m., and, in a commercial point of view, is perhaps the most important river in Europe, owing to the numerous states to which it affords a water conveyance. The following table exhibits the extent of the states, or portions of the states, included within the valley of this great river:

Switzerland	12,400 sq.m.	Prussia	31,152 sq.m.
France	15,000	Other Ger. States	9,043
Austria	860	Belgium	4,100
Baden	4,644	Netherlands	6,620
Bavaria	10,000		
Wurtemberg	5,320		83,298

The navigation of the Rhine has always been of considerable importance, but since the employment of steamers, and the abolition of the tolls, and other political obstacles to its free use, its importance as a channel of navigation and im-

portance has been immeasurably increased. Vessels of large burden ascend the river to Cologne, and Strasburg is reached by those of 80 or 90 tons. Recently, however, steamers have been regularly established on the Upper Rhine, between Strasburg and Basle, and an astonishing increase has taken place in the number of passengers, and the quantity of goods passing up and down the river. In 1827, for example, the number of passengers conveyed along the Rhine, in the Prussian territories, amounted to only 33,432; whereas, in 1836, they amounted to 146,961, and now (1841) exceed 200,000! The increase in the quantity of merchandise conveyed along this great international highway has been equally great; and its importance will, no doubt, be still more rapidly increased by the opening of railways, and improved methods of communication with the great cities on its banks.

Besides the goods conveyed up and down the Rhine in steamers and sailing vessels, immense quantities of timber are sent down in the form of rafts. The smaller rafts from the Upper Rhine, and the smaller affluents of the river, used formerly to rendezvous at Namey, near Andernach, where they were consolidated into rafts of a larger size, that were sent down the river to Dordrecht, where they were generally broken up, and the timber sold and forwarded to its final destination. Of late years, however, the plan of constructing very large rafts has begun to fall into disuse, though, as they are still sometimes met with, the reader may not be displeased to have them described.

"A little below Andernach the little village of Namey appears on the left bank, under a wooded mountain. The Rhine here forms a bay, where the pilots are accustomed to unite together the small rafts of timber floated down the tributary rivers into the Rhine, and to construct enormous floats, which are navigated to Dordrecht, and sold. These machines have the appearance of a floating village, composed of 12 or 15 little wooden huts, on a platform of oak and deal timber. They are frequently 800 or 900 ft. in length, and 60 or 70 ft. in breadth. The rowers and workmen sometimes amount to 700 or 800, superintended by pilots, and a proprietor, whose habitation is superior in size and elegance to the rest. The raft is composed of several layers of trees, placed one on the other, and bound together: a large raft draws not less than 6 or 7 ft. of water. Several smaller ones are attached to it, by way of protection, besides a string of boats loaded with anchors and cables, and used for the purpose of sounding the river and going on shore. The domestic economy of an East-Indian or an English man-of-war is hardly more complete. Poultry, pigs, and other animals, are to be found on board; and several butchers are attached to the suite. A well supplied boiler is at work night and day in the kitchen; the dinner hour is announced by a basket stuck on a pole, at which signal the pilot gives the word of command, and the workmen run from all quarters to receive their messes. The consumption of provisions in the voyage to Holland is almost incredible; sometimes amounting to 40,000 or 50,000 pounds of bread; 18,000 or 20,000 of fresh, besides a quantity of salted meat; and butter, vegetables, &c., in proportion. The expenses are so great, that a capital of three or four hundred florins is considered necessary to undertake a raft. Their navigation is a matter of considerable skill, owing to the abrupt windings, the rocks, and shallows of the river; and some years ago the secret was thought to be monopolised by a boatman of Rüdesheim and his sons." (*Autumn on the Rhine*.)

The *Rhenus*, or Rhine (Gr. *Ῥῆνος*), became first known to the Romans by the conquest of Julius Cæsar, who crossed it twice to punish the Germans. It is thus described by him: *Rhenus oritur ex Lepontiis quæ Alpes incolunt, et longo spatio per fines Nantuatum, Helvetiorum, Sequanorum, Mediomatricorum, Tribuorum, Trevirorum citatus fertur; et ubi oceano appropinquat, in plures diffidit partes multis ingentibusque insulis effectis quarum pars magna a feris barbarisque nationibus incolitur (ex quibus sunt qui piscibus atque ovis avium vivere existimantur), multisque capitibus in oceanum influit.* (Bell. Gall. iv. 10.) Ancient writers, though agreed with respect to its general course, differ respecting the number of mouths by which it falls into the ocean. Tacitus (Ann. ii. 6) speaks of two only, one of which, probably the modern Waal, he terms *Fahalis*, and the other *Rhenus*. Ptolemy and Ptolemy, however, say that there were three mouths, the most northerly of which, called *Flevum*, was supposed to have been formed by a channel dug by Drusus, to connect the Rhine with the Ivala, which is, most probably, identical with the Yssel, as Pomponius Mela (iii. 2) assures us that it fell into the lake *Flevo*, or modern Zuyder-Zee. No doubt, however, the channels of the river in the delta must have shifted, both prior and subsequently to the accounts given by the classical writers; besides which, the inroads made by the sea on the coast of Holland render it impossible to ascertain what may have been the exact number of its mouths at any very remote period. (*Encyclopédie Method.*, art. Rhin; Bru-

## RHINE.

*guière. Olog. de l'Europe; Conversations Lexicon; Inglis's Switzerland, &c., &c.*

**RHINE (PROVINCE OF)**, a prov. containing the S. portion of the Prusso-Rhenish states; having N. Holland, E. the prov. of Westphalia, Nassau, and other German states, S. France, and V. the latter, Belgium, and Holland. It lies between 49° and 52° N. lat., and 6° and 9° E. long. Area, 10,327 sq. m. Pop., in 1837, 2,433,250, of whom 1,842,154 are Catholics, and 564,728 Protestants. Principal towns, Aix-la-Chapelle, Cologne, Coblenz, Dusseldorf, Elberfeld, Treves, Bonn, &c. It is divided into five regencies, and these again into 59 circles. Principal rivers, Rhine, which traverses almost the whole extent of the prov. Moselle, Saar, Roer, &c. Surface very various. Its E. part to the N. of the Moselle consists principally of volcanic mountains, and a chain of the same sort (Eifel Gebirge) runs across the province between Malmédy and Coblenz. The débris of volcanic rocks being particularly suitable for the growth of the vine, it is very extensively cultivated; the produce of the vines of the Rhine and the Moselle being estimated at about 700,000 elmers a year, though but little is exported. Exclusive of wine, the principal raw products consist of corn, flax and hemp, timber, tobacco, &c. Manufactures in the Lower Rhine are both extensive and flourishing. In the town of Aix-la-Chapelle, Eupen, Malmédy, Montjoie, &c., along the Netherlands frontier, and in Elberfeld, Barmen, and others to the E. of the Rhine, improved machinery is to be met with; and the manufacture of fine woollen cloths, cassimeres, fine and coarse cottons, silks, &c., is prosecuted with great vigour and success. The iron works and hardware manufactures are also important and valuable.

We subjoin an Official Account of the principal businesses carried on in the Rhine Province, in 1837, and of the number of establishments, and the number of work-people employed in each:—

Manufactures.	No. of Estab.	Workmen.
Silk and mixed silk wares . . . . .	40	5,190
Woollen cloth and other woollen stuffs . . . . .	101	8,829
Establishments for woollen yarn spinning . . . . .	43	1,857
Ditto cotton spinning and weaving . . . . .	43	4,144
Printed stuffs . . . . .	1	302
Flax spinning . . . . .	1	109
Cards for spinning-mills . . . . .	7	633
Stocking weaving . . . . .	7	330
Iron and metal wares . . . . .	15	308
Pins and needles . . . . .	23	1,400
Varnished-plate wares . . . . .	1	68
Machines and boilers . . . . .	15	796
Chemical products . . . . .	3	63
Porcelain and earthen wares . . . . .	2	189
Porcelain painting and gilding . . . . .	1	115
Eau de Cologne . . . . .	12	58
Liquors and spirits . . . . .	12	45
Sugar refineries . . . . .	7	166
Sugar candy . . . . .	1	90
Chicory . . . . .	2	5
Vinegar . . . . .	2	3
Tobacco . . . . .	20	684
Salt . . . . .	6	65
Gunpowder . . . . .	5	41
Paper . . . . .	8	628
Carriages and coaches . . . . .	3	49
Brushes . . . . .	1	8
Toys and trinkets . . . . .	1	30
Total . . . . .	389	26,145

**RHINEBECK**, p. l., Dutchess co., N.Y., 55 m. S. Albany, 315 W. Bounded W. by Hudson river. It contains two churches, a Dutch Reformed and Methodist; nine stores, one flouring-mill, two grist-mills, three saw-mills, one paper-mill; four schools, 27 scholars. Pop. 2659. At the landing, steamboats from New-York to Albany stop and receive passengers daily. Freight barges are towed twice a week to New-York.

**RHODE ISLAND**, still retaining under its new constitution its original name of *Rhode Island and Providence Plantations*, is the smallest state in its territory in the Union; and is situated between 41° 22' and 42° 3' N. lat., and between 71° 6' and 71° 38' W. long., and between 52° 23' and 50° 54' E. long. from W. It is about 49 m. long, and 29 m. broad, containing 1360 square miles, of which Narragansett bay includes 130; and the whole state contains 870,400 acres.

It is divided into five counties, which, with their population in 1840, were as follows:

Providence . . . . .	58,073
Newport . . . . .	16,874
Bristol . . . . .	6,476
Kent . . . . .	13,083
Washington . . . . .	14,324

The population in 1790 was 58,825; in 1800, 60,122; in 1810, 76,931; in 1820, 83,059; in 1830, 97,212; in 1840, 108,830. Of these, 51,362 were white males; 54,225 were white females; 1413 were coloured males; 1825 were coloured females. Employed in agriculture, 16,617; in com-

## RHODE ISLAND.

merce, 1348; in manufactures and trades, 21,271; in navigating the ocean, 1717; in the learned professions, 457. It is the only state in the Union in which the number employed in manufactures and trades exceeds those employed in agriculture.

Newport and Providence are the principal seats of government, and are considered the capitals, though the legislature sometimes regularly meets at South Kingston, Bristol, and East Greenwich.

About one third part of the state in the west and north-west, is hilly and rocky; but there is nothing which properly deserves the name of a mountain or high hill in the state. On Narragansett bay and the Atlantic ocean, and in some places on the streams, the surface is level. In the western and northwestern parts, the soil is thin, and has no great fertility. But near Narragansett bay, and on the islands in it, the soil has great fertility. It is generally distinguished for the excellence of its cattle and sheep, butter and cheese; and produces Indian corn, rye, barley, oats, and, in some places, wheat; though it is better adapted to grazing than to grain. Grass, fruits, and culinary vegetables are produced in great perfection. Shell and other fish are found in the rivers and bays, of an excellent quality.

There were in the state in 1840, 8024 horses and mules, 36,891 neat cattle, 90,146 sheep, 30,659 swine. There were produced 3038 bushels of wheat, 34,521 of rye, 450,498 of Indian corn, 2979 of buckwheat, 66,490 of barley, 171,517 of oats, 911,973 of potatoes, 183,830 pounds of wool, 383 tons of hemp or flax. The products of the dairy amounted to \$223,229; of the orchard, to \$32,098; of lumber, to \$44,455.

The exports of the state consist chiefly of flaxseed, lumber, horses, cattle, beef, pork, fish, poultry, onions, butter, cheese, barley, and especially cotton goods. In proportion to its population, it is the greatest manufacturing state in the Union, and especially it led the way in the manufacture of cotton goods. Its shipping is also extensive. The exports for the year ending September 30th, 1841, was \$278,465; and the imports were \$339,592. The tonnage entered was 25,195 tons, and the tonnage cleared was 21,698 tons.

The climate is healthy, and on the islands more mild than in other parts of New-England. The heat of summer is tempered by the sea-breezes, and the severity of winter is moderated by the proximity of the ocean. Newport is celebrated as a delightful summer residence, and is much resorted to, particularly from the southern states.

The rivers, though not large, furnish many fine mill-seats, which have been extensively used for manufacturing purposes. The principal are Pawtucket, Providence, Pawtuxet, Pawcatuck, and Wood rivers. Narragansett bay is a fine body of water, extending 30 miles into the state, and containing a number of beautiful and fertile islands. Among them are Rhode Island, which gives name to the state, 15 m. long, and on an average  $2\frac{1}{2}$  m. broad. Conanicut is 8 m. long, and 1 broad; Prudence is 6 m. long; and Block Island, 10 m. out in the Atlantic, is 8 m. long, and from 2 to 4 broad. It constitutes the township of New-Shoreham, and contains a lighthouse. The entrance of Narragansett bay is between point Judith on the W., and Senkonnet rocks on the E., and it has many good harbours. The harbour of Newport, on the S.W. part of Rhode Island, is one of the best in the United States, being spacious, safe, easily accessible, and with a sufficient depth of water for the largest vessels. Providence, at the head of Narragansett bay, 36 m. above point Judith, has a good harbour, and in population, commerce, and wealth, is the second city in New-England. Bristol on the E. side of the bay, 15 m. N. of Newport, has a safe and commodious harbour. Pawtucket, 4 m. N. of Providence and Pawtuxet, 10 m. S. of Providence, are distinguished as manufacturing villages.

There were in the state in 1840, 44 commercial and 57 commission houses in foreign trade, with a capital of \$2,043,507; 930 retail dry goods and other stores, with a capital of \$2,810,125; 58 persons engaged in internal transportation, with 83 butchers, packers, &c., employed a capital of \$71,050; 262 persons engaged in the lumber trade, employed a capital of \$254,000; 1160 persons employed in the fisheries, with a capital of \$1,077,157.

The manufactures of this state, small as it is, are deserving of particular notice. According to the census of 1840, home-made or family goods were produced to the amount of \$51,180; 41 woollen factories, with 45 fulling-mills, employed 961 persons, and produced goods to the amount of \$849,172, with a capital of \$685,350; 209 cotton factories, with 518,817 spindles, employed 12,086 persons, producing articles to the amount of \$7,116,792, with a capital of \$7,326,000; 27 persons produced 1000 tons of anthracite coal, with a capital of \$6000; five furnaces produced 4136 tons of cast iron, with a capital of \$32,250; two paper-mills produced articles to the amount of \$25,000, and other manufactures of paper produced to the amount of \$3500, the whole employing 15 persons, and a capital of \$45,000; hats and caps were manufactured to the amount of \$92,465, and

## RHODE ISLAND.

straw bonnets to the amount of \$86,106; the whole employing 411 persons, and a capital of \$66,427; 27 tanneries employed 69 persons, and a capital of \$72,000; 44 saddleries and other manufactories of leather produced to the amount of \$182,110, with a capital of \$70,695; 43 persons produced granite and marble to the amount of \$36,202; 113 persons produced bricks and lime to the amount of \$66,000; 534 persons produced machinery to the amount of \$437,100; 164 persons produced hardware and cutlery to the amount of \$138,720; 179 persons manufactured the precious metals to the amount of \$283,500; 57 persons produced 1,237,050 pounds of soap, 157,250 pounds of tallow candles, and 264,500 pounds of spermaceti or wax candles, with a capital of \$252,628; 161 persons manufactured carriages and wagons to the amount of \$78,811, with a capital of \$36,661; various mills produced articles to the amount of \$83,683, employing 166 persons, and a capital of \$152,310; nine rope-walks employed 45 persons, produced cordage to the amount of \$49,700, with a capital of \$28,300; vessels were built to the amount of \$41,500; 195 persons manufactured furniture to the amount of \$121,131, with a capital of \$83,300; four distilleries produced 885,000 gallons of distilled spirits, and three breweries produced 89,600 gallons of beer, with a capital of \$139,000; six brick and 292 wooden houses were built, employing 887 persons, and cost \$379,010; 16 printing-offices, eight binderies, two daily, four semi-weekly, and 10 weekly newspapers, and two periodicals, employed 122 persons, and a capital of \$35,700. The total amount of capital employed in manufactures was \$10,696,136.

Brown university at Providence, was founded at Warwick in 1764, and permanently located in Providence, in 1770, is the only college in the state, and is a flourishing institution. The president, and a majority of the trustees, are required to be of the Baptist denomination. The common schools of this state, formerly less attended to than in the other New-England states, have lately received much attention, and are improving. In 1843 there was expended for instruction in the state \$42,944. The state has a permanent school fund amounting to over \$50,000. The sum of \$25,000 annually is paid from the state treasury to the school committees of the several towns for the support of the public schools. In 1840 there were in Brown university, and in a high school which partakes of the nature of a college, 324 students. There were 32 academies or grammar schools with 3664 students; 434 common and primary schools, with 17,355 scholars.

The principal religious denominations are Baptists, Congregationalists, Episcopalians, and Methodists. In 1836, the Baptists had 20 congregations, and 18 ministers, besides nine other Baptist churches of a different description; the Congregationalists had 16 ministers and 16 congregations, with 2100 communicants; the Episcopalians had 16 congregations, 18 ministers, and 1655 communicants; the Methodists had 10 ministers. Besides these, there are some Friends, Unitarians, Universalists, Christians, and Roman Catholics. There is a state prison at Providence, completed in 1838.

In the commencement of 1840, there were 62 banks in the state, with an aggregate capital of \$9,880,500, and a circulation of \$1,719,230. Although the banks are so numerous, averaging two to a township, though located in the principal places, yet they have generally preserved their credit unimpaired. Rhode Island has no public debt.

Until recently, the only constitution of the state was the charter granted by King Charles II. in 1663. Within about 20 years, four attempts have been made, under the sanction of the general assembly, to form a constitution for this state, all of which attempts, except the last, failed. In March, 1840, the Rhode Island Suffrage association was formed, having in view the extension of the right of suffrage to all the native white male citizens of the United States resident in the state. In May, 1841, at a mass meeting held at Newport, this association took measures for calling a convention of the people, without regard to the existing government; and a convention was chosen by a part of the people in several towns, which assembled at Providence, October 9th, 1841. This convention proceeded to form a constitution for the state, and submitting it to a portion of the people, they adopted it, and the convention proclaimed this constitution to be the supreme law of the land. But the whole proceeding was repudiated by the existing government, who, in the mean time, had taken measures to assemble a convention on the first Monday in November, 1841, who formed a constitution, and submitted it to the people for their ratification; and there were for the constitution 16,702, against it 8013; majority in favour of it 8689. On the 4th of May, 1842, the charter government was organized, as usual, at Newport, the state being in too great commotion to organize, under the constitution recently adopted. The Suffrage party, having elected a governor and a legislature, under the so called people's constitution, or-

ganized May 3d, 1841, a government, under the protection of an armed force at Providence. May 15th, 1842, an attempt was made by an armed force, commanded by the governor under the "people's constitution," to capture the state's arsenal in Providence, and a civil war seemed to be commencing. In the third week of June, 1842, the general assembly passed an act, providing for another convention to form a constitution, to be held in September, and to be composed of delegates chosen by persons who had resided three years in the state, without regard to property, taxation, or military service as a qualification. In the last week of June, 1842, another desperate effort was made to overthrow, by force of arms, the regular government of Rhode Island; but the insurgents, with their governor at their head, were signally defeated and dispersed at Chepachet, by the forces of the state. The convention provided for by the act of the general assembly in June, assembled at Newport in September, 1842. The constitution formed by this convention was submitted to the people on the 21st, 22d, and 23d of November, in 1842, and by a vote of 7032 for it, and 59 against it, it was adopted; the "Suffrage party" formally protesting against it, but inconsistently voting under it. Thus a threatened civil war has been avoided, without the interference of the power of the United States' government, and a check has been given to irregular attempts to alter the constitution of the government of a state; and things seem likely to settle down into a tranquil condition.

The executive power of the state is vested in a governor, elected annually by the people. In case of the inability of the governor to serve through death, impeachment, or absence from the state, his place is supplied by the lieutenant governor, elected also annually by the people; or in case of the inability of both, the office shall be filled by the president of the senate. The senate consists of the lieutenant-governor, and one member from each town or city in the state, and is presided over by the governor, or in his absence by the lieutenant-governor, who has no vote excepting on an equal division of the members. The secretary of state is also secretary of the senate, and in the absence of the governor and lieutenant-governor, presides over the body until a president is chosen. The house of representatives consists of not to exceed 72 members. Each town or city is entitled to at least one member, provided that no town or city shall elect more than one sixth of the entire number. The present ratio of representation is one member to every 1530 inhabitants, and each fraction exceeding one half is entitled to one representative. The present number of members is sixty-nine. The judicial power of the state is vested in one supreme court, and such inferior courts as the general assembly may, from time to time, ordain. The judges of the supreme court are elected by the general assembly in grand committee, and may be dismissed by a majority of all the members elect of each house separately. Every person, a citizen of the United States, of the age of 21 years, who has resided, and has had a home in the state for one year, and in the town or city where he offers his vote for six months next preceding the election, and real estate in said town or city to the amount of 134 dollars, or renting for seven dollars above all incumbrances whatsoever, is entitled to the right of suffrage; or if his property is in another town or city in the state than that in which he resides, he must produce a certificate to that effect from the clerk of the city or town in which it lies, dated within ten days previous to the election, and showing that the deed, if there be any, has been recorded for 90 days. The name of the voter must have been legally enrolled for one year next previous to the election in the town or city where he offers his vote, and he must have paid a town or city tax of one dollar, and have been enrolled in the militia, and have performed military duty. A residence at any garrison or naval station in the state does not give a legal residence. The general assembly holds two sessions annually, one at Newport, on the last Monday of October, the other biennially at South Kingstown, and in the intermediate years, at Bristol and East Greenwich, alternately. An adjournment of the October session is held annually at Providence.

This state has several important works of internal improvement. The Blackstone canal connects Providence and Worcester, and lies partly in this state. The same is true of the Providence and Boston railroad. With this is connected a daily line of steamboats to the city of New-York. The Providence and Stonington railroad lies principally in this state, and is connected by a line of steamboats to New-York city. When the Long Island railroad shall have been completed through the island, which is expected to be done by July, 1844, this, with the Stonington and Providence railroad, and the Providence and Boston railroad, will constitute the most direct and speedy communication between New-York and Boston.

Rhode Island was first settled by Roger Williams in 1636, who located in Providence, and gave it its name, in memory of having found in it a refuge from religious persecution.

## RHODES.

He was banished from Salem, Massachusetts, on account of his religious opinions, for which he held that men were only answerable to their Maker; while his opposers thought that many of his measures were opposed to the peace of society as constituted by them. In 1638 he purchased the territory of Canonius and Miantonomoh, two chiefs of the Narragansett Indians. In 1638, William Coddington and 17 others, being persecuted for their religious tenets, followed Williams to Providence, and by his advice they purchased of the Indians the island of Aquetnek, now called Rhode Island, and Coddington became their judge or chief magistrate. He also granted universal toleration to all Christian sects. In 1643 Williams went to England as the agent for both settlements, and by the assistance of Sir Henry Vane, obtained a patent from the parliament, then exercising supreme power, by which the towns of Providence, Newport, and Portsmouth, were authorized to establish a civil government for themselves. And in 1647 all the freemen assembled at Portsmouth enacted a code of laws, and established a civil government. An assembly was constituted to consist of six representatives from each town; and the executive and judicial power was vested in a president and four assistants, to which there was an appeal from the courts established in each town for the trial of small causes. Some difficulties having arisen in regard to the grant to Williams and Coddington, upon an application to the King Charles II., a charter was granted, incorporating Rhode Island and Providence plantations. It was provided that no person should be molested or called in question for any differences in matters of religion, and the supreme power was vested in a governor, deputy governor, ten assistants, and representatives of the several towns chosen by the freemen. This is the venerable charter under which the people lived and prospered, until recently. In 1730, the number of inhabitants was 18,000, and in 1761 it was 40,000. Rhode Island bore an honourable part in the revolutionary war; and General Greene, one of her citizens, was inferior, as a general officer, only to Washington. She was the last of the old 13 states, who adopted the federal constitution, which she did in May 29th, 1790, by a majority of two votes. The recent constitution went into operation May 3d, 1843.

RHODES, a famous island of the Mediterranean, off the S.W. coast of Asia Minor (an. *Lycia* and *Caria*), 10 m. S. cape Volpe; the city of Rhodes, at the N.E. extremity of the island, being in lat. 36° 26' 53" N., long. 28° 12' 51" E. It is about 45 m. in length, N.E. and S.W., and is, where broadest, about 18 m. across. Pop., according to Savary, 36,500, of whom rather more than a third are Greeks; but Turner says it does not exceed 20,000. Probably it may be estimated at about 25,000, a number that would have been insufficient in antiquity to have peopled one of its three cities. A chain of mountains runs lengthwise from one end of the island to the other; their highest summit, mount Artemira (an. *Atabyras*, on which was a temple of Jupiter), commanding a noble view of the island and of the adjacent shores of Asia Minor. In antiquity this mountain chain was covered with dense forests of pine, whence the Rhodians drew supplies of timber for their fleets, and in modern times it has supplied considerable quantities for the dock-yards of Constantinople. Speaking generally, the soil in the lower parts is dry and sandy; but it has some fine valleys, and is well watered by the numerous streams that descend from the mountains. In antiquity it was famous for its fertility—

A region pregnant with the fertile seed  
Of plants, and herbs, and fruits, and foodful grain  
Each verdant hill unnumbered flocks does feed;  
Unnumbered men possess each flowery plain.  
*Pindar, by West, Olympic Odes, No. 7.*

But, owing to the insecurity and extortion of which the inhabitants have been long the victims, its agriculture is in the most depressed state, many of its finest fields being allowed to lie waste, and the island not producing corn sufficient even for its scanty population. Its wheat is still, however, of the finest quality; but, according to the statement of Mr. Turner, its wine, which he calls "tolerable, red, and sharp," must have sadly degenerated from that mentioned by Virgil as being fit for the feasts of the gods!

Non ego te, Diis et mensis acceptis secundis  
Transierim, Rhodia, et tumidis, bumastis, racemis.  
*Georg., lib. ii., lin. 101.*

It also produces oil, oranges, citrons, and other fruits; and, but for the grinding despotism by which it is weighed down, it might produce, in profusion, most necessities and luxuries. Mirbale is quarried in several parts of the island.

The climate of Rhodes (*clarum Rhodon*, Hor.) is probably the finest in the Mediterranean. "It is," says Dr. Clarke, "a truly delightful spot; and its gardens are filled with delicious fruit. Here, as in Corsica, every gale is scented with the most powerful fragrance, wafted from groves of orange and citron trees. Numberless aromatic herbs exhale, at the

same time, such profuse odour, that the whole atmosphere seems to be impregnated with a spicy perfume. The present inhabitants of the island confirm the ancient history of its climate; maintaining that hardly a day passes throughout the year in which the sun is not visible." *Travels*, iii., 278, 8vo. ed.) The heat, which otherwise would have been oppressive, is tempered by the wind, which blows with little variation from the N. and N.W.

The only beasts of burden used in the island are mules and donkeys, there being no camels, and but few horses, and those only belonging to the richer Turks. Partridges are very abundant. Various species of excellent fish, with coral and sponges, are found in the adjacent sea.

The city of Rhodes is situated, as already stated, at the N.E. extremity of the island. It is built amphitheatrically, on ground rising gently from the water's edge; and is strongly fortified, having a moated castle of great size and strength, and being surrounded by walls, flanked with towers. These works were constructed by its former masters, the knights of St. John; and Mr. Turner says, that, though he had known nothing of the history of the island, he should have perceived that its fortifications were the work of the same master hand that had constructed those of Malta. (ii., 11.) The town consists generally of narrow winding lanes and mean houses. When in possession of the knights it had many substantial stone houses, some of which, as well as the public buildings, were ornamented with the arms of the knights in *alto relievo*; but the greater number of these houses are now in a state of ruin, and such as have been rebuilt in their stead are mere wooden fabrics. Contrary to what might have been expected, the best streets in the city are in the quarter inhabited by the Jews. The Greeks occupy a distinct quarter, behind and S.E. from the city properly so called. On the land side the city is surrounded by a burying-ground; and beyond it are the suburbs, consisting of detached and finely situated houses, surrounded by gardens, many of which, however, are said to be unoccupied. The ancient palace of the grand master is now the residence of the pacha; the large and fine church of St. John is the principal mosque, and the grand hospital has been converted into a public granary. It has two harbours; the smallest, a fine basin, with a narrow entrance, is protected on all sides from the wind; but the Turks having allowed filth and sand to accumulate in the entrance, it can now be used only by the smaller class of vessels: the other harbour is much larger, and has deep water, but is safe only during westerly winds, those from the N.E. throwing in a heavy sea; on this account large vessels prefer anchoring in the roads in 21 fathoms water, from its being more convenient for getting out to sea, in the event of the wind setting in strong from the N.E. A lighthouse is erected on a mole between the two harbours. Several ships for the Turkish navy have been built at Rhodes; but the trade of the town is quite inconsiderable. There are some, though but few, remains of antiquity in the city; the barbarism of its Saracenic and Turkish conquerors, and the recurrence of destructive earthquakes, having destroyed most memorials of its former splendour.

*Historical Notice.*—Rhodes was early distinguished by its wealth, its naval power, the wisdom of its laws and institutions, and its superiority in art and science. Ptolemy, a prince of Rhodes, distinguished himself at the siege of Troy; and the island could then boast of the then famous cities of Lindus, Jalyssus, and Camirus. The city of Rhodes is much less ancient, having been founded during the Peloponnesian war. But its advantageous situation, and the excellence of its harbour, soon gave it a decided superiority over the other towns of the island, many of whose inhabitants withdrew to it; and it was, in fact, one of the best built and most magnificent cities of the ancient world. It had been constructed with the greatest regularity; its streets being wide and straight, and the houses in each being of the same height and built on the same model. Pliny calls it *civitas libera et pulcherrima* (*Hist. Nat.*, lib. v., cap. 31); and Strabo, who had seen Rome, Alexandria, and other great cities of the ancient world, gives the preference to Rhodes. "The beauty," says he, "of its harbours, streets, and walls, and the magnificence of its monuments, render it so much superior to all other cities as to admit of no comparison." (*Lib. xiv.*) Its temples, especially those dedicated to Bacchus, Diana, Isis, &c., were celebrated alike for the magnificence of the building, and the statues and paintings with which they were enriched. In the noble ode already referred to, written about 500 years B.C., Pliny alludes as follows to the excellence of the Rhodians in statuary:

Thence in all arts the sons of Rhodes excel;  
Though be at their forming hands the chisel guide;  
This in each street the breathing marbles tell,  
The stranger's wonder, and the city's pride.

The most famous of the works of art in Rhodes were two pictures, of the most transcendent merit, by Protogenes, the

## RHODES.

contemporary and rival of Apelles (*Strabo*, lib. xiv.; *Pliny*, *Hist. Nat.*, lib. xxxv., cap. 10), and the colossus, the work of Chares of Lindus, deservedly reckoned one of the wonders of the world. This magnificent brazen statue, erected in honour of Apollo, the tutelary deity of Rhodes, is said to have been 70 cubits (about 105 feet) in height, and of the most admirable proportions. It was set up about anno 278 B.C., and was thrown down by an earthquake 56 years thereafter; and it is a curious fact that it lay where it fell for nearly 890 years, or till A.D. 667, when the island, having been taken by the Saracens, they broke the statue to pieces, and sold the brass. Blaise de Vigenère, a writer of the 16th century, stated, for the first time, that the colossus stood with a foot on each side the entrance to the port, and that the largest vessels, under full sail, passed between its legs. This story, which carries absurdity on its face, and for which there is not a shadow of authority in any ancient writer, having been adopted by Rollin, has thence found its way into most modern works. (*Pliny*, lib. xxxiv., cap. 7; *Rollin*, *Hist. Ancienne*, iv., 137, 4to ed.; *Savary's Letters on Greece*, English translation, 63; *Biographie Universelle*, art. *Chares*.) Exclusive of this matchless work, Rhodes had 105 colossal statues; each of which might, according to *Pliny* (*loc. cit.*), have sufficed to illustrate the town.

The wealth of the Rhodians was derived partly from the fertile soil and advantageous situation of their island, but more from their extensive commerce and commercial navigation, and the wisdom of their laws, especially those having reference to maritime affairs. Such, indeed, was the estimation in which the latter were held, that the rule of the Rhodian law *de jactu* was expressly embodied in the Digest (lib. xix., tit. 2), and has been thence adopted into all modern codes. Indeed, the fair presumption seems to be that most of the regulations as to maritime affairs included in the civil law were derived from the same source.

Rhodes was also famous for its science and literature. Æschines, on his retirement from Athens, opened a school of rhetoric in this city; and towards the termination of the Roman republic, and under the early emperors, Rhodes was held, as a school of eloquence, literature, and philosophy, to be little, if at all, inferior even to Athens; and these, combined with the genial temperature of the climate, and the luxurious refinement of the capital city, made it be resorted to by some of the most illustrious individuals of whom Rome has to boast, including, among others, Pompey and Cicero. Julius Cæsar, too, had set out to study at Rhodes, and was only prevented by being captured on his voyage by pirates. (*Suetonius*, lib. i., cap. 4.) Tiberius resided for about 7 years in the island. It seems also to have been a favourite retreat of those Romans who wished to withdraw from the factions and turmoil of Rome. (*Cicero*, *Epist. ad Fam.*, lib. ii., epist. 28.)

The government of Rhodes, which, like that of most other Greek cities, was originally monarchical, was subsequently changed into a democracy, and thence into an aristocracy; under which it enjoyed a degree of tranquillity and prosperity to which most Grecian cities were strangers. It was taken by Mausolus, king of Caria, but recovered its independence under his widow, the famous Artemisia. From this period Rhodes continued to enjoy profound peace, till it was attacked by Demetrius, the son of Antigonus, one of Alexander's successors. The siege of the city of Rhodes by Demetrius is one of the most celebrated in ancient history; but all the science and efforts of Demetrius were defeated by the bravery and resolution of the Rhodians, and he was compelled to raise the siege, anno 303 B.C., after it had continued about a year. The expense of the colossus was mostly defrayed from the sums received by the Rhodians for the machines and other engines used by Demetrius in the siege, and which he gave up to them. It may be worth while to notice the fact, mentioned by Hume, that this siege affords the only example to be found in antiquity of the establishment of a cartel for the exchange of prisoners. (See *Essay on the Populousness of Ancient Nations*.)

The Rhodians were subsequently ranked among the steadiest of the allies of Rome; they repulsed Mithridates, who made an attack on their city, and continued to enjoy their liberty till the reign of Vespasian, when Rhodes was made a Roman province. The island was overrun by the Saracens; but having been recovered by the eastern emperors, it was presented, in 1308, by the Emperor Emanuel, to the knights of St. John of Jerusalem, who held it till 1522, when, after a desperate resistance, it was taken by the Turks, under whose barbarous brutalising despotism it has sunk to the miserable condition in which we now find it. "Beauty and mildness of climate, fertility of soil, variety and abundance of necessary and agreeable articles, a situation favourable for useful enterprise and a prosperous trade, nothing is wanting to this fine island, except to be delivered from the Turks, who possess, in so eminent a degree, the fatal talent of converting the most happy abode into a spot to be shunned and dreaded." *Sonnini's Trav-*

## RHONE.

*els in Greece and Turkey*, i., 166, Eng. trans.; see, also, exclusive of the works already referred to, *Anc. Universal History*, viii., 157-212, 8vo. edit.; *Savary's Greece, Letters XII. and XIII.*; *Voyage d'Anacharis*, cap. 73; *Schomberg's Treatise on the Maritime Laws of Rhodes*, passim, &c.)

RHODEZ, or RODEZ (an. *Segodunum*), a town of France, dep. Aveyron, of which it is the cap., on a hill beside the Aveyron, 163 m. E. by S. Bordeaux; lat. 44° 21' 8" N., long. 2° 34' 29" E. Pop. in 1836, ex. com., 9158. Like most other very old towns, it is ill built: streets steep, narrow, dirty, and dark from the projection of the upper stories. The neighbourhood is, however, agreeable; and the town, which has rather an imposing aspect from without, is closely surrounded with gardens and planted promenades. Almost the only edifice worth notice is the cathedral, a Gothic building, constructed between the 13th and 16th centuries. Its fine tower, which, it is said, may be seen at a distance of nearly 50 m., is 266½ feet high, square for two thirds its height, then octagonal, ornamented with delicate tracery, surmounted with a small cupola and a colossal statue of the Virgin; it has minarets at each corner, on the summits of which are figures of the four evangelists. This church is rich in arabesques, and has a fine organ. The bishop's palace, prefecture, royal college, formerly belonging to the Jesuits, seminary, public library, with 16,000 volumes, town-hall, hospital, convent of Cordeliers, a building of the 14th century, &c., are the other chief public edifices.

Rhodez is a bishop's see, and has courts of primary jurisdiction and commerce, a chamber of manufactures, schools of drawing, and for deaf and dumb persons; manufactures of coarse woollens for clothing trousers, hats, wax candles, and playing cards; and some trade in cheese, wool, coarse linens, &c. It has four annual fairs. In its vicinity many mules are bred. Rhodez was annexed to the dom. of the crown by Henry IV. (*Hugo*, art. *Aveyron*, &c.)

RHONE (an. *Rhodanus*), a celebrated river of S.W. Europe, rising in the Pennine Alps, traversing portions of Switzerland and France, and falling into the Mediterranean, between lat. 43° 15' and 48° 15' N., and long. 4° and 8° 20' E. Length, 390 m.; estimated area of basin, 37,300 sq. m. The highest source of this river is on the W. side of the great mass of St. Gothard, between the Furca, Gallenstock, and Grimsel, at an elevation of 5780 feet above the sea; but it scarcely assumes the form of a river till its junction with three or four other streams at the foot of the glacier of its own name, a beautiful fan-shaped cluster of ice, the lower edge of which is 5470 feet above the sea. Its course through the Valais is W.S.W. as far as Martigny, about 82 m. from its source, the height of the river at this point being 1523 feet above the sea; but here the stream assumes a N.N.W. direction for about 24 m., entering the lake of Geneva at a level of 1236 feet above the sea, bringing with it a deposit of mud which has partially filled all the upper part of the lake. (*Lyell's Geology*, i., 333, 334.) The Rhone, on leaving this lake at the town of Geneva, where it is crossed by two bridges, is soon afterwards joined by the Arve, and then enters a rocky defile between the Alps and Jura chain, taking a S.W. direction for about 22 m., as far as the gorge called the *Perte du Rhône*, where its waters are hidden by limestone rocks nearly meeting over the stream. Its course thence is nearly due S. for 40 m., as far as St. Cenis, at which point the river is still 645 feet above the sea. Here, however, it takes a sudden turn to the W.N.W., which direction it maintains with few exceptions to its junction with the Saône at Lyons, the average fall from the lake of Geneva to this city (a distance of about 120 m. along the stream) being estimated at somewhat more than 6 feet per mile. The *Perte du Rhône* is thus described by Mr. Bakewell: "The river, before arriving at *la Perte*, runs in a narrow bed, cut in soft clay strata reposing on a hard calcareous stratum; but on reaching this stratum, the waters have excavated a deep tunnel in it, into which they fall with considerable force; the rocks on each side approaching so close, that before the space was widened by the Sardinian government to prevent smuggling, a man might have strode across, and seen the Rhone pass at a great depth between his feet. This tunnel is divided half-way down by projecting ledges of rock into an upper and lower channel. In winter and early in spring the river runs below these ledges, and is nearly concealed; in one part, also, masses of rock have fallen down, and entirely covered the lower bed of the river for about 60 yards. This part may be traversed when the river is low; but in summer, during the melting of the Alpine snows, it is much enlarged and flows over the intervening rock." The Rhone was in this state at the time of Mr. Inglis's visit; and to this circumstance may be traced the disappointment felt by that traveller. (*Bakewell's Travels*, iii., 265, 266; *Inglis's Switzerland*, p. 175.) The Rhone leaves the hilly country a few miles E. of Lyons, where its deep, transparent blue, and very rapid waters are joined from the N. by the sluggish and muddy

## RHONE.

stream of the Saone: indeed, so marked is the difference between these rivers, that for many miles below Lyons, they flow side by side, the E. portion being clear and blue, the other of a muddy yellow colour. The course of the Rhone close to the city is from N.N.E. to S.S.W.: it has a medium breadth of about 650 feet, and is so liable to inundations that embankments have been formed to protect the town and its suburbs. From Lyons the united stream holds a course nearly due S. to the Mediterranean, receiving numerous streams both from the W. and E., but chiefly the latter: the Isère, a considerable river, rising on Mount Cenis, joins it between Tournon and Valence; and near Avignon (where the Rhone is 117 feet above the sea), it is joined by the Durance, a swift and turbid stream, which collects the waters from the western face of the maritime Alps.

The Rhone enters the Mediterranean by four mouths: the first separation occurs at Arles, where two branches are formed; one called the great Rhone, running S.E.; the other known as the little Rhone, pursuing a S.W. course, and both together enclosing the alluvial island of Camargue, which has an area of about 1900 sq. m. Each of these again bifurcates a short distance above the mouth; but the E. channels are those only which admit of safe navigation. The Rhone, which has a very rapid course (Rhodanus ferox), brings down a whitish sediment, discolouring the Mediterranean to a distance of 6 or 7 m., and there is every reason to suppose that there has been a constant, though slow, advance of the base of the delta during the last 18 centuries: indeed, Mese (an. *Mesua Collis*), stated by Pomp. Mela to be almost an island, is now far inland, and Notre Dame des Ports, a harbour in the 9th century, is now a league from the sea. The confluence of the Rhone with the currents of the Mediterranean forms bars across the mouths of the river, and by these means considerable spaces become divided off from the sea, and subsequently from the river also, when it shifts its channels of efflux. Some of these lagoons being subject to the occasional ingress of the river when flooded, and of the sea during storms, are alternately fresh and salt. Others, after being filled from the sea, become more salt by evaporation, and are, in fact, natural salterns. The sea, opposite the mouth of the Rhone, deepens gradually from 4 to 40 fathoms within a distance of 6 or 7 m., the bottom being characterised by very curious alternations of marine and freshwater shells. (*Lyell's Geology*, i., 341-345.)

Among the tributaries of the Rhone, by far the most important is the Saone (an. *Arar*), which rises on the Vosges, in that mass of high land which gives origin also to the Meurthe, Moselle, and Meuse: the source is at Viomenil, 1300 feet above the sea. Its course is tortuous, though generally S.S.W. as far as Chalons; 18 m. above which it receives on its E. bank the waters of the Doubs. This river rises at an elevation of 2830 feet above the sea, in one of the longitudinal valleys of the Jura mountains; and after running N.N.E. for about 60 m., is suddenly deflected southward by mount Terrible, whence its course is S.W., past Besancon, to its confluence with the main river. The general direction of the Saone from Chalons is S. by W., past Macon, Trevoix, &c.; and the average fall from the former place to its junction with the Rhone at Lyons scarcely exceeds 1 ft. per mile; and the channel being extremely tortuous, it has a very slow current. (*Influxu incredibile lenitate, ita ut oculis, in utram partem fluat, judicare non possit.* Cæsar, lib. i., cap. 12.) Its waters are charged with marl, sand, and the debris of Jura limestone. The Isère and Durance have already been mentioned. They are extremely rapid, charged with deposit from the secondary strata flanking the main ridge of the Alps. The only considerable W. tributary is the Ardèche, rising in the Cévennes, not far from the Loire.

Owing to the rapidity of its current, the Rhone was formerly of comparatively little use in navigation, the principal trade being carried on by vessels down the stream, mostly from Lyons to Beaucuire, the boats that ascended the river being usually dragged up by horses. But since the introduction of steamers, a vast impulse has been given to the navigation; the Rhone, Saone, and their greater affluents, have become important channels of intercourse; and their basins are now improving more rapidly than any other part of France. We extract the following details from the interesting work of Mr. Maclaren, who sailed down the Saone and Rhone, from Chalons to Marseilles:

"I left Chalons at six A.M., and reached Lyons by the steamboat at two, distance about 85 m. The fare was only 43 francs. From Lyons to Avignon the fare is 30 francs, the distance about 170 m.; time about 13 or 14 hours per steamboat. The steamboats are English built, and worked by English engineers. They are about 100 feet long, 25 wide, and are neat and commodious, though by no means splendid. They are very flat in the bottom, drawing only about 24 inches of water. The Rhone is full of sandbanks,

which, owing to the rapidity of the current, are continually shifting, and vessels drawing a greater depth than 2 feet cannot navigate the river with safety. The English engineer told me that his steamboat went about 9 m. an hour in still water; the current adds about 5 m. going down, and deducts as much going up; so that she moves at the rate of 14 m. one way, and 4 the other.

"The Rhone passes through one of the most beautiful, picturesque, and delightful regions in the world. It is one continued vineyard, skirted and sheltered by mountains from 500 to 2000 feet in height, presenting every variety of form and aspect—now round and smooth—now rugged and peaked—now bare and sterile—now clothed with vines or mulberries, or cut into terraces, and carefully cultivated to their summits. Mount Pilatre, and others of the high Cévennes, on the W., and the Alps on the E., capped with snow, appear through openings in the lateral chains at intervals. The valley is often contracted to a space of one mile; again it spreads out in the form of a rich plain, to a breadth of 10 or 12 m. Twenty times the river appears closed in by the hills, and you are puzzled to conjecture where it escapes, till a bend in its course clears up the mystery. To the natural beauties of the country are added those which it derives from the industry and taste of its inhabitants. There is an almost unbroken line of large towns, villages, hamlets, cottages, and neat villas, along each side of the river, and not merely on its banks, but reaching back to the mountains. The glittering white walls of these buildings, surrounded by rich, well cultivated lands, give vivacity to the scene, and fill the mind with images of peace, abundance, security, and contentment. From Chalons to Marseilles, the marks of progress meet the eye everywhere. The whole district, 270 m. in length, is advancing with giant strides. At every step, in descending the river, we meet with houses or manufactories building, quays forming on the river, bridges erecting, roads or towing paths, or embankments making. Two facts will show that this is no exaggeration. It is only eight years since steamboats were introduced; and there are now six plying between Chalons and Lyons, and ten between Lyons and the sea, though the coal they use is brought from England, and costs about 50s. a ton. It is but ten years since suspension-bridges were heard of in the district; yet in the short intervening space, the industrious inhabitants of these districts have erected fourteen suspension-bridges over the Saone, and twelve over the Rhone. I doubt if there be as many at this moment in all England. And let it not be supposed that the bridges are paltry, or rude and imperfect works. They are light and elegant; the arches are often of great span, and the pathway is either level, or slightly and uniformly curved. Sometimes they have two arches, but in general three. The chains are sometimes single, but more commonly triple or quadruple, the suspension rods always single. The columns on the piers are sometimes slender obelisks of stone, sometimes thin tall slabs of cast iron. Taking them altogether, they are the lightest and most handsome structures I ever saw, and show great boldness, as well as skill and taste, in the engineer. But the fact on which I wish to fix attention is the enterprise, and the wealth which these works bespeak. The 26 bridges must have cost at least £200,000; and this sum has been raised by the public spirit of the district, and expended on one species of improvement, while many others were in progress." (*Notes on France*, &c., p. 32-37.)

The basin of the Rhone is connected by canals with the other principal rivers of France. The canal of the Rhone and Rhine connects the Doubs with the Ill, an affluent of the Rhine; the *Canal du Centre* unites the Saone to the Loire, and the canal of Burgundy connects the Saone with the Yonne, a navigable branch of the Seine; so that in this way the four principal rivers of France are all united. The navigation of the mouth of the Rhone is considerably improved by the canal of Arles, which runs close to the Great Rhone, and by the canal of Beaucuire, which leaves the river near the town of that name, and not only runs into the Mediterranean, but is joined by branch canals with the *Canal du Midi*, connecting the Garonne and the bay of Biscay with the Mediterranean. The Rhone is also connected with the Loire by a railway, which passes through the important manufacturing town of St. Etienne. (*Bakewell's Travels*, ii., 260-275; *Lyell's Geol.*, i., 340-345; *Encycl. Methodique*, art. *Rhone*.)

RHONE, a dep. of France, and next to that of the Seine, the smallest in the kingdom, though from its containing the city of Lyons, it is among the most populous, reg. S., between lat. 45° 28' and 46° 18' N., and long. 4° 20' and 4° 55' E., having N. Saone-et-Loire, W. and S. Loire, and E. Ain and Isère, from which it is principally separated by the rivers Rhone and Saone. Length, N. to S., 55 m.; average breadth, about 30 m. Area, 270,081 hectares. Pop., in 1836, 434,429. Surface mostly mountains, being covered with ramifications of the Cévennes. The dep. is well

## RIAZAN.

watered; but there are no navigable rivers, except the Rhone and Saone. In 1834 it was estimated that it had 143,120 hectares arable land, 36,399 ditto meadows, 30,552 vineyards, and 34,466 of woods. The produce of corn is far below the internal demand. The produce of wine, the chief source of agricultural wealth, is supposed to exceed 450,000 hectolitres a year. The wines produced in that portion of this dep. called the Beaujolais belong to the class of Macon wines, Of the other growths, probably the best is the Côte-Rôtie, a red wine raised near Ampuis. It is an excellent wine, possessing *du corps, du spiritueux, de la finesse, une saveur et un parfum tres-agréable.* (Jullien, p. 184.) It requires to be kept in the cask for five or six years before bottling. The white wines of Condrieux are also very good. The forests produce fine chestnuts; but the quantity of timber they yield is insufficient for the demand of the important manufacturing districts round Lyons and St. Etienne. Fortunately coal is abundant. Neither horned cattle, nor sheep, are very numerous; but a great many goats are kept, and in some places they have been crossed with the breed of Thibet. From the milk of the goats on Mont d'Or, a cheese is made, which fetches a high price. The silk worm is reared in some places, but the culture of the mulberry appears to be diminishing. Rhone is rich in minerals. Besides coal, iron, copper, argentiferous lead, barytes, manganese, fine marbles, &c., are obtained; and in this department are the two most productive copper-mines in France, those of Chessy and St. Bel.

The principal manufacture is that of silk stuffs, which is carried on upon a most extensive scale. It however, has been fully noticed under the art. Lyons, to which the reader is referred. It has also manufactures of muslins at Tarare, linen and cotton thread at Thizy and other towns, and of hardware, jewellery, glass, paper, paper hangings, chemical products, &c. In 1835, of 81,044 properties subject to the *contrib. foncière*, 31,884 were assessed at less than 5 francs, and 12,358 at from 5 to 10 francs; but 212 were assessed at upwards of 1000 francs, which, taking into account the small extent of the department, exhibits a much greater proportion than ordinary of the larger class of properties.

Rhone is divided into two arronds.; chief towns Lyons and Villefranche. It sends five members to the chamber of deputies. Number of electors (1838-39), 4251. Total public revenue (1831), 25,900,703 francs; expenditure, 18,801,371 francs. (See *Hugo, art. Rhone; French Official Tables.*)

**RHONE, BOUCHES DU.** See BOUCHES DU RHONE.

**RIAZAN**, a gov. of European Russia, between lat. 53° and 55° 40' N., and long. 39° 20' and 41° 15' E.; having N. Vladimir, E. and S. Tamboff, and W. Tula and Moscow. Area, 14,988 sq. m. Pop., in 1838, 1,241,700. Surface generally flat. The Oka, running from W. to E., divides it into two unequal portions of very different aspect. The country S. of that river is the more elevated; the air wholesome, and the soil fertile; in the N., on the contrary, the country is generally low, marshy, and covered with woods, or destitute of culture. More corn is grown than is required for home consumption; the average produce being between 5,000,000 and 6,000,000 chetwerts a year. The forests, which are very extensive, cover above a third part of the surface: those belonging to the crown comprise about 428,000 deciatines, or 1,254,000 acres. Hops, tobacco, and garden vegetables are, in some districts, raised in large quantities. The proprietors of the pasture lands let them to graziers belonging to the Ukraine, who bring thither large herds. The breed of horses is good; the Russian government has a *dépot d'Etalons* at Shopine. Bees are supposed to produce about 250,000 roubles a year. There are a few iron mines and stone quarries. Manufactures have made some progress. Those of glass and hardware occupy the first rank; and there are others of woollen, cotton, and linen fabrics, cordage, potash, soap, &c., with dyeing establishments, tanneries, and distilleries. A portion of the manufactured goods is sent to Moscow, and by way of the Oka, down the Volga; but the principal exports are the raw products of the government, consisting of corn, cattle, honey, lard, iron, timber and wooden articles. The population is principally Russian; but partly of the Tartar stock. Riazan is subdivided into 12 districts; chief towns, Riazan the capital, Zaraisk, and Kacimof. Education is very backward. In 1832, the pupils at schools and other seminaries amounted to only 1 in 934 of the population. There was then, also, but one printing-press in the government.

**RIAZAN**, a town of European Russia, cap. of the above gov., on the Tronbege, a tributary of the Oka, 110 m. S.E. Moscow: lat. 54° 37' 41" N., long. 39° 15' 54" E. Pop., about 9000. It consists of two distinct portions; an irregular fortress, with an earthen rampart, inclosing numerous churches, the episcopal palace, formerly the residence of the princes of Riazan, the consistory, &c.; and the town proper, in which are also numerous churches, with a fine

## RICHMOND.

edifice for the government-offices, several convents, a seminary and public library, hospital, &c. The town has greatly increased in size and importance within the last 50 years; but most of the houses are still of wood, and planks occupy the place of pavement in the streets. Riazan is the seat of a military governor, with authority over the governments of Riazan and Tamboff, and of the chief judicial courts of its government. It has a gymnasium, to which a society of arts was attached in 1820; a school of drawing and architecture, founded in 1824, schools for the children of official persons, &c.; and several of the principal manufactures in the government. The old town of Riazan, destroyed by the Tartars in 1568, is distant about 33 m. S.E. (*Schnitzler, La Russie; Possart Russland; &c.*)

**RIBEAUVILLE** (Germ. *Rappoltzweiler*), a town of France, dep. Haut-Rhin, cap. cant., at the foot of the Vosges, 7 m. N. Colmar. Pop., in 1836, ex. com., 6561. Above it are the remains of the old castle of Ribeauville; and in the immediate neighbourhood are some other ruined fortresses, and the principal remains of the ancient wall, called the *Heidenmauer* ("wall of the Pagans") erected at a remote period along the top of the most E. range of the Vosges. It has manufactures of calicoes and cotton handkerchiefs.

**RICHFIELD**, p. t., Otsego co., N. Y., 13 m. N.W. Cooperstown, 72 m. W. Albany, 376 W. Bounded S.E. by Canadaga lake, into which its streams flow. It contains sulphur springs, and has five stores, one fulling-mill, two grist-mills, four saw-mills, four tanneries, 13 schools, 487 scholars. Pop. 1680.

**RICHFIELD**, p. t., Summit co., O., 134 m. N.E. Columbus, 347 W. It contains three churches, a Congregational, Methodist, and Baptist, one academy, 26 students; 10 schools; 353 scholars. Pop. 1108.

**RICHFIELD**, t., Huron co., O. It has 13 schools, 471 scholars. Pop. 1590.

**RICHLAND**, district, S. C. Situated in the central part of the state, and contains 630 sq. m. Bounded E. by Wateree river, S.W. by Broad and Congaree rivers. It contained in 1840, 8878 neat cattle, 3022 sheep, 14,709 swine; and produced 3465 bushels of wheat, 333,796 of Indian corn, 63,325 of oats, 42,584 of potatoes, 1,281,989 pounds of cotton. It had 15 stores, 19 grist-mills, 21 saw-mills, one pottery; one college, 168 students; five academies, 161 students; 14 schools, 366 scholars. Pop.; whites, 5336; slaves, 10,664; free coloured, 407; total, 16,397. Capital, Columbia.

**RICHLAND**, county, O. Situated toward the N. part of the state, and contains 900 sq. m. Drained by branches of Mohican creek and of Olentangy river. It contained in 1840, 34,930 neat cattle, 79,782 sheep, 51,440 swine; and produced 506,585 bushels of wheat, 65,834 of rye, 494,511 of Indian corn, 34,797 of buckwheat, 9337 of barley, 522,209 of oats, 965,784 of potatoes, 1070 pounds of tobacco, 424,335 of sugar. It had 67 stores, nine fulling-mills, eight woollen factories, eight flouring-mills, 74 grist-mills, 106 saw-mills, two oil-mills, 25 tanneries, five potteries, two printing-offices, one weekly newspaper; one academy, 52 students; 20 schools, 6635 scholars. Pop. 44,532. Capital, Mansfield.

**RICHLAND**, p. t., semi-capital of Oswego co., N. Y., 155 m. W.N.W. Albany, 385 W. Bounded W. by Lake Ontario. Pulaski village contains the courthouse and jail, in one building of brick. Watered by Salmon river. It contains three churches, a Presbyterian, Methodist, and Baptist, 17 stores, two fulling-mills, one woollen factory, three grist-mills, 15 saw-mills, one oil-mill, three tanneries; one academy, 64 students; 37 schools, 868 scholars. Pop. 4050.

**RICHLAND**, t., Venango co., Pa. It has four stores, one fulling mill, three grist-mills, four saw-mills, two tanneries. Pop. 1385.

**RICHLAND**, t., Bucks co., Pa., 37 m. N.W. Philadelphia. Watered by Tohickon creek and its branches. It contains a Friends' church, five stores, two grist-mills, four saw-mills, two tanneries, three potteries; three schools, 85 scholars. Pop. 1781.

**RICHLAND**, t., Belmont co., O. It contains St. Clairsville, the capital of the county, which see. The National road passes through it from E. to W. It has two academies, 42 students; 12 schools, 294 scholars. Pop. 3748.

**RICHLAND**, t., Clinton co., O. It has three stores, two grist-mills, one saw-mill; 10 schools, 551 scholars. Pop. 1385.

**RICHLAND**, t., Fairfield co., O. Pop. 1992.

**RICHLAND**, t., Guernsey co., O., 95 m. E. by N. Columbus. Pop. 1777.

**RICHMOND**, a parl. and mun. bor., market town, and par. of England, the cap. of a district called Richmondshire, having a separate jurisdiction, W. div. wap. Gilling. N. Riding, co. York, on the declivity of a hill rising from the Swale, which half encircles the town, and is crossed here by a stone bridge, 11 m. S.W. Darlington, and 41 m. N.N.W.

## RICHMOND.

York. Area of par. bor., which comprises the pars. of Richmond and Aske, 5690 acres. Pop. of town, in 1831, 4000; ditto, in 1841, 4765. The town, which is most picturesquely situated, commands, from many points, very fine views of the Swale, its bold rocky banks, and the well-wooded country around; and its appearance is made more imposing by the ruins of its castle and keep, built on a rock above the river. The streets are irregularly laid out; but a very fine broad avenue leads from the Darlington and Northallerton roads into an extensive market-place, surrounded by the principal shops, town-hall, chapel-of-ease, and one of the largest hotels in the N. of England (comprising the assembly-rooms). In the centre of the market-square is a colonn, or cross, under which was a reservoir for water, brought by pipes from the neighbouring hamlet of Aislebeck; but the supply being deficient, a much larger quantity has recently been brought from Coalsgate, and a new and larger reservoir has been constructed for its reception. The houses are mostly built of a reddish sandstone; and the town, being well paved, lighted with gas, and kept remarkably clean, has a very neat appearance. The church, built on a slope facing the river, is principally in the perpendicular style, with a fine pinnacled tower; but some portions are clearly of an older date. The living is a rectory in the gift of the lord chancellor; but the perpetual curacy of the chapel-of-ease has, till lately, been in the patronage of the corporation. The Wesleyans and Baptists have places of worship, and there is a large Roman Catholic chapel with an attached school. The town has a national school, attended by about 200 boys and girls, an infant school, and Sunday schools. A free grammar school, founded in 9 Elizabeth, is well endowed with property under the management of the corporation, who appoint its head master. All natives, and the sons of residents within the borough, are admitted gratis. The number of day-scholars, however, seldom exceeds 20; besides whom the master is allowed to take boarders. The school recently attained considerable distinction, having been till lately under the superintendence of the eminent scholar, the Rev. James Tate, whose eldest son is now (1841) head master. Another free school, for commercial purposes, is under the control of the corporation: in whose hands, also, are several charity estates including endowments for almshouses. (See *Char. Comm. 7th Report*.) A scientific society and mechanics' institute have attached libraries, and there is a savings' bank. "There are no manufactures of importance at Richmond. Its market is a very considerable one for corn; but the quantity brought thither has recently decreased, and the prospects of the town are not improving. The failure of the lead-mines (about 12 m. higher up the river), the supply of corn from Ireland, and the facilities given by the railroad between Liverpool and Manchester, all contribute to its decline." (*Mun. Corp. Rep.*) It is, however, inhabited by many wealthy families, who, with the neighbouring gentry, cause a pretty extensive retail trade. The training of race-horses is also a considerable business; and races are held annually in October, about a mile from the town, on a high moor, which has a commodious grand stand. About 1½ m. N.N.W. is Aske hall, a fine seat belonging to the Earl of Zetland; and near Catterick is Brough hall, the residence of Sir W. Lawson.

Richmond, which received its first royal charter in 3 Edw. III., and was incorporated in the 19 Eliz., is governed, under the Municipal Reform Act, by a mayor, three other aldermen, and 12 councillors. Corporation revenue in 1840, £1353. Quarter and petty sessions for the borough are held under a recorder, and petty sessions for the wap. of West Gilling take place on alternate weeks. A civil court for the recovery of debts under £100, another for the district of Richmondshire, and a court leet for the manor, are held occasionally; and there is a monthly ecclesiastical court, under the Archdeacon of Richmond. The borough has returned two members to the House of Commons since the 27 Eliz., the right of election due to the Reform Act being in the holders of burgate tenures. The Boundary Act enlarged the limits of the borough by the addition of the parish of Easeby; and in 1839-40 it had 289 registered electors. It is also one of the polling-places at elections for the N. riding of the county. Market on Saturday; three annual chartered and other fairs.

The history of Richmond is closely associated with that of its castle, founded by Alan, the first earl of Richmond, who, having received from William the Conqueror the forfeited estates of the Earl of Mercia, built the castle and part of the town of Richmond, to protect his family and property. Under the Norman monarchs, the title and property were possessed by different families, allied to the blood royal; and in the contest between the houses of York and Lancaster, they also several times changed possessors, till at length they were vested in the crown by the accession of Henry, Earl of Richmond, to the throne, under the title of Henry VII. Since this epoch, the castle has

been allowed to fall into partial decay. It still, however, bears marks of its former grandeur and importance. The keep tower, of which the walls are nearly entire, is a Norman structure, about 100 feet in height, the walls being 11 feet thick; the lower story is supported by a vast column in the middle, from which spring circular arches, closing the top. The floors of the two upper rooms have fallen in; but a modern wooden staircase leads to an older flight in the walls, by which the visitor may reach its summit, which commands an extensive and beautiful view of the surrounding country. The ruins of several other parts of the castle still remain, and latterly they have been partially repaired. In the S.E. corner of the area is a ruinous tower, in which is a dungeon, 13 or 14 feet deep. The ground covered by the castle comprises nearly six acres: it belongs to the Duke of Richmond and Lennox, on whose ancestors it was conferred, with the title of duke, by Charles II. Here are also the ruins of a monastery of Grey Friars, the steeple of which is a remarkably fine specimen of the perpendicular style; and at Easeby are extensive and highly interesting remains of an abbey, built in the 12th century, for Premonstratensian monks: the buildings are chiefly in the early English style; but the windows both of the chapel and refectory have some very elegant tracery, well worth examination. (*Richman's Arch.*, p. 276.)

RICHMOND (the Tivoli of London), a town and par. of England, upper div. hund. Kingston, co. Surrey, at the bottom, and on the slope and summit of an eminence rising from the S. bank of the Thames (crossed here by a handsome stone bridge of five arches), 10 m. W. by S. London. Area of par. 1230 acres; pop., in 1831, 7243. The principal street extends the whole length of the town, running along the ridge on its W. side to the summit of the hill, and being, in the lower parts, parallel to the river. The other streets are of very inferior importance. The houses in the lower part of the town are old-fashioned, and by no means large; but on the hill and outskirts are many handsome mansions occupied by families of distinction. The houses in the terrace and the Star and Garter hotel, at the summit of the hill, command very extensive and noble prospects of the Thames and its rich valley, Windsor castle being distinctly seen in the distance.

"Here let us sweep  
The boundless landscape.  
Heavens! what a goodly prospect spreads around,  
Of hills and dales, and woods and lawns, and spires,  
And glittering towns and gilded streams, till all  
The stretching landscape into smoke decays."

Thomson's *Summer*.

The church is a respectable structure, with a low embattled tower, and, till 1563, was a chapel-of-ease to Kingston, to the rector of which parish the patronage still belongs. It has been much enlarged and repaired within the last century; and contains the remains of Thomson, the poet of the *Seasons*, who died here on the 27th of Aug. 1748, of Dr. Moore, author of *Zeluco*, and of *Views of Society in France, Italy, &c.*, Gilbert Wakefield, the scholar, Kean, the actor, &c. A new district church has also been recently erected in the pointed style. There is a Roman Catholic chapel, and the Independents, Baptists, Wesleyan, and Calvinist Methodists, have places of worship, to most of which Sunday schools are attached. A charity school, founded here in 1713, and subsequently endowed, furnishes gratuitous instruction to about 250 poor children, 60 of whom receive clothing. There are also three sets of almshouses, with pretty considerable endowments, and numerous money charities. A theatre is open during summer, and there are several excellent hotels, that on the hill, already alluded to, being a very extensive establishment in a magnificent situation.

Richmond is infinitely more a place of pleasure than of business, though it has a considerable retail trade for the supply of the resident families and visitors. It is a principal resort of visitors from London during the summer months, conveyed thither partly by coaches and partly by steamers and row boats; on the whole, however, the influx of visitors to Richmond, at least of the middle and lower classes, has materially diminished since the establishment of steamers on the river to Greenwich, Woolwich, Gravesend, &c.

Richmond park, the principal entrance to which, is at the W. end of the terrace contiguous to the Star and Garter hotel, formed by Charles I., comprises an area of 2253 acres, being about 8 m. in circumference. It consists mostly of poor soil; but has a great variety of surface, is well stocked with deer, and perfectly open to the public. The great lodge, which stands on rising ground, commanding a fine prospect, was built by Sir R. Walpole, ranger during the reigns of George I. and II., at an expense of £14,000. Here, also, is a new or stone lodge, built for a hunting seat by George I., and given by George III. to Lord Sidmouth, by whom it is still (1841) occupied.

What is called the *Old Park* extends along the Thames

## RICHMOND.

from Kew to Richmond, and includes the royal gardens and pleasure grounds attached to Kew palace (see Kew). This park is, however, inaccessible to the public, except on certain days; and is considered as belonging rather to Kew than to Richmond.

The *Green*, at the bottom of the town, forms a parallelogram almost as large as Lincoln's Inn Fields; it is used in summer for playing matches at cricket, bowls, &c.: on one side of the green is a handsome public walk.

Richmond (formerly called *Sheen*), was for centuries the site of a royal palace; but at what period it was erected is uncertain, though it became a fixed residence of royalty as early as the 14th century. Henry V. rebuilt it in a magnificent style. Henry VII. held a tournament here, in 1492, soon after which, the building having been destroyed by fire, a new palace was erected by that monarch, who gave the manor its present name, being that of his own title, previously to his accession to the crown: he died here in 1509. But its principal distinction consists in the fact, that when the emperor Charles V. visited England in 1523, he was lodged in this palace. Queen Elizabeth was imprisoned in it by her sister Mary, and it afterward became one of her favourite palaces, and here she died, on the 24th March, 1603. During the commonwealth, the palace was sold by the parliamentary commissioners for £10,753; and the whole appears to have been then dismantled and demolished, nothing now remaining except a few of the out-offices, its site being occupied by several modern mansions held on lease from the crown. On the N. side of the palace once stood a monastery, founded by Henry V. for Carthusian monks, the revenues of which, at the dissolution, were estimated at £963. A Franciscan convent, founded here in 1499, by Henry VII., was suppressed with the other in 1534.

The custom of Borough English, by which, in the event of the father's dying intestate, lands descend to the youngest son, or, in default of heirs male, to the youngest daughter, prevails in the manor of Richmond.

RICHMOND, county, N.Y., situated in the S. part of the state, and contains the whole of Staten Island, having an area of 63 sq. m. It is divided into four townships, and has a communication many times a day by steamboats, to New-York. It contained in 1840, 2517 neat cattle, 136 sheep, 3180 swine; and produced 18,989 bushels of wheat, 8863 of rye, 36,347 of Indian corn, 4238 of buckwheat, 5819 of barley, 33,739 of oats, 47,712 of potatoes. It had 49 stores; capital invested in the fisheries \$36,000; one dyeing and printing works, 14 flouring-mills, eight grist-mills, one saw-mill, one printing-office, one weekly newspaper; one academy, 25 students; 14 schools, 604 scholars. Pop. 10,965. Capital, Richmond.

RICHMOND, county, Va., situated in the E. part of the state, and contains 300 sq. m. Bounded S.W. by Rappahannock river. It contained in 1840, 6996 neat cattle, 4738 sheep, 14,329 swine; and produced 43,224 bushels of wheat, 1014 of rye, 231,493 of Indian corn, 25,920 of oats, 5434 of potatoes, 5738 pounds of tobacco, 9252 of cotton. It had 12 stores, eight grist-mills, three saw-mills; nine schools, 170 scholars. Pop.: whites, 3092; slaves, 2363; free coloured, 510; total, 5965. Capital, Richmond, C.H.

RICHMOND, county, N.C., situated in the S. part of the state, and contains 540 sq. m. Bounded W. by Yadkin river, N.E. by Lumber river. It had in 1840, 10,653 neat cattle, 7226 sheep, 18,841 swine; and produced 20,347 bushels of wheat, 1649 of rye, 247,169 of Indian corn, 12,542 of oats, 31,171 of potatoes, 4715 pounds of tobacco, 1,794,154 of cotton. It had eight stores, one cotton factory with 1000 spindles, 13 flouring-mills, 40 grist-mills, 15 saw-mills; six academies, 219 students; eight schools, 233 scholars. Pop.: whites, 4693; slaves, 3880; free coloured, 336; total, 8909. Capital, Rockingham.

RICHMOND, county, Ga., situated in the E. part of the state, and contains 384 sq. m. Bounded N.E. by Savannah river, S.W. by Briar creek. The railroad from Augusta to Decatur crosses its N. part. It contained in 1840, 5449 neat cattle, 758 sheep, 10,797 swine; and produced 1670 bushels of wheat, 183,015 of Indian corn, 1912 of oats, 23,079 of potatoes, 692,275 pounds of cotton. It had 12 commission houses in foreign trade, 265 retail stores, two furnaces, two cotton factories with 2000 spindles, one flouring-mill, 15 grist-mills, 18 saw-mills, two printing-offices, two daily, four weekly, and two semi-weekly newspapers, and two periodicals; eight academies, 224 students; four schools, 36 scholars. Pop.: whites, 5650; slaves, 6066; free coloured, 186; total, 11,932. Capital, Augusta.

RICHMOND, city, port of entry, capital of Henrico county, and of the state of Virginia, is in 37° 32' 17" N. lat. and 77° 27' 28" W. long. from Greenwich, and in 6° 26' 4" W. long. from Washington. It is 23 m. N. from Petersburg, and 117 W. from W. The population in 1800 was 5737; in 1810, 9785; in 1820, 12,067; in 1830, 16,060; in 1840, 20,153, of whom 7509 were slaves.

It is pleasantly situated on the N. side of James river, immediately below the falls, at the head of tide water, directly opposite to Manchester, with which it is connected by two bridges. Manchester may be regarded as a suburb of Richmond. Occupying a site between the upper and the lower country, it is remarkably healthy, being free from the peculiar diseases of both, and the deaths annually do not exceed one in 85 of its population. The place presents a variety of surface, and affords from many of its parts highly picturesque views. The streets generally cross each other at right angles, and are mostly 65 feet wide; but some are narrower, and others are wider. The part of the city which is built on is about three miles long, and three fourths of a mile wide; but as laid out, it contains about 3 square miles, much of which is not built upon. The city is divided into two unequal parts by Shockoe creek, an active stream, which enters James river about 800 feet east of Mayo's bridge. Shockoe hill, in the W. part of the city, and on which are beautiful and airy residences, and Richmond hill, stand opposite to each other, with the creek between them, and near the eastern extremity of the city is Church hill, a commanding eminence. The buildings are spread over these elevated grounds, and the valley between them, declining to the river. The city contains about 1500 dwellings, more than a thousand of which are of brick, covered with slate, and the remainder are of wood. The buildings are chiefly plain, with more regard to convenience than to architectural ornament, though there are exceptions to this remark. Shockoe hill, which is a favourite place of residence, is an elevated plain; and near its brow is Capitol-square, a beautiful public ground, containing about nine acres, surrounded by a handsome iron railing, and ornamented with gravelled walks, and shaded with a variety of forest and other trees. In the centre of this square stands the capitol or statehouse, in a conspicuous and commanding situation, having a portico in front, with an entablature, supported by lofty Ionic columns, of fine proportions, and an imposing appearance. It is constructed after a model brought by Mr. Jefferson from Nismes in France. In an open hall in the centre of the building within, is a marble statue of Washington by Hodouin, a French artist. This statue was erected in 1788, during the lifetime of Washington; and on its pedestal is the following inscription, from the pen of Mr. Madison. "The General Assembly of the Commonwealth of Virginia have caused this statue to be erected, as a monument of affection and gratitude to George Washington, who, uniting to the endowments of the heroic virtues of the patriot, and exerting both in establishing the liberties of his country, has rendered his name dear to his fellow-citizens, and given the world an example of true glory." In a niche in the wall of the room, is a bust of La Fayette. The City hall, which is contiguous to the state house, is a costly and elegant edifice of Grecian architecture, having a portico at each end, with four Doric columns. It contains accommodations for the city courts, the common council-room, and several offices. The penitentiary is situated in the western suburbs of the city, and is an immense building, surrounding a hollow square, about 300 feet long from north to south, and 110 feet broad from east to west. The connected grounds belonging to it consist of several acres, which are enclosed. There are a county and a city jail; and an armory, with an edifice 320 feet long, and 280 feet wide. The almshouse is in the northern suburb of the city, and has a spacious edifice, well adapted to its purpose. There is a female orphan asylum, supported in part by funds of the corporation, and partly by private liberality, which is a highly useful institution. There is a public school for the education of poor children of both sexes, founded in 1816, with a commodious edifice, which is under the superintendence of trustees appointed by the city council, and is sustained by an annual appropriation from the literary fund of the state, together with an appropriation from the city treasury. There are two market-houses in the city. Among the public institutions of the place is the Virginia Historical and Philosophical society, which has its seat in Richmond, though its members are scattered over the state. It was founded in 1831, and has been incorporated. There is a theatre in Richmond, which, however, is not extensively patronized. A great blow was given to theatrical exhibitions by the destruction by fire, during a performance, of the old theatre of Richmond, which occupied the site of the present Monumental Episcopal church, which has the following inscription on a monument on its west side. "In memory of the awful calamity that, by the providence of God, fell on the city, on the night of the 26th of December, in the year of Christ 1811, whereby the sudden and dreadful conflagration of the Richmond theatre, many citizens of different ages, and of both sexes, distinguished for talents and for virtues, respected and beloved, perished in the flames, and in one short moment, public joy and private happiness were exchanged into universal lamentation, this monument is

## RICHMOND.

erected, and the adjoining church dedicated to the worship of Almighty God, that in all future times, the remembrance of this mournful event on the spot where it happened, and where the remains of the sufferers are deposited in one urn, may be united with acts of penitence and devotion. Above sixty killed and many others maimed." This event deeply affected the whole country. Among those who perished, was George William Smith, Esq., governor of the state. The city water works are among the most splendid and useful establishments of the city. They were commenced in 1830, and cost about \$120,000. Two forcing pumps, moved by water-power, raise 400,000 gallons of water each, from James river, in 24 hours, into three reservoirs, containing each 1,000,000 gallons, whence it is distributed over the city in pipes, along which are fire hydrants, at convenient distances.

Richmond contains 16 churches, three Episcopal, two Presbyterian, three Methodist, three Baptist, a Campbellite, Unitarian, Friends, Roman Catholic, and a Jews' synagogue. Some of the churches have large and elegant edifices; There are three banks, two of which occupy different apartments in the same fine building; and there are, two insurance offices.

Richmond is about 150 miles from the mouth of James river, by the course of the channel, and between 50 and 60 m. above City Point. Vessels requiring 14 feet of water come to the bar, about 6 m. below the city; above that those requiring 10 feet of water come to its wharves, at ordinary tide. The channel of the river is winding, and the distance of the place from the ocean forms some impediment to navigation. The tide rises at Richmond about 4 feet. Four steamboats are employed in towing vessels to and from City Point. There are owned in Richmond two ships, two barques, three brigs, and three schooners; and not fewer than 100 vessels visit the port, in the course of the year. A line of five schooners sails once a week to Petersburg; and a line of five schooners once a week to New-York. Three steamboats form a line for passengers to Norfolk; and two stean packets form a line to Baltimore. The exports from Richmond consist principally of flour, tobacco, and coal; and the total amount of its exports to foreign countries and coast-wise, amount to about \$6,000,000, annually. The tonnage of the port, in 1840, was 6911 tons. A canal extends from Richmond 116 miles to Lynchburg, sometimes occupying the bed of the river, and is in progress beyond that place. At Richmond it is designed to enter a basin at the head of tidewater, which receives the shipping. A railroad extends from Fredericksburg through Richmond to Petersburg, and thence to Weldon on Roanoke river, where it connects with other southern railroads. At Richmond it crosses James river on an elevated bridge erected for the purpose. But the commercial facilities of Richmond, are exceeded by its manufacturing advantages. In the falls in James river, extending for about 6 miles, it has an immense water-power; and though greatly, it is but partially improved. It has extensive flouring-mills, and iron works, with which are connected rolling and slitting-mills, and nail factories, and it has a very extensive cotton factory. According to the census of 1840, there were 17 commercial, and 29 commission houses in foreign trade, with a capital of \$3,062,000; 258 retail dry goods and other stores, with a capital of \$1,646,450; three lumber-yards, with a capital of \$24,000; four furnaces produced 600 tons of cast iron, and eight forges, rolling-mills, &c., produced 1700 tons of bar iron, consuming 4100 tons of fuel, the whole employing 220 persons, and a capital of \$317,500; 100 persons produced machinery to the amount of \$128,000; nine persons manufactured the precious metals to the amount of \$10,800; one cotton factory with 5810 spindles, produced to the amount of \$89,000, employing 369 persons, with a capital of \$175,000; 981 persons manufactured tobacco to the amount of \$929,340, with a capital of \$492,250; 17 persons manufactured hats and caps to the amount of \$15,000, with a capital of \$3000; two saddleries and other manufactories of leather produced to the amount of \$9000, with a capital of \$3000; 13 persons manufactured 182,000 pounds of soap, and 95,000 pounds of tallow candles, with a capital of \$13,000; 96 persons manufactured furniture to the amount of \$51,000, with a capital of \$39,000; 79 persons manufactured carriages and wagons to the amount of \$45,000, with a capital of \$60,500; two persons produced confectionary to the amount of \$10,000, with a capital of \$2500; 21 flouring-mills produced 74,958 barrels of flour, and with two grist-mills and three saw-mills, employed 69 persons, produced to the amount of \$37,790, with a capital of \$461,000; 155 persons produced bricks and lime to the amount of \$55,000; one paper-mill, employing 50 persons, produced to the amount of \$55,000; vessels were built to the amount of \$5000; eight printing-offices, one bindery, two daily, six weekly, and two semi-weekly newspapers, and one periodical employed 79 persons, and a capital of \$48,700; 43 brick houses and five

## RIDGEFIELD.

wooden houses were built by 233 persons, and cost \$94,500; the total amount of capital employed in manufactures was \$1,372,950. There were one college, 63 students; 13 academies, 753 students; 14 schools, 503 scholars.

Richmond is governed by a mayor who is elected by the city councils, a recorder, and eleven aldermen. The recorder and aldermen are chosen from 27 individuals elected by the people, and the remaining 15 of these individuals, constitute the city council.

Richmond was founded by an act of the state legislature, in 1742; and the seat of government was removed to this place from Williamsburg in 1780. In 1787, it contained about 300 houses. The canal around the falls in James river, which added so much to the commercial advantages, was completed in 1794. Its extension to Lynchburg since 1835, with other facilities of communication with other places, has added greatly to these advantages.

RICHMOND, p. t., Lincoln co., Me., 15 m. S. by W. Augusta, 585 W. Bounded E. by Kennebec river. It contains 12 stores, one grist-mill, one saw-mill; one academy, 50 students; nine schools, 472 scholars. Pop. 1604.

RICHMOND, p. t., Cheshire co., N. H., 61 m. S.W. Concord, 424 W. Chartered in 1752. Drained by branches of Ashuelot river. It has 15 schools, 418 scholars. Population 1165.

RICHMOND, p. t., Chittenden co., Vt., 13 m. S.E. Burlington, 27 m. W.N.W. Montpelier, 513 W. Incorporated in 1794. Watered by Onion or Winooski and Huntington rivers, which afford water-power. It contains a church with 16 sides, and a steeple rising from the centre, occupied by various denominations, three stores, one fulling-mill, one woollen factory, six saw-mills, two tanneries; eight schools, 210 scholars. Pop. 1054.

RICHMOND, p. t., Berkshire co., Mass., 142 m. W. Boston, 369 W. Drained by a branch of Housatonic river. It has four stores, three saw-mills; one academy, nine students; five schools, 183 scholars. Pop. 1097.

RICHMOND, L, Washington co., R. I., 30 m. S.S.W. Providence. Bounded W. by Wood river, S. by Charles river, branches of which afford water-power. It contains two fulling-mills, three woollen factories, six cotton factories, with 7038 spindles, one grist-mill; two schools, 50 scholars. Pop. 1361.

RICHMOND, L, Ontario co., N. Y., 14 m. W. Canandaigua, 209 m. W. Albany. Honeyoe lake lies partly in its S. part, by the outlet of which it is watered. It contains an Episcopal and a Presbyterian church, six stores, one fulling-mill, one woollen factory, two flouring-mills, one grist-mill, three saw-mills, one oil-mill, three tanneries, one distillery; one academy, 25 students; 14 schools, 641 scholars. Pop. 1937.

RICHMOND, p. v., capital of Richmond co., N. Y., 159 m. S. by W. Albany, 237 W. Situated partly in three townships, near the centre of Staten Island, and contains a courthouse, jail, two churches, a Presbyterian and Episcopal, three stores, 30 dwellings, and about 200 inhabitants.

RICHMOND, L, Berks co., Pa. Watered by Moselem creek, which affords water-power. It contains two churches, common to Lutherans and Presbyterians, five stores, one furnace, four grist-mills, three saw-mills. Pop. 1997.

RICHMOND CITY, p. v., Lake co., O., 177 m. N.E. Columbus, 351 W. Situated on the W. side of Grand river, 1½ m. from its entrance into lake Erie. Steamboats and lake vessels come to its wharves.

RICKMANSWORTH, a market town and par. of England, co. Herts., hund. Cashio, on the Gade, 18 m. N.E. London. Area of par., 9740 acres. Pop. in 1831, 4574. The parish church has been rebuilt within these few years, with the exception of the embattled tower, which belonged to the old church. The living, a vicarage, in the patronage of the Bishop of London, is worth about £510 a year. It has an endowed national school, and other minor and Sunday schools, and two almshouses. It is governed by two constables and two head-boroughs. In its vicinity are several streams, on which considerable flour and paper-mills have been erected. Its trade is facilitated by the Grand Junction canal, which passes close by the town. Moor-park; a seat of the Marquis of Westminster, in the vicinity, was once the residence of Cardinal Wolsey; but it has since been rebuilt in the modern style; the grove, belonging to Lord Clarendon, and other seats, are also in the immediate neighbourhood.

RIDGEBURY, p. t., Bradford co., Pa., 18 m. N.W. Towanda. Drained by Bentley and South creeks, tributaries of Tioga river. It has seven schools, 260 scholars. Pop. 1214.

RIDGEFIELD, Fairfield co., Ct., 31 m. W. by N. New-Haven, 81 m. S.W. Hartford, 281 W. Drained by Saugatuck and Norwalk rivers, and the E. branch of Croton river. It contains three churches, a Congregational, Episcopal, and Methodist, 12 stores, one furnace, one fulling-mill, two grist-mills, four saw-mills; three academies, 44 students; 14 schools, 392 scholars. Pop. 2474.

## RIDGEWAY.

RIDGEWAY, p. t., Orleans co., N. Y., 10 m. W. Albion, 263 m. W. by N. Albany, 400 W. Drained by Oak Orchard creek, which has a fall of about 30 feet, affording good water-power. The Erie canal passes through it. It contains four churches, a Baptist, Methodist, Episcopal, and Presbyterian, 20 stores, two fulling-mills, two woollen factories, one furnace, three flouring-mills, two grist-mills, 11 saw-mills, two tanneries, one brewery, two printing-offices, two weekly newspapers; one academy, 97 students; 21 schools, 989 scholars. Pop. 3534.

RIDGEWAY, t., Bradford co., Pa. Drained by Clarion river and Toby's and Kersey's creeks. It has three stores, one grist-mill, 10 saw-mills; seven schools, 260 scholars. Pop. 1214.

RIGA, an important city and river port of European Russia, cap. of Livonia, on the Dwina or Duna, about 9 m. from its embouchure, in the gulf of Riga, lat. 56° 57' 12" N., long. 24° 0' 4" E. Pop. in 1835, including the garrison of 10,000 men, 67,338. About two thirds of the resident population are Lutherans, the rest consisting of members of the Russo-Greek church, Catholics, &c.

Riga is strongly fortified. It consists of the town, properly so called, and the suburbs; the former being entirely inclosed by the fortifications. Streets in the town narrow, crooked, and houses generally brick; in the suburbs, which are much more extensive, the streets are broad and regular, and the houses mostly of wood. One of the suburbs lies on the left bank of the river, the communication with it being maintained by a floating bridge about 2400 feet in length.

Among the public buildings are the cathedral, consecrated in 1211, and rebuilt in 1547; the church of St. Peter, built in 1406, with a tower 440 feet in height, being the most elevated in the empire, and commanding a fine view of the city and adjacent country; the castle, the seat of the chancellor, and of the general and civil governors; hall of the provincial states; town-house; exchange; arsenal, &c. A magnificent column, surmounted by a colossal bronze Victory, was erected in 1817, by the mercantile body, in honour of the emperor Alexander and the Russian army.

Among the literary establishments are a gymnasium, a lyceum, a school of navigation, and various elementary schools, a public library, an observatory, a society of Lettonian literature, &c. Manufactures of no great importance, though, of late, materially improved. In 1835 there were in the city 25 different manufacturing establishments, employing in all 1397 workmen, of which those of cotton, cloth, and rugs, were the most important. There are also various sugar-houses, tobacco manufactories, breweries, &c.

Owing to her situation on a large navigable river, Riga is the entrepôt of an extensive country; and is, in respect of foreign commerce, the next town in the Russian dominions to Petersburg. Corn used to be the principal article of export, but it is now far surpassed by flax and flax-seed, the exports of which have increased very rapidly. The other great articles of export are hemp and hemp-seed, timber, including masts and deals, hides, tallow, coarse linen, and canvass, &c. The total value of the exports in 1836 amounted to 47,735,684 roubles, of which flax constituted 23,829,920 roubles, flax-seed 8,731,763 ditto, and timber 3,563,763 ditto. In 1835, the exports of hemp amounted to 855,482 pods, but this is rather above the average. The imports consist principally of sugar, and other colonial products, dye-stuffs, wines, cotton, cotton-stuffs and cotton-yarn, woollens, salt, herrings, &c. Their total value in 1836 was 15,093,675, being less than a third part of the exports. The largest part by far of the trade is carried on with England. There is a bar at the mouth of the river which has usually from 12 to 13 feet water; and it is customary for vessels drawing more than this to load and unload the whole or a part of their cargoes at Boldera, a small port outside the bar. The entrance to the river, at Dunamunde, is guarded by a fort, where is also the custom-house. The ships arriving at Riga vary from 1000 to 1500 a year. In 1836, the arrivals were 1102, and the clearances 1127, about a third part of which were English. The customs duties during the same year exceeded 8,000,000 roubles. If we may depend upon the official accounts, Riga has increased very rapidly. Under Catherine II., its population did not exceed 20,000; in 1824 it amounted to 39,908; and in 1835, as already stated, to 57,338, exclusive of the garrison. It has occasionally suffered considerably from inundations. (See the official returns published by the Russian government; *Schmitzer, La Russie, &c.*, p. 508; the art. DWINA, in this dictionary, &c.)

RIGA, p. t., Monroe co., N. Y., 241 m. W. by N. Albany, 382 W. Drained by Black cr., a tributary of Genesee r. The Tonawanda railroad passes through it. It has three stores, four fulling-mills, one woollen factory, one furnace, two grist-mills, six saw-mills, two tanneries, one distillery; two academies, 65 students; 14 schools, 774 scholars. Pop. 1984.

## RIO DE JANEIRO.

RINDGE, p. t., Cheshire co., N. H., 67 m. S.S.W. Concord, 435 W. Watered by branches of Contoocook and Millers rivers. Incorporated in 1768. Iron ore is found, and a paint resembling Spanish brown. It contains two churches, a Congregational and Methodist, four stores, three grist-mills, seven saw-mills; 13 schools, 393 scholars, Pop. 1161.

RIMINI, (an. *Ariminum*), a city of Italy, Papal states, leg. Forl, between the rivers Marecchia (an. *Ariminus*), and Ansa (an. *Aprusa*), within about two miles of the embouchure of the former in the Adriatic, 283 m. E.S.E. Forl, and about the same distance S.E. Ravenna. Lat. 44° 4' N.; long. 12° 34' 35" E. Pop. about 12,500; but including the suburbs, and immediately contiguous villages, the pop. amounts to 27,000. (*Rampoldi*.) It is walled, and entered by several gates. A long street traverses it, terminating on the N. at the *Porta di San Giuliano*, whence emerges the *Emilian way*, leading to Piacenza; and on the S. at the *Porta Romana*, where ends the *Flaminian way*, conducting thither from Rome. The town is well built, having some good streets, and handsome marble palaces; but, like most other Italian cities, it has a dull, melancholy, and deserted appearance. The cathedral, said to have been built on the ruins of a temple of Castor and Pollux, was restored and altered by Alberti in the 15th century, and has a very elegant exterior, to which, however, the interior offers a lamentable contrast. In it are some tombs of the Malatesta family, once lords of Rimini. According to Eustace, this building was converted by the French into a military hospital. The church of San Giuliano has a fine altar-piece by Paul Veronese, and several good paintings by Guido, and other masters; in that of St. Augustine is a ceiling handsomely painted in fresco. It has a handsome town-house, theatre, a bowling green, and a good fish market; and in the Gambalunga palace is an extensive library, liberally thrown open to the public. The castle built here by Sigismund I. is falling into decay. The principal square is embellished with a fountain, and a statue of Paul V.; and in another of the open spaces is a small platform, or pedestal of a column, which, according to an apocryphal tradition, was the *suggestum* on which Cæsar harangued his troops after passing the Rubicon! At the S. entrance of the city is a triumphal arch, raised in honour of Augustus, and in most respects worthy of admiration; but Eustace says, that it was surmounted in the middle ages by a Gothic battlement, by which it is still disfigured. Both rivers are crossed by solid bridges; that over the Marecchia appears, from the inscriptions, to have been commenced by Augustus, and finished by Tiberius. It is of marble, 920 ft. in length (*Rampoldi*), and has five arches. Critics differ as to its merit as a work of art; but being still in excellent preservation, there can be no difference of opinion as to the solidity of its construction. Without the walls are the traces of an amphitheatre, and other remains of antiquity. The port of Rimini, on the Adriatic, at the mouth of the Marecchia, is so much obstructed by sand, as to admit small vessels only; but the fragments of marble linings piers, &c., attest that it was formerly of considerable importance.

Rimini has manufactures of silk, glass, and earthenware; and the surrounding country being very fruitful, it has a considerable trade in corn, and furnishes quantities of fish to the neighbouring towns.

In antiquity Ariminum was of far more importance than at present. It was the first considerable town on the E. coast of the peninsula, after crossing the Rubicon, (the boundary between Cisalpine Gaul and Italy, properly so called,) and was regarded as one of the bulwarks of the latter. A Roman colony was planted in it *anno U.C.* 485. and at a subsequent period it received another colony. It was occupied by Cæsar immediately after he had crossed the Rubicon, and was honoured with the especial patronage of Augustus. It was given by Peplia, with the rest of Romagna, to the Holy See, to which, with few intermissions, it has since belonged. (*Rampoldi, Corografia dell'Italia; Woods's Letters of an Architect; Cramer's Ancient Italy*, i. 255, &c.)

RIO DE JANEIRO, or simply RIO, a city and seaport of Brazil, of which it is the cap., and the largest and most important commercial city of S. America, on the W. side of one of the finest bays in the world, 80 m. W. Cape Frio, lat. 22° 54' 15" S., long. 43° 15' 50" W. Pop. probably about 200,000, of whom about a half are whites, and the rest mostly negro slaves. The city, which is in the shape of a parallelogram, is situated on level ground, at the foot of hills, and has a fine appearance from the bay. The older portion, or that adjoining the sea, is divided on the W. from what may be called the new town by a large open space, the *Campo da Honra*. The style of architecture is in general mean, resembling that of the older parts of Lisbon; and though great improvements have been effected since the emigration of the court of Portugal to Rio in 1807,

# RIO-DE-JANEIRO.

a great deal remains to be done before it be entitled to rank even with a second-rate European town. The streets, which are mostly straight, and intersect each other at right angles, are pretty generally furnished with *trottoirs*, and paved with blocks of granite. But though many of them have been widened of late years, and otherwise improved, they are still, for the most part, narrow and dirty, with a water-course in the centre, the usual receptacle of the filth from the houses. (*Three Years in the Pacific, by an American*, i. 97.) The houses, which are mostly of granite, or of granite and wood, are seldom more than two stories in height, rough, or whitewashed, with red tile roofs. They are narrow, but deep in proportion to the height; the lower story is commonly occupied by the shop or workhouse, and, in the houses of people of distinction, by the stable and coach-house: the second story (and third, if there be one) comprising the family apartments. The mildness of the climate, which is here a perpetual spring, rendering artificial heat unnecessary, there are no fire-places except in the kitchens, and, consequently, very few chimnies, which, to a stranger from Europe, gives the city a bald and, as it were, truncated appearance. The windows in the second story generally open upon iron verandas, the *jalouses* having been removed by order of government. In the outskirts of the town the streets are unpaved, and the houses of only one floor, low, mean, and dirty, with doors and windows of lattice work, opening outwards to the annoyance of the passengers. The rents of houses are scarcely as high as in London. Inside of the houses it is usual for all the apartments on the same floor to communicate above the partitions, which do not extend to the ceiling. This, though it destroys privacy, is advantageous, by allowing that free circulation of air so important in hot climates.

There are about 40 churches in the city; but none of them can be called fine buildings, or are worthy the notice of travellers from Europe. The cathedral or church of Nossa Senhora da Gloria, on a lofty hill, on the S. side of the city, is a conspicuous object from a distance, and especially from the bay. There are several conventual establishments; a *misericórdia*, with an attached hospital; a founding hospital; an institution where female orphans, born of white married parents, are educated and portioned off in marriage, with various other charitable institutions.

Water is conveyed into the city from a neighbouring lofty hill (2308 ft.), called the Corcovado, by a magnificent aqueduct, constructed in 1740. The water is thence conveyed to public fountains in different parts of the city; and a good many persons earn a livelihood by carrying water from these fountains to private families. Nothing, however, would contribute so much to the cleanliness and health of the city as an increase in the supply of water, and its distribution by pipes to private houses. The town is very indifferently lighted. There are but few inns and hotels, and those mostly very inferior; they are wholly for the accommodation of strangers, being rarely visited by the townspeople.

The royal palace forms two sides of a *largo*, or oblong space, opening to the bay near the principal landing-place. It consists partly of the old palace of the viceroys, and partly of a convent formerly belonging to the Carmelites, and is wholly destitute of architectural beauty. Among the other public buildings may be specified a new and handsome theatre, the exchange, the old college of the Jesuits, and the episcopal palace and royal villa of Christovao, in the environs.

Neither education nor literature is here in a very flourishing state. There are, however, sundry, lyceums and grammar sch-ols, and a great many private licensed academies. Among the principal educational institutions may be specified a school of surgery, military and commercial academies, an academy of arts, a national museum, &c. In the vicinity is a very good botanic garden, comprising about 4 acres, including, among other exotics, numerous specimens of the tea plant. Near the imperial palace is the public library, containing from 50,000 to 70,000 vols. Several daily and weekly newspapers issue from the Rio press; but they are said to be, without exception, the most worthless publications of their class any where to be met with. The police and health of the city have been materially improved within the last dozen years.

The market-place consists of a collection of filthy booths for the sale of vegetables, which are at once abundant, excellent and cheap. The farina of the *Jatropha Manihot* is here the grand substitute for bread stuffs, and is extensively used by all classes, forming, with bananas, the principal food of the negroes. The yam supplies the place of the potatoe; and the finest oranges are sold at from 10 to 25 cents per 100. Butchers' meat is sold in shops, scattered up and down the city. The beef, though wholly without fat, is tender. Pork is good; mutton bad and dear. Fish abundant and good. The slave-market, described by Basil Hall and others, no longer exists; but the clandestine importation of slaves is still carried on to a very considerable

extent. (*Three Years in the Pacific*, i. 103.) Slaves, however, are, speaking generally, very indolently treated. "We may," says a Rio circular, "assure our philanthropic friends abroad, that, as regards the slaves, they are here better fed, better clothed, are on the whole better treated, laugh more and weep less, than the major part of the labouring poor in Europe."

*Commerce*.—The trade of Rio is very extensive, and has increased rapidly during the last few years. It is now by far the greatest mart for the export of coffee. The shipments of this important article which, in 1830, amounted to 396,785 bags, have increased with such unexampled rapidity that, in 1839-40, they amounted to 1,095,346 bags, that is (taking the bag at 154 lbs.), to 168,683,284 lbs., or 75,305 tons! being nearly equal to all the exports of coffee from all the other ports in the world! Sugar is also an important article of export from Rio, though latterly it has been decreasing, and does not now exceed 10,000 cases (15 cwt. each); the exports of sugar from Santos are, however, increasing; and amounting, in 1839-40, to 624,750 arrobas. (*See Santos*.) The other great articles of export from Rio are hides, rice, tobacco, rum, tapioca, ipêcauanha, manioc flour and other inferior articles. The export of cotton has almost entirely ceased; and that of gold, diamonds, &c., is mostly clandestine, and too inconsiderable to be worth notice. We subjoin

AN ACCOUNT OF THE QUANTITIES AND VALUES (in Reïs) of the Principal Articles of Brazilian Produce, exported from Rio, in 1840.

	Reis.	Reis.
Coffee, 5,255,950 arrobas, at 3500 . . .	18,363,925	
Expenses, including duty and commission, 174 per cent . . .	3,219,269	21,615,094
Sugar, 575,003 arrobas, at 2100 . . .	1,207,500	
Expenses, as above, 15 per cent. . .	905,620	2 113,120
Hides, 184,292, at 6300 . . .	1,161,039	
Horns, 100,000, at 4500 per 100 . . .	4,500	
Tanned half-hides, 17,500, at 2500 . . .	43,750	
Rice, bags, 17,805, at 9000 . . .	161,145	
Tobacco, arrobas, 100,000, at 4500 . . .	450,000	
Run, pipes, 3110, at 65,000 . . .	202,150	
Tapioca, barrels, 250, at 9000 . . .	2,250	
Ipêcauanha, lbs., 20,000, at 500 . . .	10,000	
Jacaranda, manioc flour, and various articles . . .	200,00	
	2,234,834	
Expenses, as above, 12½ per cent. . .	279,350	2,514,184
Total value of exports during the year 1840 . . .		26,242,298
* Being at the medium exchange of the year, equal to about 3,400,000 <i>l</i> .		

The aggregate value of the exports, in the undermentioned years, have been—

	Reis.	Reis.
1836 . . .	18,711,824	1839 . . . 23,362,298
1837 . . .	15,362,642	1840 . . . 26,242,398
1838 . . .	20,455,805	

The principal article of import consists of cotton goods, the value of which amounts to full one third of the total value of the imports. Next to cottons are woollens, linen, and silk manufactures, wines, jewellery, and ironmongery; flour, meat, fish, butter and other articles of provision; spirits, salt, earthenware, paper, and a host of other articles. Of the total value of the imports in 1838-9, estimated at 29,450,698 rs. that of the cotton goods, which were almost wholly supplied by Great Britain, amounted to 10,555,704! We subjoin

AN ACCOUNT OF THE VALUE OF THE IMPORTS INTO RIO during each of the Three Years ending with 1838-9, specifying the value of those furnished by each Country:—

Countries	1836-1837.	1837-1838.	1838-1839.
	Rr.	Rr.	Rr.
G. Britain and her possessions	13,345,757	2,639,346	15,092,554

Totals . . .	25,490,100	21,316,275	29,450,698

The customs' duties at Rio, in 1840, amounted to 1,929,822 reïs on imports, and to 1,920,406 rs. on exports. During the same year 538 ships arrived at Rio from foreign ports; and 812 sailed, of which 512 were laden with Brazilian produce, and 230 in ballast. On the 1st of June, 1841, there were 693

## RIPLEY.

in the port 21 British, 37 Portuguese, 12 American, &c. ships. The arrivals coastwise, in 1840, amounted to 1459. (*From Freese's Rio Circular, and Private Returns from Rio.*)

The currency of Rio, and of Brazil generally, is in a very vitiated state. The par of exchange, when the silver currency was maintained, was 67*d.*, and the current rate was usually higher; but for some years past, owing to the introduction of paper and copper, the exchange has fallen, so that its average rate in Rio, in 1840, was 30*d.*

**Harbour.**—As already stated, the harbour of Rio is one of the finest in the world. Its entrance is marked by a remarkable hill, in the form of a sugar-loaf, 900 ft. in height, close to its W. side, while on the opposite side of the bay, at the distance of about 1½ m., is the fort of Santa Cruz, on which is a lighthouse. There is, also, a lighthouse, having the lantern elevated about 300 ft. above the sea level, on *Illa Rasa* (Flat island), about 10 m. S. from the mouth of the harbour. Ships may enter either by night or day, there being no obstruction or danger of any kind. The water in the bay is sufficient to float the largest ships of war; and it is extensive enough to accommodate all the navies of all countries in the world.

**RIPLEY**, county Ia. Situated in the S.E. part of the state, and contains 400 sq. m. Drained by Laugherty's and Graham's creeks. It contained in 1840, 6200 neat cattle, 5433 sheep, 6388 swine; and produced 22,173 bushels of wheat 115,883 of Indian corn 158,413 of oats, 9191 of potatoes, 5051 pounds of tobacco, 19,886 of sugar. It had 22 stores, three flour-mills, five grist-mills, 13 saw-mills, seven tanneries, one distillery; one academy, 20 students; two schools, 70 scholars. Pop. 1039. Capital, Versailles.

**RIPLEY**, county Mo. Situated toward the S.E. part of the state, and contains 1080 sq. m. Drained by branches of Big Black, and by Current rivers. It contained in 1840, 4405 neat cattle, 2769 sheep, 12,624 swine; and produced 7442 bushels of wheat, 161,503 of Indian corn, 5791 of oats, 3539 of potatoes, 19,529 pounds of tobacco, 7315 of cotton, 5220 of sugar. It had six stores, 20 grist-mills, 14 saw-mills, eight distilleries; five schools, 60 scholars. Pop.: whites, 2777; slaves, 77; free coloured, 2; total, 2856. Capital Van Buren.

**RIPLEY**, p. t., Chautauque co., N. Y., 10 W. Mayville, 350 m. W. by S. Albany, 358 W. Bounded N. by Lake Erie. It contains one store, one fulling-mill, three grist-mills, eight saw-mills, four tanneries; two academies, 35 students, 17 schools, 747 scholars. Pop. 2197.

**RIPLEY**, p. v., Union t., Brown co., O., 115 m. S.W. Columbus, 474 W. Situated on the N. side of Ohio river immediately below the mouth of Red Oak creek, 56 m. above Cincinnati. It contains two churches, a Presbyterian and Methodist, 12 stores, one iron foundry, one engine factory, two steam saw-mills, one steam woolen factory, one oil-mill, two carding machines, a steamboat yard, 100 dwellings and 800 inhabitants. Several steamboats are owned at this place, and much flour, pork, &c., are shipped to New-Orleans.

**RIOM** (an. *Ricomagus*), a town of France, dép. Puy-de-Dôme, cap. arrond., on a hill, 8 m. N. by E. Clermont. Pop. in 1836, ex. com., 11,050. It is well built; but the houses are mostly in an antiquated style, and being wholly constructed of Volvic lava, with which it is also paved, it has a singularly sombre appearance. It has several handsome public fountains, and its churches, hospitals, the various public offices, and the sub-prefecture, are good buildings. One of its promenades is ornamented with a statue of Desaix.

**Riom** is the seat of a royal court for the dép. Puy-de-Dôme, Allier, Cantal, and Haut-Loire; and of tribunals of primary jurisdiction and commerce. It produces cotton and linen cloths, candles, leather, and brandy; and has a large trade in agricultural produce. It was formerly the cap. of Auvergne, and the residence of its dukes, some remains of whose castle still exist; and it continues to rank as the second town within the ancient limits of that province. Among the distinguished individuals belonging to Riom may be specified Gregory of Tours, and the learned Jesuits J. and A. Simmond. (*See Hugo. art. Puy-de-Dôme; Dict. Geog., &c.*)

**RIPON**, a city, parl. and mun. bor. and market town of England, N. riding co. York, lower div. wap. Claro, on the Ure, close to its confluence with the Skell, both of which are here crossed by stone bridges, 22 m. N.W. York. Population of parl. bor. (which comprises the township of Ripon with part of the district of Bondgate), in 1831, 5700. "The appearance of Ripon is that of a very respectable and wealthy country town; it is increasing in population, and though it has no manufactures itself, there is an extensive manufactory of saddle-trees in Bondgate. The neighbouring country is rich and well wooded, containing many objects of local attraction and interest; and this may, perhaps, account for the fact, that of late years many respectable families have been induced to settle here. The town has,

## RIPON.

therefore, increased in importance as a residence for persons of that class." (*Parl. Boand. Report.*) The streets are irregularly laid out, but clean, and well lighted with gas, many of them meeting in the market-place, a spacious square surrounded with good shops, &c., having in its centre an obelisk 90 ft. in height, surmounted by the city arms, and on its S. side a particularly handsome town-hall, comprising courts, offices, and a handsome room for balls and public meetings. Ripon minster, erected in 1836 into a cathedral, and built in the 14th and 15th centuries, is said to be one of the best proportioned churches in England. It is a cruciform structure, with a tower rising from the intersection of the nave and transepts, besides two others (each 110 ft. in height) at the W. end. Its length, from E. to W. is 266 ft.; breadth of choir and aisles, 67 ft.; and length of transepts, 132 ft. "This venerable edifice," says Mr. Britton, "contains various parts worthy of attention, particularly its W. front, a very fine specimen of bold early English, and, except the battlements and pinnacles, without alteration. A part of the church is Norman, and a great portion of the transepts but little later. The choir is partly decorated; and S. of it is a Norman crypt, above which are some Norman buildings used as vestries. At the E. end of the choir, which is sadly disfigured by heavy modern galleries, is a decorated E. window of five lights with very elegant tracery. The nave is very light, exhibiting some extremely fine composition; and there is a considerable quantity of good screen-work, both in wood and stone." The chapter comprises a dean, subdean, and six canons, who divide among them a net revenue of £2633. Ripon was erected into a bishopric in 1838, the diocese comprising most of the populous parts of the W. riding, with the liberty of Richmondshire in the N. riding. The annual revenue of the see is £4500, chiefly derived from the surplus fund formed out of the deductions from the revenues of the larger sees. Trinity church, built and endowed in 1826 at a cost of above £13,000, is a Gothic cruciform structure, with lancet windows, and has accommodation for upwards of 1000 persons. The Wesleyan Methodists have two places of worship, and there is one each for Independents and Primitive Methodists. The town has several Sunday-schools, besides which there are national schools both for boys and girls, and an endowed blue-coat school. A grammar-school, founded in 1555, has an endowment producing about £370 a year: it is free for Latin, Greek, and English grammar, to the sons of all residents, besides whom the master may receive boarders and pny-scholars. The town has several almshouses, money-charities, &c.; and a dispensary furnishes relief to the sick poor. A mechanics' institute, subscription library, and news-room, are comprised in "the public rooms," a large and rather handsome building, erected by subscription, having attached gardens and pleasure grounds. A theatre was built in 1792; but it has been converted into a depot and riding-school for the York hussar yeomanry cavalry.

Ripon was formerly celebrated for its manufacture of spurs, and the expression, "as true steel as Ripon rowels" was once proverbial for men of integrity and intrepidity. It had also a considerable manufacture of woollen cloths; but both these branches of industry have long ceased to exist. Linen-weaving, malting, and tanning are pursued to some extent; and, as seen above, saddle-trees and saddlery are made in pretty large quantities. It is a large staple for wool, bought up here by the clothiers of Leeds, Halifax, &c.; and it has an excellent corn-market. In 1767, the Ure navigation was brought up to the town, which is thus rendered accessible by barges of 30 tons. The Knarsborough and Claro banking company and Wensleydale banking company have branches here, and, in addition to these, there are two private banks and a savings' bank.

Ripon is a borough by prescription, but received a charter from James I. Under the Municipal Reform Act it is governed by a mayor, three aldermen, and 12 councillors. Corporation revenue, in 1839, £401, exclusive of £900 accruing from the sale of property. The borough has a commission of the peace under a recorder, and a separate manor-court is held by the dean and chapter, having jurisdiction over the district, called "canon fee." Ripon has sent two members to the House of Commons since the reign of Edward VI., the right of election being previously to the Reform Act, in the holders of burgate tenures, all of which had, for many years, been in the possession of a single individual. The limits of the parliamentary borough, as fixed by the Boundary Act, comprise the entire township of Ripon with a part of the township of Aismunderbycum-Bondgate. Registered electors, in 1839-40, 383. Large markets on Thursday, abounding with all kinds of agricultural produce, and six yearly fairs.

Ripon obviously derives its name from its position *in ripid* of the river Ure; but whether it be of Roman or Saxon foundation is wholly unknown. A monastery, founded here A.D. 661, attained considerable celebrity: it was, how

## RIVE-DE-GIER.

ever, destroyed by the Scotch in the reign of Edward II., and was not afterwards restored.

RIVE-DE-GIER, a rapidly increasing town of France, dép. Loire, cap. cant., on the Gier, a tributary of the Rhone, at the head of the canal of Givors, and on the railway from St. Etienne to Lyons, 12 miles N.E. the former, and 30 m. S.W. the latter. Population, in 1836, ex. com., 9040; but it is now (1841) probably much higher. It was formerly fortified, but its works have been destroyed, and it is now principally remarkable for its commercial activity, sharing largely in the growing prosperity of the country along the Rhone (which see), and the districts round Lyons and St. Etienne. It has extensive manufactures of glass wares; and its coal-mines furnish a large proportion of the coal required in the hardware factories of St. Etienne. It has also hardware manufactures of its own. The officers of the Givors canal company, and the noble reservoir belonging to that canal, are the most remarkable public works at Rive-de-Gier. (*Hugo, &c.*)

RIVERHEAD, p. t., capital of Suffolk co., N.Y., 90 m. E. New-York, 226 m. E.S.E. Albany, 306 m. W. The post-office is called Suffolk C.H. Bounded N. by Long Island sound. Watered by Peconic river, flowing into little Peconic bay. Small vessels come to the mouth of the creek, 2½ m. from the courthouse at Riverhead village. The village contains a courthouse, jail, three churches, a Congregational, Methodist, and New Jerusalem, an academy, 70 dwellings, and about 500 inhabitants. The courthouse has stood over 100 years. Wood is extensively exported to New-York and is loaded into the larger vessels at Jamesport, ½ m. below Riverhead village. The town contains 17 stores, one fulling-mill, one woollen-factory, three grist-mills, one saw-mill, two tanneries; 14 schools, 651 scholars. Pop. 2449.

ROANE, county, Tenn. Situated centrally toward the E. part of the state, and contains 600 sq. m. Watered by Tennessee and Clinch rivers. It contained in 1840, 11,140 neat cattle, 10,970 sheep, 43,034 swine; and produced 71,520 bushels of wheat, 639,064 of Indian corn, 148,962 of oats, 16,064 of potatoes, 2695 pounds of tobacco, 24,151 of cotton. It had 12 stores, one furnace, four forges, one cotton factory, with 504 spindles, 15 flouring-mills, 37 grist-mills, 22 saw-mills, one oil-mill, eight tanneries, 18 distilleries; one academy, 30 students; four schools, 88 scholars. Pop.; whites, 9590; slaves, 1298; free coloured, 60; total, 10,948. Capital, Kingston.

ROANOKE, r., Va. and N.C., is formed by the junction of Staunton and Dan rivers, near the S. boundary of Va., and flows into the head of Albemarle sound. Its navigation is unobstructed to Halifax near the foot of the Great Falls, 75 miles, for vessels of 45 tons. At the falls the river descends 100 ft. in twelve miles. A canal, 12 miles long, extends around these falls, opening a navigation for batteaux to the junction of Staunton and Dan rivers, both of which are navigable for some distance for boats of 5 tons.

ROANOKE, county, Va. Situated S.W. of the centre of the state, and contains 370 sq. m. Drained by branches of Staunton river. It had in 1840, 5337 neat cattle, 6087 sheep, 10,681 swine; and produced 140,506 bushels of wheat, 13,536 of rye, 181,534 of Indian corn, 98,246 of oats, 6303 of potatoes, 599,273 pounds of tobacco. It had 13 stores, one fulling-mill, two woollen-factories, eight flouring-mills, 12 grist-mills, 16 saw-mills, one oil-mill, two tanneries, three distilleries, one printing-office, one daily and one weekly newspaper; two academies, 194 students; five schools, 98 scholars. Pop.; whites, 3845; slaves, 1553; free-coloured, 101; total, 5499. Capital, Roanoke C.H..

ROANNA (supposed to be the *Rodumna* of Ptolemy), a town of France, dép. Loire, cap. arrond., on the Loire, here crossed by a new bridge, 30 m. N. Montbrison. Population, in 1836, ex. com., 9334. It is pretty, well built, open, straggling town, with a good quay, a large hospital, a handsome theatre, and a communal college, having a good library and cabinet of natural history, &c. It is the seat of a tribunal of original jurisdiction, and a chamber of manufactures; and is a depot for the manufactures of Lyons and the S.E. of France, passing to the central and N.W. dep. It also manufactures muslins, calicoes, and woollen fabrics; and has some trade in corn, wine, flour, timber, and charcoal. Various remains of antiquities have been frequently discovered in and near the town. (*Hugo, at Loire; Dict. Géog.*)

ROBERTSON, county, Tenn. Situated in the N. part of the state, and contains 350 sq. m. Drained by Red river and its branches. It contained in 1840, 9736 neat cattle, 12,015 sheep, 43,032 swine; and produced 86,068 bushels of wheat, 7416 of rye, 43,993 of Indian corn, 97,289 of oats, 8220 of potatoes, 1,168,833 pounds of tobacco, 12,394 of cotton. It had 10 stores, one cotton factory with 212 spindles, 19 distilleries, one printing-office, one weekly newspaper, and seven periodicals. Pop.: whites, 9977; slaves, 3790; free coloured 34; total, 13,801. Capital, Springfield.

## ROCHDALE.

ROBESON, county, N.C. Situated in the S. part of the state, and contains 700 sq. m. Drained by Lumber river. It had in 1840, 14,830 neat cattle, 12,513 sheep, 29,274 swine; and produced 2646 bushels of wheat, 248,195 of Indian corn, 1579 of oats, 54,632 of potatoes, 547,595 pounds of cotton. It had six stores, 58 grist-mills, 13 saw-mills; two academies, 61 students; 1126 scholars in schools. Pop.: whites, 6262; slaves, 2885; free coloured, 1222; total, 10,370. Capital, Lumberton.

ROBESON, p. t., Berks co., Pa. Bounded N.E. by Schuylkill r. It contains a Presbyterian and Lutheran church; six stores, one furnace, seven forges, four flouring-mills, five grist-mills, eight saw-mills, three tanneries. Pop. 2016.

ROBINSON, t., Alleghany co., Pa., 6 m. N.W. Petersburg. Bounded N. by Ohio river, E. by Chartier's creek. It has one store, one fulling-mill, two woollen-factories, five flouring-mills, five grist-mills, two saw-mills; nine schools, 315 scholars. Pop. 1694.

ROCHDALE, a parl. bor., market town, and par. of England, middle div., hund. Salford, co. Lancaster, on the Roch, tributary of the Irwell, 11 m. N.N.E. Manchester, and 37 m. E.N.E. Liverpool. Population of town and parliamentary borough (which comprises all within the limits of a circle described with the radius of ½ m. from the town-hall), in 1831, 25,000: population or parish (which extends over 58,620 acres), 74,427. The town consists of several streets, greatly improved of late years: the principal thoroughfare, in which are the market-house and town-hall, being wide and lined with brick houses. The streets generally are well paved, lighted with gas, and well supplied with water from four reservoirs in the township of Wardleworth. Here are two assembly-rooms, a small theatre, a commodious jail, and workhouses. The parish church, a structure of Norman and early English architecture, with a square pinnated tower, stands on an eminence, to which there is an ascent from the lower part of the town by a flight of 126 steps; the living is a vicarage, of the annual value of £1730 in the gift of the Archbishop of Canterbury. The town has also two episcopal chapels, and within the parish are six others, chiefly in the patronage of the vicar. Here is a Roman Catholic chapel, and 12 places of worship for different denominations of dissenters, among whom Methodists, Independents, and Baptists are the prevailing bodies. Each church and chapel has a Sunday-school, attended by great numbers of children. The town has a large national school, another well-endowed establishment, called the *Moss school*, for the gratuitous education of 40 boys and 20 girls; a free grammar-school, founded in 1564, and attended by about 45 boys (who, owing to the smallness of the endowment, pay a fee of 26 a year); an endowed girls' school, and numerous money charities. A dispensary and ladies charity furnish relief to the sick poor; besides which, there are bible, tract, and other religious associations, a literary society, a horticultural society, and a savings' bank.

Rochdale is a principal seat of the woollen and cotton manufactures, especially the former: the woollen articles produced here consist principally of baizes, flannels, and kerseys; and those of cotton of strong calicoes, fustians, &c. In 1839, there were in the parish (exclusive of Saddleworth township) 56 woollen-mills, 95 cotton, and one flax-mill, propelled by an aggregate steam power of 2969 horses, employing, in all, 9745 hands, of which 8132 belonged to the cotton-mills. There are also numerous hand-loom weavers, though power-loom have been extensively introduced within the last few years. Hat-making is pursued on a pretty considerable scale, and numerous hands are employed in the town and neighbourhood in making machinery. The Manchester and Liverpool District Banking Company have a branch here, and there are two private banks. Coal and stone abound in the neighbourhood, and the parish comprises 10 collieries. Iron ore has been found in considerable quantities in Butterworth township, and flags are quarried at Spotland. Rochdale has means of communication with Manchester and Liverpool westward, and with Halifax, Leeds, &c., eastward, both by canal and railway. The Rochdale canal, which passes near the town, uniting westward with the Duke of Bridgewater's canal, and eastward with the Calder and Ribblesdale navigation, 33 miles in length, cost upwards of £600,000, and is supplied, at its summit-level, by large reservoirs, one of which covers 130 acres. It was opened in 1804, and the daily traffic may amount to 1400 tons. The Manchester and Leeds railway passes through the district; and in Calderbrook township is a tunnel 2860 yards long, chiefly cut through the solid rock, 80 ft. below the surface. The total length of the line is 50½ m., and the whole is now open.

Notwithstanding its population and manufacturing importance, Rochdale had no representative in the legislature till the passing of the Reform Act, which conferred on it the important privilege of sending one member to the House of Commons, the electoral limits being defined, as above stated, in the local act of 6 Geo. IV. c. 101. Registered

## ROCHEFORT.

electors, in 1839-40, 965. It is also a polling-place for the S. division of Lancashire. The town is under the jurisdiction of the county magistrates; but a manor-court is held every three weeks for the recovery of debts under 40s. Markets on Monday and Saturday: fairs, May 14, Whit-Tuesday, and Nov. 7, for horses and cattle. (*Baines's Hist. and Geog. of Lancashire*; *Butterworth's Stat. of Lancashire*; *Parl. Reports*, &c.)

ROCHEFORT, a maritime town, and the third naval port of France, dep. Charente-Inférieure, on the Charente, about 12 m. (by water) from its mouth, opposite the isle of Oleron, and 10 m. S.S.E. La Rochelle; lat. 45° 56' 10" N., long. 0° 57' 34" W. Pop., in 1836, ex. com., 13,248; but said to have been, in 1841, upwards of 17,000. (*Ports, &c. of France*, 160.) It is situated at the extremity of an extensive plain, and is shaped like a bow, the are formed by the ramparts, and the chord by the river. The town, which is wholly of modern date, having been founded under Louis XIV., is well laid out and built, though the houses want elevation. Some of the principal streets are planted with double rows of poplars; and in the centre of the town is the *Place d'Armes*, a large and regular square, planted, and ornamented with a fountain; which, with other fountains, provide the inhabitants with an abundant supply of river water. The port is capacious, and deep enough to receive vessels of the largest size, having 20 ft. water at low ebb, and more than 40 ft. at high tide. The mercantile harbour, separated from the *port militaire*, admits vessels of from 800 to 900 tons. The naval yard is entered by the *Port de Soleil*, a handsome gateway constructed in 1828; on either side of which are lodges for the guard, the agents for the surveillance of the port and officers of the customs. It comprises building docks for ships of from 60 to 120 guns; sawing, brass and copper mills impelled by steam; a sail-loft, model workshop, a *bagne*, or prison, capable of accommodating 1000 convicts; a rope-house, in which cables upwards of 400 yards in length are made, and a naval and military arsenal, biscuit manufactory, and stores for materials of every kind necessary in the fitting out of ships of war. The cables and ship biscuit made at this port are admitted to be the best in France. The naval hospital without the town comprises nine separate buildings, furnishing accommodation for 1200 patients. The residence of the naval commandant is a fine building, surrounded by gardens, which are open to the public. Rochefort is the seat of a maritime prefecture, and tribunals of original jurisdiction and commerce; and has schools of naval gunnery, hydrography (2d class), medicine, drawing, music, &c.; a society of arts and literature, Bible society, public library, &c. It has a few vinegar factories, and sugar refineries; but ship-building is by far the most important branch of industry, and the ship-builders of the mercantile port construct handsome vessels for the coasting trade and cod fisheries. The little trade otherwise enjoyed by Rochefort is principally in corn, wines, salt, and brandy. The town was formerly very unhealthy; but it has been, in this respect, greatly improved by the drainage of the adjacent country. (*Ports and Arsenals of France*, 159-173; *Guide du Voyageur en France*; *Diet. Géog.*)

ROCHELLE (LA), a town and seaport of France, dep. Charente-Inférieure, of which it is the cap., on the Atlantic, 76 m. S. by E. Nantes, and 93 m. N.N.W. Bordeaux; lat. 46° 9' 21" N., long. 1° 0' 40" W. Pop., in 1836, 14,857. "Rochelle has an admirable commercial position. The town forms, as it were, the bottom of a small gulf, which serves as an *avant port*. It is defended by two handsome towers, which, whether La Rochelle be approached by land or water, are seen at an immense distance. Opposite the town, at the extremity of the roadstead, are the isles of Ré and Oleron. The harbour is safe and commodious; it is protected by a strong jetty, and is capable of receiving vessels of 400 or 500 tons' burden. There has recently been created a dock or *arrière port*, where vessels are careened. The town itself is clean and well built." (*Ports, &c. of France*.) The streets are wide and straight, and have foot-pavements, mostly under arcades, on which the houses are built. Few of the private buildings are lofty or of much size; but the town has, notwithstanding, a striking appearance. The fortifications, constructed by Vauban, consist of ramparts, with 19 bastions and eight lunettes, the whole enclosed with ditches and a covered way. The town is entered by seven gates, one of which, the *Porte d'Horloge*, is a handsome structure, apparently of the 16th century. There are several good squares; and without the walls are the promenades called the *Mall* and the *Champ de Mars*. The cathedral, town-hall, courts of justice, hospital, orphan asylum, exchange, and a good bathing establishment, are the principal public buildings, though several more are worth notice. La Rochelle is the cap. of the 12th military division of France, which comprises the déps. Charente-Inférieure, Deux Sèvres, and Vendée; the seat of a bishop, of courts of primary jurisdiction and commerce, of a royal

## ROCHESTER.

academy of arts and sciences, &c., and the residence of several foreign consuls. It has a seminary and communal college, schools of navigation and design, a public library of 20,000 vols., botanic garden, &c.; several prisons, a mint, and a royal arsenal and foundry. Its trade is extensive, not only in wines and brandies, but in wood, iron, salt, cheese, butter, oil, sardines, and colonial produce.

La Rochelle appears to owe its origin to a castle constructed here to check the incursions of the Normans. It was for some time in the possession of the English, from whom it was taken by the French in 1224. During the religious wars, and especially after the massacre of St. Bartholomew, it was a stronghold of the Protestants. It was invested by the Catholic forces in 1572, and withstood a long siege, terminated by a treaty. "The numerous infractions of that treaty in the reign of Louis XIII., and under the ministry of Richelieu, led to a second siege which commenced in August, 1627, and which was as violent, and longer and more decisive than the former. The king, the Duke of Orleans, Marshal Bassompierre, and all the most renowned generals of the time, were present at the siege. The circumvallation extended for three leagues round the town; but the sea being open, English vessels poured in provisions and ammunition. After six months of heroic resistance, the famous engineer, Métézeau, was directed to bar the entrance to the harbour by an immense dyke, extending 1500 metres into the sea, and of which the remains are still visible at low water. The result was soon fatally apparent. Famine quickly decimated the ranks of the besieged; and after a siege of 14 months and 18 days, La Rochelle was compelled to capitulate. Richelieu made a triumphal entry into the city; the fortifications were demolished, and the Protestants deprived of their last place of refuge." (*Ports and Arsenals of France*; *Guide du Voyageur*, &c.; *Diet. Géog.*)

ROCHESTER, a city, parl. and mun. bor., and market-town of England, co. Kent, lathe Aylesford, at the W. end of and adjoining Chatham on the S. bank of the Medway, crossed here by a handsome stone bridge of 11 arches, 25 m. W. by N. Canterbury, and 28 m. E. by S. London. Pop. of parl. bor. (which includes with the old bor. additional portions of the par. of Stroud), in 1831, 12,058. The bridge over the Medway connects the town with Stroud, on the opposite bank of the river; so that the three towns of Chatham, Rochester, and Stroud form, as it were, a continuous street, upwards of 2 m. in length, along the road from London to Dover. The houses in Rochester generally have a somewhat antiquated appearance; and among them are several built chiefly of timber, with projecting gables and stories. The town is partially paved, and lighted with gas. Fortifications were erected for its protection in 1802; but Fort Pitt is now used as a military hospital, and Fort Clarence has become a lunatic asylum for soldiers. The town-hall, a spacious brick edifice, fronted by Doric columns, is open underneath, and above is a large hall with several portraits of public characters: at the back is a small bor. jail. On the site of the former guildhall is the clock-house, a great building erected in 1706, at the expense of the celebrated admiral Sir Cloudesley Shovel. A theatre is occasionally opened; there are also assembly rooms and baths, and a record room at the end of the bridge. At the S.W. angle of the town, rising abruptly from the river, is the castle, anciently a strong fortress, but which has, for a lengthened period, been in a state of decay. The walls, which are of Kentish ragstone, enclose a quadrangular area of nearly 300 sq. ft., and, with their towers, are now in ruins. The walls of the keep, however, at the S.E. angle of the court, are in good preservation: it rises about 104 ft. from the ground, and has turrets at the angles rising 12 ft. above the rest of the buildings. "The style of the whole building is Norman, and it presents a fine specimen of the modes adopted at the date of its erection to enable a very small number within the castle successfully to resist a much greater number of besiegers; for which purpose, indeed, the access, the various successive gates, and other defences, are admirably calculated. The masonry in the interior is very good, especially that of the well, which is in one of the walls, and was accessible from several floors of the castle." (*Rickman's Arch.* p. 187.)

A little E. of the castle is the cathedral, originally founded by Ethelbert, about A.D. 600; but the present building was principally erected in the 12th century, from the plans of Bishop Gundulph, one of the first church architects of his day. It is a cruciform structure, with a central tower, of modern erection, rising from the intersection of the nave and transepts, with another, now unroofed, called Gundulph's tower, on the N. side, close to the E. transept. According to Britton, the dimensions of the church are as follows: total inside length, 306 ft., of which 156 ft. belong to the choir; breadth of nave and aisles, 66 ft.; length of the great and small transepts, 122 ft. and 90 ft. respectively; extent of W. front, 81 ft.

## ROCHESTER.

"The exterior appearance of this cathedral is not very imposing, and the exterior walls of the nave are either much decayed or covered by modern repairs. The other parts of the church are surrounded by buildings, so that little more than one portion can be seen at a time. The W. front is a fine specimen of Norman enrichment, but has a very large inserted perpendicular W. window. The nave has Norman piers and arches, except those next the cross, which, with most of the E. portions of the church, are early English. There are other Norman portions on the other side, which appear to be the remains of the cloisters and other monastic adjuncts. The crypt is very spacious, extending under the whole choir; its character is early English; but a portion under the N. aisle may be considered almost Norman. There are a few monuments; but they are more remarkable for singularity than beauty. The whole cathedral, except the nave and S. aisle of the chancel, is adorned with early English groining, and, as at Canterbury, the floor of the choir is considerably raised above that of the nave." (Britton, quoted in *Richman's Arch.* p. 184.)

The interior has very recently been repaired in excellent taste, and Rochester cathedral is one of the best specimens of the early English style in the kingdom. The ecclesiastical corporation comprises a dean and six prebendaries, who divided among them, in 1834, a nett revenue of £5106, and have the patronage of 30 benefices; there are, also four minor canons. The see of Rochester was worth, at an average of three years ending with 1831, only £1460 a year; but it either has been or is to be increased to £4000 a year. The town has two parish churches; one of which, St. Margaret's, is of very mixed architecture, and the other, St. Nicholas, in the perpendicular style: the living of the former is in the gift of the dean and chapter, and of the latter in that of the bishop. The Wesleyan Methodists, Independents, Unitarians, and the Society of Friends, have places of worship; and the Sunday schools within the bor. are attended by above 800 children. A grammar-school, founded in 1542, having six exhibitions at Oxford and Cambridge, is supported by the dean and chapter; besides which there is an endowed inathematical school, established in 1701. Two national schools give instruction to about 500 children; and there are two or three almshouses, with smaller money-charities.

"Rochester, like Chatham, was in a great degree dependent on the expenditure produced by the naval and military establishments at Chatham during the war, and the reduction of that expenditure has been severely felt. The greater part of the population consists of retail tradespeople. There is no manufactory in or near the town; but a considerable quantity of coal and other articles is imported for the supply of the country inward as far as Tunbridge; and there is a large export trade in hops." (*Municipal Report.*)

The great customs' duty received here in 1840 amounted to £52,426, being nearly double the amount received in the preceding year; by far the largest portion of this sum is, however, derived from the trade of Chatham. The town is said, in the *Municipal Boundary Report*, to be declining in prosperity; "the poor-rates have increased; many of the houses are uninhabited, and there is less expenditure and luxury among the upper classes than in former times."

The bor. of Rochester, first incorporated in the reign of Henry II., is divided, under the Municipal Reform Act, into three wards, and is governed by a mayor, five aldermen, and 18 councillors. Corporation revenue, in 1839, £3427. It has a commission of the peace under a recorder, and petty sessions are held twice a week; besides which, there is a court for the recovery of small debts, with two or three other minor local courts.

Rochester has returned two members to the House of Commons since 26 Edward I., the right of election down to the Reform Act being in the freemen not receiving alms. The electoral limits were enlarged, as above mentioned, by the Boundary Act. Reg. electors in 1839-40, 1124. Corn markets on Tuesday, and for provisions generally on Friday; fairs, disused.

The only event of any importance connected with the modern history of Rochester is the descent made by the Dutch in 1667. See CHATHAM.

ROCHESTER, city, capital of Monroe co., N. Y., is situated in 43° 8' 17" N. lat., and 77° 51' W. long. 73 E. Buffalo, 141 W. Utica, 220 W. by N. Albany, 87 E. N. E. Niagara falls, 28 N. W. Canandaigua, 360 W. The population in 1820, was 1502; in 1830, 9269; in 1840, 20,191. It is situated on both sides of Genesee river, 7 m. S. of lake Ontario. It was laid out as a village in 1812; incorporated as a village in 1817; and as a city in 1834; and the city limits cover an area of 4324 acres. It is handsomely laid out, with considerable, though not entire regularity. The parts of the city are connected by three bridges, and the river is also crossed in the middle of the city by the splendid aqueduct of the Erie canal. The streets are spacious, with a width varying

from 60 to 80 feet, well paved in the centre, with convenient sidewalks; and there are several public squares, which are enclosed. Buffalo-street, which is broad and straight, runs through the centre of the city, crossing the river on a bridge; and on the E. side is called Main-street. The city is handsomely built; chiefly with brick, and many of the stores and dwellings are elegant. Many of the houses have fine gardens, ornamented with fruit trees and shrubbery. Some of the churches and public buildings are handsome structures. The public buildings and institutions are a courthouse, jail, county clerk's office, two market-houses, six banking-houses, besides a bank for savings, a mutual insurance company, 23 churches, four Presbyterian, three Episcopal, two Methodist, two Baptist, one Free-will Baptist, two Friends, a Reformed Presbyterian, an Evangelical Lutheran, a Universalist, a Free Bethel, a Free Congregational, two Roman Catholic, and two African, a museum, a Collegiate institute, two female seminaries, two orphan asylums, a mechanics' literary association, a young mens' association, an atheneum, and an apprentices library.

Rochester owes its great advantages and rapid growth especially to the vast water-power created by the falls in Genesee river, which amount to 268 ft. within the bounds of the city, in which are three successive perpendicular falls of 96, 20, and 105 ft., besides rapids. On these rapids and falls are many large flouring-mills, not surpassed in the world, and numerous other hydraulic works. It is estimated that, independent of the capital invested in the construction of these mills, it requires \$2,000,000 annually to keep them in operation, and that they produce annually, to the amount of \$3,500,000. Rochester is finely situated for commerce. Vessels come up the Genesee river from lake Ontario to Carthage, 2½ m. below the centre of the city, where steamboats arrive and depart daily, and to which there is a railroad from the city. The river is boatable above the place for 45 miles, to Mount Morris. The Erie canal passes centrally through the city, giving it access on the E. to Albany, and thence by Hudson river to New-York city; and W. to Buffalo, and thence to the upper lakes, and the various parts connected with them by canals. The Genesee valley canal, when completed, will connect it with Olean on the Alleghany river, and thence to Pittsburg. The chain of railroads from Boston to Buffalo passes through it, and gives it a ready access to both these places, and to all others on the route. These facilities for transportation have completed the advantages derived from its immense water power, and the eminently rich agricultural region by which it is surrounded; which if it does not yield a sufficiency of wheat for the supply of its mills, it can be readily obtained from the great wheat-growing state of Ohio, and the other fertile states of the west.

According to the census of 1840, there were in the city one commission and one commercial house in foreign trade, with a capital of \$15,100; 266 retail dry goods and other stores, with a capital of \$1,238,890; two lumber yards, with a capital of \$30,000; 404 men engaged in internal transportation, with 71 butchers, packers, &c., employed a capital of \$156,000; 53 persons produced machinery to the amount of \$48,000; 25 persons manufactured hardware and cutlery to the amount of \$3000; 10 persons manufactured 250 small arms; 14 persons manufactured the precious metals to the amount of \$9600; 75 persons manufactured various metals to the amount of \$95,900; 116 persons produced granite and marble to the amount of \$57,000, with a capital of \$7600; four persons manufactured granite and marble to the amount of \$5000; 49 persons made bricks and lime to the amount of \$14,015; four fulling-mills and four woolen factories employed 69 persons, producing to the amount of \$59,000, with a capital of \$58,616; one cotton factory with 3000 spindles, employed 80 persons, produced to the amount of \$40,000, with a capital of \$50,000; 58 persons manufactured tobacco to the amount of \$73,000, with a capital of \$16,000; hats and caps were manufactured to the amount of \$44,900, and straw bonnets to the amount of \$1600, the whole employing 196 persons, and a capital of \$23,625; three tanneries produced 3760 sides of sole leather, and 5200 sides of upper leather, employing 165 persons, and a capital of \$128,500; saddlery, and other manufactures of leather, produced to the amount of \$246,500, with a capital of \$50,725; 11 persons produced soap and candles to the amount of \$33,500; three distilleries produced 195,000 gallons of distilled spirits, and three breweries 204,960 gallons of beer, the whole employing 37 persons, and a capital of \$60,300; 21 persons produced drugs and paints to the amount of \$42,000, and turpentine and varnish to the amount of \$450, with a capital of \$45,500; two persons produced glass to the amount of \$3000, with a capital of \$1000; one pottery, employing five persons, produced to the amount of \$3500, with a capital of \$1500; 16 persons produced confectionary to the amount of \$22,700, with a capital of \$6750; two paper-mills, employing 27 persons, produced to the amount of \$35,000, with a capital of \$22,500; one rope-

## ROCK.

walk, employing six persons, produced cordage to the amount of \$7000, with a capital of \$5500; four persons manufactured musical instruments to the amount of \$5000, with a capital of \$5000; 84 persons manufactured carriages and wagons to the amount of \$70,600, with a capital of \$35,900; 22 flouring-mills produced 311,663 barrels of flour, and with eight saw-mills and one oil-mill, employed 256 persons, producing to the amount of \$1,841,975; with a capital of \$945,600; vessels were built to the amount of \$74,300; 284 persons manufactured furniture to the amount of \$41,700, with a capital of \$113,400; nine printing-offices, one bindery, four daily, five weekly newspapers, and two periodicals, employed 62 persons, and a capital of \$32,500; 61 brick or stone, and 68 wooden houses were built, employing 418 persons, and cost \$401,370. The total capital employed in manufactures was \$1,963,017.

Such is Rochester; and the United States, the land of wonders in this respect, with the exception of Lowell, Mass., does not probably furnish another example of an equally rapid rise. Its early founders never anticipated such a growth. In 1812 there were only two framed dwellings on the spot, each containing a single room; and a few years before, when a proposal was made in the Legislature of the state to build here a bridge across the Genesee river, it was strongly opposed, and a member remarked, "that it was a God-forsaken place, inhabited only by muskrats, visited only by straggling trappers; through which neither man nor beast could gallop without fear of starvation or fever and ague." The act to build the bridge passed, but was reprobated by many, as an extravagant waste of the public money, on such "an outlandish and unfrequented spot." But, like the opposers of the Erie canal, they probably many of them lived to acknowledge their error.

The city, which contains over 2000 dwellings, is divided into five wards, and is governed by a mayor, a recorder, a marshal, and 10 aldermen, two from each ward. These constitute the common council, who appoint a city clerk, city attorney, and a treasurer.

ROCHESTER, P. L., semi-capital of Stafford co., N. H., 46 E. Concord, 505 W. Salmon falls river bounds it on the N.E., and Cochoec river passes through it, both affording water-power. It contains three churches, a Congregational, Methodist and Free-will Baptist, 11 stores, four fulling-mills, three woolen-factories, two grist-mills, four saw-mills, two oil-mills, two tanneries; 17 schools, 788 scholars. Pop. 2431.

ROCHESTER, P. L., Windsor co., Vt., 43 S.S.W. Montpelier, 482 W. Drained by White river, and by a branch which affords water-power. Chartered in 1781. It contains a Congregational and Methodist church, three stores, two fulling-mills, one grist-mill, seven saw-mills; 13 schools, 469 scholars. Pop. 1396.

ROCHESTER, P. L., Plymouth co., Mass., 54 S.E.E. Boston, 441 W. Bounded S.E. by Buzzard's bay. Watered by Mattapoiet and Sippican rivers. It contains five churches, three Congregational, a Baptist, and Universalist, 17 stores, two grist-mills, five saw-mills; one academy, 100 students, 23 schools, 1092 scholars. Pop. 3864. Mattapoiet village is on a branch of Buzzard's bay, has a good harbour, and is engaged in ship-building, the whale fishery, and the manufacture of salt.

ROCHESTER, N. Y., Ulster co., N. Y., 16 S.W. Kingston, 74 S. by W. Albany. Watered by Rondout creek, and its tributaries. The Delaware and Hudson canal passes through it. It contains a Dutch Reformed church, nine stores, two fulling-mills, one woolen factory, seven grist-mills, 11 saw-mills, three tanneries; 10 schools, 503 scholars. Pop. 2674.

ROCK, R., Wis. and Ill., rises S.W. of Winnebago lake, and flows S. into Ill., and thence S.W., and enters Mississippi river, 3 m. below Rock Island. In Wisconsin it receives Catfish river, which passes through the "Four Lakes."

ROCKAWAY, beach, Hempstead t., Queens co., N. Y. Situated on the S. shore of Long Island, between Jamaica bay and the Atlantic ocean, and has become a fashionable watering-place. Here is the Marine Pavilion, a splendid boarding house, and a pleasant and healthy resort in the summer season. The accommodations are extensive, and of the finest kind, and nowhere can the sea air and sea bathing be enjoyed in greater perfection.

ROCKBRIDGE, CO., VA. Situated in the central part of the state, and contains 680 sq. m. Drained by North river and its branches, which flow into James river. It derives its name from the celebrated Natural bridge, for a description of which, see Natural Bridge. It contained in 1840, 13,452 neat cattle, 19,821 sheep, 26,321 swine; and produced 263,756 bushels of wheat, 69,566 of rye, 504,646 of Indian corn, 4339 of buckwheat, 249,018 of oats, 35,579 of potatoes, 293,755 pounds of tobacco. It had 28 stores, three furnaces, three forges, 32 flouring-mills, 13 grist-mills, 56 saw-mills, two oil-mills, 14 tanneries, 36 distilleries, two potteries, two printing-offices, two weekly newspapers; one col-

## ROCKLAND.

lege, 83 students; four academies, 153 students; 28 schools, 740 scholars. Pop.: whites, 10,448; slaves, 3510; free coloured, 326; total, 14,284. Capital, Lexington.

ROCKCASTLE, CO., KY. Situated a little S.E. of the centre of the state, and contains 330 sq. m. Bounded S.E. by Rockcastle river. Drained by Dick's river. It had in 1840, 2863 neat cattle, 3703 sheep, 5613 swine; and produced 8472 bushels of wheat, 66,392 of Indian corn, 29,395 of oats, 3149 of potatoes, 4725 pounds of sugar. It had two stores, five grist-mills, four saw-mills, three tanneries. Pop.: whites, 3023; slaves, 377; free coloured, nine; total, 3409. Capital, Mount Vernon.

ROCKINGHAM, CO., N. H. Situated in the S.E. part of the state, and contains 695 sq. m. Watered by Lamprey, Exeter and Beaver rivers. Bounded S.E. by the Atlantic for 18 m., constituting the whole seacoast of the state. It contained in 1840, 29,764 neat cattle, 38,589 sheep, 15,477 swine; and produced 20,392 bushels of wheat, 29,933 of rye, 204,504 of Indian corn, 3056 of buckwheat, 26,030 of barley, 83,177 of oats, 805,367 of potatoes. It had 34 commercial and commission houses, in foreign trade, 33 retail stores, six lumber yards, a capital invested in the fisheries, \$59,580, five furnaces, 16 fulling-mills, four woolen factories, six cotton factories, with 15,500 spindles, two flouring-mills, 89 grist-mills, 108 saw-mills, one oil-mill, one paper-mill, one powder-mill, 43 tanneries, two distilleries, four potteries, seven printing-offices, five weekly newspapers; 19 academies, 1015 students, 243 schools, 10,618 scholars. Pop. 45,771. Capital, Portsmouth.

ROCKINGHAM, CO., VA. Situated a little N. of the centre of the state, and contains 833 sq. m. Watered by Shenandoah river and its tributaries. It contained in 1840, 20,132 neat cattle, 23,955 sheep, 38,765 swine; and produced 375,187 bushels of wheat, 90,886 of rye, 470,584 of Indian corn, 248,412 of oats, 41,186 of potatoes, 37,182 pounds of tobacco, 3330 of sugar. It had 30 stores, one furnace, three fulling-mills, 35 flouring-mills, 16 grist-mills, 42 saw-mills, four oil-mills, 21 tanneries, 15 distilleries, three potteries, one printing-office, one weekly newspaper; one academy, 45 students, 26 schools, 799 scholars. Pop.: whites, 14,944; slaves, 1899; free coloured, 501; total, 17,344. Capital, Harrisonburg.

ROCKINGHAM, CO., N. C. Situated in the N. part of the state, and contains 475 sq. m. Drained by branches of Haw and Dan rivers. It contained in 1840, 9725 neat cattle, 6157 sheep, 30,074 swine; and produced 61,015 bushels of wheat, 4805 of rye, 431,085 of Indian corn, 149,402 of oats, 9053 of potatoes, 1,777,205 pounds of tobacco, 23,947 of cotton. It had 18 stores, one furnace, one cotton factory with 864 spindles, 13 flouring-mills, 36 grist-mills, 25 saw-mills, two oil-mills, five tanneries, eight distilleries; 11 academies, 244 students; 10 schools, 211 scholars. Pop.: whites, 8595; slaves, 4572; free coloured, 275; total, 13,442. Capital, Wentworth.

ROCKINGHAM, P. T., Windham co., Vt., 93 S. Montpelier, 450 W. Watered by William's and Saxton's rivers, which afford water-power. Bounded E. by Connecticut river. It contains three churches, two Congregational and an Episcopal, 12 stores, seven fulling-mills, four woolen factories, five grist-mills, seven saw-mills, two paper-mills, two tanneries, one printing-office, two binderies, one weekly newspaper and one periodical; 17 schools, 703 scholars. Pop. 2330.

ROCKINGHAM, P. V., capital of Richmond co., N. C., 135 S.W. Raleigh, 409 W. Situated 5 m. E. of Pedee river, and contains a courthouse, jail, several stores, and about 200 inhabitants.

ROCK ISLAND, in Mississippi river, at the foot of Rock river rapids, and is  $3\frac{1}{2}$  m. long, and three-fourths of a mile wide. The shores are of perpendicular rock, 20 ft. above high water. It contains fort Armstrong on its S. part.

ROCK ISLAND CITY, P. V., capital of Rock Island co., Ill., 150 N.N.W. Springfield, 875 W. Situated between Rock river and the Mississippi, has been laid out on an extensive scale, and contains in Stephenson village a courthouse which cost \$20,000, a jail, 15 stores, 125 dwellings, among which is a splendid hotel, and about 700 inhabitants. The rapids extend 15 m. from the mouth of Rock river, in which distance they descend about 22 ft.; ledges of rocks extend across the river, which in low water form a serious impediment to navigation. It has been in contemplation to cut a canal from the Mississippi to Rock river, by which an immense water-power would be gained in the latter.

ROCKLAND, CO., N. Y. Situated in the S.E. part of the state, and contains 173 sq. m. Bounded E. by Hudson river. It contains magnetic iron ore, and variegated marble. The New-York and Erie railroad, which commences at Piermont, crosses the county. It contained in 1840, 6695 neat cattle, 17,392 sheep, 11,511 swine; and produced 3650 bushels of wheat, 35,140 of rye, 41,110 of Indian corn, 34,111 of buckwheat, 47,055 of oats, 48,117 of potatoes. It had 53 stores, five lumber yards, one furnace, three forges, four

## ROCKPORT.

fulling-mills, four woollen factories, three cotton factories with 1642 spindles, one dyeing and printing works, 20 grist-mills, 11 saw-mills, one paper-mill, five tanneries, two distilleries; 28 schools, 1099 scholars. Pop. 11,975. Capital, New City village, in Clarkson t.

ROCKLAND, p. t., Venango co., Pa., 212 W.N.W. Harrisburg, 284 W. It has three stores, three furnaces, one fulling-mill, five grist-mills, five saw-mills; three schools, 101 scholars. Pop. 1178.

ROCKLAND, t., Bucks co., Pa. Drained by Maxatawny and Sacony creeks. It has two stores, one furnace, one forge, three grist-mills, four saw-mills, one paper-mill, two tanneries, one distillery. Pop. 1649.

ROCKPORT, p. t., Essex co., Mass., 32 N.E. Boston, 464 W. Situated on the N. part of cape Ann, and has a harbour for small vessels. It contains three churches, a Congregational, Baptist, and Universalist, 13 stores; six schools, 592 scholars. Pop. 2650.

ROCKPORT, p. t., Cuyahoga co., O., 132 N.E. Columbus, 367 W. Bounded N. by lake Erie. Watered by Rocky river. It contains two grist-mills, two saw-mills, two tanneries; eight schools, 516 scholars. Pop. 1235.

ROCKPORT, p. v., capital of Spencer co., Ia., 162 S.S.W. Indianapoli, 689 W. Situated on a high bluff on the N.W. bank of Ohio river, and contains a courthouse, jail, a tannery, a ship yard, and about 300 inhabitants.

ROCKVILLE, p. v., capital of Montgomery co., Md., 56 W. Annapolis, 16 W. Situated on the head waters of Watts branch of Potomac river, and contains a courthouse, jail, county offices, several stores, 60 dwellings, and about 350 inhabitants.

ROCKY MOUNT, p. v., capital of Franklin co., Va., 179 W. by S. Richmond, 254 W. It contains a courthouse, jail, two stores, one furnace, in the vicinity, which employs 100 labourers, and about 200 inhabitants.

ROCKY MOUNTAINS, a very extensive mountain system of N. America. (See vol. i. p. 78.)

ROCROY, a town of France, dep. Ardennes, cap. arrond., in an extensive plain, near the Belgian frontier, 15 m. N. by W. Mézières. Pop., in 1836, 3682. It is surrounded by a rampart strengthened with bastions and *demi-lunes*; is the seat of a tribunal of original jurisdiction, and has a military hospital, a society of agriculture, and some hardware manufactures.

Rocroy having been besieged by a Spanish army in 1643, the Prince of Condé, then Duke d'Enghien, and only 21 years of age, advanced to its relief, with an army inferior in numbers and in the quality of the troops. But the extraordinary talent and brilliant courage of the prince more than made up for his inexperience and the inferiority of his force. The French gained a complete victory (19th May, 1643). The Spanish infantry, which had hitherto been invincible, was cut to pieces; and the French arms acquired a superiority which they preserved for more than sixty years, or till the battle of Blenheim. The humanity of Condé, henceforth called "le Grand," was as conspicuous on this occasion as his talents and his courage. (*Voltaire, Siècle de Louis XIV.*, cap. 3.)

RODMAN, p. t., Jefferson co., N. Y., 11 S. Watertown, 163 N.W. Albany, 408 W. It contains three churches, a Methodist, Baptist, and Presbyterian, four stores, two fulling-mills, one woollen factory, two grist-mills; 21 schools, 600 scholars. Pop. 1702.

ROMANS, a town of France, dep. Drôme, in a fine plain, on the Isère, by which it is separated from the Bourg-de-Péage, on the opposite side of the river, the communication between the two being maintained by a fine bridge, 12 m. N.E. Valence, and 35 m. W.S.W. Grenoble. Pop., including Bourg-de-Péage, in 1836, 11,345. Romans, which is surrounded by an old wall flanked with towers, is said by Hugo to be a handsome well-built town, and has some fine promenades. The parish church is the only remaining portion of the famous monastery founded here by St. Bernard, in 837, to which the town owes its origin. Romans has a theatre, a *pensionnat*, or school for the gratuitous education of young ladies, a tribunal of commerce, &c., with manufactures of silk and woollen stuffs, hosiery, gloves, &c. It has also an active trade in the produce of the dep., including silk, wool, wine, oil, truffes, &c., which is much facilitated by the junction of the Isère with the Rhone. (*Hugo, art. Drôme; Dict. Géographique.*)

The famous Baron Lally, who, having distinguished himself at the battle of Fontenoy, was subsequently sent as commander-in-chief of the French forces to India, was a native of Romans, where he first saw the light, on the 15th of January, 1702. Being of a violent, irritable temper, and involved in the greatest difficulties, Lally got embroiled with every body. After the fall of Pondicherry, in 1761, he returned to France, where, pursued by the hatreds he had excited in India, he was, after a lengthened imprisonment, tried by the parliament of Paris, and condemned to be decapitated. This unjust sentence was carried into effect

## ROME.

on the 9th May, 1766. (See, for a calm, dispassionate statement of the case of Lally, the *Siècle de Louis XV.*, by Voltaire, cap. 34: the article on Lally in the *Biographie Universelle* is by a partizan.)

ROME, the most celebrated of European cities (*Lux orbis terrarum, et arx omnium gentium*, Cicero, Catil. 4, cap. 6.), famous alike in ancient and modern history; first, as the metropolis of the most powerful nation of antiquity, and, afterwards, as the ecclesiastical capital of Christendom, and the residence of the pope, on both sides the Tiber, but principally on its E. bank, about 16 m. from its mouth, 115 m. N.W. Naples, and 145 S.S.E. Florence; lat. 41° 53' 54" N., long. 12° 29' 47" E. The pop., which in 1837, amounted to 156,552, had decreased, in 1838, to 148,903, owing to the influence of cholera and other causes. (*Serristori Statistica*, p. 24.)

Modern Rome, which interests alike by its classical associations, its antiquities, its churches, and its works of art, is surrounded by walls (mostly occupying the site of those constructed by the emperor Aurelian) in the form of an irregular polygon, about 14 m. in circ., the longest diameter being from the Porta del Popolo, N.W., to the Porta S. Sebastiano, S.E., about 3 m. in length. The city has 16 gates, three or four of which, however, have been walled up: of these, the principal are the Porta del Popolo, on the road to Florence and Ancona; the Porta Pia, on the road to Trivoli; the Porta Maggiore, leading to Palestrina; and the Porta S. Giovanni, leading S.E. to Albano and Naples. But not more than a third part of the enclosed area is covered with buildings, the rest consisting of ruins, gardens, and fields, with some churches, convents, and other scattered habitations. The older part of the ancient city, where the principal ruins are found, is about  $\frac{1}{2}$  m. S. from the modern city; but it is needless to add, that the former, under the emperors, was much more extensive than the modern town, inasmuch as, besides the space within the walls, it had very extensive suburbs. The ground occupied by the city is mostly low, being only from 35 to 45 ft. above the level of the sea. Exclusive, however, of the low grounds, several low hills, or eminences, are comprised within the limits of the city; and in consequence of ancient Rome being popularly said to stand upon seven hills, it was sometimes called *arx septicolis*. The following measurements exhibit the height of the hills now referred to:—

Capital, at the W. ang.	Eng. Ft.	Esquiline hill	Eng. Ft.
gle of the Tar-		Quirinal hill at the	218
peian rock	151	Pope's palace	158
Do. at N. end	160	Ancient pavement of	
Palatine hill	170	the Forum	39
Aventine —	156	Do. do. of Tra-	
Celian —	168	jan's Forum	43
Pincian —	218		

The Palatine hill, the nucleus of the city, comprises a space of about 40 acres, and appears originally to have had precipitous edges; but excepting this, and the Capitoline hill, comprising about 16 acres, the rest have an easy ascent, and are, in fact, mere eminences. No doubt, however, owing to the accumulation of rubbish in the valleys, and the lowering of the hills by rains, the digging of foundations, &c., the elevations of the latter must have been much more striking in antiquity than at present. The seven hills, properly so called, on the E. bank of the Tiber, were included in the city so early as the reign of Servius Tullius; but at a later period the *Mons Pincius* (Pincian hill), to the N.E., and of the *Mons Vaticanus*, and the *Mons Janiculus*, on the W. side of the Tiber, were enclosed within the city walls. The hills consist chiefly of volcanic tufa intermingled with thin beds of travertine, making good building stone, as well as of silicious sand, and a few layers of pumice and scorie; while the low ground which has been raised several feet above its ancient level, apparently by the deposits left by frequent floods, is covered with calcareous sands, marls, clays, or silt.

Rome is divided into 14 districts, or *Rioni*, 11 of which are in the portion now inhabited; but the more popular, and for general purposes more intelligible, distribution of the city is into a central portion on the low ground E. of the Tiber, the ancient Campus Martius, a division to the E. of the latter, on the Pincian, Quirinal, and Viminal hills, and a third division on the W. side of the river. The first of these quarters is the chief seat of bustle and trade: it is intersected by the Corso, and has some other good streets. On the N. W. side of the Capitol is the meanest and dirtiest part of the city, chiefly inhabited by Jews, and many degrees worse than Monmouth-street or Houndsditch in London. The upper part of the city on the Pincian and Quirinal hills is less densely covered with houses, and chiefly comprises palaces and villas, churches, convents, and gardens; it is intersected near the pope's palace on the Quirinal hill by two fine avenues, crossing each other

## ROME.

at right angles, and having four fountains at the point of intersection. Between the Quirinal and Esquiline hills are several streets inhabited by the lower orders, and extending to the Via Vaccina, a rather broad thoroughfare leading to the Roman forum. Beyond N., E., and S., are gardens and fields, studded here and there with villas, churches, and ruins, including the baths of Diocletian and Titus, and the Colosseum. That portion of Rome which lies on the right or W. bank of the river, consists of two parts: the Vatican, northward, in which are comprised the castle of St. Angelo and St. Peters, the glory not merely of the eternal city but of Christendom; and the Trastevere or ancient Janiculum, southward, which has the street, called from its length (nearly 1 m.), Via Longara, a botanic garden, and the Villa Corsini.

Rome, meaning the modern city (as we shall afterwards notice the ruins), is dull, dirty, and, with a few striking exceptions, meanly built: "Indeed," says Mr. Forsyth, "whichever road you take, your attention will be divided between magnificence and filth." (*Italy*, p. 124.) Most of the streets are narrow, crooked, and badly lighted with melancholy-looking *reverberiers*, or else by lamps hung over the statues of the Virgin, which seem to be indispensable to all considerable houses. From this general censur, however, must be excepted the Corso, already alluded to, extending in a straight line, more than a mile, from the Porta del Popolo to the foot of the Capitoline hill, and which, in the greater part of its extent, is 50 ft. wide, with *trottoirs* at the sides, which, however, are so narrow, and so often encroached on, as to be, in fact, of little service: it is lined with many handsome palaces, some of which may vie in grandeur with the noblest in Italy. Two other streets, the *Strada di Ripetta*, and the *Strada del Babuino*, diverging from the open space before his holiness' palace, are long, straight, and tolerably wide. These three streets are crossed by a line connecting the bridge of St. Angelo with the Pincian hill, and forming one of the most bustling thoroughfares in Rome.

With these exceptions, however, the streets are mean looking, and the houses have a shabby, dilapidated appearance, wholly unworthy so celebrated a city. The private houses are usually from three to five stories in height, built of tufa or brick, and plastered over. With these are intermixed many huge old buildings (*palazzi*), contrasting most strikingly with the surrounding slight, mean tenements, by their bulk, height, and air of antique grandeur. In consequence, however, of the decay of the families to which they belong, many of them are now turned into ecclesiastical colleges or hotels, or let to foreign ambassadors or noblemen; and in those which have escaped this fate, the lower story is sometimes let for shops, and sometimes retained for stables, coach-houses, and servants' rooms. The second story is generally a picture gallery, consisting of a suite of rooms all opening into each other, and richly adorned with marble and painted ceilings. The owner of the building occupies the third story, or, if there be a fourth, the third and fourth, throwing open his galleries to artists and all who choose to give two or three *paoli* to his servants. "The great size of many of the palaces, and the abundance as well as bold projection of the ornaments, produce, indeed, a general impression of magnificence; but if we can get space enough in front to examine the parts distinctly, we often turn away dissatisfied with the absurdity and disproportion they exhibit. Generally speaking, these buildings exhibit great simplicity of design, usually presenting to the street one simple continued line of surface, rarely decorated either with columns or pilasters. Ornaments round the windows are never omitted, but are generally too large, and in bad taste. The stories are generally divided by horizontal mouldings along the front, and great space is left between the ranges of windows. The whole is crowned by a large and rich cornice." Such, according to Woods (*Letters of an Architect*, l. 438), is the general external appearance of the best among these *palazzi*, of which Rome comprises in all upwards of 300, many, of course, being very inferior both in size and architectural beauty.

Rome has not a single square; and of the piazzas or paved areas, the Piazza del Popolo, the Piazza Navona, and that in front of St. Peter's, are the only three that deserve notice. They are adorned with obelisks, statues, and fountains; but the first and last being at the extremities of the town, are lost as places for walking in or meeting friends. The fine promenade on the Pincian hill, E. of the Piazza del Popolo, is planted with trees, and commands an extensive view; but it is of small extent, and is shut at sunset. Without the walls, however, on the N.E. side of the city, is the Villa Borghese, the grounds of which, nearly 3 m. in circ., planted after the fashion of an English park, and ornamented with statues, fountains, &c., are open to the public, and constitute the favourite resort of all classes, whether on foot or in carriages. Rome, like London and Naples, is destitute of promenades sheltered from the wea-

ther, and well lighted at night, a convenience which Paris has in perfection; and another defect is the absence of elegant shops, cafés, and restaurants, that form so striking a feature in the French capital. In the number and grandeur of its public fountains, however, and in the quality of its water, Rome surpasses every city. Almost every public piazza has its fountain, and almost every fountain has some peculiarity in its size, form, or situation, to attract attention. The finest of these, and perhaps the most magnificent in the world, is the fountain of Trevi, which has a white marble basin in a vast enclosure paved with large slabs of the same material. It represents a palace of Neptune placed on a rough, broken rock, and adorned with Corinthian pillars; in the centre of the building, under a rich arch, stands Neptune in his car drawn by sea-horses; and water runs down in torrents from the rock, making, as it were, a sea at its base. In the summer the waters overflow their usual limits, fill the whole marble basin, and rise to a level with the square, which after sunset is a favourite lounge of the inhabitants. The fountain in the Piazza Navona has an obelisk in its centre, surrounded by Tritons and Naiads, seated on rocks, and spouting forth water in magnificent jets *d'eau*. The *Fontana felice*, on the Viminal hill, discharges itself under an Ionic arcade through a rock, which a figure of Moses is striking with his rod. Other figures surround the prophet, and below are four lions hanging over the basin, as if eager to slake their thirst. These and the other fountains of the city are supplied from three only out of the numerous aqueducts which attest the luxuriance of the ancient city; and yet such is the quantity they convey, and so pure are the sources whence it is derived, that no city can boast of such a profusion of clear and salubrious water, poured forth spontaneously in jets *d'eau* without the aid of expensive machinery, as at Versailles, St. Cloud, and Chatsworth.

But, after all, water at Rome would seem to be provided rather for show than for use. Forsyth says that when he visited the city, the fountain of Trevi was inaccessible from filth! (P. 124.) There is, generally, in fact, a great deficiency of cleanliness, and a limited consumption of water, in all cities supplied by fountains, and wherever, indeed, it is not conveyed by pipes into private houses, and placed, as it were, under the hand of the occupiers.

The great glory of modern Rome consists in the magnificence of her churches, or rather in the matchless structure of St. Peter's.

"Thou, of temples old, or altars new,  
Standest alone—with nothing like to thee—  
Worthiest of God, the holy and the true.  
Since Zion's desolation, when that He  
Forsook his former city, what could be,  
Of earthly structures in his honour piled,  
Of a sublimer aspect? Majesty,  
Power, Glory, Strength, and Beauty, all are aial'd  
In this eternal ark of worship undefil'd."

This magnificent fabric occupies the site of an older structure raised by Constantine the Great. Pope Julius II. laid the first stone of the new building on the 18th of April, 1506, having selected the famous Bramante for his architect. But the latter dying in 1514, other architects were employed to carry on the work, till, in 1546, it was fortunately committed to the illustrious Michael Angelo, who nearly completed the dome, and a large portion of the building. After Michael Angelo's death, in 1563, the work was prosecuted under other architects, till its completion in 1614. The colonnade by Bernini was added in 1655-67. "St. Peter's," says Mr. Maclaren, "unlike many other celebrated edifices, surpasses expectation. The front is too low, and has some other defects; but the vestibule is admirable, and the interior is solemn, grand, rich, harmonious, beyond any thing that I had conceived. It is unquestionably the noblest building ever reared by human hands, the only work of art, as Madame de Staël observes, which produces an impression of grandeur akin to that which we receive from the works of nature. So vast are its dimensions, that colossal statues and monumental groups of figures are stowed away in its aisles and recesses without impairing the unity and simplicity of the plan, as they do in the St. Paul's of London. The interior of the dome (which is 140 ft. in diameter), as well as a considerable portion of the other surface, is covered with pictures, all of which, however, are, with one exception, of mosaic. The eye forms most erroneous estimates respecting the height of the different parts of St. Peter's, and most visitors are on this account disappointed by first impressions. The splendid bronze Baldacchino, or canopy, immediately under the dome and over the high altar, close also to the supposed tomb of St. Peter, is about 120 ft. high, though in appearance only 30. The chair of St. Peter, too, behind the high altar, appears from a distance as if raised only a few steps from the ground, whereas it is placed on an elevation 70 ft. above the floor. The pen seen in the hand of the prophet in one of the lower compartments of the dome might be

## ROME.

supposed to be 12 or 18 inches in length, whereas its real length is 6 ft. The visitor has no adequate conception of the magnitude of the dome until he arrives at the roof (the passages of which are so contrived that one may ascend on horseback), when he finds it rising before him like a mountain. The view from the external gallery round the lantern is exceedingly fine and extensive, embracing the Campagna from the sea to the Appennines; besides which, on looking at the roof of the church, its 10 cupolas give it somewhat the appearance of a town, so astonishing is its size. The depth of the floor, as seen from the interior of the lantern, appears lessened from 400 ft. to 100 ft.; but it may be discovered that the eye is deceived, as the pinnacles below appear only as tiny infants. When we stand in the interior gallery of the cupola corresponding with the whispering gallery of St. Paul's in London, and look at the mosaics\* on the concave, we are surprised to find them composed of square bits of coloured stone, half an inch broad, clumsily put together, often with intervals between them; yet, seen from below, they might pass for oil paintings. We find a pictured face of an angel, close to us nearly a yard broad; but, when we look across the gallery, a similar face, and really of equal proportions, seems to be of the natural size. The lights in this splendid edifice are finely tempered, well distributed, and kept in admirable order. The profusion, also, of rare and beautiful marble, introduced in every part, together with the gilded roof, the statues, monuments, mosaic ceilings and pictures, forms a display of brilliant and unexampled magnificence, which requires weeks and almost years to contemplate." (*MacLaren*, 177, 178; *Burton*, ii. 131-140.)

The form of the church, as designed by Bramante, was that of a Latin cross; but this was changed by Michael Angelo to a Greek cross, which has the advantage of exhibiting the whole structure at one coup-d'œil. Unfortunately, however, the plans of the latter were afterwards departed from by Carlo Maderno. In the caustic, and, perhaps, unjust language of Forsyth, "a wretched plasterer came down from Como to break the sacred unity of the master-idea, and him we must execrate for the Latin cross, the aisles, the mean-looking attics, and the low, ugly front" (*Italy*, p. 179.) The latter, however, is 396 ft. in length, and 159 ft. in height; and with whatever defects it and other parts of the structure may be charged, still there can be no question that "St. Peter's is beyond all comparison the most magnificent temple ever raised by mortal hands to the worship of the Supreme Being. It is a spectacle that never tires: you may visit it every day, and always find something new to admire. Then its temperature is delightful—as pleasantly cool in summer, as it is comfortably warm in winter. The fact is, that the walls are so thick that the air is not affected by that without, so that, like a well-built cellar, it enjoys an equability of temperature all the year round." (*Matthew's Diary of an Invalid*, p. 86.)

Of the many august ceremonies performed in this magnificent temple, the most imposing is that of the *Ten-ebree*, on the night of Good Friday, when the hundred lamps that burn over the tomb of St. Peter are extinguished, and a stupendous cross of light appears suspended from the dome between the altar and the nave, shedding over the whole edifice a soft lustre, delightful to the eye, and forming, with the objects animate and inanimate on which it sheds its light, a scene singularly striking, by a happy mixture of tranquillity and animation, of darkness and light, of simplicity and majesty; a scene, indeed, far more sublime and more deeply impressive than the illumination of the external dome on the night of St. Peter's day (June 29th). (*Eustace*, ii. 164-192.)

The dimensions of St. Peter's have been variously given by different authorities, and perhaps exactness is not attainable; but the following measurements are adopted by Gwillt, and may, perhaps, be depended on. The dimensions of St. Paul's, of Milan cathedral, and St. Sophia's at Constantinople, are from Woods, Eustace, and Dallaway.

Dimensions.	St. Peter's.	St. Paul's.	Milan Cath.	St. Sophia.
	<i>Fl.</i>	<i>Fl.</i>	<i>Fl.</i>	<i>Fl.</i>
Extreme inside length .	607	510	493	269
Length of transepts .	445	222	234	243
Height from cross to floor . . . . .	458	362	356	
Width of nave . . . . .	107		177	
Total area including outside walls .	227,000	84,000		

Comparing the Roman church with the British cathedral, which, though *longo intervallo*, may well claim to be the second in the world, the floor of St. Peter's covers nearly

\* The mosaic work is made not far from the church, in a building, part of which is used for the office of the Inquisition. The pieces employed in forming these pictures are square pieces of a vitrified substance, called *smalti*, composed of glass, lead, and tin; and there are about 15,000 different shades of colour. Marbles were first used, but the glare from their polished surface was found to destroy the effect of the picture. (*Burton*, ii. 140.)

five English acres (nearly the size of the Colosseum), while that of St. Paul's occupies only two acres; and the actual bulk or entire contents of the former, as compared to the latter, are as four to one. And, taking into account the number and splendour of the decorations of St. Peter's, we need not wonder that it is supposed to have cost, with its monuments, gilding, and embellishments, from 12 to 16 millions sterling, whereas the cost of St. Paul's did not exceed £750,000! "In the interior of these two noble buildings the difference is scarcely less striking than between one of our old barn-like meeting-houses and the most elegant of our modern episcopal churches; but, as regards the exterior, all admit, that in symmetry, purity of design, and true architectural beauty, the English is superior to the Roman temple." (*MacLaren's Notes*, 177-180.)

It is to be regretted that the situation of this cathedral of Christendom has been remarkably ill chosen. "No building," says Woods, "of great consequence was ever so badly placed. There is no distant point of view in which this church gives the impression of great magnificence, or from which it has the appearance of being such an immense building as it really is. This is owing to its situation in a hollow between the Janiculum and Vatican hills, which are connected by a neck behind it: so that on three sides it is surrounded by slopes rising almost immediately from it to about the height of the nave; and even in front, notwithstanding the large space before it, the building seems encumbered with houses, which occupy a slip extending towards the river. From the bridge of St. Angelo little is seen but the dome itself; and even when a glimpse is at length caught of its front and of the circular colonnade by which it is approached, it appears much nearer than it is; and the magnificent avenue, the *chef-d'œuvre* of Bernini, seems a finer object than the edifice to which it leads." (*Wood's Letters of an Architect*, i. 368.) This colonnade, which consists of two opposite semi-ellipses, forming each a broad covered passage leading to the front of the cathedral, comprises 256 Doric columns of travertine 40 ft. in height, arranged in four rows, and surmounted by 192 statues of saints. In the central space, between the colonnades, flanked by two fountains, is an obelisk, consisting of a single block of granite about 80 ft. in height, surmounted by a cross, the total altitude being 136 ft.; it was brought from Egypt to Rome by Caligula, and formerly stood in the circus of Nero, having been removed to its present situation by Pope Sixtus V.

"All churches," says Forsyth, even of the patriarchal class (those called *basilice*), stand at an awful distance from the majesty of St. Peter's." That of St. John Lateran however (at the S.E. extremity of Rome, far from the modern buildings, and upwards of  $\frac{1}{2}$  m. from the Coliseum), is entitled to the second place, and in former times was superior to St. Peter's. The chapter of the Lateran even now takes precedence, and the popes are always crowned here. This church was built on the site of an older structure in the beginning of the 14th century. Its front, consisting of a magnificent colonnade, is certainly impressive, notwithstanding its numerous faults. There are 5 entrances; that in the centre having a bronze door taken from the Temple of Peace in the Forum; and on the top of the façade are 15 statues of our Saviour, and various saints. The interior is divided into 5 aisles, and in the pillars of the nave are colossal statues of the Twelve Apostles; in the church comprises also a chapel of the Corsini family, in the form of a Greek cross with a central dome, gorgeously decorated with marbles, gilding, and pictures, and said to be one of the richest in Rome. Adjoining this church is a palace, which, after having been for many centuries the residence of the popes, was converted, in 1693, into a hospital for the poor; and at no great distance is the Scala Santa, a building celebrated for containing a staircase of 28 white marble steps, alleged to have belonged to the palace of Pilate at Jerusalem, and which orthodox Roman Catholics esteem a meritorious act of piety to ascend on their knees; indeed, so great is the number of devotees, that, with a view to the preservation of the steps, they have been covered with planks of wood. At the top is a painting of our Saviour at the age of twelve, begun by St. Luke, but finished by miraculous agency! (*Burton's Rome*, ii. 177.) The church of St. Paul's, outside the walls, one of the handsomest in Rome, and in many respects superior to that of St. John Lateran, was burned down in 1823, and is now, in course, though very slowly, of being rebuilt. The basilica of St. Maria Maggiore is a very fine and large edifice; but the profusion of its ornaments takes from the unity of the main design, and the narrow brick tower, rising above the whole, is in very bad taste. The interior has three aisles, the central one being lined by 36 Ionic pillars of white marble, which have a very beautiful effect: they are undoubtedly ancient, and may have belonged to the temple of Juno Lucina, that formerly stood here. A chapel in this church, belonging to the Borghese family, deserves notice for the

richness of its decorations. The church of *St. Pietro in vincolo*, originally erected about anno 420, but since wholly rebuilt, presents to the eye a noble hall, supported by 20 Doric columns of Parian marble, open on all sides, adorned with some beautiful tombs, and terminating in a semi-circle behind the marble. But it is principally remarkable for its containing the tomb of Julius II., illustrated by the noble statue of Moses by Michael Angelo.\* The other churches are so numerous that it would be an almost endless task to describe them; many of them command admiration from the splendour of their decorations and the articles of *virtù* which they contain; but perhaps the finest and most worthy of attention from the stranger are those of *Santa Agnese* in the Piazza Navona, *San Carlo al Corso*, *San Ignazio*, the *Santi Apostoli*, the *Chiesa di Gesù*, and the *Chiesa Nuova*; all of which are abundantly rich in marbles, gilding, &c., though not always disposed in the best taste.

The Vatican, the most ancient and by far the most celebrated of the papal palaces, is a mass of buildings erected at various times by different popes, said to cover a space about 1200 ft. in length by 1000 ft. in breadth, and to comprise 4000 apartments. "The effect," however, says Burton, "is any thing but pleasing; from no point of view does it present any extent of front or magnificence of design; while its proximity to St. Peter's interferes most unfortunately with the view of that building" (ii. 255.) The interior consists of a suite of galleries of small breadth, which, if placed in a continuous line, would extend two miles in length. It contains a countless multitude of inscriptions, statues, busts, reliefs, urns, sarcophagi, and vases, to say nothing of its literary and numismatic treasures, its books, MSS., drawings, the number of which the visitor can only guess at by counting the presses that conceal them from his sight. Taken altogether, it is by far the richest museum in Europe, and the precious objects it contains are magnificently lodged; for when the church was rich, she patronised the arts liberally both by buying and building, and even now the posthumous benevolence of popes and cardinals occasionally expends itself in erecting a new gallery or embellishing an old one. (*Maclaren*, p. 174.) The collection of sculptures is beyond all comparison the largest and most valuable in Europe, comprising, among other great works, the unequalled group of Laocoon and his sons, which even Michael Angelo despaired of being able to restore, the celebrated Apollo Belvedere (found at Antium, near the close of the 15th century), the well known group of the Nile and his offspring, the Belvedere Torso of Hercules and Hebe, a noble statue of Adonis, and another of Marcellus, with an excellent bust of Pius VII. by Canova. The library of the Vatican is alleged to comprise about 80,000 printed books and 35,000 MSS.; but, in point of fact, its literary riches are unknown, the catalogues having never been completed. There is reason, however, to think that its collection of ecclesiastical MSS. immeasurably surpasses any other in Europe; but it is very deficient in works of modern literature; and its value can be fully appreciated only by the churchman and the antiquary. The picture-gallery, which is by no means extensive, is, as compared with the collections now noticed, quite of modern creation. The frescoes of Raphael and Michael Angelo, indeed, have long adorned the walls of the Vatican; and the works of the former occupy three open galleries, called the *Loggie di Raffaello*, which go round three sides of a square court; but the oil-paintings have been collected wholly by Pius VI. and subsequent pontiffs, including the present pope, to whom we are indebted for the completion of the gallery. It comprises several of the *grand* productions of the Italian schools, including among others the "Transfiguration," by Raphael, usually considered his *chef-d'œuvre*, and the noblest work of art in the world; the "Madonna di Foligno" by the same master, the "Communion of St. Girolamo" by Doménichino, the "Martyrdom of St. Sebastian," perhaps Titian's very best work, the "Madonna di Monte Luca" by Giulio Romano, &c. The Vatican has two chapels, the most celebrated of which, known as the Sistine chapel, was built by order of pope Sixtus IV.; its walls and ceiling were covered during the pontificates of Julius II. and Paul III. with frescoes from the masterly hand of Michael Angelo. Behind the altar is the magnificent painting of the Last Judgment, the theme of so much eulogy and so much criticism; and on the ceiling are represented the Creation, the Deluge, and other scriptural subjects, the windows being adorned, somewhat inconsistently, with full-length figures of Prophets and Sibyls. It is a very large and lofty oblong room, with scarcely any of the furniture of a chapel: it is used on few occasions, except during the Holy week, when the *Tenebræ* and the "overwhelming" *Miserere* of Allegri are sung by the papal choir. In this chapel

also the cardinals meet in conclave for the election of a new pope. The *Sala Regia*, a hall of great size and good proportions, connects the above-mentioned chapel with another dedicated to St. Paul, which, like the first, is painted in fresco by Michael Angelo, and used only on great festivals. The Vatican is now seldom inhabited by the pope, except during the grand festival of Easter; the present abode of the pontiffs being on the Quirinal-hill (now called Monte Cavallo, from the two horses on its summit, taken from the baths of Constantine.) This palace, which was begun by Paul III., presents two long fronts, plain and unadorned, like those of most of the other palaces, the court within being upward of 300 ft. in length by 165 ft. in width, three sides being surrounded by porticoes, and the fourth having a double row of arcades surmounted by a clock tower. The grand staircase on the side to the right of the gateway conducts to the papal apartments, the gallery, and the chapel, all of which are on a grand scale, and adorned with fine paintings, especially those by Guido, which ornament a small private chapel. The adjoining gardens are spacious, refreshed by several fountains, and shaded by groves of laurel, pine, ilex, and poplar; but little attention being paid to them, they have a shabby, neglected appearance, made only more apparent by their great size. In front of the palace stand an Egyptian obelisk, flanked on either side by the statues of the horses which, as already stated, give the hill its present name. The Lateran Palace, near the church of St. John Lateran, has three lofty fronts of great extent and simplicity: a few apartments are reserved for the pope, when he comes to perform service at St. John's; but the rest is used as a hospital for 250 orphans.

Among the public buildings of modern Rome, the *Campidoglio*, or modern capitol, deserves notice, as being one of the best architectural works of Michael Angelo. The road to it is by a labyrinth of narrow dirty streets, leading from the Corso to two flights of steps, at the foot of one of which are two basaltic lions. At the top are colossal equestrian statues of Castor and Pollux, on a line with which stand several other statues and trophies. Opposite the steps is the senator's palace, the two other sides being occupied by the palazzo de Conservatori and the Museo Capitolino, the garden of which overhangs the Tiberian rock.

"Fiftieth goal of treason's race,  
The promontory whence the traitor's leap  
Cured all ambition."

But, owing to the accumulation of soil at the bottom, this leap might now be taken without any very extraordinary risk. The ancient buildings, to be noticed in the sequel, are nearly all gone; but there are many statues, and one in particular, a bronze equestrian figure of M. Aurelius, occupying the centre of the Piazza del Campidoglio, demands attention, not only on account of its beauty, but its acknowledged antiquity. In fact, quite enough is still furnished both by nature in the commanding position of the hill, and by art in the various architectural embellishments formed principally of ancient materials, to call up in the mind of the classical student those bye-gone days when decrees issued from the capitol fraught with the destinies of a subject world.

"Ages and realms are crowded in this space  
This mountain, whose obliterated plan  
The pyramid of empires pinnacled.  
Hither the kingdoms and the nations came  
In supplicating crowds to learn their doom."

Childe Harold.

The Capitoline Museum comprises a few and not very valuable paintings by the old masters; but on the other hand the collection of statues and marbles includes some of the most precious relics of ancient art, among which may be mentioned the "Dying Gladiator," the misnamed "Antinous," and the splendid group of "Cupid and Psyche," (*Conder's Italy*, iii. 347: *Maclaren*, p. 160-162.) The only other government buildings requiring notice are the new postoffice, in the Piazza Colonna, near the Corso, and the castle or citadel of St. Angelo: the central tower of the latter was built by Hadrian (thence called *Moles Hadriani*) for a mausoleum, and was unquestionably the most superb sepulchral monument ever raised in Rome. It began to be used as a fortress when the city was attacked by the Goths: its defences were strengthened by various pontiffs, the last and greatest improvement having been made by Urban VIII., who completed the *fosse* and bastions towards the meadows. It is now used as a state prison and house of correction, but it is better known to foreigners as the place whence are discharged the magnificent fireworks of the Easter festival.

Rome, as previously seen, comprises a great number of palaces, with the general plan of which the reader is already acquainted; but a few deserve more particular notice. The Colonna palace, in the square of its own name, fronting the Corso, is entered by a noble painted staircase leading to a gallery which, in point of size and architecture, is the finest in Rome: the roof of the saloon is supported by

\* The magnificent ode or sonnet of Zappi, inspired by the contemplation of this statue, may be seen, with a spirited translation, in *Rococo's Life of Leo X.*, iv. 223, 3d edit.: it is also given with a different translation in *Burton's Rome*, ii. 224.

polished columns of *giallo antico*, and the ceiling displays the battle of Lepanto, the event of which raised a colonna to the honours of a Roman triumph. The collection of pictures, however, is about the worst of any in Rome. (*Williams's Letters*, ii. 80.) The *Borghese* palace is also a very splendid building, "remarkable for its extent, its porticoes, its granite columns, and its long suite of apartments, being still more distinguished by the well-supported magnificence that pervades every part, and gives the whole mansion, from the ground floor to the attic, an appearance of neatness, order, and opulence." These are the words of Eustace; and, according to latter writers, this palace is at present equally well kept up. The collection, which, contrary to the usual rule, is on the ground floor, occupies nine large rooms, and ranks among the first in Rome. The *Doria* palace, in the Corso, has three vast fronts, and comprises a spacious court, surrounded by colonnades; the gallery is particularly rich in paintings of the Italian and other schools, including many landscapes by Gaspar Poussin and Claude; in fact, nowhere else in Rome is there so varied a collection, or one so well suited for the purposes of study. (*Rome in the 19th century*, iii. 6-14.) The *Barberini* palace, one of the grandest buildings in modern Rome, built from the united designs of Maderno, Bernini, and Borromini, consists of a projecting centre, surmounted by a square lantern and two smaller wings; it comprises, also, besides statues and paintings, a noble library, freely thrown open to the public. The *Farnese* palace, a noble structure, to erect which the Colosseum and theatre of Marcellus were despoiled of their choicest ornaments, had formerly a magnificent and, in some respects, unrivalled collection of ancient sculpture, paintings, and books. But the king of the Two Sicilies having succeeded to the rich inheritance of this illustrious family, the collection has been carried to Naples. On the ceiling of a gallery belonging to the *Rospigliosi* palace, on the Monte Cavallo, is the famous *Aurora*, the *chef-d'œuvre* of Guido, which the beautiful engraving by Morghen must have made familiar to many of our readers. The *Bracciano* and *Corsini* palaces, and others too numerous to be mentioned, deserve attention for their architectural merits and the treasures of art with which they are furnished.

Rome, besides its palaces, has numerous *villas*, both within and without the present walls, built chiefly by a few cardinals, whose riches, taste, learning, and leisure, conspired to create these beautiful retreats. The *Villa Borghese* has already been mentioned as including pleasure-grounds that form the favourite resort of the modern Romans, and the mansion, with its collection of pictures and marbles, is equally beautiful. The *Villa Albani*, outside the Porta Salara, is of exquisite design, planned by Cardinal Albani, one of the profoundest antiquaries of modern times: it was here that, under his patronage, Winkelmann pursued those studies that enabled him to write his history of ancient art. The collection, once far more extensive, is said to be extremely choice; in fact, it does not contain a single mediocre piece. The villas *Aldobrandini*, *Pamfilii*, *Lanti*, and *Ludovisi*, are all, more or less, adorned with frescoes and ancient statuary; besides being well situated and surrounded with fine gardens. The magnificent *Medici villa*, on the Pincian hill, is now appropriated to the use of the French Academy.

The Tiber, including its windings, runs for three miles through Rome. The greatest breadth of the stream within the walls is only about 400 ft., and the smallest 200 ft., the average being somewhat less than one third the breadth of the Thames at London Bridge, and considerably less than that of the Clyde at Glasgow. It is deeper, however, than the Clyde, and has certainly a larger volume of water.

"Vorticibus rapidi et multa flavas arena  
In mare prorumpit." *Virg. Æn. vii. 31.*

It well merits the epithet of *flavus*, as it is not only discoloured, but loaded with yellow mud beyond almost any other river; and this is not the consequence of accidental floods, for its waters are scarcely ever clear, and hence, no doubt, its ancient name *Albula*. Its banks are low and tame, consisting for the most part of crumbling soil, without quays, and at many places without even protecting walls; and they are not ornamented by a single promenade or decent street. (*Maclaren*, p. 150.) There are only two places where there is a sort of quay, or landing-place, one called *Ripetta*, on the E. bank, above the bridge of St. Angelo, where boats from the inland provinces land wine, provisions, &c., and the other at the S. end of the city, on the opposite bank, called the *Porto di Ripa Grande*, where sea-borne vessels land their cargoes: and where there is a line of warehouses, and a custom-house. Three bridges cross the river within Rome; that most northward is the Ponte St. Angelo (anc. *Pons Ælius*), built by Hadrian, and restored in its present form by Clement IX.: it is a structure of no great beauty, having a balustrade, on the top of which are several hideous-looking figures of angels. The next,

proceeding southward, is the Ponte Sisto (anc. *Pons Janiculis*), built by either Trajan or Antoninus Pius, and rebuilt by Sixtus IV., in the 15th century. About half a mile lower down is the island of San Bartolomeo, the ancient *Insula Tiberina*, of oblong shape, about 1000 ft. in length, and 300 ft. in breadth, united with the E. bank by the Ponte San Bartolomeo, (anc. *Pons Cestius*), and with the W. bank and the district of Trastevere by the Ponte di quattro Capli, so called from a head of Janus Quadrifrons that formerly stood there; it is the Pons Fabricius of antiquity; and was constructed anno 61, B.C. Within Rome, also, are the remains of three ancient bridges, the principal being the *Pons Triumphalis*, so called from the circumstance of the triumphal processions crossing it on their way to the capitol: it is now entirely destroyed, but the piers of it may be distinguished by the agitation of the water a little below the bridge of St. Angelo. About half of the Pons Palatinus, the most ancient bridge of Rome, is still standing, a few yards below the island of San Bartolomeo, and a continuation has been made of wood for the accommodation of foot passengers. The Pons Sublicius or Æmilii, the most southerly of the old Roman bridges, has long disappeared. The Tiber is now, as it was in Virgil's time, subject to very high and also frequent floods, the water sometimes rising as high as the Piazza di Spagna, and very frequently laying under water all the streets in the busy quarter near the river. On the Porto di Ripetta are two pillars which mark the height of the different floods for some centuries past; and it appears from it that they have all happened between the months of November and February. The frequency of these inundations gave rise to various projects for preventing them, and Aurelian caused the banks to be raised and its channel cleared, though with what success we are not informed. The vast accumulation of soil, however, by which the surface of modern Rome is raised so many feet above the ancient city, must undoubtedly, make it less liable to suffer from floods now than formerly. (*Burton*, i., 336.)

The classical monuments of Rome are very numerous, their interest depending on their beauty, grandeur, and singularity, their intrinsic merits, or on the events and personages historically associated with them. Those who expect gratification from the first source will, in many instances be disappointed, as the greater number present little to please the eye or gratify the taste. The *aqueducts*, for example, those astonishing efforts of human industry, which stretch across the Campagna in various directions, exhibit their real greatness only to the understanding. To the eye, these works (of which there seem to have been 14, coming from 9 different sources,) present merely a series of naked brick arches, scarcely larger than a house-door in span, or higher than a park-wall, and without any sort of ornament. Near the mountains, and in crossing valleys, they may be lofty; but in the vicinity of the city they are low and tame; three only now remain in a state fit for use, viz. the *Aqua vergine*, *Aqua felici* (anc. the *Claudian aqueduct*), and the *Aqua Sabatina*, which supplies the Janiculum. The Roman roads, also, solidly built of large stones, may be called great works for their expense and utility, but they have no external attractions. The same remark applies to the *Cloaca*, of which a false idea is conveyed by calling them *sewers*. They were rather drains made to carry off the stagnant water of the pestilential marshes, which occupied much of the low ground near the Tiber, and the spaces between the Aventine, Palatine, and Capitoline hills. They were constructed at a very early period (according to some, in the time of the kings), for the obvious reason, that the marshes separated the first inhabited parts of the city from each other, and their desiccation became indispensable. The height and width of the *Cloaca maxima* are equal, each measuring 13½ ft.: a view of it may be obtained at its mouth, where it flows into the Tiber a little below the Ponte Rotto, another portion being visible near the Arch of Janus Quadrifrons.

The *baths*, as they now exist, are an assemblage of naked, half dilapidated brick walls, which surprise by their huge size and the extent of ground they cover. We know of the former existence of eight *thermæ*, erected by different emperors; and the carcasses of three remain in considerable masses, those of Titus, Caracalla, and Diocletian, the ruins of the first two of which are in vineyards, a great part of the last having been transformed by Michael Angelo into the church and monastery of Santa Maria degli Angeli. Each consists of a labyrinth of apartments, the uses of some of which antiquaries have scarcely been able to conjecture. Caracalla's baths cover an area of 23 English acres, a space nearly three times the size of Lincoln's-inn-fields, in London. "But we must keep in mind the multifarious nature of these establishments, which included not only baths, with their *caldaria*, *frigidaria*, *sudatoria*, &c., but porticoes and gardens, libraries, lecture and conversation rooms for the philosophers, academies and halls for declamation, gym-

## ROME.

nasia for the 'fancy,' theatres for the gay; temples for the devout, and, most probably, wine shops or places of refreshment for all; in fact, they were less baths than 'places of universal recreation.' The Roman citizen left his house early, and only returned at night to his bed, spending the day chiefly in the forum, the courts of justice, or at the baths. The latter establishments seem to have combined the uses of our coffee-houses, reading-rooms, libraries, lecture-rooms, and theatres, as well as baths. We may call them, indeed, national *club-rooms*, supplied with every species of accommodation then in vogue, and open to the whole free citizens of Rome. It is this circumstance which gives them their interest. We cannot tread these ghastly chambers, where no sound now fills on the ear save the echo of our own steps, without thinking of the animated throng that once peopled them, the crowd of Roman citizens of all grades and classes, from the emperor to the mendicant who received his monthly dole of wheat from the public granaries, the foreigners from every clime, princes, tax-gatherers, hostages, petitioners, litigants, soldiers, parasites, who came to the seat of empire for business or pleasure. All these must have resorted to the baths, some for ablation, exercise, or amusement, some to read in the libraries, some to listen to the philosophers, some to talk of the news and hear bulletins read from the armies, announcing battles on the Rhine or Euphrates, or insurrections in Spain or Gaul." (*Maclaren's Notes*, p. 142.)

Among the numerous temples that once adorned the ancient capital of the world, the Pantheon and the temples of Vesta, Peace, Fortuna virilis, and Bacchus, present extensive and very interesting remains; but incomparably finer than all the rest is the Pantheon (in the ancient *Campus Martius*), which, though stripped of its external ornaments, and disfigured by two modern belfries, erected by Bernini, is entire within. This exquisite temple was built, as Pliny tells us (*Hist. Nat.*, lib. xxxvi., cap. 15), and as the inscription on the portico testifies, by Agrippa, the friend and general of Augustus, who dedicated it to Jupiter the Avenger, *Jovi ultori*. It is a perfect circle, 180 feet in diameter.

"Relic of nobler days and nobler arts  
Despoiled, yet perfect, with thy circle spreads  
A holiness appealing to all hearts—  
To art a model."

Its beauty consists in its admirable proportions; and its portico, 110 feet in length by 44 feet in depth, supported by 16 Corinthian columns of white marble, has a most majestic appearance. "The portal is more than faultless; it is positively the most sublime result that was ever produced by so little architecture." (*Forayth*.) The dome is of great extent, and has a central aperture, from which the building receives its entire light. The Pantheon has been stripped of everything that could be taken away, in order to furnish materials for the embellishment of St. Peter's. It is now made the receptacle of monuments to those who have deserved well of their country, and contributed to sustain the reputation of Italy.

The great wonder of ancient Rome, however, is the Flavian amphitheatre, now the Coliseum, or more properly Colosseum,\* unquestionably the most august ruin in the world, and by far the largest amphitheatre of which we have any knowledge.

"Omnis Cæsareo cedit labor amphitheatro,  
Unum præ cunctis fama loquatur opus."

*Martial de Spect.*

It consists of a vast ellipse, the length of the longest diameter measured from the outside of the outer wall being about 620, and that of the shortest 513 feet, so that it covers about 5½ English acres of ground! The longest diameter of the arena has been variously given at from 257 to 300 feet, and the shortest at from 180 to 190 feet; the space between the arena and the outer wall (from 160 to 167 feet) being occupied by the walls, corridors, and seats that rose tier above tier from the wall round the arena nearly to the top of the outer wall. The latter, which is about 179 feet in height, consists of three rows of vaulted arches rising one above another, exclusive of which, it had, when perfect, upper works of wood. This colossal amphitheatre is said to have had seats for 67,000 spectators, and standing room for 20,000 more! There is really, therefore, but little of exaggeration in the statement of Addison that the amphitheatre

"On its public shows unpeopled Rome,  
And held, uncrowded, nations in its womb."

The arena was sufficiently extensive for the exhibition, on the grandest possible scale, of the bloody sports that delighted the ancient Romans; and here hundreds, and even thousands, of gladiators and of wild beasts have frequently contended at once—

"Butcher'd to make a Roman holiday!"

\* The amphitheatre of Vespasian and Titus was, in the lower ages, called *Coliseum*, or *Colosium*, from the vastness of the building, and not, as has been sometimes stated, from a colossal statue of Nero, supposed to have stood near it. (*Lezardien's Antiquities of Rome*, a valuable work, p. 329.)

This magnificent ruin has been much damaged by earthquakes, lightning, and the destroying influence of time; but it has suffered incomparably more from the injuries inflicted upon it by the successive masters of Rome. In the 12th century it was occupied as a fortress; and in the course of the next century it became, what it long continued to be, a common quarry, whence materials were taken to build a large portion of the modern city. (*Hobhouse's Illustrations of Childe Harold*, p. 263-266.) In consequence of these lengthened devastations, "not a single step is now remaining of all the seats of stone which rose in regular succession from the arena; but the wall which surrounded it, to prevent the escape of the wild beasts, is nearly entire. The interior presents a most complete scene of destruction. By means of broken staircases, we may climb up a considerable height, and almost be lost in the labyrinth of ruins. It is from such a view of these remains that the best idea of their vastness is formed; and if viewed by moonlight, when the shattered fragments of stone, and the shrubs which grow upon them, are seen at a distance in alternations of light and shade, the mind receives mingled impressions of gratification and melancholy which, perhaps, no other prospect in the world could produce." (*Burton's Rome*, ii., 52-53.) At length, however, an end was put to the spoliation of this most splendid relic of imperial Rome. "Benedict XIV. consecrated the spot which persecution and fable had stained with the blood of so many Christian martyrs." (*Gibbon*, xii., 455.) And subsequent pontiffs have repaired and strengthened portions of the existing ruin.

"The pile speaks powerfully to the imagination, through the bloody rites once celebrated in it. It was the scene of those savage fights of gladiators, those combats of wild beasts which were unknown among other ancient nations, and have fixed a brand of infamy on the Roman name. The interior has been carefully cleared out, and the boundaries of the arena which was so often soaked with blood are distinctly seen. When we stand among the broken arches of this vast edifice, now the abode of bats and owls, silent as the grave, and with not a single building near it, our thoughts are irresistibly carried back to the thousands of all ranks and both sexes who once filled its ample benches, to the roars and yells of the wild animals lacerating each other, the shrieks of the slaughtered human beings, and the shouts of the blood-thirsty multitude now applauding the blow which took away a fellow-creature's life, and now calling out for fresh victims. These cruel exhibitions were characteristic of Rome, both republican and imperial. The Greeks, wherever they established their power, carried with them the elevated sentiments and graceful mirth of the stage; and you may trace the dominion of the Romans over the ancient world, by the amphitheatres built for the gratification of their ferocity." (*Maclaren's Notes*, 150-2.)

The Romans, always fond of shows and games, were especially attached to those of the Circus.

Duas tantum res anxius optat,  
Panem et Circenses.

*Juvenal*, Sat. 10, v., 81.

There are said to have been at one time no fewer than 15 circuses in the city and its environs. The principal of which were the circus Maximus, circus Agonalis, and the circuses of Nero and Caracalla. Of the circus Maximus (which Amianthus Marcellinus describes as being at once "the temple, the dwelling-house, the public meeting, and all the hopes of the ancient Romans"), there are now no remains; but Pliny informs us that it was capable of accommodating 260,000 spectators; Juvenal, using, perhaps, a poet's licence, goes the length of saying,

"Totum hodie Romam Circus capit."

The form of the circus Agonalis (supposed to have been built by the emperor Severus) may be traced in the piazza Navona; and even the round end is not lost: it is about 750 ft. in length; and the races held here during the carnival forcibly remind us of the uses to which it was formerly devoted. The circus of Caracalla, outside the gate of San Sebastian, has its walls still entire, though the seats have fallen in, leaving a kind of terrace along the whole length of the walls. It appears to have been 1678 ft. in length, 435 ft. in width, and to have been capable of accommodating 20,000 spectators. Of the other Roman ruins (excepting those of the forum and capitol), the two columns of Trajan and Antonine, and the three triumphal arches of Titus, Constantine, and Severus, principally deserve attention, from their beauty and the taste displayed in their execution. The column of Trajan, erected to commemorate that emperor's successes in Dacia, is 115 ft. 10 in. in height, not including the statue of St. Peter, which Sixtus V. had the bad taste to substitute for that of its illustrious founder. A spiral staircase leads to the balustrade at the top; and the exterior is adorned with sculptures in *basso relievo*, spirally arranged round the column, representing the victories and achievements of the emperor. Napoleon's pillar at Paris is a good imitation of that of Trajan. The

## ROME.

pillar of Antonine (or, more correctly, of M. Aurelius, for he erected it), in the piazza Colonna, is 122½ ft. high, and is now surmounted by a colossal statue of St. Paul; the bas-reliefs, similarly arranged to those on the other column, are not nearly so well executed, and the whole is much injured and defaced. The arch of Titus, built to commemorate his victories over the Jews, consisting of a single arch, was adorned with eight marble columns of the Composite order, and had its interior covered with sculptures, representing the emperor's triumph after the capture of Jerusalem; but it is in a state of great dilapidation, many of its rich decorations having been carried off to embellish the Farnese and other palaces: latterly, however, some attempts have been made towards its restoration. Till the time of Sixtus IV., the bas-reliefs were not visible, so much had the soil accumulated and buried the arch; but that pontiff ordered it to be excavated; and there is now a clear passage under it at the level of the ancient pavement, and, perhaps, on the pavement itself. The arch of Constantine, at the foot of the Palatine hill, near the Colosseum, is the most noble, because the best preserved structure of the kind in Rome; but it is indebted for its chief beauty to the spoliation of the arch of Trajan, which stood in the forum of that emperor, and which the senate, with equal barbarism and servility, stripped of its *bas-reliefs* and other rich materials, employing them to ornament the new structure. It consists of a large arch between two of smaller size, having on each side four fluted Corinthian columns of giallo-antico supporting the figures of eight Dacian captive warriors. It is covered with the bas-reliefs taken from the arch of Trajan, and with others of later date and of very inferior execution. The soil which had accumulated round this arch was excavated in 1804, when part of the *Via Triumphalis* was brought to light. The grass-grown platform at the top was once, probably, occupied by the victor in his triumphal car; but this has disappeared. We have already stated, that the paltry gateway in front of Buckingham palace is a wretched miniature imitation of this arch: (*Lumisdén's Ancient Rome*, 327.)

The Capitoline hill, "that rock of triumph, that high place where Rome embraced her heroes," naturally kindles a feeling of enthusiasm; but of the topography of the ancient capital we really know next to nothing. "Four temples, 15 chapels, three altars, the great rock, a fortress, a library, an atheneum, an area covered with statues, the enrollment-office, all these are to be arranged on a space 400 yards in length, and 200 in breadth; and of these, the last only can with precision be assigned to the double row of vaults crowded with salt, where the inscription of Calulus was discovered. The citadel may be believed to have extended along the whole side of the hill." (*Hobhouse's Illustrations of Child Harold*.) But however little be known of the precise position of these ancient buildings, here was situated the *domus de canna straminibusque*, which passed for the house of Romulus, and was preserved with religious care till the time of the emperors; here the Roman people celebrated their most sacred rites, and kept their treasures, archives, trophies, records, Sibylline books, and other valued relics; and here 300 conquerors, in the space of 1000 years, deposited their spoils and consummated their glories, by the grand spectacle of a triumph. (*MacLaren*, p. 161.) The Roman forum, however, is, perhaps, the most melancholy object within the walls of "the eternal city." Its former grandeur is utterly annihilated; the ground has been applied to other purposes, and even the exact position of its various parts is much disputed, though it be probable that excavations, judiciously conducted, would set the question at rest. The forum, as described by Bunsen, the Prussian envoy, who took great pains on its investigation, appears to have been of no great size (about two acres), and to have owed much of its magnificence to the temples, basilicæ, curiæ, and other buildings that surrounded it. Indeed it was in consequence of its inadequate size, that Julius Cæsar built a new one. Augustus, Trajan, and other emperors, followed his example, and Rome had ultimately a multitude of forums. But though the ancient forum Romanum and present Campo Vaccino be so desolate that we might apply to it Virgil's description of its appearance before the arrival of the Trojan settlers. (*Æn.* viii., 360.)

"*Pasim armenta videres  
Romanoque foro et laitis mugire carinis.*"

the classical scholar turns more with pleasure to the pages of Byron:

"The Forum, where the immortal accents glow,  
And still the eloquent air breathes, burns with Cicero!  
The field of freedom, faction, fame, and blood;  
Where a proud people's passions were exhaled  
From the first hour of empire in the bud  
To that when further worlds to conquer failed."

The forums of Augustus, Trajan, and Nerva, were laid out

near the foot of the Capitoline hill, close to, though separated by buildings from the forum Romanum; and southward rises the Palatine hill, on which was built that mere village or collection of huts of which the masters of the world, in the days of their grandeur, loved to speak as "the cradle of their empire, the acorn, whence sprung the mighty oak that overshadowed the world." Cicero had a house here, and the brick ruins are still extant of the golden palace of Nero; but at present this spot, which once lodged the whole Roman people, is occupied by a single villa, surrounded by vineyards and gardens. All the more conspicuous monuments above described belong to the imperial times, for scarcely a shred remains which can be referred with certainty to the ages of the republic. The principal exceptions are the Tullian prison, comprising two dungeons, perfectly dark, and built with huge blocks of stone, answering in all respects, to the striking description given of it by Sallust; (*Bel Catalan*, cap. 55); there are also two ancient tombs (one of which belonged to the Cornelian family, and contained the bones of the Scipios); and the Cloaca Maxima already mentioned; but these structures have little beauty, and derive their interest almost exclusively from classical associations.

*Population*.—It is extremely difficult to arrive at any just conclusion with respect either to the population of Rome, or of any other of the great cities of antiquity. Generally it has been exceedingly exaggerated. The great actions of the Romans, the vast extent of their empire, and the magnificence and splendour of their capital, the original seat of their power, seem naturally enough to lead to the conclusion that its population must have been immense. The strong national spirit of the Roman writers led even the most cautious among them to magnify the power and importance of the eternal city, which were exaggerated beyond all bounds by orators and poets, anxious to gain the favour of the public by flattering their prejudices, and exalting their power and greatness. The statements, too, of the classical writers as to the population of Rome and other great towns, are not only in themselves very vague, but, being extremely liable to mistakes in copying, have, no doubt, in many instances been magnified by copyists and others, always prone to exaggerate what is really great, and of which they have no distinct knowledge. And in addition to this, all inquiries into the population of Rome, Athens, and other ancient cities, are rendered peculiarly difficult from the circumstance of the returns of the censuses, and the statements in the classical authorities founded on them, usually or always referring to such free citizens only as were capable of bearing arms, without including children or slaves, though the latter formed in most instances a large, if not the largest portion, of the population. Our limits will not, however, permit of our entering into any detailed examination of the various statements that have been put forth with respect to the population of Rome. The exaggerations of Vossius, Lipsius, Châteaubriant, and others, who give to imperial Rome 14, 5, and 3 millions of inhabitants, are too absurd to deserve notice. Hume, who in his masterly *Essays on the Populousness of Ancient Nations*, has discussed the question of the population of Rome with his usual learning and good sense, arrives at the conclusion that Rome, when in the zenith of her greatness, might have been about as populous as London in 1760: in other words, that she might then have had from 700,000 to 800,000 inhabitants. Gibbon estimated the population at 1,200,000 (*v.*, 286, 8vo. ed.); but it would appear the more moderate estimate of Hume is the more accurate, though the probability be that even it is beyond the mark. It appears from the very learned and elaborate researches of M. Dureau de la Malle (*Economie Publique des Romains*, liv. ii., cap. 10), that the area of Rome, included within the walls of Aurelian, which have been traced and laid down with the utmost precision, amounts to very near 1396½ hectares, that is to about three fifths the area of Paris: and the fair presumption is from the numerous forums and other open spaces in Rome, the number of the public buildings, and the great magnitude of many of the private residences, that its population, as compared with that of Paris, would be in a still less proportion. To the population within the walls has, however, to be added that of the suburbs, the amount of which is the subject of elaborate inquiry by the same learned critic. On the whole, he concludes, apparently on good grounds, that the population of imperial Rome, including its suburbs, in its most flourishing period, may be fairly estimated, allowing for troops and strangers, at between 560,000 and 570,000 (*l.*, 403). And though we would not be understood as agreeing with M. Dureau de la Malle in all his statements, we have no doubt of their general accuracy, and of his estimate coming very near the mark. And, in fact, how small soever it may appear when contrasted with the statements that have been long current as to its vast magnitude, a population of 560,000 is

## ROME.

really immense for a city like Rome, without either manufactures or trades, and the inhabitants of which chiefly depended for subsistence on the gratuitous distribution of the corn supplied by the conquered provinces.

During the troubles that devastated Italy, and especially Rome, from the 5th to the 13th century, the population of the city rapidly declined, and did not exceed that of a third or fourth rate town of the present day. But from the 14th century it began again to increase; and in the "golden days" of Leo X., it is supposed to have amounted to about 85,000. Towards the middle of the 17th century it was estimated at 90,000. In 1709, the inhabitants amounted to 138,568; in 1740, to 146,080; in 1765, to 161,899. (*Gibbon*, xii., 429) But owing to the influence of the French occupation, they had fallen off, in 1821, to 146,000, exclusive of Jews. It has, however, again increased; and at the last census, in 1838, it had 148,903 inhabitants. Owing partly to the unhealthiness of a portion of the town, and partly to the celibacy of large classes of the population, the deaths uniformly exceed the births; so that were it not for the influx of inhabitants from all parts of Italy, and indeed of Europe, the population would rapidly decline. The decrease in 1837 was chiefly attributable to the ravages of the cholera.

The *inhabitants*, generally, are of a very mixed race; and it would be absurd to suppose, after so many changes, that they possess any considerable portion of ancient Roman blood. The men of the working and middling classes are generally stout and good-looking; though what are called Roman faces seem to be rarer than in England. The women, though good looking when young, soon become coarse; and, being large-boned, have a haggard appearance on losing their plumpness in old age. The men wear hats with crowns like a sugar-loaf, very wide cloaks wrapping round and round like a Scotch plaid; pieces of cloth tied about the legs with cords, instead of stockings, and sandals in lieu of shoes. The women generally wear a scarlet Spencer with sleeves; and, for a head-dress, a piece of white linen, thickened on the crown by numerous folds, and with the end hanging down behind to the shoulders. Want of cleanliness is a common vice. The streets, public places, houses, and persons of the bulk of the population would all be improved by scrubbing, washing, and combing. Some of the most interesting objects are inaccessible from the accumulation of filth; and the appearance of the monks is absolutely disgusting; they are not redolent of holiness, but of dirt and vermin.

The cardinals and bishops (being under the pope) the rulers of the country, constitute the court-party, and claim the highest rank, after whom come the lay-nobility, subsisting on the revenues of their estates. The priesthood forms a very numerous portion of the inhabitants; for, besides 37 cardinals and bishops, it appears, according to the census of 1836, that there were then in the city 3490 priests and monks, besides 1384 nuns. The civil nobility, with a few exceptions, are few in number, poor, and without power or influence. The lawyers, who are divided into four classes (corresponding nearly with king's counsellors, barristers, attorneys, and notaries), form a pretty extensive section. After them rank the artists, a very numerous body, with a good deal of influence in society; and next to these are the *mercanti di Campagna*, a wealthy class, who farm extensively, and have warehouses at Rome for the sale of their produce. Rome has about 5500 shops; but their owners, with some few exceptions, rank below the classes above described. The foreigners, a mixed multitude, among whom the English and Russians are the most numerous, and, generally speaking, the best informed, constitute a class of themselves; enjoying also, in consequence of their wealth, many peculiar privileges. The police exercises no inquisitorial powers; and foreigners may live as they please without attracting attention, and do, with impunity, what would not be permitted to natives. To this circumstance, as well as to the fascinations of antiquity and modern art, we may attribute the visits of foreigners; for, of the English at least, a large proportion are led by motives very different from a love either of the fine arts or classic lore. (*Maclaren*, p. 145.) With respect to morals, it is admitted on all hands that they are extremely lax. The common people are intelligent, and obliging, but passionate; and, on the slightest provocation, strike at each other with knives. Revenge and jealousy often lead, among the lower orders, to assassinations; rendered more frequent by the almost perfect impunity with which they may be committed. The statements as to conjugal infidelity are, perhaps, exaggerated; though the circumstances, under which society is placed, the swarms of priests, monks, and others, having no excitement but that of intrigue, leave no doubt as to the prevalence of licentiousness, and the general corruption of morals. The modern Romans are prone to falsehood. "They never speak truth," says Mr. Maclaren, "at the expense of their

own interest; and in the courts it is asserted that any quantity of false evidence may be got for money. Cheating, in all its forms, is practised by high and low; and provided it be cleverly done, and successful, they feel a pride in telling it. The judges and functionaries of all kinds have the reputation of being very corrupt. The higher classes are slaves to their vanity, and their indolent pleasures; the lower to the most abject superstition. This character, however, chiefly belongs to the past or passing generation. A large proportion of the young Romans in the middle and upper classes are described as liberal, gentlemanly, and honourable; but they, and indeed the educated classes generally of all ages, are Deists. They speak with contempt of the mummeries and pious frauds they daily witness, but go once a year to confession in order to avoid scandal. The Romans have, however, their redeeming qualities; they are very sober, social in their habits, fond of their children, and obliging to strangers. There is no town, perhaps, where foreigners feel so much at ease. They may dress as they please, live as they please, and indulge in all their personal tastes and eccentricities, without being annoyed, or even stared at. In private lodgings, strangers often meet with much genuine and gratuitous kindness. Many of their vices may be ascribed to the operation of a bad political system on minds naturally acute and active; for falsehood, hypocrisy, and craft are the natural fruits of a government which crushes liberty of thought." (*Maclaren's Notes*, p. 82.)

The manners of the upper classes are indicative of extreme indolence. They rise late, and are never to be seen until four in the afternoon, when they take a drive up and down the Corso, which, narrow as it is, may be termed the Hyde park of Rome; after which, they resort to *sorides* in private houses, for the theatres are open only during the carnival. To walk in Rome is quite unfashionable; and a carriage of some kind or other is quite indispensable, even to those of the noblesse or gentry whose limited income denies them a comfortable meal. Daunting, conversation, and cards are the chief evening amusements; dinner-parties are almost unknown, and suppers are only given on great occasions. In the month of May, all the inhabitants that can afford it, go to the country for two months, and again in October for the same period, the air of the Campagna being then purified by the rains of April and September. On these occasions, they hire a house or lodging in one of the pretty towns 10 m. or 15 m. from Rome; and their principal amusement during their *villagetur* consists in fishing and bird-catching; the chase, in any of its noble forms, being little followed.

The public amusements consist of theatrical representations, concerts, and religious ceremonies, with occasional frolics at the carnival and other festive seasons. There are three theatres, two of which, the opera seria and opera buffa, are open during a great part of the year; but the performances are of a very mediocre description; the concerts have little to recommend them, and among the people at large, music forms but a small part of their enjoyment, though a few wandering harpers (*carciofalar*) may sometimes be found trying to inspire them with the love of sweet sounds. An amphitheatre (*corren*) for bull-fights, tumbling, horse-riding, &c., has been formed out of an ancient mausoleum of Augustus, and when open is a favourite resort. The carnival would require some space for its description in detail: it may be sufficient here to observe, that in its license and intrigue, its unbridled mirth, and its levelling of rank; nay, even in the season of its celebration, it bears an obvious resemblance to the Roman Saturnalia; but it approaches, perhaps, more closely to the feast of Cybele, when, according to Livy (xxiv. c. 14), the richest draperies were hung from the windows, masquerading took place in the streets, and every one, disguising himself as he pleased, walked about the city in jest and buffoonery. If the historian had informed us in addition that one of the principal amusements was a promiscuous pelt of sugar-plums or chalk-stones, he would have furnished us with a precise picture of the modern carnival. Religious festivals are very frequent, but occur oftener between Advent and St. Peter's day than at other seasons. The pope celebrates mass and confers his public benediction in St. Peter's on Christmas day, Easter day, Whit-Sunday, and other festivals, on which occasions the solemnities are unusually grand, and attract immense crowds to the church.

The exhibition of the illuminated cross has been already mentioned. The illumination of the exterior of the church is also very imposing: the appearance of this immense building, with its dome, lantern, and cross, all lighted with large paper lanterns, has a most striking and magnificent effect, which, however, is much heightened, when at a given signal thousands of globes and stars of vivid fire, suddenly ignited, as if self-kindled, blaze in a moment into one dazzling flood of light, all over that vast structure. Immediately

## ROME.

after the above display, on the night of St. Peter's day, follows the Girandola, an exhibition of fireworks, from St. Angelo, which is generally admitted to be superior to any other of the kind in the world. These festivals cost the Papal treasury about 15,000 crowns a year.

We have already noticed (PAPAL STATES, *anté*, 462) the wretched state of literature and education in modern Rome. It has, indeed, a university, a college, and numerous public schools; but they either afford no instruction in the higher branches of literature and philosophy, or such only as is of the worst possible description. All foreign publications, that might tend to expand and enlighten the public mind, are rigidly excluded; all native works must be submitted to the revision of the licensers; and the only literary pursuits that meet with any encouragement are those having reference to antiquity and the fine arts; and even they feel the paralysis that affects the other and nobler branches of study. "Rome, once the mistress of the world, the seat of arts, empire, and glory, now lies sunk in sloth, ignorance, and poverty, enslaved to the most cruel as well as to the most contemptible of tyrants, superstition and religious imposture." (*Middleton's Cicero*, i., 494, 4to ed.)

Rome has numerous charitable institutions, the total annual revenue of which amounts to between 800,000 and 900,000 dollars, half of which comes from the Papal treasury, the rest being supplied by endowments or voluntary contributions. But however large be the number of these establishments at Rome, "a great proportion of them are of doubtful, ill-directed, and even pernicious charity. Not to speak of the founding hospitals, or those which offer a premium to idleness and thoughtlessness; there are 13 societies for giving dowries to girls on marriage, and pecuniary gifts on taking the veil; and of 1400 women married here in a year, 1000 avail themselves of these societies." There is also much private alms-giving, especially by the pope, who thus spends about 35,000 crowns a year. The consequence of this indiscriminate charity is seen in the mendicancy, squalor, wretchedness, idleness, and want that meets you at every step in the streets of Rome. There are in the city 21 establishments for the diseased, insane, and convalescent, of which eight are public and 13 private hospitals, accommodating, on the whole, about 4000 patients; the average mortality is about seven per cent. There are also eight founding hospitals, in which are nearly 4000 children of both sexes. In fact, Rome is one of the great recipients for abandoned children, brought thither from remote provinces, and even from Naples. The mortality in these hospitals is absolutely frightful, upward of 72 per cent.

An account of the Papal government, its judicial system, &c., has been already given, with other statistical details, in the article PAPAL STATES. The city is governed by an ecclesiastical governor, and a council (*sacra consulta*), appointed by the pope; and though there is a senator, or civil governor, he enjoys only the name without its authority; and the title has, for many years, been conferred exclusively on a native of another Italian state, as it has not been thought safe to entrust it to a Roman. The police of the city consists of about 4000 carabinieri, somewhat similar to the gendarmes; but the inefficiency of this body, which is said to be even more imbecile than the old town guard of Edinburgh, is proved by the frequent robberies and assassinations committed with almost total impunity.

Rome, though the chief manufacturing city of the Papal states, has no manufacture deserving much notice. The principal are silk and woollen goods, especially velvets, brocades for the clergy, and the more expensive kinds of silk goods. Hats of very good quality are made here to the value of about 200,000 crowns a year. The manufacture of mosaics and jewellery of an extremely varied character, occupies a great number of hands, and many also are employed in making casts, or imitations of antique models, &c. Leather, and prepared skins, gloves, parchment, strings for musical instruments, glue, glass bottles, are among the other articles manufactured in the city; but they are of no great importance; and, with the exception of works connected with the fine arts, all the manufactures are conducted in the most clumsy manner. The hospital of St. Michael has the privilege of furnishing cloth for the apostolic palaces and the pontifical troops. None but national wool is employed in the manufacture; the spinning is done by hand, chiefly by women in the prisons, the wringing is effected also by manual labour, and it is made a boast that no machinery is employed where the work can be done without it! The establishment has 25 looms, employs 850 persons, and produces about 77,500 yards a year of the most costly, if not the best, cloth produced in Europe. Manufactures of some kind or other are carried on also, chiefly by hand-labour, in 12 conservatories, containing about 600 inmates. Rome has an insurance company, a public bank, besides two private banking-houses, a savings' bank, and a *monte di pietà*, the last of which had, in 1836, a circulating capital of 230,000 crowns.

A great discrepancy of opinion has prevailed with respect to the climate of Rome. The fact, however, seems to be, that wherever the houses are few, and the ground is mainly covered with gardens, fields, or ruins, malaria is felt during the summer months, though not in the same degree as in the open country outside the walls. Now, this is the condition of the greater part of ancient Rome, of all the districts E. and S. the Quirinal and Capitol; so that five of the seven hills are either wholly or partially unhealthy. The upper part of the Pincian hill, the road toward the Porta Pia, and the space between the baths of Diocletian and the Porta San Lorenzo are also considered unhealthy, and there are districts of the same character hardly inhabited, having a convent here and there, the rest being laid out in gardens, vineyards, &c. West of the Tiber, the district of Lungara is unhealthy. The more densely peopled parts, on the contrary, are sufficiently healthy; and it may be said, with truth, that *modern Rome*, which extends from the Quirinal and the Capitol to the banks of the Tiber, is generally free from malaria. There are unhealthy seasons in Rome, as in most other cities, and in particular years epidemic fevers prevail to a fearful extent in the dirty and densely peopled districts; but these have no connexion with malaria, being attributable rather to the absence of sewerage, and the filthy habits of the lower orders. The temperature of the city is generally mild and genial. Frosts are not frequent, and though snow falls occasionally, it seldom lies on the ground more than a single day. The *tramontana*, however, a piercing cold N. wind, sometimes blows for days together. Rains are frequent and heavy in November and December; but fogs are rare. In summer the heat is often oppressive, especially during the prevalence of the *scirocco*. In summer, the hour after sunset is considered the most unwholesome period of the day, and then people generally avoid exposure to the air. (*For. Quart. Rev.*, xxi., 38, &c.)

The history of Rome, which includes, for many centuries, that of all the countries washed by the Mediterranean, and, at a later period, that of the western Christian church, is far too extensive to allow of any considerable details in a work of this nature. Its foundation is hidden in the obscurity of an age respecting which few records remained in the time of its historians; and the investigations of Beaufort and Niebuhr have thrown much doubt on its early traditional history. Chronologists, however, are pretty well agreed in assigning its foundation to Romulus, its era, according to Livy, being 753 years B.C. According to the account of Livy, the founder was succeeded by six other monarchs; and the constitution during the kingly period was an *elective* monarchy, with a king, senate, and popular assembly, the king being, at the same time, chief magistrate, high priest, and commander of the army; though, in point of fact, as his election depended on the voice of the comitia, the "people" were the real source of power. The senate originally consisted of 100 members, to whom, in course of time, others were added. The comitia comprised the burghers only, and the decrees of the senate required their approval before they became law. The Romans during this period being successful in war, added considerably to their previously confined territory. The public and private vices of Tarquinus Superbus led (anno 510 B.C.) to the abolition of kingly government, and the establishment of the republic, under two consuls, annually chosen, originally from the patricians only, but afterward from either patricians or plebeians. The temporary ascendancy of the patrician party effected the institution (B.C. 500) of the dictatorship, by which, on extraordinary emergencies, the whole power of the state was committed to a single individual, who might act with despotical authority. In the sequel, after many delays, and much opposition, officers called tribunes were appointed by the people, who had a *veto* on the proceedings of the senate. The constitution was thus founded on the principles of a distribution of power between the aristocracy and the commonalty; and in this state it remained without any considerable change to the end of the Punic wars, the empire of Rome being in the meanwhile extended over Italy, Sicily, Corsica, and Sardinia, the N. coast of Africa, and part of Spain. Amid these successes the distinction of patricians and plebeians seemed to have disappeared; but the unequal distribution of the public lands, or of those conquered by the arms of the republic, led to new, protracted, and bloody struggles between the patricians, who had appropriated to themselves the lion's share of these lands, and the plebeians, who sought to bring about their more equitable division. This occasioned the introduction by the latter of an *AGRICULTURAL LAW*; not, however, meaning by this, as is commonly understood, a law to interfere with, or to effect, an equal distribution of private property, but merely a law to limit the extent of the public lands held by individuals, and to subject them to a real, and not a nominal, rent. (*See Niebuhr, li. passim.*)

The history of the intestine troubles of Rome during the

## ROME.

Long protracted contests respecting this law, and the extension of the franchise to all Italian subjects and allies of Rome (the latter of which led to the Social war), would lead us into details quite unsuited to the nature of this work. It is sufficient here to state that the principle of representation not being adopted in the Roman constitution, it could not long survive, after the extension of the franchise to the Italians in general. The deliberations of the city assemblies were henceforth liable to be controlled by an influx of citizens from a distance, and full scope was given for the exercise of all sorts of corruption and intimidation. The soldiers, too, after they had carried their victorious arms beyond the boundaries of Italy, gradually ceased to pay their accustomed deference to the orders from Rome, and began to regard themselves rather as the servants of the generals by whom they were commanded, and to whom they looked for advancement, than of the republic. In consequence, the whole power of the state came to be engrossed by the great military leaders; and Marius and Sylla, Pompey and Cæsar, Marc Antony and Augustus, were successively masters of the Roman world. The battle of Actium (anno B.C. 30) threw the whole power of the state into the hands of Augustus, and the public, weary with intestine wars and revolutions, were glad to enjoy tranquillity under his supremacy. The emperor, who had previously been merely the commander in chief, now began to concentrate all the powers of the state in his own person. He became, in effect, perpetual dictator, and held the sovereign power free from all constitutional responsibility. The senate, indeed, continued to exist under the emperors, and the prætors or judges retained their names; but the decrees of the former were recommended, or rather dictated, by the emperors, and the *edicts* of the latter were superseded by summary decrees called *constitutiones principum*. In this state the government of Rome remained about 400 years. The succession depended partly on the will of the reigning emperor, who sometimes appointed his successor, either by adoption, or by giving him the title of Cæsar. In the event of no successor being named by the previous emperor, the right of election devolved on the senate; but it was frequently usurped by the army and by the Prætorian guards; and sometimes rival emperors were chosen by the senate and the army, or by different armies, the pretensions of the candidates being decided in the field. Under such circumstances, and considering the degraded state of the Roman people, enervated by indolence, and corrupted by largesses, immunity from taxes, and indulgence in public shows, it may well excite surprise that the empire did not sooner fall to pieces.

Some speculative inquirers have classed the circumstance of the imperial dignity being elective among the causes that contributed to its decline; whereas it really appears to have been almost the only principle that enabled it to survive so long. In a government like that of Rome, where everything had to be transacted directly by the emperor, a hereditary monarchy, which supposes the occurrence of minorities, was out of the question. And how unworthy soever the means by which some of the emperors arrived at the imperial dignity, not a few of them owed it to their superior ability. Nerva, Trajan, the two Antonines, Severus, Aurelian, and other able princes, gave new vigour to the tottering fabric, and prolonged its existence.

At the close of the fourth century the Roman dominions, which still extended from Britain on the W. to the Euphrates on the E., were divided between Honorius and Arcadius. At this time, too, the barbarians, sensible of the growing weakness of the Romans, began to harass the empire with incessant hostilities, and one country after another was lost, till at length Italy itself was invaded by the Huns, and shortly afterward by the Heruli, whose general, Odoacer (A.D. 476), dethroned the impotent Romulus Augustulus, assumed the title of *rex*, and fixed his residence in Ravenna. Thus fell the greatest empire of the world, exactly 1229 years after its supposed foundation by Romulus. Odoacer gave way to Theodoric, king of the Ostrogoths, and during his reign Rome and all Italy enjoyed a period of peace and prosperity. But the calm was only temporary; Belisarius, the general of Justinian, and Totila the Ostrogoth, successively took Rome, which was stripped of some of its most splendid monuments, at the same time that its inhabitants were reduced to a state of wretchedness which they had not before experienced. After having become a province, or *exarchate*, of the eastern empire, Rome passed, in 774, under the dominion of the Franks, who retained it till the deposition of Charles le Gros, in 887, after which the possession of Rome and Italy became, during more than three centuries, the subject of contention between the emperors of Germany, the numerous states into which Italy had been parcelled, and the bishops of Rome, who with the title of pope assumed a right to temporal power. Nicolas III. at length obtained from Rodolph of Hapsburg, in 1278, the grant of an independent territory, called the States of

## ROMNEY.

the Church; and thus began the sovereignty of the popes, which, with some interruptions, has continued to the present day. (Farther details respecting this part of Roman history will be found under the head PAPAL STATES.)

ROME, p. t., semi-capital of Oneida co., N. Y., 15 m. N.W. Utica, 107 m. N.W. Albany, 391 W. Drained by Mohawk river and Wood creek, the latter flowing into Oneida lake. These streams were connected by a canal 2 m. long, before the construction of the Erie canal, which was purchased when the Erie canal was made. The village is near the Erie canal, between Mohawk river and Wood creek, occupies the site of old fort Stanwix, of revolutionary memory, and is handsomely laid out with streets 100 feet wide, crossing each other at right angles, and has two public squares. It contains a courthouse, jail, county offices, a U. States arsenal, magazine, and workshops, a bank, six churches, two Presbyterian, an Episcopal, Methodist, Baptist, and Roman Catholic, all of which have handsome brick edifices, two private seminaries, 250 dwellings, 18 of brick or stone, and the rest of wood, and 2500 inhabitants. The Black river canal here unites with the Erie canal, and the Syracuse and Utica railroad passes through it. There are in the t., mostly in the village, 33 stores, two fulling-mills, one woollen factory, one cotton factory with 900 spindles, one furnace, two grist-mills, 15 saw-mills, three tanneries, one brewery, two potteries, one printing-office, one weekly newspaper; three academies, 307 students; 21 schools, 1290 scholars. Pop. 5680. Next to Utica, it is the most important town in the county.

ROME, p. v., capital of Floyd co., Ga., 161 m. N.W. Milledgeville, 762 W. Situated at the junction of Etowah and Oostanaula rivers, to form Coosa river. It contains a courthouse, jail, two churches, a Methodist and Baptist, an academy, three stores, 30 dwellings, and about 300 inhabitants.

ROME, p. v., capital of Perry co., Ia., 143 m. S. by W: Indianapolis, 653 W. Situated on the N. bank of Ohio river. It contains a fine brick courthouse, a stone jail, two churches, a flourishing public school, 40 dwellings, and about 250 inhabitants.

ROMFORD, a market town and par. of Essex, in the liberty of Havering-atte-Bower, on the high road from London to Norwich, 13 m. E.N.E. London, and 16 m. S.W. Chelmsford. Area of par., 3340 acres. Pop., in 1831, 4294. The town consists principally of a long wide street along the high road, having near its centre the market-house and town-hall, in which are held the petty sessions for the liberty. The church is an ancient structure, consisting of a nave, chancel, and N. aisle, with a tower at the W. end. The living is a curacy subordinate to that of Hornchurch, in the patronage of New college, Oxford, value £54, besides which the curate receives an annual stipend of £200. (*Ecclesiast. Report.*) The Wesleyan Methodists and Baptists have their respective places of worship, with attached Sunday schools; besides which there is a national school, partly endowed and partly supported by subscription. The town has also several almshouses and benefactions for the poor. At a little distance from Romford are cavalry barracks, erected in 1795, but now disused. The inhabitants are chiefly retail dealers or persons employed in market gardening and agriculture. The town derives, however, its principal advantage from its situation on the London road, and more recently from being one of the stations on the Eastern Counties railway. It is also one of the polling places for the S. division of Essex. Markets, especially for calves, well attended, on Mondays, Tuesdays, and Wednesdays; fairs, June 24th, for cattle and horses.

ROMNEY (NEW), a cinque-port, decayed bor. market town and par. of England, co. Kent, lathe Shepway, partly in lib. Romney marsh, and partly in hund. St. Martin's Pointney, 19 m. S.W. Dover, and 58 m. S.E. London. Area of bor. and par., 2320 acres. Pop., in 1831, 963. The town, which arose out of the ruins of Old Romney, was formerly in a comparatively flourishing condition, being a considerable seaport; but the haven has for many years been completely filled up. It consists at present of a broad principal street crossed by one of inferior size, in which is the town-hall. Houses chiefly of brick, the market-house and town-hall being modern erections. The church is a spacious structure, consisting of a nave, aisles, and chancel, partly Norman and partly in the pointed style, with a large and curious tower at the W. end. The living is a vicarage in the patronage of All-souls' college, Oxford; of the nett value of £161 a year. The Wesleyan Methodists have a small chapel, and there are two Sunday schools, besides a free school and almshouses. The inhabitants, with a few exceptions, are employed in grazing cattle on Romney marsh, a rich tract of land, extending about 7 m. N. and W. from the town, and comprising about 47,000 acres. This tract is defended from the encroachments of the sea by an immense embankment called Dymchurch-wall, along which is a good road for carriages: this sea-wall is kept in repair

## ROMORANTIN.

by a rate levied on the proprietors of the marsh. The sheep depastured here furnish long combing wool.

New Romney is a borough by prescription, and returned two members to the House of Commons from the reign of Edward III. down to the Reform Act, by which it was disfranchised. It was not considered of sufficient importance to be included in the provisions of the Municipal Reform Act; but it still retains certain privileges reserved in that Act for the Cinque-ports. Old Romney, 2 m. W. the town, has now only a few houses surrounding the church. Markets on Thursday; fair, August 26, for pedlery, &c.

ROMNEY, p. v., capital of Hampshire co., Va., 188 m. N.N.W. Richmond, 116 W. Situated on the E. side of the S. branch of Potomac river. It contains a courthouse, jail, several stores, and about 400 inhabitants. Nett proceeds of the postoffice in 1841, \$412.

ROMORANTIN, a town of France, dep. Loir-et-Cher, cap. arrond. on the Sèvre (a tributary of the Loire), where it receives the Morantín, 24 m. S.E. Blois. Pop., in 1836, ex. com., 6503. It was formerly the capital of Sologne, and was embellished by Francis I. It has an old castle, a spacious prison, a theatre, courts of original jurisdiction and commerce, and some manufactures of woollen stuffs and yarn. Romorantin was taken by Edward the Black Prince in 1356. Cannon appear to have been used in the siege; but this, though one of the earliest, is not, as has been alleged, by any means the first occasion on which they were so employed. But it is better known in history, by giving its name to the edict of 1650, drawn up by the chancellor l'Hôpital, which gave to bishops, and took away from the parliaments the power to try cases of heresy. It is said that the chancellor consented to this edict only to avoid a still greater evil, the establishment of the inquisition. (*Hénault Abrégé, Anno 1560; Hugo, &c.*)

ROMSEY or RUMSEY, a mun. bor., market town, and par. of England, co. Hants, hund. King's Sombourn, the town being situated on the Test, a tributary of the Anton, on the Andover canal, 6 m. N.W. Southampton. Area of par., divided into Romsey-Extra and Infra, 9310 acres. Pop. in 1831, 5432. The town, which consists chiefly of a long and wide street, crossed by another at right angles, covers a considerable extent of ground. It has an audit-house, with a market-place beneath, and an old town-hall, in which petty sessions are held; but by far the most remarkable public building is the parish church. This interesting edifice is almost the only remaining portion of an abbey said to have been founded here by Edward the Elder. The present structure appears, however, to date from the beginning of the 12th. century, and it is one of the most complete Anglo-Norman monuments in the kingdom. "It is a cross church, with a low massive tower; the general exterior appearance is Norman, of very good character, and much of it unaltered. The W. end is early English, very plain outside, and its details accommodated to the Norman part; but the inside of this W. portion is a very fine specimen of the early English, rich rather by composition than minute ornament. The central portion and the transepts, with the sides of the chancel, are Norman, showing various singularities and mixtures of pointed and round arches." (*Riekman, Goth. Arch.*, p. 176.) This church has a fine high altar, much good tracery, stained glass, &c.; and a curious peculiarity is, that a large fruit bearing apple tree grows from its roof. The living, a vicarage in the gift of the dean and chapter of Winchester, is worth £365 a year. The Presbyterians have a meeting-house in Romsey; and it has an almshouse, a charity school for thirty boys, a free school, &c. The corporation are trustees for several charities which, with the affairs of the borough generally, appear to have been well managed. (*Mun. Corp. Appendix.*)

The borough was first chartered by James I.; its corporation consists of a mayor, six aldermen, and 12 capital burgesses. Romsey-Infra is the only corporate town; Romsey-Extra being without the jurisdiction of the former. Corporation revenue, £98 1s. 3d.; corporation debt, £1300.

The sole importance of Romsey is derived from its supplying goods by retail to a large agricultural district. "The borough is increasing in population, but the trade is decreasing. Formerly, many extensive manufactures of paper and other articles were carried on at Romsey, where there is abundant and excellent water-power; but the introduction of steam has greatly diminished the trade of Romsey." (*Mun. Corp. Appendix.*) Immediately adjacent to the town is Broadlands, the seat of Viscount Palmerston. Markets on Thursday; fairs on Easter-Monday, August 26, and November 8, for cattle, sheep, and horses, (*Parl. Reports, &c.*)

ROMULUS, p. t. Seneca co., N. Y., 183 m. W. Albany, 329 W. Bounded E. by Cayuga lake, W. by Seneca lake. It contains a Presbyterian church, one store; eight schools, 290 scholars. Pop. 2235.

RONDA, a city of Spain, in Andalusia, prov. Granada, on the Guadiaro, 40 m. W. by N. Malaga, and 45 m. N.N.E.

## RONDA.

Gibraltar. Pop., according to Mifano, 18,678. Its situation is peculiar, being built on lofty rocks beetling over the river, across which, at an elevation of 200 feet above the surface, are thrown two bridges, one of which consists of a single arch, 110 feet in span, and surmounted by another bridge of three arches, at a much greater elevation. A third bridge crosses the stream somewhat above the town. The river is wholly unnavigable; and several cascades are formed close to the city. One portion, called the Old City, overhangs the S. Cliff, and is encircled by an old embattled wall, built by the Saracens, and flanked by extensive outworks, while the more widely spread buildings on the opposite bank bear the name of *El Mercadillo*, or New Town. Within the fortifications stands the royal palace of Abou-Melic, the Moor, now a vast heap of ruins. The only entrance to the city is through a succession of gates, leading to a long and narrow, but tolerably straight street, running N. and S. for about 3 m. to the upper or new bridge. This street is lined with handsome shops; and from it lead off both right and left numerous alleys, communicating with little courts and crooked passages, all of which, however, are lined with remarkably good houses. In fact, says Capt. Scott, "this labyrinth is the Mayfair of Ronda, the aristocratic location of all the *Hidalguia* of the province, who, proud of the little patch of land won by the swords of their forefathers from the accursed Moslems, would as soon think of denying the infallibility of the pope as of taking up their abode among the mercantile inhabitants of the mushroom suburb, which, however, is, beyond all comparison, the most agreeable place of residence." (*Scott's Ronda and Granada*, i., 103.) The principal streets of the new town are wide and tolerably straight: it contains some fine open *plazas*; and although the houses are thus more exposed to the sun, they enjoy a freer circulation of air. The absence of an enclosing wall tends, also, in point of coolness, to give the Mercadillo an advantage over the city. It is nearly as difficult of approach, however, and as incapable of expansion as the walled city itself, for cliffs bound it on three sides, leaving the access free only on its N. side. The city has few public buildings, except its churches, which are numerous, and gaudily fitted up; but they have neither paintings nor statuary of any merit. The new town comprises a small, but commodious theatre, the stables of the *Real Maestranza* (or corporation of nobility for breeding horses), and the *Plaza de los Toros*, a circular covered building of stone, one of the handsomest in Spain, and capable of accommodating 10,000 spectators.

The inhabitants of Ronda are principally employed in agricultural and horticultural pursuits, though there are several manufactures of coarse woollen cloths and hats, two or three tanneries, and numerous water-mills. It is a place, also, of considerable commerce; it is secluded, and, at the same time, central situation, making it a convenient *dépôt* for smuggled goods, in which, indeed, the present trade of Spain mostly consists. A very large fair is annually held here in May for cattle, horses, sheep, and general goods: it collects an astonishing concourse of people from all parts of the country, and offers an excellent opportunity for observing the costumes and shades of character peculiar to the inhabitants of the different provinces. "The society of Ronda is particularly good, consisting of some of the most ancient Andalusian families; who, with all the polish of the first circles, are exempted from the demoralising vices which distinguish the fashionable inhabitants of Madrid and other large cities. On the whole," continues Captain Scott, "I scarcely know a place where a few weeks can be more agreeably spent." (i., 118.) The climate of Ronda, also, is very delightful; neither oppressively hot nor disagreeably cold: and it is considered so favourable to longevity, that it has become a common saying—*En Ronda los hombres de ochenta años son pollones* ("at Ronda even men at eighty are chickens").

The neighbourhood is not only extremely picturesque, but produces an abundance of wine, oil, and corn, as well as the fruits and vegetables peculiar to a more N. climate. Cattle graze in large herds on the plains, and the hills abound with many varieties of game, including deer and wild boars. About 3 m. S.E. of Ronda is the singular mountain, called *Cresta de Gallo*, consisting of two parallel ridges joined at the bottom, one red, the other white: both of them possess mineral riches, which, under a better system of national economy, might, probably, be turned to good account.

Ronda has been supposed, though, perhaps, with little foundation, to owe its origin to the Romans. Nothing certain, however, is known respecting it prior to the domination of the Moors, who made it one of their principal strongholds. In 1831 it became the court residence of Abou-Melic, son of the emperor of Fez, who erected the castle and fortifications. It was finally taken from the Moors by Ferdinand of Castile in 1485. (*Scott's Ronda and Granada*, i., 99-129; *Mod. Trav.*; *Mifano, &c.*)

## RONDOUT.

**RONDOUT**, creek, N. Y., rises in Sullivan co., and flows into Hudson river in Ulster co., 1 m. below Rondout village. The Walkkill, a main branch, enters it on the S. side, in Esopus. It affords good water-power. The Delaware and Hudson canal passes along the valley of this creek, and there is a lighthouse at its entrance into Hudson river. Rondout village is the depot of the coal of the Delaware and Hudson Canal Co.

**ROSCOMMON**, an inland co. of Ireland, prov. Connaught, having N. Leitrim and Sligo, E. and S.E. Longford, Westmeath, and King's county, from which it is separated by the Shannon, S.W. and W. Galway, from which it is separated by the Suck, and Mayo. Area 609,405 acres, of which 131,063 are bog and mountain, and 24,787 water. There are some mountainous tracts in the N. parts of the county, and elsewhere; but, speaking generally, its surface is nearly flat, exhibiting, for the most part, either green fields or bogs. Substratum principally limestone. Pastures most luxuriant. Stone fences, so common in Scotland, are, in Ireland, nearly peculiar to this county. Estates very large; many of them, however, are let on perpetual leases, the holders of some of which form an intermediate class between the great proprietors and the occupiers. A large proportion of land in pasture; but latterly tillage has been rapidly extending. Several improvements have been introduced both in the plan of husbandry and in the instruments employed in carrying it on. "But the general system of agriculture, excepting on lands held by wealthy individuals, still remains (1832) in a very imperfect state; and the smaller farms are cultivated in a manner at once slovenly and wasteful." (*Weld's Survey of Roscommon*, p. 654.) Tillage farms generally small. Oats and potatoes principal crops; but wheat is now rather extensively cultivated. A good deal of work is done by the *loy*, a species of spade. Cattle, long-horned; sheep, long-woolled; both breeds good; few dairies. Average rent of land, 13s. an acre. Some new cottages, on a few estates, are neat and comfortable, but the great majority continue to be as bad as possible. The same may be said of the farm buildings.

There are veins of coal and ironstone in the N. parts of the county, to the W. of Lough Allen. These had been occasionally wrought to some extent for a considerable period, but in general to the heavy loss of those by whom the works were carried on. It was, however, contended that this happened from the want of capital, or want of skill on the part of those employed; and the most exaggerated and delusive accounts were, at the same time, published of the value of the mines. At length, during the memorable year 1823, three companies were formed for working the coal and iron mines at Arigna and other places in this county. One of these, after examining the ground, prudently declined proceeding any farther: the energies of another were paralysed by the fraud, jobbing, and mismanagement of some of its directors and agents; and the third (the Irish Mining Company), an enterprising and well conducted association, ultimately abandoned the undertaking, their collieries having proved, if not absolutely worthless, not worth the cost of working them. (*Weld's Survey*, p. 33, 77, 682, &c.) The linen manufacture was at one time pretty extensively diffused over the county, but it has latterly very much fallen off. Being washed through its whole extent by the Shannon, few Irish counties have greater facilities than Roscommon for the easy and convenient disposal of their products. It is divided into six baronies and 56 parishes, and sends two members to the House of Commons, both for the county. Registered electors, in 1839-40, 2092. Principal towns, Roscommon and Elphin. In 1831, this county had 41,369 inhabited houses, 44,252 families, and 249,613 individuals, of whom 123,031 were males and 126,582 females.

**ROSCOMMON**, an inland town of Ireland, prov. Connaught, cap. of the above co., 6 m. W. from Lough Ree, and 78 m. W. by N. Dublin. Pop., in 1831, 3306. It has a parish church, a Roman Catholic chapel, a public school, a market-house, a cavalry barrack, an extensive modern county court-house and jail, and an infirmary. Races are held annually in the vicinity. Under a charter of James I., in 1612, the corporation, which consisted of a sovereign, 12 burgesses, and a commonalty, returned two members to the Irish House of Commons till the union, when it was disfranchised. It principally occupies the S. slope of a gently rising hill; but it is straggling, ill-built, and poor, its hovels stretching along the principal lines of road by which it is approached. Latterly, however, it has been somewhat improved. In summer, it suffers from a deficiency of water. A manor court holds pleas for debts to the amount of £10. The county assizes are held here; as are general sessions twice a year, and petty sessions every Monday. It is a constabulary station, and has manufactures of coarse woollens, linens, and brown pottery, for the supply of the immediate neighbourhood. The trade in corn is increasing. Markets on Saturdays; fairs on Whit-Monday and 5th December. Postoffice revenue, in 1830, £800; in 1836, £966. Branches

## ROSS AND CROMARTY.

of the Agricultural and National banks were opened here in 1836. The ruins of an old Dominican abbey, founded in 1257, has a fine monument of its founder, one of the O'Connor family. Here, also, are the remains of a fine old castle, built by the English soon after their entry into this part of the county. The town, and a considerable contiguous estate, which has hitherto been much neglected, is the property of the Earl of Essex. (*Statistical Survey; Frazer's Guide*.)

**ROSCREA**, a town of Ireland, prov. Munster, near the N.W. extremity of the co. Tipperary, finely situated between the Sliebh-Bloom and Devils-bit ranges of hills, on a branch of the lesser Brosna, 40 m. N.E. Limerick. Pop. in 1831, 5512. It is of great antiquity, having been made the seat of a bishopric in the 6th century, united to Killaloe in the 12th. Some remains of the old cathedral may still be seen in the W. front of the parish church; it has also a fine stone cross, a pillar tower, an old castle built by the Ormonde family, and the ruins of a Franciscan monastery. The town is irregularly built. Among the public buildings are the parish church, a Roman Catholic chapel, meeting-houses for Quakers and Methodists, a school on the foundation of Erasmus Smith, a fever hospital, cholera hospital, and dispensary, market-house, bridewell, and barrack. A manor court, which holds pleas, to the extent of £10 Irish, sits monthly: petty sessions are held on Mondays. It is a constabulary station. It manufactures coarse woollens, has several flour-mills, two tanyards, two breweries, and a distillery, and carries on a very extensive trade in grain: its retail trade is also considerable, the surrounding country having a more than usual number of resident gentry. Markets on Mondays and Thursdays; fairs on 25th March, 7th May, 21st June, 8th August, 9th October, and 29th November. Postoffice revenue in 1830, £814, in 1836, £873. Branches of the Agricultural and National banks were opened in 1835.

**ROSE**, p. L, Wayne co., N. Y., 7 m. N. Lyons, 179 m. W. by N. Albany, 359 W. Drained by small streams flowing into Lake Ontario. It has two stores, one fulling-mill, one grist-mill, seven saw-mills; seven schools; 573 scholars. Pop. 2038.

**Rose**, p. L, Jefferson co., Pa. It has two stores, one fulling-mill, one woolen-factory, five grist-mills, 17 saw-mills; four schools, 100 scholars. Pop. 1421.

**Rose**, p. L, Carroll co., O., 123 m. E.N.E. Columbus, 308 W. It has one school, 20 scholars. Pop. 1593.

**ROSETTA**, or **ROSSETTA** (Arab. *Rashid*), a town and seaport of Lower Egypt, on the W. branch of the Nile (the anc. *Bolbitine* mouth), near its embouchure, 36 m. E.N.E. Alexandria. Down to a late period, it was one of the most important commercial towns in the country, and had a population estimated to amount to about 25,000; but since the opening of the Mahmoudieh canal from Alexandria to the Nile, Rosetta has sunk into comparative insignificance; its population has dwindled down to about 4000, and the principal traffic consists in the removal to Alexandria of the bricks, and other materials, of its buildings! It was principally constructed of red brick, plastered over and white-washed. As elsewhere in the east, the streets are narrow, and the upper stories project, so as frequently to meet. Upon the whole, however, Rosetta is neater than many oriental towns, and its situation in the midst of date, banana, and orange groves, is distinguished for beauty. The inhabitants are principally occupied in the rice, cotton, sallow, and leather factories established by the pacha, at a wretchedly low rate of wages. There are now no resident merchants in Rosetta, and its shipping, which was formerly considerable, is reduced to a few boats. The port, though tolerably secure within, is difficult of entrance, there being a shifting bar at the mouth of the river, which can only be passed with safety during favourable winds, and at certain times of tide. Rosetta is famed for the supposed salubrity of its air, which attracts visitors thither during the summer and autumn months. It was founded by one of the caliphs about 870, near the site of the ancient *Bolbitinum*, but has no antiquities of its own. Here, however, was discovered the famous *trilingual* tablet, called the "Rosetta stone," to which we are mainly indebted for the discoveries of Young and Champollion. (*Private Information*.)

**ROSS AND CROMARTY**, two cos. of Scotland, in the Highlands, forming together a maritime district of great extent, stretching quite across the island, and including Lewis, in the Hebrides. These counties, though in some respects distinct, are united under one sheriff, and Cromarty being a small county, consisting of several detached portions, most of which are wholly surrounded by parts of Ross, they may be most conveniently noticed under one head. They are bounded N. by the co. of Sutherland, E. by the friths of Dornoch and Moray, S. by Inverness, and W. by the Atlantic. Area, 1,904,000 acres, of which 1,532,800 are mainland, and 375,200 islands; the fresh-water lakes cover a space of 44,800 acres on the mainland, and of 12,800 in the

## ROSS AND CROMARTY.

islands. The E. parts of the province, consisting of the districts called the Black Isle, or the Peninsula, between the Beaulie and Moray firths, the frith of Cromarty; and Easter Ross, or the Peninsula, between the firths of Cromarty and Dornoch, are comparatively flat and fertile. Easter Ross has a considerable extent of claye loam, and of light sandy soil. The soil of the Black Isle is very various; much of it is poor, but the cultivated portion consists principally of claye loam, good black mould, and sandy loam. In Strathpeffer, and the country round Dingwall, the soil is clayey; but with these exceptions the rest of the county is wild, dreary, rugged, and mountainous, interspersed with lakes, and narrow glens, that afford pasture for sheep and black cattle. Estates, for the most part, very large; but there are several that are not of much value: Farms of all sizes; but the number of small occupancies, though still very considerable, is much diminished. Native breed of cattle hardy, compact, and well suited to the country; but in the W. parts of the county, the Skye and Argyleshire breeds, or one closely allied to them, is most prevalent. Cattle were formerly much more abundant than at present. Sheep-farming has, for many years past, engrossed almost the whole attention of the principal farmers and improvers; so that, besides a decrease in the number, it is also said that the breed of cattle has deteriorated. This, however, has been denied by others; and, at all events, the baneful practice of overstocking is no longer carried to anything like the extent to which it was formerly practised in this, as well as in other Highland counties. At no very distant period, oxen were extensively employed in field-labour; but they are no longer used for this purpose. All sorts of improvements, both in breeding and cropping, have been tried by the principal proprietors, and by many intelligent and enterprising sheep farmers that have immigrated thither from the S. Most part of Easter-Ross, great part of the Black Isle, with the country round Dingwall, and along the N.W. shore of the Inner frith of Cromarty, now ranks with the finest districts of Scotland. It is traversed in every direction by excellent roads, is well fenced, and has a more than usual number of seats and plantations. Agriculture has been wonderfully improved; and the crops of wheat and turnips are at present nowise inferior to those in the more S. cos. But exclusive of these districts, a great extent of mountainous country is still occupied by the old Highland tenantry. These are a brave and hardy race; but poor, and without either enterprise or industry. They occupy the straths or valleys between the mountains, and along the banks of the rivers, which in some places are so thickly tenanted, that there is a family for every Scotch acre of arable land! On this they raise oats, bear, or bigg (a species of barley), and potatoes; frequently cultivating the ground with a crooked spade (eachrom) instead of a plough. The mode of ploughing, which was formerly general over the whole country, and which is still practised by the smaller tenants, is barbarous in the extreme. The smaller tenants uniformly possess a considerable extent of grazing ground, which is commonly contiguous to, but sometimes at a considerable distance from, their arable possessions. Their huts are for the most part wretched; few of them having either chimneys or windows; they prefer, indeed, living in the midst of smoke and filth; and in winter the cattle are generally housed under the same roof with the family. Except for a few months, when sowing or reaping their crops, preparing and saving their fuel, &c., the greater part of their time is spent in the pursuit of game, in fishing, or in idleness.

Previously to the reduction of the duties on whiskey, in 1823, illicit distillation was very prevalent, and is still carried on, though to a comparatively small extent. "It cannot be said with truth that the class of people of which the great majority of the population consists enjoy the comforts of life in even a moderate degree. Poorly fed, scantily clothed, and miserably lodged, theirs is a life of penury and toil; exposed to the temptations of idleness, without its ease, and to the slavery of labour, without its rewards, they drag out a wretched existence suffering under the continual fear of impending want, and uncheered by any prospect of amendment in their condition. (Art. *Parish of Glenshiel*; *New Statistical Account of Scotland*, No. 12, p. 200.) Under these circumstances, no reasonable person can doubt that the measures adopted by many landlords during the last half century for consolidating the small possessions held by the native tenants, and introducing farmers possessed of capital and skill, have been, in a public point of view, eminently beneficial. In some instances the change may have been hastily effected; but we hesitate not to say that it has, on the whole, been highly advantageous to the peasantry themselves. Having been obliged to repair to villages or to emigrate, they have also been obliged to lay aside their slothful habits; so that, in point of fact, not only the wealth and industry, but even the population of the country, has gained materially by the introduction and extension of

## ROSLIN.

that sheep-farming system that has been the theme of so much ignorant vituperation. In proof of this, we may observe that the population of this district amounted, according to the enumeration of Dr. Webster, in 1755, to 47,466. In 1800, it had increased to 55,877; and notwithstanding the increase of sheep-farming, and the prevalence of emigration in the interim, it amounted, in 1831, to 74,830. Minerals and manufactures of no importance. Average rent of land, including the islands, in 1810, 1s. 1d. an acre. Principal rivers.—Conon, Orin, and Beaulie. This district is divided into 33 parishes, and sends one member to the House of Commons; the boroughs of Dingwall, Tain, and Cromarty being associated with others in the return of a representative. Registered electors for the county, in 1839—40, 713. In 1839, Ross and Cromarty had 15,039 inhabited houses, 16,187 families, and 74,820 inhabitants, of whom 34,927 were males, and 39,893 females. Valued rent, £87,940 Scotch: annual value of real property, in 1815, £121,577.

ROSS, a town and parish of England, county Hereford, hund. Graytrey, on the Wye, 15 m. W. by S. Gloucester. Area of parish, 3540 acres. Population of do. in 1831, 3078, of which the borough had about 2000. The latter is finely situated on an eminence above the river; but its streets are steep, rough, and narrow. The church, in a conspicuous situation, has a lofty spire, and is partly in the perpendicular style; but, according to Rickman, it has been injured by alterations and repairs. The living a rectory and vicarage, vested in the patronage of the bishop of Hereford, is one of the best in the county, being worth £1284 a year, nett income. There is a market-house, two charity schools, and an almshouse. In Camden's time Ross was celebrated for its cutlery and its cider; the former, however, has entirely disappeared, but it continues to be distinguished by the excellence of the cider made in its vicinity. It is governed by a sergeant and four constables. Market on Thursday.

The "Man of Ross," immortalized by Pope (*Moral Essays*, iii. lin. 250), was a Mr. John Kyrle, a native of the town, where he died in 1724, at the age of 84. The splendid eulogium of the poet did not really go beyond Kyrle's merits. He expended his time and income in promoting objects of public utility and benevolence, by which the town continues to be benefited. His portrait is still preserved in his house, now an inn, near the entrance of the road from Gloucester.

Ross, county, O. Situated toward the S. part of the state, and contains 650 sq. m. Watered by Scioto river and its tributaries. It contained in 1840, 20,578 neat cattle, 30,382 sheep, 48,678 swine; and produced 390,790 bushels of wheat, 3580 of rye, 1,890,320 of Indian corn, 1595 of barley, 199,459 of oats, 27,070 of potatoes, 29,870 pounds of sugar. It had 101 stores, three bloomeries, three fulling-mills, four woolen-factories, 12 flouring-mills, 19 grist-mills, 29 saw-mills, one oil-mill, one paper-mill, 18 tanneries, 11 distilleries, two printing-offices, two binderies, two weekly newspapers; two academies, 85 students. Pop. 27,460. Capital, Chillicothe.

Ross, t., Alleghany co., Pa., 4 m. N. Pittsburg. Bounded S. E. by Alleghany r., S.W. by Ohio r. It contains four grist-mills, five saw-mills; six schools, 350 scholars. Pop. 1675.

ROSSIE, p.t., St. Lawrence county, N.Y., 25 m. S.W. Canton, 183 N.W. Albany, 452 m. W. Watered by Oswegatchie and Indian rivers. It abounds with iron and lead ore. It contains three stores, three furnaces, three grist-mills, four saw-mills, two tanneries; five schools, 217 scholars. Pop. 1553.

ROSLIN, an considerable village of Scotland, county Mid-Lothian, near the N. Esk, 7 m. S. by E. Edinburgh. It is remarkable only for the ruins of its castle and chapel, and for the fine scenery along the river. The ruins of the castle, the extent and magnitude of which sufficiently evince its former strength and importance, stand on a peninsulated rock, accessible only by a lofty bridge. The era of its foundation is uncertain. It was for a lengthened period the residence of the St. Clairs, earls of Orkney and Caithness, some of whom lived here in almost regal splendour. It was taken and burnt by the English, under the Earl of Hertford, in 1544. The chapel of Roslin, at some little distance from the castle, is the most exquisite specimen of the florid Gothic in Scotland, and is in good preservation, having escaped, with comparatively little injury, the iconoclastic ravages of the Reformers. It was founded in 1445. The inside is 69 ft. in length, 34 in breadth, and 40 ft. in height, supported by two rows of clustered pillars, about 8 ft. in height, with an aisle on each side. The arches are Saxo-Gothic, and are extended across the side aisles; but the centre of the church is one continued arch, divided into compartments, and finely sculptured. The capitals of the pillars are enriched with foliage, and a variety of figures, most elaborately and minutely cut.

The Earls of Orkney and Roslin were interred in a vault below the floor of the chapel: and it is a curious fact, that

## ROSSBACH.

down almost to the era of the revolution they were buried, not in coffins, but in complete suits of armour. This circumstance has been alluded to by Scott, in his fine ballad of "Rosabelle," in the "Lay of the Last Minstrel."

The glen in which the Esk runs from Roslin to Laswade is mostly narrow; has in parts high, precipitous, rocky, and well-wooded banks, and is celebrated for its romantic scenery. A little below Roslin, on the opposite side of the river, is Hawthornden, the seat of Drummond, the contemporary and friend of Ben Jonson, and one of the best poets of his age. The house stands on a brink of a precipice, overhanging the river, and, with the estate, is now in the possession of the descendants of the poet. Below the house are caves, or extensive apartments cut in the sandstone rock.

Roslin is much resorted to in summer by parties from Edinburgh; and most strangers who visit the latter, contrive also to visit Roslin. (*Pennant's Scotland*, iii. 254, ed. 1790; *Chamber's Gaz. of Scotland*, &c.)

ROSSBACH, a village of Prussian Saxony, 16 m. S. Halle, celebrated in modern history for its being the scene of the great victory gained on the 5th of November, 1757, by Frederick the Great, with little loss to his own forces, over the French and Imperialists.

ROSTOCK, a commercial city and seaport of N. Germany, being the largest town, though not the capital of the grand duchy of Mecklenburg-Schwerin, on the Warnow, 9 miles above its mouth in the Baltic, and 40 m. N.E. Schwerin, lat. 54° N., long. 12° 12' E. Population, in 1837, 18,067. It is surrounded with old walls, and divided into three parts; the old, middle, and new towns. It has several suburbs, which, with the city, are built in an old-fashioned style. It has been frequently the residence of the grand dukes, and has a ducal palace, numerous churches, a convent, two hospitals, a town-hall, theatre, &c. The church of St. Mary's is interesting from its having a monument in honour of Grotius, the illustrious author of the treatise *De Jure Belli et Pacis*, one of the greatest men of modern times, who expired here on the 28th of August, 1645, far from his family and friends, an exile from his ungrateful country. In one of the squares, thence called *Blucher's Platz*, is a statue of the celebrated Prussian general, Blucher, who was a native of the town. The university of Rostock, one of the oldest in Germany, was founded in 1419. It has four professors of theology, five of jurisprudence, five of medicine, and ten of philosophy; besides three extraordinary professors, and ten private teachers, having attached to it a library of 45,000 printed volumes, theological and other auxiliary schools, an anatomical theatre, laboratory, botanic garden, and various scientific collections. It is, however, but poorly attended, having, in 1836, only 86 pupils. Rostock has a society of natural history, and other learned associations, and a commercial institute. It is one of the most active manufacturing towns of N. Germany, having numerous woollen factories, breweries, and distilleries, vinegar and soap works, &c. Rostock has a pretty extensive trade. The exports consist chiefly of good red wheat, barley, peas, rapeseed, and a few oats; with wool, rags of a very superior quality, oil cake, rape oil, bones, flax, horses, cattle, provisions, &c. The average export of all kinds of grain may be taken at from about 115,000 to 130,000 qrs. a year; and the total value of all sorts of exports may be estimated at about £280,000. The imports consist of colonial products, spices, wine, manufactured goods, &c. There belong to the port nearly 200 vessels of from 150 to 250 tons, which trade with most European nations, the United States, and Brazil. The outport of Rostock is Warnemünde, at the mouth of the Warnow. The depth of water at the latter varies from 10½ ft. to 12½ ft.; but when the W. pier, now in process of construction, shall have been completed, it is expected that the depth of water will be from 12 ft. to 14 ft. The depth of water in the river from Warnemünde up to Rostock is usually from 8 ft. to 9 ft.; so that vessels drawing more than this, must be lightened to get up to the latter. The commercial weights here are the same as at Hamburg. The duties are extremely moderate; on most imported articles they amount, in privileged vessels, to only 3 per cent, and in other ships to 4½ per cent, *ad val.* An export duty of about 5d. per quarter is charged on corn, and of about 4s. 8d. per hhd. on wine: wool is not subject to any export duty.

Rostock having been formerly one of the Hans towns, had, for a lengthened period, and till lately, some exclusive privileges. Its vessels bore the flag, not of the grand duchy, but of the city of Rostock; and it had its own separate jurisdiction, independent of the rest of Mecklenburg; appeals from its tribunals being carried to the central court at Lubek. But it has now only a court of secondary jurisdiction, with appeal to the tribunal at Parchim; and its other privileges have been either curtailed or abolished. (*Berghaus; Allg. Länder, &c.; Stein; Commere. Dict.*)

ROSTOFF, a town of European Russia, on the Don, about 22 miles above where it falls into the sea of Azoff.

## ROTHERHAM.

Population, about 8000. This and the contiguous town of Nakhichevan are the principal entrepôts of the trade of the vast countries traversed by the Don. The inhabitants of the latter are the more commercial, but Rostoff would seem to enjoy the special favour of the government, the *dépôts* of provisions for the army, the fortresses of the Caucasus, and of the eastern coast of the Black sea, being established in it. The fort St. Dimitri, near the town, is a *dépôt* for the munitions of war required by the above-mentioned places. During the proper season there is a great deal of bustle and activity both here and at Nakhichevan.

ROSSTRAVER, p. t., Westmoreland co., Pa., 17 m. S.W. Greensburg, 191 m. W. by S. Harrisburg, 217 m. W. Bounded E. by Youghiogheny river, W. by Monongahela river. It has three stores, one fulling-mill, one woollen factory, five flouring-mills, nine saw-mills, two tanneries, two distilleries, one pottery; six schools, 258 scholars. Pop. 1880.

ROTHERNBURG, a town of Bavaria, circ. Middle Franconia, cap. distr., near the Tauber, 40 m. W. Nuremberg, Population 5700. It is beautifully situated, but irregularly laid out, and has few edifices worth notice. It was anciently a free city of the empire, and is surrounded by old walls flanked with numerous towers. It has manufactures of woollen stuffs, and an active trade in corn and cattle. (*Berghaus, &c.*)

ROTHERHAM, a manufacturing town, parish, and township of England, W. riding county York, liberty of Hallamshire, wap. Strathforth and Tickhill, on the Don, crossed here by a handsome stone bridge, and close to its junction with the Rother, (whence the name), 6 m. N.E. Sheffield, and 142 miles N.N.E. London. Area of parish (comprising eight townships), 12,810; do. of township 2140 acres. Population of town, in 1831, 4083. The town, partly in a valley, and partly on the sides of two steep hills, has several steep, narrow, and irregular, streets, lined with indifferently built stone houses. Recently, however, great improvements have been made, the streets have been widened, new houses built, and gas generally introduced. The courthouse, jail, market-house, and public library, are handsome modern buildings. The church (chiefly built by Archbishop Rotherham, in the 15th century, and by him rendered collegiate) is a large cruciform structure of perpendicular architecture, with a central tower and spire fully enriched with pannels, canopies, and crockets: "On the whole," says Mr. Britton, "This is one of the finest parish churches in the N. of England, and deserves the most attentive examination, both as to its composition and most of its details." (*Archæ. p. 274.*) The living, a vicarage in the gift of lord Howard of Effingham, is worth £170 a year. There is an episcopal chapel in the township of Tinsley; handsome churches have recently been erected at Greaseborough and Thorpe, and a church is in course of construction at Kimberworth. The town has a Roman Catholic chapel, and places of worship for Wesleyan and Primitive Methodist, Baptists, and Unitarians; besides which, there is at Marsborough, on the other side the river, an Independent chapel, with an attached academy for the education of young men intended for the ministry belonging to that class of dissenters. There are seven Sunday-schools, a Lancasterian school for 400 children of both sexes, two endowed charity schools, and a grammar school, founded in 1584, slenderly endowed, but conferring certain advantages on its pupils at the English universities. A dispensary was established in 1806; and there are almshouses for poor unmarried females. An ecclesiastical college, founded here at the close of the 15th century, was suppressed by Edward VI.; a part of the building is now used as an inn.

Rotherham, from its position in the middle of a district abounding with iron and coal, has long been distinguished for its manufactures of cast-iron; and during the American and French wars it almost exclusively supplied the navy with cannon. The iron-work for Sunderland, Southwark, and other bridges, was also cast here. The manufacture is still carried on with great vigour, new establishments have sprung up; and at present fenders, engine-work, and every variety of hardware, are manufactured on an extensive scale. Glass, starch, naphtha, and soap are also produced; a flax-mill employs about 100 hands, and there are two extensive porter-breweries. The town enjoys great facilities for the transport of its manufactured produce. The Don was made navigable to Tinsley, above the town, in 1720, and is accessible to Rotherham for vessels of 50 tons. A railway to Sheffield was opened in 1838, and the distance between the two towns (5½ m.) is performed in about a quarter of an hour. The North Midland railway, also, passes close to the town, and the Marsborough station is, in point of traffic, one of the most important on the line. The distance by railway to London is 171 miles, and the journey is accomplished in about nine hours. Large markets for corn and cattle on Monday; fairs, Whit-Monday and Dec. 11. The town has no regularly constituted municipal

## ROTHESAY.

authority; but a body chosen by the inhabitants, called "the feoffees of the common land of Rotherham," employ the proceeds of certain rents for the improvement of the town. The midsummer quarter sessions for the W. riding, and weekly petty sessions, are held here by the county magistrates; besides which, there is a court of requests for the recovery of small debts. It is, also, the chief place of a poor-law union.

ROTHESAY, a royal borough and seaport of Scotland, county Bute, of which it is the capital, at the head of a beautiful bay on the E. side of the island, 30 m. W. by S. Glasgow. Population, in 1837, 4924. Port Bannatyne, a favourite sea-bathing residence, is 2½ m. N.W. Rothesay. Being protected on the land side by surrounding hills, and towards the sea by the opposite coast of Argyre, only 3 m. distant. Rothesay has a very mild climate, and is much resorted to by sea-bathers, as well as by invalids. Exclusive of its castle, the principal public buildings are the town-hall and county buildings (under one roof), in the castellated form, with an elegant tower; two places of worship (one of them Gaelic), connected with the established church; and chapels belonging respectively to the Associate Synod, Cameronians, Independents, and Episcopalians. The parish church is situated ½ m. and Mount Stuart, the seat of the marquess of Bute, 3¼ m. S. from the town. The means of education are ample: there are six public libraries in the town, and two reading rooms; with various friendly societies and charitable associations. A savings' bank was established in 1821.

The cotton manufacture has been introduced; and two cotton mills employ 455 hands. But the fisheries may be said to be the most important, as well as the oldest, branch of business carried on. The salmon fishery obtains to a limited extent, as also that of haddocks, whiting, and soles. But the herring fishery is more extensive than all these together. The fishery, however, is not carried on in the bay of Rothesay; or if so, only in a small degree; it centres chiefly in the kyles (straits) of Bute, and the adjacent salt-water lakes; but it is principally carried on with Rothesay capital. In the year ending 5th of April, 1840, 17,119 barrels of herrings were cured at Rothesay. About 60 vessels of 3000 tons, exclusive of steamers, belong to the port. There are two small building yards, and three branch banks.

The castle of Rothesay, a noble ruin, is of great antiquity. It was at one time a favourite royal residence, and Robert III. expired in it in 1405. John, earl of Bute, the favourite of George III., and Matthew Stewart, the mathematician, father of Dugald Stewart, were both natives of this borough. Previously to 1832, it joined with other boroughs in sending one member to the House of Commons; but it is now merged in the county representation.

ROTTERDAM, a celebrated commercial city of Holland, being, in point of population and importance, the second in the kingdom, prov. S. Holland, cap. arrond., on the N. bank of the Maas, where it is joined by the Rotte, whence its name, 17 m. (direct distance) from its mouth, and 35 m. S. S.W. Amsterdam; lat. 51° 55' 19" N., long. 4° 29' 14" E. Population, on the 1st of January, 1840, 73,098, having increased about 10,000 during the previous ten years. It is of a triangular shape, the base of the triangle extending along the river. It is surrounded by a moat, and, like every other Dutch town, is intersected by numerous canals, only one public thoroughfare, the High street, being without a canal in its centre. This street, which runs in a direct line E. and W. through the city, is somewhat raised above the rest, being built upon the dam by which the Maas is prevented from inundating the country behind the town. Being the principal seat of retail commerce, it is lined with shops throughout. Rotterdam has a striking appearance from the river.

The fine quay, called the *Boompjes*, from the rows of trees with which it is planted, extends along the river for nearly a mile; behind the trees is a line of well-built houses four or five stories in height, mostly of dark-coloured brick, and having an aspect of much grandeur. The quay being crowded with shipping, this part of the city is the great seat of business, and presents a scene of incessant activity. "In penetrating through the town from the Boompjes, we come to street after street, each having a canal in the middle, lined with trees on both sides, and exhibiting a mixture of lofty gable fronts of houses, trees, and masts of shipping. The canals, or havens, stretch lengthwise and crosswise, like the meshes of a net, through the city; and at every short interval is perceived a drawbridge of white painted wood, constructed with ponderous balancing beams overhead, and raised by means of chains, for the passage of vessels. The ground beneath the trees is paved with small yellow bricks, and is chiefly occupied as quays for the landing of goods. The space from the trees to near the houses is paved in the usual coarse manner for carts and carriages, and here the foot passengers are generally obliged to walk,

## ROTTERDAM.

for small outshot buildings, flights of steps to doorways, and such like interruptions prevent any regular thoroughfare on the narrow brick trottoirs close by the houses. The havens are in a few places protected by chains from the streets, so that there is constant liability to accidents, particularly at night, when the darkness is but poorly relieved by oil lamps dangling, Parisian fashion, from the ropes stretched betwixt the trees and the houses. Latterly a portion of Rotterdam has been lighted with gas; but according to a parsimonious plan, the lamps are not lighted when the moon is expected to shine." (*Chamber's Tour*, p. 5, 6.)

The houses of Rotterdam are generally on a large scale, and lofty; and in many of the streets they are really elegant. Mr. Chambers speaks as follows of a large class of residences. "Each house may be considered the castle of a merchant, who both resides with his family, and carries on the whole of his commercial transactions within the same set of premises. The front part of the building exhibits an elegant door of lofty proportions, 15 or 20 ft. high, for instance, at the head of a flight of steps. On getting a glimpse into the interior, you see a lobby paved with pure white marble, and a stair of the same material leading to the story above, which consists of a suite of lofty rooms, and is the main place of residence of the family.

"Some of the rooms are finished in a style of great elegance, with rich figured cornices and roofs, silk draperies to the windows, smooth oak floors, and the walls most likely painted as an entire picture or landscape, in oil, by an artist of eminence. Near to the door of the house is a coach-house door, which, on being thrown open from the street, discloses a wide paved thoroughfare leading to an inner court, the buildings round which are devoted to the whole warehousing department of the merchant. The bulk of the edifices of this great trading city are of the kind I describe." The ordinary houses are badly heated, and are in other respects not very comfortable; but the poorest house in the city is as clean as scrubbing and washing can make it, both inside and out; in this respect, indeed, the Dutch have no equals. Among the minor peculiarities which strike an Englishman, are the small mirrors affixed outside to almost all the first-floor windows, which are placed so as to show the inmates whatever may be going on in the street below. The want of good potable water is a great inconvenience.

Rotterdam has few public buildings of interest. The town-hall, a large modern structure in the Grecian style, has a noble council room, with rooms for the city library and philosophical apparatus; but, though superior to the generality of such edifices, it is much inferior to that of Amsterdam. The exchange, on the contrary, is a finer building than that of the capital; it is rectangular, with a court in the centre, surrounded with arcades, supported by 30 pillars, each of a single block. The Schieland palace, occupied in 1811 by Napoleon and Maria Louisa, is perhaps the finest of the public edifices. The custom-house and the former East India house on the Boompjes present nothing remarkable. There are from 15 to 20 churches, including one for English Episcopalians, and one for Scotch Presbyterians. The principal is the church of St. Laurence, formerly the Roman Catholic cathedral. It is a large Gothic brick building, with a lofty square tower, and dates as far back as 1412; but nearly all its ancient ornaments were swept away at the Reformation. In it are the monuments of the celebrated Dutch admirals, De Witt, Kortenaar, and Brakel, each of which has an appropriate inscription. It has also a splendid organ, said to be superior in size to the great organ of Haarlem, generally considered the largest in Europe. This is 150 ft. in height, mounted upon a colonnade about 50 ft. in elevation, and has, according to Barrow, 5500 pipes, the largest being 32 ft. in height, and 16 in. in diameter. In the market-place is a bronze statue of Erasmus, the most illustrious by far of the natives of Rotterdam. The house where this great scholar, "the glory of the priesthood and the shame," first saw the light, on the 28th Oct., 1467, still exist; but (*quantum mutatus es*) it has been degraded into a gin-shop! Rotterdam has a naval dock-yard; but it is on a small scale, and contains little worth notice. In the neighbourhood of the city are many places of entertainment, as tea-gardens &c.; and in the town are several clubs, where English as well as the continental newspapers are taken in. Rotterdam is the seat of the marine department for the Maas, of the superior judicial courts for the province, and of a tribunal of commerce; the cap. of the 9th militia district of the kingdom; and the residence of a military commandant, a director of police, and numerous foreign consuls. It has a society of arts and experimental philosophy, founded in 1767, branches of the societies of Public Good and the fine arts, a college, a Latin school; many superior and intermediate and poor schools, in the whole of which, according to Chambers, about 8000 children are instructed; and various private academies. The central prison of Holland for juvenile offenders is at Rotterdam; it has also various workhouses and charitable institutions, and a sav-

## ROUBAIX.

ings' bank, paying interest at 4 per cent. There are manufactures of tobacco, refined sugar, needles, and pins, glass wares, corks, dyeing and chemical products, spirits, &c.; large markets are also held weekly for corn, flax, hemp, and other agricultural produce; and the annual fair of Rotterdam is the largest in Holland. (*De Cloet*.) Rotterdam is more advantageously situated in a commercial point of view than Amsterdam, or any other Dutch town. She is easily accessible from sea by the largest class of merchantmen; and from her position on the principal embouchure of the Rhine, as well as of the Maese, she is the grand emporium of the foreign trade of the countries which they traverse. The imports and exports are similar to those of Amsterdam, which see. The white Zealand and Rhenish wheat shipped here is of a superior quality; and it is the best market for madder, geneva, cheese, &c. The imports, in 1840, comprised, among other things, 20,115 tons coffee; 20,057 tons sugar; and 5032 chests indigo, mostly from Java; with 13,305 bales cotton, 17,411 hhds. tobacco, 21,012 slabs banca tin, &c. During the same year there entered the port 1671 ships of the burden of 339,584 tons. Rotterdam has a regular intercourse by means of steam-packets with London and other great over-sea ports, and with Dusseldorf, Cologne, Maestricht, and other ports on the Rhine, Maese, &c. The railway from Amsterdam to Haarlem is to be extended to Rotterdam.

Besides Erasmus, the great painter Adrian Vander-Werf, was a native of Rotterdam.

ROTTERDAM, D. L., Schenectady co., N. Y., 22 m. W.N.W. Albany, 390 W. Bounded N.E. by Mohawk r. It contains two Dutch Reformed churches, four stores, two grist-mills, three saw-mills, one oil-mill; 10 schools, 387 scholars. Pop. 2284.

ROUBAIX, a manufacturing town of France, dép. du Nord, arrond. Lille, cap. canton, on the canal of Roubaix 7 m. N.E. Lille. Pop., in 1836, ex. com., 13,426, or with com., 19,455. Like most Flemish towns, it is well built. It formerly laboured under a want of water; but of late an adequate supply has been obtained by means of Artesian wells. After Lille, Roubaix is one of the chief towns in the dép. for the manufacture of cotton goods; it has been estimated that, in the town, and immediately adjacent country, about 30,000 hands are alternately employed in the manufacture of cotton and woollen goods; the latter from about June to September, and the former during the remainder of the year. Mr. Symonds says, "of the various weaving and spinning districts of this manufacturing dép., there is none more prosperous than Roubaix, which has increased prodigiously within the last 10 or 15 years. The articles chiefly manufactured are Thibets, waistcoat-pieces, and thick cotton goods. There are about 12,000 looms in this district, of which half are Jacquard looms. The latter are principally in the factories, the manufacturers finding it necessary to preserve the privacy of their patterns. A weaver will on cotton goods, earn at an average 30 sous (15d.) a day; on the second class work, from 30 to 40 sous (15d. to 20d.); and on the Jacquard loom, from 2 fr. to 5 fr. per day, the average being about 3 fr.: these are gross wages. Net earnings will be, weekly, about 12 fr. or 13 fr. for the Jacquard weaver, and from 6 fr. to 10 fr. for the plain weavers. Women and children obtain plenty of employment at the mills. Wages had risen by above 15d. in the last few years. I inspected a woollen spinning factory; the spinners were earning from 20 fr. to 24 fr. per week, nett, as a matter of course; and it is by no means uncommon for them to earn 30 fr. nett. The girls earned about 7 fr. 30 cents, and the children 3 fr. per week. The rooms were all high, clean, and well ventilated; and the machinery, built by an engineer at Rhelms, though not of the newest description, was extremely good. The yarn spun was fine and even, and superior to what I have sometimes seen in Scottish mills." (*Handloom Weaver's Rep.*, p. 129, 130.) The working population of Roubaix is increasing by continual immigrations from Belgium. Some of the labourers live in the town; but the greater number reside in the neighbouring villages and hamlets, coming daily to and from the factories, in which they work from 14 to 15 hours a day. They live mostly on meat, soup, potatoes, and beer; using butchers' meat four days a week. Symons says, that the morals of the working classes here are decidedly worse than in most other districts; but, according to Villermé, who, in this respect, is a better authority, the work-people of Roubaix and Turcoing are, whether as regards morals, cleanliness, clothing, lodging, food, or health, decidedly superior to those of Lisie. Drunkenness is here, and, indeed, every where else throughout French Flanders, a prevalent vice; but, in other respects, the conduct of the work-people seems to be good; and they have established numerous societies for their mutual support and assistance. (*Villermé; Tableau des Ouvriers; Hugo; Dict. Géog.*)

ROUEN (an. *Rothomagus*), one of the principal cities of France, and the great seat of its cotton manufacture, dep.

## ROUEN.

Seine-Inferieure, of which it is the cap., on the Seine, 44 m. (direct distance) from its mouth, and 67 m. N.W. Paris; lat. 49° 26' 27" N., long. 1° 5' 59" E. Pop. in 1836, 92,083; but if the inhabs. of all its suburbs be included, the pop. will amount to upwards of 100,000. (*Villermé, &c.*) This city, which stands in a fine and fruitful country, is most admirably situated on a navigable river, by which it communicates with the capital on the one hand, and with the flourishing seaport of Havre on the other; and it is surrounded by a verdant and delightful country. Its numerous spires and towers, and the vessels that throng its quays, give it a very imposing external appearance, to which its interior presents in most parts a striking contrast. Generally it is ill built. Streets mostly narrow, crooked, and filthy; houses principally of wood, or rather of lathe and plaster, though in the W. and newer quarters of the city some are built of more solid materials, and have even considerable elegance. It is oval, or rather lozenge shaped, and was for a lengthened period pretty strongly fortified; but its ramparts are now demolished, and their place is occupied by a series of boulevards, which separate the city proper from the *faubourgs* Cauchois, Bouvreuil, Beauvoisine, Martinville, &c.

The Seine here crossed by a bridge of boats, and one of stone, divides it from its large suburb of St. Sever. The boulevards, which are planted with trees, like those of Paris, and the fine broad quays and *cours*, which extend along the banks of the river, are the favourite and almost the only public promenades; the squares or open spaces are shabby and irregular, and except the *Place Royale*, near the centre of the city, are all of insignificant size. Some, however, are ornamented with public fountains, with which Rouen is well furnished: the *Fontaine de Lisieuz* is a curious piece of antique sculpture, representing Mount Parnassus, with figures of Apollo, Pegasus, &c. In the square of La Pucelle, an indifferent statue of Joan of Arc is erected on the spot where that heroine suffered martyrdom in 1431.

The central parts of the city are the chief seat of general commerce; the upper classes principally reside in the *fau-bourg* Cauchoise, and the N. suburbs; while the lower quarters at the E. end of the town, and the *faubourg* St. Sever, are almost wholly inhabited by the manufacturing classes.

By far the most celebrated and striking public edifice is the cathedral, one of the noblest religious structures in France, or even in Europe. It was constructed principally between the 13th and 16th centuries inclusive: entire length, 434 ft.; breadth 103 ft.; length of transepts, 174 ft.; height of nave, 89½ ft.\* Its richly ornamented front has three fine portals, over the central of which is a square tower, and spire of iron work, reaching to a height of 464½ ft.; flanked by two lofty but dissimilar towers, the *Tours Romain* and *Gorges d'Amboise*. The former, which dates from a period long anterior to the rest of the building is in a simple and unadorned style; but the latter, built at the end of the 15th century, is much admired for the beauty of its architecture. It is ornamented with numerous sculptures; and before the revolution contained an enormous bell, which with many others belonging to this cathedral, was then sent to the canon foundry. The interior of the edifice is lighted by 130 windows, many of which are ornamented with stained glass; and contains a vast number of tombs, including that of Richard I. (*Cœur de Lion*) of England, many dukes of Normandy, and 17 archbishops of Rouen; and the fine mausoleum of the two cardinals d'Amboise. The latter is very perfect; but many of the other monuments were much mutilated in the religious and revolutionary wars.

The church of St. Ouen in the *Place Royal* belonged to the oldest conventual establishment in Normandy, and occupies a larger extent of ground than the cathedral. It is an admirable specimen of the pointed Gothic; its fine octagonal tower rising from the centre of the building, is 255 ft. in height. The town-hall adjoining this church was originally a portion of the conventual edifice; and, besides various public offices, is appropriated to the museum and public library, with about 80,000 volumes. Several of the other churches in Rouen well deserve notice, and some are of high antiquity. The city clock is placed in a square Gothic tower, erected in 1839, in the High-street. The *Palais de Justice*, with a noble saloon, was built for the parliament of Normandy, at the end of the 15th century. The incarcantile halls of Rouen, for the exhibition and sale of different articles, are well adapted to their destination. They occupy three sides of a square, the centre of which forms an open exchange. A special apartment is devoted to every different kind of goods; the cotton-cloth hall, where the most important branch of traffic is conducted, is 200 ft. in

\* The dimensions are given by Hugo, and the *Guide du Voyageur*, in French ft., which are here converted into English ft.

## ROUEN.

length, by 53 ft. 4 in. in breadth. Every Friday, from 6 A.M. till noon, these halls display great commercial activity. There is another exchange adjacent to the quay. The exchange-office, *chambre des comptes*, barracks, the *biectre*, a spacious general prison, another prison for accused but untried persons, prefecture, archbishop's palace, mint, custom-house, college, two theatres, *hotel-dieu*, the general infirmary, which, according to Hugo, has commonly 2000 inmates, Protestant church, and the remains of an old fortress, are among the other principal public buildings. Rouen has some private houses worth notice, especially those in which Fontenelle and Pierre Cornille were born; others in which are some curious works of art, &c. It is the seat of a royal court for the depts. Seine-Inf. and Eure; of tribunals of primary jurisdiction and commerce; a Chamber of commerce, and council des *prud'hommes*, royal and university academies, a royal college, and a mint established in the 9th century; the cap. of the 15th military division of France; the seat of an archbishop, whose diocese comprises the dep. Seine-Inférieure, and whose suffragans are the bishops of Bayeux, Coutances, Evreux, and Seez; the seat of a Protestant consistory; and the residence of many foreign consuls. It has a central society of agriculture; societies of public emulation, commerce, agriculture, medicine, &c.; a Bible society; schools of design and navigation; a botanic garden; savings' bank, and various charitable institutions.

Rouen is so eminent for its cotton manufactures that it has acquired the title of the French Manchester, and checked printed cotton cloths for women's dresses, are commonly known in France by the name of *rouenneries*. It was anciently celebrated for its linen fabrics, the manufacture and dyeing of which appear to have been carried on in it in the earliest times of the French monarchy. But so late as the middle of the last century, the workmen employed at Rouen were nearly all foreigners, Germans, Dutch, or Swiss; who remained in France only during a part of the year, returning to spend the remaining months in their native countries: and less than 50 years ago, the cotton yarn employed in the manufactures was wholly spun by hand. At present, however, both water and steam power are largely employed. The whole region round Rouen shares more or less in its branches of manufacture. Mr. Symons says there are 930 spinning mills in Normandy and the Seine, and 920,000 spindles. (*Hand-loom Weavers' Report*.) The prefect of the Seine-Inférieure, in 1835, estimated the weavers of cotton and woollen goods in that dep. to amount to about 130,000, four fifths of whom were resident in Rouen and its immediate neighbourhood: and Villermé (1840) states that 50,000 persons, men, women, and children, or about half the entire population of the city and suburbs, are engaged in the cotton manufacture. (*Tableau des Ouvriers*, i. 138-9.)

"The manufacturers of Rouen (says Mr. Symons) pride themselves greatly on the superiority of their products: and it is but justice to say that I have seldom seen printed cottons so good in colour and texture at 7d. per ell, as those of Rouen at that price. The goods produced by the Norman looms are in direct competition in third markets with those from the W. of Scotland. The wages of Norman weavers are, if anything, lower than in Scotland, but provisions are at least 20 per cent. cheaper. So that no great difference is perceptible in the condition of the two classes; and were I to be forced to choose whether I would be a pullicate weaver in Scotland or in Normandy, I think I should be sorely puzzled which to select, or rather which to consider the greater infliction." (*Hand-loom Rep.* p. 125.) The nett wages obtained by country weavers working on their own account on pullicates, thick calicoes, &c., are about 1 fr. a day, or 5s. a week, and this may be taken as above, rather than below, the average. Children and women are both occupied in weaving at proportionate earnings. In the spinning mills, spinners get from 15 to 20 fr. a week, working from 80 to 84 hours; women and girls employed at the earding and drawing operations gain from 7 fr. to 10 fr. The power-loom weavers earn from 12 to 16 fr., and day labourers from 10 to 12 fr. a week. (*Hand-loom Rep.*)

In some branches, and especially that of spinning, wages diminished during the ten years preceding 1834; since which they have been somewhat augmented. According to Villermé, the working classes of Rouen are, upon the whole, in a much less depressed condition than those of Lisle, and their health is also much better. Drunkenness is in both towns the prevailing vice among the lower classes; but it seems to be less prevalent at Rouen. The woollen manufactures of the city are unimportant; their chief seat in this dep. being at Elbeuf (which see). Broad silks, velvets, hardware, superior earthenware, chemical products, and confectionary, for which Rouen is famous, are the other principal products. Vessels of 200 tons ascend to the city, which carries on a considerable trade with the countries both in the N. and S. of Europe, the Levant,

## ROVIGO.

America, and the other maritime depts. of France; the greater part, however, of its foreign commerce is carried on through the intervention of Havre.

Rouen was of sufficient importance in the third century to be created a bishop's see; it afterward became successively the capital of the kingdom of Neustria, and of the duchy of Normandy. Prince Arthur of Brittany having been put to death in Rouen, in 1203, by John, king of England, Philip Augustus besieged and took the city in the year following. It was retaken by Henry V. of England in 1417, and retained by the English till 1449, when it was finally annexed to the French crown. The Reformation made great progress here; and the city suffered much in consequence of religious feuds. But fewer individuals fell victims to the Massacre of St. Bartholomew and the frenzy of the revolution in this than in most other large French cities.

Rouen has given birth to some of the most illustrious individuals of whom France has to boast; among whom may be specified Pierre Cornille, deservedly surnamed *le grand*, one of the greatest modern dramatists, born here on the 6th of June, 1606; his brother, Thomas Cornille; Fontenelle, the academician, born here in 1657; Bochart, the famous oriental scholar; Daniel the historian; Brumoy, author of the *Théâtre des Grecs*, &c. (*Hugo*, art. Rouen; Villermé, *Tableau des Ouvriers*, i., 135-166; *Hand-loom Weavers' Rep.*)

ROULERS, a town of Belgium, prov. W. Flanders, cap. canton on the Mandelbecke, a tributary of the Lys, 26 m. W. by S. Ghent. Pop., in 1836, 9982. It has a high school, manufactures of linen fabrics, leather, soap, oil, &c., and some trade in butter of a superior quality. (*Hensching; Dict. Géog.*)

ROUSE'S POINT, p. v., Champlain t., N. Y., 158 m. N. Albany, 560 W. Situated on the W. side of lake Champlain, and has a small village containing a Methodist church and about 125 inhabitants, with a steamboat landing. A little N. of the village, the United States government, shortly after the last war, built a strong fortification, in the form of a round tower, pierced for several tiers of guns, on which was expended over \$400,000. On accurately taking the latitude with the fine instruments used in that survey, it was found to be within the Canada line, and was abandoned. It is nearly in ruins, but is now, by the terms of the late treaty, within the United States, and is the most favourable site for a fortification which will command the entrance to lake Champlain. A fortification here would be of great importance in case of a war.

ROVEREDO (Germ. *Roverett*), a town of the Tyrol, on the frontiers of Austrian Italy, cap. circ. of its own name, on the Leno, near its junction with the Adige, 13 m. S. by W. Trent. Pop. 7300. It is well built, many of its edifices being of marble. The most remarkable building is the castle, on a height commanding the town. It has superior civil, criminal, and commercial tribunals for the circ., a gymnasium and high school, and an English convent establishment. In and round the town are numerous silk mills, which employ, according to the Austrian Encyclopedia, 8000 hands. It has also tobacco and leather factories. (*Oester. Nat. Encycy.; Bergg.; Rampoldi, Corografia, &c.*)

ROVIGNO, a seaport town of Austrian Italy, circ. Istria, on the Adriatic, 36 m. S.S.W. Trieste. Pop. 9300. It has numerous fine churches and other public edifices, high and female schools, and two hospitals. Its principal church is built after the model of St. Mark's at Venice. It is the seat of civil, criminal, and commercial tribunals; has two harbours, one of which is tolerably secure; and carries on a considerable trade in wine, olives, timber, anchovies, and tunny. Its inhabitants are principally seafaring people, or engaged in the fisheries; they are, however, partly occupied in ship building and making cables. Near the town are some quarries of superior marble. (*Rampoldi; Oester. Nat. Encycy.; Berghaus.*)

ROVIGO (an. *Rhodigium*), a town of Austrian Italy, prov. Venice, cap. deleg., on the Adigetio, a branch of the Adige, in the swampy tract of the Polesin, 36 m. S.W. Venice, and 17 m. N.E. Ferrara. Pop., in 1837, 5669. It is fortified in the old style, with walls flanked with towers, a ditch, and a citadel; and is entered by six gates. According to Rampoldi, it is rather a handsome town; but the *Austrian Encycy.* says, it is ill-built, and unhealthy. It has numerous churches, a seminary, and a hospital; two orphan asylums, a large and fine theatre, an academy of sciences and arts, and various superior public schools. The library of the Count Silvestri, comprising 36,000 volumes, is open to the public. It is the seat of the superior courts for the deleg., and the residence of the delegate, and the bishop of Adria. Though much decayed, it has a considerable trade in corn, a large fair from Oct. 20 to 28, and three weekly markets. General Savary was created by Napoleon, Duke of Rovigo. (*Rampoldi; Berghaus; Austr. Nat. Encycy., &c.*)

## ROWAN.

**ROWAN**, county, N. C. Situated centrally in the W. part of the state, and contains 375 sq. m. Drained by Yadin river. It had in 1840, four schools, 98 scholars. Pop.: whites, 8646; slaves, 3365; free coloured, 98; total, 12,109. Capital, Salisbury.

**ROWLEY**, p. t., Essex co., Mass., 30 m. N. by E. Boston, 470 W. Watered by Rowley river, which affords water-power, and has at its mouth a harbour for small vessels. The first fulling-mill in the United States was erected here. It contains two churches, a Congregational and Baptist, three stores, two grist mills, two saw mills, four tanneries; one academy, 30 students; three schools, 218 scholars. Pop. 1203.

**ROXBORO'**, t., Philadelphia co., Pa.,  $\frac{7}{8}$  m. N.W. Philadelphia. It contains the village of Manyunk on Schuylkill river, where a canal connects the pool at Fairmount with that of Flat Rock. The dam presents a beautiful cascade, which adds much to the picturesque scenery. Steatite or soapstone is found in the N. part of the township. It has 24 stores, one forge, 11 fulling-mills, four woollen factories, eight cotton factories, with 17,940 spindles, eight flouring-mills, two grist-mills, two saw-mills, three paper-mills; 12 schools, 746 scholars. Pop. 5797.

**ROXBORO'**, p. v., capital of Person co., N. C., 54 m. N.N.W. Raleigh, 250 W. It contains a courthouse, jail, two stores, and about 100 inhabitants.

**ROXBURGH**, an inland and frontier co. of Scotland, having N. the co. Berwick and a small portion of Mid-Lothian, E. and S. Northumberland and Cumberland, and W. Dumfries and Selkirk. Area, 457,920 acres, of which nearly a half is occasionally under the plough. It is partly intersected and partly bounded by the Tweed; and is traversed from its S.W. border, where it has its source, N.E. to Kelso, by the Teviot, whence it is sometimes called Teviotdale. It has every variety of surface and soil. The low arable lands in the valleys of the Tweed and Teviot, consist principally of light turnip soil. The mountainous or pastoral district is principally in the S.W. parts of the county, along the Dumfries, Cumberland, and Northumberland border. The hills, however, like the Cheviots, to which they are contiguous, are mostly smooth, dry, and well covered with good sheep pasture. Property mostly in large estates; but there are several of the smaller class of proprietors. Farms generally large; and some farmers frequently hold three or more farms. Arable husbandry is as well understood and practised in the lower parts of this county as in the most improved parts of the empire. It is also celebrated for having been the theatre where some of the principal improvements in modern farming were first introduced, and where others were first successfully practised in Scotland. Mr. Dawson, the great improver of Scotch husbandry, occupied the farm of Frogden, near Kelso, in this county; and in it, soon after 1760, he set to work the first plough drawn by two horses, driven by the first ploughman, that was ever seen in Scotland! And if Mr. Dawson was not the first to set the example of raising turnips, he was the first practical farmer by whom they were profitably cultivated on a large scale. (*Survey of Roxburgh*, p. 69, 90.) Fanners for dressing corn were also made and used in this county before they were seen in any other part of Scotland. (*Ibid.* p. 59.) Large quantities of wheat are now produced. Cattle, a mixed breed. Sheep, principally Cheviots. Within the last 30 years many important improvements have been effected in this district. A large extent of land that was entirely pastoral now bears luxuriant crops: bone manure has been introduced; agricultural management has been materially amended; a good deal of waste land has been planted; farm-houses and buildings have, in numerous instances, been rebuilt on approved plans; thrashing-machines have been erected on most considerable farms; and the habits and accommodations of the people have been materially improved. (*New Statistical Account of Scotland, Roxburgh*, p. 23, 33, 40, 125, &c.) There are some very productive orchards in the neighbourhood of Jedburgh, Melrose, and Kelso. Average rent of land, in 1810, 10s. an acre. Mari is found in vast quantities in several parts of the county, and it is also well supplied with limestone and freestone. Various branches of the woollen manufacture have been introduced, and are prosecuted with considerable vigour at Hawick and Wilton; and in a lesser degree at Jedburgh, Melrose, and Kelso. The parish of Kirk Yetholm, in this county, is celebrated as being the residence of the largest colony of gypsies in Scotland. Roxburgh contains 31 parishes; and returns one member to the House of Commons for the county; and the borough of Jedburgh joins with other burghs in returning a member. Registered electors for the county, in 1839 40, 2227. Principal towns, Jedburgh, Kelso, Hawick, and Melrose. In 1831, this county had 6732 inhabited houses, 8930 families, and 43,633 inhabitants, of whom 20,761 were males, and 22,902 females. Valued rent, £314,663 Scotch. Annual value of real property, in 1815, £254,180.

## RUGBY.

**ROXBURY**, p. t., Norfolk co., Mass., 2 m. S. Boston, 433 W. It is connected to Boston by a neck of land, which constitutes a broad avenue, and may be regarded as a continuation of Washington-street, Boston. It contains the pond, 4 miles from Boston, from which the city is supplied with water, by four trains of cast iron pipes, the aggregate length of which, with the distributing pipes, is 40 miles. Incorporated in 1630. There are many elegant country-seats in the township. It contains 10 churches, five Congregational, one Unitarian, one Episcopal, one Baptist, and two Universalist, two banks, 83 stores, four lumber-yards, five grist-mills, four saw-mills, five tanneries, two printing-offices, two binderies, one weekly newspaper; 12 academies, 350 students; 20 schools, 881 scholars. Pop. 9089.

**ROXBURY**, p. t., Litchfield co., Ct., 53 m. W.S.W. Hartford, 314 W. Watered by Shepaug river. It contains two churches, Congregational and an Episcopal, two stores, two grist-mills, three saw-mills; seven schools, 211 scholars. Pop. 971.

**ROXBURY**, p. t., Delaware co., N. Y., 20 m. E. Delaware, 65 m. S.W. Albany, 352 W. Drained by Papacout branch of Delaware river. It has five stores, one fulling-mill, five grist-mills, 18 saw-mills, four tanneries; 18 schools, 990 scholars. Pop. 3013.

**ROXBURY**, t., Morris co., N. J., 14 m. N.W. Morristown. Schooley's mountain covers a great portion of its area. On its summit is Budd's pond, 2 m. long and 1 broad, which has its outlet into the S. branch of Raritan river. It has nine stores, one forge, two fulling-mills, one woollen factory, two grist-mills, two tanneries, four distilleries, one pottery; 14 schools, 587 scholars. Pop. 2231.

**ROYALSTON**, p. t., Worcester co., Mass., 74 m. W. Boston, 416 W. Incorporated in 1765. Miller's river and its branches afford good water-power. It has three stores, seven fulling-mills, two woollen factories, two grist-mills, seven saw-mills, two tanneries; 12 schools, 233 scholars. Pop. 1607.

**ROYALTON**, p. t., Windsor co., Vt., 33 m. S. Montpelier, 488 W. Watered by White river. It contains three churches, a Congregational, Episcopal, and Methodist, four stores, two fulling-mills, two woollen factories, one grist-mill, six saw-mills, two tanneries; one academy, 30 students; 16 schools, 567 scholars. Pop. 1917.

**ROYALTON**, p. t., Niagara co., N. Y., 8 m. E. Lockport, 271 m. W. Albany, 406 W. Bounded S. by Tonawanda creek. At Gasport on the Erie canal, are inflammable springs. It has 11 stores, two grist-mills, seven saw-mills; 16 schools, 741 scholars. Pop. 3549.

**ROYALTON**, t., Cuyahoga co., O., 126 m. N.E. Columbus. It had one store; 15 schools, 454 scholars. Pop. 1051.

**RUBICON**. See ITALY, ante, p. 60.

**RUDDLE**, t., Independence co., Ark. It has eight stores, three grist-mills, two saw-mills, one tannery, two distilleries, one printing-office, two weekly newspapers; one academy, 55 students; two schools, 45 scholars. Pop. 1323.

**RUDGELEY**, a market town and par. of England, co. Stafford, and E. div. of hund. Cuttlestone, on the S. bank of the Trent, crossed here by a fine aqueduct of the Grand Trunk canal, 8 m. E.S.E. Stafford, and 122 m. N.W. London. Area of par., 7120 acres. Pop., in 1831, 3165. The town is well built, comprising many good houses, and a few that may even lay claim to elegance. The parish church, an ancient structure, with a handsome tower at its W. end, has recently been enlarged and almost rebuilt. The living is a vicarage in the gift of the dean and chapter of Litchfield. There are places of worship for different classes of dissenters, and several Sunday schools. A free grammar school was founded here by Queen Elizabeth: an endowed school furnishes clothing and instruction to 35 boys; besides which there is a national and infant school. Hopkins's almshouses afford relief to aged poor women, and there are several money charities. The principal manufacture of Rudgeley is that of hats and felts; but other articles are made here. A stream, which runs through the town to the Trent, turns several colour and corn-mills, and there are some iron-forges. At Brereton, within the parish, are extensive collieries, employing from 500 to 600 men. The town derives considerable advantages from its position on the great line of canal communication between the N. and S. counties. Its government is vested in two constables, chosen by the inhabitants. Markets on Tuesday; fairs April 17, June 5, and October 21, for horses and cattle.

**RUGBY** (an *Rocheberie*, or *Rokely*), a market town and par. of England, co. Warwick, hund. Knightlow, on the Avon, 28 m. E.S.E. Birmingham, and 75 m. N.W. London. Area of par. 2190 acres: pop., in 1831, 2501. The town, on an eminence S. of the river, consists of three streets, one of which, leading to the church, is broad, and lined with modern brick houses: indeed, great improvements have been made within the last few years, and the advantages derived by the town from its proximity to the Bir-

## RUGBY.

Birmingham railway seem likely still further to promote its prosperity; in the older part of the town, however, there are many houses of plaster and timber, denoting the former poverty of the place. The church is an ancient building, possessing little architectural interest, with a square embattled tower, having a turret at its S.E. angle: the living is a rectory, of the annual value of £510, in the gift of Earl Craven. There is also a district church, of very recent erection. The Wesleyan Methodists and Baptists have places of worship; and there are several Sunday schools, a charity school for 30 children of each sex, with almshouses and other charities. The chief importance of Rugby, however, is derived from its great public school, to which the talent of several of its recent masters and the richness of its endowments have given a well-merited celebrity. It was originally a simple grammar school, founded in 1657, by Lawrence Sheriffe, citizen of London, a native of the neighbourhood, for the benefit of the town and neighbourhood of Rugby. Any person who has resided during two years in, or within 10 m. of the town, may send his sons to be educated free of expense: but if the parent reside out of the town, his son must then lodge at one of the boarding-houses of the school, paying the same rate for his board as those not on the foundation. The number of boys on the foundation is unlimited; but the masters may not receive more than 260 boys not on the foundation. The number of scholars may at present average about 280, about 60 of whom are on the foundation. The school property consists of land within the parish, and of about 8 acres of land, called the Conduit Close, in the neighbourhood of Lamb's Conduit-street, London; the value of which has so greatly increased, in consequence of the buildings erected upon it, that the annual revenues of the school, which, at the middle of last century, were under £120 a year, now exceed £5000. The management is vested in 12 trustees; and the school is under a head master and eight classical masters, with subordinate teachers of writing, French, &c. The study of classical literature is carried quite as high as elsewhere, and the success of the boys at examinations for scholarships at Oxford and Cambridge, shows that their knowledge is of a substantial character; but at the same time, history, both sacred and profane, modern as well as ancient, physical and political geography, arithmetic and mathematics (as far as conic sections), and French, constitute integral parts of the course of instruction. An annual examination is held at Christmas, and the names of the boys that distinguish themselves are published in a class paper. The school has 14 exhibitions, established by the founder. Three exhibitioners are elected every year by the trustees on the report of examiners sent from the universities of Oxford and Cambridge. These exhibitions are of the value of £60 a year, and may be held for seven years during residence in any college at either university. There are likewise six scholarships, of the annual value of £25 each, supported by subscription: one scholar is elected every year, and his age must not exceed 14½ years at the time of his examination. The scholarship is tenable for six years, if the boy holding it remains so long at Rugby. The ancient buildings of this great seminary consisted formerly of a master's house, and two or three school-rooms, all of very limited size and shabby exterior, totally inadequate to the wants of the increasing establishment. In 1809, however, the erection of a large and handsome pile of buildings was commenced on the site of the old school-house at the S. extremity of the town. The edifice is of white brick, dressed with stone at the angles, windows, and cornices, the whole being of Tudor architecture. The principal front is 220 feet in length, and the schools are entered by a turretted gateway facing the street and leading to the principal court, a fine area, 90 feet in length, by 75 feet in breadth, having cloisters on three of its sides. The buildings on the S. side comprise the dining-hall of the head-master's boarders and three school-rooms; on the W. side is the great school-room, and on the N. side are schools for the French and writing classes. The apartments of the head master are handsome and commodious, communicating also with the various dormitories running round the quadrangle over the school-rooms. The school-chapel is a detached building, in the later pointed style, the interior being fitted up with stalls and handsomely carved seats: the ceiling is decorated with paintings, and near the altar is the statue of Dr. James, a late head master, by Chantry. Rugby has no manufactures, and the inhabitants of the vicinity are principally agricultural. The trade of the town, however, has been greatly increased by the opening of the Birmingham railway, which has one of its stations here; and it is now an important *entrepôt* between the surrounding country and the metropolis. The Oxford canal passes, also, within a short distance of the town, connecting it with the principal inland navigation of England. On an eminence N.E. of Rugby are some slight remains of a castle supposed by

## RUREMONDE.

Dugdale to have been erected in the reign of Stephen. Large markets on Saturday for corn and provisions; a great horse fair Nov. 22, and 12 other fairs. (*Char. Comm. 29th Report; Journal of Education*, vii., 234-249; *Railway Handbook*, &c.)

RUGEN, an island in the Baltic, belonging to Prussia, opposite to Stralsund, and separated from Pomerania, by a strait varying from  $\frac{1}{2}$  to 2 m. in width. It is of an exceedingly irregular shape, being deeply indented by bays and arms of the sea. Area, 361 sq. m. Pop. about 30,000. It is very fertile, and sends annually large quantities of corn, &c., to Stralsund. Rugen differs much in appearance from the mainland part of Pomerania, its coasts consisting mostly of high, precipitous, chalky cliffs. It is well wooded; and being intercepted by ravines, as well as deep narrow bays, its scenery is highly picturesque. This circumstance, and its facilities for sea-bathing, render it a favourite resort in summer. The inhabitants are primitive in their habits and manners, industrious, and frugal. They are principally of the reformed religion; and their language is a patois of low German intermixed with Swedish. The fishing in the adjoining seas and bays is very productive. Unfortunately the island has no good harbour, and its coasts are very dangerous. A lighthouse, having the lantern elevated 197 feet above the level of the sea, has been erected on the most northerly promontory of the island, in lat.  $53^{\circ} 41' 12''$  N., long.  $13^{\circ} 57' 27''$  E. Bergen, the capital, situated in the centre of the island, has 2700 inhabitants. After being long in possession of Sweden, Rugen became part of the Prussian dominions in 1815.\*

RUGGLES, p. t., Huron co., O., 91 m. N. by E. Columbus, 380 W. Watered by head branches of Vermilion river. It has two saw-mills; six schools, 266 scholars. Pop. 1245.

RUMFORD, p. t., Oxford co., Me., 52 m. W.N.W. Augusta, 614 W. Watered by Androscoggin river and its tributaries, which afford good water-power. Incorporated in 1800. It has six stores, one grist-mill, three saw-mills, two tanneries; 12 schools, 622 scholars. Pop. 1444.

RUMNEY, p. t., Grafton co., N. H., 47 m. N. by W. Concord, 525 W. Drained by Baker's river. First settled in 1765. It contains two churches, a Baptist and Christian, three stores, one grist-mill, eight saw-mills, three tanneries; 10 schools, 364 scholars. Pop. 1110.

RUNGPOOR (*Rangapura*), a district of British India, presid. and prov. Bengal, between lat.  $25^{\circ}$  and  $27^{\circ}$  N., and long.  $88^{\circ}$  and  $91^{\circ}$  E.; having E. Assam, S. Mymensing and Dinajepoor, W. the latter and Purneah, and N. Sikkim and Bootan. Area, 7856 sq. m. Pop., in 1822, 1,340,350. It is wholly on the N. side of the Ganges, and is intersected by the Brahmaputra and Teesta. The climate is not so hot as in most other parts of Bengal; the soil is inferior to that of the Dinajepoor district. Tobacco is the staple product. Wheat is also a considerable crop; barley, oats, maize, cotton, and indigo, are little grown. A good deal of cotton-thread is, notwithstanding, spun in the district, the material being imported by way of Moorsheadabad, &c. Total land revenue, in 1829-30, 1,063,178 rupees. Hindoos and Mohammedans are supposed to be nearly equal in point of numbers. Chief towns Rungpoor, the cap.; Mungulhaut, Chilmay, and Goalparah. Rungpoor, in lat.  $25^{\circ} 43' 3''$  N., long.  $89^{\circ} 22' 2''$  E., has been estimated to have a population of from 15,000 to 20,000. (For copious information respecting this district, and that of Purneah, the reader is referred to the surveys by Dr. Buchanan Hamilton, in *Martin's British India*, vol. iii.; *Parl. Reports*, &c.)

RUPERT, p. t., Bennington co., Vt., 94 m. S.W. Montpelier, 424 W. Pawlet river and a branch of Battenkill afford water-power. It has three stores; nine schools, 346 scholars. Pop. 1036.

RUPPIN (NEW), a town of the Prussian dom., prov. Brandenburg, gov. Potsdam, cap. circ., on the lake of its own name, 37 m. N.W. Berlin. Pop., in 1837, 7925. It is well built, and has a council-house, high school, hospital, central prison, barracks, and a large covered military exercising ground; with manufactures of woollen goods, gloves, and leather. Its trade is greatly facilitated by the Ruppiner canal between the Havel and the Rhin, forming a link in the communication between the Elbe and the Oder. (*Berg-haus*, &c.)

RUREMONDE, or ROERMOND, a town of Belgium, prov. Limburg, cap. arrond., on the Meuse, where it is joined by the Roer, 37 m. N.W. Maestricht. It was dismantled by Joseph II.; but is still surrounded by ramparts, and is the residence of a military commandant. It is well built; is the seat of a court of primary jurisdiction, and a college; and has manufactures of woollen stuffs, and considerable trade.

\* It is very probable that Rugen was at one time joined to the mainland; but there is no foundation whatever for the statement that it was separated from it by a violent storm in 1309.

## RUSCOMB MANOR.

**RUSCOMB MANOR**, t., Berks co., Pa. It has one store, one grist-mill, two tanneries. Pop. 1189.

**RUSH**, county, Ia. Situated toward the S.E. part of the state, and contains 400 sq. m. Drained by Big and Little Blue river, and Big and Little Patrook creeks. It contained in 1840, 15,163 neat cattle, 29,091 sheep, 48,458 swine; and produced 99,712 bushels of wheat, 5375 of rye, 1,156,707 of Indian corn, 224,064 of oats, 19,059 of potatoes, 12,239 pounds of tobacco, 414,155 of sugar. It had 38 stores, 18 flouring-mills, 17 grist-mills, four tanneries, eight distilleries, one brewery, two printing offices, two weekly newspapers; 48 schools, 1149 scholars. Pop. 16,454. Capital, Rushville.

**RUSH**, p. t., Monroe co., N. Y., 12 m. S. Rochester, 218 m. W. Albany, 363 W. Drained by Honeye creek, a tributary of Genesee river. It contains a church, three stores, one fulling-mill, two tanneries; 15 schools, 631 scholars. Pop. 1929.

**RUSH**, t., Champaign co., O. It has two stores, three saw-mills; six schools, 179 scholars. Pop. 1236.

**RUSH CREEK**, t., Fairfield co., O. Pop. 2434.

**RUSHFORD**, p. t., Allegheny co., N. Y., 272 m. W. by S. Albany, 331 W. Drained by Cold creek, a tributary of Genesee river. It has two churches, eight stores, two fulling-mills, one woollen factory, one furnace, two grist-mills, seven saw-mills; nine schools, 273 scholars. Pop. 1512.

**RUSHVILLE**, p. v., capital of Rush co., Ia., 40 m. E.S.E. Indianapolis, 538 W. Situated on the W. side of Big Flat Rock creek, and contains a courthouse, jail, three churches, a Baptist, Methodist, and Presbyterian, all of brick, four stores, 80 dwellings, and about 550 inhabitants. Pop. of the township 2146.

**RUSSELL**, p. v., capital of Schuyler co., Ill., 60 m. W.N.W. Springfield, 838 W. It contains a courthouse of brick, two stores high, a jail, four churches, a Presbyterian, Methodist, Episcopal, and Campbellite, 12 stores, besides groceries, 200 dwellings, and about 1200 inhabitants.

**RUSSELL**, county, Va. Situated in the S.W. part of the state, and contains 1370 sq. m. Watered by Clinch river, and by head branches of the W. fork of Sandy river. It contained in 1840, 14,404 neat cattle, 15,431 sheep, 26,945 swine; and produced 59,400 bushels of wheat, 7898 of rye, 294,253 of Indian corn, 142,377 of oats, 20,658 of potatoes, 106,616 pounds of sugar. It had 10 stores, 25 grist-mills, 10 saw-mills, two oil-mills, eight tanneries, 100 distilleries; two schools, 41 scholars. Pop.: whites, 7152; slaves, 700; free coloured, 26; total, 7878. Capital, Lebanon.

**RUSSELL**, county, Ala. Situated in the E. toward the S. part of the state, and contains 865 sq. m. Bounded E. by Chattahoochee river, and drained by its tributaries. It contained in 1840, 17,375 neat cattle, 1806 sheep, 27,201 swine; and produced 11,479 bushels of wheat, 387,534 of Indian corn, 5341 of oats, 37,913 of potatoes, 1,12,719 pounds of cotton. It had 13 stores, 12 grist-mills, 11 saw-mills; three academies, 111 students; 14 schools, 325 scholars. Pop.: whites, 6244; slaves, 7266; free coloured, 3; total, 13,513. Capital, McDonald.

**RUSSELL**, county, Ky. Situated toward the S. and E. part of the state, and contains 260 sq. m. Watered by Cumberland river and its tributaries. It contained in 1840, 3628 neat cattle, 3890 sheep, 11,704 swine; and produced 8676 bushels of wheat, 144,119 of Indian corn, 28,300 of oats, 4524 of potatoes, 16,374 pounds of rice, 780,505 of tobacco, 5773 of cotton, 4469 of sugar. It had three stores, one cotton factory, with 168 spindles, eight grist-mills, three saw-mills, one oil-mill, two tanneries, 26 distilleries; two schools, 50 scholars. Pop.: whites, 3928; slaves, 406; free coloured, 4; total, 4238. Capital, Jamestown.

**RUSSELL**, p. t., St. Lawrence co., N. Y., 192 m. N.N.W. Albany, 476 W. Drained by West Canada creek. It has one store, five saw-mills; 13 schools, 371 scholars. Pop. 1373.

**RUSSELL**, t., Putnam co., Ia. It has four stores, six grist-mills, seven saw-mills, one tannery, five distilleries, one pottery; eight schools, 206 scholars. Pop. 1503.

**RUSSELLVILLE**, p. v., capital of Franklin co., Ala., 111 m. N. by W. Tuscaloosa, 796 W. It contains a courthouse, jail, several stores, about 30 dwellings, and 200 inhabitants. Nett proceeds of the postoffice in 1841, \$322.

**RUSSELLVILLE**, p. v., capital of Logan co., Ky., 172 m. S.W. Frankfort, 696 W. Situated between Green and Cumberland rivers, 35 m. from each. It contains a courthouse, jail, two churches, an academy, several stores, 175 dwellings, and 1196 inhabitants.

**RUSSIA**, the most extensive, and one of the most powerful empires, either of ancient or modern times. It comprises the whole northern portion of the eastern hemisphere, from the frontiers of Posen and the gulf of Bothnia on the W., to the Pacific ocean and Behring's straits on the E., or from the 18th to the 190th deg. of E. long., being a distance, on the 60th deg. of lat., of nearly 6000 N. Its extent, from N. to S., though less vast, is still very great, stretching from

## RUSSIA.

the 38th to the 70th, and in some parts to the 78th deg. of N. lat., exhibiting an average breadth of about 1500 m. And, exclusive of this, Russia claims a very large tract in the N.W. part of America; and is mistress of Nova Zembla, and some other large islands in the Arctic ocean, of the Aleutian islands off Kamtschatka, and of the Aland isles, &c., in the Baltic. Her superficial extent has not been determined with anything like accuracy. It was estimated by Hassel at 372,935 geog. sq. m., viz., Russia in Europe, including Finland, 72,869 sq. m.; Russia in Asia, 275,767 do.; and Russia in America, 24,000 do.; and Schnitzler, in his *Statistique Générale*, has adopted this estimate. The latest, however, and probably the most accurate estimate of the extent of this vast empire is that given by M. Keppen, of the Academy of Sciences of Petersburg, in the employment of government. According to this gentleman, the area of its different great divisions is as follows:

Geog. sq. m.

Russia in Europe, including the portions of the governments of Perm, Orenbourg, and Viatka, that extend into Asia	84,016
Northern Asiatic Russia, or Siberia	250,818
Southern Asiatic Russia, or Transcaucasian provinces	3,381
Grand duchy of Finland	6,406
Kingdom of Poland	2,267
American colonies	17,500
Grand total	364,388*

The reader may, perhaps, acquire a better idea of the vast extent of the Russian empire, when he is told that it includes nearly one seventh of the terrestrial part of the globe, and about one twenty-seventh part of its entire surface. But by far the greatest proportion of this prodigious superficies is almost uninhabited, and seems to be destined to perpetual sterility; a consequence partly of the extreme rigour of the climate in the provinces contiguous to the Arctic ocean, and partly of almost all the great rivers by which they are traversed having their embouchure in that ocean, and being, therefore, inaccessible either for the whole or the greater part of the year.

**Face of the Country.** Mountains—Russia is, in general, level, and comprises some of the most extensive plains in the world. That part of the empire which is in the eastern hemisphere is naturally parcelled into the two great divisions of European and Asiatic Russia, by the Oural mountains, which stretch in a N.N.E. direction from the Caspian sea to the Arctic ocean; forming, through the greater part of their course, the boundary between Europe and Asia. The highest points in this chain have an elevation of about 6500 ft. above the level of the Caspian. In all the vast country, extending on the W. side of this central chain to the confines of Poland and Moldavia, there is hardly a single hill. The Valdai hills, or elevated grounds, between Novgorod and Twer, where the Volga, the Don, and the Dniepr have their sources, are nowhere more than about 1200 ft. above the level of the sea, the country exhibiting a waving surface, and without any considerable elevations. There is nothing, in fact, save the forests, to break or interrupt the course of the wind, in all the immense space interposed between the Oural and the Carpathian mountains. The only great chain of mountains in western Russia is that of Caucasus, between the Euxine and Caspian seas, and this is almost at the southern extremity of the empire. Siberia, or Asiatic Russia, consists principally of a vast plain, slightly inclining to the N. Towards the S. and E., however, it is in parts mountainous, being separated from Mongolia and Manchouria by high and little explored ridges, in which the great rivers that flow through it to the Arctic ocean have their sources.

The most distinguishing feature in the appearance of Russia is her vast forests. Schnitzler, who estimates the surface of European Russia at about 400 millions of decatiens, supposes that 156 millions are occupied by forests. They are so very prevalent in the governments of Novgorod and Twer, between Petersburg and Moscow, that it has been said a squirrel might travel from the one city to the other without ever touching the ground. The forest of Volkonski, at the source of the Volga, is the most extensive of any in Europe. In the government of Perm, on both sides of the Oural mountains, containing 18 millions of decatiens, no fewer than 17 millions are covered by forests! The forests of Asiatic Russia are, also, of vast size. In extensive districts, however, the surface is quite free from wood. This is particularly the case in the vast steppes or plains in the governments of Astrakhan and Omsk, which in many parts, indeed, are a mere sandy desert.

**Rivers and Lakes.**—The rivers of Russia are usually divided into five groups or systems, corresponding to the seas in which they have their embouchure, viz., the Arctic

\* This estimate, with the population, is subsequently given more in detail.

## RUSSIA.

ocean, the Baltic, the Black sea, the Caspian, and the Pacific ocean. The first division is by far the largest. It comprises, in Europe, the Dvina, Mezen, and Petchora; while in Asia it includes, among a host of others, the Obi, Jenisei, and Lena, three of the largest rivers of Asia. All these rivers run from S. to N.; and the last three have a course of from 2000 to 2500 m. The rivers which fall into the Baltic, though of far greater importance in an economical point of view, are of very inferior magnitude. The principal are the Neva, which has Petersburg at its mouth, the Duna, and the Niemen. The rivers which fall into the Black sea equal those falling into the Baltic in commercial importance, and far exceed them in length of course and volume of water. Among others are the Dniestr, Dniepr, Bug, Don, and Kuban. The basin of the Caspian has, however, to boast of the largest and most important of the rivers of Russia, the Volga. This great river has its sources in the government of Tver, about 180 m. S. by E. from Petersburg: including sinuosities, its course is about 1000 leagues, while that of the Danube is only about 450! (See *WOLGA*.) It is of vast consequence to the internal navigation of the empire. The Caspian sea, also, receives the Oural and the Emba.

Owing to the flatness of the country through which they flow, and the vast length of their course, the rivers of Russia are but little interrupted by cataracts, flow with a tranquil stream, and afford great facilities to internal navigation. The severity of the climate no doubt prevents, during a considerable portion of the year, all intercourse by water; and, as already stated, renders the rivers falling into the Arctic ocean of comparatively little value. Luckily, however, the frost, which interrupts navigation, affords the greatest facilities to land travelling. (See *post*.)

The lakes as well as the rivers, of Russia are upon a gigantic scale. The lake of Baikal, in the government of Irkutsk, in Asiatic Russia, is one of the most extensive in the world. In European Russia, the lakes of Ladoga, Onega, Peipus, Ilmen, and Bielo Ozero, are also of great extent, particularly the first. The duchy of Finland is almost everywhere interspersed with lakes, and they are very abundant in other provinces, particularly in that of Olonetz.

*Soil and Climate.*—These, it is obvious, must differ exceedingly in so vast a country. Some provinces mostly consist of sandy barren plains, or vast morasses. But the most valuable portion of the empire, or that included between the Baltic, the gulf of Finland, and the Volga, on the N. and E.; the Black sea on the S., and Austria, Poland, Prussia, &c., on the W., has, speaking generally, a soft black mould, of great depth, mostly on a sandy bottom, easily wrought, and very fertile. In some places it inclines to sand or gravel; in many, from the want of drainage, it is peaty or boggy; in Livonia, and parts of Lithuania, it is clayey, but it nowhere inclines to chalk. The following statements by Plescheyef, whose accuracy is well known, contain all the information with respect to the soil and productiveness of the country that seems to be required in a work of this description. "Russia," says he, "is divided into two great parts by the Oural mountains, which form an uninterrupted barrier through its whole breadth, and separate Siberia or Asiatic from European Russia.

"That part of Russia which lies on this side of the Oural mountains, presents an immense plain declining westward by an easy descent. This plain, from its vast extent, has a great variety of climates, soils, and products. Its northern part, which sensibly declines towards the White and Frozen seas, is covered with forests, marshy, and but little fit for cultivation. The other, and more southerly portion of this vast plain, includes the whole district along the Volga, as far as the steppes or deserts between the Caspian and the sea of Azof, and constitutes the finest part of Russia: generally it has a fertile soil, the arable and meadow land preponderating over the woods and marshes.

"That part of the country which extends towards Voronje, Tambouf, Penza, and Simbirsk, as far as the deserts, is most remarkable for the superior quality of every kind of fruit and other produce. It has everywhere an excellent soil, consisting of black earth, strongly impregnated with saltpetre. But the tract which commences between the sea of Azof and the Caspian, and extends near the shores of the latter, and between the Volga and Oural, as far as the Emba, is little better than a desert, being level, dry, high, barren, and full of salt lakes.

"The country lying on the other side of the Oural mountains, known by the name of Siberia, is generally a flat tract of vast extent, declining imperceptibly towards the Frozen ocean, and rising thence by equally imperceptible degrees, towards its southern border, where at last it is lost in the immense mountain ranges which separate the Russian and Chinese empires. It is unnecessary to notice in

detail the different great divisions of this vast territory. As we proceed farther E., the climate in the same latitude becomes more and more severe, the summers shorter, and the frosts more intense. In general it may be stated, that the more southerly portion of Siberia, or that between the S. frontier of the empire and the 57th or 60th deg. of lat., as far E. as the river Lena, has, for the most part, a fertile soil; and that, notwithstanding the severity of the climate, it produces most kinds of grain. But, owing to the increase of cold and the nature of the soil, the more northerly portion of the region now noticed, or that extending from the 57th or 60th deg. of lat. to the Frozen ocean, and the whole country E. of the Lena, from the frontier of Manchouria northwards, is wholly, or almost wholly unfit either for cultivation, or for the grazing of cattle. In the E. a portion of this vast tract is mountainous, but it mostly consists of immense levels, full of swamps and bogs, covered with moss, which would be totally impassable were it not that the ice, which never thaws deeper than a few inches, gives a firm underfooting." (*Eng. Trans.*, p. 5.)

A country which, like Russia, extends from N. to S. through about 40 degrees of latitude, might be supposed to have almost every climate; and this is, in some measure, the case. "When spring commences in one division of this vast empire, another experiences all the rigours of winter. Here the parched camel traverses arid burning deserts; there the rein-deer courses over heaps of snow, under which he finds a scanty supply of moss. The Samoid sleeps in his cabin, where the days are short and cloudy, while the Kirghisian feeds his flock under a clear serene sky. This variety of the products and diversity in the manner of living, gives Russia advantages not enjoyed by any other European country. She possesses, in the greatest abundance, all the most necessary articles, and the greater number of those which are reckoned luxuries; and she either furnishes or may procure all the products of different climates." (*Storch, Tab. de la Russie*, l. 6.)

But notwithstanding the heats that usually prevail during summer, especially in the southern provinces, cold, speaking generally, predominates very decidedly in Russia. With the exception, indeed, of the Crimea and the transcaucasian provinces, no part of Russia can be said to be generally hot; and even in them the frost in winter is often very severe. The climate of Russia is, in fact, proverbial for its severity; and this increases not only as we advance towards the N., but also as we advance towards the E.; the cold being decidedly greater in Siberia than in the same latitudes in European Russia, a difference which is also sufficiently perceptible in the provinces on the E. and W. sides of the latter. This, no doubt, is owing to various causes; but principally, perhaps, to the greater cultivation of the western provinces and their proximity to the Baltic; and to the vast extent of frozen sea and land traversed by the winds from the N.E. Beyond the 65th degree of lat. the ground is covered with snow and ice for about nine months in the year; and during the other three months ice is always found at a little distance below the surface. Corn crops cannot be depended upon in European Russia beyond the 62d degree of lat.; and the great agricultural provinces lie to the S. of the 58th deg. The fruits of temperate climates are seldom met with beyond the 52d deg. At Petersburg, in lat. 59° 56', the mean maximum of cold is about 24°, and the mean maximum of heat 23° Reaumur. The Neva is commonly frozen over before the end of November, and the ice never breaks up before the end of March. At an average of ten years it is calculated that there are annually at Petersburg 97 bright days, 104 rain, 72 snow, and 93 unsettled. At Moscow, in lat. 55° 45', the cold is more severe than at Stockholm in lat. 59° 20'. At Astrakhan in lat. 46° 21', nearly the same as that of Lyons, the Volga is sometimes frozen over so as to bear loaded wagons. The sea of Azof is usually frozen over from November to the beginning of April. In Siberia, as already stated, the cold is much more severe than in the provinces to the W. of the Oural mountains. The breaking up of the ice on the Lena does not take place before the beginning of May.

But this severe cold is not unhealthy, and is much less inconvenient than might be supposed. While the frost lasts the air is pure and bracing, and its severity is guarded against by warm clothing, and by having the houses properly constructed and heated. At Petersburg and Moscow the winter is, in fact, the finest season. The inhabitants seem to revive at its approach. Sledge-roads over the snow render travelling commodious and agreeable; and a winter journey in a moderate frost by moonlight is a high enjoyment. The Russian peasants can only for warm covering for their legs and feet. At Petersburg, in a frost of 25° Reaumur, it is common to see women standing for hours together washing their linen through holes dug in the ice over the Neva!

# RUSSIA.

Spring can hardly be said to have any place in the Russian calendar. The transition from frost to fine weather is usually very rapid. In a brief period after the snow and ice have disappeared, the fields and trees are clothed in the liveliness of summer, and vegetation makes an extraordinary progress. At Petersburg the summer is as mild and agreeable as in the S. of France; but there and in all the N. provinces it is very variable. As we advance towards the S. it becomes steadier, and the heats increase. At Astrak-

han the mercury in the thermometer sometimes rises to 103° F.; and in the transcaucasian provinces it rises still higher. The autumn, or the period of transition from summer to winter, is the most unpleasant season in Russia. The sky is generally cloudy, and rains and storms are very prevalent.

The Crimea, from its high S. lat., and its being unbo-  
somed in the Euxine, has the most agreeable climate in the empire.

NAMES, Area, and Population of the different Great Divisions and Governments, included in the Russian Empire in 1838:—

Governments.	Area in Geog. sq. m.	Pop. in 1838.	Governments.	Area in Geog. sq. m.	Pop. in 1838.
<i>Northern Provinces :</i>					
Archangel . . . . .	15,212	239,000	Tchernigoff . . . . .	898	1,300,000

N. B. The 364,388 Geographical sq. m. of 15 to a deg. are equal to 7,725,000 Eng. sq. m. of 69-15 to a deg.

\* The pop. of the old prov. of Omsk, suppressed in 1838, is wholly included in this table in that of Tomsk; in point of fact, however, it was assigned in part to Tobolsk, and in part only to Tomsk.

Classified Account of the Population of the Russian Empire in 1836, according to the Official Statement published by the Minister of Finance:—

	Males.	Females.		Males.	Females.
Russian priests . . . . .	52,331		Greeks of Nijny, gunmakers of Tula, &c. . . . .	10,882	10,940
Deacons and sacristans . . . . .	63,178		Citizens of Bessarabia . . . . .	57,905	56,176
Male children of priests, deacons, and sacristans . . . . .	138,548		<i>Inhabitants of Villages:</i>		
Total . . . . .	254,057	240,748	Peasants (that is, slaves), the private property of the emperor and the imperial family, peasants annexed to the crown, &c. . . . .	10,441,399	11,022,594
Priests of the United Greek and Roman church . . . . .	7,823	7,318	Peasants the property of nobles . . . . .	11,403,722	11,958,873
Catholic priests . . . . .	2,497		<i>Wandering Tribes.</i>		
Armenian priests . . . . .	474	343	Calmucks, Circassians, and Mohammedans of the Caucasus . . . . .	245,715	261,982
Lutheran do . . . . .	1,003	955	<i>Territory beyond the Caucasus.</i>		
Reformed church . . . . .	51	37	Georgia, Armenia, Mongolia, &c. . . . .	689,147	689,150
Mohammedan Mollahs . . . . .	7,850	6,071	Poland . . . . .	2,077,311	2,110,911
Lamas (Tartar) . . . . .	150		Finland . . . . .	663,658	708,484
<i>Nobles.</i>			Russian colonies in America . . . . .	30,761	30,292
Hereditary . . . . .	284,731	253,429	Total of population . . . . .	23,896,223	30,237,343
By virtue of service, &c., with their sons . . . . .	78,922	74,273	Grand total of both sexes . . . . .	59,133,566	
Petty officers who have left the army, and are employed in the civil service, &c. . . . .	187,047	237,443			
Foreigners of all classes . . . . .	22,114	15,215			
Military colonies . . . . .	950,698	981,467			
<i>Inhabitants of Towns.</i>					
Merchants . . . . .	131,347	120,714			
Shopkeepers, artisans, &c. . . . .	1,339,434	1,433,982			
Citizens in the eastern provinces . . . . .	7,535	6,966			

In this table, however, and in that given above, the private soldiers of the army and many, with their wives and children, are not included; so that the sum total, in round numbers, may be estimated at a twenty-one millions. In addition to which must be reckoned the inhabitants of the mountains between the Black sea and the Caspian, amounting to 1,445,000. There are also some wandering tribes of Circassians and others, whom it is impossible to number.

## RUSSIA.

**Divisions, Population, &c.**—The divisions of the Russian empire have differed materially at different periods. Peter the Great made some important changes in the distribution that had existed previously to his epoch. The whole, however, was remodelled and placed on a new footing by Catherine II. in 1775. She divided the entire empire into three great regions: those of the north, middle, and south. Each of these regions was subdivided into governments, of which there were at first 42, and at the end of her reign 50. Paul made some ill-advised changes on this distribution, which were set aside on the accession of Alexander. The existing divisions were mostly fixed by the latter in 1822, nearly on the basis laid down by Catherine. The empire, exclusive of the kingdom of Poland, is divided into governments, exclusive of certain territories called provinces, or *oblasts*, not formed into governments. Some of these divisions, particularly those in Asiatic Russia, are of vast extent; but neither their boundaries nor their population are well ascertained. But, as the best that can be had, we subjoin M. Keppen's table of the area and population of the different provinces included in the empire. [See preceding page.]

**Animal and Vegetable Products.**—The animals of Russia include those commonly met with in the arctic circle, and in temperate climates, as well as some of those belonging more peculiarly to the intertropical regions. Exclusive of horses, oxen, sheep, &c., rein-deer and camels are both met with. The latter is employed in travelling through the deserts in some of the S. provinces, while the former constitutes the principal wealth of the Samoiedes, Tungusians, Ostiaks, Tchouktchis, and other tribes inhabiting the extreme N. parts of the empire. The dog is common everywhere; and in parts of Siberia, where there are neither horses nor rein-deer, is of the very greatest utility; and besides being employed for draught and burden, is used as food. Bears are abundant; beavers and other fur-bearing animals are also common; and in many provinces the chase forms a principal part of the occupation of the people. The rivers and lakes swarm with fish.

All sorts of corn succeed in Russia; though, as already stated, the crops cannot be depended upon above the 62d degree, nor is cultivation attempted in any part of the empire beyond the 65th degree. Fruits of all sorts are abundant in the S. provinces. The vine is cultivated in the vicinity of Astrakhan, in the Crimea, and in the Caucasian provinces; but the wine made from it is of a very low quality. Though meadows are not abundant in Russia, the pastures in most parts are excellent. The forests will be afterwards noticed.

**Minerals, Working of Metals.**—The mines of Russia are of considerable importance and value. The principal are situated in the Oural and Altai mountains, and in the vicinity of Nertschink, in Siberia. Gold and platina are both found in considerable quantities in the Ouralian mountains, especially in the mines in the neighbourhood of Catherineburg; the former being also obtained from the Krilatof mine, &c. in the government of Tobolsk, and from various stream works in the Oural. According to the official returns, the gold and platina obtained from mines belonging to the crown, and to individuals in the Oural, in 1836, were:

Poods. Lbs.		Poods. Lbs.	
<b>Gold:</b>		<b>Platina:</b>	
Crown mines	129 17	Crown mines	20 17
Private	134 21	Private	117 25
	263 38		138 42

In 1837, the same mines produced 309 poods 23 lbs. gold, and 118 poods 28 lbs. platina; and exclusive of the above, the Siberian mines produced in the same year 160 poods of gold, of which 30 poods were extracted from silver. On the whole, therefore, the produce of gold in Russia, in 1837, must have exceeded 470 poods; that is, taking the pood at 36 lbs., and the price of gold at £4 per oz., it must have amounted to £1,082,880!

Silver is chiefly found in the Altai mountains of Kholivano Vostkvensski, and in the Siberian mountains contiguous to Nertschink. The annual produce of the silver mines exceeds 3000 poods, or 108,000 lbs., worth, at 5s. 2d. an ounce, £334,000. And if we add to the value of the gold and silver that of the platina, the aggregate value of the three cannot be estimated at less than £1,500,000 a year.

Copper is found in the government of Olonetz, and in the Oural and Altai mountains. It is produced to the extent of about 210,000 poods a year. About 40,000 poods of lead are obtained from the mines of Nertschink and Kholivano. The iron-mines furnish a supply more than sufficient for the wants of the empire. The works in the Oural mountains only are said to employ above 50,000 labourers; and iron is also procured in the Altai, Caucasus, the Valdai hills, &c. The total product of iron is said by Schnitzler to amount to nine millions poods; and may now, perhaps, be taken at

from 10 to 12 millions poods, or from 160,000 to 180,000 tons. Wood only is used in the iron-works and foundries of Russia. Mercury, antimony, zinc, cobalt, &c., are found in Siberia.

Cast-iron articles are prepared at most mines where there are forges. There is an important cannon manufactory at Petrozavohsk, in the government of Olonetz, which was brought to a high state of perfection by an Englishman of the name of Gascoigne. But the principal hardware manufactories are carried on at Tula, in the government of that name. (See TULA.) A great variety of articles of cutlery are produced; and the royal manufactory of fire-arms is very extensive, employing, it is said, about 7000 male and 9600 female workers. (Schnitzler, *La Russie, la Pologne, &c.*, p. 315.) Very different statements have been made as to the quality of the arms produced at Tula. Those of Dr. Clarke were speedily confuted by the exploits of the Russian forces; and no doubt the manufacture has been since materially improved. At present we are assured, on undoubted authority, that though the arms produced at Tula be inferior in point of finish to those made in England, they are of very good quality.

Russia is abundantly supplied with mines of salt and brine springs; but as most of them are at a great distance from the Baltic and western provinces, there is a large importation of salt from England and Austria. The salt mines and brine springs in the government of Taurida (the Crimea), are the most extensive, and furnish annually about 16 millions poods (nearly 260,000 tons): those of Perm, which annually supply about seven millions poods, are the next in importance; the mines of Iletsik, in the government of Orenbourg, furnish about 300,000 poods, exclusive of what is furnished by the salt lakes, and additional supplies are obtained from various other mines and springs.

**Agriculture.**—Landed property in Russia is generally divided into estates belonging either to the crown or the nobility. Some of those belonging to the latter are very extensive; but, owing to the compulsory division of estates among the children of a family on the death of the father,\* this is not generally the case; and the too great subdivision of the land is, in fact, one of the evils with which Russia is threatened. The peasants occupying the crown estates are in a state of *predial*, and those occupying the estates of the nobility are generally in a state of *absolute*, slavery. The value of a Russian estate formerly depended more on the number of labourers or slaves belonging to it, and which may be either sold, or let out by the proprietor, than on its extent, or the quality of the soil: but since the increase of population this, in many districts, is no longer the case; and the proprietor is sometimes burdened with the charge of supporting and maintaining labourers, and paying the tax on them to government, for whose services he has little or no use. Different proprietors adopt different methods in the management of their estates. In the principal part of Great Russia, comprising all the central provinces of the monarchy, the system is very simple. The proprietors rarely farm any considerable portion of their estates, or interfere with the mode in which they are cultivated. They usually content themselves with distributing them among the peasantry; their revenue consisting in the produce of an *obrok*, or capitation tax, imposed on each male peasant, by way of rent. In the Baltic provinces, on the other hand, the owners usually retain a quarter, or some less proportion, of their estates in their own possession, managing them either directly, or by the intervention of stewards or agents. The peasants on such estates are allowed cottages, having pieces of ground attached, generally, perhaps, about 15 acres, sufficient for their support; their *obrok* or tax being paid by labour, or *corvées*, performed on the lands held by the proprietor, or let by him to others. In the Ukraine and other S. provinces, the peasants are partly free; and these pay for the lands they occupy, sometimes money, but more frequently produce and labour rents. There is also a class of small proprietors who cultivate their own lands, but who have not the privilege of holding slaves.

It may seem at first sight that, provided its amount were moderate, the system of parceling out land to occupiers charged with an *obrok* or capitation tax, could not be fairly objected to. And when such is the case, and the landlord allows the occupiers to reap the fruit of increased economy and exertion, this is no doubt the preferable mode of dealing with slaves. But the vice of the system is that, except on the crown estates, everything depends on the will of the proprietor, who, though occasionally enlightened and liberal, is too frequently ignorant of his real interests, careless, and embarrassed. The occupier has, in fact, no security whatever. If he improve his farm, or have about him the appearance of getting rich, the chances are that his *obrok* will be im-

\* One seventh of a man's landed property goes, on his death, to his widow for ever; one fourteenth goes to each daughter; and the residue is equally divided among the sons. (*Venables' Russia*, 132.)

## RUSSIA.

mediately increased; or that a portion will be taken from his farm, and given to another family. Even the predial slaves on the crown estates, from whom only a certain amount of labour or of corvées can be legally demanded, are frequently exposed to the extortion of those to whom the lands are let, or of the officers employed to superintend them. Hence, in the generality of instances, the peasants invariably follow a routine system; they avoid labour by which they are not to benefit; and it is seldom, except on the lands managed by the proprietors themselves, or on those occupied by the few free tenants to be found in the country, that any considerable improvements are ever attempted. When the population of an estate parcelled among peasants is increased, a new distribution of the land has to be made; and, if unoccupied land cannot be assigned to the new families, they are provided for by diminishing the shares apportioned among the old ones. On such occasions, if the occupiers complain that their obrok or tax is too heavy, it is usual to grant those on whom the proprietor can depend, license to leave the estate; and though they still continue slaves, many avail themselves of this permission, and migrate to towns, where they exercise some trade or profession, from the profits of which they frequently pay a much higher obrok than was imposed upon them in the country, and accumulate sums with which to purchase their freedom.

It is evident from these statements, and from the influence of the compulsory division of estates in preventing improvements by the proprietors, that agriculture in Russia must be at a very low ebb. But though this is its general condition, it differs materially in different provinces; and some estates, even in the most backward provinces, have been greatly improved. In Livonia, and the provinces bordering on the Baltic, and also in parts of the Ukraine, the husbandry is very superior, and the implements quite equal to the best that are to be met with in most parts of Germany. But, with the exception of a few estates, it is quite otherwise in the rest of the empire. The plough is there a wretched implement drawn by one horse, and calculated rather to scratch than to turn up the soil. The harrow is made of wood, and rollers and hoeing machines are entirely unknown. Were it not that the soil is generally light, friable, and very easily wrought, it would be impossible to cultivate it by such means. But these suffice to make it produce more than enough for the wants of the inhabitants. There is not, indeed, as Mr. Loudon has truly stated, another country in Europe where corn crops may be raised at so little expense of labour as in Russia.

Exclusive of the forests, and the sandy deserts of the south, vast tracts in the northern parts of the empire are, and always must be, unsusceptible of cultivation. Taking the whole surface of European Russia at 402 millions of deciatines, M. Schnitzler supposes that the cultivated land does not exceed 6½ millions, and the meadows (chiefly in Livonia and Courland) six millions deciatines (*Essai Statistique de la Russie*, p. 34.) The products vary, of course, with the differences of soil and climate. All sorts of corn are raised; but rye being the common food of the peasantry, it is produced in much greater quantities than any other sort of grain. Next to rye is oats; and the value of the crops of these two, taken together, is supposed to be more than double the value of the crops of wheat, barley, and of every other kind of corn. Orel, Kasan, Nijal Novgorod, Penza, Tambouf, and Koursk, are the most productive provinces; and it is in them that the greatest quantity of wheat is raised. According to the official returns, which, however, in these matters are little to be depended upon, there were sown in European Russia, in the latter part of 1834, 20,349,149 chetverts winter corn (rye and wheat); and in the following spring, 30,306,046 chetverts spring corn; the return to the former being, at an average, 4½ for 1, and that of the latter nearly 4 for 1. But, in the best districts, wherever the land is moderately well cultivated, the produce is much greater; and is, indeed, nowise inferior to that of the most favoured countries. Corn, in Russia, is very frequently kiln-dried in the sheaf, before it is either stacked or thrashed. Flax and hemp are very extensively cultivated; and, besides what is made use of at home, are very largely exported. Potatoes succeed almost everywhere; and this, also, is the case with hops. Tobacco is confined to the S. provinces, where it is an important article. It deserves to be mentioned, to the credit of the government, that it has latterly been exerting itself in the most efficient manner, for the improvement of agriculture. Professorships of agriculture have been established in the different universities; and an institution to which a model farm is attached has been established near Mohilew for educating 120 pupils, so as to fit them to act as stewards or managers of large estates.

Horses are very abundant in Russia. Speaking generally, they are coarse and ill-shaped, but hardy and active. In the southern provinces, however, whence the cavalry horses are brought, the breed is very superior. The khans or

chelks of the nomadic tribes occasionally possess as many as 10,000 horses.

M. Storch states that there is no country in Europe where so many cattle are reared as in Russia, and none where they are taken so little care of. (*Tableau de la Russie*, li., 155.) Exclusive of the numerous herds, which constitute a principal part of the wealth of the pastoral and nomadic tribes, every peasant has a few head, and even the beggar has a cow or a goat! The ordinary Russian ox is small, lean, and bony; but those of the Ukraine, Podolia, Volhynia, and some other provinces, are large, and of a very fine breed. Many thousand head are annually sent from the Ukraine to Petersburg and other Russian towns, and also to Silesia and Germany. Tallow is at present, and has been for some years, the most important article of export from Russia: the increase of the exports of this article from Odessa within these few years has been quite extraordinary. The wool of the common Russian sheep is hard and coarse; but latterly considerable efforts have been made to improve the breed by importing fine woolled sheep from Germany; and wool, notwithstanding the increase of factories at home, is becoming an important article of export. Thus, during the period from 1814 to 1824, the annual average export of wool amounted to only 1,364,068 lbs., whereas, in 1838, it amounted to very near 13,000,000 lbs., valued at £552,000. Hogs are everywhere abundant, and, in the northern provinces especially, furnish a principal part of the food of the people, while their bristles are an article of export. Goats are also abundant.

The rearing and management of bees is more attended to in Russia than in any other European country, and is, in fact, the principal occupation of several tribes. The wild bees, however, greatly exceed those that are domesticated. Their culture is principally attended to in the provinces of Kasan and Ourfa. Individuals among the Bashkirhs possess 100 hives in their gardens, and upwards of 1000 in the forests! (*Storch, Tableau*, li., 349.) Honey is very extensively used in many parts instead of sugar. The export of wax is very considerable. In 1834, it amounted to 22,248 poods, or 800,928 lbs.

*Manufactures*—are not generally in an advanced state. Since the reign of Peter the Great, their improvement and extension have, it is true, been favourite objects with the government; and heavy duties and prohibitions have, in consequence, been imposed on such foreign articles as it was supposed might interfere with similar articles of native growth. This however, was a very erroneous policy. The slavery of the peasantry is an all but invincible obstacle, in so far at least as they are concerned, to the formation of those habits of industry, perseverance, and invention, necessary to insure success in manufactures; while the thinness of the population, the variety of natural products, and the fertility of the soil, all concur in pointing out agriculture, including under that term mines and fisheries, as the natural and most advantageous employment, that can be carried on upon a great scale, till civilization be more generally diffused. In fact, considering the peculiar circumstances under which Russia has been placed, and the deficiency of her capital, the wonder rather ought to be that she has made so great a progress as she has done in manufacturing industry, than that she should still be so backward. Among the peasantry generally, there is little or no subdivision of labour. Each family commonly supplies itself with all the clothing and furniture which it requires. Sometimes, however, a person superadds some particular employment to his ordinary avocations; and sometimes this principle is carried farther, and the inhabitants of entire villages devote themselves to some particular trade. It is only in pretty large towns that the division of labour, such as it exists among us, is carried to any considerable extent; and even there it is a common complaint, that the native products, though showy, are seldom substantial or good. "Si le génie de l'invention lui manque," says Schnitzler, "le Russe, possédant en revanche, au plus haut degré, la facilité d'imiter ce que d'autres ont produit; et un esprit vif et exercé lui fait deviner les procédés qu'il faut suivre. Mais, pressé de gagner, et manquant de persévérance, il travaille à la hâte, plutôt pour l'apparence que pour la durée, et les produits de toute espèce restent toujours infiniment au-dessous des ouvrages exécutés par des mains étrangères." (*Tableau de la Russie*, p. 125.) The versatility of the Russian peasant is astonishing. He is truly a Jack of all trades, and will turn his hand to whatever may be required. "He will plough to-day, weave to-morrow, help to build a house the third day, and the fourth, if his master need an extra coachman, he will mount the box, and drive four horses abreast as if it were his daily occupation. None of these operations, except, perhaps, the last, will be as well performed as in a country where the division of labour is more thoroughly understood. They will all, however, be sufficiently well done to 'serve the turn,' a favourite phrase in Russia. The people are very ingeni-

## RUSSIA.

ous, but perseverance is wanting; and though they carry many arts to a high degree of excellence, they generally stop short of perfection; and it will be very long before their products can come into competition, for finish, durability, or cheapness, with English goods." (*Venables' Russia*, p. 141.)

In certain departments, however, Russia is not merely equal but even superior to other countries. Her leather is excellent; and for some purposes, such as bookbinding, is decidedly superior to any other material. The process followed in the preparation of this important article has been often described; and foreigners have frequently engaged in the business in Russia, with the view of making themselves acquainted with the details, that they might undertake it at home. But whether it be owing to something in the bark or the water, or to some other undiscovered cause, none of the attempts to produce Russia leather in foreign countries have ever succeeded, and Russia continues to enjoy a monopoly of this valuable product, and to export it in large quantities. The sail-cloth, cordage and canvass, tick; felt, mats, pot-ashes, soap, candles, caviar, isinglass, spirits, and some other articles produced in Russia, are quite as good, or better, than those of any other country.

So late as 1788, almost all the cloth required for the clothing of the army was imported from abroad; but it is now wholly manufactured at home. Cloth of a superior quality is also made at Moscow and its vicinity, at Ianburg, near Petersburg, Sarepta, and other places; but, generally speaking, it is both inferior to what might be imported and dearer. Linen is principally manufactured in Vladimir, Kostroma, Moscow, and Kalouga; and sail-cloth and cordage in Archangel, Orel, &c. The silk manufacture of Moscow is extensive and thriving, and it is carried on to a less extent in other towns. Numerous establishments for the spinning of cotton have been recently founded. Generally, however, they supply only the coarser descriptions of yarn, the finer sorts being almost wholly imported from England. The cotton manufacture has recently made a rapid progress. It is principally carried on in the government of Vladimir; Choula and Ivanova being its chief seats. In 1828 they had 15,612 looms, and employed 24,257 workpeople. During the same year there were sold in the province 5,610,000 lbs. of foreign cotton yarn, and 600,000 lbs. produced by Russian spinners. (*Schneider, La Russie*, &c., p. 105.) The increase has been very great in the interval; for, it appears from the official returns, that there were in Vladimir, in 1839, 315 factories, which gave employment to 83,655 workpeople. The glass manufacture has also, made a very rapid progress. Single plates are made at the Petersburg glass-works, that cost, £600 each. The glass-works of the brothers Malzoff, in Tula, and Twer, are deservedly celebrated. The home consumption of glass is great, and is rapidly increasing. The manufacture of snuff and cigars, potash, and soap has, also, very rapidly increased. Paper, coarse and fine earthenware, jewellery, &c., are produced at Moscow, Petersburg, and other places.

Industry of all sorts has made an astonishing progress since the peace of 1815. In 1812 there were, in the entire empire, 2332 manufacturing establishments, employing 619,093 workpeople; whereas, in 1836, the former amounted to 6015, and the latter to 269,673, of whom about one half were free labourers. During the next three years the progress was still greater, there being, in 1839, 1855 manufactories, employing 412,931 workpeople, exclusive of those engaged in mines, smelting-houses, furnaces, &c. In 1837, the total value of the manufactured produce of Russia was estimated at 509,574,397 roubles, and it is now (1841) probably not under 650 millions. Among the different manufacturing establishments, in 1839, 616 were appropriated to the production of woollens, 227 to that of silk, 467 to that of cotton, 267 to that of linen.

The progress of industry is strikingly evinced by the fact that while, in 1820, there were only two steam-engines in the government of Moscow, it reckoned about 100 in 1830! The same government had, in 1839, 1058 factories, and 83,654 workpeople.

With the exception of the formidable restraints originating in the slavery of the peasantry, industry is quite free in Russia. There are no internal monopolies, save those of salt, spirits, and playing cards. There is nothing in the guilds, or corporations, to check competition; and all who are free may exercise any art or profession, either in town or country, as may be most agreeable to themselves. Slaves who have obtained a passport, or license from their owners to leave their estates, are, in this respect, in the same situation. Since 1836, lectures have been instituted in all the Russian universities, for the instruction of manufacturers or handicraft-tradesmen in mechanics, chemistry, &c., and in the application of science to practice.

**Commerce.**—The commerce of Russia is already, notwithstanding the paralyzing influence of the prohibitive sys-

tem, very extensive; and will, no doubt, continue to increase with the growing wealth and population of the empire, and according as more liberal principles may be expected to prevail. The principal articles of export are tallow, which is more largely exported from this than from any other country; grain, particularly wheat; hemp and flax; timber, potashes, bristles, linseed and hempseed, linseed and hempseed oils, furs, leather; fox, hare, and squirrel skins; canvass and coarse linen, cordage, wool, caviar, wax, isinglass, tar, &c. The principal imports are sugar, especially from the Havannah; cotton stuffs and yarn, the latter being by far the most important article sent from Great Britain to Russia; coffee, but not in large quantities; indigo, and other dye-stuffs; woollens, oils, spices, wine, salt, tea, lead, tin, coal, fine linen from Holland and Silesia, &c.

The principal trading ports are Petersburg and Riga, on the Baltic, but particularly the former; Archangel, on the White sea; Odessa, on the Black sea; Taganrog, on the sea of Azof; and Astrakhan and Baku, on the Caspian sea. Moscow is the principal *entrepôt* of the interior commerce of the empire. The trade with China is mostly carried on through Kiakta; and the fair of Nijni Novgorod is celebrated all over Europe. There are also very large fairs at Irbit, Kharkoff, Koursk, and other towns. (*See these towns*.) The value of the goods offered for sale at the different great fairs, in 1839, is said to have amounted to 353,894,722 roubles. In 1839 the total value of the exports from the empire to foreign countries was estimated at 332,002,258 roubles (£13,533,000); of which those from Petersburg amounted to nearly a half, or to 128,044,000 roubles. At an average of the six years ending with 1838, the real value of the articles of British produce and manufacture exported from this country to Russia amounted to £1,686,391 a year, cotton-twist constituting three fourths of their total value.

**Water Communications.**—The great road from Petersburg to Moscow is justly said by Lord Londonderry to be a most magnificent public work. It is nearly 500 m. in length, quite level, about double the width of the Great North-road in England, and is macadamised throughout, and kept along the whole line in the most perfect repair. (*Tour*, i. 144.) But, with the exception of this and of a few other principal lines, there is a great want of good roads in Russia. This, however, is productive of less inconvenience than might be expected, from the circumstance of the frost rendering the worst roads fit for sledge travelling for a considerable period of the year; and from the number of navigable rivers and the extension that has been given to their navigation by the construction of numerous canals. By these means a water communication has been effected between the great navigable river the Volga, which has its embouchure in the Caspian sea, and Petersburg and Archangel: the Volga has also been united with the Don, which falls into the sea of Azoff. The Pripet, an affluent of the Dniepr, which falls into the Black sea, has been connected with the Bug, an affluent of the Vistula, while the latter has been connected with the Niemen.

Few countries, in fact, have so extensive a command of internal navigation. Goods put on board in St. Petersburg may be conveyed to Astrakhan, a distance of above 1400 m., or to any port on the Caspian, and *vice versa*, without once being landed. The iron and furs of Siberia and the tens of China are received at Petersburg in the same way; but owing to the great distance of these countries, and the short period of the year during which the rivers and canals are navigable, they sometimes take three years in their transit! Immense quantities of goods are conveyed during winter upon the ice in sledges, to the different ports, and to the nearest *pristans*, or places in the interior, where barks are built for river or canal navigation. They are put on board in anticipation of the period of sailing, that the barks may be ready to take advantage of the high water, by floating down with the current as soon as the snow and ice begin to melt. The cargoes carried up the river into the

interior during summer are principally conveyed to their ultimate destinations by the sledge roads during winter. The conveyance by the latter is generally the most expeditious; and it, as well as the internal conveyance by water, is performed at a very moderate expense.

The barks that come from the interior are mostly of a very rude construction, flat-bottomed, and seldom drawing more than 20 or 30 inches water. When they arrive at their destination, they are sold or broken up for fire-wood. Those that leave the ports for the interior are of a superior description, and are comparatively few in number; the commodities imported being, at an average, of much greater value, relatively to their bulk and weight, than those that are exported.

As illustrative of the importance of the inland navigation of the empire, we may mention that, in 1839, no fewer than 46,850 boats and 17,469 rafts arrived from the interior at the different great ports and emporiums of the Russian empire, the goods so conveyed being worth 538,921,730 roubles. Of these, 22,842 boats and 784 rafts, value 196,974,904 roubles, arrived at Petersburg; 1362 boats and 1235 rafts, value 15,281,500, at Archangel; 1965 boats and 1373 rafts, value 32,437,378, at Riga, and so on.

Accounts in Russia are kept in roubles and kopeks: but the rouble is of two kinds, very different in value. The silver rouble is worth from 3s. 2d. to nearly 4s. English, varying according to the distance from the capital. The paper rouble, worth about 10d. English, and usually considered equivalent to a franc, is the basis of all mercantile calculations, and is divided into 100 kopeks. The kopek, worth consequently about a centime, is a copper coin. The only gold coin is the demi-imperial, value about 20 francs. Since 1828, platinum coins, worth about £1 sterling, have been struck; but they are not yet of any practical importance. The Russian pound is rather larger than the avoirdupois pound; the last = 138 quarters; the *chetwert*, the measure for corn, = 5.75 English bushels; the *deciatine*, land measure = about 27 acres; the verst of 104.5 to a Geog. degree = 1167 yards, 3 versts being about equivalent to 2 English miles.

*Native and Foreign Merchants, &c.*—Every Russian carrying on trade must be a burgher, and have his name registered in the burgher's book; he thus acquires an unlimited freedom of trade. All whose names are in the burgher's book are either towns-men who have property within the city, or members of a guild. There are three guilds. Those belonging to the first report themselves to possess from 10,000 to 50,000 roubles; these may follow foreign trade, are not liable to corporal punishment, and may drive about the city in a carriage drawn by two horses. Those belonging to the second guild declare themselves possessed of from 5000 to 10,000 roubles: they are confined to inland trade. A capital of from 1000 to 5000 roubles entitles its owner to admission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amount to 1½ per cent. upon their declared capital, the statement of which is left to the conscience of every individual. Burghers are not obliged to serve in the army, but may provide substitutes, or pay a fine. The *guests*, or foreign merchants who enrol themselves in the city register, on account of their commercial affairs, enjoy privileges nearly similar to those enjoyed by the members of the first guild.

None but native Russians are allowed to engage in the internal trade of the country; and hence a foreigner, who imports goods into Russia, must sell them to Russians only, and at the port where they arrive. A few foreigners, indeed, settled in Russia, and having connections with the natives, trade with the interior; but it is contrary to law, and the goods are liable to be seized. In 1836, the merchants of the three guilds amounted, in all, to 123,854.

The merchants engaged in foreign trade are mostly foreigners, of whom the English are the principal. The peculiar privileges formerly enjoyed by the latter are now nearly obsolete, and their rights, in common with those of other foreigners, are merely those of guests. The English factory at Petersburg is, at present, little else than a society formed of some of the principal English merchants, several of whom, however, do not belong to it: its power extends to little else than the management of certain funds under its control.

Owing to the scarcity of capital in Russia, goods, the produce of the country, are frequently paid in advance; and foreign goods are most commonly sold upon credit. From the month of November to the shipping season in May, the Russians who trade in flax, hemp, tallow, bristles, iron, &c., either come themselves to Petersburg or Riga, or employ agents to sell their goods to foreigners, to be delivered, according to agreement, in May, June, July, or August. The payments are made according to the circumstances of the sellers and buyers; sometimes the buyer pays the whole amount, in the winter months, for the

goods which are to be delivered in the summer or autumn; and sometimes he pays a part on concluding the contract, and the residue on delivery of the goods. The manufacturers and dealers in linen usually come to Petersburg in March, and sell their goods for ready money.

Foreign goods were formerly almost entirely sold at a twelvemonth's credit, and some at a still longer term; but of late years several articles, as coffee and sugar, are sold for ready money: still, however, the great bulk of foreign goods for the supply of the interior is sold on credit. Most of the Russians who buy goods on credit of foreigners, for the use of the interior, have no other connection or trade with Petersburg than merely coming there once or twice a year to make purchases; which, having accomplished, they set off with the goods, and the foreigner neither sees nor hears of them again till the bills become due. It is obvious, from this statement, that experience and sagacity are nowhere more requisite in a merchant than here. He has nothing, in fact, but his own knowledge of the native dealers to depend upon: and it is highly creditable to the Russians, that foreigners do not hesitate to trust them with immense sums on such guaranty.

*Government.*—In Russia all power emanates from the sovereign, whose authority is uncontrolled, except by the respect he may yield to established customs, to the privileges of certain classes, and the prejudices of the people. The will of the monarch has no legal limits, so that he may be said to be absolute. The act of election of 1613, which conferred the crown on the house of Romanoff, recognises the unlimited power of the sovereign. The empress Catherine and the emperor Alexander laboured to give order, simplicity, and regularity to the administration, and to reduce it to a system, so that it might be as independent as possible of the caprices of the sovereign. Alexander, indeed, proclaimed in 1811 that the law was in Russia superior to the sovereign, and gave to the senate the right of remonstrating against any *ukase* (an Imperial decree is called) they thought contrary thereto. This, no doubt, seeing the way in which the senate is composed, is a very feeble check on the despotic power of the emperor. But it may well be doubted, whether, in the actual state of Russia, the present form of government be not better adapted to its wants than any that could be substituted in its stead. It is sufficiently clear, as well from general principles as from what has actually occurred, that Russian princes cannot safely follow a course of conduct generally disliked by the nation. On the other hand, however, the extent and unity of the sovereign power is the best security for the progress of civilization, and for the improvement and well-being of the mass of the people. The latter being, for the most part, slaves, without property, intelligence, or influence, would be tyrannised over to an incomparably greater extent than at present, had the nobles any share in the government, or were they able to control its proceedings. What Poland was Russia would be, were the nobility or superior classes participating in the sovereign power. But the interests of the autocrat and those of the mass of the people are generally identical. Under his protecting ægis civilization is daily extending, and a class of free labourers is gradually growing up. The emperor is afraid of the nobles, not a few of whom are supposed to be tainted with liberal opinions; but he has nothing to fear from their slaves. Hence the despotic power of the former over the latter has been materially reduced: very great changes for the better have been made in the condition of the peasantry on the crown estates; and the government has gone steadily on, with quite as much rapidity as circumstances would warrant, endeavouring to improve and advance the servile portion, that is, the great mass, of its subjects, and to pave the way for their ultimate emancipation. An enlightened despotism is, in fact, the most suitable government for such a country as Russia. A representative constitution would merely put additional power into the hands of a comparatively small class, and would be as little adapted to the wants of such a country as an absolute government would be to England.

The monarch is the central point of the administration; his decisions are law. Every thing emanates from him in the first instance, and every thing is referred to him in the last. The labour he has to undergo is great, and requires incessant activity.

The public business is transacted, under the emperor, by different boards, councils, or colleges, which have each separate, but sometimes not easily distinguished functions. The *Imperial Council of the Emperor* was established, on its present footing, in 1810. It consists of a president and an indefinite number of members, of which the ministers always make a part. It is divided into the five departments of legislation, war, civil and religious affairs, finance, and the affairs of Poland; and has the superintendence of all matters connected with the internal administration of the

## RUSSIA.

empire. The second college, or senate, was founded by Peter the Great in 1711, and is reckoned the most important body in the state. It has various functions, partly of a deliberative and partly of an executive character, set forth in a ukase of 20th Sept., 1802. It is the high court of justice for the empire, and controls all the inferior tribunals. The members are nominated by the emperor; at present their number is about 100, and each receives a salary of 7000 roubles a year. The senate is divided into eight committees or sections, of which five sit at Petersburg, and three at Moscow. Each committee is authorized to decide in the last resort upon certain descriptions of cases, brought either immediately before it, or by appeal from the inferior courts. In a few cases, however, parties dissatisfied with its decisions may petition the emperor. The senators are mostly persons of high rank, or who fill high stations; but a lawyer of eminence presides over each department, who represents the emperor, and without whose signature its decisions would have no force. In the *plenum*, or general meeting of the sections, the minister of justice takes the chair, as high procurator for his majesty. Besides its superintendence over the court of law, the senate examines into the state of the public revenue and expenditure, and has power to inquire into public abuses, to appoint to a great variety of offices, and to make remonstrances to the emperor. Monthly reports of its proceedings are published in the gazette.

The third college consists of the *Holy Synod*, and to it is committed the superintendence of the religious affairs of the empire. It is composed of the principal dignitaries of the church. All its decisions run in the emperor's name, and have no force till approved by him.

The fourth college consists of the *Committee of Ministers*, of whom there are eleven, viz., the ministers of the imperial household, of war, finance, justice, interior, public instruction, imperial domains, postoffice, roads and public buildings, and the vice-chancellor and comptroller-general. The ministers have frequently colleagues who supply their place when they are either sick or absent. They communicate directly with the emperor, or with his *Chancellerie particuliere*, in whose hands all the executive authority is centred.

The local administration differs in different provinces; government having always allowed conquered or annexed countries to preserve their own laws and institutions, except in so far as they were hostile to the general constitution of the empire. Finland, for example, has a special form of government; and the provinces wrested from Sweden by Peter the Great, Courland, and those formerly belonging to Poland, have peculiar institutions and privileges, which, however, have lately been much modified. But, despite these exceptions, the form of the provincial government is, notwithstanding, sufficiently uniform.

The empire is divided into general governments, or vice-royalties, governments, and districts. There are, at present, 14 of the first, 50 or 51 of the second, and above 320 of the last. There are also, as already stated, extensive districts which, from the thinness of the population, or otherwise, are not organized into regular governments, which are called provinces, or *oblasts*. The vice-roys, or general-governors, are the representatives of the emperor; and as such command the forces, and have the supreme control and direction of all affairs, whether civil or military. All the functionaries within their jurisdiction are subordinate to, and make their reports to them. They sanction or suspend the judgments of the courts, &c. A civil governor, representing the general governor, assisted by a council of regency, to which all measures must be submitted, is established in each government or province. In case of dissent, the opinion of the governor is provisionally adopted till the pleasure of the emperor with respect to the matter be ascertained. A vice-governor is appointed to fill the place of the civil-governor when the latter is absent or unwell. There are also, in every government, a council of finance under the presidency of the vice-governor, who manage the crown estates, and superintend the collection of the revenue; a college of general provision, which has the direction and inspection of all charitable foundations, prisons, workhouses, schools for the instruction of the poor, &c.; and a college of medicine, which attends to all matters connected with the public health, appoints district physicians, inspects pharmacopoeias, &c. The districts have each their local functionaries. The towns have a municipal body, elected once every three years by the different classes into which the population is divided. And each town has, also, according to its importance, a commandant or bailiff, appointed by the crown, who has charge of the police, of the public buildings and magazines, and who executes sentences, pursues criminals, &c.

The Russian judicial system is complicated, and not easily understood, except by natives. There are civil and criminal courts in every circle and a supreme court of

justice, divided into civil and criminal sections, is established in every government. Cases decided in the inferior courts may be appealed to it. Its sentence is final in all criminal cases, and in all civil matters relating to sums under 500 roubles. Those involving property to a greater amount may be carried before the senate.

It is a curious fact that, notwithstanding the despotical nature of the government, all the provincial tribunals consist partly of elective functionaries. Thus, the superior court for a circle consists of a judge and secretary, and of two assessors chosen annually by the nobles, and two by the peasants; and the superior court of justice for a government, which is divided into a civil and criminal chamber, consists of a president, secretary, and four assessors for each chamber, two of the assessors being chosen by the nobility, and two by the burghers. It is, in fact, a principle in Russia that a portion of the judges in every court should belong to the same class as the party whose interests are under discussion, and be elected for that purpose by his co-peers. In the case of the nobility and burghers, this is a most valuable privilege; but in the case of the peasantry, who stand most in need of protection, this privilege is quite illusory; their slavery and ignorance making them utterly incapable of profiting by it.

Previously to the reign of the Empress Catherine II., the judges, particularly in the inferior courts, were wretchedly paid. That princess increased their salaries; but they are still far too low. And seeing that the judges are removable at pleasure, and owe their situation to favour rather than to merit, we need not wonder that the greatest abuses continue to exist in the administration of justice. The proceedings are dilatory in the extreme. The prohibition against taking fees from suitors is rarely complied with; and in most tribunals it is affirmed, that if justice cannot be altogether defeated, it may at least be indefinitely postponed, by dint of money. These abuses have, however, been in part, at least, obviated by the publication, between 1826 and 1833, by the Legislative Commission, of an extensive digest (*Sвод Законов*, "Body of Law") of all the laws then in force relative to the rights of citizens and the administration of public justice. This publication has greatly simplified the law; and it is of vast importance from its being, as it were, a charter of rights which may be appealed to on all future occasions, and which it will be very difficult for any succeeding sovereign to abridge. But it would, notwithstanding, be idle to expect any very material improvement in the ordinary administration of justice, until the judges be better trained, selected, and paid; and till the influence of public opinion, and of a comparatively free press, neither of which has at present any existence in Russia, be brought to bear on the administration of justice, and of public affairs generally. The latter, in fact, is the only security against abuse on which any reliance can safely be placed. Wherever judges are exempted from the control of public opinion, and the animadversion of the press, they are most commonly the obsequious instruments of government, and seldom scruple to commit injustice when they believe it will be acceptable to their superiors.

There is in Russia, particularly in the great towns, a very efficient system of police. The officers are empowered to discharge various functions besides those which come more peculiarly within their province; such as the decision of differences between masters and servants, &c. Crime is not frequent in Russia; and property is as well protected in it as in any other country. Houses being generally built of wood, fires in great towns are apt to be very destructive; and the most effectual precautions are taken to prevent their occurrence. All strangers arriving in Russia must produce their passports at the police office, and notify their arrival in the public papers.

*Punishments.*—Capital punishments are rare in Russia, treason being the only crime visited with death. In cases of murder, fire raising, and other capital offences, the criminal, after receiving a certain number of lashes from the knout (a heavy thong whip), under the infliction of which he sometimes expires, is condemned for life to forced labour in the mines of Siberia. This part of the legislation of Russia has been the theme of much, though, as it appears to us, of little deserved eulogy. We agree with Mr. Coxé, that the fear of death is to most men the most efficient check on the commission of crime; and though it were conceded that Russian malefactors undergo a much severer punishment, still, as people generally know nothing of it, it makes no impression on them, and has little or no influence in deterring others from committing similar offences. (See *Coxé's Travels in Russia*, &c., iii., 116.) The nostrils of criminals used also to be slit, and their face branded with a red-hot iron previously to their banishment to Siberia; but this needless aggravation of punishment was put an end to by the Emperor Alexander.

Torture was formerly universal in Russia, and was inflicted at the discretion of the superior justices in all parts

## RUSSIA.

of the country, by whom, as was to be expected, the power was often shamefully abused. Russia is indebted to the Empress Catherine for the abolition of this atrocious practice. And it is a singular fact, and worthy of the attention of those who are so fond of recommending immediate changes, that the prejudice of the Russians, in regard to the necessity of torture, was so deeply rooted that Catherine had to proceed with great caution in bringing about its abolition, which was effected rather by indirect than by direct means. (*Coze, ubi supra.*)

According to an official return there were, on the 1st of Jan., 1835, 97,121 criminals in Siberia, of whom 23,264 were females. Of the convicts, about 10,000 are condemned to forced labour in the mines, and otherwise; the others being mostly employed in agriculture. The greatest criminals, or (according to the interpretation of the Russian government) those sent thither for political offences, are mostly confined in N.E. Siberia, the climate of which is especially severe. The desertions amount to about 2000 a year.

**Division of the People into Classes.**—The people of Russia are divided into four classes, viz., 1. nobles, 2. clergy, 3. burghers, merchants, and other farmers, and 4. the peasants, or slaves.

1. **Nobles.**—Previously to the reign of Peter the Great, the Russian nobility consisted principally of the descendants of the ancient petty princes of the country, or of lords possessed of vast estates. They were in the exclusive possession of all situations of trust and emolument, to which they succeeded according to their rank. Peter, who early saw the disadvantage of this state of things, and the necessity of undermining the influence of the nobles, most of whom were violently opposed to his projects for the regeneration of the country, had recourse, in furtherance of his plans, to the scheme of creating a new order of nobility. In this view he divided all the civil and military functionaries in the service of the state into 14 classes, enacting, at the same time, that the eight highest classes should confer on the individuals in them the distinction of hereditary nobility; that some of the other classes should confer the distinction of personal nobility, or of nobility for life; and that those enrolled in the others should be deemed gentlemen, or *biens nés*. Some modifications were made in this arrangement by the Empress Catherine II.; but it is still maintained nearly as it was contrived by Peter the Great.

The creation of a new nobility founded on merit, or on services rendered to the state, was, no doubt, a material improvement at the time. By illustrating many new families, it has served to lessen the influence of the old nobility, and to liberalise the order, at the same time that it has opened a prospect to all enterprising individuals of rising to the highest dignities. On the whole, however, it would seem that the system, having served its purpose, might now be advantageously abandoned. "*En grossissant,*" says M. Schnitzler, "*à l'infinie, le corps de la noblesse, ne nuit-il pas à cette institution peut-être nécessaire; et en depouillant le tiers état de tout ce qu'il a des citoyens distingués, n'affaiblit-il pas la considération dont il serait juste et utile d'entourer la classe laborieuse? N'enlevait-il pas à jamais aux arts et à l'industrie des hommes capables, qui auraient contribué à leurs succès, s'ils n'avaient pas eu à soutenir un rôle nouveau, et qu'ils ne craignissent de déroger à un rang auquel des longs efforts et les travaux de leurs pères ont enfin élevés, et se livrant à des occupations qu'on regarde comme roturières?" (*Statistique Générale*, p. 244.)*

According to the official accounts, the order of the nobility comprised, in 1836, 691,355 individuals, of whom 538,160 enjoyed hereditary and the others personal dignities. In Russia, properly so called, the nobles are not numerous; but they abound in Podolia, Volhynia, and other provinces acquired from Poland, and especially in Poland itself, which, in 1837, had 283,420 nobles! Few, however, of the latter possess estates, and many of them are in a very destitute condition. In the Polish provinces, and in Courland, Livonia, and Esthonia, none but nobles can inherit landed property; but this is not the case in Russia Proper, though, with the exception of the crown estates, they are, in fact, almost the sole proprietors. The titles of prince, count, and baron have superseded those formerly in use. In the government of Tuia, there are said to be more than 100 families having the dignity of prince. All the members of noble families are noble, and have the same title as the head of the family. On the death of a noble person, his estate is divided, according to a fixed scale (see *ante*, p. 721), among his children of both sexes. Nobles are exempted from all personal charges, and from the obligation to serve in the army, but they are obliged to furnish recruits according to the number of their vassals. Nobles are also exempted from corporeal punishment; have leave to distil all the spirits required for the consumption of their establishments; may engage in manufactures or trade; have a right to all the minerals on their estates, &c. Precedence is determined, in Russia, by military rank; and an ensign would

take the *pas* of a nobleman not enrolled in the army, or occupying some situation giving military rank. (*Schnitzler, Essai d'une Statistique*, &c., p. 112, &c.)

The property of a noble who has been condemned is not confiscated by the state, but goes to his family. The nobles also elect various local magistrates, assessors, &c., and deliberate at their meetings on various matters connected with the local administration. There is also in every government a committee of nobles to watch over the interests of the body, and to take care of the establishments that belong to it; and every circle has a committee of nobles who manage the estates and affairs of nobles who are under age. These privileges, which are obviously of considerable importance, were embodied and set forth in a ukase in 1762; and another ukase of the Emperor Alexander prohibits all government functionaries from interfering with the election of the assessors, and other functionaries chosen by the nobles.

It is not easy to form a fair estimate of the character of the Russian nobles. Generally speaking, their education is more superficial than solid; but many are, nevertheless, highly accomplished; they are all well acquainted with French, and numbers with the English and German languages; those who have travelled being distinguished by the superior polish and elegance of their manners. They are universally hospitable; and most of them affect, and many relish, the society of literary men and artists. That they are more sensual, more given to ostentatious display, and less distinguished by a gentlemanly bearing towards their inferiors, than the higher classes in England or France is, no doubt, true. But the representations of their manners and conduct, given by Clarke, Lyall, and other travellers, of their caste, are, notwithstanding, mere vulgar caricatures, which, though they may perhaps apply to a few individuals, are generally quite as wide of the truth as M. Pillet's accounts of our fair countrywomen. Considering, indeed, that the Russian nobility have no exciting political occupation, that in most parts of the empire there is no middle class, and that the occupiers of their estates are not freemen but slaves, the wonder is, not that their tastes and habits should be, in some respects, barbarous, but that they should have made so great an advance as they have done since the reign of Peter the Great, and that they should be so intelligent and refined as they are found to be.

The Russian nobles, like those of England and other countries in feudal times, are in the habit of keeping great numbers of vassals in their houses as servants. The number of such retainers in some great families exceeds all belief, amounting sometimes to above 500! They receive only a trifling pittance as wages, but that is quite enough for their wants, as they are fed and clothed by their masters. Several Russian noblemen have recently distinguished themselves by their attention to their estates, and by the efforts they have made to introduce the improved processes and implements in use in more advanced countries. In some instances they have brought innkeepers and labourers from England. Latterly, also, many of the principal nobles have become extensive manufacturers, and some of the greatest manufacturing establishments of the empire are, at present, in their hands. They are driven, in fact, to adopt this course by the circumstances under which they are placed. All agricultural, and most out-of-doors employments being suspended during winter, the noblemen, who must provide for the subsistence of their slaves, whether the latter be employed or not, naturally endeavour to avail themselves of their services during the interruption of husbandry pursuits, by setting on foot some species of manufacture. The latter, indeed, is frequently carried on only during winter, the peasants being employed in agriculture during the rest of the year. When, however, a nobleman establishes a manufacture on a large scale, and keeps it constantly at work, the peasants are usually put on the footing of hired labourers, and instead of getting an allotment of land, are paid for their work, and left to supply themselves with necessities. Some manufactures conducted in this way have been eminently successful; though it be hardly necessary to add, that if they be of the higher class, or require any peculiar skill, economy, or attention, they are not of a kind that can be successfully carried on by the agents of noblemen; and that the moment the protection afforded by oppressive custom-house duties, under which they have grown up, is withdrawn, they will straightway fall to the ground. (*See Venables' Russia*, &c., p. 140.)

Mr. Cox and Dr. Pinkerton, among the best and most trustworthy of the English travellers who have visited Russia, speak very favourably of the Russian nobility. The former says, that though they have adopted the delicacies of French cookery, they neither affect to despise their native dishes, nor squeamishly reject the solid joints which characterise an English repast. The plindest as well as the choicest viands are collected from the most distant quarters. At the tables of opulent persons in Petersburg

## RUSSIA.

may be seen steril from the Wolga, veal from Archangel, mutton from Astrakhan, beef from the Ukraine, and pheasants from Hungary and Bohemia. The common wines are claret, Burgundy, and champagne; and English beer and porter may be had in perfection and abundance. It is usual to take a whet before dinner; but the stories engrafted on this practice, of the prevalence of inebriety among the higher classes are wholly without foundation. In this respect their habits have undergone a total change since the days of Peter the Great; and they are now remarkable for sobriety. The peasantry, however, often indulge to excess in their potatoes. (*Coze*, ii. 151.)

The lengthened stay of the Russian armies in the western and more civilized European states, after the defeat of Napoleon's invasion, made a large number of the nobles, and of the more intelligent classes (which in Russia consist of the military officers), familiarly acquainted with a more advanced state of society, and a better form of civil polity. This circumstance, also, gave an increased stimulus to the desire for travelling that previously prevailed among the nobility, many of whom withdrew to France, England, and Italy. It is not to be denied, that the influence of these concurring circumstances has since, on various occasions, made itself sensibly felt in Russia; and that the government has sometimes had reason to believe that a considerable portion of the nobility, and even some of the most distinguished regiments, would not be displeased to see some limit set to the powers of the czar. To counteract this feeling, various obstacles have latterly been opposed to the emigration of Russian nobles and to their residence abroad: the most vigilant measures have also been adopted to hinder the employment of foreign tutors and governesses; and to prevent the introduction of foreign works not approved by the censor. It remains to be seen whether these measures will be effectual to maintain the present order of things; but, at all events, it is sufficiently clear, from what has been already seen, that, under existing circumstances, such a revolution in Russia as should materially modify the power of the czar, would not be for the advantage of the bulk of the people, but the reverse.

2. *Clergy*.—This body will be more fully noticed under the head religion. It comprises, in all, about 274,000 individuals, of whom about 254,000 belong to the established church. Including the wives of the priests, it is supposed that about 540,000 persons may belong to this class. They are exempted from all direct taxes, and from corporeal punishment, and may acquire all sorts of fixed property.

3. *Merchants, Burgers, &c.*—This comprises the class intermediate between nobles and peasants, and is thus alluded to by the empress Catherine in her instructions for a new code of laws:—"This class, composed of freemen, belong neither to the class of nobles nor to that of peasants. All those who, being neither gentlemen nor peasants, follow the arts and sciences, navigation, commerce, or exercise trades, are to be ranked in this class. In it should be placed all those who, born of plebeian parents, shall have been brought up in schools or places of education, religious or otherwise, founded by us or by our predecessors. Also the children of officers and of the secretaries to the chancery," &c. Merchants and traders belong to this class; and they, as already stated, are distributed into their guilds according to the amount of capital they respectively possess (*see ante*), and enjoy various privileges on their paying a certain per centage on their declared capital. The burgers, or second division of this class, possess many privileges superior to the peasants; but they are distinguished from the merchants by being subject to the capitation tax and to enrolment in the army and navy. The Germans and other free colonists established in different parts of the empire, and the free cultivators and tenants found in certain districts, belong to this intermediate class. This class comprises about 3,000,000 of individuals.

4. *Peasants*.—Unhappily, however, the far largest portion of the people of Russia are slaves belonging either to the crown or to individuals; above 21 millions being the property of the former, and 23 millions of the latter. Count Cheremetief is proprietor of above 110,000 slaves, and the numbers of those belonging to some of the other great landholders are but little inferior. The nobles are obliged to pay a tax to government (at the rate generally of about four roubles per mule), and to furnish recruits for the army according to the slave population of their estates. The time and labour of the slaves belonging to private individuals are absolutely at the disposal of their masters, who may seize whatever property they may happen to acquire. The most common practice is for the latter to impose on their peasants an obrok or capitation tax, which may amount, at an average for those resident in the country, to from 35 to 45 roubles per male, young and old; but those who have received licenses to reside in towns, or who have learned any profession, or have been successful, are charged for greater sums, sometimes even as much as 1000 roubles a year or upwards;

Others, instead of an obrok, perform task-work; others, again, deliver a certain portion of their produce; and from some all these are demanded. Run-away slaves are punished by imprisonment and hard labour.

Besides having power to dispose of his time and labour, the master may inflict corporeal punishment on his slave; but he is forbidden by law (which, however is often evaded) from treating him with any great cruelty, and he is guilty of a capital offence if death arise from his chastisement within 24 hours. When one class may exercise such power over another, very great abuses cannot fail to exist. The insecurity, too, under which the peasants are placed, is necessarily fatal to their industry. Oppression and ill-treatment are now, however, a good deal less common than formerly; and it is certainly true that the condition of the boors is by no means so bad as might, *a priori*, be concluded, and that, as respects their command over the necessities of life, they are in a much better situation than the peasantry of Ireland. Those on the estates of humane and enlightened landlords are in decidedly comfortable circumstances; while they mostly all have sufficient supplies of the articles they consider necessary to existence. Some licensed slaves have accumulated very large fortunes. One of this class of persons is mentioned as having 4000 labourers in his employment; and another planned and built the finest church in Petersburg.

The peasants are of a sound constitution, stout and firmly built, and generally of a middle stature. They live in wooden cottages, formed of whole trees piled upon each other, and built together in villages, the gables to the road. Sometimes they consist of two stories, but more frequently only of one. They are heated by stoves, and though dirty, are not uncomfortable nor ill suited to the climate. Their furniture consists generally of wooden articles, with a pan or two. Beds are little used, the family generally sleeping on the ground, on benches, or on the stove.

The dress of the peasant consists of a long coarse druggot coat, fastened by a belt round the waist, but in winter they wear a sheep-skin with the woolly side inwards. Their trousers are of coarse linen; instead of stockings, woollen or flannel cloth is wrapped round the legs, and boots or shoes of matted linden bark are frequently substituted for those of leather. The neck, even in winter, is bare,\* and the head is covered by a peaked round hat or cap. (*Voyage de deux Français dans le Nord de l'Europe*, tom. iv. p. 323.)

The Russian peasant considers himself well fed if he have rye-bread, which is the staple article of food throughout the empire, and sour cabbage soup, with a lump of fat, or hog's-lard, boiled in it, by way of relish. He uses butchers' meat on holidays, and at other times eggs, salt-fish, bacon, lard, and mushrooms, which, at the proper season, are extremely abundant, onions, &c. His favourite dish is a hodge-podge of salt or fresh meat, groats, and rye-flour, highly seasoned with onions and garlic. Salted cucumbers are a constant dish at the peasant's table all the year round. These and salted cabbages form an important article of national commerce. They are brought in large vats from the southern provinces, where the climate favours their production, to Moscow, Petersburg, and other large towns, and here they are constantly on sale in the public markets. The preparation, in autumn, of a sufficient supply of these pickled vegetables forming, in every family, an important part of domestic economy. This dependence of the Russian peasant on vegetable diet is, no doubt a consequence of the extraordinary number of fasts and fast-days, of which he is a careful observer, and which are multiplied to such an absurd extreme, that it is said there are only from 60 to 70 days in the year on which it is permitted to use butchers' meat. Quas a fermented liquor, made by pouring boiling water on rye or barley-meal, is the common beverage of the peasant. But he is also very fond of mead, and still more so of corn brandy, and other spirituous liquors. The consumption of the latter is immense, exceeding 80,000,000 gallons a year, and furnishing annually a large revenue to government. The use of tea is becoming more and more extended. A substitute for it, called *izbitzen*, consisting of herbs, honey, &c., boiled together, is also extensively used by the peasantry.

The peasants are exceedingly superstitious. A vessel of holy water hangs from the ceiling of every room, and a lamp lighted on particular occasions. Every house is provided with a sacred corner, supplied with one or more pictures of their tutelary saints, coarsely daubed on wood, frequently resembling rather a Calmuck idol than a human head; but sometimes they are of a better quality, and neatly framed: to these they pay the highest marks of veneration. All the members of the family, the moment they rise in the morning, and before they retire to sleep in the evening, never omit their adoration to the saints: they cross

\* This, according to the intelligent author of the *Voyage de deux Français*, is a decisive criterion by which to distinguish the genuine Russians.

## RUSSIA.

themselves during several minutes, upon the sides and forehead, bow very low, and sometimes even prostrate themselves on the ground. Every person, also, on entering the room, pays his obeisance to these objects of worship previously to his addressing himself to the family.

The Russian peasantry have the vices incident to their situation. With a great capacity of endurance, and the most extraordinary talent for instruction, they have but little active vigour or steadiness of purpose. In accosting a person of consequence, or from whom they expect any favour or advantage, they prostrate themselves, touch the ground with their hands, and kiss the fringe of his garments. Their insecure position makes them anxious to enjoy the present moment; and their masters being obliged to provide for their support when they become old and infirm, they have little motive to providence or forethought. When they accumulate money, they most frequently bury it in the ground; a practice common to all countries where property is insecure.

The peasantry belonging to the richer nobles are, speaking generally, in all respects, much better off than those who belong to the class of poor and petty nobles; and, unfortunately for the peasants, the number of the latter is rapidly increasing by the subdivision of estates in every successive generation, and the constant augmentation of the nobility, from the influx into its ranks of individuals in the civil and military service. In 1822, however, the evil resulting to the peasantry from this state of things was partially obviated by restricting the right to purchase slaves to nobles possessed of a certain amount of property.

Previously to the reign of Peter the Great, it was customary for the Russians, of all ranks, to marry their children very early, even before the age of puberty. Though restrained by Peter and Catherine II., this custom of early marriage still prevails, and is said to be fraught with many pernicious consequences. A ukase issued in 1801, prohibits priests from solemnizing marriages, unless the man be 18 and the woman 16 years old.

The use of the vapour bath is universal in Russia, not being reckoned a luxury but a necessary; and public baths are met with in all parts of the country. They are resorted to by the peasantry, at least, once a week. Though the baths are highly heated, the bathers not unfrequently run out and in summer plunge into cold water, or, if it be winter, roll themselves in the snow! This sudden alternation of temperature is not found to be injurious to health. But, notwithstanding the frequent use of the bath, the boors are very deficient in cleanliness. (See Coxe, 5th ed., i. 269; *Schützler, Essai, d'une Statistique Générale*, passim; *Voyage de deux Français au Nord de l'Europe*, iv. 318-332; *Pinkerton's Russia*, pp. 69-80, &c.; *Foreign Communications to the Poor Laws*, p. 330, &c.)

**Army.**—The military power of Russia having been ridiculously exaggerated by some, and as ridiculously depreciated by others, deserves to be inquired into with some attention. The Strelitzes, the first regularly organized corps of infantry in the Russian service, seems to have had their origin about the middle of the 16th century; and continued till their suppression by Peter the Great, to constitute the principal strength of the army. They enjoyed various privileges; were always about the person of the emperor; and by their licentiousness and insubordination, as well as bravery, bore a close resemblance to the Praetorian bands of antiquity, and the Janissaries of the Ottoman Porte. The abolition of this formidable corps, and the reconstruction of the army on a plan similar to that followed in the more civilized countries of Europe, was undoubtedly one of the greatest services rendered by Peter the Great. At his death, the regular army amounted to about 110,000, exclusive of the imperial guard; and the success which attended his contest with the Swedes showed that this army was a match for the best troops that could then be opposed to it.

Under Catherine II., the army was greatly augmented and improved. This able and ambitious princess augmented the pay of the troops and officers, and gave them a new, more commodious, and elegant uniform than that formerly in use. She formed the Cossacks into a light cavalry, which, after being successfully opposed to the Spahis of the Turks, has since distinguished itself in the great contests of more modern times. During the latter part of the reign of Catherine the regular army amounted to about 250,000 men; and little was wanting to place it on a level with that of the surrounding powers, save the better organization of the commissariat department, and the choice of better educated and more skilful native officers.

It is, however, to the emperors Alexander and Nicholas that the Russian army is indebted for the more efficient organization, discipline, and power by which it is now distinguished. The momentous struggles in which the former was engaged called forth all the military resources of the empire; many abuses were rectified, and improvements introduced; and the armies of Alexander were at length enabled to contend successfully with those of the greatest cap-

tain of the age. Under the present emperor, the discipline and organization of the army have been still further improved; and it is, at present, in a comparatively high state of efficiency.

The Russian army has been newly organized, by a ukase of the 9th August, 1835. Down to that period, two large armies were maintained; but those were then consolidated, and the staff of one of them reduced. The army is now divided into six *corps d'armée* of infantry, each corps into three divisions, each division into two brigades, each brigade into two regiments, and each regiment into six battalions of 1000 men each; four battalions take the field, and two remain as a reserve; so that each regiment, in fact, is 4000 strong, and each *corps d'armée* is 48,000 strong. To each of these six corps there is attached one division of light horse, in two brigades (Hussars and Huhlans) of two regiments each. Each regiment of horse consists of nine squadrons of 160 horse each, eight of which take the field, and one remains as a reserve; so that a regiment in the field has 1280, and a division 5120 horses. Besides this, each corps has a division of artillery united to it, consisting of three brigades, with four batteries each of eight guns, and one brigade of horse artillery, one reserved battery, one park of artillery, and three sapper battalions, together 6000 men. Thus a complete *corps d'armée* is 60,000 men strong, with 120 pieces of artillery; and the whole active army 360,000 men, and 720 pieces of artillery. Then come the corps of guards, in three divisions of infantry, three divisions of cavalry, and one division of artillery, with 120 guns; then the grenadier corps, equal in strength to an infantry corps; both together 114,000 men, and 240 guns. There are two reserved corps of cavalry, each of two divisions (Huhlans and Cuirassiers) each division of two brigades of two regiments each, with two brigades of horse artillery, and a dragoon corps in two brigades of two regiments each, and one brigade of horse artillery; altogether this cavalry corps consists of 30,000 men and horses. Finally, there are two independent *corps d'armée*, of the Caucasus and Siberia, the first equal in strength to a whole corps, the latter to half a one; so that the entire strength of the regular army in time of peace amounts to 594,000 men; which, at present, is equal to one per cent. of the population, as the Asiatics, and particularly those tribes who serve as irregular troops, are not included in this account. (*Supp. to the Conversations Lexicon of Gegenwert*, Engl. trans. p. 198.)

But exclusive of the above, the troops not of the line, or those forming the irregular army, constitute a very formidable force. They consist, 1st, of upwards of 50,000 men in garrison in different parts of the interior, and along the frontier; 2d, of above 100,000 veterans, mostly employed for the same purpose; and 3d, of the irregular Cossack cavalry, and the colonized regiments.

The really effective force of the Russian army may, therefore, be reckoned at about 600,000 men; but from this various deductions must be made. Two out of the six battalions of the different regiments are almost always absent, constituting, in fact, *dépôts*, being employed in public works, in the conveyance and training of recruits, &c. It is believed, too, that the forces actually embodied rarely come up to the returns; the officers being driven, by the inadequacy of their allowances, to add to their means of subsistence by keeping up vacancies in the ranks. And if, in addition to these various causes of deduction, we bear in mind that Russia must always, in the event of her being engaged in foreign war, keep a large amount of forces at home to guard the frontiers, and to maintain tranquillity in Poland and other disaffected provinces, it will be seen that, at present, she would have considerable difficulty in marching 200,000, or even 150,000 men across the frontier. When Napoleon invaded Russia in 1812, the entire force brought to oppose him scarcely exceeded 200,000 men. During the last war with Turkey, the invading army did not exceed 120,000.

Even if the troops really at the disposal of government corresponded with those in the official returns, Russia would find great difficulty in sending large armies into distant countries, and maintaining them when there. Her finances are far from being in a flourishing state; and owing to the abuses that prevail in her commissariat department, a great expenditure is incurred, at the same time that the troops are often very ill provided with the most indispensable necessities.

At home, however, Russia is all but invulnerable. The severity of the climate renders it next to impossible for an invading army to maintain any permanent footing in the country; whilst the nature of the ground, without roads, and intersected with forests, rivers, and marshes, opposes the greatest obstacles to the advance of an invading force, and still more to its retreat. Even though the army of Napoleon had not had to contend with the rigours of an unusually early winter, the result of his expedition could not have been materially different. He could not possibly have maintained himself during the winter at Moscow. Sooner

## RUSSIA.

or later he must have retreated; and a retreat through such a country, and in presence of a powerful enemy, ready to take every opportunity of attacking, could not fail to be most disastrous.

The troops of the imperial guard are a very fine body of men. Generally, the Russian soldiers are, in respect of bodily vigour, inferior, perhaps, to those of England. They have no enthusiasm; and in respect of activity and intelligence, are very far below those of England, France, and Prussia. On the other hand, however, they possess, in the greatest perfection, the two first qualities of a soldier; the most unflinching courage, and the most implicit obedience. Subjected from birth to a master whose will is their law, the habit of prompt and absolute obedience becomes, as it were, a part of themselves. Regardless of dangers or difficulties, they will attempt whatever they are ordered; and will accomplish all that the most undaunted resolution and perseverance can effect. They also endure, without a murmur, the greatest hardships and privations, and support themselves in situations where others would starve. The Cossacks, Bashkirs, and other irregular cavalry, are very useful troops, and are well calculated either to improve a victory or to cover a retreat. Contrary to what might have been expected, the artillery is the department in which the Russians have made the greatest advances; but it is said to be in excess as compared with the other descriptions of force. Were the officers as intelligent and skilful as the soldiers are brave and docile, the Russian army would be most formidable. But this is far from being the case. Latterly, however, great efforts have been made to improve the education of the officers, and, exclusive of the establishments for that purpose mentioned below, a military academy was opened at Petersburg in 1832, where officers not above the degree of captain are instructed in military service; and in 1837 a school for 400 cadets for the artillery and engineers was opened at Woronesch. The pay of the officers, though still miserably low, has been increased; and the present emperor has endeavoured to excite the martial spirit of the people, and to make the service popular, by instituting grand military spectacles. Some of these have been on a gigantic scale. At the grand military and religious festival in commemoration of the battle of Borodino, in 1839, no fewer than 120,000 troops were present! Marshal Marmont has spoken in high terms of the efficiency and discipline of the Russian forces he reviewed in the S. provinces in 1834.

**Recruiting.**—The army is recruited from the classes of peasants and artisans, every individual belonging to them being liable to compulsory service, provided he be of the proper age and stature. The levies are ordinarily in the proportion of 1 or 2 to every 500 males; but during war the proportion is at least as 2 or 3 to 500, and sometimes as much as 4, or even 5, to 500. This last proportion, however, of that of 5 to 500 males, may be taken as the *maximum* levy, and is rarely exceeded. The number of recruits to be furnished by the empire in general, and by each district in particular, is fixed according to the results of the preceding census. The nobles nominate such of their sons as they please to complete their quotas, the only conditions being that they should have a good constitution, and be of the requisite size, and not less than 18 nor more than 40 years of age; and, as idle, ill-disposed individuals are sure to be nominated in preference for recruits, those who are averse from the service endeavour to distinguish themselves by industry and good conduct. The *minimum* standard height for infantry is not less than 1 mètre 534 millimètres; and for cavalry, 1 mètre 660 millimètres. The recruits are first sent to the recruiting establishments, and thence forwarded to the corps to which they are assigned. Nobles, magistrates, clergymen, and students are exempted from the service. Merchants and traders enrolled in the different guilds are also exempted: the levies furnished by the Cossacks are regulated by particular treaties; and many half savage tribes are excused, partly on account of their diminutive size, and partly because of their great aversion to a military life. Generally, it is found that a levy of 2 on every 500 males produces a supply of about 90,000 or 100,000 men. Substitutes are allowed, and may be effected by mutual consent, provided the noble be informed, and do not oppose it.

A ukase of the 3 (15) Sept., 1827, fixes the period of service at 20 years in the imperial guard, and 22 in the other corps. Every individual, with his family, if he have one, becomes free the moment he is enrolled in the ranks of the army. In case of desertion, he is again enslaved; but desertion is exceedingly rare in Russia.

The guard is recruited from the grenadiers; the latter from the infantry of the line and light chasseurs.

**Promotion.**—After two years' service a soldier may become a sub-officer. The sub-officer who has served twelve years obtains of right the rank of sub-lieutenant or ensign.

Children of soldiers are educated at public military

schools, or at schools belonging to the regiment: those who pass their examination with credit become sub-officers. There are at Petersburg schools for pages, engineers, officers of artillery, sub-officers of the guard, &c.; the rank of ensign being given to pages who have gone through a certain course, and to gentlemen cadets who have been two years in the service. But the principal establishment for the education of officers is that of the *Corps des Cadets* at Petersburg, founded in 1731. It has about 700 pupils, the sons of noble parents, that is, of those who have attained to the rank of captain in the civil or military service. The pupils are divided into five classes, and on leaving school become ensigns in regiments of the line. This school has materially contributed to diffuse information among the inferior nobility, and to supply the army with able officers. There are also schools for cadets at Moscow, Woronesch, Polotsk, Tula, Tamboff, and other towns. The pupils leave after a fixed time, and are ranked as ensigns.

During peace promotion depends upon seniority, from the rank of ensign to that of colonel: during war it is determined indifferently, by gallantry, selection, and seniority.

**Pay, &c.**—The Russian army is supported at very little expense. Exclusive of their pay, the higher class of officers receive considerable allowances, as mess-money, &c.; and they generally contrive to eke out their emoluments in various indirect ways. The pay of the subalterns is the most inadequate; and it is hardly possible for any one to serve as a subaltern in the cavalry, especially in the cavalry of the guard, unless he have private resources. Officers are allowed, according to their rank, one or more servants (*deutschsk*), maintained by government, but equipped at the expense of their masters. They are taken from among the recruits, the least suitable for active service. The pay of a common Russian soldier does not exceed 25s. a year! and various deductions are made even from this miserable pittance. He gets a new uniform each year; and is allowed, in addition, three barrels of flour, 24 lbs. of salt, and a certain quantity of rye or oatmeal. On fête days the soldiers of the guard receive a certain allowance of butchers' meat, but this is very rarely tasted by their fellows. At home the soldier is paid in paper; but when he crosses the frontier he is paid in silver roubles; and as one of the latter is equivalent to four of the former, his pay, when abroad, is, of course, augmented in the same proportion. This may, perhaps, have been partly intended as a stimulus to the soldier to undertake offensive operations; but, besides having this effect, it was absolutely necessary, to enable him to subsist among foreigners without robbing. The cavalry horses are very good; and, fodder being very cheap, they are well kept.

Soldiers leaving the army on the expiration of their compulsory service are entitled to a small pension; and those who have been maimed or wounded are received and supported in some of the hospitals established in that view in different parts of the country. Soldiers who continue in the army after their term of compulsory service have expired acquire several advantages. They receive, exclusive of the retiring pension to which they are entitled, double pay; and after five years' voluntary service they are entitled to a retiring pension equal to three times their original full pay.

The inadequate pay of the officers and men is the grand evil in relation to the Russian army. It compels all classes to resort to underhand methods of making money; and hence the jobbing and corruption of the first, and the Jewish habits of the latter. Government is plundered in every possible way; and while the army loses in strength and efficiency, it may be questioned whether it would not be more advantageous, even in a pecuniary point of view, for government to increase the pay of the officers and troops, so as to raise them above the necessity of indulging in practices injurious to the service, of the existence of which it is well aware, but at which, as matters now stand, it is obliged to wink.

Capital punishments are at all times rare in the Russian army, and are never inflicted except during war. During peace culprits are uniformly condemned to transportation to Siberia, and to forced labour in the mines. Corporal punishments may be ordered by the commanding officers of regiments, but they cannot be carried beyond twenty strokes of the knout, and are not to be inflicted except for very grave offences. Soldiers who continue in the army after their full period of compulsory service is exhausted, cannot be corporally punished except by command of a council of war.

**Military Colonies.**—Exclusive of her ordinary forces, Russia has a considerable force of military colonists. These are a sort of agricultural soldiers established by a ukase issued in 1818, agreeably to the suggestion of General Arakchief. The object was to create a military force at the least possible expense, by ingrafting military service upon the agricultural labours of the peasants. For this purpose certain districts belonging to the crown were selected in the environs of the lake Ilmen, in the government of Novgorod,

and in some of the southern governments, the territory of which was distributed among the peasantry, at the rate of about 15 deciatines, or 45 acres of arable land to each head of a family, villages on an improved and uniform plan being at the same time erected for their accommodation. The stock and implements necessary for the cultivation of this land are furnished to the colonist by the crown, and he is charged with its cultivation, with contributing to the common magazine of the village, keeping up the roads, &c.; the surplus produce, after these outgoings and the provision for his family are deducted, being at his disposal. A soldier is assigned to each colonist, to be maintained by the latter; but the soldier is, in return, obliged, when not absent or engaged in duty, to assist the colonist in the labours of his farm. The colonists, as well as the soldiery, are deprived of their beards, and wear uniform, everything within the colony being subject to military regulation: there is no restraint on the marriage of the soldiers; and their male children, and those of the colonists, are all bred up to be soldiers. The girls are educated in separate schools; and, though there be no regulation to that effect, are generally married to the young men belonging to the colonies. Exclusive of the principal soldiers already alluded to, there is in every cottage a substitute or supplementary soldier, generally a son of the colonist, who is bound to take the place of the principal soldier in the event of his death or sickness, so that the regiments distributed among the colonies can never want their full complement of men.

The colonies may contain in all from 50,000 to 60,000 troops; but, notwithstanding what Marshal Marmont has stated to the contrary, the experiment is now generally regarded as a failure. It will always, indeed, be found to be impossible successfully to combine the business of agriculture with the military service. The soldiers get attached to their farms and families, and become unwilling to leave them and impatient of military restraint. Few, indeed, at all familiar with such subjects, will be surprised to learn that considerable discontent has, at different times, prevailed among the colonies in question. A dangerous mutiny, in which several officers lost their slaves, was not suppressed except by the presence of the emperor, who discovered on this occasion his usual courage and decision. Indeed, the general opinion is, that the military colonies will be gradually abandoned.

*Navy.*—Russia has a very considerable naval force, the fleet comprising about 50 ships of the line, 25 frigates, 10 steam ships, and about 600 smaller vessels. She is indebted for her naval power, as she is for her ascendancy by land, her civilization, and, indeed, everything else, to the creative genius of Peter the Great. Previously to his accession, Russia had no seaport, other than Archangel, and did not possess a single gun-boat. As soon, however, as Peter had acquired a footing on the Baltic, he set about creating a navy; and the better to qualify himself for the task of its construction, he visited Holland, where he not only made himself acquainted with the principles of naval architecture, but with the practical business of a ship's carpenter, by working himself at this employment! The monarchs since Peter, and especially Catherine II. and the present emperor, have all exerted themselves to increase and improve the fleet; and it is now, perhaps, in as high a state of efficiency as it is likely to attain.

The truth, however, is, that though the naval force of Russia be sufficient to give her an overwhelming influence in the three inland seas connected with her empire, or in the Baltic, the Black sea, and the Caspian, it is not in the nature of things that she should ever be able to cope with the maritime powers situated on the ocean. The Baltic, in fact, affords no proper field for the training and exercise of a fleet. Besides being limited in extent, it is frozen over for half the year; during all which time the ships have to be laid up; and the crews, being on shore, cannot possibly attain that skill in seamanship, and dexterity in manœuvring, that is attained by sailors constantly afloat. And, by a singular contradiction, instead of attempting to obviate this state of things, and sending squadrons into the open seas, and keeping them afloat all year, it is a rule of the Russian service, that every third year the seamen, if so we may call them, shall not go to sea at all! Nothing, therefore, can be more idle and unfounded than the statements so frequently put forth as to the danger to be apprehended from the increasing naval power of Russia. Such dangers are wholly imaginary. The physical circumstances under which she is placed must always prevent her from becoming a great naval power. She is superior, by far, to any other power on the Baltic, the Black sea, or the Caspian; but there her ascendancy naturally stops; and any attempt on her part to construct fleets to cope with the maritime powers, properly so called, would be a most absurd and unproductive waste of the national resources.

Russian ships, both in the Baltic and Black sea, last but a very short time, and, consequently, are very expensive.

The great naval stations are Cronstadt, in the gulf of Finland, and Sevastopoli, in the Black sea.

*Education in Russia* is at a very low ebb. There have for more than a century been schools in all the great towns; but these are but few in number; and the rural population is too much dispersed, even if it were not enslaved, and tied down to routine practices, to allow it to reap much benefit from country schools. But, notwithstanding the difficulties in its way, education is making progress, and has been much improved and extended within the present century. It has always been, and continues to be, an object of great solicitude with the government. A plan for a national system of instruction was laid down in a ukase of the emperor Alexander, issued in 1802; which, though it has undergone various modifications, contains the outline of the system that is still followed. The empire is divided, in respect of education, into a certain number of districts, each of which has, or is intended to have, a university, with a certain number of lyceums (at which the young men intended to fill civil offices are mostly instructed), gymnasia, high schools, and elementary schools, varying according to its extent and population. At present the districts are those of Petersburg, Moscow, Kharkof, Kasan, Dorpat, Kieff, Helsingfors, Odessa, White Russia, the Transcaucasian provinces, and Siberia; but of these only the first seven have universities. A curator, or inspector, is placed at the head of each district, who is in constant communication with the minister of public instruction. The subjects and courses of study, the examinations to be gone through, the fees to be paid, &c., are all fixed by government. The sum placed annually at the disposal of the minister of public instruction amounts to above three millions roubles.

The report of the minister of public instruction to the emperor, at the close of 1835, gives various details as to the then state of the higher departments of public instruction; and has partly supplied us with the following information:

1. *University of Petersburg.*—This university, founded in 1819, had, in 1835, 73 professors and subordinate functionaries, and 385 students. The six governments dependent upon it had eight gymnasia.

2. *University of Moscow.*—At the above epoch this university, founded in 1755, had 99 professors or functionaries, and 611 pupils. In its library were near 45,000 volumes. It had nine governments within its jurisdiction, and in these there were, in 1835, a lyceum, an institution for nobles, nine gymnasia, five free schools, 75 central schools, and 152 parish schools. The surveillance of the system is committed to the care of an inspector and five sub-inspectors. A school has since been founded in Moscow for the gratuitous education of the sons of 50 decayed merchants.

3. *The university of Kharkof,* founded in 1803, had 81 professors, &c., and 315 pupils. The eight governments under its jurisdiction had, in December, 1835, seven gymnasia.

4. *The university of Kasan,* founded in 1804, had, in 1835, 76 professors, &c., and 170 pupils. The nine governments under its jurisdiction had each a gymnasium. The Arabic, Persian, Turkish, and Mongolian languages are taught in this university.

5. *The university of Dorpat,* founded in 1632, one of the most celebrated in Russia, had, in 1835, 74 professors, &c., and 563 pupils. The university library had 58,936 volumes; and there is attached to the institution a botanical garden and a museum. The three governments under its jurisdiction had, in 1835, four gymnasia, and 156 public schools with 3750 pupils.

6. *The university of Kieff,* called St. Wladimir, was founded in 1834, being intended to supply the place of that of Wilna, suppressed after the late Polish insurrection. It had, in 1835, 88 professors and subordinate functionaries, and 203 pupils. It is well endowed, its revenues having amounted, in 1835, to 250,000 roubles. There are four governments under the jurisdiction of this university, in which were one lyceum, seven gymnasia, and 25 free schools with 461 pupils. Government provides for the education of 50 pupils at this university, of whom 26 are trained to be teachers, and 24 are to be instructed in the law, so as to enable them to fill judicial and other civil offices in the old Polish provinces.

7. *The university district of White Russia* includes five governments and a province. It has as yet no university; but it had, in 1835, 12 gymnasia and a high school.

8. *The university of Helsingfors,* in Finland, founded in 1827, instead of that of Abo, destroyed by fire in the course of that year. In 1835 it had about 40 professors, &c., and 425 pupils. There are in the grand duchy of Finland about 390 establishments for educational purposes.

9. *University district of Odessa.*—In this, as in the district of White Russia, no university has as yet been established. But there is a lyceum in Odessa; and in the three governments and provinces subjected to its jurisdiction, there were, in 1835, five gymnasia, and 13 high schools.

## RUSSIA.

10. In the *Transcaucasian district* there is a gymnasium, a free school, and 12 central schools.

11. The number of schools in *Siberia* is not specified; but there is said to be a great want of teachers there, as there is in most other divisions of the empire.

Besides the above there are various schools founded for particular objects, and not coming directly under the control of the minister of public instruction. Among others may be specified the military schools in Petersburg, Moscow, and other towns; schools for the special use of the nobility; the schools of the surgico-medical academies of Petersburg, Moscow, &c.; schools founded and endowed by individuals, and those founded by, and placed under, the control of the clergy.

The latter, or the theological schools, intended principally for the instruction of the sons of the clergy, are among the most ancient and important of any in Russia. They consist of four principal academies at Kieff, Moscow, Petersburg, and Kasan, which give instruction in the higher branches, and confer the degrees of A.M. and M.D.: of 36 diocesan schools; and of between 350 and 400 district schools, at which considerable numbers of the inferior classes are instructed; and of a still greater number of parish schools. The total number of scholars in these four descriptions of schools may vary from 65,000 to 75,000. Though the sons of the clergy generally follow the profession of their fathers, this is not always the case. Occasionally they enter the civil service, and some of the most celebrated statesmen, historians, poets, &c., of Russia have sprung from this class. (*Dr. Pinkerton's Russia*, p. 251; *Schützler*, &c.)

Elementary instruction is in the most depressed state. According to the ukase of 1802, a grammar school should be established in every district, and an elementary school should be established in every parish, or at least in every two parishes, according to the population. But these regulations have, in very many instances, not been complied with; and when it is considered that the advantages of education are but little appreciated by the peasantry, and that it is frequently discouraged by the nobility, to whom it occasions some expense, it will not appear surprising that such should be the case. In despite, however, of every obstacle, education has made and is making a very considerable progress. This is seen from the following statement of the schools in existence in 1804, 1824, and 1835:

	1804.		1824.		1835.	
	Schools.	Pupils.	Schools.	Pupils.	Schools.	Pupils.
Schools under the Minister of Public Instruction . . . . .	459	33,481	1,411	69,629	1,681	85,707
Military schools . . . . .	15	22,000	117	102,253	152	179,380
Ecclesiastical do. . . . .	100	15,000	544	50,000	601	67,424
Special do. . . . .	13	31,775	40	41,300	1,522	127,861
Totals . . . . .	627	109,256	2,118	263,224	3,956	360,575

Of the total schools existing in 1835, 2841 were maintained at the expense of government. Among the scholars, no fewer than 252,311 enjoyed bursaries, or were educated gratis. The total expense incurred that year by government for school purposes amounted to 28,734,141 roubles. Since 1835 the number of schools has been considerably increased: and if we add to the pupils at school those receiving instruction at home, it will be seen that education has made a rapid progress in Russia; and that though very backward, especially in the country districts, it is far more generally diffused than is generally supposed.

Since the epoch of the Polish insurrection, the government of Russia has discovered considerable jealousy with respect to education. In consequence all Russian subjects have been forbidden from studying at any foreign university; a strict surveillance is exercised over all descriptions of schools; no private schools are in future to be opened without permission from the proper authorities, and all masters and mistresses of such seminaries must be native Russians; and it is further ordered, that no one shall be a teacher in a private family without being accredited by a university, and having a certificate of capacity and good conduct. The sciences principally taught in the universities are the history, literature, geography, and statistics of Russia.

Lectures on politics or political economy would be esteemed dangerous, and are forbidden. The object of these regulations is manifest; and we are not surprised that some of them should have been adopted. But, whatever may be the case with the higher branches, the government has had sagacity to perceive that the diffusion of elementary instruction, including the principles of the useful arts, would not tend to shake the stability of the existing order of things, while it would do more than anything else to raise the peasantry from the state of ignorance and debasement in

which we now find them, and to develop the resources of the country. Great numbers of new schools have been opened within the last half dozen years; and lectures on agriculture, and the application of science to art, have been established in the different universities.

The fact is, that a taste for instruction and reading is beginning to be widely diffused among the town population. Many new works, some of them of distinguished merit, annually appear; and many foreign works are translated into Russian. Numerous literary and scientific journals issue from the presses of Petersburg, Moscow, Riga, Odessa, &c.

The journals of a political cast being subjected to a severe censorship, afford no means of judging of the prevalent political feelings of the mass of their readers. All works and journals imported from abroad must also be submitted, under heavy penalties, to the inspection of the censors. This jealousy of whatever might tend to expand the minds of the people, and to make them acquainted with their rights and duties, is the grand obstacle to the civilization of the higher classes and burghers. But, notwithstanding the censorship, about 350,000 volumes of foreign works, principally French and German, are annually imported.

Professors and teachers in universities and other seminaries obtain rank, and rise according to merit and seniority; and when unfit for the active duties of their station, they receive a small pension. But their regular salaries, like those of almost all other Russian functionaries, are totally inadequate to support their rank and station in society. A professor has only about £80 a year, and his assistant £32; a professor of languages has £24, and each of the students, supported by the crown, £8 a year! The institutions of Moscow and Tsarskoi-Zelo are the most distinguished of those intended for the instruction of nobles. In the first there are about 300 boarders, paid for by their parents; the rest attending as day-scholars. The first class pay £32 a year, and the second £24. (*Pinkerton's Russia*, p. 256.)

The pedagogical institution of Petersburg is one of the most important and valuable in the empire. It is exclusively appropriated to the education and training of school-masters. In 1835 it had 45 functionaries and 144 pupils.

Young men belonging to great families used formerly to be, for the most part, educated at home by foreign tutors, of whom not a few were ignorant, unprincipled, and servile. But an edict of the emperor Alexander contributed to subvert this practice, by excluding all young men, not educated at a public seminary, from the higher class of public employments; and, as already seen, it has been still farther discouraged by the present emperor.

**Races.**—The Russian empire embraces at present an immense variety of different races; but the great bulk of the nation, or the Russians properly so called, with the Poles, and also the Bulgarians and Servians, belong to the great Slavonic family. The Slavonians are most generally supposed to be the descendants of the *Sarmatae* of antiquity; but, though probable, this is by no means certain. At all events, they are radically distinct from the Goths, on the one hand, and from the Tartars and other Eastern nations, on the other. There is no foundation whatever for the common opinion that they were denominated Slavonians from their being originally slaves. On the contrary, when first known to history, the Slavonians were as free as the Goths. The practice of slavery was gradually introduced; and in Russia it was not completed till the beginning of last century. (See *Dr. Pinkerton's Russia*, p. 276, and the authorities there referred to.) The individuals of Slavonic origin at present within the limits of the Russian empire are supposed to amount to about 46,000,000, being about three fourths of the entire population.

The next principal race is that of the Ouralians or Finns, inhabiting the grand duchy of Finland, Esthonia, Lapland, and several districts in the north of the empire. The Finnish population is believed to amount, in all, to above 3,000,000 individuals. The Letto-Lithuanian race, amounting to nearly 2,000,000, is principally found in Lithuania and the W. provinces. There are, also, about 2,000,000 Tartars; 2,000,000 Georgians, Armenians, &c. The Germans settled in various parts of the empire may be taken at about 450,000; and there are, besides, 1,064,000 Jews, with Samoyedes, Mongolians, Kamchatskades, Americans, &c.

**Language.**—Those who are aware of the various races and the numbers of different people included within the Russian empire, need not be surprised that about forty distinct languages are in use, having attached to them an immense number of different dialects. The individuals belonging to the Slavonic race have two languages—the Russian and the Polish, both derived from the ancient Slavonic. This mother-tongue, augmented and modified by the influence of Christianity, which introduced into it a number of Greek words, and by the dominion of the Tartars, by whom it was loaded with Turkish and Mongolian terms, was gradually formed into the Russian. The primitive

## RUSSIA.

idiom continued, however, to be employed in the liturgy and the sciences till the reign of Peter the Great, when the Russian gained that ascendancy in religion and science it had already gained in conversation. The extraordinary advances that were then made in civilization occasioned the introduction of an immense number of new words. At length the language became tolerably well fixed. The alphabet, which consisted originally of 43, has been reduced to 37 letters, some of them borrowed from the Greek and others from the Latin. Some characters are, however, quite unlike those of any other language, and can hardly be pronounced by any save Slavonians. The grammatical forms are not well defined, and the conjugations are exceedingly irregular. Otherwise the language is rich, sonorous, flexible, natural, and elegant. The variety of its terminations is very remarkable. There is very little *patois* in Russia; the language of the country differing but little from that of the towns. There are, however, three principal dialects; 1st, the *Great-Russian*, the pure or cultivated language of the nation, spoken in Moscow, and all the central parts of European Russia; 2d, the *Mal-Russian*, or language of the S.E. parts of Russia in Europe; and 3d, the *White-Russian*, or dialect spoken in Lithuania, Volhynia, &c. It is a curious fact, that the first grammar of the Russian language appeared at Oxford in 1696. The best grammar is that of Dobrowski, published at Vienna in 1822. The Russian academy has published a dictionary of the language in 6 vols., 4to., 1805-1822.

*Literature.*—Russia has had several distinguished natural philosophers and mathematicians, but they have been chiefly foreigners (Germans principally) resident in the country. At present the literature of Russia occupies a respectable place in that of Europe. The introduction of Christianity was marked by the growth of a taste for letters among the ancient Slavonians; but the only remains of that early literature are some fragments of chivalrous poetry, and the annals of the monk Nestor. The Tatar invasion arrested the progress of literature, and Russia fell back into the abyss of barbarism, whence she did not begin to emerge till after the accession of the house of Romanoff. The attempts of the restorers of literature were at first confined to some feeble dramatic performances; and towards the close of the 17th and the beginning of the 18th centuries to miserable imitations of French and other foreign works. In the course of the 18th century, however, Lomonosoff created, by his precepts and his example, a national literature. Soumarokoff carried the drama to a high degree of perfection, and since then a crowd of writers have distinguished themselves in all departments, from the *epopeia* down to eulogic and fable; and the national literature continues to flourish with undiminished vigour. The History of Russia, by Karamzin, now in course of publication, is a work of great merit. Numerous journals or periodical publications, in different languages, devoted to politics, literature, and science, appear in different parts of the empire; but so long as these are subjected to a severe censorship, and as the government looks with jealousy on anything approaching to the expression of a free opinion, the political and philosophical works of Russian writers can be but little deserving of attention. The first Russian press was set up at Kieff in 1551. Previously to 1800, there had not been printed above 1000 works in Russia; in 1807, the number of such works was about 4000; in 1821, they amounted to 13,249, and at present (1840) to more than double this number, about a third part being translations from the French and other foreign languages.

Russia has some splendid libraries and museums. The imperial library at Petersburg contains about 400,000 vols. and 17,000 manuscripts; and the Romantzow museum contains a large collection of national antiquities and of every kind of curiosities.

*Religion.*—Most religions to be found in the ancient continent have their adherents in Russia. The court, however, and the great body of the nation profess the Russo-Greek Christian faith, denominated by its votaries the orthodox or true Catholic faith. The points in which it principally differs from the Roman Catholic faith, are, its denying the spiritual supremacy of the pope, its prohibiting the celibacy of the clergy, and its authorising all individuals to read and study the Scriptures in their vernacular tongue. The prohibition of celibacy is carried to such an extent, that no priest can perform any spiritual function before he is married nor after he becomes a widower; and as he is not allowed to remarry, the death of his wife and the cessation of his functions as a priest (unless he be specially allowed by the bishop to continue them) are necessarily identical! The priests may, however, on the death of their wives, enter into a convent, and enjoy the barren privilege of becoming eligible to be dignitaries of the church. Pictures of saints are admitted into the Russo-Greek churches and houses; but all statues, bas-reliefs, &c., are rigidly excluded. There are several fasts, of which that of Easter, which

continues for seven weeks, is the longest and strictest. Divine service is performed in the native tongue; and singing in churches is unaccompanied by any sort of instrumental music. The total population professing the Russo-Greek faith may be estimated at about 50,000,000. No country in Europe possesses such a number of fine churches as Russia. The meanest village is generally furnished with a temple ornamented with gilt domes and spires. These edifices are nearly all in the Grecian style of architecture, substantially built of brick, plastered and painted with much taste, forming a striking contrast to the huts or izbus of the peasantry by which they are surrounded.

There are in all Russia nearly 500 cathedrals and about 29,000 churches attached to the established faith, the latter employing about 70,000 secular or parochial clergymen. There are also about 550 convents, of which 480 are for men and 70 for women. Adjoining to each church, or near it, there is always a *kolokolnia* or belfry, commonly of great height, and provided with large bells, which are tolled several times during every service, and on holidays kept ringing the whole day. The Russians are passionately fond of the sound of bells, and larger and finer ones are nowhere to be found; every church has in its steeple four or five of different sizes; and in many this number is doubled and even trebled. (*Pinkerton's Russia*, p. 263, &c.)

The Russian church was long subordinate to that of the Eastern empire, its metropolitan being nominated by the patriarch of Constantinople. But after the capture of the latter city by the Turks in 1453, the Russian clergy appointed their own metropolitan. This practice continued till the reign of Peter the Great, who declared himself the head of the Russo-Greek church, appointing, at the same time, a synod for the management of its affairs. The clergy are either secular or regular—the former consisting of the parochial clergy, and the latter of the higher dignitaries, monks, &c. The hierarchy is composed of bishops, archbishops, and metropolitans. There are in all thirty-eight dioceses.

In Russia, as in most other countries, the piety, or superstition of individuals, had conferred great wealth on the church, particularly on the monasteries. This having occasioned many abuses and irregularities, afforded a pretext, of which Peter the Great availed himself, not only to suppress various monasteries, but to deprive the church of the greater part of its wealth. In the reign of Catherine II. the degradation of the clergy was completed by the appropriation of the whole immovable property of the church to the use of the state, pensions being assigned, in its stead, to the different functionaries to whom it had belonged. But with the exception of a few livings in Petersburg, Moscow, and other principal cities, the stipends of the clergy, even when increased by the offerings of the people, and by the perquisites on occasion of births, marriages, funerals, &c., are quite inadequate to provide for their comfortable subsistence. The total number of established clergy, of all ranks and orders, may be taken at about 254,000; and the sum allowed as stipends by government is so very small, that they are almost wholly dependent on their flocks. The revenue even of the senior metropolitan, the highest dignitary in the hierarchy, did not recently exceed £600 or £700 a year; and an archimandrite, or abbot, the class next below a bishop, had not generally more than from £40 to £50 a year! (*Pinkerton's Russia*, p. 241.) Mr. Coxe says, that "besides the surplice-fee, which in the poorest benefices amounts to £4 a year, and in the most profitable to but £20, they have only a wooden house, scarcely superior to that of the meanest among their parishioners, and a small portion of land, which they generally cultivate with their own hands; while the highest dignity to which they can ever attain, so long as they continue married, is that of a prototype of a cathedral, whose income scarcely exceeds £20 a year." (*Travels in Russia*, &c., iii. 143.)

When such is their depressed condition, we need not wonder at the low state of learning and want of refinement among the great bulk of the Russian parochial clergy. Coxe tells us, that when he was in Russia, many of the parish priests were so miserably ignorant as to be unable to read, even in their own language, the gospel they were commissioned to preach! But, though still very far behind, such gross ignorance is now much less common than formerly. The duties of the Russian clergy of all orders are very laborious. Dr. Pinkerton, whose authority is unquestionable, says, that we find in the family circles of the secular or parochial clergy, a degree of culture and good manners peculiar to themselves. This description of clergymen wear long beards, and form, in fact, like the priests of old, a kind of distinct class, or caste. None but the sons of clergymen are educated for the church; nor is there one instance in a thousand of any one belonging to any other class entering the ranks of the secular clergy. The regular, or dignified clergy, on the contrary, though often the sons of priests, not unfrequently receive recruits from among

## RUSSIA.

the nobles and other classes; and all the higher stations in the church continue to be filled up from their ranks. (*Pinkerton's Russia*, p. 250.) Orders, and other marks of distinction are conferred on the Russian clergy; and at present a bishop is little thought of unless he be decorated with the star and riband of some order of knighthood.

The Russo-Greek church has, from an early period, had its schisms and dissenters. The latter are said to be split into about 70 sects. They are classed under the common denomination of *raskolniks*. The ritual, or service of the Russian church is contained in *twenty volumes folio*, in the Slavonic tongue!

With the exception of the restraints laid on the Jews, who are excluded from Russia Proper, almost all religions may be freely professed anywhere in the empire. No member of the Russo-Greek church is, however, permitted to renounce his religion; and when a marriage takes place between one of its members and a person belonging to another faith, the children must all be brought up in the established faith. Catholics are very numerous in the Polish provinces; there are, also, large numbers of Lutherans, chiefly in the Baltic provinces, with Mohammedans, Jews, worshippers of the Grand Lama, Feticists, &c.

*Finances*.—Owing to the low state of civilization in most parts of the Russian empire, and the want of manufactures and great towns, the public revenue is by no means so great as might be supposed from the vast extent of the empire, and the magnitude of the pop. In consequence, however, of the cheapness of most necessary articles in Russia, and the small rates of pay of the soldiers and other public functionaries, her limited revenue goes a great way, and she is able to meet outgoings that elsewhere could not be met with less than twice or three times the sum.

Most topics connected with the public revenue and expenditure are involved in a mystery which it is not always possible to penetrate. The former is derived from a few sources, consisting of,

1. The capitation tax, charged on all the male boors belonging to individuals, and also on some descriptions of freemen. At an average it may be estimated at about 4 roubles a head; and, estimating those subjected to it at 10,000,000, it will give 40,000,000 roubles.

2. The *Obrok*, or rent paid by all male boors on the crown estates. Estimating this tax at 10 roubles, and those subjected to it at 9,000,000, it will give a sum of 90,000,000.

3. The tax of 1½ per cent. on the declared capital of the merchants. The amount of this tax may be taken at 8,000,000.

4. The customs' duties in 1839 produced very near 92,000,000 gross revenue. The expenses of collection amount to about 7½ per cent. of this sum.

5. The spirit duties produce a very large sum. In Russia, properly so called, government reserves to itself a monopoly of distillation; but in the rest of the empire the produce of the distilleries, which any one may construct, is subjected to an excise duty. The consumption of spirits is very large; and the revenue thence arising may be estimated at 100,000,000. Among their other privileges the nobility may distil all the spirits required for their establishments free of duty.

6. The salt mines and brine springs are monopolized by government, which sells their produce at the rate of a rouble per pood. This monopoly is supposed to produce, about 10,000,000 a year.

7. The crown mines, and the duties payable by the proprietors of private mines, produce together about 16,000,000.

8. The seigniorage on coin may be taken at 8,000,000.

9. Stamps, licenses, &c., and the tax laid on the sale of immovable property, may be estimated at 7,000,000.

10. Miscellaneous items, such as the sums paid by the nobles to be exempted from furnishing recruits for the army, the rent of crown property let on lease, the profits of crown manufactures, &c., may be taken at 8,000,000.

Hence it may be concluded that the public revenue of the Russian empire amounts, in all, to 379,000,000 or 380,000,000 roubles a year, that is, to about £15,536,000.

The taxes are partly farmed, and partly collected by government officers. There is, as already stated, in every government, a council charged with the administration of everything relative to the finances.

Our information with respect to the expenditure is even less accurate than that respecting the income of Russia. In time of peace, however, they are understood to be nearly equal; but during war, or on extraordinary occasions, involving an increase of expenditure, the ordinary revenue is quite insufficient to meet the outgoings, and it is usual both to increase the rate of taxation and to resort to loans. The expense of the army and navy (the latter being about one fifth or one sixth part of the former) amounts to more than half the revenue. The next great items are the interest and sinking fund on account of the public debt; the civil list,

internal administration, public works, &c.; the diplomatic service, and various other items.

According to the report of the minister, M. Kankrin, the public debt amounted, in 1837, to 956,333,574 roubles.

*Historical Sketch*.—The ancients had very little acquaintance with the vast countries included in the empire of Russia. The monarchy is usually regarded as having been founded by Rurik about anno 862, his dominions, and those of his immediate successors, comprising Novgorod, Kieff, and the surrounding country. In 980-1015 Vladimir introduced Christianity, and founded several cities and schools. But, from this period down to 1237, when the country was overrun by the Tartars, Russia, with few exceptions, was the theatre of civil war. In 1338 the seat of government was transferred to Moscow; and in 1481 the Tartars were finally expelled. In 1613 the house of Romanoff, whence his present majesty is descended, was raised to the throne; and from this period the empire acquired strength and consistency. Under Alexis Mikhailovitch (1645-1676) White Russia and Little Russia were conquered from the Poles, and the Cossacks of the Ukraine acknowledged the supremacy of the Czar, various internal improvements were effected, and the power of Russia began to be felt and feared by all her neighbours. At length, in 1696, Peter the Great ascended the throne, and the destinies of Russia and of the northern world were immediately changed. This prince, who has, probably, a better claim than any other that ever existed to the epithets of "great" and of "father of his country," gave to the arms of Russia a decided preponderance in the north of Europe; he also gave her a fleet; conquered large provinces on the Baltic; laid the foundations of the noble city which bears his name; and introduced among his people the arts, the literature, the customs, and, to some extent also, the laws and institutions of the more civilized European nations. The difficulties he had to encounter in his projects for remodelling and civilizing his dominions were of the most formidable description; and could not have been overcome by any one possessed of less authority, or of a less stern decided character.

From this period Russia has progressively advanced in power and civilization. Under Catherine II. (1762-1796), a princess of extraordinary talent, Russia acquired a vast accession of power by her acquisitions in Poland and on the Black sea, where she has now the same ascendancy as in Baltic. The history of Russia, during the present century, is known to everybody. The attempt of Napoleon to dictate a peace to the emperor Alexander, in the ancient capital of the Czars, led to the overthrow of his colossal power, and gave a vast accession of influence and consideration to Russia; which has been maintained and extended under the present emperor.

It would be idle to speculate upon the permanency of the present order of things in Russia. A great deal, in such an empire, depends on the personal character of the sovereign. The present occupier of the throne has every quality—good sense, undaunted courage, great decision, and the utmost vigilance and activity—required in the ruler of such a country. But should the government fall into less able and skilful hands, it is not improbable that Russia may become the theatre of revolution and change, for which, at present, she certainly is not fitted.

The following table gives a view of the extent of the Russian dominions at different epochs:

	Germ. sq. m.
In 1535, at the accession of John the Terrible,	
his dominions comprised . . . . .	37,200
— 1585, at his death . . . . .	144,000
— 1613, at the accession of Michael Romanoff . . . . .	148,000
— 1645, at his death . . . . .	258,000
— 1725, at the death of Peter the Great . . . . .	280,000
— 1741, at the accession of Elizabeth . . . . .	325,000
— 1796, at the death of Catherine II. . . . .	336,000
And at present (1841) . . . . .	364,000

Tables similar to this have been the theme of much silly declamation about the grasping, insatiable ambition of Russia. No doubt her rulers have the same desire to extend her territories as those of France, England, or any other power; but certainly they are not, in this respect, at all peculiar. In point of fact, however, by far the greater part of the territorial acquisitions of Russia have consisted of mere deserts, or of countries occupied by roving barbarians, and are worth little or nothing. Her really valuable acquisitions have been confined to those on the side of Poland and the Black sea. Her conquests in this direction have added materially to her power; and it is but fair to add, that they have also added materially to the well-being and civilization of the inhabitants.

Russia, L. Loraine co., O. It has one store, one grist-mill, one saw-mill, one printing-office, one bindery, one semi-weekly newspaper; the Oberlin Collegiate institute with 498 students, three schools, 101 scholars. Pop. 1302. Russia, p. t., Herkimer co., N. Y., 16 m. N. Herkimer,

## RUSTCHUK.

93 m. N.W. Albany, 408 W. Watered by West Canada creek and its branches. It contains a church common to Baptists and Presbyterians, eight stores, two lumber-yards, three fulling-mills, two cotton factories with 1004 spindles, two forges, four grist-mills, 11 saw-mills, four tanneries; 14 schools, 619 scholars. Pop. 2298.

RUSTCHUK, or RUTSCHUK, a fortified city of Turkey-in-Europe, prov. Bulgaria, cap. Sanjak, on the Danube, 56 m. E. by N. Nicopolis, and 62 m. N.W. Shumla. Pop. variously estimated, but may probably be about 30,000. It is built on a steep bank, up which the streets ascend from the river. It is surrounded on three sides by walls, in the manner of Turkish fortifications; but towards the river it is partly open. At its N.E. extremity is a ruined citadel, on an abrupt height above the Danube. "The description already given of Belgrade applies, with very little modification, to this Bulgarian city, except that Rustchuk is not in such a state of dilapidation, and the Turks here appear more civilized than the Servians: they have schools for their boys; and several of their houses are furnished with glass windows. The comfort of fountains, simple as they are in exterior, and the luxury of coffee-houses, are not unknown to the Bulgarians; on the contrary, the one and the other abound in Rustchuk." (*Elliot's Trav.*, i. 180.) The streets are narrow and gloomy; on either side they present only dead walls; and as in all the rest of Bulgaria and in Roumelia, each of the larger houses is a fortress in itself. The governor's palace, some of the mosques, and some public baths are the only edifices worth notice. Many of the buildings are white-washed, and their tall chimneys are visible at a great distance. Woollen, silk, and cotton stuffs are made here; and there are many Turkish, Greek, and Armenian merchants in the town, who carry on considerable trade with Vienna, Wallachia, &c., in cloth, corn, and indigo. Mr. Quin observed in the shops of Rustchuk, "a rich display of military saddles and bridles, belts, and car-touche-boxes, gayly ornamented; of Persian carpets, Broussa silks, ataghans, pistols, pipes, umbrellas, Greek caps, scarlet jackets, yellow slippers, gold-headed canes, fine cloths, woollen and cotton stockings, and every article of grocery, fruits, vegetables, meat, fowl, fish, hardware, and jewellery. The floors of these shops were usually elevated above the level of the street, and the owners and their assistants sat inside upon the floors, some working as tailors, some as saddlers, and artisans of the ordinary trades." (*Voyage down the Danube*, 314-15.) In 1812, the Russians took and burned the citadel and a part of the town; and in 1829, they entered the town after little opposition. (*Elliot's Trav.*, i. 178-182; *Quin's Voyage*, 288-315; *Slade's Germany and Russia*, 187-189.)

RUTHERFORD, county, N. C. Situated in the S.W. part of the state, and contains 1025 sq. m. Drained by head branches of Broad river. It contained in 1840, 14,066 neat cattle, 17,784 sheep, 92,059 swine; and produced 76,663 bushels of wheat, 6030 of rye, 1,090,388 of Indian corn, 1000 of barley, 57,955 of oats, 16,599 of potatoes, 4653 pounds of tobacco, 250,325 of cotton. It had 11 stores, two flouring-mills, 53 grist-mills, 16 saw-mills, two oil-mills, five tanneries, 15 distilleries, one printing-office; eight schools, 149 scholars. Pop.: whites, 15,875; slaves, 3201; free-coloured, 126; total, 19,202. Capital, Rutherfordton.

RUTHERFORD, county, Tenn. Situated near the centre of the state, and contains 540 sq. m. Drained by Stone's creek and its branches, flowing into Cumberland river. It contained in 1840, 25,225 neat cattle, 35,625 sheep, 81,430 swine; and produced 147,500 bushels of wheat, 10,000 of rye, 3,301,000 of Indian corn, 222,400 of oats, 114,666 of potatoes, 1,069,000 pounds of tobacco, 2,620,000 of cotton, 1200 of sugar. It had 20 stores, five woollen factories, one cotton factory with 612 spindles, five flouring-mills, 30 grist-mills, 25 saw-mills, 12 tanneries, 20 distilleries, two printing-offices, two weekly newspapers; five academies, 244 students, 24 schools, 633 scholars. Pop.: whites, 15,042; slaves 9072; free coloured, 166; total, 24,280. Capital, Murfreesboro'.

RUTHERFORDTON, p. v.; capital of Rutherford co., N. C., 216 W. by S. Raleigh, 453 W. It contains a court-house, jail, an academy, several stores, and about 300 inhabitants.

RUTHERGLEN (pronounced Ruglen), a royal and parl. bor. of Scotland, co. Lanark, on the left bank of the Clyde, 2½ m. S.E. of Glasgow. Pop., in 1831, 4741. It consists of one leading street, straight and well paved, nearly ½ m. in length, 112 ft. broad, and of the parallel lane called the Back Row. From both sides of the main street, which lies in a direction nearly E. and W., go off a few cross lanes. There are no public buildings except the parish church, a *quoad sacra* place of worship connected with the establishment, a chapel belonging to the Relief, and the town-hall. A small cotton-mill employs about 80 hands; and there are two print-works in the vicinity, a Turkey red dye work, and a chemical work. About 500 hand-

## RUTLAND.

loom muslin weavers are employed by Glasgow manuf-  
turers.

Rutherglen was created a royal bor. in 1126, at which time it was of more importance than Glasgow, the latter being included within its municipal boundaries. But in 1226, Alexander II. granted a charter to Walter, bishop of Glasgow, relieving his town from certain servitudes previously due to Rutherglen. (*Mun. Corp. Rep.*, 1835, part II. p. 371.) Previously to the passing of the Reform Bill, in 1832, Rutherglen, unimportant as it has been, enjoyed the same parliamentary privileges as Glasgow; being united with it and two other towns in sending one member to the House of C. Glasgow has since that period had two representatives for itself; while Rutherglen joins with Kilmarnock and three other bors. in choosing a mem. Registered voters, in 1840, 1170. Municipal councillors, 18; corporation revenue, £700. (*New Stat. Acc. of Scotland, sec. Lanarkshire*, p. 373-398; *Ure's Hist. of Rutherglen*, 1793.)

RUTHIN (Welsh *Rhudd-ddyn*, or *Rhuthyn*, the "Red-fortress"), a parl. and mun. bor., market-town, and par. of N. Wales, co. Denbigh, hund. Ruthin, in the vale of Clwyd, 17 m. W.S.W. Chester, and 45 m. N.W. Shrewsbury. Pop. of mun. and parl. bor., in 1831, 3376. The town, situated on rising ground, chiefly E. of the Clwyd, consists of a principal avenue, entered by several other inferior streets. At the summit is the market-place, in which is the town-hall, a substantial building, erected in 1663, but recently repaired. The county hall, a fine modern stone structure, forms with the jail an interesting feature in the town. The jail, recently enlarged by the addition of a building for female prisoners, has suitable arrangements for the classification of the inmates. The church, originally conventual, belonging to a community of Bonhommes, is an ancient structure of mixed architecture; the tower, S. and W. fronts, being comparatively modern, and much inferior to the rest of the building. The interior is elegantly fitted up with stalls, tabernacle-work, &c., and the roof is of carved oak, pannelled, and richly sculptured. It was made collegiate in 1310 by John de Grey, who formed an establishment for regular canons, and endowed it with valuable lands and numerous privileges. A part of the cloisters has been converted into a residence for the warden of Christ's hospital, founded here by Dr. Gabriel Goodman, for the support of 12 decayed housekeepers. The warden and pensioners are inappropria of the great tithes of Ruthin and Llan-Rhydd; and the warden, who is appointed by the dean and chapter of Westminster, is the vicar of both parishes, with an income of £263 a year. The free grammar-school is endowed with a moiety of the tithes of Llan-Eldan, and is under the superintendence of the warden, though the appointment of the head-master rests with Jesus, college, Oxford: the school ranks as one of the best in N. Wales, and is attended by about 50 boys. A national school is established here for 40 children of each sex; and there are Sunday-schools attached to the chapels of the Independents, Wesleyan and Calvinist Methodists. No particular trade or manufacture is carried on in the town, exclusive of what is necessary for the accommodation of the inhabs., who are principally employed in agriculture; and no change of any consequence appears to have taken place in it for several years, neither are any causes in operation or likely to operate towards the extension of the town beyond its municipal limits. (*Mun. Bound. Rep.*)

The corporation of Ruthin consists, according to the Mun. Reform Act, of a mayor, three aldermen, and 12 councillors. Corp. rev., in 1839, £145. The bor. unites with Holt, Wrexham, and Denbigh in sending one mem. to the H. of C., the right of election down to the Reform Act having been vested in the resident burgesses. The parl. limits, according to the Boundary Act, include with Ruthin, parts of the pars. of Llan-Ffwrth, Llan-Rhydd, and Llan-Fair-Dyffryn-Clwyd. Reg. electors, in 1839-40, for the united bors., 941. Ruthin is likewise one of the polling places at elections for the co., and the assize town; besides which the quarter sessions are held alternately here and at Denbigh. Markets, well supplied with corn, on Monday, and a provision market on Saturday. Fairs, March 19, Friday before Whit-Sunday, Aug. 8, Sept. 30, and Nov. 10.

Ruthin, according to the Welsh historians, is of high antiquity; but we have no authentic information respecting it prior to the reign of Edw. I., who built here a magnificent castle, overlooking the Clwyd, on its W. bank, which he presented, in 1281, to Reginald de Grey. The ruins have been restored with admirable taste by the present proprietor. The manor of Ruthin belongs to the Lady Grey de Ruthin, daughter of the 19th baron of that name, who has been a great benefactress to the town.

RUTLAND, an inland co. of England, surrounded by Lincoln, Leicester, and Northampton. It is the smallest of the English co.s., containing only 95,360 acres, of which about 9000 are arable, meadow, and pasture. Surface gent-

## RYDE.

ly varied; air pure; and the soil almost everywhere loamy and rich. The W. part of the county, in which is the vale of Camrose, celebrated by Drayton, is under grass, and the E. chiefly in tillage. It is particularly celebrated for its wheat, cheese, and sheep. Estates and farms of various sizes. Average rent of land, in 1810, 20s. 9½d. an acre. The river Welland runs along its S.E. border, from Rockingham to near Stamford; and there is a canal from the river Soar to Oakham, the principal town. It is divided into five hundreds, and 25 parishes; and returns two members to the House of Commons, both for the county. Registered electors, in 1839-40, 1373. In 1831 Rutland had 3935 inhabited houses, 4191 families, and 19,385 inhabitants, of whom 9721 were males, and 9664 females. Sum expended for the relief of the poor, in 1839-40, £7246. Annual value of real property, in 1815, £138,216: profits of trades and professions in ditto, £30,939.

**RUTLAND, county, Vt.** Situated toward the S. part of the state, and contains 958 sq. m. Watered by Otter creek, Black, White, Quechee, and Pawlet rivers. The Green mountain range passes through its E. part. It contains iron ore and excellent marble. There were, in 1840, 40,023 neat cattle, 271,727 sheep, 15,563 swine; and were produced 40,116 bushels of wheat, 38,013 of rye, 154,792 of Indian corn, 10,850 of buckwheat, 154,119 of oats, 642,108 of potatoes, 1990 pounds of silk cocoons, 396,804 of sugar. It had 77 stores, 11 furnaces, five forges, 11 fulling-mills, eight woollen factories, one cotton factory with 1076 spindles, one flouring-mill, 20 grist-mills, 103 saw-mills, two oil-mills, one paper-mill, 27 tanneries, two printing-offices, one weekly newspaper; three academies, 382 students; 249 schools, 10,339 scholars. Pop. 30,699. Capital, Rutland.

**RUTLAND, p. t., capital of Rutland co., Vt.,** 62 m. S.W. Montpelier, 456 W. Drained by Otter creek and its branches, and by a branch of Castleton river. It contains five churches, two Congregational, an Episcopal, a Methodist, and a Baptist, 11 stores, one woollen factory, two grist-mills, two saw-mills, one paper-mill, one tannery, one printing-office, one bindery, one weekly newspaper; 16 schools, 963 scholars. Pop. 2708. The principal village has an elevated situation, and contains a courthouse, jail, two churches, 12 stores, the printing-office, about 100 dwellings, many of them handsome, and about 600 inhabitants.

**RUTLAND, p. t., Worcester co., Mass.,** 55 m. W. by N. Boston, 412 W. Incorporated in 1722. A branch of Ware river affords water-power. It is on the dividing ridge between the waters of Connecticut and Merimac rivers. It contains a Congregational church, a town-house; one academy, 40 students; 13 schools, 712 scholars. Pop. 1260.

**RUTLAND, p. t., Jefferson co., N. Y.,** 6 m. E. Watertown, 158 m. N. W. Albany, 422 W. Drained by Sandy creek and Black river. It has the remains of an Indian fortification, and contains four stores, two fulling-mills, one grist-mill, seven saw-mills, three tanneries; 11 schools, 253 scholars. Pop. 2090.

**RYDE, a town, seaport, and watering-place of England,** on the N. side of the Isle of Wight, par. of Newchurch, and hund. of E. Medina liberty, 5½ m. E.N.E. Newport. Pop. of Newchurch, 1831, 4928, of which about 3800 belonged to the town of Ryde. The latter has a peculiarly handsome appearance from Portsmouth, opposite to which it lies, at a distance of about 5 m.; its white houses, interspersed with gardens and plantations, being ranged in successive rows upon a tolerably steep acclivity, rising directly from the sea, backed by bold hills, and surrounded with cultivated land. It consists of a principal street, running upward from the shore, and intersected by others, some of which comprise handsome detached residences, well adapted for the numerous visitors who flock thither during summer. It has two chapels-of-ease, one of which is a handsome modern structure, places of worship for Wesleyan Methodists, Baptists, and Independents, with attached Sunday-schools and an endowed charity school; it has also a small theatre, assembly-rooms, libraries, baths, &c., and some good hotels. The accommodations for summer visitors have been greatly improved within the last few years, since Ryde has risen into favour; and a pier, constructed on wooden piles, runs ¼ m. into the sea, making the town accessible seaward at all times of the tide. Steamboats run nearly every hour in the day, during summer, between Ryde, Portsmouth, Cowes, and Southampton; and the opening of the South-western railway has occasioned a great influx of visitors to this and its rival watering-place, W. Cowes. The air is salubrious, and in the environs are many agreeable walks commanding fine land and sea views; but as a bathing place, Ryde is inferior to Southsea, on the opposite coast of Hampshire, or to Cowes, on account of the shallowness of the water, for a lengthened distance from shore. It has no manufactures, and its trade is principally confined to the supply of visitors and the inhabitants.

**RYE, a parl. and mun. bor., cinque port, market town and**

## RYEGATE.

par. of England, co. Sussex, hund. Godstow, rape Hastings, on the Rother, about 3 m. from its mouth, 38 m. E. by N. Brighton, and 53 m. S.S.E. London. Pop. of parl. borough (which comprises, with the par. of Rye, that of Winchelsea and six others, with a portion of the par. of Brede), in 1831, 7700. The town, which stands on the edge of an extensive tract of marsh land, running along the coast as far as Hythe, consists of several regular and well-formed streets, lined with old, but respectable-looking houses, many of which command fine views of the channel and surrounding country. In the centre of the town is the market-house and town-hall, with an old structure called the Ypres tower, occasionally used as a jail. A public library is supported by subscription, and there is a small theatre. The church is a large cruciform structure, with a central tower, partly of Norman and partly of early English architecture: the aisles of the choir have fine lancet windows, and there is a large and fine perpendicular E. window. The living is a vicarage, in the gift of the earl of Burlington. The Wesleyan Methodists, Independents, and Baptists have their respective places of worship, with attached Sunday-schools; and it has a small endowed grammar-school, an English school, with several almshouses and other charities. "There is no manufactory in the town, which depends upon being the port and market through which the surrounding rich agricultural district is supplied. Some years since it is said to have been in a declining condition; the reverse, however, is now the case, and it appears to be, indeed, in an eminently thriving state. This is mainly attributable to the improvements lately made in the harbour and in the navigation of the river, which have made the town accessible to vessels of 200 tons. By means of the Rother and its branches, it supplies the surrounding country to a distance of 8 m. with coals and other articles; and there is a project in contemplation to extend the navigation as far as Robert's bridge, a distance of 15 m. in a straight line. This, if carried into execution, will be a source of considerable advantage to the town, which will then become the port through which the country, as far as Battle, will be supplied." About 90 vessels, of the aggregate burden of nearly 5000 tons, belong to the port; and in 1840 the gross customs' tons duties amounted to £6790. The exports are chiefly wool, oak timber, and bark. A considerable quantity of hops is raised in the neighbourhood, for the drying of which large quantities of Welsh coal are annually imported. (*Mun. Bound. and Corp. Rep.*)

Rye is a borough by prescription, and is governed, under the Municipal Reform Act, by a mayor, three other aldermen, and 12 councillors, styled "the mayor, jurats, and commonality of the ancient town of Rye." Corp. revenue in 1839, £429, exclusive of £86 accruing from the sale of property. Courts of session are held under a recorder; and there is a court for the recovery of debts under 40s. Rye returned two members to the House of Commons from the 42 Edw. III. down to the Reform Act, which deprived it of one of its members, and at the same time enlarged the electoral limits, so as to comprise with the old borough the rest of the parish of Rye, the town and parish of Winchelsea, with six other entire parishes, and a small portion of the parish of Brede. Registered electors in 1839-40, 524. Markets on Wednesday and Saturday; fairs, Whit-Monday and August 10th.

Rye is very ancient, but its early history is little known. It appears to have been an original cinque port, and is mentioned as a member of these ports in a charter granted by Henry III. In the reign of Edward III. the town was so considerable that it sent nine armed vessels to the royal fleet when the king undertook the invasion of France. In the next reign, A.D. 1377, it was plundered and burnt by the French, but it soon recovered its consequence. The rise of other ports on the same coast during the last century, and the filling up of its port, occasioned a considerable decrease of its importance, which, however, as above seen, it has now a fair prospect of in some measure recovering.

**RYE, p. t., Rockingham co., N. H.,** 64 m. S. Portsmouth, 42 m. S.E. Concord, 479 W. Bounded S.E. by the Atlantic. The harbour admits small vessels engaged in the fisheries. It has three churches, a Congregational, Methodist, and Christian, three stores, five grist-mills, three saw-mills; one academy, 25 students; four schools, 420 scholars. Pop. 1305.

**RYE, p. t., Westchester co., N. Y.,** 27 m. E.N.E. New-York city, 146 m. S. Albany, 251 W. Bounded S.E. by Long Island sound, E. by Byram river. It contains three churches, a Methodist, Episcopal, and Presbyterian, five stores; three academies, 54 students; six schools, 193 scholars. Pop. 1803.

**RYEGATE, p. t., Caledonia co., Vt.,** 43 m. E. by S. Montpelier, 529 W. Bounded E. by Connecticut river. Watered by Wells river, which affords water-power. At Canoe falls, in Connecticut river, is a dam, which affords good mill seats. It contains two churches, an Associate Re-

## SABINE.

formed Presbyterian and a Reformed Presbyterian, one store, one grist-mill, five saw-mills, two tanneries; nine schools, 459 scholars. Pop. 1223. First settled in 1774, by emigrants from Scotland, from whom most of the inhabitants are descended.

## S.

SABINE r., La. and Texas, rises in 32° 30' N. lat., in Texas, and, flowing south-eastwardly, it enters Louisiana; and, from the southern part of Caddo parish, it forms the boundary between Louisiana and Texas. It is about 300 m. long, and enters the gulf of Mexico through Sabine lake, which is 30 m. long, and from 1 to 8 m. wide.

SACKETT'S HARBOUR, p. v., Houndsfield t., Jefferson co., N. Y., 174 m. N.W. Albany, 415 W. Situated on the S.W. side of Black River bay, near the foot of lake Ontario. First settled in 1802, incorporated in 1821. During the last war with Great Britain, it was a military and naval station of the Americans, and has the best harbour on the lake. It contains three churches, an Episcopal, Methodist, and Presbyterian, a ship-yard, extensive U. States barracks, a bank, 22 stores, two furnaces, one steam-engine factory, two grist-mills, three saw-mills, one large tannery, one distillery, 300 dwellings, many of them of limestone, and about 2000 inhabitants. On a point S. of the village is a light-house. A canal brought from Black river, near Watertown, affords good water-power. Tonnage in 1840, 3637 tons.

SACO r., N. H. and Me., rises in the White mountains, within a few rods of the source of Ammonoosuc river, which flows W. to Connecticut river, while Saco river flows E. through the Notch in the White mountains, and finally enters the Atlantic, between Saco and Biddeford. It has four principal falls in Maine, of 70, 20, 32, and 42 feet respectively, affording in the whole an immense water-power. Great quantities of pine timber grow on its banks.

Saco, p. t., and port of entry, York co., Me., 15 m. S.W. Portland, 65 m. S.S.W. Augusta, 100 m. N.N.E. Boston, 530 W. Bounded S. by Saco river, which affords extensive water-power, by a fall of 42 feet, within a short distance. It contains 38 stores, three cotton factories with 17,760 spindles, two grist-mills, two saw-mills, three tanneries, two printing-offices, two weekly newspapers; five academies, 246 students; 21 schools, 500 scholars. Pop. 3358. The village contains five churches, a Congregational, Episcopal, Methodist, Baptist, and Universalist, a bank, an academy, numerous stores and mills, many handsome dwellings, and considerable trade, particularly in lumber. Tonnage of the port in 1840, 3358.

SADSBURY, p. t., Chester co., Pa., 37 m. N.W. Philadelphia, 59 m. E.S.E. Harrisburg, 139 W. The postoffice location is called Sadsburyville. Drained by Octarara creek and the W. branch of Brandywine river. It contains 10 stores, three fulling-mills, two woollen factories, two cotton factories with 2217 spindles, two forges, one furnace, one fulling-mill, five grist-mills, four saw-mills; eight schools, 320 scholars. Pop. 2292.

SADSBURY, t., Lancaster co., Pa., 16 m. S.W. Lancaster. It has three stores, three forges, five flouring-mills, three grist-mills, four tanneries; eight schools, 250 scholars. Pop. 2093.

SADSBURY, t., Crawford co., Pa. It has nine stores, three grist-mills, two saw-mills, one tannery, one distillery. Pop. 2441.

SAFFI, AZAFFI, or ASFI (an. *Sofa*), a city and seaport of Morocco, prov. Abda, on the Atlantic, near Cape Cantin, and 95 m. N.W. Morocco. Pop. estimated at 12,000, including about 3000 Jews. (*Græberg of Hemsö*.) It is built in a sterile ravine between two hills; being very hot in summer, and disagreeable in winter, "as the waters from the neighbouring mountains, occasioned by the rains, discharge themselves through the main street into the ocean, deluging the lower apartments of the houses." (*Jackson*.) It has thick and high walls, and a neat palace, formerly the occasional residence of the emperor's sons; a little way N. of the town is a small fort. Its roadstead is safe in summer, but in winter, when the winds blow from the S. or S.W., vessels are obliged to run to sea; which they have been known to do several times in the course of a month, while taking in their cargoes.

Saffi was formerly an emporium of the European trade with Morocco, but its commerce has declined with the rise of Mogadore; on the foundation of which, in 1760, the emperor ordered the removal thither of all the merchants of Saffi. The Moorish and Bedonin inhabitants are fanatical and intolerant, and said to be inimical to Europeans, with whom, however, they have now little intercourse. In the environs are many Mohammedan sanctuaries. This city is supposed to have been founded by the Carthaginians. In modern times, it belonged to the Portuguese, from 1508 till

## SAID.

1641. (*Græberg of Hemsö, Specchio di Marocco; Jackson's Morocco, &c.*)

SAFFRON-WALDEN (anc. *Saffron-weald-dæn*, "the woody hill abounding with saffron"), a municipal bor., market town, and par. of England, co. Essex, and hund. Uttlesford, 23 m. N.N.W. Chelmsford, and 37 m. N.N.E. London. Pop. of mun. bor., in 1831, 4350. The town, in a valley close to a tongue of high land, surmounted by the church, comprises several good streets, and a spacious market-place, with a neat town hall. Many of the houses are good, and the place generally bears an appearance of neatness and comfort. The church, which stands so high as completely to overtop the town, is an elegant structure in the perpendicular style, with an embattled tower at its W. end; the living, a vicarage in the gift of Lord Braybrooke, is worth £237 a year. The Independents, Baptists, Unitarians, and Friends, have each places of worship. A free grammar-school, endowed by Edward VI., has an exhibition at Queen's college, Cambridge; but the education is now conducted on the national plan, and connected with it is a girls' school, the whole furnishing instruction to about 250 children of both sexes. There are likewise several Sunday-schools, some almshouses lately rebuilt, and various other money charities. Saffron-Walden has several large malting establishments, and enjoys a good retail trade for the supply of the numerous wealthy families in its vicinity; besides which it has well attended markets for corn, cattle, and provisions. The neighbourhood is extremely productive, and well cultivated; but the growth of saffron (whence the name of the town) has been abandoned. The borough was incorporated by Edward VI., in 1549, and is governed, under the Municipal Reform Act, by a mayor, three aldermen, and 12 councillors. Corporation revenue, in 1839, £147 19s. Petty sessions for the hundred are held every alternate week, and there is a court for the recovery of debts under £10. Saffron-Walden is also one of the polling places at elections for the N. division of Essex, and the principal town of a poor law union, embracing 24 parishes. Markets on Saturday; fairs, for horses and cattle, Saturday before Midlent Sunday, and November 1st.

SACHALLEN. See JAPAN.

SAG HARBOUR, p. v., port of entry, East Hampton and Southampton townships, Suffolk co., N. Y., 110 m. E. New-York, 260 m. S.S.E. Albany, 340 W. Situated toward the E. end of Long Island, on a branch of Gardiner's bay, and has a good harbour. It contains four churches, a Presbyterian, Methodist, Roman Catholic, and an African, numerous stores, 450 dwellings, and about 3250 inhabitants. The inhabitants are largely engaged in the whale fishery, having a considerable number of vessels and a large amount of capital embarked in it. The tonnage of the port in 1840 was 20,405 tons. The collection district, however, embraces the bays and harbours between Montauk point and Oyster Pond point. Salt is made by the evaporation of sea water.

SAGINAW, river and bay, Mich. The river is one of the largest in the peninsula, and is formed by the union of Cap. Flint, Shiawassee, and Tittabawassee rivers, 25 m. in a direct line from its entrance into Saginaw bay. Its length from the head of some of its branches to its mouth is about 130 m. The bay into which it enters is 60 m. long and 30 wide, setting up from lake Huron. It is navigable for vessels of the largest class, and has some of the best harbours on the lake. At the entrance of the river there is a bar with about 5 or 6 feet of water; but above that it has a depth of 25 or 30 feet.

SAGINAW, county, Mich. Situated toward the N.E. part of the settled portion of the peninsula, and contains 1031 sq. m. Saginaw bay bounds it on the N.E. Watered by Saginaw river and its tributaries. It contained, in 1840, 1066 neat cattle, 1462 swine; and produced 4125 bushels of wheat, 9837 of Indian corn, 2841 of oats, 16,929 of potatoes, 12,229 pounds of sugar. It had five stores, one grist-mill, six saw-mills. Pop. 692. Capital, Saginaw.

SAGINAW, p. t., capital of Saginaw co., Mich., 97 m. N. by W. Detroit, 621 W. The village is on the W. bank of Saginaw river, 23 m. from its mouth. The ground on which it stands is elevated 30 feet above the level of the river. It contains a courthouse, a U. States landoffice, a deputy collector's office, three stores, two warehouses, and two steam saw-mills. A steamboat and several vessels belong to the place. The t. has five stores, one grist-mill, five saw-mills. Pop. 837.

SAHARA, or the great central desert of Africa. (*See AFRICA*, i., 29.)

SAID (an. *Sidon*), a town and seaport of Asiatic Turkey, celebrated in remote antiquity as one of the greatest emporiums of the Mediterranean, and as being the parent city of Tyre. Its modern representative is seated on the N. side of a cape extending into the Mediterranean, 22 m. N.N.E. Tyre, 20 m. S.S.W. Beyrout, and 55 m. W. Damascus; lat. 33° 34' 5" N., long. 34° 22' 40" E. Pop. estimated by

## SAI-GON.

Mr. Robinson at from 4000 to 5000 only, of whom more than half are Christians of the Greek church. Olivier says, "Sidon may be compared with Beyroot as to its population and extent, and its streets are equally irregular and filthy; but its situation is more pleasant and advantageous, its houses are better built, and it has *khans* (hotels or private residences) of considerable extent, and which would not disgrace any city of Europe. Most of these have their own fountains, independent of those distributed through the town. The Aulac supplies Said with water, which is brought from it by a channel, kept in ill repair, for a distance of more than a league." (*Voy. dans l'Emp.*, Oth. iv. 58 transl.) The streets in the upper town, which stand upon an acclivity, are narrow and gloomy, being arched over in many places, like those of Jerusalem. The lower part of the town is more cheerful. The bazaars are well supplied, especially with leather goods. (*Robinson's Syria &c.*, i. 269, 270.) Most of the houses have gardens attached. On the land side the town is defended by a high wall, now partly in ruins, as well as by a fortress, on a hill to the S., said to have been constructed by Louis IX. of France. There are several mosques, both within and without the town. It has been generally supposed that the ancient city was about 2 m. farther inland and, like many other maritime cities of antiquity, at some distance from the sea-shore, on which its port was situated. The non-existence of any antiquities worth notice at Said seems to favour this opinion; while, at a place called Old Sidon, at about the distance above stated, some traces of ancient walls and other buildings are still discoverable.

There can, however, be no doubt that the harbour on the N. side of the present town was the port of the ancient as well as the modern town. Here is a quay formed of very thick walls, in parts of which a tessellated pavement of variegated marbles, with representations of animals, festoons, &c., still exists in tolerable preservation. Many granite columns are also wrought into the walls, and others stand as posts to a bridge of several arches, which runs from the mainland to a castle built in the sea by Fahr-din, the celebrated emir of the Druses, in the 16th century. The latter, aiming to render himself independent of the Porte, not only fortified Said, but, in order to make its harbour inaccessible to Turkish galleys, choked it up by sinking boats filled with the debris of ancient buildings. This measure gave a severe blow to the commerce of the town, the roadstead being so insecure that scarcely a fisherman's skiff can lie in it in safety. (*Bowring's Report*.) But even at the end of the last century, the French merchants of Said had a considerable trade with Marseilles, to which they exported cotton, silk, and woollen goods, fruits, corn, oil, scammony, galls, soda, and wax. At present the principal resources of the inhabitants are derived from dyeing, and from the manufacture of leather and silk goods.

Sidon is first mentioned in Gen. x. 15, 19; and appears to have risen into importance at a very early period, since it is spoken of in Joshua as the "great Zidon," (ch. xi. 8; xix. 28.) In the division of Palestine it was allotted to the descendants of Asher, but we learn from Judges i. 31, that it never came into the actual possession of that tribe. Its inhabitants were anciently eminent in ship-building, and were employed by Solomon in the construction of the temple, there being, among the Jews, none who had "skill to hew timber like unto the Sidonians." Pliny states that it was also famous for its glass manufactures. In its commercial importance, it appears, however, to have been early eclipsed by Tyre, and afterwards generally followed the fortunes of that city. In the middle ages, during the Latin kingdom of Jerusalem, it was a lordship and an episcopal see under the Tyrian primacy. The crusaders, who lost it in 1111, recovered it from the Saracens in 1150; but were finally obliged to surrender it to the latter in 1289. In its neighbourhood is the convent of Mar-Elias, the residence of the late eccentric Lady Hester Stanhope. (*Robinson's Syria and Palestine*, i. 268, 273; *Olivier, Voyage en Syrie*, ch. ii.; *Bowring's Report on Syria*; *Mod. Trav.*, vol. ii., &c.)

SAI-GON, a city, river-port, and the chief emporium of the empire of Anam, prov. Tsampa, of which it is the cap. on the river of its own name, about 50 m. above its mouth; lat. 10° 47' N. long. 107° 5' E. Pop. loosely estimated at 180,000 among whom are many Chinese. It consists of two distinct towns, about 3 m. distant from each other, though the intermediate road is lined all the way with straggling houses. Pingheh, which has the citadel, and is the seat of the governor, is on the W. bank of the great Sai-gon river; whereas Sai-gon proper, the main seat of commerce, is on a smaller river, which however, is navigable for good-sized boats. The two towns are nearly of like size. The streets, which are regular, and intersect each other at right angles, are in some instances of great width. Along these, or along canals, many of which traverse the city, the houses are disposed in straight lines, and

## ST. AUGUSTINE.

close to each other. They are built chiefly of mud, enclosed in bamboo frames, and plastered; sometimes they are tiled, but more frequently thatched with palm-leaves or rice-straw: they have seldom more than one story; but some of the better sort are surrounded with an open court-yard, with a gate towards the street. In Sai-gon proper, some of the streets are paved with flags; and quays of stone and brickwork extend nearly a mile along the river. The citadel in Pingheh, constructed by a French engineer in 1790, has not been completed. It is a quadrilateral fortress with earth ramparts, bastions, horn works a regular glacis, esplanade, and dry ditch. When Mr. Crawford visited the city, no guns were mounted on it, though there were several French cannon in the arsenal; and at present it is not capable of a regular defence. The interior, which is neatly laid out, has barracks, officers' quarters, and the governor's residence. In the N. E. part of the city, on the banks of a deep creek, are the naval yard and arsenal, one of the most complete establishments in the empire, where many good junks and war-boats have been built. The rice magazines, the naval arsenal, and the royal palace, a brick edifice, are the other principal public buildings. Sai-gon communicates with the Cambaja river by a canal 23 m. in length, about 80 ft. in width, and 12 ft. in depth. Its foreign trade, which is principally with China and Siam, is much less considerable than that of Bankok. The principal articles exposed for sale in the shops are Chinese earthenware, silks, paper, tea, &c. A few glass bottles and some broadcloths may be met with, but scarcely any other European goods. The markets are well supplied with poultry, hogs, oxen, &c.; and the flesh of other animals less suited to a European taste, as dogs and alligators. Fruit is in great abundance, and the variety and excellence of the fish can hardly be surpassed. According to Mr. Crawford, Sai-gon is far preferable, as a place of residence, to Bankok. Its vicinity is well cultivated with rice, areca palm, &c. (*Crawford's Embassy to Cochin China*, i. 317-348; *White's Voyage*, &c.)

ST. ALBANS, p. l., Somerset county, Me., 50 m. N.N.E. Augusta, 645 W. Drained by Sebasticook river. Incorporated in 1813. It contains four stores, two fulling-mills, two grist-mills, four saw-mills; one academy, 50 students; 13 schools, 651 scholars. Pop. 1564.

ST. ALBANS, p. l., capital of Franklin county, Vt., 26 m. N. Burlington, 63 N.W. by N. Montpelier, 537 W. Bounded W. by lake Champlain. It contains 20 stores, four saw-mills, two tanneries, two printing-offices, two binderies, two weekly newspapers; one academy, 80 students; 14 schools, 315 scholars. Pop. 2702. The village, situated 3 m. E. of the lake shore, is on an elevated ground, and has a public square in the centre. It contains a courthouse, jail, three churches, a Congregational, Episcopal and Methodist, an academy, 16 stores, various mechanic shops, 100 dwellings, and about 700 inhabitants. At a bay on the lake shore, 3 m. W. of the village, is a landing, from which a steamboat plies to Burlington, by the way of Plattsburg and port Kent, and where there are a church, a storehouse, and several dwellings.

ST. AUGUSTINE, city, port of entry, and capital of St. Johns co., Flor., 200 m. E. by S. Tallahassee, 880 W. It is situated 2 m. back from the shore of the Atlantic, on the S. side of a peninsula, connected to the main land by a narrow isthmus, and protected from the swell of the ocean by Anastasia island, which is so low as not to obstruct the sea breezes, or a view of the ocean. The site is not over 12 ft. higher than the ocean, and the soil is rich in calcareous and vegetable deposits. The town is embosomed in orange trees. The climate is equal to any in the world; frosts are experienced only one or two months in the year, and many winters pass entirely without them. The air is equal to that of Italy or the south of France. In the summer season it is tempered daily by sea breezes, and the land breezes render the evenings cool and pleasant. It is a favourite resort of invalids from the N. The city is in the form of a parallelogram, fronting on the E. on Matanzas sound, which spreads half a mile in width between it and Anastasia island, forming a harbour sufficiently capacious to contain a large fleet in perfect safety. The city is one mile long and three fourths of a mile wide, though not more than half of this extent is compactly built. The principal streets cross each other at right angles, but they are narrow, and many of them very crooked. The old houses are generally two stories high, built of shell stone, and the lower floors are covered by a composition which resembles stone, and in some instances the upper floors and the roof were formerly of the same material. A fine large square opens from Matanzas river into the eastern part of the place, on the W. side of which a neat courthouse has been erected of stone, which contains also the public offices. On the N. side stands a splendid Roman Catholic church. On the S. side are several elegant residences, and Trinity church, a neat Gothic edifice. In front of the

## SAINT BERNARD.

harbour is a fine market place. The intervals around the square are filled with dwellings, surrounded by orange groves, which give it a rural, rather than a commercial appearance. At the mouth of the harbour is a bar with not more than 9 ft. of water at low tide, though within it has 18 or 20 ft. It is completely commanded by fort Marl-on at the N. end of the city, directly opposite to the entrance. It is in the form of a trapezium, with bastions at the corners, and made bomb-proof. It is calculated to contain 1000 men, and formerly mounted 70 pieces of heavy ordnance; but they are at present dismounted, and it is now occupied as an arsenal and a jail for criminals. From the fort a sea wall is erecting, 7 ft. high and 5 ft. thick, which will extend through the whole front of the city, to check the inroads of the tide, which will cost \$50,000. The city contains four churches, a Roman Catholic, Episcopal, Methodist and Presbyterian, a U. States' land office, 20 stores and groceries, various mechanic shops, 400 dwellings, and 2459 inhabitants. In the S. part of the city, fronting the Matanzas, are extensive barracks, rebuilt, after having been destroyed by fire, at an expense, to the U. States government, of \$25,000. One half of the population of the city are from the United States; the remainder are Spaniards, French, and other nations, who are rapidly becoming American in their character. One half of the inhabitants are of the Roman Catholic religion. On the N. point of Anastasia island is a lighthouse. A packet plies regularly to Charleston. The city is governed by a mayor and four aldermen, chosen from any part of the place.\*

SAINT BERNARD, parish, La. Situated in the S.E. part of the state, and contains 150 sq. m. It has lake Borgne on the N.E., and, for some distance below New-Orleans, includes both banks of the Mississippi. Bounded E. by the gulf of Mexico. It contained in 1840, 1862 neat cattle, 1154 sheep, 389 swine; and produced 65,150 bushels of Indian corn, 24,185 of potatoes, 34,600 pounds of rice, 4,308,000 of sugar. It had nine stores, two saw-mills, one distillery; one college, 21 students. Pop.: whites, 1035; slaves, 2137; free coloured, 65; total, 3237.

SAINT CHARLES, parish, La. Situated in the S.E. part of the state, and contains 512 sq. m. Bounded N.E. by lake Pontchartrain. Watered by Mississippi river. It has Allemande lake and bayou on the W., and Washa lake on the S. It contained in 1840, 3075 neat cattle, 3223 sheep, 1000 swine; and produced 207,000 bushels of Indian corn, 1500 of oats, 1500 of potatoes, 800,000 pounds of rice, 10,000,000 of sugar. It had two saw-mills; two schools, 23 scholars. Pop.: whites, 874; slaves, 3722, free coloured, 104; total, 4700.

SAINT CHARLES, county, Mo. Situated in the E. part of the state, and contains 470 sq. m. Bounded S.E. by Missouri river, N.E. by Mississippi river, N. by Culver river. It contained in 1840, 947 neat cattle, 4606 sheep, 19,324 swine; and produced 54,144 bushels of wheat, 271,251 of Indian corn, 5620 of barley, 48,705 of oats, 25,833 of potatoes, 301,685 pounds of tobacco. It had 23 stores, one flouring-mill, 15 grist-mills, seven saw-mills, six tanneries, seven distilleries, one printing-office, one weekly newspaper; one college, 104 students; two academies, 57 students; 13 schools, 321 scholars. Pop.: whites, 6286; slaves, 1597; free coloured, 28; total, 7911. Capital, St. Charles.

ST. CHARLES, p. v., capital of St. Charles co., Mo., 20 m. N.W. St. Louis, 110 m. E. Jefferson city, 828 W. Situated on the N. bank of Missouri river, on the first elevated land on the river above its mouth. It has a rocky shore, and the alluvial land commences at the lower end of the place. It has five streets parallel with the river, each about a mile and a half long. It is the principal crossing place over the Missouri from St. Louis to the N.W. part of the state; both for travel and merchandise. It contains a courthouse of brick, a jail of stone, a market house of brick, three churches, a Presbyterian, Methodist and Roman Catholic, a nursery with a female school attached, 10 stores, two steam-mills, 150 dwellings, and 1457 inhabitants. It is the seat of St. Charles college, under the direction of the Methodists, founded in 1839, which has a president and four professors or other instructors, and 85 students. The commencement is on the last week in August. It has two academies, 57 students. The situation of St. Charles is pleasant and healthy, has good water, and a convenient landing place on the river, and is well situated for trade. There is stone coal in the vicinity. Pop. of the town 2818.

ST. CLAIR, lake, Mich., is situated between lakes Huron and Erie, and is 24 m. long, 30 m. wide, 90 m. in circumference, and 20 ft. deep. It receives Clinton river from Michigan, and Thames river and others from Canada, and receives by St. Clair strait, the waters of lake Huron and the other connected lakes, N. and W. of it.

SAINT CLAIR, county, Ala. Situated toward the N.E.

## SAINTES.

part of the state, and contains 840 sq. m. Bounded S.E. by Coosa river. Drained by Canoe and Broken Arrow creeks. It contained in 1840, 7205, neat cattle, 2240 sheep, 1972 swine; and produced 21,370 bushels of wheat, 256,635 of Indian corn, 21,000 of oats, 2190 of potatoes, 362,221 pounds of cotton. It had six stores, one flouring-mill, eight grist-mills, five saw-mills, four tanneries, 11 distilleries; 19 schools, 398 scholars. Pop.: whites, 4505; slaves, 125; free coloured, 8; total, 5638. Capital, Asheville.

SAINT CLAIR, county, Mich. Situated in the E. part of the state, and contains 930 sq. m. Bounded E. by St. Clair river. Watered by Black, Pine and Belle rivers. It contained in 1840, 3101 neat cattle, 1075 sheep, 3029 swine; and produced 10,836 bushels of wheat, 11,433 of Indian corn, 1230 of buckwheat, 12,641 of oats, 40,657 of potatoes. It had 16 stores, one flouring-mill, four grist-mills, 15 saw-mills, six tanneries, one printing-office, one weekly newspaper; 13 schools, 228 scholars. Pop. 4906. Capital, St. Clair.

SAINT CLAIR, county, Ill. Situated toward the S.W. part of the state, and contains 648 sq. m. Bounded W. by Mississippi river. Watered by Kaskaskia river and Silver and Indian creeks. It contained in 1840, 23,954 neat cattle, 9733 sheep, 34,255 swine; and produced 146,524 bushels of wheat, 1539 of rye, 630,025 of Indian corn, 12,367 of barley, 102,872 of oats, 24,134 of potatoes, 976 pounds of tobacco. It had two commercial and one commission houses in foreign trade, 36 retail stores, one woollen factory, three flouring-mills, 11 grist-mills, 14 saw-mills, one oil-mill, two tanneries, three distilleries, one printing-office, one weekly newspaper; one college, 125 students; two academies, 91 students; 16 schools, 505 scholars. Pop. 13,631. Capital, Belleville.

SAINT CLAIR, county, Mo. Situated in the S.W. part of the state, and contains 820 sq. m. Watered by Osage river and its branches. Capital, Osceola.

SAINT CLAIR, p. l., Bedford co., Pa., 113 m. W. Harrisburg, 139 W. It has one store, one fulling-mill, one flouring-mill, one saw-mill, one tannery, one distillery; two schools, 73 scholars. Pop. 1488.

ST. CLAIR, p. l., capital of St. Clair county, Mich., 48 m. N.E. Detroit, 572 W. Bounded E. by St. Clair strait or river. Watered by Pine and Belle rivers. The village is situated on the S. side of Pine river, at its entrance into St. Clair strait, on the site of old St. Clair fort. It contains a courthouse, jail, and a number of stores and dwellings, and has one grist-mill, three saw-mills; two schools, 40 scholars. Pop. 413.

ST. CLAIR, t., Butler co., O. Bounded S.E. by Great Miami river. Watered by St. Clair and Four Mile creeks. It contains Rossville village opposite to Hamilton, and has two schools, 41 scholars. Pop. 1174.

ST. CLAIR, t., Columbiana co., O., 11 m. S.E. New-Lisbon. Watered by Little Beaver river. The line of the Sandy and Beaver canal passes through it. It has two schools, 51 scholars. Pop. 1739.

ST. CROIX river, Me., constitutes the boundary between the United States and the British province of New-Brunswick. Its whole length is 130 m. It passes through Grand lake, and at its head has a monument, which designates the permanent boundary, from which the line proceeds due north. It has many falls, affording great water-power, and enters Passamaquoddy bay. It is navigable 12 m. for large vessels to Calais, where it is crossed by a bridge.

SAINTES (an. *Mediolanum*, afr. *Santonæ*), a town of France, dep. Charente-Inférieure, cap. arrond., on the Charente, here crossed by a stone bridge, 39 m. S.E. La Rochelle. Pop. in 1836, ex. com., 7823. Its situation is good, and it is entered from the S. by a finely planted promenade; but it is ill laid out, and is, for the most part, badly built. It has, however, some remarkable public buildings and antiquities. The cathedral was founded by Charlemagne; and the tower, with the principal entrance, is said to have belonged to the original edifice; but the rest of the structure dates principally from the 16th century. The church of St. Eutropius has a fine steeple, constructed under Louis XI. A celebrated abbey was founded here in 1043, into which Eleanor of Guienne retired after her divorce from Louis-le-Jeune; its buildings are now converted into cavalry barracks. The sub-prefecture, formerly the bishop's palace; the hospital, originally the seminary; the Protestant church, hall of justice, public library, and theatre, comprise the other chief public buildings. It has cabinets of natural history and antiquities, a communal college, and departmental nursery grounds; and manufactures of hosiery, earthen-ware, dyeing-houses, tanneries, &c. Saintes is the centre of a district furnishing the best Cognac brandy; in which, and in corn and wool, it has a large trade.

Under the Romans *Mediolanum* was one of the chief cities of Aquitaine. Some Roman baths exist on the banks of the river; and without the walls are the remains of an amphitheatre, almost as extensive, though not nearly in such good preservation, as that of Nîmes: adjacent to the

\* Under the article *Augustine* St., a less complete account of the place was inserted, inadvertently, from the English edition.

## SAINT FRANCIS.

bridge is a triumphal arch dedicated to Tiberius Drusus and Germanicus (*Guide du Voyageur*); and the ruins of an aqueduct, a circus, &c., are still traceable. "Saintes was the capital of the department Charente-Inférieure, from 1790 till 1810." (*Dict. Géog.*)

**SAINT FRANCIS**, river, Mo. and Ark., rises in St. Francis co., Mo., and flowing S., enters Ark. and receives Whitewater river, a large branch which rises in Mo., and flows nearly parallel to it. It enters the Mississippi in Phillips county, and is said to be navigable in high water nearly 200 m. Though it passes through many lakes and swamps, its waters are remarkably clear, and abound with fine fish.

**SAINT FRANCIS**, county, Mo. Situated toward the S.E. part of the state, and contains 425 sq. m. Drained by St. Francis, and sources of Big and Establishment rivers. A considerable portion of the celebrated Iron mountain is in this county. It contained in 1840, 3740 neat cattle, 3548 sheep, 10,721 swine; and produced 21,903 bushels of wheat, 167,275 of Indian corn, 31,273 of oats, 441 of potatoes, 13,410 pounds of tobacco. It had 11 stores, four grist-mills, two saw-mills, five tanneries, one distillery; 11 schools, 286 scholars. Pop.: whites, 2694; slaves, 501; free coloured, 16; total, 3211. Capital, Farmington.

**SAINT FRANCIS**, county, Ark. Situated in the E. part of the state, and contains 1080 sq. m. Drained by Cache and White rivers. It contained in 1840, 5508 neat cattle, 559 sheep, 8862 swine; and produced 1438 bushels of wheat, 128,470 of Indian corn, 3942 of oats, 13,790 of potatoes, 2508 pounds of tobacco, 53,338 of cotton. It had seven stores, one flouring-mill, six grist-mills, two saw-mills; three schools, 70 scholars. Pop.: whites, 2132; slaves, 365; free coloured, 2; total, 2499. Capital, Franklin.

**ST. FRANCISVILLE**, p. v., capital of West Feliciana par., La., 136 m. N.W. New Orleans, 1170 W. Situated on a bluff, on the E. bank of Mississippi river, 1 m. from it. By the Bayou Sara it communicates with the Mississippi, is a noted stopping-place for descending boats, and exports a large quantity of corn. It has a court-house, 15 stores, and 814 inhabitants.

**SAINT GENEVIEVE**, county, Mo. Situated in the E. toward the S. part of the state, and contains 400 sq. m. Bounded N.E. by Mississippi river. Watered by An Vase and Establishment rivers. It has copper, lead and zinc ores, and salt springs. It contained in 1840, 4329 neat cattle, 1696 sheep, 10,591 swine; and produced 28,976 bushels of wheat, 203,754 of Indian corn, 18,351 of oats, 2520 of potatoes, 61,855 pounds of tobacco, 1175 of sugar. It had six commission houses in foreign trade, 14 retail stores, one flouring-mill, two grist-mills, 12 saw mills, two tanneries; two academies, 60 students; four schools, 92 scholars. Pop.: whites, 2553; slaves, 548; free coloured, 37; total, 3148. Capital, St. Genevieve.

**ST. GENEVIEVE**, p. v., capital of St. Genevieve co., Mo., 61 m. S. by E. St. Louis, 190 m. E.S.E. Jefferson city, 844 W. Situated on the W. bank of Mississippi river, 1 m. distant from it, on Gabourie creek, a small stream which is sometimes boatable. It contains a Roman Catholic church, an academy with 40 students, and about 1000 inhabitants. In front of the village was about 4000 acres of bottom land, which was cultivated in common; but the encroachments of the river have carried much of it away. It has an extensive trade in lead. The inhabitants are chiefly of French descent. Pop. of the town 1607.

**ST. GEORGE**, p. t., Lincoln co., Me., 48 m. S.E. Augusta, 625 W. Situated on a peninsula, bounded E. and S. by the Atlantic W. by Muscongus bay. It has some ship building and considerable shipping employed in the coasting trade and the fisheries. It contains 10 stores, one grist-mill; 17 schools, 904 scholars. Pop. 2094.

**ST. GEORGES**, p., hundred, New-Castle co., Del., 31 m. N. Dover, 126 W. It has 10 stores, three grist-mills, two saw-mills; three schools, 92 scholars. Pop. 3127.

**ST. HELENA**, an island of the S. Atlantic ocean which will be famous in all time to come as being the scene of Napoleon's imprisonment and death. It belongs to Great Britain, and is situated 800 m. S.E. from Ascension island, and 1200 m. W. from the coast of Benguela, in S. Africa, lat. 159 15' S., long. 52 46' W. Length, 10½ m.; breadth, 6½ m. area, 30,300 acres. Pop. about 3000, of whom nearly a half are whites. It appears from a distance like the summit of a lofty submarine mountain, rising abruptly from the shore in rugged and almost perpendicular cliffs, varying from 300 to 1500 ft. in height, diversified in a few places with deep narrow ravines, descending to the sea, and forming difficult landing-places for the fishermen. In the largest of these, towards the N.W. is James' Town, the capital and port of the island. The interior is a plateau, about 1506 ft. above the sea, divided into two unequal parts by a ridge of mountains rising about 500 ft. above the plain, and 2000 ft. above the sea: the highest summit of this ridge, called Diana's Peak, is 2703 ft. in height. The geological formation of the

## ST. HELENA.

island consists almost entirely of basalt, over which in some parts are strata of limestone mingled with tufa and other igneous substances, proving it to have once been the seat of volcanic action. A deep crater-like dell, however, called the Devil's Punch-bowl, is the only feature at all resembling an extinct volcano. The climate is mild, and little variable, the thermometer ranging between 57° and 70° Fahr. in winter (June, July, and Aug.), and between 68° and 72° in summer (Jan., Feb., and March). Rain is common, especially in Feb. and July; and the frequency of cloudy days tends greatly to moderate the heat. The influence of the climate over the constitution of residents in the island is, however, said to be most disastrous. According to O'Meara, it is "extremely unhealthy, hepatitis and dysentery prevailing to an extent and with a severity seldom paralleled, so that very few persons pass their 45th year." (*Voice from St. H.*, ii. 433.) About a fifth part of the entire surface is covered with soil, which, though not deep, is rich and productive. Luxuriant pastures are found on the high lands; agriculture, however, is but little attended to; and the inhabitants mostly depend on foreign supplies for their support. The valleys are chiefly laid out in garden ground; and here may be seen near each other, and all flourishing alike, the mango, banana, tamarind, and sugar-cane of the tropics, the orange, citron, grape, fig, and olive of S. Europe, and the apple, gooseberry, and currant of a still colder region. The yam and all the European vegetables are abundant, three crops of potatoes being often raised from the same ground within the year. The tops and sides of the hills are covered with the cabbage tree, dog-wood tree, and gum-wood; and the oak, also, has been introduced. The *Palma Christi* and common blackberry are so luxuriant as to be eradicated with difficulty. Cattle and sheep are not numerous, the latter being barely sufficient to supply the wants of the shipping. Goats graze in immense numbers on the high grounds. Neither birds nor beasts of prey, if we except rats, are found; but the latter are numerous and destructive, and there are many varieties of troublesome and poisonous insects. Game is abundant, and the coast furnishes excellent fish. Whales and turtles are often seen near the shore, especially in January and April.

St. Helena, of which the East India Company were "the lords proprietors" till 1834, is now under a military government, assisted by a civil secretary; and the laws are administered by the chief judge. It is still used as a place of refreshment for vessels sailing northward on the Atlantic, those proceeding southward not being able to make the island. Its commerce is trifling; the value of the imports, principally consisting of stores for shipping, not exceeding from £40,000 to £50,000 a year.

James' Town, the port and the residence of the authorities, is the only town. The anchorage is good in 12 fathoms water, and the port is well protected from the winds. The town is entered by an arched gateway, within which is a spacious parade lined with official residences. The church, a handsome building, fronts the gateway; and close by it a street branches off into the inner parts of the town. The shops are plentifully supplied with English and Asiatic products, but the prices are invariably very high. The principal inhabitants reside on the higher and cooler parts of the island, and visit James' Town only on Sundays, or when the want of supplies obliges them to come to its shops and market. One of the handsomest of these villas is Plantation House, a mansion of considerable elegance, belonging to the governor, situated in the midst of extensive grounds, adorned with a variety of fine trees and shrubs.

Longwood, the residence of Napoleon, stands on the plateau, in the middle of an extensive park. When first occupied by the ex-emperor, it was of very limited dimensions; but some additions were subsequently made to it. After Napoleon's death, the house was for some time uninhabited. Latterly, it has been converted into a kind of farming establishment; and very recently, the room in which the conqueror of Austerlitz breathed his last was occupied as a cart-house and stable!

St. Helena was discovered on the 21st of May (St. Helena's day), 1502, by Juan de Noya, a Portuguese; but no establishment was formed nor was the island inhabited till the Dutch became its masters in the middle of the 16th century. Captain Munden, in 1673, took it from the Dutch; and it was soon afterwards granted by Charles II. to the English East India Company, who, with the exception of the period of Napoleon's imprisonment, held the proprietorship down to 1834, when it was restored to the English government. (*St. Helena Gazette*; *Major Beaton's Letter to the Agr. of St. Helena*; *O'Meara's Voice from St. Helena*.)

Such is a brief notice of this very unimportant island; to which, indeed, we should not have thought it worth while to allude, but for the fact of its having been selected by Great Britain and the other allied powers as the place to which they banished Napoleon. It is unnecessary to par-

## SAINT HELENA.

ticularise the circumstances connected with this memorable event. Suffice it to say, that after the battle of Waterloo, and his second abdication, Napoleon, having retreated to Rochefort, addressed, on the 13th of July, 1815, the following letter to the Prince Regent, afterwards George IV.

*"Altesse Royale,*

*"En butte aux factions qui divisent mon pays, et à l'ini-  
mitié des plus grandes puissances de l'Europe, j'ai terminé  
ma carrière politique, et je viens, comme Thémistocle, m'as-  
seoir au foyer du peuple Britannique. Je me mets sous la  
protection de ses lois, que je reclame de V. A. R., comme du  
plus puissant, du plus constant, et du plus généreux de mes  
ennemis."*

"NAPOLEON."

But though Napoleon was more than entitled to compare himself to Themistocles, he erred widely in supposing that the Prince Regent was another Artaxerxes. It was, no doubt, indispensable for the tranquillity of Europe and the world, and for the advancement of the projects of the allied sovereigns, that Napoleon should be placed under restraint. But a sense of what was due to themselves, and still more of what was due to the extraordinary individual the chance of war had placed in their power, should have secured him the best asylum and the most generous treatment consistent with perfect security. It is needless to contrast what they should have done, with what they actually did. The sending of Napoleon to St. Helena, and his treatment while there, constitute the most discreditable chapter in the history of modern royalty. It is painful to have to reflect that the government of such a country as England should have taken a conspicuous part in this unworthy treatment of a fallen foe. Every reader of ancient history heartily execrates the vindictive malignity with which the Romans pursued Hannibal. And yet, in comparing his treatment with that of Napoleon, it should be borne in mind that the Carthaginian hero never relaxed in his hostility to his ancient and hereditary enemies; he did not place himself in their hands, nor did he appeal to their generosity; and the probability is, that if they had got him into their power, they would have despatched him at once, and not have sent their illustrious captive to some miserable islet, to embitter and insult the few remaining years of his memorable life.

Napoleon arrived at St. Helena on the 13th of October, 1815, and there he expired on the 5th of May, 1821. His remains, after having been deposited for 19 years in a humble grave, near his prison-house, were, in 1840, conveyed with great pomp and ceremony to France, where, agreeably to the wish expressed in his last will, they now repose in the Hôtel des Invalides, in Paris.

**SAINT HELENA**, parish, La. Situated in the S.E. part of the state, and contains 1700 sq. m. Bounded W. by Anute river. Drained by Tichah river and its branches. It contained in 1840, 5390 neat cattle, 1513 sheep, 16,300 swine; and produced 102,930 bushels of Indian corn, 4978 of oats, 38,782 of potatoes, 35,060 pounds of rice, 925,176 of cotton. It had 11 stores, 11 grist-mills, eight saw-mills, two tanneries; one academy, 37 students; four schools, 86 scholars. Pop. whites, 1945; slaves, 1573; free coloured, 7; total, 3525. Capital, Greensburg.

**SAINT JAMES**, par., La. Situated in the S.E. part of the state, and contains 250 sq. m. It lies on both sides of Mississippi river. It contained in 1840, 4762 neat cattle, 5107 sheep, 3290 swine; and produced 155,790 bushels of Indian corn, 1,032,950 pounds of cotton, 15,157,000 of sugar. It had 14 stores, two saw-mills; two colleges, 505 students; three schools, 48 scholars. Pop.: whites, 2762; slaves, 5711; free coloured, 75; total, 8548. Capital, Brüggers.

**SAINT JOHN BAPTISTE**, par., La. Situated in the S.E. part of the state, and contains 260 sq. m. Bounded N.E. by lake Pontchartrain. Mississippi river passes through it, along the margin of which is most of the land capable of cultivation. It contained in 1840, 2620 neat cattle, 2000 sheep, 950 swine; and produced 208,830 bushels of Indian corn, 112,000 pounds of rice, 11,000,000 of sugar. It had two saw-mills; eight schools, 81 scholars. Pop.: whites, 2141; slaves 3444; free coloured, 191; total, 5776. Capital, Bonnet Carré.

**ST. JOHNS**, river, Me., and New-Brunswick, rises in Somerset co., Me., near the head-waters of the Chaudière in Canada, and the Penobscot, Me. Below the entrance of St. Francis river it forms the N.E. boundary of Me., until it crosses into New-Brunswick, where it pursues a S. and S.E. course until its entrance into the bay of Fundy. It is navigable for vessels of 50 tons, 80 m. from its mouth, and for boats 200 m., and its whole length is about 350 m. The free navigation of this river in New-Brunswick, secured to the United States, by the late treaty with Great Britain, will be of great importance to the N. part of Maine, by affording an outlet to the immense quantity of lumber which is found near its borders.

**ST. JOHNS** river, Flor. Its sources have not been ex-  
740

## SAINT LANDRE.

plored, but are probably in extensive grass meadows, extending from E. to W. from 3 to 12 m., and from 20 to 30, north and south, and probably within 20 m. of the coast. It often spreads from 3 to 5 m. in width, but at other places is not one fourth of a mile wide. It is exceedingly crooked; and though in a straight line it may not be more than 150 m. from its source to its mouth, by the course of the river it is more than twice that distance. Vessels drawing 8 ft. of water enter lake George and Dun's lake, 150 m. from its mouth. At the entrance of the river there is a bar with 12 ft. of water, and here it is only a mile wide. There is a lighthouse on the S. side of the river at its entrance. Its general course is N. nearly parallel to the coast, but in its N. part, it curves suddenly to the east, until it enters the Atlantic.

**SAINT JOHNS**, county, Flor. Situated in the E. part of the peninsula, and contains 1450 sq. m. Watered by St. Johns and North river, and Matanzas sound. It produces oranges, citrons and lemons. Live oak grows extensively on St. Johns river. It contained in 1840, 647 neat cattle, 534 swine; and produced 3175 bushels of Indian corn, 1126 of potatoes, 25,000 pounds of sugar. It had 45 stores, two printing-offices, two weekly newspapers; three academies, 113 students; 4 schools, 77 scholars. Pop.: whites, 1685; slaves, 883; free coloured, 121; total, 2694. Capital, St. Augustine.

**ST. JOHNSBURY**, p. t., Caledonia county, Vt., 7 m. E. Danville, 37 m. N.E. Montpelier, 546 W. Chartered in 1786, first settled in 1788. Pausumpic river and its tributaries, afford good water power. It contains three Congregational churches, six stores, three fulling-mills, one furnace, five grist-mills, seven saw-mills, one oil-mill, three tanneries, two potteries, one printing-office, one weekly newspaper; one academy, 25 students; 15 schools, 602 scholars. Pop. 1887.

**ST. JOHNSVILLE**, p. t., Montgomery co., N. Y., 61 m. N.W. Albany, 394 W. Bounded S. by Mohawk river. Drained by east Canada and Zimmermann's creeks. It contains a Dutch Reformed church, three stores, one grist-mill, three saw-mills; four schools, 113 scholars. Pop. 1923.

**SAINT JOSEPH'S** river, Mich., rises in the N.E. part of Hillsdale county, and flowing E. with a broad southerly bend by which it enters Ia., it turns to the N.W. until it enters lake Michigan. It is 250 m. long, and in length and volume of water, it is the second river in the peninsula. It is navigable for keel boats 130 m. to Lockport, and has a good harbour at its mouth, protected by a pier, which is sufficient for any number of vessels required by the lake navigation. There is a sand bar at its mouth with 6 ft. of water. It receives many tributaries, affords much water-power, and flows through a fertile territory and is in some places, heavily timbered on its borders.

**SAINT JOSEPH'S**, county, Mich. Situated in the S. part of the state, and contains 528 sq. m. Organized in 1829. Watered by St. Joseph's river, and its branches. It contained in 1840, 7865 neat cattle, 3986 sheep, 13,864 swine; and produced 131,451 bushels of wheat, 2438 of rye, 148,944 of Indian corn, 2927 of buckwheat, 11,323 of barley, 112,125 of oats, 66,386 of potatoes, 20,250 pounds of sugar. It had two fulling-mills, seven flouring-mills, 11 saw-mills, one tannery, two distilleries; 37 schools, 819 scholars. Pop. 7068. Capital, Centreville.

**SAINT JOSEPH'S**, county, Ia. Situated in the N. part of the state, and contains 468 sq. m. Organized in 1830. Watered by St. Joseph's and Kankakee rivers. It contained in 1840, 6551 neat cattle, 3668 sheep, 14,289 swine; and produced 102,620 bushels of wheat, 197,438 of Indian corn, 1920 of buckwheat, 133,647 of oats, 40,867 of potatoes, 1412 pounds of tobacco, 72,018 of sugar. It had one commission house in foreign trade, 20 retail stores, two flouring mills, two grist-mills, 14 saw-mills, five tanneries, two distilleries, one pottery, one printing-office, one weekly newspaper; one academy, 38 students; 22 schools, 920 scholars. Pop. 6425. Capital, South Bend.

**ST. JOSEPH**, p. t., Berrien co., Mich., 195 m. W. by S. Detroit, 652 W. Watered by St. Joseph and Papaw rivers which here unite. Bounded W. by lake Michigan. The village, which is the capital of the county, is situated on the S. side of St. Joseph river, at its entrance into the lake, and is one of the most important places on the W. side of the peninsula. It contains a courthouse, jail, an Episcopal church, 12 stores, four large forwarding and commission houses, a bank, two steam saw-mills, a printing-office, issuing a weekly newspaper, and about 500 inhabitants. There have been appropriated, by the United States, \$3500 for the improvement of the harbour. It has 2000 ft. of wharf, and admits vessels requiring 64 ft. of water. Three steamboats are owned here, but few other vessels. A bridge here across St. Joseph river cost \$15,000. It has two schools, 43 scholars. It commands a pleasant view of lake Michigan.

**SAINT LANDRE**, parish, La. Situated toward the

## ST. LAWRENCE.

S.W. part of the state, and contains 2000 sq. m. Bounded E. by Atchafalaya river, W. by Bayou Nez Pique. Drained by Teche and Vermillion rivers. It contained in 1840, 69,267 neat cattle, 10,236 sheep, 20,841 swine; and produced 431,208 bushels of Indian corn, 74,523 of potatoes, 5000 pounds of rice, 3500 of tobacco, 21,437,190 of cotton, 400,000 of sugar. It had 37 stores, three flouring-mills, 100 grist-mills, eight saw-mills, four tanneries, two printing-offices, two weekly newspapers; one college, nine students; two academies, 120 students; seven schools; 85 scholars. Pop.: whites, 7179; slaves, 7129; free coloured, 925; total, 15,233. Capital, Opelousas.

ST. LAWRENCE, river, United States and Canada, forms the outlet of the five great lakes or inland seas of N. America, and after a course of more than 2000 m., flows into the gulf of St. Lawrence, receiving the drainage of a territory of over 500,000 sq. m. With the middle of the lakes through which it passes, it forms the boundary between the United States and Canada, until it intersects the 45th degree of N. lat.; or rather what was settled, though somewhat erroneously, and marked as such before the treaty of 1783. On accurately taking the latitude of 45° N., by the most improved instruments of the present day, the former line was found to be more than half a mile N. of the true line of 45°; but, by the late treaty it has been established as the true line. The river has different names in different parts of its course. From lake Ontario to its mouth, is the St. Lawrence proper, though above Montreal, it is sometimes called Iroquois river. Between lakes Ontario and Erie, it is called Niagara river; between lakes Erie and St. Clair, Detroit river; between lakes St. Clair and Huron, St. Clair river; between lakes Huron and Superior, St. Mary's river. It is navigable for ships of the line, 400 m. to Quebec; and for ships of 600 tons to Montreal, a distance above Quebec of 180 m. From Quebec to Montreal it has an average breadth of 2 m. The breadth of the gulf of St. Lawrence at its mouth, from cape Rosier to Mingau settlement in Labrador, is 150 m. It receives many tributaries, the most important of which on the S. side is Chambly or Richelieu river, the outlet of lake Champlain; and on the N. side, Ottawa or Grand river, which enters it a little above Montreal. For a more minute account, see LAURENCE (Str.)

ST. LAWRENCE, county, N. Y. Situated toward the N.E. part of the state, and contains 2717 sq. m. Bounded N.W. by St. Lawrence river. Watered by St. Regis, Racket, Grass, Oswegatchie, and Indian rivers and their tributaries. Lead ore is extensively found in the neighbourhood of Rossie. Iron ore and marble are also abundant. It contained in 1840, 61,455 neat cattle, 125,321 sheep, 41,889 swine; and produced 278,007 bushels of wheat, 53,571 of rye, 204,824 of Indian corn, 34,312 of buckwheat, 24,018 of barley, 334,009 of oats, 1,412,272 of potatoes, 848,132 pounds of sugar. It had two commission houses in foreign trade, 155 stores, 16 furnaces, six forges, 28 fulling-mills, four woolen factories, two flouring-mills, 45 grist-mills, 103 saw-mills, one paper-mill, 27 tanneries, one distillery, two potteries, two printing-offices, two weekly newspapers; four academies, 761 students; 357 schools, 13,539 scholars. Pop. 56,706. Capital, Canton.

SAINT LOUIS, county, Mo. Situated in the E. part of the state, and contains 550 sq. m. Bounded E. by Mississippi river, N.W. by Missouri river. Watered by Maramee river. It contained in 1840, 22,877 neat cattle, 8730 sheep, 24,441 swine; and produced 59,177 bushels of wheat, 6138 of rye, 477,879 of Indian corn, 1908 of buckwheat, 95,306 of oats, 90,988 of potatoes, 197,045 pounds of tobacco. It had one commercial and 14 commission houses in foreign trade, 214 retail stores, 17 lumber-yards, two flouring-mills, 14 grist-mills, 13 saw-mills, one oil-mill, six tanneries, four distilleries, 22 printing-offices, six daily, seven weekly, and five semi-weekly newspapers; two colleges, 232 students; 14 academies, 668 students; 28 schools, 1056 scholars. Pop.: whites, 30,505; slaves, 4616; free coloured, 858; total, 35,979. Capital, St. Louis.

ST. LOUIS, city, capital of St. Louis co., Mo., is in 36° 37' 28" N. lat., and 90° 15' 39" W. long. from Greenwich, and 13° 14' 15" W. long. from W. It is 20 m. by water below the mouth of the Missouri; 1964 m. above the mouth of the Ohio; 1149 m. above New-Orleans; about 1100 m. below the falls of St. Anthony; 120 m. E. Jefferson city; 808 W. The population in 1810, was 1600; in 1820, 4593; in 1830, 6694; in 1840, 16,469, of whom 1531 were slaves. Employed in commerce, 845; in manufactures and trades, 2012; in navigating rivers, &c., 891; in the learned professions, 188. It is the commercial metropolis of the state, and was formerly the seat of government. The site is elevated many feet above the floods of the Mississippi, and is protected from them by a limestone bank, which extends nearly 2 m.; an advantage rarely enjoyed on the Mississippi, which is generally bounded by high perpendicular rocks, or a loose alluvial soil. This spot has an abrupt acclivity

## ST. LOUIS.

from the river to the first bottom, and a gradual one from it to the second bottom. The first bank presents a view of the river, being elevated 20 ft. above the highest water; the second bank is 40 ft. higher than the first, and affords a fine view of the city, river, and surrounding country, and contains the finest residences. The place was originally laid out on the first bank, and consisted of three narrow streets running parallel with the river. Fortifications were erected on the second bank, as a defence against the savages. Soon after the American emigration commenced, four additional streets were laid out back of the first, on the second bottom, which is a beautiful plain, and these streets are wide and airy. There are eight principal streets parallel to the river, crossed by over 20, running from the river, and crossing them at right angles. There are extensive tracts laid out N. and S. of this, called North St. Louis, and S. St. Louis, which will probably be soon built upon. The whole length of the place extends in a right line 5½ m., and by the curve of the river, 6½ m. Its breadth may ultimately extend 6 m. back from the river, but is at present one third of that distance. The thickly settled parts are confined within much narrower limits, and extend a mile and a half along the river, with half that breadth. Front-street is open on the side toward the river, and on the other side is a range of warehouses, four stories high, built of limestone, which have a very commanding appearance, and are the seat of a heavy business. In First-street the wholesale and retail dry goods stores are located; and in the streets immediately back of this are the artisans and tradesmen. It contains many neat, and some elegant buildings. The more recent houses are built of brick, of an excellent quality made in the immediate vicinity; some are of stone quarried on the spot, and are generally whitewashed. Many of the residences, particularly in the back parts of the place, have spacious and beautiful gardens attached to them.

Among the public buildings of the city the city hall is a splendid edifice of brick, the basement of which is occupied as a market, at the foot of Market-street, on a square reserved for the purpose. There is another market in the N. part of the city. The courthouse is in the centre of a public square near the middle of the city; the Presbyterian church occupies an eligible site on the high ground of the city; and is a large and well-finished building, surrounded with ornamental trees, which are carefully pruned. The Unitarians have a large church of tasteful architecture. The Roman Catholic cathedral is a large and splendid edifice, 136 ft. long, 58 ft. wide, the walls of which are 40 ft. high, above which the tower of the steeple rises 20 ft. square to the height of 40 ft.; surmounted by an octagon spire covered with tin, crowned with a brass gilt ball 5 ft. in diameter, above which is a gilt brass cross 10 ft. high. The lightning rod is 17 ft. higher than the cross. In the steeple is a peal of six bells, the three largest of which weigh from 1600 to 2500 pounds each. The front of the building is of polished freestone, with a portico of four massive Doric columns. The interior is splendidly finished and furnished, and contains several elegant paintings of celebrated masters. The city contains 14 churches, two Episcopal, two Methodist, two Presbyterian, an Associate Reformed, a German Lutheran, a Baptist, a Unitarian, two Roman Catholic, an African Methodist, and an African Baptist. There is a United States land office, a theatre and concert hall. There are several literary and benevolent institutions in the city. The St. Louis university is under the direction of the Roman Catholics, was founded in 1832, has a president, 12 professors or other instructors, 146 students, and 7900 vols. in its libraries. The commencement is on the third Thursday in August. It has a spacious building 4 m. N. of the city, which cost \$30,000, which has extensive grounds around it. Its medical department is within the city, and has a building with a hall for lectures, a chemical laboratory, &c., which will accommodate 400 students. The Western academy of sciences has an extensive museum of natural history, mineralogy, &c. There is also a museum, containing many Indian antiquities, fossil remains, and other curiosities. The convent of the Sacred Heart is an institution of nuns, for conducting female education. The Protestant ladies conduct an orphan asylum; and there is a Roman Catholic orphan asylum, conducted by the sisters of charity, who also minister in the St. Louis hospital.

The city has a bank and two insurance companies. The United States arsenal is in the southern limits of the city. Jefferson United States barracks are on the bank of the Mississippi, 10 m. below the city, and can accommodate about 700 men.

The city is supplied with water raised by steam power from the Mississippi to a reservoir on an elevated ancient mound, whence it is distributed in iron pipes over the city. A company is also formed for lighting the city with gas. The country for 15 m. W. of the city consists of a very fertile

## SAINT MARKS.

prairie. Chonteau's pond in the upper part of the city is a beautiful sheet of water, fed almost entirely by pure springs, and has an outlet into Mississippi river.

The city is admirably situated for commerce, and already surpasses in its trade every other place on the river, N. of New-Orleans. The Mississippi and Illinois to the N.; the Ohio and its tributaries to the S.E.; and the Missouri to the W. afford it a ready access to a vast extent of country; while to the S. the Mississippi furnishes an outlet to the ocean for its accumulated productions. It is the principal depot of the American fur company, who have a large establishment with 1000 men in their employ. A vast amount of furs is here collected; and 10,000 dried buffalo tongues have been brought in, in a single year. Numerous steamboats ply from this place in various directions; and several cross the Mississippi as ferry boats. The landing is good at South St. Louis, on a bold rocky shore, where there is sufficient depth of water for boats of the largest class. The steamboat arrivals, in a single year, have amounted to 800, with a tonnage of over 100,000. The tonnage of the port in 1840, was 11,259 tons.

There were in the city in 1840, one commercial and 24 commission houses in foreign trade, with a capital of \$717,000; 214 retail dry goods and other stores, with a capital of \$3,875,050; 17 lumber-yards, with a capital of \$287,529; 40 persons employed in internal transportation, together with 37 butchers, packers, &c., employed a capital of \$141,500; furs, skins, &c., exported, were valued at \$306,300; 167 persons manufactured machinery to the amount of \$169,807; 13 persons manufactured 305 small arms; nine persons manufactured the precious metals to the amount of \$5050; 65 persons manufactured various metals to the amount of \$54,000; 69 persons produced granite and marble to the amount of \$30,000; 249 persons produced bricks and lime to the amount of \$182,500; 13 persons manufactured tobacco to the amount of \$3350, with a capital of \$9250; 23 persons manufactured hats and caps to the amount of \$77,600, with a capital of \$12,000; two tanneries employed 14 persons, and produced 8000 sides of upper leather, with a capital of \$54,500; 12 manufactures of leather, as saddlery, &c., produced to the amount of \$116,600, with a capital of \$54,850; 15 persons produced 138,000 pounds of soap, and 243,000 pounds of tallow candles, with a capital of \$16,700; one distillery produced 30,000 gallons of distilled spirits, and six breweries 370,700 gallons of beer, the whole employing 38 persons, and a capital of \$48,800; eight persons produced paints and drugs to the amount of \$13,500, with a capital of \$7000; one rope-walk, employing three persons, produced cordage to the amount of \$5000, with a capital of \$10,000; 78 persons manufactured carriages and wagons to the amount of \$54,500, with a capital of \$25,250; two flouring-mills produced 13,656 barrels of flour, and with six saw-mills, and one oil-mill, produced to the amount of \$185,608, with a capital of \$106,500; 22 printing-offices, six daily, seven weekly, and five semi-weekly newspapers, employed 82 persons, and a capital of \$49,650; 210 brick or stone, and 130 wooden houses were built, employing 397 persons, and cost \$761,980. The total amount of capital employed in manufactures, was \$674,250. There were in the city 10 academies or grammar schools with 577 students, and seven common or primary schools, with 713 scholars.

St. Louis was first settled in 1664 by a company of merchants, to whom M. D'Abbadie, the director general of Louisiana, had given an exclusive grant for the commerce with the Indian nations on the Missouri. The company built a large house and four stores here; and in 1770, there were 40 private houses, and as many families, and a small French garrison. In 1780, an expedition was fitted out at Michilimacine, consisting of 140 British and 1500 Indians for the capture of St. Louis and other places on the W. side of the Mississippi, which was successfully repelled by the aid of an American force under Gen. George Rogers Clark, who proceeded from their encampment on the opposite side of the river. In May 1821 the place contained 651 dwellings, 232 of which were of brick, or stone and 419 of wood, and the population was 5600. No inland town in the world is more favourably situated for commerce than St. Louis. It is the natural depot of the vast and fertile regions watered by the Missouri, the upper Mississippi, the Illinois and their numerous tributaries, it is rapidly increasing in population and importance, and is destined to be one of the principal cities of the west.

SAINT MARKS, p. v., port of entry, Leon co., Flor., 20 m. S. Tallahassee, 816 W. Situated on St. Marks river at the junction of Wakully river to form Appalachee river. It is the port of Tallahassee, with which it is connected by a railroad and is favourably situated for business. It is 6 m. from the entrance of the river where is a lighthouse, and the river has 8 ft. of water to this place.

SAINT MARTINS, parish, La. Situated toward the S.

## ST. THOMAS.

part of the state, and contains 850 sq. m. Bounded N.E. and E. by Atchafalaya river. Watered by Teche river. It has Chetimaches lake and Grand island in its S. part. It contained in 1840, 26,930 neat cattle, 5054 sheep, 7297 swine; and produced 96,939 bushels of Indian corn, 1,783,283 pounds of cotton, 2,474,700 of sugar. It had 39 stores, two lumber-yards, two tanneries, one printing-office; one academy, 26 students; six schools, 110 scholars. Pop.: whites, 3549; slaves, 4641; free coloured, 484; total, 8674. Capital, St. Martinsville.

ST. MARTINSVILLE, p. v., capital of St. Martinsville par., La., 178 m. W. New-Orleans, 1281 W. Situated on the W. side of Teche, river, and is built chiefly on one street, on the elevated bank of the river. It contains a courthouse, jail, a Roman Catholic church, and about 400 inhabitants.

SAINT MARY'S, county, Md. Situated in the S.W. part of the state, and contains 200 sq. m. Bounded N.E. by Patuxent river, S.W. by Potomac river, E. by Chesapeake bay. It contained in 1840, 10,073 neat cattle, 11,390 sheep, 17,320 swine; and produced 68,372 bushels of wheat, 1508 of rye, 255,955 of Indian corn, 61,862 of oats, 11,723 of potatoes, 2,672,052 pounds of tobacco. It had 30 stores, one cotton factory with 224 spindles, four flouring-mills, 24 grist-mills, one printing-office, one weekly newspaper; four academies, 54 students; 12 schools, 351 scholars. Pop.: whites, 6070; slaves, 5761; free coloured, 1393; total, 13,224. Capital, Leonardtown.

SAINT MARY'S, parish, La. Situated in the S. part of the state, and contains 870 sq. m. Watered by Teche river. It contained in 1840, 16,806 neat cattle, 8211 sheep, 6403 swine; and produced 153,410 bushels of Indian corn, 20,017 of potatoes, 4741 pounds of rice, 1,436,000 of cotton, 13,291,000 of sugar. It had 13 stores, one grist-mill, two saw-mills, two tanneries; eight schools, 110 scholars. Pop.: whites, 2366; slaves, 6286; free coloured, 298; total, 8950. Capital, Franklin.

ST. MARY'S, p. v., port of entry, Camden co., Ga., 993 m. S.S.E. Milledgeville, 802 W. Situated on St. Mary's river, 7 m. from its mouth. It has a safe harbour, and vessels requiring 21 ft. of water come to its wharves. It contains a Presbyterian church, an academy, several stores, 80 dwellings, and about 600 inhabitants. It is the most southerly town in the state, and as the country back of it is not well settled, it has not an extensive trade.

ST. MAWE'S, a market town and seaport of England, co. Cornwall, hund. Powder, par. St. Just-in-Roseland, on the E. shore of Falmouth harbour, 2 m. E.N.E. Falmouth. Area of par. St. Just, 2550 acres. Pop., in 1831, 1558. The town consists of one irregularly-built street, at the foot of a hill facing the sea, the inhabitants being principally fishermen and pilots. The harbour of St. Mawe's is a creek belonging to that of Falmouth, the entrance to which is defended by St. Mawe's castle, built in the time of Henry VIII. It is governed by a portreeve chosen at an annual court-leet. This inconsiderable place sent two members to the House of Commons from 1562 till the passing of the Reform Act, by which it was disfranchised. Markets on Fridays.

ST. STEPHENS, p. v., Washington co., Ala., 149 m. S. by W. Tusculloosa, 961 W. Situated on the W. bank of Tombigbee river, at the head of schooner navigation, 120 m. above Mobile. It has a considerable number of dwellings, chiefly of stone, but has the aspect of decay. It contains a United States land office, several stores, and about 150 inhabitants.

SAINT TAMMANY, parish, La. Situated in the E. part of the state, and contains 972 sq. m. Bounded S. by lake Pontchartrain, E. by Pearl river, W. by Tangipahoa river. Watered by Chifuncte river. It contained in 1840, 25,000 neat cattle, 1250 sheep, 18,500 swine; and produced 12,150 bushels of Indian corn, 4000 of oats, 18,350 of potatoes, 987,250 pounds of rice, 140,000 of cotton, 360,000 of sugar. It had 25 stores, 18 grist-mills, 21 saw-mills, one printing-office, one weekly newspaper; two academies, 56 students; one school, 15 scholars. Pop.: whites, 2353; slaves, 1940; free coloured, 305; total, 4598. Capital, Covington.

ST. THOMAS, one of the Virgin islands in the West Indies, belonging to the Danes, in about lat. 18° 20' N., long. 65° W., 36 m. E. Porto Rico. Its area is estimated at 37 sq. m., and its population at about 7000, of whom 500 are whites, 1500 free blacks, and the remainder slaves. Surface mountainous, and the island generally less fertile than St. Croix. Droughts and violent hurricanes are frequently experienced. Sugar and cotton are the principal products. St. Thomas has long been, and still continues to be, one of the principal emporiums in the West Indies. It owes this distinction partly to its convenient situation, partly to its spacious and safe harbour at St. Thomas on the S. side of the island, and partly and principally to the moderation of the import duties, which vary from 1 to 1½ per cent. St.

## ST. THOMAS.

Thomas has, in consequence, become as it were a *dépôt* for the supply of the neighbouring islands; goods being sent to it to be warehoused till opportunity offers for conveying them to their final destination. The great articles of importation are manufactured goods, principally from England, but partly, also, from other countries of Europe, with provisions, lumber, &c., from the United States. We subjoin an

ACCOUNT of the Import Trade of St. Thomas in 1840.

	Vessels entered.	Tonnage.	First cost Value of Imports.
From Great Britain . . .	42	9,303	2,100,000
France . . . . .	38	6,914	640,000
Spain . . . . .	7	500	23,000
Italy . . . . .	9	1,293	53,000
Hamburg and Altona . .	32	5,890	900,000
Flensburg . . . . .	12	2,265	41,000
Bremen . . . . .	9	1,132	198,000
Holland . . . . .	2	306	13,000
U. States of America and Brit. America . . .	217	30,279	968,000
Totals . . . . .	308	53,132	4,997,000

In the same year the colonial arrivals were as follows;

	Vessels.	Tonnage.
Vessels of Venezuela and New Grenada . . .	55	4,612
British Islands . . . . .	600	9,923
French ditto . . . . .	55	2,311
Spanish ditto . . . . .	377	11,981
Danish ditto . . . . .	321	13,637
Dutch ditto . . . . .	99	3,148
Swedish ditto . . . . .	18	569
Hayti . . . . .	43	1,813
Totals . . . . .	1,568	48,024

N. B. Besides a great number of vessels neither landing nor loading goods, being in that case free from port-charges.

ST. THOMAS, Franklin co., Pa., 7 m. W. by S. Chambersburg, 53 m. S.W. Harrisburg, 98 W. Drained by Black creek. It contains two churches, four stores, one furnace, one woollen factory, five grist-mills, seven saw-mills, one oil-mill, two tanneries, two distilleries; 11 schools, 364 scholars. Pop. 1725.

ST. VINCENT. See VINCENT (St.)

SALAMANCA, (an. *Salamanca*), a celebrated city of Spain, kingd. of Leon, and prov. of its own name, on the Tormes (a trib. of the Douro), crossed here by a handsome stone bridge of 27 arches, 92 m. S. by W. Leon, and 119 m. W.N.W. Madrid. Pop., according to Miñano, 13,918, not including the clergy and university. It stands on three small hills, and is surrounded by walls: streets generally steep, narrow, and crooked, extremely dirty, and with a decayed, melancholy aspect. There are numerous public places and fountains; but the only one worth notice is the *Plaza mayor*, a fine square, each side of which is 293 ft. in length, surrounded by houses of three stories, all of equal height, and exact symmetry, with iron balconies, surmounted by a stone balustrade: the lower part is open, forming a colonnade running all round the square. Bull-fights are exhibited here in June. Among the public edifices, by far the largest is the cathedral, a gothic building with a superfluity of carving on the exterior; it is 378 ft. in length, and 181 ft. in breadth, the height of the nave being 130 ft. In the interior are some good paintings, and a fine organ with horizontal pipes. The chapter comprises a bishop, 10 dignitaries, and 26 canons. The city has also 25 parish churches; but few of them merit description. The church of St. Stephen, however, which was formerly attached to a Dominican convent, may almost vie in splendour of decoration with the cathedral itself. Salamanca has, for many centuries, been celebrated as the seat of a university, and the numerous buildings belonging to the various colleges constitute a principal feature in the city: indeed, so proud are the Spaniards of the collegiate edifices of Salamanca, that they somewhat pompously termed it *Roma la chica* (little Rome). The university was founded in 1239, and enjoyed a revenue, in 1836, of 1,200,000 reals, or £12,500 sterling; though this has since been much diminished by the suppression of the convents, and the application of their funds to secular purposes. In the 15th and 16th centuries, the university of Salamanca was attended by from 10,000 to 15,000 students; but its former glory is departed, and we question whether it have now 300 pupils. Nor is this to be at all regretted, for what advantage could any one derive from the prelections of Spanish churchmen on monkish literature, the philosophy of Aristotle and Thomas Aquinas, Roman jurisprudence, and the canon law? Attached to the university is a large library, furnished with a few modern books, and piles of scholastic divinity.

Formerly there were four public and 25 private colleges connected with the university; but many of these have now fallen to decay, and the buildings are little better than mere ruins; indeed, but few of them retain any traces of

## SALEM.

their former magnificence, their most valuable effects having been carried off during the Peninsular war, and the monastic libraries were burnt by wholesale in 1836. Before the suppression of the monasteries, Salamanca had 580 clergymen; and before the coffers of the churches and convents were emptied to supply the wants of the state, ample provision was made for the support of imposture and idleness. Every street swarmed with vagabonds, not merely those who were proper objects of compassion, but those also who, if compelled to work, would have been found abundantly able to maintain themselves. Mendicancy still prevails; but the want of public support must eventually compel the mendicants to apply themselves to industrious callings.

The manufactures of Salamanca are inconsiderable, comprising some fabrics of broad-brimmed hats (*sombretos*) several tanneries, two or three establishments for weaving woollen cloths, and a few others for making starch, glue, earthenware, &c., besides a pretty large manufacture of shoes. A weekly market is held here, and an annual fair in September. The suburbs abound with well planted walks; the *huerta*, or irrigated tract near the river, is planted with fruit trees; corn and leguminous plants abound throughout the neighbourhood (the husbandry of which, according to Townsend, is superior to that in most parts of Spain), and the hills, clothed with oak trees, are depastured by oxen, sheep, and goats, celebrated for the delicate flavour of their meat.

Salamanca, though mentioned by the classical writers under the name of *Salmantica*, appears to have been of little importance under the Romans, though a Roman road and some other monuments are still extant. Salamanca is celebrated in the history of the late Peninsular war for the victory gained in its vicinity on the 23d July, 1812, by the Anglo-Portuguese army, under the Duke of Wellington, over the French under Marshal Marmont. The struggle was most severe, but the British were successful at all points. (*Twiss's Spain and Portugal*, p. 58-63; *Townsend's Spain*, ii. 73-88; *Miñano; Dict. Géog.; Encycl. Métrop.; Napier's Peninsular War*, iv. 108.)

SALANKEMENT, a small village of the Austrian dominions, prov. Slavonia, on the Danube, nearly opposite to the embouchure of the Theiss, 23 m. E. by S. Neusatz. It deserves notice for its having been the spot where the first decisive check was given to the progress of the Turks. A powerful army of the latter, commanded by the justly celebrated Vizier Kuiperli, was encountered here on the 19th of August 1691, by the Imperialists under Prince Louis of Baden. After an obstinate and well contested action, without any decisive advantage to either party, Kuiperli fell; when the Turks, panic-struck by his loss, were totally defeated, leaving above 20,000 men on the field of battle. The loss of the Imperialists did not exceed 8000 men. (*La Croix, Abrégé de l'Histoire Ottomane*, anno 1691.)

SALEM, co., N. J. Situated in the S.W. part of the state, and contains 320 sq. m. Bounded N.W. and S.W. by Delaware r. and bay. Watered by Salem and Alloways creeks. It contained in 1840, 11,277 neat cattle, 16,486 sheep, 26,339 swine; and produced 94,484 bushels of wheat, 36,925 of rye, 371,984 of Indian corn, 306,691 of oats, 70, 644 of potatoes. It had 48 stores, three woollen factories, 17 grist-mills, twelve saw-mills, four tanneries, one pottery, one printing-office, two weekly newspapers; two academies, 71 students; 43 schools, 1646 scholars. Pop. 16,024. Capital, Salem.

SALEM, p. t., Rockingham co., N. H., 27 S.S.E. Concord, 458 W. Spigott r. and its branches afford water-power. It contains three churches, a Congregational and two Methodist, four stores, two fulling-mills, two woollen factories, five grist-mills, three saw-mills; 10 schools, 467 scholars. Pop. 1408.

SALEM, city, port of entry, and one of the capitals of Essex co., Mass., is situated in 42° 31' 19" N. lat., and 70° 53' 57" W. long. from Greenwich, and 6° 7' 27" E. long. from W. It is 14 N.N.E. Boston, 24 S. Newburyport, 454 W. The population, in 1790, was 7921; in 1800, 9457; in 1810, 12,613; in 1820, 12,731; in 1830, 13,886; in 1840, 15,062. Employed in commerce, 287; in manufactures and trades, 1188; in navigating the ocean 1301; in the learned professions, 52.

It is chiefly situated on a peninsula or tongue of land, formed by two inlets or arms of the sea, called North and South rivers. A handsome bridge over North or Bass river connects the place with Beverly, was built in 1788, and is 1481 ft. in length. The lowest bridge, on the S. side was built in 1808. There are handsome settlements at North and South Salem, on the opposite sides of the two rivers, connected with the town by these bridges, which are free. A north-east arm of the peninsula, towards Beverly bridge, is considerably settled: and an easterly arm, called the Neck, is occupied chiefly by the almshouse, hospital, and two forts which are situated here. The almshouse has a

## SALEM.

considerable farm attached to it. The compact part of the city is more than a mile and a half long, and three-fourths of a mile wide, extending across the peninsula. The city is handsomely laid out, though not with entire regularity, with spacious streets, crossing each other nearly at right angles. Essex-street occupies the height of land, and extends quite through the city, not more than from 20 to 25 ft. above high-water, nearly east and west, but its course is winding. Federal and Bridge-streets are broad and straight. Chesnut-street is considered the handsomest in the place, though it is not the most public. The place contains 134 streets. In the eastern part of the city is an elegant public square or common, containing about  $8\frac{1}{2}$  acres, enclosed by a neat railing, laid out with gravelled walks, and bordered by a large number of elms. The city is well-built, partly of brick or stone, but largely also of wood; and some of the houses are elegant, particularly in the vicinity of the common. The streets are generally well paved and lighted, and the city is supplied with pure spring water from the neighbourhood, in pipes. Salem was long the second place in New-England in wealth, commerce, and population; but Providence and Lowell now exceed it in population, and New-Bedford in shipping. In early times it even disputed with Boston the right to be considered the capital. In proportion to its size, it is now one of the most wealthy places in the United States. The wharves, 31 in number, are along South river, which forms the principal harbour, which is so shallow, that vessels requiring more than 12 ft. of water must load and unload at a distance from the wharves, yet the harbour is accessible to ships of war, which find a safe anchorage, as was proved by the frigate Constitution, which here took refuge during the last war, when pursued by a superior force. The commerce of Salem is extensive, and her ships visit almost all parts of the world. From 1784 to 1812, and later, her citizens extensively prosecuted, and were greatly enriched by the East India trade, which was more extensively prosecuted here than in any other place in the United States. In 1818, there were 53 vessels employed in this trade, belonging to Salem, with an aggregate tonnage of 14,272 tons; but this branch of its trade, though still carried on, is less extensive than formerly. The number of vessels engaged in foreign commerce is about 100, and 13 in the whaling business, besides the vessels employed in the coasting trade and the fisheries. The tonnage of the district in 1840, was 37,021 tons. There are many islands in the harbour, most of which are small and rocky. Winter island lies on the north side of the entrance, and contains 38 acres. Fort Pickering is situated on its eastern point. The light-house is on Baker's island, which contains 53 acres. By the construction of a dam across North river, something after the form of the mill-dam at Boston, an important water-power has been produced, and several tide-mills have been erected.

Among the public buildings are a courthouse, jail, an almshouse, a hospital, a market-house, a custom-house, an East India marine museum, with many curiosities from remote parts of the world, and a lyceum. There are eight banks with an aggregate capital of \$2,350,000; three insurance companies with a total capital of \$570,000, besides two mutual insurance companies, without a definite capital. There is also a bank for savings. There are two public libraries, an atheneum containing 9000 vols., and a mechanics' library containing 2000 vols., besides some others. There are 18 churches, four Congregational, four Unitarian, two Baptist, a Methodist, an Independent, Friends, Christian, Universalist, Roman Catholic, and a free church. Among the public institutions is a society, formed in 1801, of those who had as captains or supercargoes doubled the Cape of Good Hope or Cape Horn, for the relief, when necessary, of the families of its members, and for advancing the knowledge necessary for the East India trade. Strangers introduced by a member have free access to its splendid museum. There are various other charitable and benevolent societies. Harmony Grove cemetery, W. of the city, contains 35 acres of ground beautifully laid out, and ornamented with trees, and is a highly attractive spot.

According to the statistics of 1840, there were 45 commercial houses engaged in foreign trade, capital not given; 80 retail stores, with a capital of \$430,000; the fisheries produced 7500 quintals, of smoked or dried fish, 10 barrels of pickled fish, 22,800 gallons of spermaceti oil, 263,500 gallons of whale or other fish oil, the whole employing 300 persons, and a capital of \$200,000; four persons manufactured machinery to the amount of \$3000; 20 persons manufactured the precious metals to the amount of \$50,000; 76 persons manufactured various metals to the amount of \$90,000; six persons manufactured granite and marble to the amount of \$5000; 15 persons produced brick and lime to the amount of \$7000; 100 men manufactured tobacco to the amount of \$40,000, with a capital of 30,000; 16 persons produced hats and caps to the amount of \$7000, with a capital of \$5000; 17 tanneries produced 20,000 sides of sole lea-

ther, and 40,000 sides of upper leather, the whole employing 100 persons, with a capital of \$75,000; 50 other manufactories of leather, as saddleries, etc., produced to the amount of \$430,000, with a capital of \$250,000; 15 persons produced 65,000 pounds of soap, 10,000 pounds of tallow candles, and 100,000 pounds of wax or spermaceti candles, with a capital of \$66,000; four distilleries produced 300,000 gallons of distilled spirits, employing four persons, and a capital of \$35,000; 20 persons produced drugs and paints to the amount of \$50,000, with a capital of \$140,000; four ropewalks, employing eight men, produced cordage to the amount of \$103,000, with a capital of \$83,000; six persons produced musical instruments to the amount of \$4000, with a capital of \$2000; ten persons produced carriages and wagons to the amount of \$8000, with a capital of \$4000; two grist-mills and two saw-mills, employing ten persons, produced to the amount of \$107,000, with a capital of \$50,000; 60 persons manufactured furniture to the amount of \$30,000, with a capital of \$40,000; three printing-offices, three binneries, two weekly, and two semi-weekly or tri-weekly newspapers, employed 29 persons, and a capital of \$9000; 10 wooden houses were built, employing 40 persons, and cost \$25,000. The total capital employed in manufactures was \$1,439,000. There was one academy, with 32 students; 77 schools, 2965 scholars.

Salem was chartered as a city in 1836. It is governed by a mayor, six aldermen, and 24 common-council men.

Next to Plymouth, Salem is the oldest place in the state, having been settled by John Endicott, at the head of a company of emigrants, in 1628. Its Indian name was Naumkeag or Naumkeek, by which it was designated in early times. They were strongly reinforced next year, by the arrival of 11 ships, and 1500 persons, part of whom went to Boston, Charlestown, Dorchester, and other towns. This fleet brought out the charter, under which John Winthrop had been chosen governor, and Thomas Dudley deputy governor. These settling at Boston, the seat of government was transferred to that town. In 1678 Salem contained 85 dwelling-houses and 300 rateable polls. Marblehead was taken from Salem in 1649; Beverly in 1688; Danvers in 1757. The celebrated delusion denominated "the Salem witchcraft," commenced in that part of the town which is now Danvers; but the court, the trials, and the executions were here; 19 persons were put to death in this and some of the neighbouring towns, including Boston and Charlestown. The place of execution in Salem is still denominated Gallows Hill, from which now peaceful spot, the finest view of the city is obtained. At length this severity was condemned, and the occasion of it was pronounced a delusion. These colonists undoubtedly erred exceedingly, but their error belonged to the age. The English laws at that time recognised witchcraft as a capital offence, and they received the sanction of that learned and upright jurist, Sir Matthew Hale.

Salem was distinguished as an early supporter of the American Revolution. On the closing of the port of Boston, the General Court was removed to this place; and Gen. Gage hoped that the inhabitants would be conciliated by the expectation of increasing prosperity. But by a unanimous vote in a public town-meeting, they gave him to understand that they disdained to flourish on the ruin of Boston, and they resisted an attempt of the British to seize some military stores, by taking up a draw-bridge in the town, before the battle of Lexington. During the Revolutionary war, Salem furnished 60 privateers, manned by 4000 men, which were eminently bold and successful.

The railroad from Salem to Boston, 14 miles, was opened in 1838, and is passed in 50 minutes; and Salem is thus brought into a near connection with the commercial capital of New-England.

SALEM, P. L. semi-capital of Washington co., N. Y., 46 m. N.N.E. Albany, 416 W. Bounded S. by Battenkill r. Drained by Black and White creeks, which afford water-power. It contains a courthouse, jail, two churches, a Presbyterian and an Associate Reformed, 11 stores, one fulling-mill, one woollen factory, five grist-mills, five saw-mills, one printing-office, one weekly newspaper; one academy, 60 students; 22 schools, 731 scholars. Pop. 2835.

SALEM, P. L. capital of Salem co., N. J., 64 m. S. Trenton, 175 W. Watered by Salem cr. and its tributaries. The village is on Salem creek,  $\frac{3}{4}$  m. from its mouth in Delaware bay, and contains a fine brick courthouse 60 by 40 feet, fire-proof brick county offices, a stone jail, a market house, a bank, an academy, and about 250 dwellings. The town contains 17 stores, two lumber yards, capital \$23,000, two tanneries one pottery, one printing office, two weekly newspapers; two academies, 71 students; four schools, 130 scholars. Pop. 2007.

SALEM, P. L. Mercer co., Pa. 240, m. W.N.W. Harrisburg, 296 W. Watered by Little Shenango and Crooked creeks. It has one fulling-mill, two grist-mills, 13 saw-mills; 13 schools, 569 scholars. Pop. 1980.

## SALEMI.

SALEM, p. v., Stokes co., N. C., 109 m. W. by N. Raleigh, 320 W. It is a Moravian village, situated on a small branch of Yadkin river. It is built chiefly on one extended street, shaded with trees. The houses are chiefly of brick. It contains a Moravian church, a female academy of celebrity, which has four brick buildings, four stories high, on a fine public square, a branch of the bank of Wilmington, four stores, a cotton factory, a paper-mill, a printing-office, and about 1000 inhabitants.

SALEM, p. v., capital of Crittenden co., Ky., 249 m. W.S.W. Frankfort, 781 W. It contains a courthouse, jail, three stores; one school, 25 scholars. Pop. 233.

SALEM, p. t., Columbiana co., O., 167 m. E.N.E. Columbus, 269 W. It has 10 schools, 324 scholars. Pop. 1900.

SALEM, t. Champaign co., O. It has two flouring-mills; one school, 47 scholars. Pop. 1402.

SALEM, t., Highland co., O. It has six schools, 233 scholars. Pop. 2004.

SALEM, t. Jefferson co., O. It has nine stores, one grist-mill, two tanneries; six schools, 375 scholars. Pop. 2044.

SALEM, t., Shelby co., O. It has three stores, one woolen factory, one grist-mill, three saw-mills, two tanneries; two schools, 51 scholars. Pop. 1158.

SALEM, p. v., capital of Washington co., Ia., 93 m. S. Indianapoli, 604 W. Situated on the head waters of Blue river, and contains a courthouse, jail, market house, a county seminary of brick, two churches, a Methodist and Presbyterian, 12 stores, a grist-mill, oil-mill, and cotton factory, all moved by steam, and various other mills and manufacturing, two printing-offices and about 1500 inhabitants.

SALEM, a district of British India, presid. Madras, between the 11th and 13th degs. of N. lat., and 77° and 80 degs. E. long.; having N. E. and E. N., and S. Arcot; S.E. and S. Trichinopoly; S.W. and W. Coimbatore, from which it is separated by the Cavery; and N.W. the Mysore territory. Area, 6518 sq. m. Pop. in 1836-7, 905,190. Its whole surface is above the E. ghaats; and its climate is cool and bracing, which makes it be much frequented by European invalids. It comprises the Barramah districts, a rich table-land forming its N. portion. Except the Cavery and Ponari, it has few rivers and no lakes. In 1836, of 4,178,870 acres, 1,118,730 were estimated to be under culture; exclusive of 661,500 for cultivation, and 2,391,600 acres that were barren and mountainous. About three fourths of the land is assessed under the ryotwar, and the remainder under the zemindar system. Rather more than half the population is supposed to be actively employed in agriculture. Maize, rice, and a little cotton are grown, and great quantities of teak, sandal, and black woods grow on the hills; but the principal exports are cloth, ghee, tamarinds, turmeric, jagherry, oil seeds, and iron. Iron ore is very abundant, and good steel is made. Cloth is, however, the staple commodity, and is manufactured for export to the W. Indies, and America. The chief imports are areca nuts, silk, and black pepper. Total revenue of the district, in 1837-8, 1,950,563 rup.; of which sum, 1,625,524 rup. were contributed as land-tax. Salem, the city, town, and residence of the British authorities, stands in about lat. 11° 37' N., long. 78° 13' E. It has some trade in cotton cloths, saltpepe, &c. (*Madras New Almanac; Hamilton, E. I. Gaz.*)

SALEMI, a considerable town in Sicily, intend. Trapani, cap. cant., on a hill 20 m. E. Marsala. Pop., in 1831, 12,162. It is finely situated, but has a most abject appearance. Its inhabitants are indolent, and the town has no trade, being, according to Russell (*Trav.*, p. 64), distinguished only by filth and superstition. Salemi occupies the site of the ancient *Halycia*. Sir R. C. Hoare supposes that it derives its present name from a Saracen chief of the 9th century. (*Classical Tour in Sicily*, ii. 85.)

SALENO, (an. *Salernum*), a celebrated city and seaport of S. Italy in the Neapolitan dominions, prov. Principato Citra, of which it is the capital; at the foot of a hill on the N.E. shore of the gulf of Salerno, 17 m. S.S.W. Avellino, and 28 m. S.E. by E. Naples, with both of which cities it is connected by good roads. Lat. 40° 44' N.; long. 14° 46' E. "The modern city with 16,000 inhabitants, is by no means well built; and the narrow and dirty streets, running in different levels from the immediate edge of the sea, some way up the mountain, gives its interior a gloomy appearance, and afford but inconvenient residences; but its situation is most happy, and a marina, or promenade, which skirts its whole length along the shore, was added by the French, and contributes to render its aspect from the sea extremely imposing. There is no port; though a broken mole affording protection to the smallest vessels only, offers the semblance of such an accommodation." (*Craen's Tour*, &c., pp. 369, 370.)

The principal square has a good public fountain, and is surrounded with several Gothic edifices, including the intendency, the new theatre, and the cathedral. The houses are lofty, and the streets paved with lava. Ancient Gothic

## SALINE.

walls, in tolerable repair, enclose the city; and on the hill above, amid the principal remains of the ancient *Salernum*, is a ruined citadel. The cathedral, a heavy Gothic structure, is the most interesting of its public edifices. It was erected by the Normans on the site of an ancient building, and is dedicated to St. Matthew who is said to be buried within its walls. "The atrium, or court before it, is spacious, and surrounded by a portico of antique columns of porphyry, granite, &c. (said to have been brought from Pæstum 23 m. S.S.E. by Robert Guiscard); upon which the Normans constructed a range of brick arches, bent more after the Saracenic than the Gothic or Grecian manner; these support a regular set of apartments. In the centre is a basin of granite, 15 ft. in diameter, constantly filled by a fountain of excellent water. Many excellent sepulchres are placed in the colonnade, and the church contains also some monuments of remarkable personages, as Roger and William, dukes of Apulia, Margaret of Durazzo, and the restless pontiff Gregory VII., who died of chagrin at Salerno, in 1085. On each side the entrance of the choir is a pulpit raised upon pillars. Their panels are formed by rich mosaics of many colours, disposed in knots and stars. The choir is inlaid with square and oval plates of verde-antique, porphyry and serpentine; the great altar is decorated in the same barbarous, but splendid manner." (*Swinburne's Tour*, ii. 119.) Though the cathedral has but few paintings, it has, luckily, an ample supply of miraculous images! There are numerous other churches, one of which is said, but on doubtful authority, to be the burial-place of John of Procida, a native of Salerno, celebrated as the principal contriver of the conspiracy against the French in Sicily, which terminated on the 30th of March, 1282, in the massacre known by the name of the "Sicilian Vespers." Salerno has two hospitals, a workhouse, three government pawn-banks, a seminary, a royal lyceum, and a university. To the last belongs a school of medicine, which was once among the most famous in Europe, but which has, for a lengthened period, lost its pre-eminence. But the lyceum in this town is said to be superior to most others in the kingdom.

Salerno is an archbishop's see, the residence of the provincial intendent, and the seat of a superior criminal court, and of a civil tribunal. Previously to the period when Naples attained to a decided lead among the cities of S. Italy, Salerno carried on a considerable commerce by sea; that, however, has now wholly disappeared, though it continues to possess a pretty extensive inland trade, and has two large annual fairs.

Its climate is mild, but it is unhealthy from the proximity of marshes and rice-grounds, the culture of which occupies many of the inhabitants. It is doubtful whether the ancient *Salernum* was contiguous to, or at some distance from, the sea; but, on the whole, the probability seems to be that it did adjoin the sea, or that it was within such a short distance of it as to justify its being reckoned among maritime towns. (*Cellarii, Geographia Antiqua*, i. 860.) After the fall of the Roman empire, Salerno became the capital of a flourishing republic, the sovereignty of which was contested by the Greeks, Saracens, Lombards, and Normans; the latter of whom obtained possession of the city in 1076. Having been mostly burned down by the emperor Henry VI., it subsequently became a feudal possession of the Colonna, Orsini, and Sanseverini families, till it was re-annexed to the royal domains by the emperor Charles V. (*Rampoldi; Craven; Swinburne; Eustace, Classical Tour*, iii. 85.)

SALINA, p. t., Onondaga co., N. Y., 133 m. W. by N. Albany, 350 W. Drained by Onondaga creek, flowing into Onondaga lake, lying in the t. It contains the villages of Syracuse, Salina, Liverpool, and Geddes; and contains the richest salt-springs in the United States. It has in its several villages, eight churches, two Presbyterian, two Episcopal, two Methodist, a Baptist, and Roman Catholic, about 130 stores and groceries; three academies, 150 students, 21 schools, 1848 scholars. The salt-springs are owned by the state, which receives a duty of six cents on a bushel from the manufacturers, which on 2,622,305 bushels manufactured in 1840, amounts to \$157,338. Pop. 11,012, being the most populous township in the state.

SALINE, co., Mo. Situated a little N.W. of the centre of the state, and contains 829 sq. m. Bounded N. and E. by Missouri r. Watered by La Mine r. and its branches. It contained in 1840, 7176 neat cattle, 5798 sheep, 2475 swine; and produced 24,677 bushels of wheat, 304,095 of Indian corn, 36,763 of oats, 11,858 of potatoes, 17,250 pounds of tobacco. It had two commission houses in foreign trade, 10 retail stores, two flouring-mills, 12 grist-mills, 9 saw-mills, six distilleries, 14 schools, 303 scholars. Pop.; whites, 3635; slaves, 1615; free coloured, 8; total 5,258. Capital, Jonesboro'.

SALINE, co., Ark. Situated near the centre of the state, and contains 720 sq. m. Bounded S.W. by Saline r.

## SALINS.

It contained in 1840, 1530 neat cattle, 273 sheep, 3850 swine; and produced 592 bushels of wheat, 9500 of Indian corn, 1690 of oats, 4200 of potatoes, 940 pounds of tobacco, 64,500 of cotton. It had three stores, five grist-mills, one saw-mill, one tannery, one distillery; one school, 36 scholars. Pop.; whites, 1662; slaves 399; total, 2,061. Capital, Benton.

SALINS, a town of France, dep. Jura, cap. cant., in a narrow valley on the Furieuse, 26 m. N.E. Lons-le-Saulnier. Pop., in 1836, ex. com., 6185. It is walled, and commanded by two forts on adjacent heights. Its principal street is paved, and lined with substantial houses. There are several churches, a spacious college, a public library, good barracks, a theatre, hospital, and prison: these buildings are nearly all new, the town having been almost wholly destroyed by fire in 1825. Salins has several iron-forges, stone works, and brandy distilleries; but its name and principal importance are derived from its brine springs, which were wrought in the time of the Romans. They occupy a large space in the middle of the town, inclosed by turreted walls. And according to Hugo, the produce amounts to 140,000 cwt. of salt a year; in addition to which a considerable quantity is made at Arc, about 4 leagues distant to which an aqueduct conducts a portion of the water of the Salins spring. (*Hugo; Dict. Géog.*)

SALISBURY, or NEW SARUM, a city, parl. bor., and market town of England, co. Wilts., of which it is the cap., hund. Undercluch, on the Avon, here crossed by three stone bridges (one of which has 10 arches), 21 m. W. Winchester, and 80 m. W.S.W. London. Pop. of parl. bor., which includes, with the city, the extra-parochial district of the Cathedral Close, and parts of parishes Fisherton and Milford, in 1831, 11,672. It is built with great regularity, having six principal streets running from N. to S., crossed by the same number, intersecting them at nearly right angles. The houses generally are large and respectable, some, also laying claim to considerable architectural elegance. It is well paved, lighted with gas, and kept remarkably clean by means of brooks running down the middle of the streets. The market-place, a large open square, on its W. side, has, at its S.E. angle, the council house, a brick structure, with a Doric portico, erected at the close of the last century at the expense of the Earl of Radnor, and since greatly enlarged. The interior is divided into court-rooms, offices, &c., for the business of the assizes, quarter-sessions, and corporation, and it has several good modern portraits. On the opposite side of the market-square is a curious old hexagonal-shaped building, having a conical roof supported by pillars; it is called the Poultry or Butter-cross, and was probably built in the reign of Edward III. In another part of the same square is the public library and reading-room, founded in 1819, and supported by subscription. The most striking feature in Salisbury, however, is its cathedral, which stands in the large open space called the Liberty of the Close, on the S. side of the city. The situation is remarkably good; the precinct or close is kept in the best order, and comprises some very fine trees which, as well as those in the palace-grounds, serve to embellish the views of the cathedral. The W. front, the N. side, and the E. end of the latter are all open, and may be seen from peculiarly favourable distances: indeed, the N.E. view is perhaps the best general view of a cathedral to be had in England, and displays the various portions of this interesting edifice to the best advantage. Salisbury cathedral has the advantage of being built in one style, the early English, and on a uniform and well-arranged plan. The centre tower and spire (the entire height of which is estimated at 404 ft.) are of later date, but admirably accommodated to the style of the building. The plan is that of a complete cathedral, having spacious cloisters, an octagonal chapter-house, and a tower for a library and muniment room: there are two transepts, each of which has an aisle eastward, and the nave has a large N. porch. The extreme length of the church (including the Lady chapel) is estimated at 474 ft.; breadth of nave and aisles, 78 ft.; height of nave 30 ft.; and width, including the great transepts, 210 ft. Modern alterations have taken away the altar-screen, and thrown the Lady chapel open to the choir: the organ-screen, also, as well as a large portion of the tabernacle-work in the choir, is of modern construction. The E. window is filled with a beautiful painting on glass of the Resurrection, from the designs of Sir Joshua Reynolds; another window exhibits a painting on glass of the Elevation of the Serpent in the Wilderness; there are other painted windows, and in various parts of the church are several ancient monuments, some of which are extremely curious. The W. front is a beautifully enriched specimen of the pointed architecture, peculiar to this church: the angles are terminated by tolerably massive square towers, surmounted by spires, and pinnacles; and over the grand central entrance is a series of canopied arches beneath the great W. window, which is formed in

## SALISBURY.

three divisions. The exterior of the church is enriched with a number of recesses situated in tiers at different heights all round the building. Many of the statues still remain, and it is supposed that originally there must have been at least 200. The cloisters are remarkably magnificent, forming an exact square, each side of which is 182 ft. in length. The cathedral library is built over the E. side of the cloisters, and adjoining them, in the same direction, is the chapter-house. "On the whole," says Mr. Rickman, "the cathedral presents an object for architectural study hardly equalled by any in the kingdom: the purity of its style and the various modes of adapting that style to the purposes required, deserve the most minute attention." (*Rickman's Gothic Architecture*, p. 257, 258.)

Within the close, formerly surrounded by a wall and still entered by several ancient gates, deserving admiration, are the residences of the bishop, dean, canons, &c. The deanery-house is opposite the W. front of the cathedral; and at a little distance S.E., surrounded by gardens, is the bishop's palace, a very irregular building, in different styles of architecture, having been enlarged and repaired at various periods, from the middle of the 15th century down to a recent period. The gardens are on a large scale, comprising an area of several acres, well planted with fine, large old trees. The episcopal see was removed from Old Sarum to Salisbury under the authority of a papal bull, in 1217, about which time the cathedral was founded, the expense of its erection, exclusive of the chapter house, tower, and spire, being estimated at 40,000 marks, or £36,667, an enormous sum in those days. The chapter comprises, (besides the bishop) a dean, precentor, chancellor, and six canons residentiary, dividing among them a nett revenue of £2800 annually, and having residences and separate revenues, with the patronage of 18 benefices. There are likewise 31 prebendaries, besides choral vicars, &c. At an average of the three years ending with 1831, the revenues of the bishopric amounted to £3939 a year; but it either has been, or is to be augmented to £5000 a year. The bishop has also a large portion of the cathedral-patronage, besides that of 36 benefices; his diocese extends over the whole of Wiltshire and a portion of Shropshire. Salisbury has three other churches, one of which, St. Edmund's, is in the gift of the bishop, and that of St. Thomas's in the patronage of the dean and chapter. St. Edmund's is a perpendicular structure, with large windows and good tracery, the chancel having been modernized. The tower fell down, and was rebuilt in the 17th century. St. Thomas's is a large perpendicular church of good composition, with its tower standing on the S. side of the S. aisle: it has a nave and chancel, with aisles and a cleristery. St. Martin's is a large church, in the early English style, with some more recent parts. The church at Fisherton is small and of mixed architecture. The Roman Catholics have a handsome chapel; and there are places of worship for Independents, Baptists, Wesleyan Methodists, and Unitarians, with attached Sunday-schools. A grammar-school is attached to the cathedral for the instruction of the choristers, and there is another in the city, founded by Queen Elizabeth, in the patronage of the corporation. The bishop supports a good school; and there is also an orphan school; and the different parishes have their respective, national, infant schools, &c. There are several charities, among which may be mentioned that of Bishop Le Poor, near Harnham bridge; Trinity hospital, founded in the reign of Richard II., for 12 aged matrons; and Bishop Ward's college for clergymen's widows; with several other almshouses, money charities, &c. An infirmary, founded near Fisherton bridge in 1766, is liberally supported by subscription; a mendicity society has been established with considerable success, and there are various minor benevolent institutions, bible, and tract societies, &c.

A county-jail has been recently erected in Fisherton, and there is a small, but neat theatre, little patronised, with assembly and concert rooms. A weekly newspaper, called the "Salisbury and Winchester Journal," has a pretty extensive circulation. Races are annually held near the town in August. "The town of Salisbury cannot be considered as increasing, or in a state of improvement, having very little trade. An extensive woollen manufacture was formerly carried on here; but it is now confined to a single factory; and cutlery, for which this town was once famous, is now brought for sale from Birmingham." (*Parl. and Municipal Bound. Report*.) It has hitherto derived some benefit from its position on one of the great roads to Devonshire; but the opening of the Western railway has deprived it of this advantage.

Salisbury received its first charter from Henry III., which was afterwards renewed by several monarchs. According to the Municipal Reform Act, it is divided into three wards, and governed by a mayor, six aldermen, and 18 councillors. Quarter and petty sessions are held under a recorder; besides which the assizes and quarter sessions for the county are held here. A court for the recovery of debts to any

## SALISBURY.

amount is held monthly by the bishop's bailiff, who also holds courts-leet for the lord of the manor. Salisbury has returned two members to the House of Commons since the reign of Edward I., the right of election down to the Reform Act being vested in the corporation, consisting, in 1831, of 56 members. The limits of the par. bor. were enlarged by the Boundary Act, so as to include, with the old bor., the cathedral close, and certain parts of Fisherton and Milford parcs, as before mentioned. Registered electors, in 1839-40, 698. Salisbury is also the chief election town for the S. division of Wiltshire. Markets on Tuesday and Saturday, with large cattle fairs on alternate Tuesdays. Fairs, Tuesday after Jan. 6; Tuesday after March 25; Whit Monday and Whit Tuesday for horses, and Oct. 29 for butter and cheese.

Salisbury owes its foundation to the removal of the ecclesiastical establishment from the once important but now decayed bor. of old Sarum, the Roman station of *Sorbidunum*, about 2 m. N. from the modern city. The quarrels between the troops of Henry II. and Roger Le Poor, the turbulent prelate of that day, induced the latter to establish his clergy in a more peaceful and advantageous situation: a city soon arose around the cathedral, and by the influence of the monarchs and clergy, soon became an important place, while the other fell to decay, and was ultimately deserted by its inhabitants. Henry III. granted the city a charter, entitling it to the same privileges as Winchester, and conferring extensive local powers on the bishop of the see. Parliaments were occasionally held here during the 13th and 14th centuries. The city became celebrated, after the death of Charles I., for the abortive attempt of the royalists under Colonel Wyndham, to proclaim Charles II. Two large monasteries existed here prior to the Reformation; but there are no extant remains of these foundations. Among other distinguished individuals to whom Salisbury has given birth, may be specified James Harris, the author of the "Hermes," and of other learned and ingenious philological and metaphysical treatises, born here in 1709. Thomas Chubb, a clever, but not very learned, deistical writer of the last century, was also a native of this city. N.W. from Salisbury stretches the vast tract of downs and heaths, called Salisbury plain; and about 6 m. N. of the city is the stupendous monument of Stonehenge, which see. (*Parl. and Mun. Reports; Rickman's Architecture, &c.*)

SALISBURY, p. t., Merrinac co., N. H., 16 N.N.W. Concord, 491 W. Kearsarge mountain lies in its W. part. Drained by Blackwater river. Chartered in 1768. It contains two churches, a Congregational and Baptist, three stores, one fulling-mill, two grist-mills, two saw-mills; one academy, 65 students; 10 schools, 324 scholars. Pop. 1329.

SALISBURY, p. t., Addison co., Vt., 69 S.W. Montpelier, 481 W. It contains lake Dunmore, the largest pond in Vt., 4 m. long and three fourths of a mile wide, the outlet of which, called Leicester river, affords water-power. Watered by Middlebury river. It has two stores, one fulling-mill, one woollen-factory, one forge, one glass-factory, one grist-mill, six saw-mills; 10 schools, 440 scholars. Pop. 942.

SALISBURY, p. t., Essex co., Mass., 42 N.N.E. Boston, 477 W. Bounded E. by the Atlantic, S. by Merrinac river, W. by Powow river. It contains six churches, two Congregational, a Methodist, Baptist, Christian and Universalist, 23 stores, 16 fulling-mills, three woollen factories, three grist-mills, two saw-mills, three tanneries, one printing-office, one weekly newspaper; 11 schools, 653 scholars. Pop. 2739.

SALISBURY, p. t., Litchfield co., Ct., 53 W. Hartford, 337 E. First settled in 1720, incorporated in 1740. Bounded E. by Housatonic river, which between this town and Canaan has a perpendicular fall of 60 ft. affording great water-power. It has several ponds, the outlets of which afford water-power. It contains three churches, a Congregational, Episcopal and Methodist, seven stores, three furnaces, 10 forges, three grist-mills, four saw-mills, two tanneries; one academy, 15 students; 13 schools, 695 scholars. Pop. 2562.

SALISBURY, p. t., Herkimer co., N. Y., 73 W.N.W. Albany, 413 W. Drained by East Canada creek, and tributaries of West Canada creek. It contains five churches, a Presbyterian, two Methodist, and two Universalist, seven stores, two fulling-mills, one forge, four grist-mills, 11 saw-mills, one paper-mill, three tanneries, one printing-office; 14 schools, 507 scholars. Pop. 1859.

SALISBURY, p. t., Lancaster co., Pa., 16 E. Lancaster, 51 E.S.E. Harrisburg, 121 W. Drained by Pecquea creek, which affords water-power. It contains nine stores, one forge, two flouring-mills, two grist-mills, one saw-mill, one distillery, one brewery; 10 schools, 390 scholars. Pop. 3959.

SALISBURY, t., Lehigh co., Pa. It has three stores, three flouring-mills, two saw-mills; one school, 40 scholars. Pop. 1438.

SALISBURY, p. v., capital of Rowan co., N. C., 118 W. Raleigh, 255 W. Situated on a branch of Yadkin river. It contains a courthouse, jail, a church, an academy, and about

## SALONICA.

700 inhabitants. Here is an ancient stone wall, laid in cement, from 12 to 14 ft. high and 22 inches thick, which reaches to within a foot of the surface; and the length of what has been discovered is about 300 ft. The object, time and purpose of its construction are uncertain. A smaller similar work has been discovered, at the distance of 6 m.

SALMON, r., N. Y. rises in Lewis co., and enters lake Ontario in Mexico bay. Twelve miles from its mouth is a remarkable cataract of 107 ft. perpendicular, where the river is 250 ft. wide at high water. Above the cataract the rocky banks are 80 or 90 ft. high and below it 200 ft. high. Many salmon are taken in the river below the falls, whence it derives its name. It is navigable for schooners,  $\frac{1}{2}$  m. from the lake, and boatable in high water, to the falls.

SALON, a town of France, dép. Bouches du Rhone, cap. cant., in a fertile plain within about 3 m. of the canal de Craponne, and 29 m. N.N.W. Marseilles. Pop., in 1836, 4446. It is divided into an old and a new town, separated from each other by a planted boulevard. It has, according to Hugo, an air of opulence, of which many larger towns are destitute: its streets are regular, and it has many good houses and public buildings; including the church built by the Templars, the parish church, with several curious sculptures, town-hall, &c. On a rocky, rocky height, at the extremity of the town, is an old castle, now converted into a house of correction (or, according to Hugo, a barrack). It has manufactures of silk twist, hats, soap, and olive-oil; and a brisk general trade. The remains of a temple in honour of Thierius have been discovered here. (*Hugo, Dict. Geog., &c.*)

SALONICA (an. *Thessalonica*), a celebrated city and seaport of European Turkey, cap. sandjak of its own name, at the N.E. extremity of the gulf of same name, 185 m. N.N.W. Athens, lat. 40° 30' 47" N., long. 22° 57' 13" E. Its population was estimated by Mr. Walpole at about 42,000, by M. Beaujour at 60,000, and by later, though, perhaps, less cautious authorities, at 70,000, of whom about three fifths are Turks, and the rest chiefly Jews and Franks, with a few Greeks. Its appearance, when approached from the gulf, is very imposing, as it is seen from a great distance, placed on the acclivity of a steep hill, amid cypress trees and shrubs, surrounded by lofty white-washed walls ascending in a triangular form from the sea, and surmounted by a fortress with seven towers. The domes and minarets of numerous mosques rise from among the other buildings, and, being surrounded with cypresses, give an air of splendour to its exterior.

The circ. of the city walls probably exceeds 5 m.; but, according to Dr. Clarke, "a great part of the space within is void." (vii. 443. 8vo. ed.) Its interior presents the same irregularity, and many of the deformities common to Turkish towns; but, on the whole, as respects cleanliness and internal comfort, it may contrast favourably with most other places in Turkey of large size and population. "The houses are generally built of unburned bricks, and are, for the most part, little better than so many hovels." (*Clarke*.) Those of the principal inhabitants, Greeks and Turks, have here, as in Yannina, small areas connected with them, generally occupied by a few trees. The bazars, at the lower end of the town, are very extensive, forming several long, but narrow streets shaded either by trellises with vines, or by projecting wooden sheds, with branches of trees thrown across. The dealers are principally Greeks and Jews; and the shops are well filled with manufactured goods and colonial produce; but in jewellery, shawls, and the richer articles of oriental dress, they appear inferior. Some of the mosques are worth notice from their size and antiquity, especially two which were formerly Greek churches. Another remarkable edifice, called the Rotunda, after having successively served as a heathen temple and Christian church, has been converted into a mosque: it has evidently been built on the model of the Pantheon at Rome. The cupola is adorned with mosaic work, appearing like eight frontispieces of fine buildings, and in the dome is a circular aperture, as in that of the Pantheon. A fourth mosque has been formed out of a fine temple of the Thermen Venns. This was originally a perfect parallelogram 70 ft. in length, and 38 ft. in width, supported on either side by 12 columns of the Ionic order, of the most exquisite proportions. The Greeks spoiled this beautiful building by endeavouring to make it cruciform; but the six columns of the *pronaos* remain; and M. Beaujour says, that if the Gothic disfigurements were stripped off, the original edifice would be found in the highest state of preservation, and would be reckoned one of the finest remains of antiquity. Among the other ancient structures are two triumphal arches, one of which, now forming a part of the city walls, was erected to Augustus after the battle of Philippi, and the other, of brick encased with marble, in honour of Constantine: on the piers of the latter are some fine groups in bas-relief, having a great deal of spirit. The Augustan gate, however (now called the Vardar gate, because it leads to the river of that name), is said by Dr. Clarke to be a work of superior taste.

## SALONICA.

Its original height appears to have been 43 ft.; but the lower part, to the depth of 27 ft., is below the present surface: the span of the arch is 12 ft., and the masonry is of squared white marble blocks, having inscriptions and appropriate bas-reliefs. In the middle of the city is a magnificent ruin, called *Incantadas* by the Spanish Jews resident here, supposed to have been the *propyleum*, or entrance to a circus, consisting of five Corinthian columns, supporting an entablature on which are several figures much defaced, as large as life, and still exhibiting the traces of a master's hand. The castle, which forms a large area, separated by a rampart from the city, has lofty and well-built walls; and, at its highest point, stands the fortress surmounted, like that of Constantinople, by seven towers, called by the Turks *Yedi-koule*, and by the Greeks *ἑπτὰ πύργοι*. These towers, however, though occupying the site of the old acropolis, are comparatively modern, having been built by the Venetians.

Salonica, during that period of the late war, when the anti-commercial system of Napoleon was at its height, became an important depot for British goods, whence they were conveyed to Germany, Russia, and other parts of Europe. They were transported on pack-horses, by long and laborious journeys, into the centre of Europe, through Bosnia into Austria, and through Bulgaria into different parts of Hungary, Transylvania, &c.; the time occupied in travelling from Salonica to Vienna being about 35 days. At all times, however, it has had a considerable trade, which, of late years, has rather increased, particularly as regards the importation of British cotton manufactures. The exports principally consist of silk and tobacco, wool, raw cotton, wheat, and other species of grain, linseed and hempseed, timber, nuts from Mount Athos, &c.; the entire value in 1837 being estimated at £136,614, while the imports for the same year (consisting principally of British manufactures and colonial produce), were valued at £90,810. The import-trade of the rayahs, most of whom are Jews, who purchase by firms the same commercial privileges as the Franks, is carried on by credits on Vienna, few of the importers having any capital; and orders to England are commonly paid for by drafts on Vienna, where the charge for credit is at the rate of 4 per cent. per annum. Goods are generally sold in the interior at an advance of 10 or 14 per cent. on the invoice cost, leaving a profit varying from 4 to 8 per cent. for the importer. We subjoin

AN ACCOUNT of the number of ships, with their Tonnage, and the Value of their Cargoes, that entered and left Salonica in 1837, specifying the countries to which the Vessels belonged

Countries.	Entered.			Cleared.		
	Vessels.	Tons.	Value of Cargoes	Vessels.	Tons.	Value of Cargoes
British	5	546	17,755	5	546	50

Total	329	25,492	90,809	306	23,275	136,614

The intercourse with England was a few years ago principally carried on through Malta by Maltese or Greek vessels; but the trade is now almost exclusively carried on in English bottoms. The ordinary import and export duties are those common to foreign trade in Turkey, viz. 3 per cent. *ad valorem*, being farmed by the Porte under certain restrictions to the pacha, or governor of the city. Salonica has no port; but there is excellent anchorage in the roads opposite the town, which, from the configuration of the gulf, are nearly landlocked. Accounts are kept in piastres of 40 paras, or 120 aspers, and the coins are similar to those of Constantinople (which see). The weights and measures are the same as those of Smyrna, except that the *kizloz*, or corn measure of Salonica, = 378 kizloz of Smyrna.

The commercial classes consist chiefly of Jews and Franks, the Greek population having greatly diminished since the war of independence. Salonica, however, is a metropolitan see, with eight attached bishoprics, and there are numerous Greek churches. The Jews form an important section of the population; they are chiefly of Spanish descent, and obtain a livelihood by commerce and retail trade in the bazaars, those of the lower orders being employed as porters on the quays or in similar offices. The Franks, most of whom reside in the lower part of the city, consist almost exclusively of French and Germans, who have establishments for the management of the transit trade. The situation is said to be unhealthy, especially in autumn, owing to the vicinity of the marshes at the head of the gulf; intermittent fevers are then exceedingly com-

## SALOP.

mon, as well as chronic visceral complaints, the result of repeated attacks of those diseases.

Thessalonica was at first an inconsiderable town under the name of *Therma*, by which it was known to Herodotus, Thucydides, and Æschines. Xerxes stayed here some days with his army (*Herod.* vii. 128), and it was occupied for a short time by the Athenians during the Peloponnesian war. According to Strabo (*lib. vii.*), Casander changed its name to that of his wife Thessalonica, the daughter of Philip, and sister of Alexander the Great. After the conquest of Macedonia by the Romans it was made the capital of the second of the four districts into which that country was divided; it was the residence of Cicero during a part of the time he continued an exile. Valerian raised it to the rank of a colony; and it had an amphitheatre, a hippodrome, and numerous splendid public buildings. It is also extremely interesting from its connection with the early history of Christianity; having been visited by St. Paul, who made many converts, to whom he addressed the Epistles to the Thessalonians. (*Holland's Travels; Clarke's Travels*, vii. 441-478; *Morning Chronicle* for July 14, 1836; *Cellarii, Geog. Antiqua*, i. 1044.)

SALOP, or SHROPSHIRE, an inland co. of England, having N. Denbigh, a detached portion of Flint, and Cheshire, E. Stafford, S. Worcester, Hereford, and Radnor, and W. Montgomery. Area, 859,520 acres, of which about 790,000 are supposed to be arable, meadow, and pasture. Aspect much diversified. No part of the surface is quite flat; but the great plain of Salop, or Shrewsbury is comparatively level. It extends, lengthwise, from Whitechurch, on the confines of Cheshire, S. to Church Stretton, a distance of about 30 m.; and from Oswestry, on the confines of Denbigh, to Colebrook Dale on the E., about 28 m. The Wrekin hill rises out of this extensive plain on its E. side. The S., or rather the S.W. parts of the county contain several ranges of flatish square-shaped hills, divided by beautiful valleys. Soil various, but generally fertile. In the E. it consists of a red sandy loam, like that of Cheshire; in the S., a mixture of clay and loam is most prevalent; and in the W. there is a good deal of gravelly light soil. The harvest is said to be a fortnight earlier on the E. than on the W. side of the county; a difference depending partly, no doubt, on the greater elevation of the ground on the W. side; but partly, also, on differences of soil. Salop is principally under tillage; but, in the S. and W., breeding and dairying are carried on to a considerable extent. A good deal of cheese, sold under the name of Cheshire, but inferior to the genuine article, is made in this county. The wool of the hilly tracts used to be of a peculiarly fine quality, but it has deteriorated during the present century in consequence of the efforts of the farmers to increase the size of the sheep and the weight of the fleece. The total stock of sheep in the county is supposed to exceed 420,000; producing annually above 7000 packs of wool. Hops are produced on the borders of Hereford. Property variously divided: some estates being very large, while there are many of very inferior degree of size. On the borders of Wales, farms are very small, many not exceeding 20 acres; but on the E. side of the county, in the vicinity of Shifnal, Wellington, Newport, &c., they vary from 100 to 500 acres or more.

The district of Clun forest, in the S.W. part of the county, is divided into small freehold properties, varying in value from £5 to £150 a year, the majority being of the smaller class. Their occupiers, who, in most cases, are also the owners, employ few labourers, the principal part of the work on their farms being executed by themselves and their families. Leases less common now than formerly, and farms generally held from year to year. Agriculture improving; but, owing to the want of leases of a reasonable length, and with proper conditions as to management, it continues to be very defective. The number of corn crops, taken in succession, has been materially diminished since 1830; but two wheat crops still not unfrequently follow each other. These remarks do not, however, apply to the district on the E. side of the county mentioned above; where the farms are large; for there the tenants are active and enterprising, and agriculture highly improved. Turnips extensively cultivated, and for the most part in drills; few oats grown. Cattle of mixed breed, and rather inferior. Pork and bacon much used by the people. Large flocks of turkeys raised by some farmers. Drainage in some places much wanted. Average rent of land, in 1810, 17s. 2d. an acre. Principal mineral products, iron, coal, lead, limestone, and freestone. With the exception of S. Wales, Staffordshire, and Lanarkshire, more than double the quantity of iron is made in this county than is made in any other county of the empire; the Salop furnaces having produced above 73,000 tons of iron in 1830, and above 100,000 tons in 1839. The furnaces are principally in Colebrook Dale, between Wellington and Willey. Excellent china ware, and a very superior species of pottery, are made at Coalport on the Severn and its vicinity: pipes, nails, &c.,

## SALSETTE.

are made at Broseley; carpets at Bridgnorth; gloves at Ludlow, &c. Some branches of the flannel manufacture are carried on in Shrewsbury and its neighbourhood; but by far the largest portion of the flannel sold in its markets is brought from Merioneth and Denbigh. The Severn, which becomes navigable at Poole, county Montgomery, traverses this county in a S.E. direction, dividing it into two not very unequal portions; and it is besides intersected by very important canals. Roads formerly very bad, but now a good deal improved, though still susceptible of much amelioration. Salop is divided into 15 hundreds, or districts answerable to that denomination, and 216 parishes. It returns 11 members to the House of Commons, viz., four for the county, and two each for the boroughs of Shrewsbury, Bridgnorth, and Wenlock, and one for Ludlow. Registered electors for the county, in 1839-40, 8815, of whom 5039 were for the N. and 3776 for the S. division of the county. In 1841, Salop had 47,303 inhabited houses, and 239,014 inhabitants, of whom 119,357 were males, and 119,657 females. Sum expended for the relief of the poor, in 1839-40, £55,022. Annual value of real property, in 1815, £1,083,702. Profits of trades and professions, in ditto, £279,933.

SALSETTE, an island on the W. coast of Hindostan, prov. Arungabad, immediately N. of Bonibay island, with which it is connected by a narrow causeway. Length 18 m., with an average breadth of about 13 m. Pop. loosely estimated at 50,000, about one fifth of whom may be Portuguese Christians. There are two towns on the island, Tannah and Gorubunder; the first being neat and flourishing, with a small fort, several churches, and a considerable British cantonment. The more remote interior parts of the island are inhabited by wild tribes, having no intercourse with the Hindoos of the coast; but who, being occupied as burners of charcoal, bring it down to particular spots, whence it is carried away by dealers in the article, who deposit in its place a payment, settled by custom, of rice, clothing, and iron tools.

The most remarkable objects of Salsette are the cave-temples of Kennerly, among the most remarkable Buddhist excavations in India. They are of various sizes and forms, being scattered at different elevations over both sides of a high knoll, belonging to a range of hills which divides the island into two nearly equal parts. The largest and most remarkable cave bears a great resemblance to that of Carlee (which see, l. 553), and was converted by the Portuguese into a church. It is entered through a fine and lofty portico in front, a little to the left hand of which is a detached octagonal pillar, surmounted by three lions seated back to back. On either side of the portico is a colossal statue of Budh, nearly 20 ft. in height. The screen which separates the vestibule from the temple has in its centre a large door, above which are three windows in a semicircular arch; elsewhere, it is covered with carved figures. The apartment within is 91½ ft. in length, and 38 in breadth, semicircular, and surrounded on every side but that of the entrance with a colonnade of octagonal pillars. Of these, 12 on either side nearest the entrance have carved bases and capitals; the rest are not finished in this manner. In the semicircular end is a dome-shaped rock, the *daygos* of Buddhist temples, traditionally said to have once supported the *tee*, or sacred umbrella. The roof, like that of the Carlee temple, is a semicircular arch, supported by slender ribs of teak-wood. The various other caves in this hill are square, or flat-roofed, and attached to many are deep and well-carved cisterns. There are other cave-temples in the island, at the villages of Mompezier and Ambowlee; and at the former are ruins of a very handsome Portuguese church and Jesuit monastery. (*Forbes; Lord Valentia; Heber, &c., in Mod. Trav.*)

SALTA, a city of S. America, cap. of the prov. of its own name, republic of La Plata, on the high road from Buenos Ayres to Potosi, 820 m. N.W. the former city; lat. 24° 30' N., long. 64° 1' 30" W. Pop. from 8000 to 9000. "Upon the whole it has a neat appearance, and boasts of a cathedral and many churches. It is, however, badly situated in the bottom of a valley, through which flow the rivers Arias and Silleta (tributaries of the Salado); the latter of which has, of late years, abandoned its ancient bed, and seems to threaten, at no distant period, to burst over the low marshy grounds upon which the city stands." (*Parish's Buenos Ayres*, p. 273.) Its air is unhealthy, but its vicinity abounds with wheat, rye, cattle, &c., in which, and in salt, wine, hides, and mules, the city has an active trade. It was founded by Don Philip de Lerma, in 1582.

SALTASH, a decayed bor., market-town, and par. chapel of England, co. Cornwall, S. div., hund. of East, 17 m. S.E. Launceston, and 4 m. N.W. Plymouth. Pop. of bor., in 1831, 1637. It stands on a steep rock, near the Tamar, from which the principal street runs at right angles, the houses rising one above another to the hill-top, on which stands the chapel and town-hall. The latter is supported by pillars, the open space beneath being used for a

## SALZBURG.

market. Streets narrow and ill-built; the houses being for the most part little better than cottages, though chiefly of stone from the rock on which the town stands. The chapel is small; and the living is a curacy subordinate to the vicarage of St. Stephen, value £45 a year. There are also two places of worship for dissenters, with attached Sunday schools, and there is a small free school. Saltash, which appears to have been formerly of more importance than at present, is principally inhabited by fishermen, or persons connected with the docks and shipping of Devonport; and in summer is a favourite resort for holiday-people from Plymouth and the surrounding neighbourhood. It is likewise one of the chief entrances into Cornwall from Devonshire, and is approached by a ferry over the Tamar, the revenues of which belong to the corporation. Saltash was made a free borough in the reign of Henry III., and returned two members to the House of Commons from the reign of Edward VI. down to the Reform Act, by which it was disfranchised. It was considered of too little importance to be included in the provisions of the Municipal Reform Act. Markets on Saturday: fairs, Feb. 2, July 25, and the Tuesdays before each quarter-day.

SALTCOATS, a seaport town of Scotland, co. Ayr, partly in the par. Ardrossan, and partly in that of Stevenston, 24 m. S.W. Glasgow, and about 1 m. S. Ardrossan. Pop. in 1836, about 4000. It has some good houses; but, on the whole, is indifferently and irregularly built, and mean looking. It has a town-house, with a handsome spire, clock, and bell. Its name is derived from the salt-works, established in the town for the production of salt, by the evaporation of sea water; but since the repeal of the duty on salt, they have been nearly abandoned. Magnesia, however, still continues to be produced to some extent. The principal dependence of the inhabitants is on the weaving and sewing of muslins, for the Glasgow manufacturers. There may, in all, be about 500 looms so employed; principally on lappets, gauzes, shawls, trimmings, silks, &c. About 30,000 tons of coal are annually shipped here for Belfast, Dublin, &c. A good deal of ship building was formerly carried on, but lately it has declined. Two congregations belong to the United Associate Synod, and one to the Relief; and there is a Gaelic chapel. It has a subscription library, a parochial school, a free school, managed by a committee of ladies, and other schools, a savings' bank, and some friendly societies, a branch of the Ayrshire Banking Company, &c. The harbour is very defective, and in this respect it labours under great disadvantages as compared with Ardrossan. (*New Statist. Acc. of Scotland, Ayrshire, parishes Ardrossan and Stevenston.*)

SALT CREEK, t., Pickaway co., O. It has six stores, one fulling-mill, two saw-mills, four tanneries, two distilleries; five schools, 153 scholars. Pop. 1841.

SALT CREEK, L., Wayne co., O. It has three stores, two grist-mills, three saw-mills, one oil-mill, two tanneries; one school, 82 scholars. Pop. 1461.

SALT LICK, t., Fayette co., Pa. It has one store, one furnace, one fulling-mill, four grist-mills, 15 saw-mills; five schools, 143 scholars. Pop. 1911.

SALT river, Ky., rises in Mercer co., and flowing N. into Anderson co., and turning W. through Spencer and Bullitt counties, receiving the Rolling fork, a large branch from the S., it enters Ohio river at West point. It flows through some of the most fertile portions of the state.

SALUZZO (Fr. *Saluces*), a city of the Sardinian dom., div. Coni, cap. prov., at the foot of the Alps, on an affluent of the Po, 30 m. S.S.W. Turin. Pop. in 1838, 14,426. It consists of two portions, one on the summit and declivity, and the other at the foot of a hill. The upper town is walled, tolerably well built, and has a castle, which was, for three centuries, the residence of the marquises of Saluzzo; one of whom, between 1478 and 1480, constructed the gallery through the Col de Viso. (*Murray's Handbook for Piedmont*, 344.) The lower town is the more populous, and continues on the increase. The cathedral, a handsome building, is in a suburb. Saluzzo has several convents, an intendency, a court of primary jurisdiction, and a royal college. It is a bishop's see. Its chief manufactures comprise silk, leather, hats, and hardware; and it has some trade in wine, corn, and cattle. Under the French, Saluzzo was the cap. dep. Stura. (*Rampoldi, Corr., &c.*)

SALZBURG, a city of Upper Austria, cap. of the circ., as it formerly was of an archbishopric of the same name, on the Salzach, a tributary of the Inn, 67 m. S.W. Linz, and 70 m. E.S.E. Munich. Lat. 47° 48' 10" N.; long. 13° 1' 25" E. Pop. in 1834 about 12,000, having decreased considerably since Salzburg ceased to be the cap. of an indep. territory. The Salzach, which here flows impetuously between two masses of rock, divides the city into two portions, connected by a stone bridge, 370 ft. in length. It is walled, and entered by eight gates; and on a lofty point, commanding the town and adjacent country, is the *Hohen-salzburg*, formerly the feudal citadel and residence of the

## SAMARANG.

prince-archbishops, but now used as a barrack. On the opposite side of the river is the *Capucinerberg*, a similar height, surmounted by the Capuchin convent. Owing to the number of its churches, the profusion of marble statues, and flat-roofed houses, Salzburg has the aspect of an Italian city. According to Turnbull, one of the principal hotels, which, he says, forms a fair specimen of the general style of building, "is a heavy pile of masonry, five stories in height, and composed of walls, floorings, and internal divisions, from the basement to the roof, entirely of stone." Generally speaking, the city is dull and gloomy, and its streets narrow, irregular, and grass-grown. The cathedral, constructed in the 17th century, on the plan of St. Peter's at Rome, is large and imposing, and has numerous monuments, sculptures, paintings, and other works of art. It has a fine façade of white marble, occupying the whole side of a public square, with three entrances, flanked by two rows of marble statues. Several of the other churches are highly gilt, and decorated. Monasteries are numerous, but the number of their inmates has been much reduced. In the church of the Benedictine convent is the tomb of Michael Haydn, the musical composer, who, as well as Mozart, was a native of Salzburg. The Mirabel palace is a handsome modern edifice. One of the greatest curiosities in the city is a gateway or tunnel, 420 ft. in length, cut through the solid rock (*Spencer*), though for what purpose we are not informed.

Salzburg has a military and three civil hospitals, several charitable institutions, a government pawn-bank, and a prison. It had formerly a university; but this is now reduced to a lyceum of two faculties, medicine and jurisprudence, with a library of 20,000 volumes, and probably of 120 MSS., some of the 8th and 9th centuries, a botanic garden, zoological museum, &c. In the Benedictine convent is another extensive library, with collections of coins, &c. It has, also, a gymnasium, Ursuline female school, a spacious public cemetery, a public museum, and a theatre. Salzburg is still the residence of an archbishop, who has five suffragans; and is the seat of the superior courts for the circle, &c. It has manufactures of cotton yarn, leather, starch, gunpowder, iron wire, and files, and some transit trade, though this has very much diminished. It is well and cheaply supplied with provisions, but the prevalence of *goitre* is a drawback to its advantages. All travellers agree that it is hardly possible to exaggerate the romantic beauty of the scenery of the neighbourhood.

Salzburg is supposed to occupy the site of the ancient *Juvaria*, destroyed by Attila in 448. In 803, Charlemagne and the ambassadors of Nicephorus, emperor of the East, met in this town to settle the boundaries of their respective empires. In the 13th century the city became the capital of a territory, governed by its archbishops till 1802, when it was secularized. (*Estr. Nat. Encyclop.*; *Berghaus*; *Turnbull's Austria*, i., 139-143; *Spencer*; *Germany and the Germans*, ii., 309-312.)

SAMARANG, a town and seaport of Java, on its N. coast, the cap. of a prov., near the mouth of the river of its own name, 240 m. E.S.E. Batavia; lat. 6° 56' S., long. 110° 27' E. Pop. supposed to be at least 20,000, including many Chinese and some Europeans. It is tolerably well built, and is fortified with ramparts and a wet ditch, capable of resisting a native force. It has many good houses, a large church, town-hall, and hospital, a military school, theatre, and observatory. Before it is a deep morass, and it communicates with the sea only by two raised causeways and the river: it is, however, less unhealthy than the lower parts of Batavia. Provisions are cheap; and near the town are many country houses. "The river, or rather creek, is very shallow, and cannot be entered by loaded boats at low water. The roads are also exceedingly insecure; the town owes its importance, therefore, solely to the industry of the natives in the adjoining districts, who raise large quantities of coffee, pepper, and rice. Many ship-loads of the latter are annually exported to China, and to different countries in the archipelago." (*Earl's Eastern Seas*, p. 42.) Samarang is the seat of one of the three civil and criminal courts, and courts martial in the island, and the residence of a governor with extensive authority.

SAMARANG, a city of Indep. Tartary, in Bokhara, on the *Sogd*, or *Zer-Afghan*, 130 m. E. Bokhara, lat. 39° 30' N., long. 68° 50' 15" E. Pop., according to Sir A. Burnes, about 10,000. The out works are said to be about 30 m. in circ., enclosing gardens, parks, fields, and extensive suburbs: the inner wall surrounding the city is of earth, and has four gates. Samarang has the appearance of having been magnificently built, but it is now in a decayed condition, and gardens, fields, and plantations occupy the place of its numerous streets and mosques. There were formerly up wards of 200 mosques, many of which were of white marble; but most of these have become mere ruins. Of the 40 *medressas*, or Mohammedan colleges, only three are perfect, one of them forming the observatory of the celebrated Ulug

## SAMOS.

beg being extremely handsome, ornamented with bronze and enamelled bricks. Another college, called *Sheradar*, is likewise of very beautiful architecture. The tomb of the famous Timour Bec, or Tamerlane, and his family, still remains; and the ashes of the emperor rest beneath a lofty dome, the walls of which are superbly adorned with jasper and agate.

Samarang has several bazaars, and three large khans; but its commercial importance is all but extinguished, Bokhara having been for many years the great entrepôt of the caravan traders, as well as the modern capital of the country. The ancient city, however, is still regarded with high veneration by the people, and till a king of Bokhara has annexed Samarang to his rule, he is not viewed as a legitimate sovereign: indeed, its possession becomes the first object on the demise of one ruler and the accession of another. Paper, made of silk, is said to have been early manufactured at Samarang, but ordinary paper is now supplied from Russia. The situation of the city has been deservedly praised by Asiatics, since it stands near low hills, in a country elsewhere plain and level. The climate is dry and healthy; good water is supplied from a great number of fountains, communicating by pipes with the river, and the neighbourhood furnishes abundance of fruit, and other supplies for the market.

Samarang, which was taken in 1220 by Jenghis-khan from the Sultan Mahomet, became under Timour the capital of one of the largest empires in the world, and the centre of Asiatic learning and civilization, at the same time that it rose to high distinction on account of its extensive commerce with all parts of Asia.

It was reunited to Bokhara by Abdullah at the close of the 16th century, since which it has gradually fallen to its present rank as a mere provincial town; and we may now search in vain for its ancient palaces, the beauty of which is eulogised by the Arab historians. (*Burnes's Bokhara*, ii., 270-272; *Hagemester sur l'Asie Occidentale*; *Ritter's Asien*, vol. v.; *Dict. Géog.*)

SAMBOR, a town of Austrian Poland, cap. circ. of same name, on the Dniester, 44 m. S.W. Lemberg. Pop. nearly 10,000. (*Berghaus*.) It is tolerably well built, and has several Rom. Catholic and United Greek churches, a hospital, a criminal tribunal, mining court, salt intendency, gymnasium, &c. Its inhabitants are employed partly in the manufacture and bleaching of linens, and partly in making salt. Rhubarb is cultivated in the neighbourhood. (*Oesterr.-Nat. Encyc.*)

SAMOS, a famous island of the *Ægean sea*, now belonging to Turkey, off the W. coast of Asia Minor, from which it is separated by the narrow strait called the Little Bosphorus, only 2 m. across. It has on the N. the gulf of Scaia Nova, is about 30 m. in length, E. and W., by about 8 or 9 in mean breadth; mount Kerki, on its W. extremity (an. *Catabates*, from its collecting clouds and generating thunder), being in lat. 37° 43' 88" N., long. 26° 38' 21" E. The pop. was estimated by Tournefort at 12,000; Mr. Turner, a later, though inferior authority, estimates it at 60,000; but this, we have little doubt, was decidedly beyond the mark, even at the time when it was framed; and since the revolution in Greece there has been a good deal of emigration from the island. A chain of mountains runs from one extremity of the island to the other: most of them are covered, as in antiquity, with forests of oaks and other timber, though in parts they are precipitous and bare. Tournefort says that they consist principally of white marble. It has several pretty extensive valleys, especially on its S. shore, which, being well watered by streams from the hills, produce, even with the most deficient culture, excellent crops of wheat and other grain, with olives, figs, oranges, and other fruits, wine, silk, cotton, &c. In antiquity it was celebrated for its extraordinary fertility; it was then, also, cultivated with the utmost care, and the walls still exist which were built to form the sides of the mountains into terraces, and to facilitate their culture. (*Turnefort*, i., 407.) It still continues to be the most productive island of the archipelago. It annually exports considerable quantities of corn; from 25,000 to 30,000 cantars grapes, and about 15,000 barrels raisins. The only thing which Strabo did not admire in Samos was its wine (lib. xiv.), but Tournefort says that when properly made, its muscad wine is very superior. Perhaps it was not produced in antiquity. Oil and valonia are also considerable articles of export. Wolves and other wild animals occasionally commit ravages among the oxen and sheep; poultry are excellent, and partridges exceedingly abundant. Exclusive of marble, it is said to furnish iron, lead, and even the precious metals.

Having voluntarily surrendered to the Turks, this island has been less harshly treated by them than most others in the archipelago. It, however, zealously espoused the cause of the other Greeks during the revolutionary struggle; and, though it was assigned to the sultan by the treaty which

recognised the independence of Greece, the inhabitants refused at first to submit to his officers. Previously to this event, the government of the island was substantially vested in three primates, chosen by the inhabitants. But this, if we may believe Mr. Turner, by whom the higher order of Samians are called "the most unprincipled miscreants in existence" (iii., 110), would seem to have been no great boon. Besides being oppressed by the agents of the sultan and the primates, the island has, also, been fleeced by a swarm of Caloyers, Papas, and other Greek priests, whose only claim to live at the public expense is, that they are able to repeat mass from memory. A considerable sum is remitted to the bishop of Nicaria for his important service in blessing, once a year, the water and cattle of the inhabitants! (*Turnerfort*, i., 408.)

The present capital of the island, called Khora, or Megalikhora, is on its S. side, about 2 m. from the sea, on the lower extremities of a mountain, on the ascent of which the citadel of the ancient city was situated. Though not without some good houses, it is a miserable town, having stony, steep, unpaved, and hardly passable streets. Vathi, on the N. side of the island, is larger than Khora, and has an excellent harbour; but it, also, is a wretched place, with streets from 6 to 8 feet in width, execrably paved and steep. (*Turner*, iii., 107.)

Such is the present state of an island that, in antiquity, was one of the most famous in the *Ægean* sea. Samos early attained to great distinction. She was one of the most powerful of the states belonging to the Ionian confederacy; and was able, by means of her fleets, to maintain her independence after Croesus and Cyrus had reduced the states of Ionia, on the continent. The city of Samos, on the S. shore of the island, was extensive, and populous, strongly fortified, and adorned with many noble public buildings. Among the other great works executed by the Samians, Herodotus specifies a tunnel, which they had carried through the mountain, to convey a supply of water to the city; an immense mole, constructed for the security of the harbour (of which the remains still exist), about 120 feet in height, and which advanced in a curved line about  $\frac{1}{2}$  m. into the sea; and the largest temple of which he (Herodotus) had any knowledge. (*Herod.* lib. iii., cap. 60.)

The temple to which the venerable historian alludes was dedicated to Juno, and stood a little to the W. of the city near the Imbrasus. The island, indeed, was especially sacred to Juno, and was supposed to have been the place of her birth, and where she espoused Jupiter. Hence, says Virgil, speaking of Carthage, where the goddess had also a temple—

Quam Juno fertur terris magis omnibus unam  
Posthabita coluisse Samo. *Æneidos*, i., lin. 19.

The statue of the goddess in this temple was very ancient, having been the work of Smilis, a contemporary of Dædalus. Among other statues in and near the temple, were those of Jupiter, Minerva, and Hercules, by Myron, one of the most celebrated sculptors of antiquity. Mark Antony carried off these statues to Rome; but Augustus made those of Minerva and Hercules be returned to Samos, retaining only that of Jupiter.

The Hærean games, instituted in honour of Juno, called by the Greeks *Hpa*, were celebrated here with extraordinary splendour. Like other great temples, that of Juno was an asylum for all who implored the protection of the goddess; and Tacitus notices the arrival of deputies from Samos, at Rome, praying that the *vetustum Asylus* might be confirmed. (*Annal.* iv., cap. 14.) The subsequent history of this famous edifice is but little known. It has, however, fallen a sacrifice to the ravages of time, or of barbarians, or both. When visited by Tournefort, more than a century ago, portions of two columns were all that remained standing.

Among other things Samos was famous in antiquity for its pottery, which was everywhere in great request; and the art of manufacturing it is even said to have been discovered in this island.

The government of Samos experienced the mutations common to the governments of most Greek states. Originally it had kings, who were superseded by a mixed government, inclining sometimes to democracy, and sometimes to oligarchy; while occasionally it was subject to tyrants. Of the latter, the most celebrated is Polycrates, who attained to the sovereignty in the 6th century B.C. His object seems to have been to retain the government partly by force, partly by corrupting and reducing the inhabitants, and partly by engaging them in schemes of foreign conquest. (*Mitford's Greece*, i., 450.) At a period subsequent to the death of Polycrates, who was inveigled and crucified by the satrap of a neighbouring province, the Samians were attacked by the Athenians, under Pericles; who, after an obstinate struggle of nine months' duration, succeeded in reducing their city; and at a somewhat later period it received a colony from Athens. During the contest between Mark

Antony and Augustus, Samos was, for a while, the head quarters of the former and of Cleopatra, who kept court here with more than regal magnificence. After Augustus had become the master of the Roman world, he passed a winter in this island, which he restored to its freedom, and at the same time conferred on it other marks of his favour. It afterwards became subject to the Greek emperors; and finally, in the 16th century, to the Turks, under whose brutalising sway it has been reduced to the miserable state in which we now find it.

Of the many illustrious individuals that Samos has produced, Pythagoras is by far the most distinguished. The era of his birth is not quite ascertained, but it appears to have occurred about 550 years B.C. He early visited Egypt and other ancient seats of learning; but, on his return from his travels, being, as is said, dissatisfied with Polycrates, he emigrated to Magna Grecia, and founded at Crotona a school of philosophy, that speedily attained to the highest celebrity. Samos also gave birth to Rhæcus, said by Herodotus to have been the architect of the temple of Juno, to Theodorus the sculptor, and a host of others. Anacreon was among the distinguished guests invited by Polycrates to Samos.

The narrow strait between Samos and the mainland is famous in ancient history for the great victory gained in it and the adjacent promontory of Mycale, over the fleet and army of Xerxes, on the same day that the forces he had left in Greece, under Mardonius, were destroyed at Plataea. (Exclusive of the authors already referred to, see *Ancient Universal History*, viii., 259–264, and xiii., 510, 8vo ed.; *Anacharsis*, cap. 74; *Facciolati Lexicon*, voce Samos, &c.)

SAMPSON, county, N. C. Situated a little S.E. of the centre of the state, and contains 800 sq. m. Bounded W. by South river. Drained by Black river and its branches. It contained in 1840, 6735 neat cattle, 4432 sheep, 20,562 swine; and produced 3872 bushels of wheat, 1061 of rye, 130,951 of Indian corn, 2126 of oats, 96,127 of potatoes, 29,974 pounds of rice, 342,390 of cotton. It had eight stores, 16 grist-mills, 10 saw-mills; one academy, 35 students; 13 schools, 272 scholars. Pop., whites, 7475; slaves, 4425; free coloured, 257; total, 12,157. Capital, Clinton.

SANA, a city of Arabia, the cap. of Yemen, and the residence of the imâm, in a valley from 6 to 9 m. in breadth, and 4000 feet above the level of the ocean, near the head of the Shab river, and about 150 m. N.N.E. Mocha. Pop., according to the estimate of Mr. Crutenden, in 1836, 40,000. The city is walled; as is also its suburb of Bir-el-Azab, which was open in Niebuhr's time. The city and suburb, together, are said to be  $\frac{5}{8}$  m. in circ. The walls are mounted with cannon, but these are in a very bad condition. At both the E. and W. extremities of the city is a castle, having each a palace of the imâm. The streets of Sana are narrow, though broader than those of Mocha, and some other Arabian cities. A handsome stone bridge is thrown across the principal street, down which a stream of water runs in wet weather. Houses principally built of brick, with open holes for windows, closed when necessary by wooden shutters; but some, belonging to the higher classes, have glass windows, beautifully stained. The palaces are built of hewn stone, plastered over with grey-coloured mortar. All the private residences in Sana appear to be furnished with fountains. There are about 20 mosques, very elaborately adorned, many having their domes gilt, especially those in which are the tombs of the imâms. The public baths are both numerous and good: they are on the same plan as those of Egypt, and "a favourite resort of the merchants, who meet here to discuss the state of trade, and the news of the day over their cup of keshr, and their never-failing hookah."

A part of the city is appropriated to the Jews, who amount to about 3000. Each pays about a dollar a year for permission to reside; and a sheikh is appointed, who is responsible for the regular payment of this impost, and of the heavy taxes laid upon their vineyards, gardens, &c. The Jews subsist chiefly by the sale of silver ornaments, gunpowder, and spirituous liquors, and many by working as common artisans, such as shoemakers, &c. There are also many Hindoos among the population, who, like the Jews, are obliged to conceal as much as possible the property they possess, for fear of exaction. The Mohammedan merchants are generally wealthy, and live in good style. The principal trade of Sana is in coffee, the city being in the heart of the coffee country of Yemen. The article is brought into the market in December and January; and considerable quantities of it are retained in the warehouses. It is, however, little used for home consumption, the favourite beverage being *keshr*, an infusion of the husk. The coffee-husk accordingly fetches here the higher price of the two, from 4 to 12 dollars per 100 lbs. being paid for it. Very fine silk goods, sugars, &c., are exposed for sale in the bazars. The imports are principally piece goods and Persian tobacco; with dates, and a great quantity of thread, or rather

## SANDBORNTON.

artist for weaving. Glass is in great request, and is principally supplied from Egypt. The import duties at Sana are so slight as to be almost nominal.

The climate is too dry to be healthy; rain seldom falls, and famine appears to be a frequent result. Some inscriptions, supposed to be in the ancient Hittite character, have been discovered here (see *Geog. Journal*, viii., 287), but travellers have hitherto found few, or no other antiquities. The greater part of the fortifications, and an aqueduct now ruined, are said to have been the work of the Turks, who held the sovereignty of the country till about two centuries ago. (*Cruttenden*, in *Geog. Journal*, viii.; *Niebuhr, Voyage en Arabie*, &c.)

**SANDBORNTON**, p. t., Belknap co., N. H., 21 m. N. Concord, 502 W. Bounded E. by Great bay of Winnepesaukee lake, W. partly by Penigewasset river. Incorporated in 1770. It contains five churches, a Congregational, Methodist, Baptist, Free-will Baptist, and Christian; five stores, three fulling-mills, one woollen factory, one cotton factory with 700 spindles, seven grist-mills, 10 saw-mills, four tanneries, one printing-office, two binderies, one academy, 148 students; 23 schools, 1037 scholars. Pop. 2745.

**SANDERSVILLE**, p. v., capital of Washington co., Ga., 28 m. S. E. Milledgeville, 658 W. It contains a courthouse, jail, seven stores, 25 dwellings, and about 125 inhabitants.

**SANDFORD**, p. t., Broome co., N. Y., 20 m. E. Binghamton, 120 m. S.W. Albany, 304 W. Drained by Occuqua creek, flowing into Delaware river. It contains one store, two grist-mills, nine saw-mills; nine schools, 369 scholars. Pop. 1173.

**SANDSFIELD**, p. t., Berkshire co., Mass., 126 m. W. by S. Boston, 361 W. Incorporated in 1736; first settled in 1750. Drained by a branch of Farmington river. It contains two churches, a Congregational and Baptist, eight stores, one fulling-mill, one woollen factory, two grist-mills, six saw-mills, three tanneries; 14 schools, 382 scholars. Pop. 1464.

**SANDLAKE**, p. t., Rensselaer co., N. Y., 17 m. E. Albany, 384 W. Watered by Poestenkill and Wynautekill creeks. It contains five churches, a Presbyterian, two Methodist, a Baptist, and a Lutheran; 11 stores, one cotton factory with 1000 spindles, one glass factory, one flouring-mill, four grist-mills, 27 saw-mills, two tanneries; 21 schools, 1258 scholars. Pop. 4303.

**SANDUSKY**, river, O., rises in Richland and Crawford counties, and after a course of 90 m., enters Sandusky bay.

**SANDUSKY**, county, O. Situated toward the N.W. part of the state, and contains 320 sq. m. Drained by Sandusky river and its branches. It contained in 1840, 10,613 neat cattle, 8452 sheep, 33,914 swine; and produced 119,122 bushels of wheat, 8890 of rye, 142,628 of Indian corn, 7732 of buckwheat, 1962 of barley, 77,072 of oats, 78,403 of potatoes, 83,722 pounds of sugar. It had two commission houses in foreign trade, 14 stores, three flouring-mills, eight grist-mills, 26 saw-mills, one oil-mill, three tanneries, one distillery, one pottery, two printing-offices, two weekly newspapers; 56 schools, 5159 scholars. Pop. 10,182. Capital, Lower Sandusky.

**SANDUSKY CITY**, p. v., port of entry and cap. of Erie co., O., 60 m. W. Cleveland, 110 m. N. Columbus, 414 W. Situated on the S. side of Sandusky bay, fronting the opening into lake Erie, three miles distant, of which it has a delightful view. The entire village is based on an inexhaustible quarry of the finest building stone, of which many of its edifices have been erected. Excepting for three winter months, its wharves are thronged with steamboats and other lake vessels, whose arrival and departure enliven the view. It contains four splendid churches, an academy of stone, three stores high, 26 stores besides groceries and provision houses, a ship-yard where steamboats and other vessels are built, 300 dwellings, and about 2000 inhabitants.

**SANDWICH**, a cinque-port, nun. and parl. bor. of England, co. Kent, late St. Augustine, hand. Eastry, on the Stour, about 2 m. from its mouth, and 65 m. E. by S. London. Area of town and port, 1960 acres. Pop. in 1831, 3136. The parliamentary borough however comprises, with the foregoing, the parishes of Deal and Walmer, and the extra-parochial hamlet of St. Bartholomew, having an aggregate area of 3810 acres, and a population in 1831, of 12,235. Sandwich is divided into the three parishes of St. Mary, St. Peter, and St. Clements. It is washed on the N.E. by the river Stour, and surrounded on every other side by a dyke, the remains of its old fortification. It is irregularly built, and has a more ancient appearance than, perhaps, any other town in the county. The streets are well paved, and lighted, and the inhabitants are supplied with excellent water from the river, and from a spring which rises near the Eastry, and is brought to the town by a canal, 3 m. in length. St. Clement's church is a spacious building, with a massive tower of Norman architecture rising from four semi-circular arches in the centre of the building, and supported on strong piers. In some parts it is curiously or-

## SANDY HOOK.

namented. The living is a vicarage, with a nett income of £310 a year. St. Mary's is also a vicarage, worth £117 a year nett. Both the foregoing parishes are in the gift of the archdeacon of Canterbury. St. Peter's is a rectory, in the gift of the crown and the corporation of Sandwich alternately, worth £144 a year nett. There are places of worship for Independents and Wesleyans; two hospitals, one founded in the 12th century, and accommodating 16 residents, who must be freemen; the guildhall, built in 1579, and a new house of correction, comprise most of the remaining public buildings. The free grammar school of Sandwich was founded in the reign of Elizabeth, and received considerable endowments in lands in 1563. Its governors are the mayor and corporation; it has four scholarships in Lincoln college, Oxford, of which two are in the appointment of the governors of the school, and two in that of the rector and fellows of the college; and four in Caius college, Cambridge, nominated in a similar manner. It has, also, a national school and other charities. The town has been for several years in a depressed and declining state. It has no manufactures, and its trade is trifling, consisting principally in the importation of coal for the use of the town and neighbouring country. The scheme of straightening the course of the Stour to the sea so as to form a canal, has been abandoned for want of capital and enterprise. (*Munic. Bound. Rep.*)

Sandwich was first incorporated by Edward III. Its corporation consists of four aldermen and 12 councillors, styled the mayor, jurats, and commonality of the town and port. Their jurisdiction extends over Ramsgate, Sarr, and Walmer, and did formerly over Deal, which are all members of this cinque-port. Sandwich has, however, no commission of the peace except upon petition or grant. It has sent two members, usually styled barons, to the House of Commons since the 42d of Edward III. Previously to the Reform Act, the right of voting was in the freemen, resident and non-resident, the freedom being acquired by birth, gift, marriage, apprenticeship, ownership, and residence. Registered electors in the new parl. bor., in 1839-40, 977; corporation revenue, in 1839, £1339.

Sandwich, formerly called Lundenwick, appears to have risen into consequence, on the decline of Richborough, the an. *Rhutupium*, about the 6th century. It was long a place of considerable trade, and continued, till a comparatively late period, to be a kind of out-port to London, many goods being conveyed by land to and from the capital. Markets, Wednesday and Saturday; fair, December 4, for clothing, &c. (*Mun. and Bound. Reports*, &c.)

**SANDWICH**, p. t., Carroll co., N. H., 49 m. N. Concord, 530 W. Bounded S.W. by Squam lake. Watered by Bearcamp river. Chartered in 1763. It contains five churches, a Congregational, two Methodist, and two Free-will Baptist; seven stores, two fulling-mills, five grist-mills, eight saw-mills, one oil-mill, four tanneries; one academy 34 students; 20 schools, 755 scholars. Pop. 2625.

**SANDWICH**, p. t., Barnstable co., Mass., 58 m. S.S.E. Boston, 459 W. Bounded N.E. by Cape Cod bay, W. by Buzzards bay. A ship canal has been proposed to connect these bays, which would be 5 m. long, through level ground, and would save the tedious and somewhat dangerous navigation around Cape Cod. The village contains four churches, a Congregational, Unitarian, Methodist, and Roman Catholic. In other parts of the town are six churches, four Methodist, a Congregational, and Friends. It contains 17 stores, one glass factory, seven grist-mills, one saw-mill; three academies, 180 students; 21 schools, 1130 scholars. Pop. 3719.

**SANDWICH ISLANDS.** (See *POLYNESIA*.)

**SANDY**, river, Va. and Ky., rises in Logan and Tazewell counties, Va., and flowing N.W. and N. for nearly 200 m., it enters the Ohio at Catsburg. For a distance of more than 70 m., it forms, by the Tug fork and main river, the boundary between Virginia and Kentucky. It is boatable for 500 m. from its mouth.

**SANDY CREEK**, p. t., Oswego co., N. Y., 161 m. W. by N.W. Albany, 391 W. Bounded W. by lake Ontario. Drained by Little Sandy creek. It has two churches, a Presbyterian and Methodist, four stores, one fulling mill, one furnace, one grist-mill, five saw-mills; one academy, 45 students; 22 schools, 483 scholars. Pop. 2430.

**SANDY HILL**, p. v., semi-capital of Washington co., N. Y., 53 m. N. Albany, 423 W. Situated on the E. bank of Hudson river, immediately above Baker's falls. The streets form a triangular figure, leaving an open area of that form in the centre. It contains a courthouse, jail, three churches, a Presbyterian, Methodist, and Roman Catholic; eight stores and groceries, various mills and manufactories, 150 dwellings, and about 1000 inhabitants. The river here affords great water-power, which is but partially improved. A navigable feeder of the Champlain canal, which is 1 m. distant, passes through the place.

**SANDY HOOK**, a sandy beach, Middletown t., Mon-

## SANDY LAKE.

mouth co., N. J., is 6 m. long, and from half a mile to a mile wide, enclosing Sandy Hook bay, 7 m. long and 6 m. wide, forming the outer harbour of New-York. It has a light-house on its N. point.

**SANDY LAKE**, p. t., Mercer co., Pa., 228 m. N.N.W. Harrisburg, 283 W. Drained by Sandy creek, flowing into Sandy lake in its N.W. part. It contains three stores, one furnace, three fulling-mills, four grist-mills, nine saw-mills, one oil-mill; eight schools, 184 scholars. Pop. 1566.

**SANDYSTON**, p. t., Sussex co., N. J., 87 m. N. Trenton, 256 W. Bounded W. by Delaware river. It has one store, three grist-mills, three saw-mills; nine schools, 279 scholars. Pop. 1209.

**SANFORD**, p. t., York co., Me., 83' m. S.W. Augusta, 512 W. Incorporated in 1768. Watered by Mousum river. It has five stores, one fulling-mill, two woollen factories; 20 schools, 1052 scholars. Pop. 2233.

**SANGAMON**, river, Ill., rises in Vermillion co., and by a winding course S.W. W., and N.W., it flows into Illinois river. It is navigable for steamboats of 100 tons burthen to Petersburg, and in high water, one has proceeded to within 5 m. of Springfield. It flows through a highly fertile country.

**SANGAMON**, county, Ill. Situated near the centre of the state, and contains 900 sq. m. Sangamon river and its tributaries afford extensive water-power. Organized in 1821. It is one of the most fertile counties of the state. It contained in 1840, 20,878 neat cattle, 18,233 sheep, 69,016 swine; and produced 74,522 bushels of wheat, 8533 of rye, 1,390,160 of Indian corn, 2359 of barley, 193,875 of oats, 44,852 of potatoes, 2000 pounds of tobacco. It had 50 stores, five flouring-mills, 23 grist-mills, 40 saw-mills, 21 oil-mills, nine tanneries, four distilleries, four potteries, three printing-offices, four weekly newspapers; three academies, 192 students; 20 schools, 844 scholars. Pop. 14,716. Capital, Springfield.

**SANGERFIELD**, p. t., Oneida co., N. Y., 15 m. S. Utica, 88 m. W.N.W. Albany, 372 W. Watered by Chenango river and Oriskany creek. It contains three churches, two Presbyterian and a Baptist, six stores, two fulling-mills, one furnace, one grist-mill, eight saw-mills, one tannery, two distilleries; two academies, 150 students; 12 schools, 662 scholars. Pop. 2251.

**SANGERVILLE**, p. t., Piscataquis co., Me., 77 m. N.W. Augusta, 672 W. Incorporated in 1814. Watered by a head branch of Sebasticook river. It has four tanneries, 11 schools, 510 scholars. Pop. 1197.

**SANILAC**, county, Mich. Situated on the N.E. part of the settled portion of the peninsula, and contains 730 sq. m. Bounded E. by lake Huron. Watered by Cass and Black rivers. It is unorganized. The eastern part contains excellent pine timber.

**SANQUHAR**, a royal and parl. bor. of Scotland, co. Dumfries, in the valley of the Nith, and near the left bank of that river on the road from Dumfries to Ayr, 26 m. N.N.W. the former. Pop. in 1831, 1527. It consists principally of a main street along the line of the high road. It has a town-hall, with a tower and clock, a handsome parish church, built in 1823, two chapels in connection with the Associated Secession Church, and a chapel for Anabaptists; with a parochial and other schools, a subscription library, a savings' bank, &c. The inhabitants are principally dependent on the weaving of cottons, and on the sewing and embroidery of maslins for the Glasgow manufacturers. There is an extensive carpet manufacture, at Crawick Mill, about 1 m. from the town.

Sanquhar seems to have derived its origin from its fine old castle, now in ruins. This, which formerly belonged to the lords of Sanquhar, having been purchased in 1630 by an ancestor of the last duke of Queensberry, became, on the demise of the latter, with other vast possessions in Dumfriesshire, the property of the family of Buccleugh. It was created a royal borough in 1596, and is united with Dumfries, Annan, Lochmaben, and Kirkcubright in sending one member to the House of Commons. Registered electors, 1839-40, 66. Corporation revenue, in 1839-40, £73. Councillors, 17. (*New Statistical Account of Scotland*, art. *Sanquhar*; and *Official Returns*.)

**SANTA CRUZ**. (See *TENERIFFE*.)

**SANTANDER** (an. *Portus Blendum*), a city and seaport on the N. coast of Spain, cap. prov. of its own name, on the W. side of the bay of the same name, running into the bay of Biscay, 50 m. W.N.W. Bilbao. Pop., according to Miñano, 18,716. It is built on the slope of a hill, and has wide streets lined with tolerably respectable houses, the principal public edifices being the cathedral, two parish churches, and three hospitals. Few of these, however, possess any architectural merit; and Captain Cook, an intelligent traveller, states, that "Santander is almost the only place in Spain of similar magnitude, where no artist in any department has left a memorial of his skill." (*Sketches in Spain*, 1, 76.) It is a thriving town, however, with a con-

## SANTORINI.

siderable number of new houses, very unusual in Spain; and it is the chief seaport of Old Castle, it having been the principal object of the government for some years back to make it one of the principal marts for the supply of Madrid. It has a large trade with Cuba, to which it sends the wheat of Castle, large mills being erected in the neighbourhood for converting it into flour previous to embarkation. The exportation of wool is at present shared with Bilbao; but when the roads are completed, it will have the superiority over that port from its greater proximity to the wool-bearing districts. There are iron-mines in the neighbouring mountains; but, owing to the disturbed state of the country for some years past, they have been little wrought. The *astillero*, or building establishment of the marine, formerly much employed, is now almost in ruins; and the forests of the Montana, which once supplied Spain with nearly all the timber for the navy, are now seldom used, except for the supply of fuel. The harbour of Santander is large, well sheltered, easily accessible, and sufficiently deep for all trading vessels. The vicinity produces an abundance of wheat and other grains, fruits of several varieties, and large quantities of cattle; the coast also swarming with salmon and other kinds of fish. (*Cook's Sketches*, 1, 75-78; *Miñano*, &c.)

**SANTAREM** (an. *Prasidium Julium*), a river-port and town of Portugal, formerly the residence of the court, prov. Estremadura, cap. Comarca, on the Tagus, 45 m. N.N.E. Lisbon. Pop. estimated at 8000. It is built on a hill, and consists of three separate parts; the Maravilla on the summit, the Ribera on the E. declivity, and the Alfange on the W. and S., descending to the river's bank, and commanded by the fortress of Alcazaba. Only a few portions of its old walls remain. It is well built, and has some good public edifices; but these are much neglected, and several have almost fallen to ruin since the removal of the court to Lisbon, in the 15th century. Besides numerous churches and convents, Santarem has several hospitals and asylums, and two Latin schools; and it is the seat of the Patriarchal seminary, the highest ecclesiastical establishment in the kingdom. Its environs are fertile, and well cultivated, and it has an active trade with Lisbon. (*Dict. Geog.*, &c.)

**SANTEE**, river, S. C., is one of the largest rivers of the state, and is formed by the union of Congaree and Wateree rivers, about 25 m. S.E. Columbia. Both these branches rise, by different names, in N. C., where the main branch of the Wateree is called Catawba r., and of the Congaree, Broad r. It enters the Atlantic by two mouths, about 20 miles below Georgetown. It is navigable for boats in high water, by the Wateree and Catawba branch, 300 m. to Morgantown, N. C. Steamboats ascend the Congaree branch to Columbia. A canal 23 m. long connects Santee with Cooper r., by which the produce of a large section of this state, and of a part of N. C. finds a market at Charleston.

**SANTORINI** (an. *Thera*), an island of the Ægean sea, belonging to the S. Cyclades, 65 m. N.N.E. from the nearest point of Crete, Mount St. Elias, the highest point of the island, being in lat. 36° 20' 45" N., long. 25° 28' 8" E. Pop. 12,000. This island is, shaped like a crescent, or rather horse-shoe, the concave side to the W., forming a bay, sheltered by the islands Therasia, Aspronisi, &c. The island has a dismal appearance from the sea, consisting wholly of black volcanic rocks, without wood, rivers, or rivulets; but it has, notwithstanding, some very fertile districts, the decomposed volcanic rocks and ashes supplying a fruitful soil, which being carefully cultivated, produces corn, cotton, and large supplies of wine. The inhab. have no water, other than that which they collect in cisterns; and the calcined rock, being of a light consistency, the houses are rather excavated in it than built. Pyrgos in the centre of the island, near the seat of the ancient Thera, and Scaros, on the coast of the bay, are the only towns of any consequence. The inhabitants are very industrious; and have sustained little other inconvenience from the Turkish dominion except that of paying the tribute due to the Porte.

It was the general opinion of the ancients, that this island, and others in its vicinity, had been thrown up from the bottom of the sea; and Pliny says that this event occurred in the 4th year of the 135th Olympiad. (*Hist. Nat.*, lib. ii. cap. 87.) No doubt, however, this date is erroneous; as it appears from Herodotus, that the island was inhabited 1550 years B. C., or 1313 years before the epoch assigned by Pliny for its appearance: (*Herod.*, lib. iv. caps. 147, 148, and 151.) Probably, unless the date given by Pliny be vitiated, he may have referred to some eruption that had occasioned an enlargement of the island. The convulsions of which it was anciently the theatre, have not been suspended in more modern times; a new island having been thrown up near its coast in 1573, and another in 1707, each being preceded by a violent volcanic eruption. In remote antiquity it was called *Calistae*, or the beautiful, an epi-

## SANTOS.

thet that never could have been applied to it, had its appearance then been at all like that which it now exhibits. The ruins of its ancient city, Thera, on the hill now called St. Elias, evince its extent and magnificence. (*Tournefort*, i., 268, &c.; *Sonnini's Greece and Turkey*, 287, &c. English trans.; *Herodote par Larcher*; *Tab. Georg.*, art. Thera, &c.)

SANTOS, a town and seaport of Brazil, prov. St. Paul, in a low and unhealthy situation on the N. side of the island of St. Vincent, 35 in. S.S.E. St. Paul, lat. 23° 58' 15" S., long. 46° 0' 15" W. "Santos is a place of considerable trade, being the storehouse of the great captaincy of S. Paulo, and the resort of many vessels trading to the Rio de la Plata. It is tolerably well built; and its pop., consisting chiefly of merchants, shopkeepers, and artificers, amounts to 6000 or 7000." (*Mawe*, p. 63.) The pop. has, however, increased materially since the publication of Mawe's work. Several rivulets flowing from the mountains unite in one great river a little above the town. The port is, formed by the continent and the island St. Amaro. There are two entrances, but that of the S. is alone navigable by large vessels; the other, which is formed by the river Bertogã, being fit only for small craft. The harbour admits ships of large burden, which are sheltered from all winds except those from the S.S.W. round to the S.E. A pilot is not absolutely necessary on entering. "In advancing into the river Santos, you will have 10, 9, 8, and 7 fathoms water, until you near the bar, upon which there are only from 4½ to 5 fathoms: the entrance is narrow, but the starboard side is much the boldest, and has 19 fathoms water close to the shore. After passing the first barra-grande, the water deepens to 15 and 16 fathoms within 12 fathoms of the shore. The best anchorage will be abreast nearly of the centre of the town, in 7 fathoms, on a bottom of mud. Provisions are abundant, and good water may be obtained by sending a boat about 7 m. farther up the river." (*Blunt's Sailing Directions*.) The part called the Narrows is defended by two forts.

Though the commerce of Santos will not bear to be compared with that of Rio or Bahia, it is very considerable. Sugar is the great article of export; and the shipments of it have lately been increasing. The imports are similar to those of Rio, which see. Being, as it were, the port of St. Paul's, an extensive intercourse is carried on with the latter. We subjoin

An account of the exports of Sugar from Santos during the three Seasons ending with 1839-40.

Shipped for	1839-1840.	1838-1839.	1837-1838.
Europe	176,000	130,000	12,000
River Plate	165,500	74,000	108,500
Ports of Brazil	120,350	33,500	48,100
Valparaiso	169,000	104,000	65,500
United States	102,000	89,800	7,900
Total	634,750	397,100	249,000

SAONE (HATTE), a dep. of France, reg. E.; between lat. 47° 15' and 48° N., and long. 5° 35' and 7° E., having N. the dep. Vosges, E. Haut-Rhin, S. Doubs, and W. Cote d'Or and Haute-Marne. Length, N.E. and S.W. about 70 m., breadth varying from 25 to 40 m. Area, 530,990 hectares. Pop., in 1836, 338,910. In the N. and E. are the Vosges mountains, and their ramifications. The general slope is to the S.W., in which direction the Saône traverses the dep. throughout its centre. The Oignon forms its S.E. boundary. There is a considerable extent of rich soil. In 1834, the arable lands were supposed to comprise 256,103 hectares, meadows 58,923 do., vineyards 11,769 do., and woods 154,230 do. Agriculture has made some progress within the present century; but it is still very backward. The produce of corn, pulse, &c., exceeds the demand for home consumption. Wheat, oats, and barley, are the principal crops. In 1835, according to the official returns, nearly 1,820,000 hectol. of grain of all kinds were harvested, besides about 1,000,000 do. potatoes. The vineyards form a principal source of wealth. The produce may be estimated at about 350,000 hectol. a year. The wines of Ray, Charicy, Navenne, Quincy, Gy, and Champlitte-le-Chateau, are the best: they have a fine colour, body *un bon gout*, and may be kept for a long time. *On peut les considérer comme de bons vins d'ordinaire de troisième qualité.* (*Julien*, p. 135.)

Near the Vosges, large quantities of cherries are grown for the manufacture of *kirschwasser*. Timber is an important product; and the annual produce of wool is estimated at 130,000 kilogr. In 1835, of 129,312 properties subject to the *contrib. foncière*, 67,324 were assessed at less than 5 fr., and 20,455 at from 5 to 10 fr.; while only 91 were assessed at 1000 fr. and upwards. In minerals this dep. is one of the richest in France. Its iron *forges* employ about 5000 hands; and bar iron, iron plates, and wire, steel, and various iron goods are made to the annual value of

## SARAGOSSA.

14,000,000 fr. Glass and earthenware, cotton goods, paper, and hats, are also produced: the exports are, however, mostly confined to agricultural products, and iron goods. Haute-Saône is subdivided into three arronds: chief towns, Vesont, the cap., Gray, and Lure. It sends four mems. to the chamber of deputies. Registered electors, in 1838-39, 1052. Total public revenue (1831), 7861,653 fr. According to Hugo, "*Les habitants de la Haute Saône ayant été moins mêlés avec les conquérants francs ou bourguignons que ceux d'autres parties de la France, représentent assez exactement, par leur extérieur, l'ancienne race Gauloise ou le peuple Gallo-romain.*" (*Hugo*, art. Haute Saône; *French Official Tables*.)

SAONE-ET-LOIRE, a dep. of France, reg. E. principally between the 46th and 47th degs. of N. lat., and long. 3° 40' and 5° 30' E., having N. Cote d'Or, E. Jura and Ain, S. Rhone and Loire, and W. Allier and Nievre. Area, 856,472 hectares. Pop., in 1836, 524,180. The E. and W. parts of the dep. are level; the centre is mountainous, the mountains dividing the basins of the Loire and the Saône. These two rivers are, however, united in this dep. by the canal du Centre. Nearly half the surface consists of a rich and fertile soil. In 1834, the arable lands were supposed to comprise 458,323 hectares, meadows 126,655 do., vineyards 47,936 do., and woods 150,694 do. The produce of corn exceeds what is required for the consumption of the dep.; in 1835, 2,558,000 hectolitres, principally wheat and rye, are said to have been harvested, besides 2,250,000 hectolitres potatoes; which last form the staple food of the inhabs. of the mountains. Some of the vineyards in this dep., especially those in the arrond. of Châlons-sur-Saône, produce wine that ranks in the first class of Burgundy. The wines produced in the other districts are known in commerce by the name of *vins de Mâcon*. They are excellent as *vins ordinaires*, but cannot be compared with the first-rate growths. Julien says that their proper place is in the second class of burgundies, immediately after the finest growths of Beaune; and that they are *en général corsés, spiritueux, quelquefois trop fumeux, et toujours agréables*, (p. 121.) The produce of wine is estimated at about 500,000 hectol. The arrond. Charolles has some fine pastures; and, in 1830, the dep. was supposed to possess 250,000 head of cattle, and 405,000 sheep, being a much larger stock than in any of the neighbouring depas. A great number of hogs are reared. In 1835, of 129,312 properties subject to the *contrib. foncière*, 70,987 were assessed at less than 5 fr., 26,208 at from 5 to 10 fr., and 22,347 at from 10 to 20 fr.; and 269 at 1000 fr. and upwards. Coal, iron, manganese, and marble are raised; the glass and iron works and potteries are important. The commerce of the dep. centres principally in Châlons-sur-Saône. This dep. is divided into five arronds: chief towns, Mâcon, the cap., Autun, Charolles, Châlons, and Louhans. It sends 7 mems. to the chamber of deputies. Registered electors, 1838-39, 3,243. (*Dict. Géog.*; *French Official Tables*.)

SARAGOSSA, ZARAGOZA (an. *Casarea Augusta*), a city of Spain, kingdom of Aragon, prov. of its own name, in a fine plain on the Ebro, crossed here by two bridges, 87 m. S.E. Pampluna, 156 m. W. by N. Barcelona, and 176 m. E.N.E. Madrid; lat. 41° 47' N., long. 42° 45' W. Pop., according to Miñano, 43,440. The limits of the town are marked by a wall partly of turf and partly of stone; and there are eight principal and two smaller gates. It is divided into four quarters and two suburbs, comprising upwards of 200 long, narrow, ill-paved, and dirty streets; indeed there is only one wide street in the whole city, viz. the *Cosso*, which sweeps round the outside circ. of the town on the land side, connecting the market-place and the Ebro. (*Cook's Sketches in Spain*, i. 109.) The houses, generally speaking, are of brick, and three stories high; but few of them have any pretensions to architectural display. The town has an immense number of churches, two of which are cathedrals, thus characterized by Mr. Townsend: "That called *El Aen* is vast, gloomy, and magnificent, exciting devotion, inspiring awe, and inclining the worshipper to fall prostrate and adore in silence the God who seems to veil his glory; the other, called *El Pilar*, being spacious, lofty, light, elegant, and cheerful, inspires hope, confidence, complacency, and makes the soul impatient to express its gratitude for benefits received." (*Spain*, i. 206.) This church, however, was nearly destroyed during the siege in 1808-9; and several of the other churches and convents were then also destroyed: The chapter of the united cathedrals comprises an archbishop, dean, 12 dignitaries, and 30 canons. Among the numerous other churches, 16 of which are parochial, that of *Santa Engracia* is worth notice on account of its valuable paintings, sculptures, &c.; and the conventual church of St. Domingo, in the *plaza* of the same name, is remarkable for a fine altar-piece and mausoleum of white marble. There are five *hospicias*, or public almshouses, one of which, the *Casa de Misericordia*, has accommodation for 700 sick and

## SARANSK.

aged persons of both sexes, and another affords a refuge for upwards of 1000 orphans and foundlings. The exchange, near the *Puerta del Angel*, is an antique-looking square building, ornamented with busts of the kings of Aragon, enclosing a spacious hall supported by 50 Doric columns, contiguous to which is the sessions-hall of the *ayuntamiento*. There are two sets of barracks, and in the suburbs are several extensive and well-planted walks. A little W. of the city is the fortress of Aljaferia, so called from its founder, the Moorish king Ben-Aljaf, who made it his palace. A university was founded here on the expulsion of the Moors, in 1118, but was not incorporated till 1474: it was well attended at the close of the last century, but is now comparatively deserted. Among the other establishments may be mentioned a royal economic society, with professors of chemistry and agriculture, botany, rural economy, &c.; a royal academy of the fine arts, a public library, and a *monte de piedad*. The manufacturing industry of Saragossa, once very considerable, has all but fallen to decay; the only manufactures, at present, being those of coarse woollen cloths, parchment, shoes, and leather. The town enjoys also considerable advantages for commerce, owing to its position in the midst of a fertile country, and on the canal of Aragon, which runs from near Tudela to Sastago: its trade, however, is confined chiefly to the transport of grain to Tortosa in exchange for articles of home consumption.

"On the whole, Saragossa may be said to be on the decline, like all the provincial caps, many of the old families having gone to hide their poverty at Madrid; and many magnificent houses, on a scale not exceeded any where in Spain, are now let out in tenements. Provisions of all sorts, corn, wine, oil, mutton, game, and vegetables are cheap, abundant, and excellent, this being probably the best country for living in Spain. The people, generally, are civil and polished, as in all the old cities; but the lower classes have a bad reputation, and assassinations are said to be common. The peasants of the environs wear a Moorish costume, like those of Valencia, and in manners they are ruder and more ferocious-looking than almost any other peasantry of the Peninsula." (*Cook's Sketches*, i. 111.)

The climate is temperate and healthy, though somewhat damp; the neighbourhood produces good crops of wheat, barley, and maize, kidney beans and other vegetables, wine, oil, fruits, and silk. The neighbouring hills depasture great numbers of sheep, chiefly belonging to the *Canaderos* or sheep-grazers of Saragossa, an old and highly privileged association. (*Townsend*, i. 245-212; *Cook's Sketches*, i. 108-111; *Modern Trav.*, *Miñano*, &c.)

Saragossa is very ancient, being said to have been founded by the Phœnicians or Carthaginians. It was greatly enlarged by Julius Cæsar, who made it the head quarters of the veteran legion; and Augustus gave it the name of *Cæsarea Augusta*, with the privileges of a free colony. Of its Roman buildings, however, which, according to Strabo, must have been numerous and handsome, there are scarcely any vestiges. Towards the close of the 5th century it was taken by the Goths, who were expelled in 712 by the Saracens; and at length, in 1017, it was made the capital of a separate Moorish state. A century afterwards it was besieged and taken by Alphonso of Aragon; and it was subsequently united to the kingdom of Castile. But it is principally known in modern history from the obstinate resistance made by its inhabs., under Palafox, in 1808-9 to the French, commanded successively by Marshals Mortier and Lasnes. The siege lasted, with some slight intermissions, from July 15, 1808, to Feb. 21, 1809; when, after a loss of about 6000 men killed in battle, and above 30,000 men, women, and children carried off by hunger, pestilence, and the frantic excesses that raged in the unfortunate city, it surrendered to the French. Colonel Napier's account of this famous siege has stripped it of more than half the romance with which it was early invested in this country. The "heroic" Palafox "for more than a month preceding the surrender never came forth of a vaulted building which was impervious to shells, and in which, there is too much reason to believe, that he and others, of both sexes, lived in a state of sensuality, forming a disgusting contrast to the wretchedness that surrounded them." (*Napier*, ii. 49, 3d edit.) In obstinacy, fanaticism, and savage cruelty, the Saragossans seem to have borne a striking resemblance to the Jews besieged by Titus. The loss of the French in the siege did not exceed 4000 men.

SARANSK, a town of European Russia, gov. and dist. Penza, on both sides the Saranga near the Insar, 70 m. N. by E. Penza. Pop. 8750. Most of its houses are of wood; it has, however, two cathedrals, nearly a dozen other churches, a convent, various manufacturing establishments, and a large annual fair. (See, also, PENZA.)

SARANAC, r., rises in Saranac lake, in Franklin co., near the source of Rackett r., and flows N. E. into Plattsburg, it turns W. and enters Cumberland bay of Lake

## SARATOF.

Champlain, at the v. of Plattsburg. It affords good water-power in its course, and has a considerable fall at the village of Plattsburg, where are mills. On the banks of this river, the British and American land forces were engaged, in the battle of Plattsburg; the British occupying its N. side, and the American the S. side, the former not being able permanently to cross the r. A canal might be constructed along this river and Rackett river, which would connect Lake Champlain with Lake Ontario, through St. Lawrence r.

SARANAC, p. t., Clinton co., N. Y., 15 m. W. Plattsburg, 181 m. N. Albany, 830 W. Watered by Saranac river. It abounds with iron ore, and has a Methodist church, five stores, one forge, one glass factory, one grist-mill, nine saw-mills; five schools, 100 scholars. Pop. 1462.

SARATOF, an extensive government of European Russia, between the 48th and 53d degs. N. lat., and the 42d and 50th E. long., having N. the govs. of Penza and Simbirsk, E. that of Orenbourg, S.E. and S. Astrakhan, and W. Tambor, Voroneje, and the country of the Don Cossacks. Length, and greatest breadth, about 350 m. each. Area estimated at about 73,600 sq. m. Pop., in 1838, 1,554,400. The Wolga intersects it from N. to S., dividing it into two portions of nearly equal size, but differing considerably in general character. The E. division is a wide steppe, destitute of wood, and covered in many parts with salt lakes, from one of which 10 million poods of salt are said to be annually obtained. The W. division is in part hilly, and though stony towards the S., has some tolerably fertile tracts in the N., where agriculture is the chief occupation of the inhabitants. Rye, wheat, oats, millet, and pease, are raised, and in ordinary years the produce, after supplying the demand for home consumption, leaves a considerable quantity for exportation. Potatoes, flax, and hemp, are also produced, and the cultivation of tobacco, hops, and wood, has been introduced by German and other colonists. The climate, in some situations, is sufficiently mild for the culture of the melon, grape, and mulberry. The principal forest trees are oaks, poplars, Siberian acacias, and firs. The woods are mostly in the N.W.; and those belonging to the crown are estimated at about 418,500 dectines; but the supply of timber is not adequate to the home demand. The rearing of live stock is conducted on a large scale; and the more wealthy proprietors are endeavouring to improve the breed of sheep, by the introduction of Merino flocks. The rearing of bees and of silkworms is on the increase. The fisheries in the Wolga furnish large supplies of fish, both for home consumption and exportation. Next to salt, mill-stones and a little iron are the chief mineral products.

The population is very mixed, including Tartars and Kirghizes, and on the Wolga are numerous colonies, founded principally by German and other immigrants from W. Europe; originally attracted thither by grants of land, and privileges conferred by the empress Catharine, in 1763. In 1811, their numbers amounted to about 55,000; and in 1838, they are said to have increased to nearly 118,000. The colonists are free, and in most respects subject only to their own jurisdiction. They conduct the most important manufactures of the government, which consist of linen, cotton, and woollen fabrics, hosiery, iron ware, leather, and earthenware. There are numerous flour-mills and distilleries. This government is favourably situated for commerce: it communicates by the Wolga with the Nijni-Novgorod and the Caspian sea, and by the Medveditz and Don, with the sea of Azof. The Tartars have a large trade in sheepskins, and the Kalmucks in horses of a very fleet though weak breed. About 5000 merchants, trading in corn, salt, fish, caviar, cattle, tobacco, and fruits, had a few years since an aggregate capital of 11,175,000 roubles. Saratof is divided into 10 districts; chief towns Saratof, Volsk, and Tzaritsyn. The population are mostly divided among the Greek, Protestant, and Mohammedan religions. Education, except in the schools of the colonists, and of the capital town, is at a very low ebb; and in 1830 there was but one printing-press in the government.

SARATOF, a town of Russia in Europe, cap. of the above gov., on the Wolga, 335 m. S.S.E. Nijni-Novgorod, and 360 m. N.N.W. Astrakhan. Lat. 51° 31' 34" N., long. 46° E. The pop. (including military), according to the official accounts, exceeds 35,000; but this is believed to be beyond the mark. It consists of an upper and lower town; but, though founded so late as 1665, it is neither regularly laid out nor well built. It has some good and even handsome stone residences; but most of its houses are of wood, and it has frequently been in great part destroyed by fire. There are about a dozen Greek-Russian churches, some convents, a Protestant and a Roman Catholic church, a mosque, and a *gostinõi-duor*, or bazaar, a large stone building for the warehousing, exhibition, and sale of merchandise. Since 1833, a new and handsome archbishop's palace has been constructed; and there are several hospitals, a gymnasium, and an ecclesiastical seminary, established in 1828, and

## SARATOGA.

having at present (1841) about 500 students. The inhabitants manufacture cotton fabrics, cotton and silk stockings, clocks and watches, leather, wax lights, tallow, vinegar, beer, &c. Saratoga, which is intermediate between Astrakhan, on one hand, and Moscow and Nijni-Novgorod on others, has an extensive trade, its exports being principally corn, salt-fish, hides, cattle, and native manufactured goods; and its imports, tea, coffee, sugar, iron, glass, and earthenware, woollen, silk, and cotton stuffs, peltry, &c. It has three large annual fairs. (*Schnitzler, La Russie; Possart, Das Kaiserth. Russland*, p. 591-616.)

SARATOGA, county, N.Y., situated towards the E. part of the state, and contains 600 sq. m. It is celebrated for its mineral waters, and contains marl and bog iron ore. Drained by Sacandaga river, and Fish and Kayaderoseras creeks. Railroads from Troy and Schenectady form a junction at Ballston, and proceed to Saratoga. It contained in 1840, 4810 neat cattle, 96,656 sheep, 51,601 swine; and produced 72,001 bushels of wheat, 162,950 of rye, 328,631 of Indian corn, 85,974 of buckwheat, 496,089 of oats, 1,019,632 of potatoes, 5767 pounds of hops, 100 of silk cocoons, 20,910 of sugar. It had 166 stores, 12 lumber-yards, two furnaces, 33 fulling-mills, 21 woolen factories, one cotton factory with 2028 spindles, four flouring-mills, 37 grist-mills, 139 saw-mills, one oil-mill, two paper-mills, 27 tanneries, two distilleries, one pottery, one printing-office, one weekly newspaper; 10 academies, 527 students; 164 schools, 6319 scholars. Pop. 40,553. Capital, Ballston Spa.

SARATOGA lake, Saratoga co., N.Y., 4 m. S.E. Saratoga, 5 m. E. Ballston Spa, is a beautiful sheet of water, 9 m. long and 2 wide, well stored with fish, and much resorted to by visitors to Saratoga Springs.

SARATOGA, T., Saratoga co., N.Y., 6 m. Ballston Spa, 36 m. N. Albany. Bounded E. by Hudson river, S.W. by Saratoga lake, from which Fish creek flows into Hudson river. It contains eight stores, two fulling-mills, two woolen factories, three grist-mills, three saw-mills; one academy, 50 students; seven schools, 454 scholars. Pop. 3624.

SARATOGA SPRINGS, T., Saratoga co., N.Y. Drained by small streams flowing into Kayaderoseras creek, which passes through its S. part. It contains the village of Saratoga Springs (which see), and contains 42 stores, one fulling mill, one woolen factory, two grist-mills, two saw-mills; four academies, 175 students; five schools, 253 scholars. Pop. 3384.

SARATOGA SPRINGS, P.V., Saratoga co., N.Y., 36 m. N. Albany, 181 m. N. New-York, 406 W. This is the most celebrated watering-place in the United States, and one of the most celebrated in the world. The village is built on five streets running N.E. and S.W., crossed by as many others, chiefly at right angles. Broadway, the principal street, is 140 feet wide, and a mile long. There are a number of splendid boarding houses, the principal of which are the United States, Union hall, the Congress hall, the Pavilion, and 70 others of less celebrity. The four principal houses contain about 1000 rooms. The principal springs are the Congress, Washington, Putnam's, Pavilion, Iodine, Hamilton, Flat Rock; and one mile E., the Ten Springs, and others, in the village, making 18 in the whole. There are four extensive bathing houses. The number of visitors at one time are, when full, about 3000, and through the season in the whole, about 35,000. The village was incorporated in 1826, and contains six churches, a Presbyterian, Methodist, Baptist, Episcopal, Universalist, and Roman Catholic; two academies and two female seminaries; 35 stores, two public libraries and reading-rooms, three printing-offices, issuing two daily and one weekly newspapers; 400 dwellings, and 2500 inhabitants. The springs differ slightly, some in their properties. Congress spring, much more resorted to than any other, and much more of which is sent abroad in bottles, is situated in the S. part of the village, and according to the analysis of Dr. Chilton in N.Y., May 1, 1843, it contained the following ingredients: one gallon of 231 cubic inches had, chloride of sodium, 363.829 grains; carbonate of soda, 7.200; carbonate of lime, 86.143; carbonate of magnesia, 28.621; carbonate of iron, .841; sulphate of soda, .651; iodide of sodium and bromide of potassium, 5.920; silica, .472; alumina, .321; total, 543.998 grains. Carbonic acid, 284.65; atmospheric air, 5.41; making 290.06 inches of gaseous contents. In the spring of 1842, this fountain was cleansed and renovated by putting down a new curb, extending down to the rock from which the water issues, which increased its gaseous and saline qualities, and restored it to its original strength. The Iodine spring has a less quantity of iron, and the Pavilion spring more carbonic acid than any other. The latter is brought from an orifice in a rock, 40 feet underground, and well tubed. The following is an analysis of it by Dr. Thomas in May, 1842. Chloride of sodium, 226.62 grains; carbonate of magnesia, 62.50; carbonate of lime, 60.24; carbonate of soda, 4.70; oxide of iron, 3.10; iodide of sodium and bromide of potassium, 2.75; silica, .62; alumina, .25; total of solid contents, 361.74 grains.

## SARDINIA.

Carbonic acid, 480.01; atmospheric air, 8.09 cubic inches of gaseous contents. Next to the Congress spring, this is most extensively resorted to, and much of it is sent abroad in bottles. Myriads of small globules are thrown by the gas nearly a foot from its surface, and it is very lively and sparkling.

The visitors are from all parts of the United States, sometimes from the distance of over 2000 miles, and frequently from foreign countries. The arrivals are sometimes 1500 in the course of a week, and the larger houses are filled to overflowing in the height of the watering season, which is chiefly during the month of August; but they do not receive visitors during a considerable part of the year. Some of the smaller houses are kept open for visitors during the whole of the year, when those who are found here are chiefly invalids.

The waters are useful in many cases of disease; but for other persons whose system wants tone and recruiting, they are the best of all remedies, and few persons who are not diseased drink of them, even for a short season, without experiencing a sensible benefit. From one to three pints are generally taken before breakfast, and the appetite is strengthened, and the whole system is invigorated. Those who drink of the water from bottles carried abroad, find it eminently beneficial. A single dealer in the city of New-York sells several thousand dozens of bottles annually, and there are several other places in the city at which it is sold, though in smaller quantities.

SARDINIA (Ital. *Sardegna*, Fr. *Sardaigne*, an. *Ichnusa*, from its resemblance to the print of a foot, *post Sardinia*), an island of S. Europe, and next to Sicily, which it nearly equals in size, the largest in the Mediterranean. It lies principally between the 39th and 41st degs. of N. lat. and the 8th and 10th of E. long., being separated from Corsica on the N. by the strait of Bonifacio. It is of an oblong form; length, N. and S., about 160 m.; average breadth, about 60 m.; area, with its dependant islands, 9240 sq. m. Pop. in 1838, 524,633.

Sardinia differs from Corsica in being more diversified, more fertile, and richer in minerals. A large proportion of the surface is hilly or mountainous. The principal mountain chains extend from N. to S., at no great distance from the E. coast; but in various parts of the island there are ranges of considerable length stretching in an opposite direction. The general elevation of the mountains is from 1000 to 3000 ft.; the peak of Limbarra, however, is 3686 ft., and that of Genargent, in the chain of that name (the *Tasani Montes* of antiquity), 5276 ft. in height, an altitude which enables the people of Arizito to travel in snow for the consumption of the capital. (*Smyth*, p. 67.)

There are many extensive plains, the principal being those of Ozieri and Sassari in the N., that watered by the Tirsì in the centre, and the *Campidano*, between Oristano and Cagliari, in the S. The Tirsì, Finmessedo, Coginas, Mannu, &c., flowing through these plains, are considerable rivers; the minor *campi* are watered by numerous small streams. Around the coasts are many lagoons, and several considerable bays, as those of Cagliari, Oristano, Sassari, Oriseli, &c.

The mountain-chains of Sardinia and Corsica have a similar formation, being composed of granite, schist, primitive limestone, &c. Through the centre of Sardinia, from N. to S., extends a remarkable tertiary formation of a calcareous nature; and various volcanic products are scattered over this formation, while the traces of extinct craters are visible in many parts of the island. Earthquakes, however, are rare; nor are storms frequent, though the climate is proverbially variable as to temperature. According to Captain Smyth, the mean temperature of the year, at the level of the sea, may be taken at 61.7 Fahr.; and the medium height of the barometer at 29.69.

Extensive districts are very unhealthy, and in antiquity the island was celebrated alike for the excellence of its soil and the badness of its air. *Sardinia fertilis, et soli quam celi melioris; atque ut fecunda, ita pene pestilens.* (Pomp. Mela, lib. ii. cap. 7.) "The intemperie, as the malaria is here called, appears to be somewhat different from the malaria of Italy and Sicily; for though equally, or even more acrimonious in effect, it does not always produce the swelled bodies and sallow skins which are the symptoms of the latter. Both diseases usually commence when the summer heat, assisted by light showers, disengages the impure gases from the low grounds, and continue until the latter end of November, when heavy rains have precipitated the miasma, and purified the air. But they differ, inasmuch as malaria is generally supposed to be weak in its effects unless imbibed during sleep; whereas intemperie, though worst at night, is pernicious at all times." (*Smyth's Sicily*, p. 82.) The chief source of insalubrity appears to consist in the exhalations from the numerous marshes and stagnant pools of the plains, and might, therefore, it may be fairly concluded, be greatly abated by a proper system of

## SARDINIA.

drainage. Fire is said to be a powerful antidote against the evil; and the lords of Oristano were formerly accustomed to light large fires round the town, which had the effect either of rarefying or destroying the mephitic vapours.

Notwithstanding her extent, the richness of her soil, her position in the centre of the Mediterranean, and her convenient harbours, Sardinia has been strangely neglected, not only by her own governments, but by the European powers generally; and has remained, down to our own times, in a semi-barbarous state. A long series of wars and revolutions, followed by the establishment of the feudal system in its most vexatious and oppressive form; the fact of her having been for a lengthened period a dependency of Spain, and, if that were possible, worse governed even than the dominant country; the division of the island into immense estates, most of which were acquired by Spanish grandees; the want of leases, and the restrictions on industry, have paralysed the industry of the inhabitants, and sunk them to the lowest point in the scale of civilization. Since 1750, however, improvements of various kinds have been slowly, but gradually gaining ground; and, within the last few years, several important and substantial reforms have been introduced, that will, it is to be hoped, conspire to raise this fine island from the abyss into which it has been cast by bad laws and bad government.

Besides that portion of the island occupied by lakes and marshes, there are large sandy or stony districts, called *macchie*, which, comprise, in the aggregate, more than one third part of the island: a similar extent may be assigned to forests and pastures; the remaining portion of the surface being laid out in corn-fields, vineyards, olive-grounds, orchards, gardens, &c. About one fifth part of the cultivated land is supposed to be allotted to the growth of corn, which, even under the present system of agriculture, is said to give a return of 7 or 8 for 1; and, in some favoured districts, the average is said by Smyth to amount from 16 to 50 for 1. Of the capacity of the island for producing the most luxurious crops of corn, there can, indeed, be no manner of doubt. In antiquity, Sardinia was reckoned, along with Sicily, a granary of Rome. "*Siciliam et Sardiniam benignissimas ubi nostre nutrices.*" (Val. Max., lib. vi., cap. 6.)

*Utraque frugiferis est insula nobilis arvis.*

*Nec plus Hesperiam longinquis messibus ullæ,*

*Nec Romana magis complemur horrea terræ.*

Lucan., iii., lib. 65.

But the unfavourable political and municipal regulations under which the island has latterly been placed, have gone far to neutralize the advantages it owes to nature. The agriculturists of Sardinia principally consist of two great classes—those who cultivate small farms on the *métayer* principle, and those who work on the estates of others, getting, in most instances, a patch of land for their support, and cultivating it at such times as they are not employed on the lord's lands. Both classes are excessively poor. The agreements under which the former class hold are seldom for more than a year; the landlord furnishing the seed as well as the land, and receiving half the produce. Those who occupy land for which they are obliged to pay a rent in corvées, or other feudal services, are, if possible, still worse off; having usually to borrow the seed either from the landlord, or from the *Monti Frumentarii* established for that purpose, and having also to defray the tithes and a host of other burdens. Another disadvantage, under which all classes labour, is the want of houses on their farms: the peasants live together, in villages, and have frequently to perform a journey of several miles in going to and coming from their farms. Probably, also, this may, in some degree, account for the frequent change of occupancies by the Sardinian peasants; though, as Marmora has truly observed, their circumstances be rarely improved by such changes.

Lands belonging to a canton or commune are frequently cultivated on a kind of partnership system, being divided into three portions: one of these, called *vidazione*, comprises all the lands that are in cultivation, and which are distributed by lot among certain individuals, while the other two portions are occupied in common as pasture. But, as a new distribution takes place every year, it is plain that no individual can take any interest in the improvement of the soil; and this sort of tenure becomes, in fact, the most effectual that can be devised for the extinction of industry. Latterly, however, the government has been making efforts to promote the formation of inclosures and the division of the lands; which, though opposed by the prejudices of the people, have made some progress. (*Marmora, Voyage en Sardaigne*, lib. v., cap. 1.)

Even these, however, are not perhaps the greatest discouragements to agriculture. As if to annihilate the possibility of the peasantry emerging from their depressed condition, and to oblige them to confine their industry to the supply of their indispensable wants, it has been enacted that no corn shall be exported if its price exceed 30 reals the *starello*; and a heavy duty is laid on all that is exported, as

a substitute for a general land-tax. Most other articles of export have been loaded with similar duties; and it would really seem that every device that ignorance and shortsighted rapacity could suggest had been practiced to reduce this "benignant nurse" of imperial Rome to a state of poverty and destitution.

Happily, however, the bounty of nature has proved an overmatch for the perverse ingenuity of man; and such is the fertility of this fine island, that, notwithstanding the influence of the duty now referred to, and the wretched system of agriculture, it exports in good years about 400,000 *starelli*, or 500,000 bushels of wheat, 200,000 st. barley, 6000 ditto maize, 100,000 ditto beans, 200,000 ditto pence, and 1000 ditto lentils. The culture of the vine is gradually increasing in importance, and about 3500 Catalan pipes are exported, chiefly from Alghero and Ogliastro. Olive oil, owing to the little care taken in its preparation, and its consequent bad quality, has hitherto been but little exported; but it is susceptible of an indefinite increase, and might be made an important article. Tobacco is a royal monopoly, and brings about seven millions livres a year into the public treasury. Flax, linseed, saffron, hemp, and barilla, are grown to some extent; silk is produced only in limited quantities, but its produce might, no doubt, be vastly increased; some cotton is produced, and also small quantities of madder, which last grows wild in the island. The mountains are clothed with forests of oak, beech, chestnut, and other timber; but from the want of roads, these are nearly useless. The agricultural implements and processes are excessively rude. The Sardinian plough, the counterpart of that described by Virgil, does little more than scratch the ground. It is without a coulter, and is very frequently wholly constructed of wood. Oxen only are used in ploughing and other field labour. Most of the garden grounds are wrought by the hoe, the spade and mattock being unknown, except to the Piedmontese labourers on the new roads. The corn is left in the fields till it be thrashed, an operation effected by the primitive practice of treading with horses and oxen.

We are glad, however, to have to state, that within the last few years some very important changes for the better have been introduced into the island, and that some of the worst of the abuses previously noticed have been obviated. In 1836, in pursuance of inquiries previously commenced, feudal jurisdictions were completely abolished; and since then the feudal system has been wholly subverted. And if, as is to be hoped, government follow up the enlightened course of policy on which it has entered, by giving freedom to commerce, the probability is, that the island will, at no very remote period, recover a large share of its ancient prosperity. According to a law passed in 1839, all lands were declared to be the property of individuals, communes, or the crown; the latter becoming the possessor of all waste lands, or those to which neither private parties nor communes could show any title. Lands which had been cultivated or applied to use, whether enclosed or not, were assigned in perpetuity to the occupiers, undisturbed possession being held to confer a sufficient right to the property in the absence of any other title: those whose interests were at all affected by the new changes received compensation in money or lands, or by an assignment of public funded property. The king substituted himself in the place of the barons: he took all the feudal rents into his own hands; and their value being estimated at 20 years' purchase, public securities to the amount, bearing five per cent. interest, were made over to the nobles in exchange for the privilege of which they had been deprived. All kinds of vassalage were, at the same time, made redeemable; and courts of law placed under the direct control of the state were substituted in the place of the feudal jurisdictions where the barons were at once suitors and judges! It is impossible to overrate the importance of these changes; and there cannot be a doubt that they will have the greatest and most beneficial influence. (*Von Raumer, Italy, &c.*, i., 295-301.)

The greater number of the oxen, horses, and other livestock, wander wild over the island, bearing the mark of their owners, and browsing in the woods in winter, there being no wolves. They are generally, as might be expected, very inferior; but considerable pains are taken in the breeding of some descriptions of horses, and horse-races are a prevalent amusement. It is singular, notwithstanding the badness of the roads, that mules should be unknown. The Sardinian sheep is said, by Marmora, to be remarkable only for its degeneracy: its wool is of a very low quality, and is worth little, except in the island. Cheese, made of the milk of sheep and goats, is extensively exported; but this is a result, not of the goodness of the milk, but of its extensive supply, arising from the great number of these animals, there being about 800,000 sheep, and 550,000 goats. (*Marmora*, p. 444.)

The *mouflon* (the *Ophion* of Pliny, *Hist. Nat.*, lib. xxxviii., cap. 9) whence some naturalists suppose the sheep to be

## SARDINIA.

derived, is a native of Sardinia. "It is a ruminating animal, frequenting only the highest and most secluded woods; where, from its timidity and fleetness, it is with difficulty shot. The form of the ears, head, legs, and hoof, identify the moufflon with the sheep, though in size it is rather larger, and is, moreover, clothed with hair instead of wool. The horns are neither full nor deciduous, but hollow, and precisely similar to those of the rein, while the bleat is the same; it propagates also very readily with the sheep, the mixed produce being the 'unibro.' Though so shy in its wild state, the moufflon soon accommodates itself to domestic habits." (Smyth, p. 120.) Deer, wild boars, and a variety of game, abound in the forests; and the skins of about 60,000 rabbits and hares, from 4000 to 5000 foxes; and 2000 martins, are annually exported, besides 5000 cantars of *currucci*, or dried skins, for making glue.

Though various improvements have been effected of late years, it is still true that the interior of this island exhibits, at this moment, a degree of barbarism which can with difficulty be believed to exist in Europe. The shepherds, and others who occupy the mountainous parts of the island, are in the habit of wearing only coverings of tanned leather, or of shaggy goat or sheep skins. They are constantly armed to protect themselves from banditti; roaming with their flocks over the uninhabited tracks, enjoying a bare subsistence, and acquainted with no laws but those of their own formation. They sometimes sow small patches of wheat and barley round their temporary dwellings; but they subsist chiefly on fruit, game, and the produce of their flocks, each family constituting, as it were, a patriarchal association. Though this part of the population be inoffensive, the number of banditti in the mountains formerly rendered it unsafe for any one, whether a foreigner or Sardinian, to venture far into the interior without an escort; and the farmers in the plains have been accustomed to rely for protection from the depredations of their highland neighbours on a long established corps, called the *baranelli*. This is an armed association, chosen annually in the village districts; the members of which are bound to make restitution for all thefts, provided they receive immediate intimation of the robbery. Their remuneration arises from an annual sum subscribed by every landholder. An attempt was made by the government, in 1819, to disband this force, but it was unsuccessful; and, on the whole, the *baranelli* are well adapted to the condition of the country.

The banditti that have long infested and still continue to infest parts of this island, owe their origin to a variety of causes, among which, no doubt, may be included the influence of the feudal system, and the opportunities afforded by the state of the country, full of natural fastnesses, without roads, and without an efficient system of police, for their carrying on their depredations with impunity. Latterly, however, some stringent measures have been adopted for their suppression. The privileges of sanctuaries have been in most instances abolished. Roads have been made into districts that were previously inaccessible; the right to wear arms has been restricted; and these measures, combined with the abolition of the feudal system, and the establishment of royal courts for the speedy and more equal distribution of justice, will, probably in no very lengthened period, go far to suppress the robberies and assassinations which have so long disgraced the island.

The houses of the peasantry are most wretched, consisting usually of only one story without windows; or, if there be windows, they are not glazed. A whole family frequently dwells in a single room in which kids, chickens, and dogs seek indiscriminate accommodation with the naked children; while an ass is usually employed turning a corn-mill (*mola asinaria*) in the corner! The centre of the room has a square hole in the clay floor, for the fire, but there is no outlet for the smoke, except accidental holes in the roof or door. A few small low chairs, with an equally low table, constitute the usual movables. Earthenware not being common, the ordinary substitute is an oblong wooden dish. More flesh is used than in Sicily, but less potentia. Omelettes of curds, &c., and raw vegetables, are favourite articles of diet.

The towns and villages are mostly large and well situated; but with unpaved, narrow streets, mean houses, and a want of every convenience. Immense dunghills, the collection of ages, disfigure the principal entrances. In the N. half of the island the villages are constructed of freestone or granite; but most of the country houses in the S. are built with sun-dried bricks made of mud and straw. In the towns some pretty good mansions are met with, though they are ill fitted up, and their *atria* generally as dirty as those of the ancients in the days of Juvenal. (Present State of Sardinia, p. 164, &c.)

The fish on the coasts and in the harbours of Sardinia are mostly caught by foreigners; Sicilians, Neapolitans, Tuscans, Genoese, &c. Anchovies and pilchards have become rare; but in 1838 upward of 17,000 tunnies were taken,

besides several thousand liberated from the nets, from the fishermen not having the means of curing them. The lagoons of Oristano, Cagliari, &c., abound with fine mullet, bream, and eels. From 200 to 300 boats arrive every year from Naples and Genoa, to the coral fisheries on the coasts, each boat collecting, at an average, coral to the value of about 1500 dollars.

Sardinia has ores of silver, copper, lead, and iron, which, if wrought, would, it is believed, be among the most valuable of her resources. But the code of regulations for the working of the mines proves an effectual obstacle to all mining speculations. It obliges speculators to work their mines under the direction of government engineers, or officers of the royal corps of miners, who are to be consulted and furnished with plans on the erection of smelting-mills, &c. Speculators are also prohibited from exposing for sale, or exporting, the produce of their mines, without permission from the intendant-general, and are, besides, to keep a journal of the daily produce of their mines, the same to be exhibited in a separate statement monthly at the intendant's office of the cap. district. (Macgregor's Report, 75.) The consequence is, that mining, and the quarrying of the fine porphyry, basalt, marble, &c., of the island, is almost wholly neglected.

Salt is a royal monopoly, and affords a considerable revenue. Until recently, Sweden drew almost all her supplies of this article from Sardinia; and it continues to be exported in considerable quantities. It is obtained by natural evaporation, principally near Cagliari. The expenses incurred by government in producing salt do not exceed nine reals the salin; whereas the continental subjects of the crown buy many thousand salins at 50 dollars or reals each.

Except the royal gunpowder, salt, and tobacco manufactories, a few for cotton, woollen, and silk goods, and some coarse pottery and glass works, Sardinia has no manufacturing establishments, except such as are employed in preparing raw produce for sale. Very little skill is shown by any of the artisans; and watches, clocks, and even coarse cutlery, are all imported. The want of roads has hitherto proved a serious obstacle to manufactures, as well as to every other branch of industry. A good road, practicable for wheel carriages, has, however, been formed within the last few years from Cagliari to Sassari, and cross roads are being carried out to it some of the most considerable places in the island. But previously, scarcely any roads were passable for travellers, except on horseback or on oxen, the *lettiga* of Sicily being unknown. A cart for luggage was, indeed, used; but this vehicle was a mere ladder mounted on solid wheels fixed to the axle-tree, and stuck round the edge with triangular nails, being, according to Captain Smyth, a ruder machine than any he had seen in Spain, Greece, or Calabria.

The commerce of Sardinia has long been stationary, so that a statement of its trade in 1824 will be nearly applicable to the present time. In that year the value of the principal articles of export and import were estimated as follows:

Imports.		Exports.	
Articles.	Value Fr.	Articles.	Value. Fr.
Timber, &c. . . .	250,372	Brandy, wines, liquors, &c. . . .	906,871
Hosiery . . . .	125,105	Grains, &c. . . .	272,825
Hemp and cordage . .	133,025	Skins and leather . .	437,514
Cotton goods . . . .	1,033,693	Fish, cured and fresh . .	700,000
Drugs and spices . . .	660,236	Salt . . . .	150,000
Woollen goods . . . .	627,762	Meats, forage & seeds . .	1,258,574
Hardware and metals . .	203,338	Cattle . . . .	70,000
Skins and leather . . .	266,217	Timber, &c. . . .	191,854
Linen fabrics, &c. . .	215,160	Tobacco . . . .	50,000
Corn, &c. . . .	160,514	Various . . . .	245,720
Various . . . .	1,174,363	Various . . . .	4,237,177
Totals . . . .	4,499,110		

The custom duties received in the above year amounted to 997,232 fr. (Marmora, 460.)

Amounts (when not estimated, as above, in francs) are kept in lire, soldi, and denari: the lira of 20 soldi and 12 denari = about 1s. 6d.; the real of 5 soldi = 4d.; the scudo of 10 reali = 3s. 9d. The Sardinian lb. of 12 oz. = 14 oz. 5 dr. avoird.; the rubbo = 26 lbs.; the moggio or stello (of corn) = about 1 bushel 1 peck. The palmo = 10½ English inches; the stello or maggio (of land) of Cagliari = 3 roods 27 poles 19 yards; of Sassari = 1 rood 38 poles 24 yards.

Sardinia is governed by a viceroy, whose commission generally lasts for three years, and who is the chief of the civil and judiciary administrations, and the commander of the forces both by land and sea. The island is subdivided into two grand divisions, those of Cagliari and Sassari, 10 provinces, 32 districts, and 368 communes. The seven cities, or principal towns, are under the administration of the magistrati, municipal bodies, each composed of six members. Each commune has a council of three, five, or

## SARDINIA (KINGDOM OF).

seven members, presided over by a sindaco. The Udiienza Reale, created in 1661, and reformed in 1823, is the highest tribunal in the island. It is composed of 13 judges and two presidents; and is divided into three chambers, two civil and one criminal; and has at its head the regent, the first functionary in the island after the viceroy. Besides its functions as a supreme judiciary court, it participates in the legislative power, the decree of the viceroy published with the concurrence of the Udiienza Reale, having the force of laws. Sassari has a tribunal resembling the Udiienza Reale of Cagliari, to which appeals may be made from its decisions. In the two cities last named are tribunals of commerce. In the provinces justice is administered by prefects, whose decisions are final in civil causes to the amount of 10 scudi, and who have primary jurisdiction in criminal cases. The *curie*, or district tribunals, have a very limited jurisdiction.

Sardinia has a parliament, called the *Stamenti*, consisting of three chambers: the ecclesiastical, selected from the prelates; the military chamber, comprising all the nobles, 20 years of age, with or without fiefs; and the royal chamber, composed of the deputies of the towns and communes under the *capo giurato* of the capital. The *stamenti* are convoked and holden during the king's pleasure, but meet only on extraordinary occasions. Each section holds its sittings apart; and, after separately discussing the matter under debate, they communicate by deputies. The deliberations of the ecclesiastical body, respecting donations, must be submitted to the pope for his approval, before passing into a law. The supreme council of Sardinia has its seat in Turin: it is composed of a president and five counsellor senators, and is similar to the ancient supreme council of Aragon. Beyond this tribunal there is no appeal; and it gives its opinion in all state affairs transmitted to it from the government of the island. (*Report on Sicily and Sardinia*, p. 77.)

The laws of Sardinia are partly comprised in the code entitled the *Carta de Logu*, promulgated in 1395, and said to be drawn up, considering the period when it was issued, with great discretion and good sense. It has, however, been materially modified by the successive acts of the *stamenti*, the edicts of the different sovereigns of the house of Savoy, and the *pregioni* or decrees of the viceroys. In consequence of the numerous and, in many instances, conflicting enactments that have thus been issued, the law has become exceedingly obscure. This encourages litigation, and the island is, in fact, to use the forcible expression of Marmora, *un mine inépuisable pour la chicane* (291). Recourse is had to the courts to determine the most trifling questions; and unfortunately the means of legal redress are at once tedious, expensive, and uncertain. "The country judges are extremely poor; and venality is so common, that sentences are just and equitable only when the government takes a criminal matter in hand. This is one of the leading causes of the assassinations that have so stigmatised the island. It is an acknowledged difficult task to work a reform in detail; for if a magistrate prove himself more than usually active in his office, he is sure to receive the vengeance of adverse partisans; and the effect of the whole system and practice is a melancholy want of security both of persons and property." (*Smyth*, p. 135.)

Nothing, in fact, would do so much to put down crime and to restore security and good order to the island, as the simplification of the law, and the nomination of superior and responsible judges. And now that the government has begun the work by the suppression of the feudal system, it is to be hoped that it will apply its energies to a reform of the abuses in the judicial system.

No religion, other than the Roman Catholic, is tolerated in this island; and the secluded position and ignorance of the people have prevented the growth of any heresy, so that in this respect Sardinia boasts a higher purity than even Rome herself.

The island is divided into three archbishoprics: those of Cagliari, Sassari, and Oristano; and eight bishoprics. Tithes are rigorously exacted. The revenues of the church are estimated by Serristori at 960,000 Italian lire, of which sum the secular clergy, amounting to between 1800 and 1900, receive about 264,000. According to Marmora (p. 324), there are 90 conventual establishments for monks, of whom there are about 1130; and 14 similar establishments for nuns.

Public education in Sardinia has, of late years, been considerably improved. "There are now normal schools in each of the 10 provinces, attended by about 6650 pupils. There are, besides, secondary schools in the two principal towns, Cagliari and Sassari, which are frequented by about 1350 students. The university of Cagliari reckons about 265 students, and that of Sassari 225. The course of studies is divided into theology, jurisprudence, philosophy, medicine, and surgery. By an ordinance of the late king, in 1823, every village or commune has now a gratuitous school for

reading, writing, arithmetic, religious instruction, and the elements of agriculture. The effect of the diffusion of instruction among the people, aided by a better system of administration and police, is already visible in the decrease of crimes, especially of murders, which, from the frightful amount of 150 yearly, in a population of about half a million, had been reduced in 1828 to 90." (*Journal of Educ.*, vol. iii., p. 23.)

A voluntary regiment of 1400 chasseurs is levied and maintained in Sardinia, for the service of that island. Respecting the rest of the armed force, &c., the reader is referred to SARDINIA, KINGDOM OF.

The finance department is managed by an intendent-general in Cagliari, and vice-intendent in Sassari, and a sub-intendent in each of the other provinces. The public receipts in 1824 amounted to 2,837,362 fr.; the direct taxes amounting to 1,006,250 fr. The paper money in circulation, in 1806, amounted to 3,840,000 fr.; but, in 1825, it had all been withdrawn, except 480,000 fr.

According to Captain Smyth, there is a striking resemblance between the Sards and Greeks. "It is impossible," he says, "for any one who has travelled in Greece, not to be struck with the similarity which, in many points, exists between the Sards and the Greeks. Not only are their arms, music, dances, dresses, and manners in close resemblance, but many of their words and superstitions are exactly the same; so that the opportunities I have had of comparing the two nations would lead me to infer the partial identity of their origin. The Sards are of a middle stature, and well shaped, with dark eyes and coarse black hair; except in the mountains, where fresh complexions and blue eyes are met with. They have strong intellectual faculties, though uncultivated, and an enthusiastic attachment to their country. They are active when excited, but extremely indolent in general. Their good qualities are counterbalanced by cunning, dissimulation, and an insatiable thirst for revenge." (*Smyth's Sardinia*, p. 141-192, &c.)

Though vassals in Sardinia could change their lord and residence at will, the degrading services and tenures of feudalism were in full vigour in most parts of the island down to its abolition in 1839. The dependence of a peasant on his lord commenced when he was deemed capable of earning his bread; and an annual tribute, either in money or kind, was exacted from all above the age of 18; and this in addition to the usual imposts on lands and stock; the contributions demanded for prisons, robberies, arson, and exemptions from the *roada*, or one day's personal labour, as well as from other dominical services. These feudal burdens, with tithes, taxes payable to the king, alms, as they are called, to mendicant monks, and other grinding extortions, amounted, in many instances, to nearly 70 per cent. of the earnings of the peasant. And if to this amount of taxation be added the vicious customs that have prevailed in the letting of land, unintelligent laws, and venal judges, need we wonder at the poverty and semi-barbarism of the peasants, and that revenge has become, in their estimation, a sacred duty.

The Sards are enthusiastically fond of poetry, but the other fine arts have met with no encouragement; and there is not a native painter, sculptor, or engraver, of any eminence in the island; and the press being under a rigid censorship, the current literature, if so it may be called, is beneath contempt. The language of Sardinia is that dialect of the Italian which preserves the greatest portion of Latin.

We have little authentic information respecting the history of this island previously to its conquest by the Carthaginians, from whom it was taken by the Romans in the third Punic war. On the fall of the Western Empire it was successively possessed by the Vandals, the Goths, the emperors of the east, and the Moors; from whom it was taken, in 1022, by the Genese and Pisans. It continued to be a subject of contention between these rival nations till 1325, when it was taken possession of by the kings of Aragon, and it remained attached to the Spanish monarchy till 1714, when, by the peace of Utrecht, it was ceded to Austria. In 1730 the latter exchanged it for Sicily with Victor Amadeus of Savoy. Previously to the French revolution, the Sardinian government is said to have been desirous to sell the island to the empress of Russia for £1,000,000 sterling; but the scheme was defeated by the interference of France and Spain. (*Young's Travels*, ii., 256.) It was unsuccessfully attacked by the French in 1793; and on the seizure by the latter of the continental portion of the Sardinian dominions, Cagliari became the residence of the royal family. Recently, as already seen, measures which promise to be of the utmost importance to the island, have received the sanction of the government. (For farther information, see *Marmora, Voyage en Sardaigne*, Paris, 1826, an elaborate and valuable work; *Smyth's Present State of Sardinia*, in great part derived from the former; *Parl. Report on Sicily and Sardinia*; *Dict. Geog.*; *Serristori, Statist. d'Italia*, &c.)

SARDINIA (KINGDOM OF, Ital. *Stati Sardi*), a state

## SARDINIA (KINGDOM OF).

of S. Europe, comprising the whole of N. Italy W. of the Tessino, including the territory of Piedmont, Genoa, and Nice, and the adjacent duchy of Savoy on the W. side of the Alps, with the island of Sardinia in the Mediterranean, nearly the whole of these dominions being included between the 39th and 46th degrees of N. latitude, and the 5th and 10th of E. longitude. Its divisions, area, population, &c., are as follows:

Divisions.	Area in sq. m.	Pop. census of 1838.	Pop. to sq. m.
Savoy . . . . .	4,270	564,137	132.1
Turin . . . . .	3,156	873,310	274.3
Coni . . . . .	2,712	556,181	203.7
Alexandria . . . . .	2,039	585,563	292
Novara . . . . .	2,692	542,723	201.6
Nice . . . . .	1,619	230,718	142.5
Aosta . . . . .	1,234	78,110	63.3
Genoa (and Capraja) . . . . .	2,105	674,988	320.6
Island of Sardinia, &c. . . . .	9,241	924,683	57
Totals . . . . .	29,102	4,650,383	160

The insular portion of this kingdom being described under the previous article, we have now to deal only with the continental portion, lying between lat. 43° 40' and 46° 24' N., and long. 5° 35' and 10° 5' E., having W. France, N. Switzerland, E. Austrian Italy and Parma, and S. the Mediterranean. The Alps separate this territory into three great divisions: Piedmont in the centre, forming the upper part of the valley of the Po; Savoy, a rugged and mountainous region on the W. and N.W.; and the province of Genoa, Nice, &c., in the S., between the Maritime Alps and Apennines, and the sea.

The most valuable portion of the kingdom is the plain of Piedmont, extending from the foot of the Alps to that of the Apennines on the S., and to the Tessino on the E. The soil is everywhere a rich, sandy loam, with little appearance of clay, and of great fertility. Owing to the heat of the climate in summer, water is here the great desideratum; and advantage has accordingly been taken of the numerous streams that pour down from the mountains, which are distributed with infinite skill all over the low grounds. Nowhere, indeed, is the art of irrigation carried to greater perfection than in that part of the great plain of the Po included in Piedmont. "Water is here measured with as much accuracy as wine. An hour per week is sold, and the fee simple of the water is attended to with the same solicitude as that of the land." (*Young*, ii., 160.) The irrigated lands being under the influence of a southern sun, produce the most luxuriant crops.

Lands in Piedmont are mostly enclosed, generally by ditches, but, in many parts, with hedges also, which in some districts equal those in the best English counties. The crops, however, are generally divided by lines of fruit trees of different kinds, intermixed with mulberry trees, poplars, and oaks; and that the benefit of these trees may not be limited to the shade they produce, they support vines. Speaking generally, farms in Piedmont are small, and are usually held on the *metayer* system, the landlord receiving half the produce, and paying the taxes and repairing the buildings. On the whole, however, the agriculture of this part of the Sardinian dominions bears so close a resemblance to that of the rest of Lombardy, that we beg to refer the reader for further particulars to the article ITALY (AUSTRIAN) in this volume.

Few countries have so large a disposable produce as Piedmont. It has an immense number of cities and towns; and yet the Riviere of Genoa, Nice, and the country as far as Toulon, are supplied with corn and cattle from its superabundant produce. The produce of maize is considerable: and it constitutes the principal support of the country population, who make use of it under a variety of forms. The most usual course of husbandry consists of what would be called in England a four-shift, the first year being maize, the second wheat, the third clover or fallow, and the fourth wheat. It is customary to mix French beans and hemp along with the maize. Wheat is sown on narrow ridges, and is earthed over by the plough; in most parts of Italy, it is an implement of a better kind than in most parts of Italy. Wheat harvest takes place in the beginning of July; it is thrashed by means of cylinders drawn by horses over the straw, which is turned up by forks. According to Arthur Young (ii., 209), the common produce of the wheat crops in Piedmont does not exceed six times the seed; which, considering the quality of the soil, he is justified in calling "miserable;" but the better crops yield between 10 and 11 seeds, or even more; and with a better rotation, and more care, this might be made the average produce of the plain.

To the corn crops must be added those of hemp, which is sometimes considerable, and silk, for which Piedmont is famous, with wine, vegetables, and fruit; the produce of the farm-yard, and the profit of rearing and fattening stock. The latter branches are the principal sources of profit from cattle; for though the latter be very abundant in Piedmont, the farmers have not learned, like those of the Milanese, to

derive much advantage from their milk. A farm of medium size was estimated by Chateaufieux to consist of about 60 acres, one fourth being in pasture. Such a farm would support a family of eight or nine persons, maintain upwards of 20 head of live stock, produce silk to the value of £25 a year, and more wine than was required for home consumption. The crops of maize and French beans go far to maintain the labourers, so that nearly the whole crop of corn may be carried to market, as well as a considerable quantity of the inferior articles. (*Chateaufieux*, 30, 31.)

Savoy, which is remarkable for the grandeur and beauty of its scenery, though a poor country, produces enough to supply the wants of its inhabitants. The peasants are all, or mostly all proprietors. The plough is of use only in the valleys; on the high grounds the peasants break up the soil with the pickaxe and spade, and, to improve it, carry up mould and manure in baskets from the valleys. Small reservoirs are prepared near the tops of the hills and mountains, from which water is let out at pleasure in spring and summer: while, to prevent the earth from being washed down the declivity, small stone walls are erected, so that, by dint of skill and industry, cultivation is extended over tracts which would otherwise be a continued surface of naked rock.

Wheat, oats, barley, rye, and hemp, are the principal grains cultivated: in some favourable situations the vine is grown; and the white wine of Montmelian is especially esteemed. The walnut is the olive of Savoy, supplying the inhabitants with oil, not only for home consumption, but also for exportation to France and Geneva. The kernels are crushed by a mill, into a paste; which is pressed to extract the oil, and afterwards dried in cakes called *pain amer* eaten by children and poor people. A good many cattle and sheep are reared, and driven for sale into Piedmont and Lombardy. The butter and cheese of Savoy are of good quality, and are important products. Many mules and horses are bred for the transit trade between France, Germany, and Italy.

The olive, though but little grown in the other parts of the kingdom, is the chief article of culture S. of the Apennines. The land in the Genoese territory is generally hilly and rocky; but has mostly a S. aspect, suitable for the olive and the vine. The cultivated land is supposed to comprise about one fourth part of the surface. The land here is divided into very small farms, those near the towns comprising only about 6 acres, and those in the interior about twice as much. Only a small proportion of the land is cultivated by proprietors: it is usually let on leases of 3, 5, 7 or 9 years, but never more; the rent of cultivated land near Genoa is very high.\* In the greater part of the Genoese territory the rent is paid in cash or produce, as wine, oil, grain, &c. rated at a fixed price; but in the provinces of Novi and Levante the rent is paid, as is usual in the rest of the kingdom, on the *metayer* principle; the landlord furnishing the land and one third the seed, and receiving two thirds the produce. Wheat and maize are generally sown alternately on the same land; and good land is said to yield usually from four to six for one, or double that quantity when tilled with the spade, as is customary in some parts. Each farm of four or five acres supports a family. Labourers get from £3 to £5 a year, with board and lodging. Their usual diet consists of Indian corn, chestnuts, potatoes, beans, and fruit; making little or no use of butchers' meat. Women work in the fields, and tend the cows, in addition to spinning, weaving, and other domestic work, in which they are very industrious. The occupiers of farms are not in a prosperous condition; and we may add, that they never will be in such condition while farms are so very small, and held under such a tenure. Paupers, however, are more numerous in the towns than in the country. The government makes no provision for the support of the poor; but there are various private charities for their assistance. (*Parl. Rep. on Agriculture*, 1836.)

The mineral riches of this country are little explored; but iron of good quality, lead, copper, sulphur, manganese, and cobalt abound in the mountains of Piedmont and Savoy. The mines of Pesey, in the Tarentaise, formerly yielded from 30,000 to 40,000 cwt. of lead, and about 4000 marks silver a year. Alabaster, fine marble, serpentine, slate, &c., are plentiful. Salt is found both in mines and in springs; and near Montiers are government salt-works, said to produce 3,000,000 lbs. a year. There are some forges, and other iron-works; but the principal manufactures consist of silk stuffs, velvets, and stockings, mostly consumed in Italy. Coarse woollen and linen goods are made in several provinces; and coarse stuffs for the rural population in Savoy. Sail-cloth, cables,

\* It is stated, in a report from Genoa, in the Parl. paper, No. 84, Sess. 1836, that the average rent of cultivated land near Genoa varies from 20*l.* to 24*l.* an acre; that wood and pasture land, in a good situation, fetches 12*l.* an acre of rent; and that the rent of "rocky land," where sheep and goats are sent to feed, is 2*l.* an acre! We apprehend that this is pretty much on a level with the statement in another Parl. paper, that the government of Tamboff, in Russia, produces annually 35,000,000 quarters wheat! (See *Tamboff*.)

## SARDINIA (KINGDOM OF).

house furniture, paper, white lead, glass, earthenware, optical and surgical instruments, jewellery, and works of art and *virtu* are among the articles made at Genoa, Nice, and other principal towns; and there are numerous brandy and liqueur distilleries, and tanneries.

*Trade*.—It is difficult to form any fair estimate of the trade of the Sardinian dominions; a large proportion of the imports not being destined for the supply of the country, but merely for transit to France, Switzerland, Germany, &c., and no distinction being made between these portions. In fact, if we may depend upon the following returns of the trade of the kingdom in 1835, it would appear that, with the exception of raw silk, olive oil, and woollen fabrics, the imports of all the great articles exceeded the exports. The articles of exports not included among those imported, consist of rice, paper, and vermicelli. It is abundantly certain, however, that the exportation of raw and silk stuffs, including velvets, exceeds very considerably the imports of such articles retained for home use, as is the case with oil, flax, and various other articles.

Account of the Value of the Principal Articles imported into and exported from the Sardinian States by Sea, in 1835.

Imports.		Exports.	
	Francs.		Francs.
Corn . . . . .	9,757,000	Corn . . . . .	2,644,500
Cocoa . . . . .	527,900	Coffee . . . . .	1,479,600
Coffee . . . . .	2,377,400	Hemp . . . . .	771,100
Hemp . . . . .	1,247,100	Cotton wool . . . . .	31,600
Cotton wool . . . . .	3,211,100	Cotton yarn . . . . .	671,700
Cotton yarn . . . . .	540,000	Cheese . . . . .	1,142,700
Cheese . . . . .	1,427,500	Olive oil . . . . .	19,501,800
Olive oil . . . . .	15,324,600	Indigo . . . . .	979,500
Indigo . . . . .	1,127,200	Paper . . . . .	1,621,800
Woolens . . . . .	5,337,500	Pasta or vermicelli . . . . .	559,900
Hides . . . . .	5,796,200	Hides . . . . .	3,668,600
Salt fish . . . . .	3,284,600	Salt fish . . . . .	1,748,500
Raw silk . . . . .	2,705,400	Rice . . . . .	2,105,000
Sugar . . . . .	12,510,300	Raw silk . . . . .	8,285,700
Tobacco . . . . .	4,254,800	Sugar . . . . .	4,921,500
Cotton stuffs . . . . .	15,318,300	Tobacco . . . . .	1,111,400
Woollen do. . . . .	4,890,100	Cotton stuffs . . . . .	12,441,000
Flax and hemp do. . . . .	1,265,800	Woollen do. . . . .	5,598,500
Silk do. . . . .	4,784,700	Flax and hemp do. . . . .	1,180,200
Wines . . . . .	1,981,300	Silk do. . . . .	2,652,200
Other articles . . . . .	22,673,300	Other articles . . . . .	45,928,900
Total . . . . .	120,763,100	Total . . . . .	85,685,900

Of the above imports, those from Great Britain amounted to 22,695,800 fr.; France, 22,135,700 fr.; Naples and Sicily, 21,171,500 fr.; Austria, 8,320,100 fr.; Brazil, 5,416,100, &c. Of the exports those to France were the largest, amounting to 27,719,100 fr.; those to Austria amounted to 14,935,300 fr.; to Naples and Sicily, 9,954,500; and those to Great Britain only 1,350,000 fr. During the same year there entered the different ports of the Sardinian states 2927 ships, of the aggregate burden of 268,109 tons, of which 87 ships of the burden of 15,068 tons were from the United Kingdom. Genoa, Nice, and Cagliari, especially the first (which see), are the principal seats of the foreign trade of the kingdom. Thus, in 1835, the Import and export trade of the arrondissement of Genoa, Nice, Cagliari, and Port Maurice, were as follows:

	Imports.	Exports.
	Fr.	Fr.
Genoa . . . . .	96,198,700	63,015,100
Nice . . . . .	20,416,100	19,488,000
Cagliari . . . . .	4,061,400	2,716,600
Port Maurice . . . . .	48,900	910,700
Totals . . . . .	120,763,100	85,685,900

Some of our readers may, perhaps, be disposed to conclude, seeing the wide discrepancy between the value of the imports and exports in the above accounts, that one or both of them must be wholly erroneous. But though we should not certainly be inclined to guarantee their authenticity, the discrepancy in question does not prove their inaccuracy, inasmuch as the countries that received the goods at second hand through the Sardinian dominions, may have paid them otherwise than by the export of produce through them.

All transit duties on goods passing through the Sardinian states have been abolished. The duties on consumption in the interior of the kingdom are moderate. The imports of corn are principally from the Black sea, but partly also from Sicily.

The government is a monarchy, hereditary in the male line; and though the regal authority be, in some degree, circumscribed by a supreme council in the island of Sardinia, it is absolute in the continental portion of the kingdom. It has, however, been a constant object of the government to restrain the extravagant privileges of the nobility, clergy, and corporations, and to enlarge the rights and immunities of the bulk of its subjects. Hence, says Count Pecchio, "Piedmont was the first country which, in 1729, abolished nearly the whole system of feudal authority and

personal service, leaving scarcely any but honorary privileges in force. It then also limited the right of primogeniture and of entail, and consequently gave greater scope to the free cultivation of the soil; and diminished the powers of the clergy, more particularly that of investing land in mortmain. These constitutions were revised and confirmed in 1770." (*Hist. of Pol. Econ.*, p. 232.) The king is assisted in his administration by five ministers, or secretaries of state; for the Interior, War, Marine, Finance, Justice, and Foreign Affairs; and by a council of state, consisting of a president, 14 ordinary, and an unlimited number of extraordinary members. In each province the whole power of government is in the hands of an intendant, who, like all other functionaries, is appointed by the king; who, of course, may, also, dismiss him at pleasure. Intendants of an inferior grade are appointed for districts and towns, who manage all the public business of their respective localities, though every town has also a magistracy, varying in its number of members according to circumstances, which regulates its municipal and private affairs. In each district is a judge, with authority in civil causes, to the amount of 300 lire, but from whose decision appeal may be made, when the amount exceeds 100 lire. Each of the 37 provinces has a tribunal, with a president, from two to six councillors, a government advocate, &c. In 1838, a new code of laws for the Sardinian states was adopted, which, though certainly an improvement on the heterogeneous code it displaced, exhibits some glaring defects. Among others, the use of torture is retained in certain cases; the most arbitrary means are used to extend the Roman Catholic religion; and Jews are subject to the most illiberal restrictions. Duelling is punished with death, even though neither combatant should be killed or wounded. The whole population is Roman Catholic, except about 7000 Jews, 21,000 Waldenses in the N.W. part of Piedmont, and a few Protestants in Genoa and elsewhere. Public instruction is less diffused than in Austrian Italy, and is in general of a very inferior kind. It is wholly under the direction of a central board in Turin, entitled the *Magistrato di Riforma*, which has under it a council di *riforma* in each province. The principal university at Turin has four faculties, and about 1200 students. Genoa, also, has a university, and there are secondary universities at Chambery, Asti, Mondovì, Nice, Novara, Saluzzo, and Vercelli, with 27 royal colleges in the larger, and 54 communal colleges in the smaller towns. The professors may be either clergymen or laymen, but where the candidates are otherwise equal, clergymen are always preferred. Foreign books pay an oppressively high duty; and the censorship, being, at the same time, rigid in the extreme, all but insuperable obstacles are opposed to the dissemination of sound information as to politics and political economy. But, despite this jealousy, it is due to the Sardinian government to state that it has of late discovered a very enlightened spirit, and done much for the improvement of its subjects; and schools and colleges, as well as most branches of the public service, have been materially ameliorated. Various new and wholesome laws have been enacted for the regulation of communes, roads, weights, and measures, sanitary police, vaccination, prisons, forests, the game laws, &c. A good many roads, canals, and bridges, have been constructed, and hospitals, museums, baths, and public establishments of all kinds have been founded; the harbours have been improved; lighthouses and barracks built, and the army has been thoroughly reorganized.

The Piedmontese infantry is composed of two classes of soldiers, viz., the permanent and the contingent (Provincial). The former serve eight years in the standing army, and at the end of that term receive their discharge from all future service. The latter serve nominally 16 years, during eight of which they are considered as forming part of the standing army, and the remainder they belong to the reserve. They are consequently divided into 16 annual contingents, eight for the first period, and eight for the second. Each soldier has to perform active services for 14 months after his enrolment, on completing which he may return home, but is subject to be called upon during the remainder of the first term of eight years to re-enter temporarily the ranks, for the annual formation of a camp of manœuvres, or upon any occasion of state emergency. The Sardinian army on the peace establishment consists of about 22,000 men; but in time of war it may be raised to 132,600 men, of whom 67,200 are Infantry, 50,000 depot and reserve ditto, 6000 cavalry, and 6300 artillery men. Unlike no country in Europe has a better organized army, or a finer soldiery, in proportion to its extent. The subaltern and field officers are, in general, a fine body of young men, well educated in the duties of their rank. But the general officers are not supposed to possess the experience adequate to the proper exercise of their commands, inasmuch as they mostly owe their rank to court intrigue and royal favour, and not to the value or length of their services. In this respect, however,

## SAREPTA.

Sardinia is not singular. Napoleon and Frederick the Great selected their officers, because they were aware of their merit, and cared for nothing else. But ordinary sovereigns can do nothing of the sort; and court favour and parliamentary influence, without regard to merit, must, speaking generally, be at all times omnipotent in the disposal of places in the army, as in everything else.

The Public Revenue and Expenditure for 1839 were estimated as follows:

Revenue.		Expenditure.	
	Liri.		Liri.
Customs and taxes on consumption . . .	42,500,000	Royal household, &c. . .	4,000,000
Direct taxes, &c. . .	27,200,000	Justice . . .	4,300,000
Foreign and post-office . . .	2,300,000	Foreign affairs . . .	3,600,000
Interior (inc. mines) . . .	300,000	Interior . . .	7,400,000
Coinage, &c. . .	200,000	War office . . .	26,100,000
Treasury fees, interest, &c. . .	600,000	Artillery . . .	2,800,000
Naval department . . .	200,000	Navy . . .	3,100,000
		Finance . . .	6,100,000
		Customs . . .	8,500,000
		The queen-dowager . . .	262,000
		The Prince of Carignano . . .	150,000
		Public debt . . .	8,662,000
Total . . .	73,600,000	Total . . .	74,474,000

According to the above statement the expenditure would appear to exceed the income; but such is not really the case, the above being merely the estimated amount of the revenue, which, for several years past, has been considerably under its real amount. In 1837 there was a surplus of 2,300,000 lire over the expenditure. The only exemptions from the land-tax are in favour of the royal palaces, domains, and manufactories; the residences and gardens of the clergy, churches, and churchyards. The public debt is about 145,000,000 frs., bearing interest at 4 and 5 per cent. The credit of the state is high; a consequence partly of the progressive reduction of the debt, and partly of the punctual payment of the interest. (*Von Raumer's Italy*, i. 236-274.)

Savoy was the nucleus of this monarchy. It was governed, as early as the 10th century, by its own counts, whose descendants acquired Nice in 1399, and Piedmont in 1418. The sovereigns of Savoy and Piedmont were long celebrated for their ability and the skill with which they preserved and extended their limited dominions, notwithstanding the difficulty of their position in the immediate vicinity of the great European powers.

This territory was recognised as a separate kingdom at the peace of Utrecht, in 1713. Sicily was then added to the Piedmontese dominion; but, in 1720, it was exchanged for the island of Sardinia. Genoa and its territory, Monaco, &c., were annexed to the Sardinian crown at the peace of 1815. (*Serristori, Statistica d'Italia, Von Raumer's Italy*, &c., i. 208, 300; *Châteaueuvix, Young*, &c.)

SARDINIA, p. L. Erie co., N. Y., 28 in. S. E. Buffalo, 276 m. W. Albany, 343 m. W. Bounded S. by Cattaraugus cr. Drained by head branches of Cazenove cr. It contains a Baptist church, one store, one fulling-mill, one furnace, two grist-mills, two saw-mills, two tanneries; 13 schools, 446 scholars. Pop. 1743.

SAREPTA, a town of European Russia, near the frontiers of the government of Saratoff, on the Sarpa, near its confluence with the Wolga. Pop. above 3000. 'This town was founded in 1765, by a colony of Hernhutters in Moravia; it is well built, neat, clean, and fortified, so as to be secure from the predatory incursions of the contiguous nomadic tribes. Its inhabitants are distinguished by their industry; they manufacture linens: silk and cotton stuffs, with stockings and caps, in great request all over the empire. They also raise and manufacture tobacco, distil spirits, &c.

SARGUEMINES, a town of France, dep. Moselle, cap. arrond. on the Sarre, 41 m. E. by N. Metz. Pop., in 1836, 4113. This town, under the name of Guemund, was formerly one of the strongest in Lorraine; but no portion remains of its ancient fortifications except a dismantled citadel, now appropriated to the *gendarmerie*. The sub-prefecture, hall of justice, and college, occupy the buildings of a Capuchin convent, founded in 1721. There are some spacious prisons. Sarqueguines has manufactures of cotton thread, forks, spoons, and earthenware of a superior quality; and is the *entrepôt* for the *papier mâché* snuff boxes made in the surrounding villages, and of which it is said to export 100,000 dozen a year. (*Dict. Geog.; Guide du Voyageur*.)

SARI, a very ancient city of Persia, prov. Mazanderan, of which it is the cap., about 18 m. from the S. shore of the Caspian, and 115 m. N. E. Teheran. Previously to 1836 it is said to have had from 30,000 to 40,000 inhabitants, who carried on a brisk trade with Astrakhan, and the interior of Persia (see *Frazer's Trav. on the Caspian*, p. 14); but about that time it was nearly depopulated by the plague. 'Sari is surrounded by a ditch and a mud wall, flanked by pentagonal brick towers. The gateways have fallen down, and roads have been broken through the wall in every direction. The appearance of the town differs essentially from that of

## SARUM (OLD).

any other in Persia S. of Elburz. The houses are built of burnt brick, and neatly tiled; some of the streets are well paved; and, although the marks of ruin are everywhere visible, Sari has something of the appearance of an English village, or small market town.' (*Major d'Arcy Todd, in Geogr. Journal*, viii. 104.) Sari is frequently mentioned by the poet Ferdosi. Its vicinity is flat, woody, and well watered. (*Kinnier's Persian Empire*, 163.)

SARK, or SERCQ, one of the islands belonging to Great Britain in the English Channel, lat. 49° 28' N., long. 2° 24' W., intermediate between Guernsey and Jersey, seven m. E. the former, and nine m. N. W. the latter; length, and greatest breadth, about two m. each. Pop., in 1831, 543. It is divided into two portions, Great and Little Sark, united by a narrow neck of land. It differs little from the adjacent islands in its physical features. The soil is sandy, and produces most kinds of grain and vegetables. A good many fish and sea-fowl are taken round its coasts. The inhabitants make cheeses, and knit stockings, gloves, Guernsey jackets, &c.; which they send to the ports in the W. of England, in exchange for colonial and manufactured goods.

SARNO, a town of the Neapolitan dom., prov. Principato-Citra, cap. cant., at the head of the river Sarno (an *Sarnus*), 11½ m. N. W. Salerno. Pop. estimated at 12,000. It is a well built and flourishing town, having a handsome cathedral, several convents, an old castle, belonging to the Barberini family, a seminary, hospital, some sulphurous baths, and manufactures of paper and copper wares.

Sarno is celebrated in history for the desperate battle fought in its vicinity, anno 553, between the troops of Justinian under Narses, and the Goths under their king Teias. The entire defeat of the latter, and the death of their monarch, terminated the Gothic kingdom and power in Italy. (*Gibb*, vii. 391; *Craesen's Tour in Abruzzi*, &c., ii. 185-188.)

SARTHE, a dep. of France, reg. N. W., between lat. 47° 35' and 48° 40' N., and long. 0° 25' E. and 0° 50' E.; having N. Orne, E. Eure-et-Loir and Loir-et-Cher, S. Indre-et-Loire and Maine-et-Loire, and W. Mayenne. It is of a compact shape, 60 m. in length, N. and S., by about the same in breadth, E. and W. Area, 621,600 hectares. Pop., in 1836, 457,372. Surface generally level, except in the N. W., where there are a few hills. The principal rivers are the Sarthe, with its tributaries the Vegre, Huisne, and Loir. The Sarthe rises near Mortagne, in the dep. Orne, and runs with a very tortuous course, S. and S. W., to the vicinity of Angers; near which it receives the Loir, and unites with the Mayenne to form the Maine, after an entire course of nearly 160 m. In the 15th century it was navigable to Le Mans, but its navigation is now difficult for some distance below that city. Besides Le Mans, Alençon stands on the Sarthe. The soil of this dep. is very various; in some parts there are rich lands, but poor sandy tracts predominate, especially in the S. E. In 1834, the arable lands were supposed to comprise 393,456 hectares, meadows 58,120 ditto, vineyards 10,081 ditto, orchards 19,479 ditto, and woods 68,319 ditto. Wheat, barley, and rye are the principal corn crops; and are sufficient, along with potatoes, of which at least 1,150,000 hectol. were raised in 1835, for the consumption of the population. The produce of wine is not enough for the consumption; but about 220,000 hectol. of cider and perry are said to be annually manufactured. Live stock pretty abundant and good. Bees are but little reared; and the wax, in which Le Mans has a considerable trade, comes mostly from the neighbouring departments. In 1835, of 124,521 properties subject to the *contrib. foncière*, 46,667 were assessed at below 5 fr., 22,949 at from 5 to 10 fr., and 20,482 at from 10 to 20 fr. Hardware, paper, woollen fabrics, leather, wax-candles, sail-cloth, glass and earthenware, soap, and other articles of necessity, rather than of luxury, are the goods principally manufactured in Sarthe. The iron forges, &c., produce annually about 1,000,000 kilogr. of good iron. The *étamines* of Maine formerly enjoyed a great celebrity, but other fabrics have superseded them; so that St. Calais, and other towns where they were chiefly made have fallen into decay. Sarthe is divided into four arrondissements: chief towns, Le Mans the capital, La Flèche, Mamers, and St. Calais. It sends seven members to the chamber of deputies. Registered electors, in 1838-39, 2345. Total public revenue, in 1831, 10,538,207 fr. In this department the females among the peasantry, and even in the classes above them, appear to enjoy but little consideration. 'Si la mairesse (la fermière) accouche, on demande: 'Est-ce un gas?' Quand le contraire arrive, on dit: 'Ouen, ce n'est qu'un cretature' (une fille); et, en effet, un homme a ici quatre ou cinq fois autant de valeur qu'une femme. Telle forte et robuste servante, propre à tous les ouvrages, ne gagne que 36 fr. et sa nourriture par an, tandis qu'un laboureur est payé de 150 à 200 fr. pour l'année.' (*Hugo, art. Sarthe; Dict. Geog.; French Official Tables*.)

SARUM (OLD), an ancient, and now totally ruined city and bor. of England, co. Wilts., on a hill, two m. N. Salisbury, or New Sarum, which see. It was the *Sorbidunum*

## SARUM.

of the Romans; and, being surrounded by walls and defended by a castle, became a place of considerable consequence under the Saxons. Under William the Conqueror, the bishop of Shireburn and Sunning removed his see thither; and such was its importance, that parliaments were held in it under subsequent Norman kings. But it always laboured under various inconveniences, the principal of which was the total want of water; and in consequence of this, and of disputes between the crown and the church as to the possession of the castle, the inhabitants began gradually to remove to the more convenient situation of New Sarum, or Salisbury; and the seat of the bishopric being translated to the latter, in the reign of Henry III., old Sarum fell into a state of total decay, and was almost wholly deserted in the early part of the reign of Henry VII. For a lengthened period there has been hardly even any vestiges of its ruins. (*Camden, Gibson's ed.*, p. 114.)

Old Sarum sent two members to the House of Commons in the reign of Edward III.; and notwithstanding its total decay, the proprietor of the burghage tenures in the borough, or of the land on which it once stood, was permitted to exercise this important privilege in its name down to the passing of the Reform Act, when it was disfranchised. Not having a single house or inhabitant, Old Sarum afforded the most perfect example of a noninhabited borough. The property several times changed hands; and though the estate was of little intrinsic value, the privilege it possessed of manufacturing two law-makers for the British empire, made it sell for a very large sum. It may well excite astonishment that such an outrage on the principle of representation should have been permitted to exist for so lengthened a period.

SARUN, a district of Hindostan, presid. Bengal, prov. Bahar, and one of the richest and most prosperous in British India, between lat. 25° 30' and 27° 30' N., and the 84th and 86th degs. of W. long.; having W. Goriekpoor, S. Ghazepoor, Shahabad, and Patna; E. Tirhoot, and N. Nepaul. Length, N. to S., about 110 m.; breadth, varying from 25 to 80 m. Area, 5760 sq. m. Pop., in 1822, 1,464,075. It is well watered; the Ganges forms its entire S. boundary, and the Gunduck intersects it near its centre; it supplies in abundance all the principal products of the east, besides good timber for ship-building, masts, spars, &c. There is little jungle or waste land; cattle, though not numerous, are of good quality. Manufactures few; the principal is that of saltpetre, a great deal of which is produced in this district. The Mohanimieds form but a small portion of the entire population. Chief towns, Chuprah, Bettiah, and Maissy. Total land revenue, in 1829-30, 15,60,563 rupees. (*Hamilton's E. I. Gaz.*: *Parl. Reports.*)

SASSARI, a city of Sardinia, cap. of its N. division, in the N.W. part of the island, on the Turritano, about 10 m. from its mouth at Porto Torres, in the gulf of Sassari, 53 m. N. by W. of Oristano, and 100 m. N.W. by Cagliari. Lat. 39° 30' N.; long. 8° 35' 20" E. Pop., in 1838, including its commune and port of Torres, 24,408. It is surrounded by a wall, strengthened by square towers, with five gates and crenels, the latter being now used merely as a barracks. It has a good main street; and is surrounded by public walks, shaded by trees. Sassari has numerous churches, convents, and nunneries, a Tridentine seminary, and a public hospital. The cathedral, a massive structure, has a disproportionately large, and a very elaborate facade; but its interior is clean and airy, and it has several good sculptures, including a monument by Canova. The university is established in the former Jesuits' college. The palace of the governor is an extensive edifice, and the public buildings in general are well adapted for their intended purposes. There are some pretty good inns and coffee houses, and the shops are fully equal, if not in some instances superior, to those of Cagliari. (*Smyth's Sardinia*, p. 267, 268.) It is the seat of an archbishop, of a tribunal of secondary jurisdiction, with appeal to the *Audienza Reale* of the island, and of a tribunal of commerce; and is the residence of the vice-instant and vice-treasurer of Sardinia, and of a military governor. It has a considerable trade in tobacco, oil, fruits, &c.

Porto Torres (an. *Turris*), its port, 10 m. distant, can only accommodate small vessels; ships of large size being obliged to anchor in the roads nearly one mile outside, where, however, the anchorage is pretty good. Sassari rose on the decay of Turris, during the insecurity of the middle ages. Agriculture appears to be better conducted in its vicinity than any other part of the island. Immediately without its walls is the fountain of Rosello, an abundant source of water, embellished with much architectural ornament. (*Smyth's Present State of Sardinia*; *Official Reports*, &c.)

SASSBACH or Saltzbach, a village of the Grand Duchy of Baden, bailiwick of Achern, at the foot of the mountains of the Black Forest on an affluent of the Acher, 17 m. E.N. E. Strasburg. This village, which has about 1000 inhabitants, has acquired a high degree of historical interest from

## SAULT DE ST. MARIA.

the famous Marshal Turenne having been killed in its vicinity, by a random shot, on the 27th of July, 1675. The circumstances attending the death of this great general have been detailed by Voltaire (*Siècle de Louis XIV.*, cap. 12), and other distinguished writers. His remains, deposited by order of Louis XIV. in the royal burying-place in the abbey of St. Denis, escaped, at the era of the revolution, the fanatical violence that scattered the dust of so many kings. At length, after various vicissitudes, they were deposited in the church of the Invalids, by order of the still more illustrious captain now entombed within the same sacred precincts. A monument, in honour of Turenne, erected in 1781 on the place where he fell, was repaired in 1801 by Moreau, and was reconstructed of granite in 1829. The funeral orations in honour of Turenne, by Flechier and Mascaron, are *chefs-d'œuvre*.

SATALIEH, or ADALIA. See ADALIA.

SATTARAH, a considerable town and fortress of Hindostan, prov. Bejapoor, about 60 m. S.S.E. Poonah. Lat. 17° 42' N.; long. 74° 12' E. The fort stands on a scarped hill; at the foot of which is the town, built partly of stone, and partly of mud or unburnt bricks, but comprising no edifice of note, if we except a new palace built within the last 20 years. The fort, though naturally strong, was taken by Sevajee from the Bejapoor sovereign in 1673, by Aurungzebe in 1690, and by the British in 1818. The British cantonments are about 2 m. to the E. Sattarah was, under Sevajee and his immediate successors, the cap. of the Maharratta empire. The Sattarah rajahs, however, had been reduced to the condition of *rois fainéants* by their ministers, the Peishwas, for a lengthened period previously to 1818, when the British vested the rajah with a limited authority over a portion of the dominion of his ancestors. The Sattarah territories since then have comprised an area of about 8000 sq. m., with a population of perhaps, 14 millions. In his evidence before the committee of the House of Commons, in 1830, Colonel Briggs stated, "The administration of the government of Sattarah may be deemed a good specimen of the management of a native government. The country is divided into districts, each yielding from a lac to 14 lac of rupees, containing from 150 to 200, and even 300, villages. Over this district is an officer, called a sonbahdar. That district is then subdivided among a great number of junior officers, each having from 6 or 8 to 20 villages under his charge. The whole civil and judicial business is conducted through those officers. The annual assessment of the land is fixed with reference to the sum yielded in former years; the assessment varying every year with the quantity of land cultivated. The revenue is always paid in money." In 1823, it amounted to about 15,60,000 rupees. This state was subsidiary to the British till about 1839, when the rajah, having been detected in a conspiracy against the British authorities, was dethroned, his dominions having since that time been amalgamated with and administered under the Bombay Presidency. (*Hamilton's Gazetteer*: *Parl. Reports.*)

SAUGERTIES, Ulster co. N. I., 10 m. N. Kingston, 45 m. S. by W. Albany, 331 m. S. by W. Bounded E. by Hudson r. Catskill m.t. extends into its W. part. Watered by Plattekill and Esopus creeks. It contains six churches, a Presbyterian, Dutch Reformed, Episcopal, Methodist, Baptist, and Roman Catholic, 23 stores, one woollen-factory, 12 bloomeries, four grist-mills, seven saw-mills, one paper-mill, three tanneries: 17 schools, 1109 scholars. Pop. 6216.

SAUGUS, p. L. Essex co., Mass., 11 m. N. Boston, 451 m. W. Taken from Lynn in 1815. It contains two churches, a Congregational and Methodist, three stores, one fulling-mill, one woollen-factory, one grist-mill; five schools, 375 scholars. Pop. 1098.

SAULT DE ST. MARIE, p. v., capital of Chippewa co., Mich. (commonly written Sault St. Mary, and pronounced Soo St. Mary), 400 m. N. Detroit, 921 m. W. It occupies the site of an old French fort, on the S. side of St. Mary's strait, which connects lake Huron with lake Superior. It has an elevated and pleasant situation, and contains a court-house, jail, three churches, a Methodist, Baptist, and Roman Catholic, three stores, one of which belongs to the American Fur Company, who have a trading house; and fort Brady with a garrison. Connected with the Baptist church is a missionary school for Indian children, to which \$1000 annually are contributed by the United States government. The Methodists also have a missionary school, and there is a school in the fort for the children of the officers and citizens. Vessels come up to the place to the foot of the rapids, and the cargoes are transported three-fourths of a mile by land, and re-shipped on lake Superior. It is proposed to construct a ship canal around the rapids, which could be done for a few hundred thousand dollars, which would render the navigation of lake Superior of great importance, as settlements are making on its southern shore, which contain great mineral treasures, particularly copper. The mail arrives at this place weekly in summer, and once in six weeks in winter. The navigation extends from the first

## SAVANNAH.

of May, to the 20th of November. The thermometer often sinks in winter to 25° or 30° below zero of Fahrenheit, and the mercury sometimes congeals. The permanent population is estimated at 800, though it is sometimes greatly increased by the influx of fur traders and Indians. Great quantities of white fish and trout are caught here, of a superior quality, and are extensively exported.

SAVANNAH, river, G. C. forms the N.E. boundary of the state, separating it from S. C. It is formed by the union of Tugaloo and Seneca rivers, the latter from S. C., which unite near the S.E. corner of Franklin co., 100 m. above Augusta. Thence it flows S.E. and enters the Atlantic through Tybee sound, in 32° N. lat. Tybee island at its mouth is 5 m. long and 3 broad, and contains a lighthouse on its N.E. point, 80 feet high. Large vessels come to *Five fathom hole*, 3 miles below Savannah, and 14 miles from the ocean, and large brigs come to the wharves in Savannah. Steamboats go to Augusta, 127 m. by land and 340 by water from its mouth; and pole boats go 150 miles above Augusta. The tide flows up the river but 55 miles.

SAVANNAH, p. t., Wayne co., N. Y., 11 m. E. Lyons, 168 m. W. Albany, 348 m. W. The S.E. part is covered by the Montezuma marshes. Cruise lake, 1½ in. in circumference, has its outlet into Seneca river. It has one store, one saw-mill; eight schools, 51 scholars. Pop. 1718.

SAVANNAH, city, port of entry, capital of Chatham co., and the largest city in Georgia, is in 32° 4' 56" N. lat., and 81° 8' 18" W. long., and 4° 6' 54" W. long. from W. It is 120 m. S.S.E. Augusta, 190 m. E.S.E. Macon, 90 m. W.S.W. Charleston, S. C., 158 m. E.S.E. Milledgeville, 662 W. The population in 1810, was 5195; in 1820, 7523; in 1830, 7776; in 1840, 11,214, of whom 4694 were slaves. Employed in commerce, 604; in manufactures and trades, 707; in navigating the ocean, 201; do. rivers and canals, 40; in the learned professions, 131.

The city is built on the S. side of Savannah river, on a sandy plain, elevated 40 feet above the level of the river, 17 m. from the ocean. The entrance over the bar from the sea does not change, and being full a mile wide, and having from 18 to 21 feet of water at low tide, the harbour is one of the finest on the southern coast of the United States. The entrance is so plain and direct that any navigator, on his first visit, having made the lighthouse on Tybee island, can, by means of the Coast Pilot, even during a heavy gale of wind, run into good anchorage, without risk or difficulty. The facility of entrance is equalled by no port of the United States S. of Newport, R. I. The navigation of the river was obstructed during the revolutionary war, to protect the city from the British; and these impediments and their effects have not yet been entirely removed. The government of the United States undertook their removal, and have still an officer in charge of the work. Vessels requiring 13 feet water load at the wharves of the city; and those requiring 15 or 16 feet of water, four or five miles below, at good anchorage. The plain on which the city is built is nearly a perfect level, and extends along the river a mile E. and W., and continues for several miles S., increasing in width back from the river. The city is regularly and beautifully laid out with streets and lanes running east and west; and crossed at right angles with streets only, running north and south. Between every other street are public squares, which in the whole are 18 in number, generally railled in, surrounded and interspersed with trees of different kinds, and form small parks, covered with grass, which give the city during the spring and summer months a cool, airy, and rural appearance. The streets generally are lined on either side with trees, and some have single, and others double rows of trees running through their centres, the latter forming perfect arcades, and serving at all times for delightful and shady walks. The houses are built with wood, brick, and stone, many of them are of fine architecture, and of beautiful proportions, and cover, at the present time, a space a mile in length, and three quarters of a mile in width. It contains 13 churches, four Baptist, three of which are African, an Independent Presbyterian, a Presbyterian, two Episcopal, a Methodist, a Lutheran, a Unitarian, a Mariners' church, a Roman Catholic, and a Jews' Synagogue. The Independent Presbyterian church is constructed of a light coloured granite, and cost \$100,000. The other public buildings are a courthouse, an exchange, arsenal, a guard-house, jail, United States barracks, an academy, theatre, female asylum, widows' asylum, a poorhouse and hospital, a market-house, and several fine banking houses. There are many benevolent societies which have no buildings, also, a public library, and a historical society. Some of the private dwellings, many of which are of brick, and some smooth cast to resemble marble and other stones, are tasteful and elegant. The warehouses are numerous, generally lining the wharves, and built of brick or stone, most of them three or four stories high. The business is generally done in an upper story, entered from the top of the bluff, while the lower stores serve to receive the merchandise di-

rectly from the ships. There are two iron founderies, five steam saw mills, three marine railways, and three steam rice-mills. The population, according to a census taken in the summer of 1838, amounted to 12,758 permanent inhabitants; to which should be added a transient winter population of 3000, according to the computation of the officer who took the census, making in the whole 15,758. Little business being done in the summer, during which it was formerly considered unhealthy, many of the inhabitants have acquired the habit, during that season, of visiting the north, which accounts for the great increase of the inhabitants during the winter season. But since the rebuilding of the city after the fire of 1820, the improvement in the dwellings, the greater attention to the cleanliness of the streets and lanes, the organization of a board of health, the substitution of a dry for a wet cultivation of rice in the vicinity, to effect which the inhabitants contributed to the planters the sum of \$70,000, and a favourable change of the habits of the people, and of the climate of the country generally, have unitedly made Savannah to rank among the healthy places of the United States. In the opinion of the most eminent physicians, the winter is now considered as the most unhealthy season.

The exports of Savannah during the commercial year of 1843, were 285,754 bales of cotton, 25,032 tierces of rice, 7,500,000 feet of lumber, 5,175,000 shingles, and 66,042 staves. The direct foreign imports amounted only to \$279,896 in value. The registered, licensed, and enrolled tonnage of the port, in 1840, was 17,930 tons. Savannah is at present the centre of commerce for a large extent of country, which, from her peculiar location, must be very much enlarged. Her immediate neighbourhood to Florida, which, from the shallowness of her harbours, can never accommodate large shipping; the dangerous navigation around the cape of Florida; and the facility of passing round the Alleghany mountains, which terminate in Georgia, by a railroad, will eventually cause her to assume a commanding position in the south. Already a railroad is completed 190 miles to Macon, in the centre of the state, which is to be continued 101 m. farther west, 60 of which are already finished, where it will join the State, or Atlantic and Western railroad, which is designed to run 136 m. still farther northwest to Tennessee river. These works, which will probably be finished by the close of 1845, will, by a direct route of 427 miles, open to Savannah the commerce of the west. The State railroad will extend by a branch to Rome, on the Coosa river, which is navigable 100 m. to its falls. There is also in contemplation a branch of the Monroe railroad to the Chattahoochee river, at a point leading directly to a union with the Montgomery railroad in Alabama, as a continuation of the great route of southern and western travel. There is likewise in progress, and nearly finished, a railroad from the Flint to the Ockmulgee rivers, which may be extended 40 m. to the Chattahoochee, to draw the productions of western Georgia and a part of Alabama to Savannah. These things show the prospect of the extension of her trade by land conveyance. A canal extends from Savannah, 16 m. to Ogeechee river. There are on the water already two companies employed with six steamboats, four of which are of iron, with 30 towboats of 150 tons burthen each, running to Augusta, 250 m. up the Savannah river. There are also two companies who have 11 steamboats and 42 towboats, running through an inland coast navigation to Darien, and up the Altamaha and Ockmulgee rivers, 650 m. to Macon. There are also running through an inland coast navigation, two steamboats to and from Florida; four steamboats ply to Charleston; two by the inland passage, and two by the outside passage. The boats run steadily during the winter season, and whenever the state of the river permits, during the summer, with occasional assistance from other boats. There are three lines of brigs, with six vessels in each, making 18, in the whole, to the city of New-York, one vessel of which sails every two days from each place, occupying on an average seven days on the passage between the two places.

According to the census of 1840, there were in Savannah two commercial and 50 commission houses in foreign trade, with a capital of \$943,500; 191 retail dry goods and other stores, with a capital of \$855,190; eight lumber-yards, with capital of \$49,000; 15 persons produced machinery to the amount of \$7300; 65 pounds of reeled silk, worth \$260, were produced by three men and two women, with a capital of \$500; five manufactories of leather, as saddleries, &c., produced to the amount of \$2400, with a capital of \$19,060; five persons manufactured 15,000 pounds of soap, and 41,600 pounds of tallow candles, with a capital of \$6000; 25 persons manufactured drugs and paints to the amount of \$35,800, with a capital of \$35,800; seven persons manufactured confectionary to the amount of \$600, with a capital of \$500; four persons manufactured carriages and wagons to the amount of \$1700, with a capital of \$900; 14 persons manufactured furniture to the amount of \$10,300, with a capital of \$15,000;

## SAVE.

four printing-offices, two binderies; three daily, three weekly, and three semi-weekly newspapers, employed 22 persons, and a capital of \$22,000; three brick or stone, and 45 wooden houses were built, employing 192 persons, and cost \$133,100. The total capital employed in manufactures was \$105,460. There were three academies, 335 students; seven schools, 470 scholars.

The city was founded by General James Oglethorpe in 1733, and was incorporated in 1761 by a charter, which was amended and enlarged in 1787. In December, 1778, Savannah was taken by the British under Colonel Campbell, which they did not evacuate until 1782. On the 10th of January, 1820, 463 buildings were burned, occasioning a loss to the amount of \$4,000,000; but it has been since rebuilt, chiefly with brick, with additional convenience and beauty.

SAVANNAH, p. v., cap. of Hardin co., Tenn., 49 m. N.W. Florence, Ala., 131 m. S.W. by W. Nashville, 807 m. W. Situated on the E. bank of Tennessee river. It is considered one of the healthiest places on the river above the Muscle shoals, and contains a courthouse, jail, a church, several stores, various mechanic shops, and 250 inhabitants.

SAVANNAH, p. v., capital of Carroll county, Ill. 202 m. N. Springfield, 872 m. W. Situated on the E. side of Mississippi r., and contains a courthouse jail, and a number of stores and dwellings. Nett proceeds of the postoffice in 1841, \$126.

SAVE (Germ. *Sau*, an. *Savus*), a river of the Austrian empire, and one of the principal tributaries of the Danube. It rises towards the N. extremity of Carniola, in about lat. 46° 30' N., long. 14° E., and runs at first S.E. through the government of Laybach and Croatia, to about lat. 45° 15', long. 17°. It thence has more of an E. direction, forming the boundary line between the Austrian prov. of Slavonia, on the N., and Turkish Croatia, Bosnia, and Servia on the S., till it enters the Danube at Belgrade, after a course of 590 m. (*Rerghaus*.) Its chief affluents are the Kulpa, Unna, Verbas, Bosna, and Drina. Though not very rapid, its inundations are often very destructive. Being navigable as far as the mouth of the Kulpa, for vessels of from 150 to 200 tons, it is a good deal used for commercial purposes. Few towns of any consequence are, however, situated on its banks, the principal being Brod and Krainburg; Laybach, Agram, Petrinia, and Posega are, however, at no great distance, and some of them are seated on its tributaries, (*Berghaus*, *Allg. Länder*; *Oest. Nat. Encyc.*)

SAVEKNE, (an. *Taberna*), a town of France, dép. Bas-Rhin, cap. arrond., on the Zorn, a tributary of the Rhine, 19 m. N.W. Strasburg. Pop. in 1836, ex. comm., 5118. Though finely situated, it is but indifferently built, and has no remarkable edifice, except an old palace, formerly belonging to the bishops of Strasbourg, but now used for the police barracks and prison. The town has manufactures of woolen cloths, hosiery, hardware, &c., with some trade in timber, floated down from the Vosges by the Zorn.

SAUGAR, or SAUGOR, a large town of Hindostan, prov. Malwa, in the ceded districts on the Nerubuddah, lat. 23° 43' N., long. 78° 47' E.: taken by the British in 1818.

Saugor is also the name of an island of the Sunderbunds, at the mouth of the Hooghly, about 60 m. S.S.W. Calcutta. A railway to connect it with that city was projected a few years ago, and is now probably completed.

SAUMUR, a town of France, dép. Maine-et-Loire, cap. arrond., on the Loire, 28 m. S.E. Angers. Pop., in 1836, ex. comm., 11,576. The Loire here forms several islands, and is crossed by five or six bridges, one of which, a stone bridge of 12 arches, 284 yards in length, long considered as one of the finest in France, connects the town with its suburb of La Croix Verte. Saumur is built partly at the foot, and partly on the declivity, of a hill crowned by a citadel. Its lower portion is tolerably well laid out, and has a handsome quay and terrace facing the river; but the upper town is irregular, and the streets inconveniently steep. The castle, which appears to have been constructed at different periods between the 11th and 13th centuries, was the occasional residence of the kings of Sicily and the dukes of the house of Valois; for some time previously to the revolution it was a state prison; it now serves as an arsenal. There are several churches worth notice; one of which, curious from its antiquity, is supposed to have been constructed in the 5th or 6th century; and another, *Notre Dame des Artilleurs*, is remarkable for its beauty; having a fine dome supported on Corinthian columns, an altar-piece by Philip de Champagne, &c. The barracks are among the best of that description of edifices in France: they are four stories in height, and can accommodate 1200 men. The town-hall, public library, public baths, and theatre, are the other principal buildings. Not far from the town is a famous riding school. It has manufactures of linen cloths, handkerchiefs, necklaces, copper and iron wares, leather, saltpetre, &c.; with a brisk trade in provisions, and four large annual fairs. Inglis says he should "greatly prefer Saumur as a residence to Angers; it is more airy and lively, the country

## SAXONY.

quite as beautiful, and provisions are a shade cheaper." (*Switzerland*, &c., p. 347.)

Saunur was taken in 1026 by Fulk of Anjou, and, after many vicissitudes, was annexed to the French crown in 1570. A Protestant academy, founded here by the famous Duplessis Mornay, the friend of Henry IV., governor of the town for a lengthened period, was dissolved by Louis XIV. in 1684. (*Hugo*, art. *Maine-et-Loire*; *Guide du Voyageur*, *Dict. Geog.*)

SAVONA; a town and seaport of N. Italy, in the Sardinian States, div. Genoa, cap. prov. on the Mediterranean, 20 m. S.W. Genoa. Pop. (1838), with comm., 16,211. It has ramparts, which, however, are of no great strength, and many good public and private buildings; but its streets are narrow, winding, and badly paved. It had formerly two harbours, the best of which was filled by the Genoese in 1525, from jealousy of its capabilities: the other, formed by a mole projecting E. into the sea, is small, and is rather difficult of approach, from the accumulation of sand and mud near its mouth. Savona is a bishop's see, and the seat of judicial and commercial tribunals; it has manufactures of silk goods, iron and earthenware, and exports oranges and lemons, grown in its vicinity. Savona was the birthplace of Popes Sixtus IV. and Julius II., and is said to have been for some time the residence of Columbus. Pope Pius VII. was also detained in it in 1810-11, by order of Napoleon. (*Dict. Geog. &c.*)

SAVOY. See SARDINIA (kingdom of).

SAXONY (KINGDOM OF), a secondary state of central Europe, and of Eastern Germany, principally between lat. 50° 10' and 51° 30' N., and the 12th and 15th degs. of E. long.; having W. the Indep. Saxon principalities; N. Prussian Saxony and Brandenburg, and S. Bohemia. It is of a triangular shape. Length, E. to W., about 140 m.; the greatest breadth nearly 90 m. The area, pop., subdivisions, &c., are as follow:

Circles.	Area in sq. m.	Pop. 1837.	Pop. to sq. m.
Dresden . . . . .	1,570	420,817	232
Leipzig . . . . .	1,338	367,730	274.8
Zwickau . . . . .	1,736	584,707	327.3
Budissin . . . . .	965	262,913	272.4
Total . . . . .	5,759	1,636,190*	284.1

The *Erzgebirge* (ore mountains), and the *Riesengebirge* (giant mountains), extend along almost the whole of the S. and S.E. frontier, but they nowhere rise to 4000 ft. of elevation. Their declivity is more gradual and undulating on the Saxon than on the Bohemian side; so that they cover the greater part of the country with their ramifications, rendering it either mountainous or hilly. There is, however, a very considerable extent of level ground, extending from the foot of the hilly tract, or from Colditz, Meissen, and Bautzen, northward, all along the frontier of Prussian Saxony. The country to the S.E. of Dresden, where the Elbe forces its way through the mountain chain, has been called the "Saxon Switzerland." It is about 30 m. in length by 24 in breadth, diversified, and highly picturesque; but its name is likely to convey a wrong impression of its scenery, its highest summit, the Schneeberg, being only 2150 ft. in height. The spurs given off by the *Erzgebirge* to the N. enclose the valleys of the Elbe, the two Muldas, the Zoehopau, Elster, Pleisse, &c., all of which flow to N.W., and except the first, which is navigable throughout the whole extent of the kingdom, rise in Saxony.

Saxony has a milder climate than most parts of continental Europe in the same latitude; the mean temperature of the year is about 47° Fahr.; that of the winter quarter being 34°, and of the summer 59°, at an average of the entire country, which has a mean elevation of about 1100 ft. above the sea. Landed properties are rather of limited size; but in all the rural districts the people appear to be contented, and, on the whole, comfortable: pauperism is rare. According to Mr. Gleig, "There is, perhaps, no country in the world where more is made of the land than Saxony. Every spot of earth which seems capable of giving a return is cultivated; and the meadows are mowed twice or thrice in the course of each summer. You never met with such a thing as a common or waste, while the forests are all guarded with a strictness proportionate to their value. As farmers, I should say that the Saxons were more clean and industrious than skilful. The fields are always well cleared of weeds, and in their crops they have a succession: but the favourite grain is rye; and either because it does not require to be pampered, or that manure is a scarce article with them, they do not seem disposed to fatten the soil too frequently." (*Germany*, &c., i., 237-238.) Rye, wheat, and

\* This is exclusive of the troops, which, when added, raise the total population to 1,652,114.

† It is obvious from this extract, that Mr. Gleig knows nothing of agriculture; but his testimony as to the appearance of the country is, notwithstanding, of some value.

## SAXONY.

barley are scarcely grown, except in the low country; in the mountain region they are met with only in the valleys; oats and potatoes being there the chief crops. Pease, vetches; millet, tassel, flax, oil seeds, tobacco, and garden vegetables, are pretty generally cultivated; and artificial grasses are nearly universal. But notwithstanding the improvement of agriculture, and the industry of the people, considerable quantities of corn have to be imported. A great deal of fruit is grown; and between 7000 and 8000 morgen of land are occupied with vineyards. In 1835, upwards of 53,000 cimers of wine were made, some of very tolerable quality. The forests which occupy about 1-4th part of the entire surface, consist of fir, pine, beech, oak, elm, maple, larch, &c. Upwards of 1-34 part of the woods belongs to the crown, yielding an annual revenue of 2,000,000 dollars; and nearly 10,000 individuals are engaged in wood-cutting.

Saxony is celebrated for her breeds of sheep, which are among the finest in Europe. The late king, when elector of Saxony, introduced the breed of Merino sheep into his dominion, and exerted himself to promote the growth of this valuable race of animals, with such success, that they are now found to succeed better in central Europe than in Spain; and, notwithstanding the rapidly increasing importations from Australia, the greater portion of the immense quantity of wool that we import still continues to be brought from Saxony and other German states. According to Berghaus, there are only 626,000 sheep in the kingdom; but we apprehend that there must be some signal error in this statement, and that their number must be very materially greater. Indeed, they are stated, in *Horschelman's Stein* (ii., 475), to exceed 2,000,000. We may further state that, in 1837, Prussian Saxony had above 2,000,000 sheep; and though it be more extensive than the kingdom of Saxony, we believe it is not so well stocked as the latter. The best wool is produced on the sheep-walks of the Saxon Switzerland. The cattle of Saxony, the number of which exceeds 550,000, are also of a superior description; but the butter is usually indifferent, while, to increase its weight it is frequently overloaded with salt. But such as it is, the demand for it is universal. "Never," says Mr. Strang, "did I witness so much butter daily consumed, as I have seen since I entered this kingdom. Here, in short, bread and butter is the order of the day at all hours. It is the perpetual family staple, and essential as a make-weight at every meal. You find it with equal propriety at breakfast, at lunch, at dinner, and at supper. A larder in Saxony may well be called the *buttery*!" (*Germany*, &c., i., 140.) Horses are not so extensively reared as other live stock, and hogs are not numerous. The game laws are very rigidly enforced, all sorts of birds being included in their enactments; and rights of fishing, &c., appear to be preserved with the most scrupulous tenacity.

Mining is one of the principal occupations of the inhabitants. Few parts of Europe equal the Erzgebirge in the variety and extent of their mineral riches. The basis of these mountains is granite, covered by gneiss, mica, and clay slate in succession, between which are other strata containing metallic ores. Upwards of 500 mines are wrought, which are said to employ about 11,000 workmen; and between 50,000 and 60,000 persons, or about 1-30th part of the entire population, derive their subsistence from mining industry and the manufacture of metallic products. The total annual value of the metals obtained is estimated by Berghaus, at 1,760,000 dollars; the silver producing nearly 930,000, and the iron and iron-wares 400,000 dollars.

Lead, bismuth, arsenic, antimony, cobalt, and manganese are the other principal metals. Freiberg (which see, i. 947) is the centre of the silver mining district. The neighbourhood of Meissen yields the fine porcelain clay, of which the "Dresden China" is made. About 4 million *scheffel* coal are annually produced. Salt is scarce; since the salt mines, formerly included in the Saxon dominion, were separated from them in 1815, and this important necessity is mostly imported from Prussia. Serpentine marble, and fine building stone, are abundant; as are various gems, including the topaz, jasper, agate, tourmaline, &c.

The most important branch of the manufacturing industry in Saxony is that of cotton. Its extension has been attributed to the nearly contemporaneous introduction of the potatoe, called by German writers the "manna of the mountains," and which has enabled the Saxon weavers to obtain a sufficiency of food at exceedingly low wages. In 1830, there were in Saxony 86 spinning establishments, having 361,202 spindles, employing 5380 adults, and 2443 children: of these establishments, only 3 were wrought by steam. In 1837, there were 124 spinning establishments, with 490,325 spindles. (*Bowring's Rep. on the Pruss. Comm. League*, p. 35.)

Most descriptions of cotton fabrics are now produced, and many new factories have been established in Chemnitz, Zwickau, Aueran, Freyburg, &c. Great efforts are making to improve the construction of machinery; and joint stock companies for the purpose have been established near

Chemnitz and Dresden. Coal has within these few years been found in the neighbourhood of Dresden; and it is said that the mines are becoming productive, and promise a good supply. Cotton-printing works are on the increase, and have been much improved within the last few years. Although the Saxon prints, in general, are not equal to the best English in beauty of pattern or brightness and fastness of colouring, they are said to make up for these deficiencies by the cheaper rates at which they can be produced. (*Keyser, in the Handloom Weavers' Report*, part 11., 510, 511.)

The only article, however, in which the Saxons come into competition with us in the American and other foreign markets is cotton hosiery, particularly the inferior descriptions. Dr. Bowring says that he had seen some stockings intended for the American markets which were sold at the rate of 3s. 4d. a dozen! The number of stocking frames amounted, in 1815, to about 9,000; in 1831, to 14,000; and in 1836, to 20,000. The number of master-workmen, in 1831, was 7163; hired workmen, 3444; apprentices, 2552; in all, 13,461 persons. The number of frames in work was 13,841, and the average weekly return per frame was 1 doll. 4 gr., = 3s. 4d. sterling. There is no branch of industry which seems more appropriate to Saxony than this. It requires only a small outlay of capital for the stocking-maker; his wooden frame is not expensive; the cost of his stock of cotton twist is small; and by associating agricultural with manufacturing industry, he supplies himself from his own little farm with the principal necessities. If we may depend on the statements of Bowring and others, it would appear that the stocking-weavers of Saxony are in a state of progressively increasing prosperity. Most of them are independent labourers, buying for themselves the raw material and selling their manufactured stockings to a number of small collectors, who furnish the Chemnitz or the Leipsic markets. (*Bowring's Report*, p. 36.)

We confess, however, that we are not a little sceptical as to several of these statements, and have very great doubts whether persons in the condition of the Saxon stocking-weavers can ever come into competition with those of England in the production of any but the coarsest description of goods. In illustration of what is now stated, we may mention, that during the year ended the 30th September, 1839, hosiery of the value of 412,410 dollars was imported from the Hanse Towns into the United States; of which, probably, the principal portion was from Saxony; and this, with yarn of the value of 22,310 dolls., made up the whole of the imports of cotton goods into the United States from these ports in the course of that year! (*Offic. Rep. Cong.*)

The manufacture of linen in Saxony is also of considerable importance. The weaving business employed, in 1839, from 12,000 to 13,000 looms; of which about 950, employing about 3000 persons as weavers, loom-builders, pattern-drawers, &c., were appropriated to the weaving of damasks and table-linen. The weekly earnings of the damask weaver vary from about 2s. 3d., up to 7s. 6d.; but for white linens, the utmost amount of a man's wages, per week, would be from 2s. to 2s. 4d. sterling. The spinning of flax employs numerous hands; but notwithstanding about 10,000 cwt. of yarn is annually imported from Silesia, Bohemia, &c., and latterly there have been considerable importations from England. (*Handloom Rep.*, p. 511.)

In 1837 there were in Saxony 126 establishments for the spinning of woollen yarn, with 71,086 spindles, and eighteen establishments for combed yarn, with 30,765 spindles; making together 101,851 spindles, being an increase of 31.1 per cent. since 1834, and of 127 per cent. since 1831. The progress of the Saxon cloth manufactures in the three years from 1834 to 1837 is stated in an official report to have been greater than in the 30 years preceding! Great improvements have been introduced, not only in the fabric, but in the finish of woollen goods, particularly by the introduction from the Netherlands of a new steam brushing machine. In 1839 the woollen manufacture employed from 3,000 to 4,000 looms, which produced about 160,000 pieces of cloth. Much attention has been paid of late to the manufacture of machinery; though it be still far behind what is met with in the manufacturing districts of Great Britain. The Jacquard loom is gradually being introduced, and there are schools of manufacture at Dresden, Chemnitz, Plauen, &c. Plain and figured silks, of very fair quality, are made at Annaberg, Penig, and Trankenberg. The government is very desirous of promoting the culture of silk, and some establishments for the propagation of the worms exist at Dresden and Leipsic; but in such a climate they can hardly be expected to have much success. Wooden wares are made in the country, of the estimated value of about 200,000 dollars a year (*Berghaus*); and Saxony supplies furniture of every description, musical instruments, &c., to a great part of Germany. Porcelain, and *modern antiques*, are articles made in large quantities, particularly at Meissen. The china produced here formerly enjoyed a very high reputation throughout Europe, but owing to the extraordinary improve-

## SAXONY.

ments made in the manufacture in this and other countries, Meissen china has declined considerably from its ancient celebrity. Almost every article of use or luxury is made in Saxony; the chief deficiency is in paper, of which the Saxons manufacture do not produce nearly enough for the immense consumption of the presses of Leipzig and Dresden.

The extension of the cotton and woollen manufactures of Saxony, since 1833, is wholly, or almost wholly, ascribable to the circumstance of her having then joined the Prussian commercial league. This opened a widely extended market for her products among the German states, from the greater number of which they had previously been either wholly excluded, or admitted only clandestinely, and under great difficulties. Saxony, in fact, has derived the greatest advantage from the league, much more, in proportion to her extent and population, than Prussia. Little or no cloth of Saxon manufacture has hitherto found its way to the United States.

The extensive commercial relations of Saxony owe their origin to the enlightened policy of Frederick Augustus, the Elector, afterwards king of Saxony, who, at a time when protecting and prohibitory tariffs surrounded his states, adopted a liberal commercial system, and converted Saxony, and especially Leipzig, into one of the most important marts, not merely for the supply of central and northern Europe, but part even of Asia with all sorts of manufactured produce. The fairs at Leipzig were for a lengthened period the great sources whence Russia, as far as the borders of China, Poland, the provinces on the Danube, and many parts of the Turkish and Persian dominions, were supplied with manufactures; and though they have latterly declined, they still continue to be much resorted to. Leipzig has been for a lengthened period the centre of the book trade of Germany, being, London and Paris only excepted, the greatest literary emporium in the world. The value of the works sold at the Easter fair of late years has been estimated at about 3,000,000 dollars; and as many as 600 booksellers are said to have been assembled at some of these fairs from all parts of Germany to dispose of their publications and adjust their accounts! (*See LEIPZIG.*)

The Convention dollar, coined in Saxony, = 32 groschen, or 4s. 1½d. Engl.: the Saxon dollar of 24 gr. is an imaginary coin. 100 Dresden *scheffels* are equivalent to 195 of Berlin. The other measures, &c., are comparatively unimportant, and the coins of Prussia are generally current.

**Government.**—Saxony is an hereditary and limited monarchy, having a senate or upper house, and a house of representatives. Previously to 1830, it had states; but these had comparatively little power; and the imposition of taxes and other public burdens, and the regulations of the public expenditure, mostly depended on the pleasure of the king. But the French revolution of 1830, was speedily followed, in Saxony, by some very important political changes. The king was obliged to associate his nephew, the present sovereign, with him in the government, a representative system was organized on a new principle, and the abuses incident to the feudal system were suppressed.

The senate consists of 52 mems., and the house of representatives of 300. Of the senators some take their seats by virtue of their offices, as the Roman Cath. bishop, the king's principal chaplain, a Protestant bishop, the dean of the university, and one or two great officers of state. Of the remainder, some sit in the right of their estates, and transmit their privileges, as senators, with their estates to their children; while others are elected for each parliament by a constituency of their own order. The qualification for a seat in the senate is the same that is required to entitle a man to vote in the election of a senator, viz: a landed estate worth 6000 dollars a year. The lower house is elected by a species of household suffrage, or by such heads of families as contribute in any way to the public burdens. The candidate must possess property to the amount of 1000 a year. Senators receive 7 dollars a day during the sitting of parliament, and deputies 3 dollars. But owing to the high qualification required for deputies, and other causes, the new constitution is not so popular as might have been expected. "Though," says Mr. Gleig, all "money-bills must needs, as among ourselves, originate in the ch. of dep., the minister has but to propose his plan through an agent, and he is sure to carry it. Meanwhile the constituency, especially in the rural districts, complain loudly that their parliament is worse than useless; that it saddles them with burdens which, under the old system, they were not required to bear; that now they have 350 sovereigns to maintain instead of one! The rigid censorship still exercised over the press keeps the Saxon public profoundly ignorant of what is passing in their parliament; though as to speaking, such a thing is unknown in the chamber of deputies. In the upper house the case is somewhat different; for it is composed of men who do occasionally speak." (*Gleig's Germany in 1837*, l. 182-194.)

But with all its defects the newly organized representative system is of great importance to the kingdom; and it

will, no doubt, acquire greater influence and independence according as experience makes the deputies better acquainted with their rights and duties.

Perhaps, however, the inroad made on the feudal system, which was maintained in the rural districts nearly to the fullest extent, was the most advantageous of the various changes effected in 1830.

Hereditary jurisdictions were abolished, except in very rare cases; and the more oppressive privileges enjoyed by the lords were, at the same time suppressed. All towns now elect their own municipalities, and are governed by laws of their own making; while the rural districts, being divided into departments, each of which has its own magistrates, whom the people not only choose, but may, also, in case of malversation, degrade from office. The municipal officers, also, though elected by the citizens for life, are liable, on conviction of incapacity or unfair dealing, to be degraded. Their powers are very considerable in reference both to person and property, for they regulate the police, hear and determine civil causes, and both fix the amount of local rates to be levied on the citizens, and determine how the produce shall be expended. In the election of the magistrates, every rate-payer has a voice. They are all salaried officers. It is necessary, however, to enable any one to be appointed to the magisterial office, that he should have received a legal education, and be possessed of some small portion of land, and of the house in which he resides.

There are civil and criminal courts in the capital of each circle, and a high court of appeal in Dresden, in which latter all capital cases are tried. Executions take place by decapitation. There are special military tribunals, a superior fiscal court, university court at Leipzig, mining tribunal at Freiberg, patrimonial tribunals, &c. The reigning family is Roman Catholic, but there are not more than 29,000 Roman Catholics in the kingdom, the great bulk of the population being Lutherans. Literature and the fine arts have flourished more in Saxony than in any other part of Germany; and there is scarcely any country in Europe where primary instruction is so widely diffused: the number of the individuals attending the schools, and other seminaries, is said to be as high as one in six of the population. The university of Leipzig is the principal seminary.

Every male inhabitant 20 years of age is, with certain exceptions, obliged to serve in the army for six years in time of peace, and for three years subsequently in the reserve corps. The armed force is pretty extensive; it consists of about 13,000 men, of whom 10,000 are privates under arms; besides the reserve corps of 3000 more. This kingdom holds the fourth rank among the German states, having four votes in the full diet and one in committee, and furnishes a contingent of 12,000 men to the army of the confed. Its public revenue from 1840 to 1842 has been fixed at 5,500,297 doll., and its expenditure at 5,424,755 doll. At the end of 1838 the public debt amounted to 10,926,457 doll.

The Saxons are among the best specimens of the old Teutonic race. In person, manners, &c., travellers have remarked that they bear a striking resemblance to the English agricultural population. The Saxon royal family is said to be descended from Witichind, sovereign of this territory in the time of Charlemagne.

Saxony was created an electorate in 1422, which title it retained till 1806, when Napoleon erected it into a kingdom. During the late war the king of Saxony was, from the battle of Jena downwards, a firm ally of Napoleon, who made extensive additions to his dominions; and he did not abandon the fortunes of his benefactor till after the battle of Leipzig had compelled the French to evacuate Germany. This conduct led to the dismemberment of the kingdom by the treaty of Vienna in 1815: some of its most valuable provinces were then assigned to Prussia; and, but for the opposition of Austria, it is probable that Saxony would then have ceased to exist as a separate state. (*Berghaus, Allg.-Länder, &c.; Stein; Strang's Germany and the Germans; Gleig's Germany, &c.; passim.*)

SAXONY, a prov. of the Prussian states, consisting of the territories dismembered from the kingdom of Saxony in 1815, with the Saxon states formerly belonging to Prussia, has on the N.E. and E. Brandenburg, S. the kingdom of Saxony and the Thuringian states, and on the W. Hesse, Brunswick, and Hanover. It is of a very irregular outline, has several enclaves, and includes within its frontiers the independent principalities of Anhalt, Sondershausen, &c. Area, 9765 sq. m. Pop., in 1837, 1,539,353, of whom 1,437,353 are Protestants and 97,932 Catholics. It is divided into three regencies, and these again into 41 circles. Principal towns Magdeburg, Halle, Erfurt, Merseburg, Naumburg, Burg, &c. The Hartz mountains lie on the W. frontier of the province; but, with this exception, there are no hills of any considerable magnitude. Principal rivers, the Elbe and its affluents, the Saale, Mulda, Unstrut, &c. Soil in parts sandy and unproductive, but in general loamy and fertile. The plain of Magdeburg is reckoned about the best

## SAYBROOK.

land in Prussia, and is very well cultivated. Principal products, wheat and other sorts of corn, flax and hemp, excellent wool, tobacco, &c. The vine is cultivated in the neighbourhood of Merseburg and some other places. Productive mines of coal, iron, rock-salt, &c. are wrought in different parts of the province. The stock of sheep exceeds 2,000,000 head, and wool, which has been vastly improved by crossing with merinos and other fine woolled breeds, has become a staple product. Manufactures important and valuable, consisting of fine woollens, linens, earthenware and porcelain, hardware, &c.

SAYBROOK, p. l. Middlesex co., Ct., 42 m. S.S.E. Hartford, 334 W. Bounded S. by Long Island sound, E. by Connecticut river, which here enters the sound with a bar at its mouth of 12 feet water at the highest tides. The harbour is on a cove which sets up from Connecticut river, which is here seldom completely frozen in winter. The shad fishery in the spring is very valuable, and white fish are largely taken for nature. The village contains a Congregational and an Episcopal church. The borough of Essex, 7 m. above the mouth of the river, contains four churches, a Congregational, Episcopal, Methodist, and Baptist; an academy, 10 stores, an extensive rope-walk, and about 1000 inhabitants, and has considerable ship-building and a number of vessels employed in the coasting trade. A ferry crosses Connecticut river, leading from the village at the centre to Lynes. The township was first settled in 1635, and was early of great importance. Yale college was for some time located here, during which 15 commencement were attended. The township contains 16 stores, two lumber-yards, four grist-mills, four saw-mills; two academies, 66 students; 13 schools, 578 scholars. Pop. 3417.

SCARBOROUGH, a seaport, par. and mun. bor., market town, and par. of England, N. riding co. York, and E. div. of the wap. of Pickering Lytha, on a rocky slope, rising from an extensive bay, 35 m. N.E. York. Area of par. bor. (which includes, with the old bor. and par., the extra parochial district of the castle), 2160 acres. Pop., in 1831, 8760; in 1841, 10,060. It has a very striking appearance from the sea, from which it rises amphitheatrically to a considerable height. It is well built; the streets in the upper part of the town are spacious and well paved; and the houses generally have a handsome appearance. It is also extending S.W. towards Falsgrave, and southward along the shore. The principal public buildings are the town-hall, trinity-house, news room, assembly-rooms, a neat and well-conducted theatre, a sea-bathing infirmary, five bathing establishments, and two public libraries. But the handsomest and most classical building belonging to the town is the museum, a rotunda 37½ ft. in diameter, by 50 ft. in height, in the Roman Doric style. It is constructed

of the Kelloway limestone, a fine building material, presented from his extensive quarries at Hackness, by Sir J. V. B. Johnstone, Bart., M.P. for the borough; and though of recent erection, has a valuable collection of specimens illustrative of the geology and natural history of the N. riding. A fine iron bridge of four arches, supported on massive stone piers, 70 ft. in height, has been thrown across a ravine to connect the higher town with the spa, ¼ m. to the S. This handsome structure, which cost £9000, raised by subscription, was completed in 1828. The parish church, which was given by Richard I. to the abbey of Cîteaux, in Burgundy, stands on an eminence not far from the ruins of the castle: it was formerly much larger than at present, but the part now used is commodiously fitted up for divine worship. Christ church, built in 1828, of stone furnished by Sir John Johnstone, in the early English style, has accommodation for 1300 persons. A chapel of ease was erected in 1840, in the lower part of the town, near the quay side, by voluntary subscription, principally for the accommodation of the poor: it contains nearly 500 sittings, of which about three fourths are entirely free. There are places of worship, also, for Roman Catholics, Wesleyan, primitive, and association Methodists, Independents, Baptists, and the Society of Friends, to most of which, as well as to all the churches, are attached well-attended Sunday schools. A grammar school, founded in the 9th century, is but slenderly endowed, but there are several good subscription schools, including two on the National and one on the Lancastrian plan. The Amicable society also clothes and educates between 70 and 80 boys and girls. A seaman's hospital is under the government of the Trinity house, and there are almshouses, and several other benevolent, as well as religious institutions.

The harbour, which is easy of access, is protected by a handsome stone pier, of modern erection; but, unfortunately, it labours under a deficiency of water, having only from 4 ft. to 5 ft. at low ebb springs, and from 8 ft. to 9 ft. at low ebb neaps; but from the first quarter flood to last quarter ebb, vessels drawing 8 ft. water may enter the harbour with safety. A small foreign, and pretty considerable coasting trade is carried on. In 1840 there belonged to the

## SCARBOROUGH.

port 205 ships, of the aggregate burden of 32,867 tons. During the same year the gross customs' duties amounted to £1887 7s. 2d.; there has, however, owing to the privilege of bonding having been conferred on the port, been a remarkable increase this year (1841) in the amount of the duties; the receipts for the 11 months ending 30th Nov. being £3721 12s. 3d. A great deal of fish is brought in here, and forwarded to the populous districts in the West Riding; and of late years several persons have embarked in the herring fishery, which is becoming an important and profitable source of employment to the fishermen. From 40 to 50 yawls belong at present to Scarborough and Flay, in addition to the numerous small boats used for fishing inshore; and it is not unusual for 150 or 200 boats to enter the harbour, during the season, at the same tide with herrings. As an encouragement to the fisheries, the corporation remit the tithe of fish to which they are entitled; and a society has been formed to raise an honorary fund, to meet the casual losses of nets, lines, and tackle, of such provident fishermen as become subscribing members; and thus ensuring to them, at a slight charge, an advantageous position.

"Since the peace, ship-building, which formerly contributed in no slight degree to the prosperity of the town, has greatly declined, and now has almost ceased; nor, from the shallowness of its artificial harbour, is it every likely to become a very important trading place. It is supported by the resort of strangers to it for the purposes of sea-bathing and amusement; and these are principally of the middle classes, and from the manufacturing districts of Lancashire, Durham, and the W. riding of Yorkshire." (*Parl. Bound. Report*.) Scarborough is, however, frequented not only for the purpose of sea-bathing, but on account of its two mineral springs; which have lately been analysed by Richard Phillips, Esq., F.R.S. We subjoin the result of his analysis of a gallon of water from each spring.

	North Spring.	South Spring.
Azotic gas	6.3 cubic inches	7.5 cubic inches
Chloride of sodium (common salt)	26.64 grains	29.63 grains
Crystallized sulphate of magnesia	142.68 —	225.33 —
Crystallized sulphate of lime	104.00 —	110.78 —
Bicarbonate of lime	49.26 —	47.80 —
Bicarbonate of protoxide of iron	1.84 —	1.81 —
Total contents	323.42 —	415.35 —
Specific gravity of the water	1.0035 —	1.0045 —

Temperature 49° with very little variation.

It is probable that the spas may, from the growing reputation of the town, and their being so conveniently connected with it by the bridge above alluded to, again acquire some portion of that celebrity which they formerly enjoyed. The recent erection of a commodious saloon, in the castellated style, with embattled towers, the architectural beauty of the wells, the massive sea-wall, forming at once a secure protection to the spas and a delightful promenade, especially at high water, combined with the newly-laid out ornamental walks and grounds, have materially increased the natural attractions of Scarborough as a watering-place. These improvements have been effected at an expense of upwards of £8000.

Scarborough, which received its first charter from Henry II., in 1252, is divided under the Municipal Reform Act into two wards, the government being vested in a mayor, five aldermen, and 18 councillors. Corporation revenue, in 1839, £3990. Quarter sessions are held under a recorder, and petty sessions are held weekly both for the borough and North riding. The borough has sent two members to the House of Commons since 23 Edw. I., the right of election down to the Reform Act being in the common council of the borough, a body comprising 44 individuals. The Boundary Act included with the old borough the extra-parochial precinct of the castle. Registered electors in 1841—42, 539. It is one of the polling-places at elections for the N. riding, and the chief town of a poor-law union comprising 33 parishes. Markets on Thursday and Saturday, cattle fairs, Holy Thursday and Nov. 23.

N. of Scarborough, on a bold craggy eminence commanding a very extensive sea-view, stand the ruins of a castle built in the reign of Stephen, to which Piers de Gaveston, the minion of Edward II., fled for refuge from the vengeance of the exasperated barons. The castle, after sustaining two sieges from the parliamentary troops, was dismantled at the close of the civil wars; and though a portion of it was repaired in 1745, and barracks have been subsequently built in its immediate vicinity, it is principally in ruins. The remains of the keep consist of a square tower nearly 100 ft. in height: the entire surface included within the outer walls comprises nearly 19 acres. A strong gateway still remains, with portions of the circular towers occurring

## SCAGHTICOKE.

at intervals in the line of the fortifications. It was, in fact, previously to the invention of artillery, one of the principal strongholds in the kingdom. (*Baines's Gaz. of Yorkshire; Granville's Spas; Parl. and Mun. Board. Reports; and private information.*)

SCARBOROUGH, p. t., Cumberland co., Me., 10 m. S.W. Portland, 59 m. S.W. Augusta, 536 W. Bounded S.E. by the Atlantic. It has four stores, four grist-mills, two tanneries; 14 schools, 854 scholars. Pop. 2172.

SCAGHTICOKE, p. t., Rensselaer co., N. Y., 20 m. N. Albany, 390 W. Bounded W. by Hudson river. Watered by Hoosic river, and Tomhanc creek. It contains two churches, a Presbyterian and Methodist; 10 stores, one fulling-mill, four cotton factories with 5807 spindles, two grist-mills, three saw-mills, two powder-mills; 15 schools, 839 scholars. Pop. 3389.

SCHAFFHAUSEN, the most N. canton of Switzerland, and, after Zug and Geneva, the smallest in the confederation. It is between lat. 47° 40' and 47° 50' N., and long. 8° 25' and 8° 55' E., being separated by the Rhine from the cantons of Zurich and Thurgau, while, on all other sides, it is surrounded by the territory of the grand duchy of Baden. Area, 116 sq. m. Pop., in 1837, 31,125. Surface undulating, its loftiest hill, the Raadenberg, in the N., rising only to about 1200 ft. above the Rhine. The soil is generally calcareous, but fertile; and the climate is among the mildest in Switzerland. It is an agricultural rather than a manufacturing canton; and, according to Picot (*Statist.* 363), its agriculture has greatly improved within the last half century. Formerly, indeed, the supply of corn was quite insufficient for home consumption; whereas, in good seasons, considerable quantities are now exported. Artificial pastures have also been materially increased, as well as the number of cattle; fruits are abundant, particularly cherries, from which a good deal of *kirschwasser* is made; and the produce of timber is amply sufficient for the wants of the inhabitants. (*Picot.*) There are nearly 5000 arpents of vineyards, which furnish the principal article of export, wine being sent to St. Gall and Appenzell, the Black forest, and other neighbouring districts; but of late years the competition of the wines of Baden, &c., and the duties imposed on the Schaffhausen wines in Germany, have crippled the trade.

One of the principal branches of industry in Schaffhausen is the conveyance of goods through the canton, which is greatly facilitated by the navigation of the Rhine. Salt, from Wirtemberg, timber, &c., are conveyed through Schaffhausen to Switzerland; but the circumstance of the confederation not being comprised within the Prussian customs union is injurious to the transit and export trade of the canton; and in consequence a desire to join the German league has long prevailed in Schaffhausen and some other cantons, though not in the majority. (*Bowring's Rep. on Switzerland*) The manufacturing establishments comprise a few cotton and hardware factories. Accounts are kept in florins, of 60 *kreutzers*=20d. English. The foot is the same as that in Zurich, the lb., a little larger.

This canton is divided into 24 districts. The male inhabitants, of full age, and not bankrupts, paupers, or suffering a penal sentence, choose the legislative body. The latter, or grand council, consists of 74 members, 24 of whom form also the petty council, which is intrusted with most part of the executive power. The grand council meets in June every year, and is presided over by a burgo-master, who is changed annually. The population is wholly Protestant. Education appears to be well attended to.

Schaffhausen was not included in ancient Helvetia, and its inhab. resemble their Swabian neighbours rather than the Swiss. It was admitted into the Confederation in 1501.

SCHAFFHAUSEN, (originally *Schiffhausen*, or *Ship-houses*), a town of Switzerland, and the cap. of the above canton, on the Rhine, 25 m. W. by N. Constance, and 49 m. E.N.E. Basle. Pop. about 7500. It is walled, and defended by the *Munoth*, an old citadel supposed to be of Roman origin, but which is now furnished with extensive bomb-proof casemates. Streets ill paved; and the buildings are remarkable for their quaint and antique architecture: many are ornamented in front with stucco, carved or fresco work. The *minster*, founded in 1052, is a massive edifice in the round arched style, with numerous monuments in its cloisters. An ordinary bridge across the Rhine replaces that unique specimen of art consisting of one arch 364 ft. in length, destroyed by the French under Marshal Oudinot in 1709. Schaffhausen has a gymnasium, a college with nine professors, a high female school, and an excellent library. The latter comprises the books that belonged to the celebrated historian Müller, by far the most illustrious of the natives of Schaffhausen, where he first saw the light, on the 3d of January, 1752. The town is a principal *dépôt* for the goods passing between Switzerland and Germany, and Basle and Zurich; consisting of silk, cotton, and woollen goods, raw cotton, colonial produce, Nuremberg manufac-

## SCHELD.T.

tures, Swiss cheeses, &c., Schaffhausen is supposed to have originated about the 8th or 9th century; it was subjected by Austria in 1330, but has been independent since 1415.

The celebrated falls of Schaffhausen are situated about a league S.S.W. from the town, where the Rhine breaks through a ramification of the Black-forest mountains. The height of these falls, which, in some respects, are the grandest in Europe, varies, according to the season, from 50 to 75 ft., being greatest in June and July, when the river is swollen by the melting of the snow on the mountains. The stream, which, immediately above the fall, is about 300 ft. in width, precipitates itself over a ledge of limestone; four rocks projecting from which divide it in its descent into five portions. The greatest body of water falls between the first of these rocks and the castle of Laufen, on the S.E. bank of the river; from which, according to Murray, the best view of the falls is obtained. "It is not," says Mr. Spencer, "the height of the fall but the immense body of water broken into spray in the most picturesque manner over the rocks, that constitutes the great beauty of the cataract. In other respects, it cannot bear the slightest comparison with either those of Terni or the Staubbach." (*Germany and the Germans*, ii. 61.)

In 1790, Lord Montagu, a young British nobleman of great promise, was drowned in a rash attempt to descend these falls; and, by a curious coincidence, his death occurred nearly at the same time that his noble seat, Cowdrey house, near Midhurst, was burned down. (*Ebel, Manuel du Voyageur; Picot, Statistique; Bowring, &c., on Switzerland, &c.*)

SCHAUMBURG-LIPPE (PRINCIPALITY OF), one of the minor states of N.W. Germany, principally between lat. 52° 10' and 52° 30' N., and about long. 9° E., surrounded by the territories of Hesse-Schaumburg, Hanover, and Prussian Westphalia, exclusive of some detached lordships enclosed in the territory of Lippe-Detmold. Area, 217 sq. m. Pop., in 1838, 27,600 mostly Lutherans. It is hilly towards its S. extremity, but flat in the N., where the lake called the Steinhuder Meer occupies about 11,000 morgen. The productive portion of the surface comprises about 74,000 morgen, besides nearly 34,000 morgen of forest-land, chiefly in the W. The soil is in general superior to that of Lippe-Detmold, and agriculture and cattle-breeding are more advanced. The inhabitants of both principalities employ their intervals from rural labour in spinning flax and weaving linens. Coal is raised in the S. to the value of about 30,000 dollars a year; and forms, with corn, wool, timber, and linen goods, a principal article of export. The constitution, which dates from 1816, is a limited monarchy; the powers of the prince being similar to those of the sovereign of Great Britain; the *landstände*, or parliament, consisting of all the noble landed proprietors, with four deputies for towns, and six representatives of the peasantry. Appeal lies from the decisions of the courts of this principality to the superior court of Wolfenbüttele. Public instruction as in Lippe-Detmold, is well attended to. Public revenue, about 137,000 dollars. There is no public debt. Schaumburg-Lippe has one vote in the full diet of the Germanic Confederation, and with Lippe-Detmold, Hohen-zollern, Reuss, Waldeck, and Liechtenstein the sixteenth place, with one vote in the committee. Its contingent to the army of the Confederation amounts to 240 men. (*Berg, &c.*)

SCHELD.T. (*Fr. Escaut*), a river of France and Belgium, which rises in the *dép.* Aisne, near St. Quentin, and runs mostly in a N.N.E. direction, through the *dép.* du Nord, and the provs. of Hainaut, E. Flanders, &c., to Antwerp, after which it turns N.W. and, dividing into the E. and W. Scheldt, which enclose the islands of Beveland and Walcheren, enters the North sea in about the same lat. as the Thames. Its entire length is estimated at about 200 m., its breadth at Dendermond is about 650 ft., at Antwerp, 1700 ft.; and the width of its mouth varies from 2½ to 3½ leagues. It is navigable from Valenciennes. Its principal tributaries are the Scarpe, Lys, and Durme, on its W., and the Dender and Rupel on its E. side. St. Quentin, Cambray, Valenciennes, Tournay, Oudenarde, Ghent and Antwerp, are on its banks. Its current is slow; and in the lower part of its course, where it runs through a completely flat country, its banks are fenced by dykes to prevent inundation. It is connected by the canal of St. Quentin and other canals with the Somme, Seine, and Loire, and with the principal rivers and cities of Belgium, in its neighbourhood. During the commercial ascendancy of Antwerp the Scheldt enjoyed a larger share of traffic than any other European river; but its importance in this respect, though still considerable, has since greatly declined. "There was nothing," says Barrow, "on this noble river, in our progress upwards, that conveyed any impression of an active or extensive commerce. In sailing up or down the Thames, or on approaching London within 4 or 5 m., the multitude of shipping affords indications not to be mistaken of the commercial wealth and prosperity of London. But the Scheldt, when

## SCHELESTADT.

we ascended it, was a vacant river; we neither met nor overtook a single sail; and, with the exception of two or three American ships, and some 10 or 12 small vessels, mostly brigs, there was little appearance of trade along the common quay of Antwerp." (*Tour in Holland*, p. 11.) This, however, was before the revolution of 1830 had made Antwerp once more the commercial emporium of Belgium; and in the interval, the Scheldt has certainly regained some portion of its former consideration. (See *ANTWERP*.)

**SCHELESTADT**, a fortified town of France, dep. Bas-Rhin, cap. arrond., on the Ill, a tributary of the Rhine, 26 m. S.S.W. Strasburg. Pop., in 1836, ex. com., 9353. It was fortified by Vauban, and is naturally strong from its being in a great measure surrounded by marshes. It has a hospital, prison, communal college, theatre, manufactures of cotton and linen fabrics, iron wire, soap, and earthenware, for which last it was famous as long ago as the 13th century, with breweries, distilleries, &c. It is supposed to have been the ancient *Elsebus*, destroyed by Attila, where Charlemagne and his successors had afterwards a palace. The Swedes took it in 1632, but restored it to the French two years afterwards. (*Hugo, art. Bas-Rhin; Dict. Geog.*)

**SCHEMNITZ** (Hun. *Selmecz-Banya*), a famous mining town of Hungary, co. Honth, in a mountainous distr., on the Schmeinitz, a tributary of the Gran, 46 mi. N. by E. Gran. Pop., in 1837, with its suburbs, 17,028. The town is entered by an old and strong gateway, which conducts to a long, narrow, steep street, wretchedly paved, and so hemmed in by sloping hills that there is scarcely room for a row of houses on either side. At the end of this street is a mountain amphitheatre, the *proscenium* of which is occupied by the churches and other large buildings; while the hill sides are covered with the white cottages of the miners embosomed among trees. (*Paget's Hungary*, i. 327.) The town has many good-looking houses, with shops and inns; but its fine old ruined castle appears to be the only edifice of much interest.

The mines of Schmeinitz, which extend under the town, and have been wrought for several centuries, furnish considerable quantities of silver, whence gold is again extracted. The ores vary greatly in productiveness; but, speaking generally, the mines have not been very profitable. There are six principal veins or courses, each from 10 to 20 fathoms in thickness, running nearly E. and W. almost parallel to, and at the distance of from 60 to 300 or 400 fathoms from each other, and connected by various small branches. In these extensive courses there are 12 royal mines, besides a number belonging to private individuals, who are obliged to dispose of all the ore they obtain to the royal smelting works at a fixed rate. The whole of these mines communicate with the emperor Francis's adit or level, at the depth of nearly 200 fathoms. (*Bright's Travels*, p. 149.) At a still greater depth is the adit of Joseph II., a magnificent work, 12 mining ft. in height by 10 ft. in breadth, extending from Schmeinitz to the valley of Gran, a distance of nearly 10 Eng. m. This adit, which is still unfinished, will carry off the water from mines which cannot now be wrought, and is so constructed that it may be used either as a canal or a railway. It has been already no fewer than 40 years in progress, and it is supposed that, when complete, it will have cost, at least, £400,000. Dr. Clarke, who descended into the mines of Schmeinitz, says, "All the imperial mines are connected with each other; offering, in their whole extent, a subterraneous passage which reaches to the astonishing length of 3000 fathoms, nearly  $\frac{3}{4}$  m.! The sight of the interior of the Paquerstohln, (one of the mines) convinced us that there are no mines in the world like those of Hungary. How wretched, in comparison, appear the mines of Cornwall and Wales, where it is sometimes necessary to creep upon the hands and knees, wet through, over all sorts of rubbish, to get from one shaft to another. The inside of a Hungarian mine may be compared to the interior arrangement of one of our best frigates, where space has been so husbanded, and cleanliness so strictly maintained, that nothing is seen out of its place, and there is room enough for every operation." (*Travels*, viii. 393, 8vo ed.)

Dr. Clarke should, however, have added that the mines of Cornwall and Wales are wrought by private individuals for the sake of profit only, whereas the imperial mines which he visited are wrought at the expense of government, to which profit is a secondary consideration. Hence the greater outlay on the latter; hence also, in part at least, their comparative unproductiveness, and the bad and costly manner in which, according to Mr. Paget, all the Austrian mining establishments are conducted.

The ore, besides silver and gold, contains lead, and sometimes iron, copper, zinc, or arsenic. In consequence of the want of wood and water but little ore is smelted on the spot, being principally sent to Nensohl or Kremnitz. About 20,000 miners are employed in the Schmeinitz district.

Mr. Paget states that the officers and workmen are all very indifferently paid; and hence there is not unfrequently

## SCHOHARIE.

ly a good deal of embezzlement. The workmen, who are paid by the piece, are not permitted to earn more than about 3s. a week: it would seem, indeed, rather to be the object of the government to keep up the mines for the employment they afford, than for the inconsiderable profit made by them.

A school of mining, in imitation of that at Freiberg, was established at Schmeinitz in 1760, which has five professors and about 200 students, who are all educated free of cost, several of them being farther furnished with an annual donation of from £20 to £30, to assist in their maintenance. It is believed, however, that this school is, in respect of science and practical knowledge, far behind that of Freiberg, and most other mining schools. It has a pretty good library, but its collection of minerals is very inferior. (*Paget's Travels in Hungary*, l.)

**SCHENECTADY**, co. N. Y. Situated towards the E. part of the state, and contains 200 sq. m. Watered by Mohawk river, along which are extensive and fertile flats. The railroads from Albany to Utica, from Troy to Schenectady, and from Schenectady to Saratoga springs, pass through it. It contained in 1840, 10,808 neat cattle, 18,094 sheep, 13,063 swine; and produced 13,113 bushels of wheat, 52,278 of rye, 62,597 of Indian corn, 41,288 of buckwheat, 100,524 of barley, 216,968 of oats, 240,535 of potatoes, 4423 pounds of sugar. It had 45 stores, two furnaces, seven fulling-mills, two woollen factories, one cotton-factory with 2000 spindles, one flouring-mill, eight grist-mills, 23 saw-mills, one oil-mill, four tanneries, one brewery, one printing-office, one weekly newspaper; one college, 230 students; three academies, 83 students; 57 schools, 1972 scholars. Pop. 17,387. Capital, Schenectady.

**SCHENECTADY**, city, and capital of Schenectady co. N. Y., 16 N.W. Albany, 15 S.W. Ballston Spa, 384 W. Situated on the S. bank of Mohawk river, and is a mile long by half a mile broad, laid out with considerable regularity on 20 streets, not always crossing each other at right angles. It contains a courthouse, jail and county offices in one neat building, a market, female academy, a lyceum, two banks, besides a savings bank, an insurance company, nine churches, a Dutch Reformed, Presbyterian, Episcopal, Methodist, Baptist, Cameronian, Universalist, Roman Catholic, and an African, 60 stores and groceries, one cotton-factory, two flouring-mills, two furnaces, one brewery, three tanneries, and various mechanical establishments, 1000 dwellings, and 6784 inhabitants. It is the seat of Union college, founded in 1795, which has a president and 10 professors or other instructors, 2125 alumni, of whom 308 have been ministers of the gospel, 213 students, and 13,000 vols. in its libraries. The commencement is on the fourth Wednesday in July. Its philosophical and other apparatus is very complete. The buildings, of which the two principal ones are 600 ft. apart, are each 200 ft. long and four stories high, on elevated ground east of the city, in a commanding situation. A centre building and other edifices are necessary to complete the original plan. Attached to the college are 250 acres of land, a part of which is designed to be laid out in groves and walks. The reputation of the institution is deservedly high.

**SCHIEDAM**, a town and port of S. Holland, cap. cant., on the Schie, a tributary of the Maas, 3 m. W. Rotterdam, and 1-m. N. from the Maas. Pop., in 1837, 11,815. It is well built in the usual style of Dutch towns, and has numerous churches, an exchange, a Latin school, a chamber of commerce and manufactures, and a branch of the Society of Public Good. "It is conspicuous both by the smoke which issues from the chimneys of its distilleries and the vast number of windmills by which it is environed. The whole horizon, in fact, in the direction of Schiedam, seems animated with life and bustle. Schiedam is the chief seat of the manufacture of Dutch gin, or Hollands. The quantity of that spirit produced here annually is very great, there being in the town as many as 100 distilleries, while many thousands of pigs are supported by the refuse of the malt employed in the manufacture. The gin of Schiedam is strong, but mild in flavour, and is usually sold in Holland for 9d. a bottle, or 4s. 6d. a gallon; the price of the gallon on its importation into England being increased by freight and duties to about 28s. or 30s." (*Chambers's Tour to Holland*, i.) The duty on Hollands, amounting to 22s. 6d. a gall., is, in fact, one of the most objectionable in our tariff. The entries of Hollands for home consumption, which formerly amounted to about 200,000 galls. were reduced, in 1840, to 15,992 galls.! We doubt, however, whether the consumption be really diminished. The exorbitancy of the duty has not taken away the taste for Hollands, but it has thrown the trade into the hands of the smuggler, to the injury alike of the legitimate trader and the revenue. Schiedam has rope-walks, building-docks, and a small though convenient port on the Schie. It sends one deputy to the states of the prov.

**SCHOHARIE**, co. N. Y. Situated toward the E. part

## SCHOODAC.

of the state, and contains 621 sq. m. Organized in 1795. Watered by Schoharie creek and its tributaries. It contains water limestone, bog iron ore and sulphur springs. The latter at Sharon are becoming much celebrated. It contained in 1840, 37,633 neat cattle, 71,238 sheep, 31,865 swine; and produced 72,871 bushels of wheat, 127,478 of rye, 67,690 of Indian corn, 80,609 of potatoes, 133,766 pounds of sugar. It had 81 stores, 30 fulling-mills, one woolen-factory, 36 grist-mills, 160 saw-mills, one paper-mill, 32 tanneries, one brewery, one printing-office; one weekly newspaper; five academies, 306 students, 199 schools, 9294 scholars. Pop. 32,353. Capital, Schoharie.

SCHOODAC, T. Rensselaer co., N. Y., 14 S. Troy, 7 S. by E. Albany, 362 W. Bounded W. by Hudson river, and drained by its small tributaries. It contains a Dutch Reformed church, 13 stores, three fulling-mills, two grist-mills, five saw-mills, 23 schools, 1133 scholars. Pop. 4125.

SCHOOLEY'S MOUNTAIN, forms a part of a granite chain, which extends N.E. and S.W. across the state of New-Jersey. It crosses the N.W. part of Morris co., and is 600 ft. above its base, and 1100 ft. above tidewater. Near its top is Washington t., Morris co., 56 N. Trenton, 218 W. is a mineral spring of some celebrity. It has a temperature of 56° of Fahrenheit; discharges 30 gallons an hour, and contains muriate of soda, muriate of lime, muriate of magnesia, sulphate of lime, carbonate of magnesia, silice, and carbonated oxyde of iron. The carbonic acid which the water contains, is altogether in a state of combination. It is a chalybeate of the purest kind, and beneficial in chronic diseases and general debility. The pure air and romantic scenery of this region, with its elevated position, render it a cool and pleasant place of summer resort. There are three well-kept hotels, besides several private boarding houses in the vicinity. It has generally a considerable number of visitors in the summer season.

SCHROON, T., Essex co., N. Y., 95 N. Albany, 25 S.S.W. Elizabeth. Watered by Schroon river, and contains Schroon lake, and other small lakes. It has two stores, two fulling-mills, two forges, two grist-mills, 56 saw-mills, two tanneries; 16 schools, 450 scholars. It supplies much valuable lumber. Pop. 1660.

SCHUYLER, co., Ill. Situated in the W. part of the state, and contains 360 sq. m. Drained chiefly by Crooked creek and its branches. It contained in 1840, 6760 neat cattle, 5246 sheep, 17,888 swine; and produced 36,800 bushels of wheat, 228,033 of Indian corn, 37,288 of oats, 23,545 of potatoes, 1424 pounds of tobacco. It had one commission house in foreign trade, 19 stores, nine grist-mills, 17 saw-mills, seven tanneries, two distilleries, one printing-office, one daily newspaper; 14 schools, 545 scholars. Pop. 6972. Capital, Rushville.

SCHUYLKILL, r., Pa., rises by three principal branches in Schuylkill co., and pursuing a S.E. course, it enters Delaware river, 7 m. below Philadelphia. It is about 140 m. long, and receives Tulpehocken creek from the W., and Perkiomen creek from the E., besides many smaller tributaries. To the wharves in western Philadelphia, where there is a depth of water 13 or 14 ft. at common tides, vessels of from 300 to 400 tons come. By means of canals and pools it is navigable from Fairmount dam above Philadelphia, 108 m. to Port Carbon in Schuylkill co., and on it an immense amount of coal is transported. The Union canal leaves the Schuylkill river near Reading, and following Tulpehocken creek, it passes over to Swatara creek, and terminates at Middletown on Susquehanna river; and is 82 m. long, thus completing the line of canal from Philadelphia to Pittsburgh, excepting the railroad of 36½ m. across the Alleghany mountains.

SCHUYLKILL, co., Pa. Situated toward the E. part of the state, and contains 660 sq. m. Drained by Schuylkill river and its branches. It is celebrated for immense quantities of anthracite coal which it contains, and exports. It contained in 1840, 6595 neat cattle, 6107 sheep, 7864 swine; and produced 23,744 bushels of wheat, 85,858 of rye, 45,971 of Indian corn, 26,731 of buckwheat, 75,810 of oats, 102,267 of potatoes. It had 99 stores, produced 431,370 tons of anthracite coal, had four furnaces, three forges, five flouring-mills, 33 grist-mills, 189 saw-mills, two powder-mills, 11 tanneries, one distillery, five breweries, four printing-offices, one bindery, four weekly newspapers; three academies, 127 students; 31 schools, 880 scholars. Pop. 29,053. Capital, Orwigsburg.

SCHUYLKILL, p. t., Chester co., Pa., 78 m. S.S.E. Harrisburg, 157 W. Bounded N.E. by Schuylkill river. Watered by French and Stoney creeks. It has six schools, 439 scholars. Pop. 2079.

SCHUYLKILL, t., Schuylkill co., Pa. It abounds with anthracite coal, and has four stores, two grist-mills, nine saw-mills; three schools, 150 scholars. Pop. 1234.

SCHUYLKILL HAVEN, p. v., Manheim t., Schuylkill co., Pa., 58 N.E. Harrisburg, 168 W. Situated immediately

## SCHWYTZ.

below the junction of the W. branch, with the main branch of Schuylkill river. The Schuylkill canal passes through it, and the West Branch railroad extends from it to the coal mines, at the foot of Broad mountain. It contains 150 dwellings and 990 inhabitants, mostly connected with the coal trade.

SCHWABACH, a town of Bavaria, circ. Middle-Franconia, 9 m. S.S.W. Nuremberg. Pop. 7000. (Berghaus.) It is walled, and pretty well built, having several Protestant churches, a synagogue, a mint, hospital, &c. It is the seat of various manufactures, the principal being that of pins; but there are others of hosiery, hats, gold and silver lace, tobacco, paper, printing types, and Jews' harps. It owes its distinction as a manufacturing town to the influx of emigrants from France, after the revocation of the edict of Nantes.

SCHWARTZBURG-RUDOLSTADT, a principality of central Germany, between lat. 50° 30' and 51° N., and about 11 W. long, inclosed by the territories of Saxe-Weimar, Cobourg, Meiningen, and Hildburghausen. Area, 403 sq. m. Pop. in 1837, 65,600, mostly Lutherans. It comprises a portion of the N. declivity of the Thuringian forest mountains, and is watered by the Schwartz, Ilm, and Saale. It does not yield sufficient corn for home consumption; timber and salt are its principal products. Iron, and a few other metals, are found; and woollen cloths, earthenware, glass, and other kinds of goods are manufactured. Since 1816, the government has been a limited monarchy; the representative body consisting of five deputies of the nobility, five of the citizens, and five of the rural pop. (Berghaus; but Hirschelmann says there are six of each.) The deputies are elected every six years. The parliament has the control of the public funds, and no new law can be adopted without its consent. The principal judicial courts are at Rudolstadt and Frankenhausen; from which appeal lies to the superior tribunal of Zerbst, in Anhalt-Dessau. Public revenue about \$208,000. The public debt has been in rapid process of diminution since 1821, and in 1836 it amounted to only \$80,152. This principality furnishes 539 men to the army of the German confederation. Chief towns, Rudolstadt the cap. on the Saale, with 4500 inhab.; and Frankenhausen with 5000 inhab., and a considerable trade in corn and wool.

SCHWARTZBURG-SONDERSHAUSEN, a principality of central Germany, between lat. 51° 12' and 51° 23' N., and about long. 11° E., inclosed by territories belonging to Prussia on every side except the W., where it joins a detached district of Saxe-Gotha. Area, 358 sq. m. Pop. in 1834, 54,080, mostly Lutherans. Surface undulating, and traversed by several affluents of the Unstrut, flowing in a W. direction. The lower part of the country yields more corn than is required for home consumption; the higher portion has extensive forests, and timber and potash are among its principal products. Iron is found; and forges and hardware factories are the principal manufacturing establishments though some woollen and linen goods are woven. The government is an unlimited monarchy. Appeal may be made from the judicial courts to the superior court of Zerbst in Anhalt-Dessau. Public revenue, in 1838, 99,936 dollars; expenditure, 94,411 ditto. Public debt, about 79,000 ditto. Contingent to the army of the Confederation, 451 men. Chief towns, Sondershausen, the cap., on the Wipper, with 3800 inhabitants; and Arnstadt (which see).

This principality, like the preceding, has one vote in the full diet of the German Confederation, and shares the 15th place and one vote in the committee with Oldenburg, and the Anhalt principalities. (Berghaus, &c.)

SCHWEIDNITZ, a town of Prussian Silesia, cap. circ. finely situated at the Riesengebirge mountains, on the Weistritz, in a fertile and beautiful country, 30 m. S.E. Breslau. Pop. about 9500. It is well built, and strongly fortified, the fortifications which had been dismantled by order of Napoleon in 1807, having been re-constructed since the peace on an improved plan, and rendered more formidable than ever. Its castle, formerly the residence of the Piast dukes, is now a workhouse. It has a magnificent Roman Catholic church, a fine town-house, a gymnasium, a house of correction, and the usual government offices of the cap. of a circ.: with manufactures of woollens, cottons, linens, &c. Near it is the castle of Fürstenstein, a fine antique feudal edifice, bought by the late king of Prussia.

SCHWERIN. See MECKLENBURG SCHWERIN.

SCHWYTZ, or SCHWEITZ (CANTON OF), one of the four Forest Cantons of Switzerland, which gave its name to the Confederation, in the central part of which it lies, between lat. 46° 50' and 47° 20' N., and long. 8° 30' and 9° E., having N. and N.E. the canton of Zurich and St. Gall, E. Glarus, S. Uri and Unterwalden, and W. Zug and Lucerne. Area, 338.3 sq. m. Pop. in 1837, 40,650. Nearly the whole surface is mountainous; the Rossstock rises about 8200 ft., and the Right about 6150 ft. above the sea. (Bruguiere Orographie.) The Rossberg, the fall of a portion

## SCIACCA.

of which in 1806 had most destructive effects, is partly in this canton and partly in that of Zug. The Sihl and the Moutta are the principal rivers: the former falls into the lake of Zurich, which forms most part of the N. boundary of the canton, and the latter into the lake of Lucerne, which limits the canton on the S.W. The Linth canal, between the lakes of Wallenstadt and Zurich, runs along its N.E. extremity. The soil and climate are more favourable to cattle-breeding than to agriculture, which is so much neglected, that in some valleys, according to Picot, the plough and flail are unknown! On the other hand; however, the inhabitants are distinguished by their superior treatment of live stock; the cattle of Schwytz are accounted among the best in Switzerland; and upwards of 20,000 head are annually sent from the S. side of the Alps to depasture, on the mountains during summer. Near Kussnacht, on the lake of Lucerne, the vine is grown; and apples, which produce cider, are tolerably abundant. The forests are extensive, and the supply of turf is all but inexhaustible: cotton thread, and this in very small quantity, is almost the only article of manufacture. The principal exports are cattle, cheese (sent mostly across mount St. Gothard), and timber. The transit trade is of little importance; and on account of the badness of the roads is mostly confined to the lakes and the navigable parts of the rivers.

The government is a pure democracy, the sovereign power residing in the people at large. The male population above 16 years of age form the general assembly of the canton, which meets every two years, on the first Monday in May, at Schwytz, to appoint, by a show of hands, the landamman, and other supreme officers, the deputies to the diet; and to deliberate on alliances, declarations of war, treaties of peace, &c. A council of high functionaries and 270 ordinary members, assemblies usually twice a year, to prepare instructions for the deputies, and hear their reports; and another council of 90 members is entrusted with the general executive power. The canton is divided into six districts, each of which has its own council and tribunal of primary jurisdiction, the decisions of which are final in cases not above the amount of 200 florins. The chief tribunal sits in Schwytz, and is composed of members, two thirds of whom belong to the districts of the cap, and the rest to the other districts of the canton. The inhabitants are exclusively Roman Catholics, subordinate to the bishop of Chur. Public education is more backward in this than in most other cantons; and it has no public library. At 16, every male inhabitant is enrolled in the militia, and Schwytz furnishes a contingent of 602 men to the army of the Confederation, in which it holds the fourth place immediately after the three directorial cantons. Schwytz, the cap. of the canton, at the foot of mount Mythen, 26 m. S.E.E. Zurich, has about 3500 inhabitants. (*Picot, Statistique de la Suisse; Ebel, Manuel, &c.; Inglis's Switzerland, passim.*)

SCIACCA, (an. *Thermæ Seluntinae*), a town and seaport of Sicily, intend. Girgenti, on the S. coast, nearly 20 m. S.E. the ruins of Selinuntum, and 30 m. N.W. Girgenti. Pop., in 1831, 12,668. The town, situated on the declivity of an eminence rising from the bay, is surrounded by an irregular wall, in tolerable repair, with bastions towards the sea, and the castle of Luna at its E. angle. At a distance it has a respectable appearance; but, notwithstanding its large churches, convents, and magazines, it appears to be poverty-stricken and wretched. Smyth says that it has not recovered from the influence of the long-continued and deadly feuds between the families of Luna and Perollo, in the 16th century. (*Swinburne's Travels*, ii. 249, &c.)

Some of the famous hot springs, whence the city had its ancient name, are a little without the walls towards the E. But the steam-baths, the construction of which was ascribed, in antiquity, to Dædalus, and now called the stufe of St. Calogero, are on the summit of an isolated mountain, about 3 m. N.E. of the town, and correspond exactly with the description of Diodorus Siculus. They continue, as of old, to be frequented by patients, and consist of several subterranean grottoes, or caverns, the outer one of which has seats excavated in the rock. (*Hoare's Classical Tour*, ii. 86; *Smyth's Sicily*, p. 218.)

Sciaccia is one of the principal ports on the S. coast of the island, for the exportation of corn, and the rock upon which the town stands is, in numerous places, hollowed out into *caricatori*, or corn cellars. In summer ships anchor at about 1 m. off town, in from 7 to 12 fathoms, on a bottom of sand and clay; but being exposed to every wind from the S.E. round to the W., it is not resorted to in winter, except by boats and flat-bottomed craft. (*Smyth's Ap pendix*.)

Agathocles, tyrant of Syracuse, famous alike for his great talents, perfidy, and cruelty, was a native of Sciaccia, where he was born anno 350 B.C. He was of low origin, his father being a potter banished from Reggio, his native city. (*Biographie Universelle*.) Fazelli, the historian of Sicily, was also a native of this town.

## SCIO.

SCILLY ISLANDS, a group of islands, belonging to England, lying about 30 m. W. by S. from the Land's End, supposed by some to be the *Cassiterides*, or tin islands of the ancients. There are supposed to be, in all, about 150 islands and rocks, but there are only about half a dozen of any importance. St. Mary's, the largest, is said to contain about 1640 acres: the entire area of the group, as given in the population returns, is only 5570 acres. In 1831, they had a population of 2465. From their situation they necessarily have a mild equable temperature; and though fogs be common, the islands are very healthy. They produce good barley, rye, and oats, the latter being principally of the variety called *pillar*, or *avena nuda*. Potatoes are extensively cultivated. Horses and cattle small; sheep numerous, and of good quality; sea-fowl are found in great numbers, and partridges are, also, abundant. There are shrubs, but few or no trees. The inhabitants used to make great quantities of kelp; they are also expert fishers, and act as pilots to such ships as require their services. As already stated, the islands are generally supposed to be the *Cassiterides*, or tin islands of the ancients. But it is most probable that the W. extremity of Cornwall was included under this term; and, at all events, there is now no trace of tin, nor, indeed, of mines of any sort, in any of the islands. Hough-town, the capital of the islands, and their only town, is situated on the W. side of St. Mary's. It has a pier and a custom-house, and is a place of some consequence, being defended by a fort, called the Star castle, with a small garrison.

Persons accused of felonies are sent to Cornwall to be tried at the county assizes; but all minor offences and civil suits are tried by a court consisting of twelve of the principal inhabitants, delegated by the proprietor of the islands under the duchy of Cornwall, of which they form a part. This court sits once a month at Hough-town, St. Mary's, for the trial of cases. Vacancies in it are usually filled up by election; but it may be dissolved and a fresh appointment made by the proprietor.

The position of the Scilly islands renders them of very considerable importance in navigation. Lying at the point of junction, as it were, of the English and St. George's channels, ships passing from the one to the other, should the wind be unfavourable, often take shelter under these islands: it is sometimes, also, convenient for vessels to take shelter among them, rather than beat about at sea in bad weather; and a strong gale from the E. usually brings in numerous vessels. There are four principal sounds or roads among the islands, exclusive of smaller inlets. Of the roads, St. Mary's, between the islands of St. Mary and St. Agnes, is the best; but it is generally the safest plan in entering it, or any of the other roads, to make use of pilots. The latter are always in readiness to offer their services.

A lighthouse of the first class was erected on St. Agnes island, the most southerly of the group, in 1680, the lantern of which is elevated 138 ft. above high water mark. It is, according to the ordnance survey, in lat. 49° 53' 38" N., long. 6° 19' 23" W.

But notwithstanding the warning given by this light these islands have been the scene of numerous shipwrecks. The most distressing of these catastrophes took place on the night of the 23d of October, 1707, when the fleet from the Mediterranean, under the gallant Sir Cloudesley Shovel, got foul of the islands: the ship bearing the flag of the admiral and two other line-of-battle ships struck upon the rocks near the lighthouse, and were totally lost, with every soul on board. Some of the other ships were in extreme danger. It is not exactly known how the accident arose. The night was dark, but there was very little wind, otherwise the whole fleet must have been destroyed. It is probable that the light had been mistaken for another. The body of the admiral was cast ashore, and buried in St. Mary's; but it was soon after removed to Westminster Abbey, where a monument, creditable to the liberality, though not to the art of the nation, was erected to his memory. (See *Borlase's Account of the Scilly Islands*, 4to, Oxford, 1756; *Cornwall*, in *Lyson's Magna Britannia*; *Burnet's Hist. of His Own Times*, iv., 205, ed. 1733; *Smollett's England*, anno 1707, &c.)

SCIO (an. *Chios*), a celebrated and beautiful island of the Ægean sea, belonging to the Turks, about 5 m. W. from cape Bianco, in Asia Minor; Chio, its chief town, on its E. side, 53 m. W. Smyrna, being in lat. 38° 22' 30" N., long. 269° 9' E. It is about 32 m. in length N. and S., and, where broadest, about 18 m. across. Though for the most part mountainous and rugged, it has a considerable extent of level and gently sloping ground. Its climate is mild and delightful; and it has numerous fine springs and rivulets. Dr. Clarke says it is the "paradise of modern Greece; more productive than any other island, and yielding to none in grandeur." (III., 236 8vo ed.) In antiquity and in modern times, down to the late dreadful catastrophe, it was cultivated with the greatest care and assiduity. Owling

## SCIO.

to the limited extent of the arable land, and the greater suitability of the soil for other crops, the principal part of the corn required for the use of the inhabitants has always been brought from the ports on the Black sea and other marts. The staple articles of produce are silk, mastic, figs, lemons and oranges, wine, oil, cotton, almonds, &c. Its mineral wealth has been but little explored, but it contains abundance of marble, jasper, and a kind of green earth, resembling verdigris.

The wines of Chios, especially those produced in the district of *Arvisia*, were among the most esteemed of any in the ancient world. They have been celebrated by Virgil (*Ecl. v.*, lin. 72); and Horace asks

"Quo Chium pretio cadum  
Mercemur?"

According to Pliny, Chian wine was served up by Julius Cæsar at his most splendid entertainments; and it is thought worthy of notice, that Hortensius left a very large stock of this famous beverage to his heir. (*Hist. Nat.*, lib. xiv., cap. 14, 15.) The wine of the island still preserves some portion of its ancient celebrity; but the produce is scanty, and it is said to be injured by transportation.

Mastic, the method of gathering which is fully described by Tournefort (i., 376), is the most esteemed of the modern products of the island, being in great request among the Turkish ladies. All the mastic trees are supposed to be the property of the grand seignor, or rather of the sultan's mother, of whom this island is the peculiar demesne. But formerly the trees were left, with the island itself to the inhabitant, with but little interference on the part of the Turks, on condition of their annually furnishing a certain quantity of mastic to the Cadi for the use of the imperial seraglio, and paying a moderate capitation tax. And it is to the comparative exemption it has thus enjoyed from Turkish despotism and rapacity, that the sprightly vivacity of its inhabitants, and their greater industry, enterprise, and prosperity, are to be ascribed. Besides its chief city, the island had, previously to its late calamity, several considerable towns and numerous villages. The population which was very dense, has been variously estimated at from 80,000 to 150,000; of whom from 30,000 to 35,000 belonged to the capital.

The latter on the E. coast of the island, constructed by the Genoese, along the sea shore at the foot of the mountains (an. *Pellenai Montes*), on the slope of which stood the ancient city, is the cleanest, handsomest, and most desirable town, as a residence, in the Levant. It is well built, and extended, previously to 1822, with its gardens and villas, for about 4 m. along the sea. Its houses are commodious, and its shops and warehouses were then well furnished; it had numerous Greek and Roman Catholic churches, with schools, and even a college. The silk manufacture was carried on upon a large scale, and the velvets, damasks, and other silk goods of Scio, were highly esteemed. It had been for many years the principal *entrepôt* of the archipelago, and carried on an extensive and flourishing commerce. Sonnini says that the shallowness of its harbour, which was suitable only for the smaller class of vessels, was the only drawback on its prosperity; but this defect was to a great extent compensated by the excellence of its roadstead, which affords secure anchorage, and every facility for getting to sea. (*Tournefort*, i., letter 9; *Sonnini's Travels in Greece and Turkey*, cap. 37; *Walpole's Journal*, quoted by Clarke; *Carné's Letters from the East*, &c.)

Unhappily, however, these statements apply to the past more than to the present state of this fine island. In 1822, during the progress of the revolutionary struggle in Continental Greece, a force landed in the town, and a part of the inhabitants, who had hitherto pursued a strict neutrality, having joined them, they attacked and took the citadel, defended by a small Turkish garrison, which they put to the sword. A strong Turkish force having landed immediately after, took the most desperate revenge for the outrage that had been committed. The island was given up to indiscriminate pillage and massacre. The inhabitants, taken by surprise, and enervated by long peace and prosperity, offered no effectual resistance to their murderous assailants. It is said that above 30,000 individuals were put to the sword; that as many more, principally women and children, were carried off and sold as slaves; and that the capital was converted into a heap of ruins, and every part of the island laid waste! These statements are most probably a good deal exaggerated; but still there cannot be the shadow of a doubt that the visitation was of the most destructive and tremendous description. Whether Scio be ever destined to recover from this wholesale butchery is problematical; but it were absurd to expect that it should revive so long as it remains in the deadly grasp of the detestable barbarians who have perpetrated such atrocities. Such of the principal inhabitants as were fortunate enough to escape being massacred, immediately fled from the island;

## SCOTLAND.

and that commerce which had been its principal support has been transferred to Syra, Napoli, and other places. (*Carné's Letters from the East*; *Tract on the Greek Revolution*, by the Rev. T. S. Hughes, Lond., 1822, &c.)

In antiquity, Chios gave birth to many distinguished individuals; among whom may be specified Ion, the tragic poet, Theopompus, the historian, Theocritus, the sophist, and Metrodorus, the physician and philosopher. But Chios aspires to a still higher honour, that of being the native country of the first and greatest of poets.

"The blind old man of Chio's rocky isle,"

of whom Velleius Paterculus has justly as well as forcibly said—*quod neque ante illum, quem ille imitaretur; neque post illum, qui eum imitari posset, inventus est.* (Lib. i., cap. 5.) And it is admitted by the ablest critics that, of all the cities that contended for the honour of having been the birth-place of Homer, the claims of Chios and Smyrna were apparently the best founded.

The Chians were for some time, in possession of the empire of the sea. They are said to have been the first who traded in slaves; and the oracle, informed of the fact, declared that it had drawn upon them the anger of heaven; one, says Barthelemi, of the noblest, but at the same time, least regarded answers the gods have communicated to man. The Chians took a prominent part in the great revolt of the Ionian cities against the Persians, by whom they were afterwards reduced, and punished with great severity. At a subsequent period we sometimes find them on the side of the Athenians, and sometimes on that of the Lacedæmonians.

"Moderate in prosperity, blameless towards their neighbours, and using their increasing wealth and power for no purpose of ambition, but directing their policies merely to secure the happiness they enjoyed," the Chians were among the most respectable of the Greek states. (*Mitford*, lib. ii., 316, 8vo ed.)

They became the allies of Rome during the wars with Mithridates. After innumerable vicissitudes Scio came, in the middle ages, into the possession of the Genoese, who, as already stated, built its capital. It was taken by the Turks in the 16th century. (Exclusive of the authorities referred to above, see *Ancient Universal History*, viii., 296, &c., 8vo ed.; *Cellarii Geographia Antiqua*, ii., 19; *Voyage d'Anacharsis*, cap. 73, &c.)

SCIOTO, river, O., is the second in magnitude of the rivers which have their whole course in the state: It rises in Hardin county, and flowing E. and then S. it enters the Ohio river at Portsmouth. It is 160 m. long, and receives the Olentangy or Whetstone river at Columbus, a large branch from the N. It is boatable in high water as far as the Little Scioto in Marion county. The Ohio canal strikes this river about 10 m. below Columbus, and follows it to its mouth. It flows through a highly fertile country.

SCIOTO, county, O. Situated in the S. part of the state, and contains 600 sq. m. Bounded S. by Ohio river. Watered by Scioto river and its branches. The Ohio canal passes through it, and enters the Ohio river at Portsmouth. It contained in 1840, 7547 neat cattle, 9502 sheep, 11,077 swine; and produced 44,370 bushels of wheat, 322,360 of Indian corn, 1000 of barley, 81,577 of oats, 14,960 of potatoes, 7049 of sugar. It had five commercial and four commission houses in foreign trade, 44 retail stores, four flouring mills, 15 grist-mills, 15 saw-mills, two tanneries; 42 schools, 1243 scholars. Pop. 11,192. Capital, Portsmouth.

SCIPIO, p. t., Cayuga co., N. Y., 8 m. S. Auburn, 164 m. W. Albany, 329 W. Bounded E. by Owasco lake. Drained by Salmon river. It contains two Baptist churches, five stores, one fulling-mill, two grist-mills, two saw-mills; one academy, 36 students; 18 schools, 828 scholars. Pop. 2225.

SCIPIO, t., Seneca co., O. It has three stores, one grist-mill, two saw-mills; eight schools, 197 scholars. Population 1556.

SCITUATE, p. t., Plymouth co., Mass., 26 m. S.E. by S. Boston, 454 W. Bounded N.E. by Massachusetts bay, S.E. by North river. The harbour is small and of difficult access, and has a number of coasting and fishing vessels, with a village of about 30 dwellings. The town has seven churches, two Unitarian, a Congregational, two Methodist, a Baptist, and a Universalist, 16 stores, nine grist-mills, nine saw-mills; 21 schools, 1025 scholars. Pop. 3886.

SCITUATE, t., Providence co., R. I., 12 m. W. Providence. Watered by the N. branch of Pawtuxet river. It contains three churches, two Congregational and a Baptist, a bank, 15 stores, one fulling-mill, one woollen factory, 11 cotton factories with 19,654 spindles, six grist-mills, six saw-mills; two academies, 62 students; 19 schools, 864 scholars. Pop. 4090.

SCOTLAND, one of the secondary European kingdoms, comprising the northern and smaller portion of the island of Great Britain, and forming one of the three great divisions of the united kingdom of Great Britain and Ireland,

# SCOTLAND.

between lat. 54° 38' and 58° 40' 30" N., and long. 10° 46' 30", and 6° 3' 30" W., or, including the Hebrides, 7° 44' W. It is surrounded by the ocean on all sides, except on the S., where it is separated from England by the Solway frith, the Cheviot hills, and the Tweed. Its greatest length, N. to S., from Dunnet Head to the Mull of Galloway, may be

estimated at about 280 m.; its breadth is very unequal; varying from 32 m., between Alloa on the frith of Forth and Dumbarton on the Clyde, to 140 m. between Buchaness point in Aberdeenshire and Rowanmoun point in Ross-shire. Its subdivisions, area, and population, are as follow:

Counties.	Total Area in sq.m.	Area of Land in Acres.	Area of Lakes, &c. in Acres.	Pop. in 1831.	Pop. in 1841.	Acres of Land to an Individual.

Scotland is extremely irregular in its surface and outline, and, compared with England, may be said to be sterile, rugged, and mountainous. This is so much the case, that, estimating the whole extent of the country, inclusive of islands and lakes, at 19,000,000 acres, perhaps not more than 6,000,000, or, at most, a third part, are arable; while the surface of England and Wales, amounting to 37,000,000 acres, comprises at least 29,000,000 acres, or more than three fourths, of arable land. With the exception, indeed, of a few rich alluvial tracts, there are no extensive valleys in Scotland; its surface, even where least mountainous, being generally varied with hill and dale. It is divided by the frith of Clyde, loch Lomond, and the Grampians, into the two grand divisions of the Highlands and Lowlands; the former comprising the N., and the latter the S. part of the country. The Highlands again are divided into two unequal parts by the remarkable narrow and deep valley through which the Caledonia canal has been constructed. The arable lands in the Highlands are mostly confined to the E. parts of Ross and Cromarty, a slip along the S. side of the Moray frith, and the E. parts of Aberdeenshire. With these exceptions, the far greater part of the Highlands consists of mountains, moors, and morasses; and in various parts, especially along the W. coast, they are extremely bleak and barren. In Caithness there is a considerable extent of low ground, but it is mostly moor. The lowland division of the country comprises, also, a large extent of mountainous districts; but the mountains are not so lofty nor so bleak and rugged as in the Highlands, and there is a much greater extent of low fertile land.

The mountains of Scotland run generally in chains from S.W. to N.E., though there are many detached groups not following this distribution. They are frequently rocky,

bare and precipitous; though mostly covered with heath. The principal and most celebrated chain is that of the Grampians, which comprises nearly all of the highest of the Scottish mountains, except Ben Nevis. This stony girdle extends across the island, from the arms of the sea, called loch Elive and loch Fyne in Argyshire, E. by N. to Stonehaven on the E. coast, and Echt in Aberdeenshire, forming, as already stated, in the greater part of its course, the line of demarcation between the Highlands and Lowlands, and separating the waters which flow into the Forth, Tay, and South Esk, from those which join the Spean, Spey, and Dee. Its most elevated summits are near the head of the Northern Dee. Ben Macduib, 11 m. N.W. Braemar, lat. 57° 6' N., long. 3° 37' W., 4390 ft. above the level of the sea, is at once the culminating point of the Grampians, and the highest of the British mountains, being 20 ft. higher than Ben Nevis which was long considered as the highest of the Scotch mountains, and 819 feet higher than Snowdon in Wales. The other principal summits in the Grampian chain are Cairnruit, 4245 ft.; Cairngorm, 4095 ft.; Ben Lawers, 3945 ft.; Ben Avon, 3967 ft. in height, &c. Ben Lomond, in Stirlingshire, 3195 ft. in height on the E. side of loch Lomond, the best known of all the Scottish mountains, also belongs to this chain. The Grampians are distinguished by their sterility, and desolate aspect; their sides, in many places, exhibiting vast perpendicular ledges of rock. The principal passes through the chain are those of Aberfoyle, Leni, Glenshie, and Killiecrankie.

Ben Nevis, alluded to above, lies to the N.W. of this chain, in about 56° 49' 30" N. lat., long. 5° W., being separated from the Grampians by the moor of Rannoch. It rises to an elevation of 4370 ft. above the sea. Its summit, which commands a magnificent view, extending from the

## SCOTLAND.

Paps of Jura to Cuchullin in Skye, Carlingorm, Ben Macduh, &c., is during the greater part of the year covered with snow. From Ben Nevis N. to loch Broom, several mountains rise to nearly 4000 ft. in height; and the country is so thinly inhabited that frequently for many miles not a house is visible. But from loch Broom to cape Wrath the surface diminishes considerably in elevation, and though bleak in the extreme, is, for some distance from the W. coast inland, not more than about 1000 ft. above the sea.

In the Lowlands, the Sidlaw and Ochill hills, which run parallel to the Grampians, nowhere rise to 2500 ft. Indeed, Broadlaw, on the N. border of Dumfriesshire, the highest mountain in the S. of Scotland is only 2741 ft. above the sea. The more elevated tracts in the Lowlands, including the mountains of Roxburgh, Dumfries, Peebles, Selkirk, and Lanark shires, are frequently smooth, and covered with a fine sward, affording good pasturage for sheep.

Though the valleys and level tracts in Scotland be few and of limited extent, as compared with those of England, some of them are extremely fertile, and they are mostly well cultivated. The carse of Stirling and Falkirk, on the banks of the Forth; that of Strathearn and Gowrie, on the Tay; and the merse of Berwickshire, all low alluvial tracts, are not inferior in point of productiveness to any lands in the empire. Teviotdale, or the low lands along the Teviot; Tynedale, or the low lands along the Tyne, in E. Lothian; the How of Fife, or the low ground along the Eden, in Fifeshire; and Strathmore, or the low grounds between the Grampian mountains and the Ochill hills, consist, for the most part, of rich foamy soil, and are extremely well farmed. It should also be observed that the general inequality of the surface makes the lower parts of the country appear to be much less fruitful than they really are: the hollows between the small eminences being often extremely fertile, and the eminences themselves, even when they are unsusceptible of tillage, frequently furnish excellent pasture. This is particularly the case in the S.W. counties: large tracts of lands in Galloway and Dumfriesshire that let from 20s. to 30s. an acre and upwards, would appear to one not well acquainted with the country and its capabilities, worth little or nothing. A good deal of level, but generally high-lying land, especially in the Highlands, and in some parts also of the Lowlands, consists of moors; having for the most part a clay subsoil, covered with peat earth, or moss impregnated with water, not unlike the bogs of Ireland. Many of these moors are of very considerable extent; the largest, probably, as well as the most desolate and worthless, is the moor of Rannoch, to the S. of Ben Nevis, comprised in the shires of Argyle, Perth, and Inverness.

**Rivers.**—Scotland has numerous rivers, several of which are of considerable size. They differ from those of England in being more precipitous, rapid, interrupted by cataracts, and subject to sudden overflows. Except the Clyde, the others mostly disembogue on the E. coast. The Tweed, which rises on the confines of Dumfriesshire and Lanarkshire, falls into the North sea at Berwick, after a course of about 100 m., only a small portion of which is navigable. Proceeding northwards, the next river of any considerable magnitude is the Forth, which rises on the E. side of Ben Lomond, and has in general an easterly, but very tortuous course to Kincardine, where it unites with its great estuary, or rather arm of the sea, the frith of Forth, the *Bototria* of Tacitus. It receives on its N. side, the Teith and Allan, and from the S., the Devon, &c.; Aberfoyle, Stirling, and Alloa are on its banks. The Forth is rapid for some considerable distance from its source; but during the greater part of its course it runs through a flat country with many windings: vessels of 300 tons ascend the Forth as far as Alloa, and those of 70 tons ascend to Stirling. It is connected with the Clyde by the great canal from Grangemouth to Dunglass. The Tay is the largest of Scotch rivers, and is supposed to carry more water to the sea than the Thames, or any other river in Great Britain. (See Tay.) The N. and S. Esks, Dee, Don, Spey, and Findhorn, all discharge themselves on the E. coast; and in the N. division of the Highlands, are the Nairn, Ness, Beaulie, &c. The Spey is one of the largest rivers in Scotland, and certainly the most rapid. It rises in loch Spey, and pursues mostly a N.E. course to the Moray frith, which it enters after a course of about 96 m. It receives no large tributary, but innumerable mountain torrents, in consequence of which it is subject to frequent and destructive inundations. The Clyde, the *Glotta* of Tacitus, though not the largest, is decidedly the most important Scotch river in a commercial point of view, Lanark, Hamilton, and Glasgow being situated on its banks. It rises in the highest part of the Lowlands, close to the sources of the Tweed and Annan; and runs at first N., but afterwards generally N.W. to the frith of Clyde, with which it unites 7 or 8 m. below Glasgow, after a course of between 70 and 80 m. It receives from the S. the Douglas, Nethan,

Avon, Cart, &c., and from the N. the Helvin, Leven, &c. The Clyde has been rendered navigable, for vessels of 400 tons, as far as Glasgow. (See Clyde and Glasgow.) The Southern Dees, Nith and Annan, into the Solway frith, are the only other streams it is necessary to notice.

The lochs, or fresh-water lakes of Scotland, are numerous, and highly distinguished for their picturesque scenery. loch Lomond (which see *ante*, p. 185) is the largest lake in Great Britain; being about 24 m. in length, and from 7 m. to 7½ m. across in the broadest part. It is estimated to cover about 25,000 acres. Lochs Awe, Ness, Maree, Tay, Shin, &c., in the shires of Argyle, Ross, Perth, and Sutherland are among the other principal lakes. Most of these are long, narrow, and deep, filling up the bottoms of the valleys between the mountains. They abound with trout, perch, pike, &c.; but loch Leven, in Kinross-shire, is the only lake that yields any revenue to its proprietors.

The coasts of Scotland are mostly bold and rocky; and on the W. side in particular, they are very much indented by arms of the sea, termed friths and lochs, that extend far inland, and, for the most part, carry deep water to their very head. These friths and inlets are of considerable importance in a commercial point of view, especially as few of the rivers are navigable to any great distance inland. On the E. coast are the friths of Forth and Tay, which, especially the first, are of great importance, as affording facilities of communication to the richest districts of the country; N. of the latter, on the same coast, are the friths of Moray, Dornoch, Cromarty, &c.; on the W. coast, the frith of Clyde, and lochs Broom, Torridon, Linnhe, Fyne, &c., deeply indent the country. The harbours of Leith, Grangemouth, Queensferry, Bruntisland, &c., are in the frith of Forth, and those of Dundee and Perth in the frith of Tay. Between the Tay and Buchan Ness are the harbours of Montrose, Aberdeen and Peterhead: the frith of Cromarty, N. of Buchan Ness point, is unquestionably the best asylum for shipping on the E. side of Great Britain, and one of the finest, indeed, that is anywhere to be met with.

Between the latter and Duncansby head are the small harbours of Wick, St. Clair's bay, &c. From cape Wrath to the Clyde, the narrow arms of the sea, though deep and secure, are little frequented. The ports of Greenock and Glasgow are the principal in the frith of Clyde, and enjoy an extensive trade; but Lamlash bay, on the E. side of the Isle of Arran, is the best harbour in this neighbourhood. There are some pretty good harbours on the coasts of Wigton and Kildubright shires. The principal headlands are St. Abb's head, Fife Ness, Peterhead, Tarbet Ness, and Duncansby head, on the E.; Dunnet head and cape Wrath, on the N.; Ru-Rea, Ardnamurchan, and the Mulls of Oe and Cantire, on the W.; and the Mull of Galloway and Burrowhead on the S. coast.

There are few or no islands off the E., but many of large size lie contiguous to and off the W. coast. These are mostly included under the Hebrides (which see). The islands of Orkney and Shetland (which see) lie off the N. coast of Scotland; the Orkneys, the nearest, being separated from the mainland by the Pentland frith, 6 m. across.

**General Aspect of the Country.**—The finest parts of the low country of Scotland usually want the rich luxuriance of an English landscape. Within the last sixty or seventy years a great deal has, no doubt, been done in the way of raising plantations; and the strictures of Dr. Johnson, as to the deficiency of wood, would at present be quite inapplicable, however just they may have been when dictated. In Scotland, however, plantations are not spread generally over the country, but are mostly congregated in the neighbourhood of gentlemen's seats, while in many large tracts they are wholly wanting. In most parts, too, we look in vain for those hedgerow trees that give so much of a woody appearance to the southern part of the island. Generally, also, the enclosures are a good deal larger than in England; and the fences being either stone walls (dykes) or hedges, that occupy only a small space of ground, having little of the breadth and roughness of those of England, the country, however well farmed, seems to an Englishman deficient in vegetation and verdure, and cold and comfortless. On the other hand, however, the succession of new objects presented by the unevenness of the surface, the rude grandeur of the mountains that everywhere bound the prospect, and the striking contrast frequently afforded between rich, well cultivated lowgrounds, and the contiguous high barren ridges, take from the Scottish landscape the tameness and monotony that prevail in many parts of England, and render it singularly picturesque and impressive.

**Climate.**—Scotland has a more rigorous climate than England; but owing to the proximity of most parts of the country to the sea, and the numerous friths and deep bays by which it is penetrated, it is less severe than might, from the latitude, be expected. The mean annual temperature of places near the level of the ocean, throughout the country, averages about 46½° Fahr. At Edinburgh, which is

## SCOTLAND.

from 300 to 400 ft. above the sea-level, the mean temperature of the year is 47·8°, which may be taken as that of the inland parts generally in the S. of Scotland, the mean of the coldest month being 38·3°, and the warmest 59·4°. A great deal of rain falls in Scotland, but very unequally; for on the E. coast it ranges from 22 to 23 in.; whereas on the W. coast and in the Hebrides, it ranges from 30 to 44 in. The average fall of rain in Edinburgh is about 23½, and in Glasgow about 29·65 in. Excess of humidity, and the occurrence of heavy rains in August, September, and October, and of cold, piercing E. winds, especially along the E. coast, in the months of April, May, and the first half of June, are the great drawbacks on the climate of Scotland. It is rare, indeed, that the crops suffer from heat or drought; but they frequently suffer from wet and from violent winds, especially in the W. part of the country. The climate is however highly salubrious, and favourable alike to longevity, and to the development of the physical and mental powers.

Scotland is supposed to possess about 3230 indigenous plants, of which 870 are dicotyledonous, 280 monocotyledonous, and 2080 cryptogamic. Most of the forest trees of England are met with. In the Highlands are several extensive forests of pine (*Pinus sylvestris*), covering the valleys, and ascending to an elevation of 2500 feet up the mountains. Apples, pears, plums, peaches, apricots, &c., ripen in the open air as far N. as Iweriness, and in warm sheltered situations to the N. extremity of the kingdom. The sea-weed, which grows in great profusion round the coasts, used to be extensively manufactured into kelp, and the business, though much diminished, in consequence of the preparation of *soude factice*, (artificial soda), is still carried on to a considerable extent.

The wild animals of Scotland are mostly the same as those of England, including the stag, wild roe, hare, rabbit, fox, badger, otter, wild cat, hedge-hog, &c.; though some of these are becoming scarce. The wolf and beaver, formerly natives of the country, have been long extinct; and the only existing remains of the *urus*, or native breed of cattle, are restricted to a few preserved in the duke of Hamilton's park, near Hamilton. One of the domestic animals peculiar to Scotland is the *colley*, or true shepherd's dog, and many specimens of the unimixed breed are extant. Several species of eagles, and other birds of prey, and aquatic birds in great numbers, inhabit the rugged coasts, and the pheasant, partridge, black-cock, grouse, and partridge abound inland. The noble species of game called the capercaillie, or cock of the wood (*Tetrao Urogallus*), was formerly abundant in Scotland; but it appears to have been exterminated about 1760. Within these few years, however, it has been reintroduced by the marquis of Breadalbane, the earl of Fife, and other extensive forest proprietors; and there can be no doubt that, if properly protected, it will succeed very well; but it is too obvious and too tempting a mark for the poacher to maintain itself. Scotland has also most of the English singing-birds, except the nightingale, which is rarely, indeed, found N. of the Trent. The fish are similar to those of England: the rivers teem with the finest salmon, trout, &c.; and the salmon fisheries of the Tay, Tweed, Forth, Spey, &c., are highly valuable.

**Geology.**—A line drawn in a N.E. direction from the mouth of the Clyde to Stonehaven, on the E. coast, separates the two principal geological regions. The first, to the N. of that line is mostly composed of primary rocks, granite, gneiss, mica-slate, covered at the foot of the mountain chains with beds of conglomerate and red sandstone; whereas the second, to the S. of the above line, is the region of transition formations, in which rocks of that kind mostly prevail, overlain in various parts by trap, red sandstone, and coal beds: granite is, however, largely developed in the S.W. part of the kingdom, in the stewartry of Kirkcubright, at Crifell, and in the Cairnsmuir range. Little if any coal exists in the primary division of the country; few metals are discovered there, and its most important mineral products are building-stone and roofing-slate. Some lead mines are, however, wrought at Strontian in Argyshire; and in Invernesshire plumbago of inferior quality has been found, imbedded between laminae of mica slate. None of the secondary calcareous formations, so extensively prevalent in England, have been found to exist in Scotland, nor any tertiary formations.

**Coal and Iron.**—The great coal district of Scotland may be considered as bounded on the N. by a line drawn from the mouth of the Tay, to the N. extremity of the isle of Arran, and on the S. by another line drawn from St. Abb's head to Girvan, in Ayrshire. These limits comprise a band of country, in which are several large coal-fields detached from each other, the most valuable extending along the banks of the Forth, with a breadth of from 10 to 12 m. on either side of the river. The Edinburgh coal-field, to the S. and E. of that city, occupies an area of 80 sq. m.; and from Bathgate the coal deposits extend W. to Glasgow and Paisley, and have, in fact, been the principal

cause of the wonderful progress made by the former in manufactures, wealth, and population. There are several small detached coal-fields in Ayrshire and some of the other of the S. counties. Iron is of frequent occurrence in the coal districts, especially in Lanarkshire, where the ores are of the very best quality; and the iron trade of that county, and of Scotland generally, has latterly increased with unexampled rapidity, and is now of the greatest importance. So much so is this the case, that, while in June, 1835, there were in Scotland only 29 furnaces in blast, estimated to produce 75,000 tons of iron, it appears from the following statement, obtained from private sources, on which every reliance may be placed, that in June, 1840, there were 61 furnaces in blast in Scotland, producing at the rate of 239,500 tons a year.

Works.	Blast Furnaces.	Tons Pig-iron per Week.
<b>Lanarkshire:</b>		
Clyde . . . . .	5	375
Govan . . . . .	4	280

“Abstract Account of Pig-Iron made in Scotland in 1840:—

	Furnaces.	Tons per Week.	Tons per Annum.
Lanarkshire . . . . .	50	4,150	209,000
Ayrshire . . . . .	4	200	10,000
Renfrewshire . . . . .	1	50	25,000
Stirlingshire . . . . .	4	240	12,000
Clackmannanshire . . . . .	2	120	6,000
<b>Total</b> . . . . .	<b>61</b>	<b>4,790</b>	<b>239,500</b>

“The whole of the above iron is made by means of heated air with the exception of one furnace at Carron.

“It will be observed that the weekly quantity is multiplied by 50 only, the average stoppages being equal to about two weeks.

“There are several new furnaces building, so that by next summer (1841) there will probably be ten additional in blast.

“The bar-iron trade of Scotland is in its infancy. Dundyvan works have just been completed, and are now in full operation, making 200 tons per week.

Govan is not yet completed; but by the end of the year will also make 200 “  
Munkland is in a similar situation as Govan, . . . . . 200 “  
Muirkirk makes about . . . . . 40 “

**Total** . . . . . 640  
Equal to 32,000 tons a year of rolled bars, boiler plates, sheets and rods.”

Gold has been occasionally found in the streams near the lead hills in Lanarkshire, and elsewhere; and silver has been met with in various places; but the precious metals are not so abundant as to defray the expense of seeking them.

Next to iron, lead and copper are the most valuable metals. The mines of Wanlockhead and Leadhills, on the borders of Lanarkshire and Dumfriesshire, furnish annually about 700 tons of lead, but the produce varies considerably. Small quantities of cobalt, bismuth, manganese, &c., are met with. Scotland produces marble in great variety, and of very superior quality, slates, excellent building stone, and many species of gems. Brick is but little used in building in Scotland; the houses being everywhere, almost of stone.

**Fisheries.**—The salmon fishery is the most important of what may be called the domestic fisheries; and since 1790 London has received the greater part by far of her supply of salmon from Scotland, considerable quantities being also sent to Liverpool. The fish are brought up, even in the hottest weather, quite fresh, being packed in pounded ice. Previously to the introduction of this plan, salmon used to be consumed principally in the country where it was taken; and, in some parts of Scotland, domestic servants used to stipulate that they should not be obliged to dine on salmon more than three or four times a week. The salmon fisheries seem to have attained their maximum value toward the end of last year, when the fisheries in the Tweed were let for £15,000 to £18,000 a year! and those of the Tay, Dee, Spey, &c., were proportionally valuable. But the

## SCOTLAND.

value of the Scotch salmon fisheries has, speaking generally, declined greatly of late years; in consequence partly and principally of a diminished supply of fish in the rivers, but, in some degree, also, from the greater facility of the communication between London and Liverpool, and the consequent importation of Irish salmon into the London markets. We have been fortunate enough to obtain from a source on which every reliance may be placed, the following

Account of the Quantity of Salmon packed in Ice imported into London, from Scotland, during each of the eight Years ending with the 14th of Oct., 1841, and of the wholesale Price of the same.

Years ending Oct. 14.	Weight of Fish.	Average Price, about.	Total Value.
	<i>Lbs.</i>	<i>d.</i>	<i>£.</i>
1834	3,432,800	9½ per lb.	135,900
1835	4,740,960	9	177,800
1836	2,751,840	10½	120,400
1837	3,617,600	10	150,750
1838	2,386,800	10½	104,160
1839	1,530,080	11	83,880
1840	1,697,920	11	77,350
1841	3,192,672	8½	116,400

This, it will be observed, is independent of the pickled salmon brought from Scotland, the quantity and value of which varies as much as that of the fresh salmon. But we are well assured that, at an average of the last eight years, its value has not exceeded £12,000 a year. At an

average, the retail price of salmon in London may be taken at from 50 to 75 per cent. above the wholesale price.

We may remark by the way that as by far the largest portion of the salmon made use of in London comes from Scotland, the above statement shows that its consumption in the metropolis is not nearly so great as is generally supposed. In fact, it is little used, except by the more opulent classes; and nothing that is not generally used by the middle classes, or by them and the lower, is ever of much importance.

The herring fishery has latterly been prosecuted with considerable success, and is now becoming an important branch of industry. Down to a recent period, it had been attempted to bolster up this department by granting bounties on the fitting out of vessels for the fishery, on the herrings taken and exported, and so forth. But, notwithstanding the very large sums expended in this way, their influence was found to be injurious rather than otherwise; partly by the meddling they occasioned on the part of government, and partly by the temptation the bounty afforded to small farmers and others, hitherto acquainted with the business, to engage in it to the injury of the regular fishermen. At length, however, the abolition of the duty on salt, and the growing conviction of the inexpediency of the bounty, led first to its gradual, and ultimately to its total, abolition in 1830; since which, we are happy to have to state, the business has not only been carried on upon a solid foundation, but has progressively increased. This is obvious from the following

Account of the total Quantity of Herrings cured, branded, and exported, in the undermentioned Years.

Years ending April 5.	Total Quantity of Herrings cured.			Total Quantity of Herrings branded.	Total Quantity of Herrings exported.		
	Gutted.	Ungutted.	Total.		Gutted.	Ungutted.	Total.
	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>		<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>
1811	65,430	26,397½	91,827½	55,662½	18,880	19,253	38,133
1815	105,372½	54,767	160,139½	83,376	68,938	72,367½	141,305½

1837	290,169	107,660½	397,829½	114,192	187,238½	2,027	189,265½
1838	382,400	125,374½	507,774½	141,552	229,160½	5,997	235,158½
1839	382,229	173,330½	555,559½	153,659½	233,690½	6,040	239,730½
1840	405,379½	138,565½	543,945	152,231	250,554	1,968	252,522½

N. B.—In the six years ending 5th April, 1815, the bounty on herrings cured gutted was 2s. per barrel, while there was a bounty at the same time of 2s. 6d. per barrel, payable by the excise on the exportation of herrings, whether cured gutted or ungutted, but which ceased on the 1st of June, 1816. In the 11 years ending 5th April, 1826, the bounty on herrings cured gutted was 4s. per barrel (about 25 per cent. on the wholesale price). In the four succeeding years, the bounty was reduced 1s. per barrel each year, till the 5th April, 1830, when it ceased altogether, and has not since been renewed.

The cod and white-fish fishery is also extensively carried on; about 100,000 cwts. having been cured in the year ending the 5th of April, 1840. The large share taken by Scotland in the northern white fishery is evinced by the statement, that, in 1834, of 76 vessels engaged in the trade, 41, of the aggregate burden of 13,242 tons, were from Scotland, and brought home 4912 tons of oil and 257 tons of whalebone. This department of industry has since, however, rapidly declined, not from any diminution of skill or enterprise, but from the increasing risks and unprofitable nature of the business. Fortunately the loss of the whale fishery has been more than compensated by the extension of the herring fishery, and the success that has attended it.

*Races of Inhabitants.*—It is generally allowed that the first immigrants into Scotland, like those into England, whence, perhaps, they originally came, belonged to the great Celtic family; and Mr. Chalmers and others have endeavoured to prove that the population continued to be purely Celtic till it was alloyed; first by Roman, and subsequently by Gothic, invaders. (*Caledonia*, vol. i., p. 496, &c.) But this opinion does not seem very tenable. Tacitus expressly affirms that the Caledonians, or inhabitants of Scotland, were of Germanic or Gothic origin. "*Rutile Caledoniam habitantium comæ, magni artus, Germanicam originem adseverant.*" (*Vit. Agricola*, cap. ii.) Agricola, however, from whom Tacitus derived his information, knew little or next to nothing of the country N. of the Grampians; and, as there is every reason to think that Berwickshire, the Lothians, Fife, and other parts of the low country on the E. coast of Scotland, were, like the same tracts in England, early occupied by Belgic, or other Gothic colonists from the opposite continental coast, it seems most probable that Tacitus, in ascribing to the Caledonians a Germanic origin, had these only in view. The fair presumption is, that, in the northern, as in the more southern part of the island, the old Celtic inhabitants maintained their ascendancy in all the mountainous, and, comparatively, inaccessible

ble districts; and this reasonable presumption is corroborated by various circumstances.

In the third century, the terms Picts and Pictland began to be substituted for Caledonians and Caledonia. It is pretty generally believed that these terms apply to the same people, and the same country. It seems, indeed, to be perfectly clear, that the Picts were descended from the Scythians, or Goths;\* and if we be right in our statement, as to the origin of the Caledonians, it follows that, if the Picts were not identical with them, they belonged, at all events, to a congenerous race.

About the period of the withdrawal of the Romans from Britain, a tribe called *Scoti*, or *Atacotti* (the *Dalriads* of the venerable Bede), began to be distinguished as a leading tribe in Ireland; and seems, indeed, to have given its name to the island, which, for some centuries, was called *Scotia*. (*Pinkerton's Geography*, i., 137, ed. 1811.) It would seem, that, previously to the 11th century, a colony of the *Scoti* from Ireland had established themselves in the West Highlands; and this colony, in no very long time, gave its name, first to the Highlands, whence it was subsequently extended, on its being united under one government, to all that part of the island N. of the Tweed and the Solway frith. The *Scoti* ceased to be heard of in Ireland not long after they had obtained a footing in the Highlands, and the ancient names of that island were revived.

Everything connected with the history of the *Scoti* is involved in impenetrable obscurity. But it is agreed, that, whatever may have been their remote origin, they had, when they settled in the Western Highlands, the language and habits of the Irish Celts, or Gael, a congenerous race with the Highland Celts, and speaking, in fact, the same language. But the *Scoti*-colonists had a written language, which the old occupiers of the country had not; and they were also decidedly superior to the latter in knowledge and

\* See Pinkerton's chapter on the Origin of the Picts in his *Inquiry into the Early History of Scotland*.

## SCOTLAND.

civilization. (*Pinkerton on the Early History of Scotland*, ii., 160.) These circumstances sufficiently account for the ascendancy they acquired, and for their being able to give their name to the Highlands, without having recourse to the hypothesis, for which there is not a tittle of evidence, of their having conquered the country.

After the Romans withdrew from Britain, some Gothic or Saxon tribes, following the example set by those who had previously settled in the more southerly parts of the island, established themselves, during the sixth century of our era, between the Tweed and the frith of Forth. (*Turner's Anglo-Saxons*, 5th ed., i., 239.) These new immigrants were afterwards followed by others, at the same time that they drew recruits from their brethren established in England; and Mr. Chalmers supposes that, their power being thus progressively augmented, they gradually acquired a complete ascendancy in all the southern parts of the kingdom, and communicated to it their language and manners. (*Caledonia*, ii., 7.) This, however, would have been an extremely difficult task: but if, which seems abundantly certain, we conclude, with Pinkerton, that the Picts, who were in possession of all the low country in the sixth century, were congenous with the Saxons, by whom it was then invaded, the two races would readily amalgamate, and the early prevalence of the Scandinavian or Gothic tongue in the lowlands is rationally and satisfactorily accounted for.

Towards the end of the eighth century, a fresh colony from Ireland established itself in the district now known by the name of Galloway, in the S.W. part of Scotland. But though these colonists succeeded in giving a name to the country, they were not sufficiently numerous to introduce their language into common use.\* And for several centuries, long indeed before the inhabitants had any considerable intercourse with other parts of the kingdom, the Saxon tongue has been in as unusual use in Galloway as in any part of the lowlands of Scotland.

Exclusive of the Celts, Goths or Picts, Romans, Scotch-Irish, and Saxons, colonies of Danes and Norwegians established themselves in Caithness, and other parts of the mainland, as well as in Orkney and Shetland, and parts of the Western isles. Generally, however, it may be said, notwithstanding the late great influx of Irish settlers into Glasgow, Paisley, and other large towns, that at present the inhabitants of the Lowlands of Scotland are principally of Saxon, while those of the Highlands, with the exception of Caithness, are almost entirely of Celtic extraction.

**Population.**—We have few data to guide us in estimating the amount of the population previously to the period of the union, in 1707, at which time Scotland is supposed to have had about 1,050,000 inhabitants. In 1755, the pop. was ascertained by Dr. Webster to amount to 1,265,000; and since 1801 its progress has been as follows:

Counties.	1801.	Inc. per cent.	1811.	Inc. per cent.	1821.	Inc. per cent.	1831.	Inc. per cent.	1841.		
									Males.	Females.	Total.

*Note.*—The returns for 1841 include 4715 persons resident in barracks in various counties, and 1775 persons on board ships in harbours.

This increase, though rapid, is less than the increase of the population of England during the same period; and it is, also, much less than the increase in Ireland from 1801 to 1831. This, however, is a favourable system, for there are good grounds for thinking that the wealth of Scotland had increased more rapidly during the above period than that of either of the other great divisions of the empire; and if so, it is plain, inasmuch as her inhabitants have not increased so fast, that their condition must have been proportionally improved; and, in point of fact, they are, speaking generally, in more prosperous circumstances at present than at any former period. Owing to the sterility of the soil, and other causes, the population of Scotland is much less dense than that of the sister kingdoms. The increase of population has been chiefly in the great towns: during the 10 years ending with 1820, the population of the country at large increased 16 per cent., and during the 10 years preceding 1830, 13 per cent.; while the population of the large towns increased respectively 264 and 263 per cent. during the same periods. The population in some of the counties has latterly rather declined, in consequence of the consolidation of farms, and the extension of sheep walks.

**Agriculture.**—Scotland, from being about the middle of last century one of the worst cultivated countries of Europe, is now one of the best. At this moment, indeed, the agriculture of the best farmed counties of Scotland is

certainly equal, and is by many deemed superior, to that of Northumberland, Lincoln, and Norfolk, the best farmed counties of England. The proximate cause of this extraordinary progress must be sought for in the rapid growth of manufactures and commerce, and consequently of large towns, and the proportionally great demand for agricultural produce since the peace of Paris in 1763, and especially since the close of the American war. Fortunately, too, the influence of these favourable circumstances was not counteracted by any vicious institutions, or by anything unfavourable in the mode of letting and occupying land. Next to the opening of new, extensive, and rapidly increasing markets, the wonderful improvement of Scotch husbandry may be ascribed to the prevalence of leases of reasonable length, usually 19 years, and which generally embody clauses to prevent the exhaustion of the soil; the absence of tithes, and, in most instances, of poor rates, and of all oppressive

\* "Galloway, in the Latin writers of the middle time, Gallowalla, sive Gallavidia, so called by the Irish who sometime dwell there, and terme themselves, in their awne language, Gael." (*Trinity Pont's Galloway*, in the Appendix to *Symon's Galloway*, p. 114.)

† This influx has been, in all respects, most injurious to the people of Scotland and England, where it has taken place to an equally great extent without conferring any corresponding advantage on the Irish. (See *Statistics of Great Britain*, 2d edition, i., 397.)

‡ The population of the counties marked thus, has decreased between 1831 and 1841.

## SCOTLAND.

public burdens; the prohibition of subletting, and the inheritance of the lease by the heir-at-law: the introduction of sheep-farming into the Highlands, and the great improvement made in the construction of all sorts of farming implements. The general use of thrashing machines, many of which are impelled by steam, and of ploughs with two horses driven by the ploughman, constitute, in fact, one of the distinguishing characteristics of Scotch, as compared with English agriculture.

Landed property in Scotland, as compared with its extent and value, is in fewer hands than in England, there being probably not more than 8000 proprietors in the whole country. It is most subdivided in the counties of Fife, Mid-Lothian, Renfrew, and Kirkcudbright, but even in these there are many large estates; and in most other parts of the country the greater portion by far of the land is distributed into very large estates, many of which are held under a system of strict and perpetual entail. It might be supposed that this sort of tenure would be prejudicial to agriculture, but, practically, its effect is not found to be nearly so great as might have been, *a priori*, anticipated. This results from the circumstance of the courts of law having decided that it is illegal to let lands belonging to an entailed estate, either for an unusually long period, or by fines (Scottish *grassums*); so that, in truth, there is little or no difference between the conditions under which entailed and unentailed estates are occupied: and as the proprietors of the former have been empowered to burden the estates, proportionally to their value, with sums laid out on necessary improvements and buildings, they are, speaking generally, in quite as good order, and as productive as the others.

Farms are of all sizes; varying from 50 to 500 acres and upwards in the improved tillage districts, and from 500 to 5000 acres and upwards in the hilly and mountainous tracts. Except in a few of the sequestered glens of the Highlands, into which the improved systems have not been introduced, the division of the land is nowhere carried to such an extent as to be prejudicial to agriculture; and, in most parts of the country, farms have been gradually consolidating and increasing in size since the American war. At an average of the kingdom, arable farms may vary from 150 to 300 acres; and pasture farms from 500 to 2000 acres.

Down to the close of the American war, the farm buildings in most parts of Scotland were mean and inadequate in the extreme. In the Lothians they were commonly ranged in a row, having the dwelling-house in the middle, with a barn at one end, and cattle-houses at the other. In other parts, they were frequently huddled together without any sort of order. The walls were always low, in most instances of stone and clay, the roof being invariably thatch. The dunghill was universally opposite to the door; and so near it, that in wet weather it was no easy matter to get into the house with dry feet. The change that has taken place in these respects during the last half century has been signal and complete. In none but the least accessible and least improved districts are any of the old houses now to be met with. Perhaps, indeed, the other extreme has not been sufficiently avoided; buildings having, not unfrequently, been erected that seem to be both larger and more expensive than necessary. The offices are mostly constructed in the form of a square. In some instances, the dwelling-house makes one of its sides; and in the better class of farms it is removed to some distance from the offices. It is generally two stories high, and is well, and sometimes handsomely, fitted up. Both houses and offices are almost always slated. The expense of buildings is uniformly defrayed by the landlord; but the tenant, for whose accommodation they are in the first instance erected, sometimes pays a percentage upon the money laid out upon them. Sometimes, also, the tenants undertake to carry the materials used in building.

The fences in many parts of Scotland consist of dry stone walls; which, though destitute of beauty, make, when properly built, a capital fence. This species of enclosure seems to have originated in the S. W. Kirkcudbright and Wigton were early subdivided with excellent stone dykes, that are now celebrated all over the kingdom by the name of "Galloway dykes." They are of very various heights, and degrees of goodness; but the best are built double to a certain height, when they are capped with broad flat stones projecting a little on each side, over which others are usually laid single; but sometimes those laid over the cap-stone are made to lock firmly together. The best dykes vary from 5½ to 6 ft. in height; and, where they have been carefully founded, well built, and constructed of good stones, they make a most excellent and very durable fence. Examples are not rare of their standing for 60 or 70 years without receiving almost any repair. In a few instances they have been found at above 100 years of age, in a state of perfect preservation! But unless they be of superior material and

workmanship, they seldom last more than from 25 to 30 years. Most of the dry stone walls now to be met with all over Scotland have been built, sometimes with more sometimes with less success, after the Galloway model.

In respect of farming implements, Scotland has very much the advantage over England. The improved Scotch plough is every where met with in the agricultural districts, and is uniformly drawn by two horses, driven by the ploughman. Iron harrows are common. Thrashing machines are introduced far more extensively than in England; and there is hardly, indeed, a considerable farm in any part of the country without one. The Scotch labourers have never been so absurd as to attempt to advance their interests by destroying those valuable engines.

Scotland may be divided into three agricultural districts:—Of these the first, or most southerly, extending from the English border to the rivers Forth and Clyde, contains a large extent of mountainous and pasture land. But extensive tracts in Berwickshire and the Lothians, on the E. coast, are naturally fertile, and are farmed with a degree of skill, economy, and success, unequalled almost in any other part of the empire. There are also large tracts of fertile and well-farmed land in Lanark, Renfrew, Ayrshire, Galloway, and Dumfriesshire; but the climate on the W. coast is not so favourable, and agriculture is not so far advanced on that side the island as on the E. The second agricultural division stretches from the Forth and Clyde to the great chain of lakes connected by the Caledonian canal, that runs from Inverness to the island of Mull. The mountains in this division are on a grander scale than in the southern division; and the proportion of waste land much greater. It, however, contains some of the finest land in the empire. The case of Gowrie, stretching from Perth to Dundee, consists of the richest alluvial soil; but its agriculture, though good, is not equal to that of some other districts. Strathern, lying to the W. of Perth, is also very fertile. Most part of the extensive county of Fife is arable, and is, in general, very highly improved. There are also very large tracts of fine land in Korfarshire and Angus, and smaller portions in Aberdeenshire and Moray. The third division of Scotland, or that which embraces the country lying to the N. of the Caledonian canal and the lakes, is, with the exception of the eastern parts of Ross-shire, and a few patches besides, wild and mountainous. Black-cattle, sheep, and wool, are its principal products.

Except in the S.E. counties, oats are grown in far greater quantities than any other kind of grain; and, from more attention being paid to their culture, or the greater suitability of the climate, or both, the produce is greater than in England, varying from 25 and 30 up to 70 bushels an acre, and even more. Oatmeal, which, till a late period, formed, in cakes and porridge, the principal part of the food of the great bulk of the people, is still in very extensive demand; but, latterly, the use of wheat bread has become very general in the rural districts, as well as in the towns. Turnips and potatoes are successfully cultivated throughout most part of the Lowlands. The raising of the former is, perhaps, nowhere so well conducted as in E. Lothian and Berwickshire. Potatoes have of late been grown in large quantities in some of the E. cos. for the London market; and they form an important article of food in all parts of the country. The practice of taking two white crops in succession has been almost wholly abandoned in the Lowlands.

Dairy husbandry is mostly pursued in the shires of Ayr and Renfrew, in the former of which Dunlop cheese is made; but it is also introduced into Wigton and other counties. Cows of the genuine Ayrshire breed are admirable milkers, and the average quantity of butter produced by each has been estimated at upwards of 250 lbs. a year. The Galloway, Fife, and Highland breeds are the best for fattening, and yield, especially the first and last excellent beef. The Galloway cattle are mostly sent up half fed, to be fattened in Norfolk and Suffolk for the London markets. Three principal breeds of sheep are reared in Scotland: the dun-faced, or Scandinavian breed, said to have been imported into Scotland from Denmark, of which a few are found in the counties N. of the frith of Tay; the black-faced, or heath breed, very widely diffused, and very hardy; and the Cheviots, the famous breed native to the Cheviot hills. The latter are now found to thrive in districts that were formerly supposed to be suitable only for the black-faced breed, and have already, to a considerable extent superseded the latter; the carcass and fleece being both much more valuable.

**Quantity and Value of Agricultural Produce.**—These are subjects as to which there is but little information on which it would be safe to place much reliance. In the statistical tables in the *General Report of Scotland* (III. Append. p. 5), the arable land is estimated at 5,043,450 English acres: of these the proportion in grass is estimated at 2,489,725; leaving 2,553,725 in tillage, which is supposed to be distributed as follows:

\* There is an excellent account of the Galloway dykes, with judicious remarks on their construction, in *Smith's Survey of Galloway*, p. 80—83.

## SCOTLAND.

	Acres.		Acres.
Wheat . . . . .	140,193	Potatoes . . . . .	80,000
Barley . . . . .	290,193	Turnips . . . . .	407,125
Oats . . . . .	1,260,352	Flax . . . . .	16,500
Rye . . . . .	500	Gardens . . . . .	32,000
Beans and Peas . . . . .	118,000	Fallow . . . . .	218,050

But a large extent of waste land has been brought under cultivation during the last 20 years; and we are also satisfied, from the greatly increased consumption of wheaten bread in Scotland, and other circumstances, that the quantity of land assigned to the growth of wheat has increased both absolutely and relatively. In our view of the matter, the distribution of the land in tillage would be more correct, were it made as follows:

	Acres		Acres.
Wheat . . . . .	220,000	Turnips . . . . .	350,000
Barley . . . . .	290,033	Flax . . . . .	15,000
Oats . . . . .	1,275,000	Gardens . . . . .	32,000
Beans and Peas . . . . .	100,000	Fallows . . . . .	150,000
Potatoes . . . . .	130,000	Total . . . . .	2,253,000

Assuming this distribution to be nearly correct, the quantity and value of the crops may be estimated as follows:

Crops.	Acres.	Produce per Acre.	Total Produce.	Price per Quarter.	Value.
Wheat . . . . .	220,000	3 qrs.	660,000	£5	£1,650,000
Barley . . . . .	290,000	3½	870,000	30	1,470,000
Oats . . . . .	1,275,000	4½	5,737,500	25	7,171,875
Beans and Peas . . . . .	100,000				
Potatoes . . . . .	130,000	3½ Ss.			2,320,000
Turnips . . . . .	350,000				
Flax . . . . .	16,000	8l.			128,000
Gardens . . . . .	32,000	13l.			416,000
Total . . . . .					£13,355,875

The average value per acre of the pasture land of Scotland is estimated in the General Report at £2, which we incline to think is not far from the mark: and on this hypothesis, the produce of 2,489,725 acres of pasture may be taken at about £5,000,000 a year. But to this has to be added the produce of about 14,000,000 acres of mountain pasture, wood-land, and waste land; which, taken at an average value of 2s. an acre, is £1,400,000. Hence the total annual value of the land produced in Scotland, will be:

Value of crops and gardens . . . . .	£13,355,875
—pasture land . . . . .	5,000,000
—uncultivated land and wood . . . . .	1,400,000
Total . . . . .	19,755,875

We believe, for reasons similar to those stated in reference to England (l. 842), that the rent of land in Scotland does not differ very materially at this moment from the rental of 1810, which amounted to £4,851,404. There have certainly been considerable variations in particular districts; but from all that we have been able to learn, we incline to think that the fall in some quarters has been fully balanced by an equal rise in others; and that, on the whole, the aggregate rent of the country at the two periods is pretty nearly equal.

It is difficult to decide as to the portion of the gross rent which should be set apart as the rent of the 14,000,000 acres of uncultivated land; but there are pretty good grounds for thinking that it does not exceed £850,000, leaving £4,000,000 as the nett rent of the arable portion, being at the rate of about 16s. an acre. Though there are some considerable exceptions, there can be no manner of doubt that, speaking generally, the arable land of England is superior to that of Scotland; but in consequence of the greater skill and economy of the farmers in the latter, and of the advantage they enjoy in the possession of leases, and the absence of tithes and poor-rates, they are able to pay decidedly higher rents for lands of equal fertility. The rent of corn land in Scotland varies from 7s. to £3 an acre, and occasionally even amounts to £5 and £6. The best pasture land rarely fetches more than £3 per acre; and that which is of a medium quality may vary from 10s. to 25s.

**Rise of rent.**—Rent has increased much more rapidly in Scotland than in England. This is ascribable partly to the extremely backward and depressed state of Scotch agriculture till after the peace of Paris, in 1763, and partly to the extraordinary advance it has made since the close of the American war. The entire rental of the kingdom is not supposed to have exceeded £1,000,000 or £1,200,000 in 1770. In 1794 it is believed to have rather exceeded £2,000,000; and since then it has been more than doubled! So rapid an increase of rent is probably unmatched in any old settled country, and indicates an astonishing degree of improvement.

**Condition of Occupiers and Labourers.**—We are happy also to have to state, that the wealth of the farmers, and the comfort and well-being of the agricultural labourers,

have increased in quite as great a proportion as the rents of the landlords. We have already noticed the extraordinary improvement that has taken place in farm-houses and offices since the close of the American war, and especially during the present century; and the same improvement is every where visible in farming stock and implements; in the furniture and other accommodations of the farm-houses: and in the dress and mode of life of their occupants. We have, indeed, no hesitation in affirming, that no old settled country, of which we have any authentic accounts, ever made half the progress in civilization and the accumulation of wealth, that Scotland has done since 1763, and especially since 1787.

Some very great improvements have been introduced into agriculture within these few years, and are now rapidly spreading over the country. Among these may be specified furrow-draining, subsoil ploughing, and the use of bone manure. These improvements have already changed the face of various extensive districts. Farms that were formerly wet, late, and suitable only for oats, are now, by the aid of furrow-draining, made thoroughly dry, early, and suitable for any species of crop. The introduction of bone-manure has occasioned a great extension of the turnip culture. The facilities afforded by steam navigation for the conveyance of fat cattle and sheep to the great markets of London and Liverpool, as well as to those of Edinburgh and Glasgow, have also been of vast importance, and have enabled the remotest districts to come into successful competition with those that are most favourably situated. In consequence, agriculture is at this moment in a rapid state of advancement; and the fair presumption seems to be that, great as has been its improvement during the last half century, it will be equal or greater during that on which we are now entering.

The only thing that seems at all likely to defeat this presumption, or to retard the future progress of agriculture, is the fact of the Reform Act having conferred the elective franchise on all occupiers of land worth £50 a year and upwards. This has been in every respect a most pernicious, ill-advised measure. Formerly the landlords rarely inquired as to the politics of their tenants; and provided they paid them their rents, and managed their lands according to the stipulations in their leases, they might be of any political or religious party they pleased. But now it is altogether different. The landlords, desirous, like other people, of extending their political influence, endeavoured to control, or rather command, the suffrages of their tenants, and to multiply the dependent voters on their estates. In furtherance of these objects, they have not scrupled, in many instances, to resort to intimidation, and to adopt vindictive measures against such of their tenants as have voted contrary to their wishes. This, however, though the most prominent at the time, is but the least evil resulting from the new state of things. It has already led in many instances to a change in the mode of letting land; and there is but too much reason to fear that it may, in the end, subvert that system of giving leases for 19 or 20 years certain that has been a main cause of the astonishing improvement of agriculture. It has also occasioned, in many instances, a subdivision of farms for the mere purpose of creating voters; and there cannot, indeed, be a question that, however well intended, the conferring the elective franchise on the tenants has been one of the greatest blows ever struck at their independence, and at the prosperity of agriculture. Nor is there anything in this but what might have been, and in fact was, anticipated from the outset. Tenants, as such, whether they hold farms worth £50 or £500 a year, are about the very last description of persons to whom the franchise should be conceded. Very many of them are indebted to, and dependent, to a greater or less extent, on their landlords; and the few who are independent are so because they have accumulated property, and would, in consequence, have been entitled to the franchise, had it been conferred, as it should have been, on those only who possessed a certain amount of realised property. If that be, as it unquestionably is, the best system of voting that brings the greatest number of independent electors to the poll, and keeps back the greatest number of those that are dependent, the giving the franchise to the tenants and occupiers of land must be about the very worst system, for they are, of all classes, that which is most dependent, and the most at the mercy of others.

The condition of the agricultural labourer has, also, as already stated, been vastly improved. With the exception of those districts in the Highlands and isles, luckily few in number, into which improvements have not yet made their way, the cottages of the peasantry have been mostly rebuilt during the last half century; and though still, in most instances, without the rustic beauty and neatness that so frequently distinguish English cottages, they are far from uncomfortable. In most parts of the country such of the farm-labourers as are married, and have families, receive the greater part of the wages in specific quantities of farm.

## SCOTLAND.

produce, which do not vary with the variations of price; so that, if they be not so well off as the manufacturing work-people, when trade is brisk and prices low, neither are they exposed to suffer like the others, when there is little demand for labour, and prices are high; on the whole, they may, speaking generally, be said to be in decidedly comfortable circumstances. The unmarried servants frequently live in the farm-house. They are almost all excellent ploughmen; all of them are able to read and write; and their sons not unfrequently emerge from obscurity, and attain to distinction.\*

**Manufactures.**—For a lengthened period after the union with England, Scotland made little or no progress in manufactures; and it was not till after the peace of Paris, in 1763, that the public enterprise began to be turned into this great channel, and that a rapid extension took place of most sorts of industry. A considerable depression ensued towards the close, and after the termination of the American war. But it was not of any very lengthened duration; and the foundations of the cotton trade having been laid about this period, manufactures have continued, from 1787 down to the present time, progressively to gain ground in Scotland, and have been prosecuted with equal skill, industry, and success. According to the report of Mr. Stuart, factory inspector for 1839, there were in that year the following factories in Scotland:

	Mills or Facto- ries.	Wrought by Steam.	Wrought by Water.	Persons employed.
Cotton . . . . .	266	193	73	35,576
Woolen . . . . .	153	37	116	40,632
Flax . . . . .	251	160	91	17,897
Silk . . . . .	6	5		783
Total . . . . .	676	395	280	91,888†

† Of whom 33,387 were upwards of 18 years of age.

In 1834 there were in Scotland 17,721 power-looms, of which 17,531 were employed in weaving cotton fabrics. There has been a very material increase of power-looms in the interval; and exclusive of them there were, in the S. division of Scotland, in 1838, about 51,000 hand-looms for various fabrics, employing, as was estimated, about half that number of families. The cotton manufacture, which principally centres in Glasgow and Paisley (which see), is of comparatively recent introduction, the first steam-engine for a cotton factory having been constructed so late as 1792. But the woollen manufacture has been of long standing, and was formerly much more widely diffused than at present, having been, in fact, with that of linen, a domestic manufacture, and pursued in every cottage. It was the universal practice of the peasantry, and occupiers of land, to spin, at home, the greater part of their own wool, as a subsidiary employment, and to send the yarn to be made into coarse cloth in the nearest village.

There is still a class in Scotland called *customer weavers*, scattered over the country, but now principally confined to the Highlands, employed by private families to weave yarn into coarse fabrics for domestic use. Most of these are also agricultural labourers, weaving only in the intervals of their ordinary avocations; they earn from 1s. to 2s. 6d. a day, but few higher than 1s. 9d. But except these, and persons living at watering-places, and on parts of the E. coast, where they engage in fishing or boat-letting for a part of the year, the great bulk of the weavers of Scotland subsist entirely by the loom, and engage, in no other pursuits. (*Symons in Hand-loom Weaver's Rep.*, p. 5.)

At present, and for some time past, this class has been in very depressed circumstances. Owing to the facility with which the business of weaving may be learned, and the sort of independence it confers on the weaver, it has always been a favourite employment; and, consequently, except in periods of great prosperity, the wages of weavers have generally been rather low. Of late years, however, the introduction of power-looms has gone far to supersede to a great extent, the business of the regular hand-loom weaver, especially of those engaged in the manufacture of cottons; and the fair presumption seems to be, that in no very lengthened period the business of the hand-loom weavers will be totally annihilated. But though there can be no doubt that, in a public point of view, this change will be productive of great advantage, it involves, in the meantime, the class of hand-loom weavers in the greatest difficulties; and, in point of fact, nine tenths of that manufacturing distress of which we have recently (1841) heard so much has proceeded from hand-loom weavers thrown out of employment by the competition of power-looms, or forced to labour for the merest pittance. That such persons are proper objects of public sympathy, none can doubt; and everything

that is practicable should be done to facilitate their employment in other businesses, or their emigration to the colonies. Till such time as this transference has been effected, there will be the same unvarying, and generally unfounded tale of manufacturing distress.

It appears from the statements given in Burns' account of the cotton manufacture for 1840, that the total quantity of cotton spun in England during that year amounted to 368,896,959 lbs., and that spun in Scotland to 37,878,892 lbs. Now, taking the entire value of the manufacture at £35,000,000, and supposing it to be proportioned in both countries to the quantity of yarn spun in each, that would give about £3,500,000 for the value of the portion belonging to Scotland. We believe, however, that the value of the cotton goods annually produced in Scotland may be estimated at about £5,000,000; for a large proportion of the Scotch manufactured articles consists of the finer descriptions of muslins and other superior and costly fabrics, which makes their aggregate value exceed what might be inferred from the comparative amount of yarn produced in Scotland.

Compared with the woollen manufacture of England, that of Scotland is inconsiderable. Flannels, blankets, shawls, plaids, stockings and stocking yarn, tartans, carpets, druggets, &c., are produced to a considerable extent at Galashiels, Hawick, Jedburgh, and Aberdeen. Some of the finer descriptions of cloth are made at Aberdeen and in its vicinity, and some of its woollen mills and factories are on a large scale. Kilmarnock is the seat of a very extensive and flourishing carpet manufacture. The power-loom having hitherto been but little adopted in the woollen manufacture, the weavers employed in this department get good wages, are well clothed and lodged, and in all respects exhibit a marked contrast with the hand-loom weavers engaged in the cotton manufacture.

The linen manufacture of Scotland is of very considerable value and importance: Dundee is its chief seat; and the statements previously given (see art. DUNDEE, I. 786) show that its increase since 1811 has been quite extraordinary. Osnaburghs, sheeting, cotton bagging, sail-cloth, dollas, and other coarse goods, are the articles principally made in Dundee and in Kirkcaldy, Arbroath, Forfar, Montrose, Aberdeen, and other seats of the manufacture in the E. of Scotland. The finer descriptions of linen fabrics, as damasks, diapers, shirting, &c., are principally produced in Dunfermline, and its immediate vicinity. Power-looms have not hitherto been extensively introduced into this department, but they are gradually gaining ground. At present it employs about 17,000 hand-looms in summer, and from 22,000 to 23,000 in winter. The linen weavers occupy an intermediate position between the woollen weavers on the one hand, and the cotton on the other. The silk manufacture is of little importance: its chief seat is Paisley (which see, *ante*, p. 449.)

The iron-works at Carron, near Falkirk, established in 1760, were for a lengthened period the most extensive in the kingdom; but they are now far surpassed by those of Gartsherrie, Calder, Clyde, &c., in Scotland, and by many in England. A good deal of Scotch ironmongery, comprising anchors, bolts, axles, mill and engine-work, &c., is exported to the colonies and foreign countries. The manufacture of machinery is an important branch of industry. Coach-making is carried on in all the large towns, and ship-building in many of the ports. Glass wares, chemical products, soap, candles, and starch, are among the other principal manufactured goods.

The favourite beverage of the people of Scotland has, for a lengthened period, been whiskey, a spirit generally distilled from malt or raw grain. Owing to the excess of the duties

\* The reader who may wish to become more particularly acquainted with the extraordinary changes that have taken place in the agriculture and mode of life of the people of Scotland since 1760, would do well to consult *Robertson's Rural Recollections*. It is at once an authentic, interesting, and instructive work.

# SCOTLAND.

with which this spirit has occasionally been charged, its smuggling has sometimes been carried to a great extent; but since 1826, when the duties were reduced from 5s. 10d. to 2s. 10d. and 3s. 4d. per imperial gallon, clandestine distillation and smuggling have been comparatively rare.

**Commerce.**—Having little industry, and being thinly peopled, Scotland had formerly a very limited foreign trade. The exports consisted of wool, skins, hides, and other raw materials, exchanged for corn, wines, spices, &c. Even so late as the era of Cromwell her mercantile marine comprised only 93 vessels, of the aggregate burden of 2724 tons, and 18 barks. During the reign of Charles II. the trade of the country, especially that with Holland and the countries round the Baltic, began to increase. It was not, however, till after the completion of the union, in 1707, when the trade to the American and W. Indian colonies was, for the first time, open to the enterprise and activity of the Scotch, that the commercial energies of the nation began to be awakened. But for a while the merchants of Glasgow, who first embarked in the trade to America, carried it on by means of vessels belonging to English ports; and it was not till 1718 that a ship built in Scotland (in the Clyde), the property of Scotch owners, sailed for the American colonies,

(See art. GLASGOW, i. 995.) The establishment and rapid extension of manufactures in Scotland, since 1763, has necessarily occasioned a corresponding increase of commerce, and the mercantile marine of Scotland is now very considerable indeed. In 1823 it comprised 3143 vessels of the aggregate burden of 300,836 tons. Such, however, has been its increase in the interval, that on the 31st of December, 1840, it comprised 3479 vessels, of the aggregate burden of 429,204 tons, manned by 23,428 seamen! The commerce of Scotland too is greater, in fact, than appears from the Customs' returns; inasmuch as a good many articles of foreign produce imported at second hand through the English ports, and articles of native produce exported in the same way, do not appear in the list of imports or exports. At present the principal articles of export consist of cotton and linen stuffs, cotton and linen yarn; wool, iron, and hardware; silk goods, coals, spirits, and beer; black cattle; herrings, salmon, and other salted and fresh fish; stationery, &c. The great articles of import consist of tea, sugar, coffee, and other colonial products; raw cotton, flax and hemp, tobacco, raw silk, wine, dye stuffs, &c. The great emporiums are Glasgow (inc. Greenock and Port Glasgow), Leith, Aberdeen, Dundee, & Montrose. We subjoin an

ACCOUNT of the Gross and Nett Customs' Duties collected at the different Scotch Ports in 1839 and 1840.

In proof of the extraordinary progress made by Scotland, we may state that at the epoch of the union with England, in 1707, the revenue amounted to only £110,694. In 1788 it had increased to £1,099,148; in 1813, when the income-tax was at its height, it amounted to £4,204,097; and in 1839, notwithstanding the repeal of the income-tax, and of a great number of other taxes, the gross revenue of Scotland amounted to £5,254,624, and the nett revenue to £4,952,460, a rate of increase wholly unexampled in, either of the other divisions of the United Kingdom. We subjoin an

ACCOUNT of the Gross and Nett Produce of the Revenue of Scotland in 1840.

	Gross Produce.	Nett Produce.
	<i>L.</i>	<i>L.</i>

Totals	5,251,727	4,929,522

**Currency.**—The currency of Scotland has, for a lengthened period, principally consisted of the notes of the different banking companies. These, for the most part, are joint stock associations, with numerous bodies of partners, and have been managed with great skill and discretion.

Very few bankruptcies have occurred among the Scotch banks; and they have, no doubt, contributed materially to forward the improvement of the country by the facilities they have afforded to industrious and deserving individuals of obtaining loans; and still more by the practice, which has long been acted upon, of taking very small sums in deposit, and allowing interest upon them at about 1 per cent. below the market rate at the time. This has brought, as it were, a number of substantial and well-organized savings' banks within reach of all classes; and by furnishing every facility for the safe and profitable custody of the smallest and largest sums, has powerfully stimulated the desire to save and amass. The deposits in the Scotch banks are sup-

\* Deducting drawbacks and repayments.

posed to amount, at this moment, to about 27 millions sterling; and we believed it may safely be affirmed, that, but for the facilities that have been afforded for the accumulation of the smaller class of sums, at least £15,000,000 of this amount never would have existed. The amount of the notes of the Scotch banks in circulation may be taken, at an average, at about 34 millions.

**Roads.**—With the exception of the military roads, constructed in the Highlands after the suppression of the rebellion, in 1745, the roads of Scotland were, speaking generally, in the most execrable state down to the American war. But such, and so great has been the improvement in the interval, that they are now quite equal to the best roads in England, and are not, indeed, surpassed by any in Europe. They are laid down on the most approved principles; and, notwithstanding the rugged nature of the country, it is but seldom that horses in a carriage may not be driven along at a smart trot. The facility with which excellent materials for their construction may almost everywhere be obtained has materially contributed to forward their formation. The roads within what is called the Highland districts have been partly constructed by means of advances from government, and the public money has very rarely been so profitably expended.

Within the present century several railways have been projected, some of which are already completed, and others in a state of great forwardness. They are mostly in the manufacturing districts, of which Glasgow and Dundee are the centres. The principal, however, will be that between Edinburgh and Glasgow, about 46 m. in length. It was begun in 1825, and is expected to be completed in the course of the present year (1841), or early in the next, at an expense of about £1,200,000.

Various projects are now on foot for connecting Edinburgh or Glasgow with some of the great lines of railway leading from London to the N. of England; and the presumption is, that this junction will be effected at no distant period. In the mean time, however, an individual may, by means of the railway to Preston or Lancaster, and the mail coaches from the latter to Glasgow or Edinburgh, or the steamers

## SCOTLAND.

from Fleetwood, near Preston, to Ardrossan, reach Glasgow or Edinburgh from the metropolis in about twenty-four hours! A journey which, so late as the era of the American war, took about a week for its completion!

**Canals.**—Of the Scotch canals, the most important by far is that called the Great canal, uniting the Friths of Forth and Clyde, and, consequently, forming an easy water communication between the E. and W. coasts of the island. Including its branch to port Dundas, in the vicinity of Glasgow, it is about 38 m. in length; the medium width at the surface is 56 ft., and at the bottom 27 ft.; average depth, from 9 ft. to 10 ft.; summit level, 156 ft. above the sea; it has 39 locks. This important work was begun in 1768, but was not finally completed till 1790. It has been as profitable to the shareholders as it is advantageous to the public; the dividend on the original stock having been latterly about 28 per cent.

The Union canal joins the Forth and Clyde canal near Falkirk, and stretches thence to Edinburgh, being about 31½ m. in length. It was completed in 1822, but has been, in all respects, a most unprofitable undertaking. Hitherto, the proprietors have not received any dividend, and their prospects, we understand, are but little, if anything improved.

There are other canals in the vicinity of Glasgow: the Crinan canal stretches across the Mull of Cantire; and there is also a canal in Aberdeenshire. But the greatest work of this class in Scotland, or, perhaps, in the empire, is the Caledonian canal. It stretches quite across the island, through the centre of the Highlands, N.E. and S.W., from the Beaulie frith on the E. coast to loch Linne on the W. It is chiefly formed by the chain of lakes, including loch Ness, loch Oich, and loch Lochy, which occupy the bottom of the remarkable glen or depression through which it is carried. Its total length, including the lakes, is 58½ m.; but the artificial or excavated part is only 21½ m. At the summit it is only 96½ ft. above the level of the W. ocean.

It is mostly constructed upon a very grand scale, being intended to be 20 ft. deep, 50 ft. wide at bottom, and 122 ft. at top; the locks are 20 ft. deep, 172 in length, and 40 ft. in breadth; and had it been wholly executed as was originally intended, frigates of 32 guns, and merchant ships of 1000 tons' burden, might have passed through it. It was opened in 1822, being executed entirely at the expense of government, from the designs and under the superintendence of Thomas Telford, Esq. The entire cost has exceeded a million sterling. There can, however, be no doubt that it was projected without due consideration, and may be regarded as about the least advantageous public work that has been undertaken for a lengthened period. During the year 1836-37, the total revenue of the canal, arising from tonnage dues and all other resources, amounted to only £2279, while the ordinary expenditure during the same year amounted to £3979; and it has increased little, if anything, in the interim. But this is not all. Owing to a wish to lessen the expense, and to hasten the opening of the canal, parts of it were not excavated to nearly their proper depth, while others were executed in a hurried and insufficient manner. Hence the canal does not really admit vessels of above 250 or 300 tons burden; and owing to the want of steam-tugs on the lakes, these are frequently delayed in making their passage across for a lengthened period. During 1837 and 1838 the works sustained considerable damage; and so large a sum will now be required for their repair and for the purchase of steam-tugs, &c., that it has been gravely debated whether it would not be better entirely to abandon and fill up the canal!

There is naturally, however, a great disinclination to destroy a work which, how inexpedient soever originally, has been executed at an enormous expense; and various schemes have been suggested for relieving the public from the expense of keeping it up without involving its destruction. Among others, it has been proposed to assign it to a joint stock company, on their agreeing to complete the works, and keep them in repair, and an act authorising such transfer was passed in 1840. Hitherto, however, it has not been possible to dispose of it in this way; so that, at this moment (December, 1841), it is not easy to conjecture what is to become of this undertaking.

**The Constitution of Scotland** has been, from the earliest times, what is called a limited monarchy. Originally the parliament, or great council of the nation, consisted of the king, the nobles, and the principal ecclesiastics. Burgesses, or representatives for the towns, were admitted into the Scotch parliament by Robert Bruce, in 1326; and in 1427 the lesser barons, or freeholders in the different counties, were authorised to send representatives; but so little was this privilege valued, that it was hardly exercised for 160 years, or till the reign of James VI., when the freeholders were compelled to send representatives.

Scotland, however, derived little or no benefit from her parliament. The nobility and clergy sat and voted in the same chamber with the representatives of the lesser barons

and of the towns; so that, even if the latter had been more powerful and independent than they were, they could have made no effectual opposition to any measure patronised by the nobility and clergy. In point of fact, however, the representatives of the counties were mere nominees of the great lords; and the towns having neither wealth, population or importance, the representatives were necessarily as impotent as themselves. The nobility and clergy were, in truth, for a lengthened period, everything, and the people nothing.

Even had it been, in other respects, better constituted, the institution of the Lords of the Articles would have rendered the parliament of Scotland good for nothing as a check on the sovereign. This was a committee, consisting of a few members, chosen either directly or indirectly by the crown, to which all matters to be brought before parliament had, in the first instance, to be referred; and which had power to reject such as it disapproved of, and to modify and alter the others in any way it thought proper. This committee had, therefore, a negative before debate; and the whole duty of parliament was confined to meeting for a day or two at the end of the session, to confirm the proceedings of the Lords of the Articles! With such an instrument at his command, we need not wonder at the preponderating influence possessed by the sovereigns in the Scotch parliaments; and had their ability to carry laws into effect been, in any respect, equal to the facility with which they could get them passed, the kings of Scotland would have been the most, instead of the least, powerful of European princes.

The committee of the Lords of the Articles was suppressed at the revolution; but owing to the defects in the mode of choosing representatives, the constitution of parliament was but little improved by its suppression; and down to the passing of the Reform Act, in 1832, Scotland had the shadow merely without the substance—the disadvantages without any of the advantages—of a representative government. Happily, however, its representative system is now placed nearly on the same footing as that of England. (For further details, see vol. i. p. 464 and p. 651.)

According to the articles of union in 1707, the peerage of Scotland is represented in the House of Lords of the United Kingdom by 16 peers, chosen by the whole body of Scotch peers at the commencement of each parliament: it was then also arranged that the counties of Scotland should be represented in the House of Commons by 30, and the boroughs by 15 members. This arrangement was continued till 1832, when the borough representation received an addition of eight members, the members for the counties continuing as before.

**Courts of Law.**—The court of sessions, which was constituted by an act of the Scottish parliament in 1537, is the highest civil court of Scotland, having jurisdiction in all civil questions of whatever nature. It was intended to supply the place of the previously existing courts, and more especially of a judicial committee of parliament called the "lords of session," whence the name of the court and the titles of the judges. Originally it consisted of seven laymen and eight churchmen, including the president. In 1640, however, an act was passed, providing for the exclusion of churchmen from the court; and, though repealed in 1661, the principle laid down in it has ever since been acted upon. Other important improvements were introduced at different periods, particularly after the revolution, when right of appeal from the court to parliament was, for the first time recognised. At the union power was given to all individuals who considered themselves aggrieved by judgments of the court of sessions to appeal to the house of lords; and it is a curious fact, that, at this moment, and for a lengthened period, the principal judicial business of the House of Lords has consisted in hearing and deciding Scotch appeals. Originally, and down to 1808, the whole 15 judges sat together in one court; but in that year an act was passed dividing the court into two chambers, the lord president presiding in the first division of seven judges, and the lord justice-clerk in the second, of six; the two remaining judges trying cases in the first instance, or, as it is technically termed, sitting as lords-ordinary. Since then the number of judges has been reduced to 13; four belonging to each of the divisions, and five acting as lords-ordinary, or sitting as single judges. The judges were at first chosen by the Scotch parliament; but since 1554 they have been appointed by the crown. They are indifferently styled lords of session, or senators of the college of justice, which last embraces the whole body of barristers (advocates), and attorneys or solicitors who practise before the court. They must be 25 years of age; and, by the treaty of union, no person can be named to the office unless he have served as an advocate or principal clerk of session for five years, or as a writer to the signet for ten. The salaries of the ordinary judges have recently been raised to £3000 a year each; those of the lord justice clerk, and lord president, being respectively, £4000 and £4500.

## SCOTLAND.

At its outset the court of session was intended to serve as a standing or perpetual jury for the trial of cases; the introduction of petty juries into the trial of civil cases in Scotland being only of very recent date, as well as of limited application. It was, in fact, unknown till 1815, when a special or jury court was instituted, for the trial of cases involving questions as to the value of property, the amount of damages, or the determination of some fact. But in 1830 this court was suppressed; and the court of session now avails itself of the assistance of petty juries in the trial of the above description of cases.

The high court of judicature was remodelled, and placed nearly on its present footing, in 1672. It consists of five judges of the court of session, specially commissioned by the sovereign, together with the justice-general and justice-clerk; the former, or, in his absence, the latter, being president. In 1836, the office of lord justice-general was conjoined with that of lord-president of the court of session. The jurisdiction of this court extends to all criminal cases, except those of high treason, which are tried by a special commission, in the English form, on the finding of a *grand jury*, which is not used in other cases in Scotland. The judgments of the court of judicature are final, no appeal lying from them to the House of Lords. Circuit or assize courts are held twice a year, by the judges of this court, in the principal towns of Scotland, two judges usually going on each circuit; and an additional circuit-court is held at Glasgow during the Christmas holidays. The circuit-courts have power to decide in appeals from inferior courts, where the subject in dispute does not exceed £25. Cases brought before the judicature court are tried by petty juries of 15 persons, who decide by plurality of votes, not being compelled, as in England, to give unanimous verdicts. It is not going too far to say, that, down to a very recent period, this was, in as far as respects political cases, one of the most corrupt, and worthless tribunals in Europe. Owing, as has been previously stated (*see vol. i. 466*), to the mode in which juries were selected, it was always in the power of the lord advocate, or public prosecutor, to get a jury appointed favourable to his own views; and the judges, having been appointed by the crown, and looking to it, most probably, for farther advancement for themselves or their families, were, with few exceptions, obsequious tools. Hence, in Scotland, to be prosecuted for a political offence was, for a lengthened period, nearly equivalent to being condemned. Luckily, however, this disgraceful state of things has been thoroughly reformed. Juries in Scotland are now fairly selected; the accused has the same right of peremptory challenge as in England; so that, however disposed, the judges can no longer dictate verdicts. The old court of exchequer, commission of teinds, admiralty and consistory courts, are now merged in the court of session.

The inferior courts of law are those of the boroughs, justices of the peace, and sheriffs. The first are called "baillie" courts, from being presided over by a baillie or alderman, with, in some cases, the assistance of a legal assessor. Their civil jurisdiction within the borough depends on circumstances, being sometimes nearly equivalent to that of sheriffs in counties; but their criminal jurisdiction extends only to petty riots and common police offences. The justices of peace decide without appeal in actions where the demand does not exceed £5 besides costs. They commit criminals and hold petty sessions, at which two are a quorum, and quarter sessions; but have in no instance the power of transportation.

The sheriff courts are very important, and transact most of the county business. Each county has a principal sheriff, called a sheriff-depute, from his being deputed or appointed by the crown; who, in addition to duties similar to those devolving upon English sheriffs, has a very extensive civil jurisdiction. He holds office *ad vitam aut culpam*, his salary varying from £300 to £500 a year, according to the supposed onerousness of his duties. In the counties of Edinburgh and Lanark, the residence of the sheriff-depute is enforced; but in the other counties he is rarely resident, his presence not being necessary, except on particular occasions. Sheriff-deputes are, in fact, usually practising lawyers in Edinburgh, and the ordinary business of the county is devolved on the sheriff substitutes, or deputies of the principal, who are always resident. In extensive counties there are usually several sheriff-substitutes. This very useful class of judges must be chosen from advocates, writers to the signet, solicitors of the supreme courts, or solicitors of three years' standing before a sheriff court: and, though nominated by the sheriff depute, they cannot be displaced without the concurrence of the lord president and lord justice-clerk. At present their salaries, which were raised in 1840, vary from £300 to £550 a year, exclusive of fees. The sheriff, or his substitute, holds small-debt courts for the decision of questions of debts and costs to the amount of £8 6s. 8d., in which the pleadings are all *ex vivo*, the expense small, not exceeding 2s. 6d. or 3s., and the judgment final. In his ordinary courts, however, the authority of which extends

to all personal actions without limit of amount, the pleadings are mostly in writing. Until a comparatively late period the sheriff exercised a criminal jurisdiction, extending in some cases to capital punishment; but his powers, in this respect, are now greatly abridged. He still occasionally tries criminal cases with a jury, but the sentence may be appealed from to the court of judicature. No sentence, except for petty offences, involving fine, imprisonment, or, at most, banishment from the county or borough, can be pronounced by any legal authority in Scotland without a jury; nor can any person be now imprisoned for any debt under £8 6s. 8d.

**Religious Establishments.**—The Roman Catholic religion, and the jurisdiction of the pope, were abolished in Scotland in 1560: a confession of Faith, on Calvinistic principles, drawn up by the celebrated John Knox, was then also agreed to, and the Protestant religion was established by an act of the legislature. Knox, having studied under Calvin at Geneva, introduced the Genevese or Presbyterian form of church government; but, though organised in 1562, it did not receive the sanction of the legislature till 1592. After the accession of James VI. to the throne of England, he endeavoured, notwithstanding the strenuous opposition of the great bulk of the nation, to re-establish episcopacy; and a struggle was carried on between the abettors of episcopacy and presbytery, who alternately prevailed, according as the court or popular party happened to have the ascendancy, till the revolution, when presbytery was definitely established.

Some, however, of the parishes are collegiate, or have two clergymen; and latterly some of the more extensive parishes have been divided, and assistant, or *quoad sacra* ministers have been appointed to them. These are called *quoad sacra* or *quoad spiritualia* ministers, because they are not entitled to participate in the civil endowments belonging to the parish, and are wholly supported by a sum granted annually by the sovereign. These *quoad sacra* clergymen, of whom there are 41, were admitted, by an act of the general assembly of 1833, members of presbyteries, and other church courts. But, though acquiesced in, the legality of this act is very questionable.

At present, and since the reign of Queen Anne, (1712) the privilege of appointing clergymen to parishes has been vested in the crown or in private patrons, with the proviso that they must be selected from among those who have gone through the course of study prescribed by the church, and been examined and licensed as preachers by some presbytery. The right of patronage has long, however, been exceedingly unpopular. Its enforcement, in despite of public opinion, occasioned the great secession from the church in 1741; and latterly it would seem to have become more unpopular than ever. The general assembly, by a measure, called the *reto* act, passed in 1834, gave the congregations belonging to parishes a right to reject a presentee, if he were not acceptable to them; but the exercise of the privilege conferred by this act has been found ineffectual by the court of session and the House of Lords; and for some time back the church of Scotland has been greatly agitated by this question. It were much to be wished that it were satisfactorily disposed of. No doubt there are numerous difficulties in the way, but they are far from being insuperable; and we are clear that either the privilege of selecting their clergymen should be given to parishes, or that they should be authorised peremptorily to reject any presentee not acceptable to them. The latter, perhaps, would be the least exceptionable mode of disposing of the question; and it might at once be effected by giving the *reto* act of the general assembly the force of law. This privilege is, in fact, of the very essence of presbytery. It is entirely a popular institution; and it is idle to suppose that those who are conscientiously attached to it should ever approve a system of absolute patronage. That control over the election of clergymen, for which the majority of the clergy and people of Scotland are now contending, is not only right and proper in itself, but is in keeping with the other institutions of the country. All magistrates of boroughs, members of parliament, and other functionaries, are now chosen by popular election; and we have yet to learn why a different practice should be followed in the case of clergymen; and that they, whether acceptable or not, should be thrust upon the public. Such a system is sure, in the end, to destroy itself. To keep it up can serve no purpose, unless it be to lessen the utility of the church, to occasion agitation, and to add to the number of dissenters.

The Scotch church is a perfect democracy, all the members being equal, none of them having any power or pre-eminence of any kind over another. There is in each parish a parochial tribunal, called a kirk session, consisting of the minister, who is always resident, and a greater or smaller number of individuals, of whom, however, there must always be two, selected as elders. The principal duty of the latter is to superintend the affairs of the poor, and to assist in visiting the sick. The session interferes in certain cases of scandal, calls parties before it, and inflicts ecclesiastical pen-

## SCOTLAND.

alties. But parties who consider themselves aggrieved, may appeal from the decision of the kirk session to the presbytery in which it is situated, the next highest tribunal in the church.

A presbytery consists of the clergymen of an indefinite number of contiguous parishes, and of an elder from each kirk session. It has cognizance of all ecclesiastical matters within its limits, examines, licenses, or rejects preachers, or candidates for the ministry, reviews the decisions of kirk sessions, &c. Originally presbyteries met every week, but now, in general, only once a month. Appeal may be made from their decisions to the synod.

A synod consists of the clergymen of an indefinite number of contiguous presbyteries, with an elder from each of the different kirk sessions. This court, which usually meets twice a year, reviews the decisions of presbyteries; but its own decisions may be reviewed by the general assembly, the highest ecclesiastical authority in the kingdom. We subjoin

**A STATEMENT, exhibiting an Account of the Number of Synods, Presbyteries, Parishes, and Clergymen, belonging to the Church of Scotland:**

Synods.	Presbyteries.	Parishes.	Clergymen.
Synod of Lothian and Tweedie . . . . .	7	123	128
Merse and Tiviotdale . . . . .	6	66	66
Dumfries . . . . .	5	56	56
Galloway . . . . .	3	37	37
Glasgow and Ayr . . . . .	3	152	159
Argyle . . . . .	5	55	57
Perth and Stirling . . . . .	5	89	90
Fife . . . . .	4	67	72
Angus and Mearns . . . . .	6	81	87
Aberdeen . . . . .	8	108	109
Moray . . . . .	7	56	58
Ross . . . . .	3	27	27
Caithness and Sutherland . . . . .	3	23	28
Glenelg . . . . .	5	41	41
Orkney . . . . .	3	20	21
Shetland . . . . .	2	15	14
Total number . . . 16 Synods . . . . .	80	1,023	1,050

The GENERAL ASSEMBLY, which consists partly of clerical and partly of lay members, chosen by the different parishes, boroughs, and universities, comprises 386 members, as follows:

Eighty Presbyteries send, ministers . . . . .	218
elders . . . . .	94
City of Edinburgh, elders . . . . .	2
Sixty-five other royal burghs . . . . .	65
University of Edinburgh, . . . . .	5
University of Glasgow, . . . . .	
University of St. Andrew's, . . . . .	
Marischal College, Aberdeen, . . . . .	
King's College, Aberdeen, . . . . .	2
Churches in India, a minister and an elder . . . . .	
Total number of members . . . . .	386

The general assembly meets annually in May, and sits for 10 days; but it has power to appoint a commission, with powers equal to its own, to take up and consider any matters it may have left undecided. The assembly is honoured during its sittings with the presence of a nobleman, the representative of the sovereign, with the title of lord high commissioner. He is, merely, however, a state appendage, and cannot interfere in any way with its proceedings. All matters brought before the assembly are decided, after debate, by a vote. Party sometimes runs as high in the assembly as in the House of Commons; and the discussions are frequently as acrimonious as eloquent.

The stipends of the Scotch clergy are principally derived from the wreck of the tithes and other property that belonged to the Rom. Cath. church, which was principally seized upon at the reformation by the nobility and gentry. The court of session, as commissioners of tithes (tithes), have power from time to time to augment the livings of such clergymen as may not be already in the receipt of the whole disposable tithes of their respective parishes. But in many parishes the tithes have been wholly taken up or exhausted; and in 1812 an act was passed to raise, at the public expense, the incomes of such clergymen as had less than £150 a year, exclusive of glebes and houses, to that sum. At this moment (1841) the average income of the clergy of the church of Scotland, exclusive of the ministers of *quoad sacra* parishes, amounts to about £200 a year, over and above their glebes and houses, the average value of which may be estimated at about £30 a year.

The dissenters from the church consist principally of the members of the United Associate Synod, Burgher Synod, and Relief Synod. The secession took place in 1741, in consequence, as already stated, of the enforcement of the law of patronage. There are some other bodies of dissenters; and of late years, owing to the influx of Irish into Glasgow, the Roman Catholics have received a great accession of numbers. The doctrines of the church of Eng-

land have also become fashionable among a good many of the higher classes. On the whole, however, the number of the dissenters has been very greatly exaggerated; and at this moment (1841) we do not suppose that, altogether, they exceed 600,000, or, at the outside, 650,000.

**Public Instruction.**—An endowed school has been for a lengthened period established in every parish in Scotland. The landlords are bound to build the school-house, and a house for the residence of the master, and to pay him a salary, which at present varies from £25 13s. 9d. to £34 4s. 5d. The power of nominating and appointing schoolmasters is vested in the landlords and minister of the parish. It is usually expected that a Scotch parochial teacher, besides being of unexceptionable character, should be able to instruct his pupils in the reading of English, the arts of writing and arithmetic, and the more useful branches of practical mathematics, and be possessed of such classical attainments as qualify him for teaching Latin and the rudiments of Greek.

Exclusive of the statutory allowance, schoolmasters receive fees from their pupils, according to a scale regulated by the landlords and clergymen. They are in general very moderate, varying, for the different branches of education, from 1s. 6d. to 7s. 6d., and, in a few instances, 10s. a quarter. An efficient system of education has, in consequence, been brought within the reach of all classes, and has been productive of the greatest advantage.

In the largest country parishes there are often subsidiary schools, established by the landlords, the masters of which are allowed a portion of the statutory salary; and in all the more considerable towns by far the greater proportion of the children are educated at non-parochial schools. Speaking generally, classical instruction is not carried to the same extent, in any of the Scotch schools, that it is carried in Eton, Harrow, and the higher class of English schools; but, on the whole, they furnish an extremely good and useful education.

Several returns have been published of the number and description of the various Scotch schools, and of the number of young persons of both sexes by whom they are attended. But these returns are all very incomplete, but little to be depended upon, and, in fact, little better than worthless. At an average, we believe, it may be estimated that from an eighth to a tenth part of the inhab. of Scotland are at schools or academies of one description or another.
